Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Group Membership (Without Benefit)

Using the below example, you can do the following:

- Create the persons who are neither parent customer nor bill group
- Create a membership where the person is the main subscriber
- Add persons in a membership

Person Name	Person Type	Policy	Policy Plan	Main Subscriber	Member Relationship Type
G, ALLEN	Person	AP234389	HMO_MED_ SILVER_RETIRED	Yes	SELF
G, JOHN	Person	AP234389	HMO_MED_ SILVER_RETIRED	No	SPOUSE
G, HARRY	Person	AP234389	HMO_MED_ SILVER_RETIRED	No	SON
G, NELSON	Person	AP234389	HMO_MED_ SILVER_RETIRED	No	SON
G, PARKER	Person	AP234389	HMO_MED_ SILVER_RETIRED	No	SON
G, RUSSEL	Person	AP234389	HMO_MED_ SILVER_RETIRED	No	SON
G, LINDA	Person	AP234389	HMO_MED_ SILVER_RETIRED	No	DAUGHTER

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Individual Membership (With Benefit)

Using the below example, you can do the following:

- Create individual membership where the person is the main subscriber and contains dependent persons.
- Enroll the main subscriber to a health plan
- Provide information regarding benefit type, binder payment, rate guarantee, exchange details, etc.

Person Name	Member Relationship Type	Main Subscriber	Health Plan Code	Binder Payment	Benefit Type	Exchange ID
GEOFF, JOHNSON	SELF	Yes	HMCSP01	Yes	MA	ABHF_121_FL
GWYNETH, JOHNSON	SPOUSE	No	HMCSP01	Yes	MA	ABHF_121_FL

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Group Membership (With Benefit)

Using the below example, you can do the following:

- Create group membership where the person is the main subscriber and contains dependent persons.

Person Name	Member Relationship Type	Main Subscriber	Policy	Policy Plan	Benefit Type
TREVOR, WALSH	SELF	Yes	AP234389	HMO_MED_ SILVER_RETIRED	MA
LETECIA, WALSH	SPOUSE	No	AP234389	HMO_MED_ SILVER_RETIRED	MA
MIKE, WALSH	SON	No	AP234389	HMO_MED_ SILVER_RETIRED	MA

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Advance Deposit at Parent Customer Level

Using the below example, you can do the following:

- Create the parent customer and bill groups for a fully-insured group business
- Create policies where the policy category is set to **Fully-Insured Group**
- Create various medical and dental plans for active and retired employees in the fully-insured group policies
- Associate a pricing rule type with the policy plans
- Maintain the advance deposit details at the parent customer level

The following table provides sample data for a fully-insured group customer that you can process through a health care inbound message:

Person Name	Person Type	Account	Policy	Policy Plan	Pricing Rule Type
Antartica Petroleum Corp	Parent Customer	-	Active Employee Medical Health Insurance Policy	HMO Medical Bronze 60 AE	AGE_BASED
				HMO Medical Silver 70 AE	AGE_BASED
				HMO Medical Gold 80 AE	AGE_BASED
				HMO Medical Platinum 90 AE	AGE_BASED
				PPO Medical Bronze 60 AE	AGE_BASED
				PPO Medical Silver 70 AE	AGE_BASED
				PPO Medical Gold 80 AE	AGE_BASED
				PPO Medical Platinum 90 AE	AGE_BASED
			Active Employee Dental Health Insurance Policy	DD BASIC PLAN AE	TIER_BASED
				DD STANDARD PLAN AE	TIER_BASED
			Retiree Employee Health Insurance Policy	HMO Medical Bronze 60 RE	AGE_BASED
				HMO Medical Silver 70 RE	AGE_BASED
				PPO Medical Bronze 60 RE	AGE_BASED

Copyright © 2026, Oracle and/or its affiliates.

Person Name	Person Type	Account	Policy	Policy Plan	Pricing Rule Type
				PPO Medical Silver 70 RE	AGE_BASED
				DD BASIC RE	TIER_BASED
Antartica Petroleum ACTIVE	Bill Group	CMS	-	-	-
		CMR			
Antartica Petroleum COBRA	Bill Group	CMS	-	-	-
		CMR			
Antartica Petroleum RETIREE	Bill Group	CMS	Employee Medicare Policy	APE Medicare Bronze RE MALE	AGE_BASED
		CMR		APE Medicare Silver RE MALE	AGE_BASED
				APE Medicare Gold RE MALE	AGE_BASED
				APE Medicare Bronze RE FEMALE	AGE_BASED
				APE Medicare Silver RE FEMALE	AGE_BASED
				APE Medicare Gold RE FEMALE	AGE_BASED

In addition, the following table provides sample derivation and pricing parameters for multiple bill groups:

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
Antartica Petroleum ACTIVE	SMALLPRIME	ACTIVE	SEATTLE	MEDICAL	HMO
	SMALLPRIME	ACTIVE	SEATTLE	MEDICAL	PPO

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Advance Deposit at Policy Level

Using the below example, you can do the following:

- Create the parent customer and bill groups for a fully-insured group business
- Create policies where the policy category is set to **Fully-Insured Group**
- Create various medical and dental plans for active and retired employees in the fully-insured group policies
- Associate a pricing rule type with the policy plans
- Maintain the advance deposit details at the policy level

The following table provides sample data for a fully-insured group customer that you can process through a health care inbound message:

Person Name	Person Type	Account	Policy	Policy Plan	Pricing Rule Type
Antartica Petroleum Corp	Parent Customer	-	Active Employee Medical Health Insurance Policy	HMO Medical Bronze 60 AE	AGE_BASED
				HMO Medical Silver 70 AE	AGE_BASED
				HMO Medical Gold 80 AE	AGE_BASED
				HMO Medical Platinum 90 AE	AGE_BASED
				PPO Medical Bronze 60 AE	AGE_BASED
				PPO Medical Silver 70 AE	AGE_BASED
				PPO Medical Gold 80 AE	AGE_BASED

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Fully-Insured Group Policy Renewal

Using the below example, you can do the following:

- Renew a fully-insured group policy

The following table provides sample data through which you can renew a fully-insured group policy:

Person Name	Person Type	Policy Number	Plan Number	Policy Renewal Date	Policy End Date
WALSH_TYPES_GROUP	Corp Customer	PL_MED_HEALTH_001	WALSH_TC_MED_PLAN_1	2024-01-01	2024-12-31

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Fully-Insured Group Policy Reinstatement

Using the below example, you can do the following:

- Reinstate a fully-insured group policy

The following table provides sample data through which you can reinstate a fully-insured group policy:

Person Name	Person Type	Policy Number	Plan Number	Reinstatement Date	Policy End Date
GREG_INDUS	Group Customer	POL_DT_HLT_50	PL_DT_101	2024-05-15	2024-12-31

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Fully-Insured Group Policy Termination

Using the below example, you can do the following:

- Terminate a fully-insured group policy

The following table provides sample data through which you can terminate a fully-insured group policy:

Person Name	Person Type	Policy Number	Plan Number	Termination Date	Policy End Date
HOP_TECH	Group Customer	PL_DENT_700	PN_DENT_505	2024-02-01	2024-12-31

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Fully-Insured Group Policy Cancellation

Using the below example, you can do the following:

- Cancel a fully-insured group policy

Person Name	Person Type	Policy Number	Policy Status	Status Reason
VIC_TECH	Group Customer	POL_DENT_700	Cancel	Unpaid Premium

```

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Fully-Insured Group Policy Plan Cancellation

Using the below example, you can do the following:

- Cancel a fully-insured group policy plan

Person Name	Person Type	Policy Number	Plan Number	Plan Name	Policy Plan Status
VAL_SYS_TECH	Group Customer	POL_MED_800	PLN_MED_1001	Medical Plan 1001	Cancel

```

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Fully-Insured Individual Membership Renewal of a Dependent Person

Using the below example, you can do the following:

- Renew a fully-insured individual membership

The following table provides sample data through which you can renew a fully-insured individual membership:

Person Name	Member Relationship Type	Main Subscriber	Health Plan Code	Membership Renewal Date
BRADLEY NICHOLSON	SELF	Yes	HP_SNR_GOLD	2024-01-05
RAMONA NICHOLSON	SPOUSE	No	HP_SNR_GOLD	2024-01-05

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Fully-Insured Individual Membership Termination

Using the below example, you can do the following:

- Terminate a fully-insured individual membership

The following table provides sample data through which you can renew a fully-insured individual membership:

Person Name	Member Relationship Type	Main Subscriber	Health Plan Code	Membership Termination Date
GLENN, MARSH	SELF	Yes	HPMINAG01	2024-03-31

```

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Health Product and Plan Inbound Message

On calling the **C1-HCProdHlthPlnInboundMessage** or **C1-HCProdHlthPlnInboundMes** web service, you can define a health product and plan inbound message using a health product and plan inbound message type. The **C1-HCProdHlthPlnInboundMessage** is a **SOAP** service which helps to create a health product, health plan, and pricing rule for a health plan through an inbound message, whereas the **C1-HCProdHlthPlnInboundMes** is a **RESTful** service which helps to create and edit a health product, health plan, and pricing rule for a health plan through an inbound message.

You can define a health product and plan inbound message type using the **Health Product and Plan Inbound Message Type (C1-HCProdHlthPlnInboundTyp)** business object through the **Inbound Message Type** screen. The health product and plan inbound message type business object encapsulates the following information:

- A business object using which you want to create the health product when the health product and plan inbound message is processed.
- A business object using which you want to create the health plan when the health product and plan inbound message is processed.

The health product and plan inbound message type helps the system to determine:

- **Inbound Message Business Object** - The business object using which the health product and plan inbound message should be created in the system. You must specify the **Health Product and Plan Inbound Message (C1-HCProdHlthPlnInbound)** business object in the health product and plan inbound message type. The health product and plan inbound message business object enables you to create and edit the following entities for a fully-insured individual customer through an inbound web service:
  - Health Product
  - Health Plan
  - Health Plan Pricing Rules

  Note: You can create or update the above entities either through a single or separate health product and plan inbound messages.
- **Health Care Product Business Object** - The business object using which health product should be created in the system. You must specify the **Health Care Product (C1-HealthcareProduct)** business object in the health product and plan inbound message type.
- **Health Plan Business Object** - The business object using which health plan should be created in the system. You must specify the **Health Plan (C1-HealthPlan)** business object in the health product and plan inbound message type.

On calling the **C1-HCProdHlthPlnInboundMessage** or **C1-HCProdHlthPlnInboundMes** web service, a batch named **C1-HCPHP** checks whether there are any health product and plan inbound messages in the **Pending** status. If there is a health product and plan inbound message in the **Pending** status, the batch changes the status of the health product and plan inbound message to the default next status (i.e. **Validation**). Then, the algorithm attached to the **Validation** status is triggered. If the validation is successful, the system changes the status of the health product and plan inbound message to **Processing**. Then, the algorithm attached to the **Processing** status is triggered. If the processing is successful, the system creates or updates the entities, such as health product, health plan, pricing rules for the health plan, and then changes the status of the health product and plan inbound message to **Processed**.

How to setup the **C1-ASOBLLNG** feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4639

Prerequisites

To use the health product and plan inbound message feature, you need to do the following:

Copyright © 2026, Oracle and/or its affiliates.

- Define the required health product and plan inbound message types in the system.
- Assign the **Product (C1_PRODUCT)** maintenance object to the **Health Product (C1-HealthcareProduct)** business object, while defining the health product and plan inbound message type.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message Type**
- Define the required characteristic types where the characteristic entity is set to **Inbound Message**.
- Define the required characteristic types where the characteristic entity is set to **Health Plan**.
- Define the required characteristic types where the characteristic entity is set to **Product**.
- Define the **Health Product and Plan Inbound Message (C1-HCProdHlthPlnInbound)** business object in the system.
- Define the **Health Product and Plan Inbound Message Type (C1-HCProdHlthPlnInboundTyp)** business object in the system.
- Define the **Healthcare Product (C1-HealthcareProduct)** business object in the system.
- Define the **Health Plan (C1-HealthPlan)** business object in the system.
- Define the required pricing rule type business object in the system.
- Define the required values for the health plan in the **PRC_RULE_ENTITY_TYPE** lookup field.

Health Product and Plan Inbound Message Status Transition through User Interface

The following figure graphically indicates how a health care inbound message moves from one status to another when it is validated and processed through the user interface:

Rejected	Monitor	C1-TODORETRY	C1-TODORETRY	Refer to C1-TODORETRY on page 2375.
	Enter	C1-TDCRINMSG	F1-TDCREATE	Refer to C1-TDCRINMSG on page 2375.
Processed	-	-	-	-
Voided	-	-	-	-

C1-AT-RQJ

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Pending**. If the **isRetried** flag in the inbound message is set to **true**, it resets the flag to **false**.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don’t specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-HLTPRDVAL

This algorithm is invoked when you execute the **Health Product Health Plan (C1-HCPHP)** periodic monitor batch or click the **Submit for Processing** button in the **Inbound Message** screen. This algorithm validates the Health Product and Plan Inbound Message, which is in the Pending status, to check the following conditions:

- Whether the specified **Inbound Message Type** and **Inbound Message Business Object** are valid.
- Whether the specified source system is valid and does exists in the **Source System Extendable Lookup (C1-SourceSystemLookup)**.
- Whether the mandatory data (such as health product code, description, product type, bundled product, start date, status) is specified in the health product.
- Whether the mandatory data (such as health plan code, description, health product, start date, status) is specified in the health plan.
- Whether the mandatory data (such as health plan code, charge, start date, pricing rule) is specified in the health plan pricing rules.
- Whether the specified data for the lookup columns matches with those mentioned in the system.
- Whether all of the switch columns either contain **Y** or **N** as values.
- Whether the specified end date for health product, health plan, and health pricing rule is greater than the start date.

Copyright © 2026, Oracle and/or its affiliates.

- Whether the product is mapped to the division which exists in the system, and the product - division mapping is a one time process.
- Whether the product code is mapped with the health plan exists in the system.
- Whether the characteristic type mapped with the respective entity exists in the system.
- Whether the specified pricing rule type for creating the pricing rule exists in the system in the **Active** status, and the pricing rule type - health plan mapping is a one time process.
- Whether the specified price item and price item parameters for pricing rule eligibility are valid, and the price item parameters exist in the **CI_PRICE_PARM** table.
- Whether the price item parameters that have parameter usage specified as **Pricing Rule Eligibility Criteria** are available while defining the pricing rule eligibility for the pricing rule.
- Whether the entity type is specified as **Health Plan** and entity value as **Health Plan Code** while creating a pricing rule for a health plan.

Note:

This algorithm does not consider the following validations or checks:

- No validation is performed between the date range of the product and health plan.
- No check is performed whether the product is in the **Active** status while creating a health plan.
- No check is performed whether the health plan is in the **Active** status while creating the health plan pricing rules.
- No check is performed on the set of the pricing rule eligibility, which is defined on multiple pricing rules, for a price item.
- No validation is performed if duplicate parameters are defined for a pricing rule.

C1-HCPRPROC

This algorithm is invoked when the health product and plan inbound message is successfully validated. This algorithm creates or updates the health product, health plan, and health plan pricing rule information for individual memberships.

This algorithm fetches the business object from the health product and plan inbound message type to create or update the records for health product, health plan, and health plan pricing rule. The algorithm performs the following operations:

- Creates or updates the health product based on the health product code.
- Creates or updates the health plan based on the health plan code.
- Creates or updates the health plan pricing rules based on the price item, health plan, start date, and eligibility criteria.

Note:

The pricing rule eligibility is optional while creating or updating the pricing rules for the health plan.

The health product and plan inbound message log maintains complete trail of actions performed on health product, health plan, and health plan pricing rules.

C1-TODORETRY

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It checks whether the maximum retry attempts are met. If the retry attempt is less than or equal to the value defined in the **Maximum Retry** parameter, the status of the inbound message is changed to **Pending**. However, if the retry attempt is greater than the value defined in the **Maximum Retry** parameter, the status of the inbound message remains as **Rejected**.

Note: This algorithm is invoked when the customer or membership inbound message is validated and processed through the batch process.

It contains the following parameters:

- **Maximum Retry** - Used to specify the maximum number of times the inbound message can be revalidated and reprocessed on failure.
- **Maximum Retry Element Name** - This parameter is not used at the moment.

Copyright © 2026, Oracle and/or its affiliates.

If you do not specify any value for the **Maximum Retry** parameter, the system uses the value defined in the **To Do Maximum Retries** status option (which is defined in the lifecycle of the **C1-CustomerInboundMessage** and **C1-MemberInboundMessage** business object) to check whether the maximum retry attempts are met. If the value is not specified for the **To Do Maximum Retries** status option, the system does not allow revalidating and reprocessing an inbound message, and the status of the inbound message remains as **Rejected**.

C1-TDCRINMSG

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the inbound message validation or processing fails.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the inbound message validation or processing fails.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

Health Product and Plan Inbound Message XML Format

Note: We recommend you to refer the Health Product and Plan Inbound Message schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

Before calling the **C1-HCProdHlthPlnInboundMessage** inbound web service, you need to ensure that the health product and plan inbound message contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
schema	Used to specify the tags of a health product and plan inbound message.	Yes
messageType	Used to indicate the health product and plan inbound message type using which the health product and plan inbound message should be created in the system. **Note:** You must specify a valid health product and plan inbound message type which is created using the **C1-HCProdHlthPlnInboundTyp** business object and which is in the **Active** status. The system then derives the business objects using which the health product and plan inbound message, health products, and health plans should be created from the health product and plan inbound message type.	Yes
sourceSystem	Used to indicate the external system from where the health product and plan inbound message is received. **Note:** You must specify a source system which is already defined in the **C1-SourceSystemLookup** extendable lookup. It must be in the **Active** status.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
externalTransactionId	Used to indicate the transaction in the external source system which resulted in the health product and plan inbound message.	No
externalBatchId	Used to indicate the external batch job or batch run number through which the health product and plan inbound message is created.	Yes
externalSourceId	Used to specify the external source system ID.	Yes
characteristics	You can use this tag within the following tags: • **schema** - Here, the **characteristics** tag is used to specify a list of characteristics for the health product and plan inbound message. • **healthPlanPricingRuleData** - Here, the **characteristics** tag is used to specify a list of characteristics for the pricing rule of a health plan.	No
inboundMessageCharacteristic	Used to specify a characteristic for the health product and plan inbound message.	No
adhocCharacteristicValue	Used to specify the value for the adhoc characteristic type.	Yes (Conditional) **Note:** This data is required while defining or editing an adhoc characteristic of the health product and plan inbound message.
characteristicType	You can use this tag within the following tags: • **inboundMessageCharacteristic** - Here, the **characteristicType** tag is used to specify the characteristic type. Here, you must specify a characteristic type where the characteristic entity is set to **Inbound Message**. • **productCharacteristics** - Here, the **characteristicType** tag is used to specify the characteristic type. Here, you must specify a characteristic type where the characteristic entity is set to **Product**. • **healthPlanCharacteristics** - Here, the **characteristicType** tag is used to specify the characteristic type. Here, you must specify a characteristic type where the characteristic entity is set to **Health Plan**. • **characteristicsList** - Here, the **characteristicType** tag is used to specify the characteristic type. Here, you must specify a characteristic type where the characteristic entity is set to **Pricing Rule**.	Yes (Conditional) **Note:** This data is required while defining or editing a characteristic of the respective entity.
effectiveDate	You can use this tag within the following tags: • **inboundMessageCharacteristic** - Here, the **effectiveDate** tag is used to specify the date from when the characteristic is effective for the health product and plan inbound message.	Yes (Conditional) **Note:** This data is required while defining or editing a characteristic of the respective entity.

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	• **productCharacteristics** - Here, the **effectiveDate** tag is used to specify the date from when the characteristic is effective for the health product. • **healthPlanCharacteristics** - Here, the **effectiveDate** tag is used to specify the date from when the characteristic is effective for the health plan. • **characteristicsList** - Here, the **effectiveDate** tag is used to specify the date from when the characteristic is effective for the pricing rule of a health plan. **Note:** You must specify the date in the `YYYY-MM-DD` format.	
characteristicValue	You can use this tag within the following tags: • **inboundMessageCharacteristic** - Here, the **characteristicValue** tag is used to specify the value for the predefined characteristic type. • **productCharacteristics** - Here, the **characteristicValue** tag is used to specify the value for the characteristic type. • **healthPlanCharacteristics** - Here, the **characteristicValue** tag is used to specify the value for the characteristic type. • **characteristicsList** - Here, the **characteristicValue** tag is used to specify the value for the characteristic type.	Yes (Conditional) **Note:** This data is required while defining or editing a characteristic of the respective entity.
characteristicValueForeignKey1	Used to specify the first value for the foreign key characteristic type.	Yes (Conditional) **Note:** This data is required while defining or editing a foreign key characteristic of the health product and plan inbound message.
characteristicValueFK2	Used to specify the second value for the foreign key characteristic type.	No
characteristicValueFK3	Used to specify the third value for the foreign key characteristic type.	No
characteristicValueFK4	Used to specify the fourth value for the foreign key characteristic type.	No
characteristicValueFK5	Used to specify the fifth value for the foreign key characteristic type.	No
productHealthPlanMessage	Used to specify the details of a health product, health plan, or pricing rule for a health plan.	Yes
HealthProductData	Used to specify the details of a health product.	Yes (Conditional) **Note:** This data is required while defining or editing a health product.
healthProductCode	Used to indicate the type of product. The valid values are:	Yes

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	• **EPO** - Indicates that the product type is exclusive provider organization. • **HMO** - Indicates that the product type is health maintenance organization. • **POS** - Indicates that the product type is point of service plan. • **PPO** - Indicates that the product type is preferred provider organization. **Note:** You must specify a value which is already defined in the **PRODUCT_TYPE_FLG** lookup field. It must be in the **Active** status. You can use this tag within the following tags: • **HealthProductData** - Here, the **healthProductCode** tag is used to specify the unique identifier for the health product. • **healthPlanData** - Here, the **healthProductCode** tag is used to indicate the health product for which you want to define the health plan.	
description	You can use this tag within the following tags: • **HealthProductData** - Here, the **description** tag is used to specify the description for the health product. • **healthPlanData** - Here, the **description** tag is used to specify the description for the health plan.	Yes
productType	Used to indicate how the health product can be classified based on the provider network. **Note:** You must specify a value which is already defined in the **PRODUCT_TYPE_FLG** lookup field. It must be in the **Active** status.	Yes
productSubType	Used to indicate the type of medical accounts that are linked to the health product. The valid values are: • **FSA** - Indicates that the product sub type is flexible spending account. • **HRA** - Indicates that the product sub type is health reimbursement account. • **HSA** - Indicates that the product sub type is point of service plan. • **MC** - Indicates that the product sub type is medicare cost. • **MR** - Indicates that the product sub type is medicare risk. **Note:** You must specify a value which is already defined in the **PRODUCT_SUB_TYPE_FLG** lookup field. It must be in the **Active** status.	No
productHCCategory	Used to indicate the health care category to which the health product belongs. The valid value is: • **MED** - Indicates the health care category of product is medical.	No

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must specify a value which is already defined in the **PRODUCT_HC_CAT_FLG** lookup field. It must be in the **Active** status.	
productAdministration	Used to specify the name of the agency which administers the health product.	No
productLOB	Used to indicate the line of business to which the health product belongs. The valid value is: • **SHOP** - Indicates the line of business to which the health product belongs is shopping mall. **Note:** You must specify a value which is already defined in the **PRODUCT_LOB_FLG** lookup field. It must be in the **Active** status.	No
productLOBCategory	Used to indicate the line of business category to which the health product belongs.The valid value is: • **COMM** - Indicates the line of business category to which the health product belongs is commercial. • **GOVT** - ndicates the line of business category to which the health product belongs is government. • **STPG** - ndicates the line of business category to which the health product belongs is state programs. **Note:** You must specify a value which is already defined in the **PRODUCT_LOB_CAT_FLG** lookup field. It must be in the **Active** status.	No
bundledProduct	Used to indicate whether the health product is a bundled product. The valid values are: • Y • N	Yes
bundledProducts	Used to specify the health products which are included in the bundled product.	Yes (Conditional) **Note:** This data is required when the health product is a bundled product (i.e. when the **bundledProduct** tag contains **Y**).
startDate	You can use this tag within the following tags: • **HealthProductData** - Here, the **startDate** tag is used to specify the date from when the health product is effective. **Note:** The health product start date cannot be later than the health product end date. • **healthPlanData** - Here, the **startDate** tag is used to specify the date from when the health plan is effective.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: The health plan start date cannot be later than the health plan end date. The health plan start date cannot be earlier than the health product start date and later than the health product end date. • **healthPlanPricingRuleData** - Here, the **startDate** tag is used to specify the date from when the pricing rule of a health plan is effective. **Note:** The pricing rule start date cannot be later than the pricing rule end date. The pricing rule start date cannot be earlier than the health plan start date and later than the health plan end date. **Note:** You must specify the date in the `YYYY-MM-DD` format.	
endDate	You can use this tag within the following tags: • **HealthProductData** - Here, the **endDate** tag is used to specify the date till when the health product is effective. **Note:** The health product end date cannot be earlier than the health product start date. • **healthPlanData** - Here, the **endDate** tag is used to specify the date till when the health plan is effective. **Note:** The health plan end date cannot be earlier than the health plan start date. The health plan end date cannot be earlier than the health product start date and later than the health product end date. • **healthPlanPricingRuleData** - Here, the **endDate** tag is used to specify the date till when the pricing rule of a health plan is effective. **Note:** The pricing rule end date cannot be earlier than the pricing rule start date. The pricing rule end date cannot be earlier than the health plan start date and later than the health plan end date. **Note:** You must specify the date in the `YYYY-MM-DD` format.	No
status	You can use this tag within the following tags:	Yes

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)

	• **HealthProductData** - Here, the **status** tag is used to indicate the status of the health product. The valid values are:
	  • ACTIVE
	  • INACTIVE
	• **healthPlanData** - Here, the **status** tag is used to indicate the status of the health plan. The valid values are:
	  • ACTIVE
	  • INACTIVE
	• **healthPlanPricingRuleData** - Here, the **status** tag is used to indicate the status of the pricing rule. The valid values are:
	  • PENDING
	  • ACTIVE
	  • INACTIVE	

productCharacteristics	Used to specify a list of characteristics for the health product.	No
healthProductDivision	Used to specify a list of divisions where the health product is available.	Yes (Conditional) **Note:** This data is required while associating a health product with a division.
division	Used to indicate the division where the health product is available. **Note:** If you associate the health product with a division, the system only allows the persons belonging to the division to enroll for different health plans of the health product. However, if you do not associate the health product to any division, the system allows the persons belonging to different divisions to enroll for different health plans of the health product.	Yes
healthPlanData	Used to specify the details of the health plan.	Yes (Conditional) **Note:** This data is required while defining or editing a health plan.
healthPlanCode	Used to specify the unique identifier for the health plan.	Yes
charitablePlan	Used to indicate whether the health plan provides subsidized health insurance coverage. The valid values are: • Y • N **Note:** If you do not specify the value, by default, it is set to **N**.	No
standardPlan	Used to indicate whether the health plan provides standard health insurance coverage. The valid values are: • Y • N	No

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: If you do not specify the value, by default, it is set to **N**.	
acaQhp	Used to indicate whether the health plan provides Affordable Care Act (ACA) qualified health insurance coverage. The valid values are: • Y • N **Note:** If you do not specify the value, by default, it is set to **N**.	No
grandFatherPlan	Used to indicate whether the health plan is a grandfathered health plan. The valid values are: • Y • N **Note:** If you do not specify the value, by default, it is set to **N**.	No
ancillaryBenefits	Used to indicate whether the health plan provides ancillary benefits. The valid values are: • Y • N **Note:** Ancillary benefits are a secondary type of health insurance coverage that covers miscellaneous medical expenses that are incurred during a stay at the hospital. For example, it can cover expenses such as ambulance transportation, blood, drugs, and medical supplies like bandages. If you do not specify the value, by default, it is set to **N**.	No
riderBenefits	Used to indicate whether the health plan provides rider benefits. The valid values are: • Y • N **Note:** A rider is an additional benefit that can be included to the basic health insurance plan. By adding riders, the insurance coverage can be expanded as per the requirement and at a lower cost. If you do not specify the value, by default, it is set to **N**.	No
addOnPlan	Used to indicate whether the health plan is an add-on health plan. The valid values are: • Y • N	No

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: If you do not specify the value, by default, it is set to **N**. An add-on health plan may provide ancillary or rider benefits. It is also known as a supplemental health plan. As these add-on plans provide additional benefits over the base plan, they are not considered as the standalone plan.	
hiosId	Used to specify the Health Insurance Oversight System ID.	Yes (Conditional) **Note:** This data is required while associating the hiosId for a health plan.
healthPlanCharacteristics	Used to specify a list of characteristics for the health plan.	Yes (Conditional) **Note:** This data is required while defining or editing the characteristics of a health plan.
healthPlanPricingRuleTypes	Used to associate the pricing rule types with the health plan.	Yes (Conditional) **Note:** This data is required while associating a pricing rule type with the health plan.
pricingRuleType	You can use this tag within the following tags: • **healthPlanPricingRuleTypes** - Here, the **pricingRuleType** tag is used to specify the pricing rule type. • **healthPlanPricingRuleData** - Here, the **pricingRuleType** tag is used to indicate the pricing rule type using which you want to define the pricing rule. **Note:** At present, you can only specify those pricing rule types where the category is set to **Age Based**, **Tier Based**, **Discount Charge**, **Additional Fee**, and **Benefit**.	Yes (Conditional) **Note:** This data is required while associating a pricing rule type with the health plan and while defining or editing a pricing rule for a health plan.
healthPlanPricingRuleData	Used to specify the details of the pricing rule.	Yes (Conditional) **Note:** This data is required while defining or editing a pricing rule defined for the health plan.
sequence	You can use this tag within the following tags:	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	• **healthPlanPricingRuleData** - Here, the **sequence** tag is used to indicate the order in which the pricing rules should be created in the system. • **baseRate** - Here, the **sequence** tag is used to indicate the order in which the price component should be created using the given base rate information. • **pricingParameter** - Here, the **sequence** tag is used to indicate the order in which the pricing eligibility criteria should be created using the parameter information. • **modifierInformation** - Here, the **sequence** tag is used to indicate the order in which the pricing eligibility criteria should be created using the modifier information. • **pricingRuleEligibility** - Here, the **sequence** tag is used to indicate the order in which the pricing rule eligibility should be created for the health plan.	**Note:** This data is required while defining or editing the respective information.
entityIdentifiers	Used to specify a list of entities (i.e. policy, source system, and plan) using which you can derive the plan to which you want to associate the pricing rule.	Yes
entityIdentifiersList	Used to specify the details of the entity.	Yes
entityIdentifierType	Used to specify the entity type. The valid values are: • **HLPN** - Used when you want to specify the health plan. • **PER** - Used when you want to specify the person. • **PIDT** - Used when you want to specify the person identifier type. • **PIDV** - Used when you want to specify the person identifier value. • **PLAN** - Used when you want to specify the plan. • **PLCY** - Used when you want to specify the policy. • **SSYS** - Used when you want to specify the source system. • **STAT** - Used when you want to specify the state. **Note:** You must specify a value which is already defined in the **PRC_RULE_ENTITY_TYPE** lookup field. It must be in the **Active** status.	Yes (Conditional) **Note:** This data is required while defining or editing a pricing rule defined for the health plan.
entityIdentifierValue	Used to specify the entity identifier (i.e. plan number, policy number, or source system).	Yes (Conditional) **Note:** This data is required while defining or editing a pricing rule defined for the health plan.
priceItemCd	Used to indicate the price item for which you want to define the pricing rule. **Note:** You must specify a price item which is already associated with the respective pricing rule type.	Yes (Conditional) **Note:** This data is required while defining or editing a pricing rule defined for the health plan.

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
rateOption	Used to indicate the rate option using which you want to create price assignment for the pricing rule of a health plan. **Note:** You must specify a rate option which is already defined in the **C1-ExtLookRetTypeRateOpt** extendable lookup. It must be in the **Active** status. If the rate option is not given for an age-based pricing rule, by default, it is set to: • The value specified in the **Default Rate Option - Flat** option type of the **C1-ASOBLLNG** feature configuration when the modifier method is set to **FLAT** • The value specified in the **Default Rate Option - Percentage** option type of the **C1-ASOBLLNG** feature configuration when the modifier method is set to **EXPT** or **INPT** However, if the rate option is not given for a tier-based pricing rule, by default, it is set to a value specified in the **Default Rate Option - Flat** option type of the **C1-ASOBLLNG** feature configuration when the modifier method is set to **FLAT** or **NULL**.	No
pricingType	Used to indicate the type of pricing defined for the pricing rule. The valid values are: • **FLAT** • **PCNT** **Note:** You must specify a value which is already defined in the **PRC_TYPE_FLG** lookup field. It must be in the **Active** status.	Yes
modifierApplicability	Used to indicate whether you want to increase or decrease the premium of an eligible member based on certain modifiers (i.e. parameters, such as tobacco usage, alcohol usage, and so on). The valid values are: • **Y** • **N** **Note:** You must specify a value which is already defined in the **HC_MODIFIER_APPLICABILITY** lookup field. It must be in the **Active** status. If you do not specify the value, by default, it is set to **N**.	No
modifierMethod	Used to indicate whether the system should consider the modifier rate as a flat amount or percentage. The valid values are: • **EXPT** - Indicates that the system should consider the modifier rate as exclusive percentage. • **FLAT** - Indicates that the system should consider the modifier rate as a flat amount.	Yes (Conditional) **Note:** This data is required when the **modifierApplicability** tag contains **Y**.

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	• **INPT** - Indicates that the system should consider the modifier rate as inclusive percentage. **Note:** You must specify a value which is already defined in the **HC_MODIFIER_METHOD** lookup field. It must be in the **Active** status.	
baseRate	Used to specify the base fees for employees with a particular set of attributes. You can define different base fees for employees with different set of attributes. **Note:** While creating a price assignment for the pricing rule, the system creates one price component for each given set of base rate information.	Yes (Conditional) **Note:** This data is required while defining a pricing rule for the health plan.
baseFee	Used to specify the base fees for the health plan.	Yes (Conditional) **Note:** This data is required while defining a pricing rule for the health plan.
lowerAgeLimit	Used to specify the lower age limit. It is used to define lower age limit pricing eligibility criteria in the price component. **Note:** The system defines the lower age limit pricing eligibility criteria using the parameter which is specified in the **Age Based Parameter** option type of the **C1-ASOBLLNG** feature configuration. This data is ignored when given in a tier-based pricing rule information.	Yes (Conditional) **Note:** This data is required while defining or editing an age-based pricing rule for the health plan.
upperAgeLimit	Used to specify the upper age limit. It is used to define upper age limit pricing eligibility criteria in the price component. **Note:** The system defines the upper age limit pricing eligibility criteria using the parameter which is specified in the **Age Based Parameter** option type of the **C1-ASOBLLNG** feature configuration. This data is ignored when given in a tier-based pricing rule information.	Yes (Conditional) **Note:** This data is required while defining an age-based pricing rule for the health plan.
pricingParameter	Used to specify a set of employee attributes based on which the base fees may vary.	Yes (Conditional) **Note:** This data is required while defining a tier-based pricing rule for the health plan.

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
parameterCode	You can use this tag within the following tags: • **pricingParameter** - Here, the **parameterCode** tag is used to specify the employee attribute (i.e. parameter, such as employee status, employee location, and so on) using which you want to define the pricing eligibility criteria. • **modifierInformation** - Here, the **parameterCode** tag is used to specify the modifier (i.e. parameter, such as tobacco usage, alcohol usage, and so on) using which you want to define the pricing eligibility criteria. **Note:** You must define the employee attributes and modifiers as parameters in the system. Note that you must set the parameter usage for these parameters to **Pricing Eligibility Criteria**. The system creates an pricing eligibility criteria for each parameter and/or modifier specified in the pricing rule information. You cannot specify any special character except underscore (_) in the parameter name.	Yes (Conditional) **Note:** This data is required while specifying the respective information.
parameterValue	You can use this tag within the following tags: • **pricingParameter** - Here, the **parameterCode** tag is used to specify the value for the parameter (i.e. employee attribute). • **modifierInformation** - Here, the **parameterCode** tag is used to specify the value for the parameter (i.e. modifier). **Note:** You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.	Yes (Conditional) **Note:** This data is required while specifying the respective information.
modifierInformation	Used to specify the modifier based on which you want to increase or decrease the base fees. **Note:** While creating a price assignment for the pricing rule, the system creates one price component for each given set of modifier information and then links these modifier price components with the respective base rate price component.	Yes (Conditional) **Note:** This data is required while specifying the modifier information.
rate	Used to specify the flat amount or percentage by which you want to increase or decrease the premium of an eligible member.	Yes (Conditional) **Note:** This data is required while specifying the modifier information.
characteristicsList	Used to specify a characteristic for the health plan.	Yes (Conditional) **Note:** This data is required while defining or editing a characteristic of the respective entity.

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
pricingRuleEligibility	Used to specify a set of attributes based on which the pricing rule eligibility is decided.	Yes (Conditional) **Note:** This data is required while defining or editing an age or tier-based pricing rule for the health plan.
priceParmCode	Used to specify the pricing attribute using which you want to define the pricing eligibility criteria.	Yes (Conditional) **Note:** This data is required while specifying the respective information.
priceParmVal	Used to specify the value for the parameter (i.e. pricing attribute).	Yes (Conditional) **Note:** This data is required while specifying the respective information.

The following table lists and describes the tags which are available in the health care inbound message schema, but should not be included in the XML file:

Tag Name	Tag Description
c1InboundMessage	Displays the inbound message ID.
bo	Indicates the business object using which the health product and plan inbound message is created in the system.
boStatus	Displays the status of the health product and plan inbound message.
statusReason	Indicates the reason why the status of the health product and plan inbound message is changed.
statusDateTime	Displays the date and time when the status of the health product and plan inbound message is changed in the system.
creationDateTime	Displays the date and time when the health product and plan inbound message is created in the system.
version	This tag appears within the following parent tags: • **schema** - Here, the **version** tag displays the version of the health product and plan inbound message. • **inboundMessageCharacteristic** - Here, the **version** tag displays the version of the characteristic defined for the health product and plan inbound message.
searchCharacteristicValue	At present, this tag is not supported in a health product and plan inbound message.
toDoRetry	Displays the information about the retry option used for the health product and plan inbound message.

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description
	Note: This information appears at the bottom of the inbound message in the **Inbound Message Content** zone once the health product and plan inbound message is validated and processed either through the user interface or batch process.
retryDateTime	Displays the date and time when the retry option is used to change the status of the health product and plan inbound message from **Rejected** to **Pending**.
numberOfRetries	Indicates the number of times the retry option is used for the health product and plan inbound message.
currentErrorState	Indicates the status to which the health care inbound message is transitioned when its validation or processing fails. The valid value is: • REJECTED
isRetried	Indicates whether the retry option is used to change the status of the health product and plan inbound message. The valid values are: • true • false

Sample Health Product and Plan Inbound Message for Health Product Setup

Using the below example, you can do the following:

- Create the health product in the ORMB system through the health product and plan inbound message.

Health Product Code	Description	Product Type	Bundled Product	Start Date	Status	Division
HPMP444	HP Medicare Plus	EPO	N	2021-01-01	ACTIVE	TX

```
<schema>
    <bo>C1-HCProdHlthPlnInbound</bo>

    </productHealthPlanMessage>
</schema>
```

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Product and Plan Inbound Message for Health Plan Setup

Using the below example, you can do the following:

- Create the health plan for the product in the ORMB system through the health product and health plan inbound message.

The following table provides sample data for a health product and health plan that you can process through the health product and plan inbound message:

Health Product Code	Health Plan Code	HiOS ID	Description	Start Date	Status
HPMP444	HMCSP01	HIOSHLPNMS001	Health Plan Medicare Surplus	2021-02-01	ACTIVE
HPMP444	HMCDP01	HIOSHLPNMD005	Health Plan Medicare Dental	2021-03-01	ACTIVE

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Product and Plan Inbound Message for Health Plan Pricing Rules Setup

Using the below example, you can do the following:

- Create the age-based pricing rule for the **RET_DENT** health plan -
  The following table provides sample data for an age-based pricing rule of the health plan:

		Base Rate			Pricing Parameter		Modifier Information		
Health Plan	**Pricing Rule Type**	**Base Fee**	**Lower Age Limit**	**Upper Age Limit**	**Parameter**	**Parameter Value**	**Modifier**	**Modifier Value**	**Modifier Rate**
RET_DENT	AGE_BASED	100	1	20	TOBAC	Y	SMOKER	N	10
		300	1	40	TOBAC	Y	SMOKER	N	20
		500	1	60	TOBAC	Y	SMOKER	N	30

- Create the discount charge pricing rule for the **RET_DENT** health plan -
  The following table provides sample data for a discount charge pricing rule of the health plan:

Health Plan	**Pricing Rule Type**	**Base Fee**	**Modifier**	**Modifier Value**	**Modifier Rate**
RET_DENT	DISCOUNT_CHARGE	50	VP_BAND	VP1	10
		70	M_BAND	M1	20
		90	IC_BAND	IC1	30

Inbound Message Type

Oracle Revenue Management and Billing allows you to define an inbound message type using which you can create an inbound message through an inbound web service. The following table describes the significance of the respective inbound message type:

Inbound Message Type	Helps the system to determine...
Health Care Inbound Message Type (C1-HCInboundMsgType)	• **Inbound Message Business Object** - The business object using which the health care inbound message should be created in the system. • **Customer Registration Type** - The customer registration type using which the customer registration object should be created through a health care inbound message.
Health Product Health Plan Inbound Message Type (C1-HCProdHlthPlnInboundTyp)	• **Inbound Message Business Object** - The business object using which the health product and plan inbound message should be created in the system. • **Health Product Business Object** - The business object using which the health product should be created in the system. • **Health Plan Business Object** - The business object using which the health plan should be created in the system.
Individual Inbound Message Type (C1-IndHCInboundMsgType)	• **Inbound Message Business Object** - The business object using which the health care inbound message should be created in the system. • **Person Business Object** - The business object using which the individual customer should be created in the system. • **Account Business Object** - The business object using which the individual customer's account should be created in the system. • **Individual Membership Business Object** - The business object using which the individual membership should be created in the system. • **Benefits Business Object** - The business object using which the individual membership benefits should be created in the system. • **Address Business Object** - The business object using which the address should be created in the system. • **Statement Construct Business Object** - The business object using which the statement construct should be created in the system.

The **Inbound Message Type** screen allows you to define, edit, copy, and delete an inbound message type. It contains the following zones:

- Inbound Message Type List on page 2764
- Inbound Message Type on page 2765

Inbound Message Type List

The **Inbound Message Type List** zone lists the inbound message types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Inbound Message Type	Displays the inbound message type.
Description	Displays the description of the inbound message type.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Edit	On clicking the **Edit** (✎) icon, the **Inbound Message Type** screen appears where you can edit the details of the inbound message type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Inbound Message Type** screen appears where you can define a new inbound message type using an existing inbound message type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the inbound message type.
	Note: You can delete an inbound message type when an inbound message is not created using the inbound message type.

On clicking the **Broadcast** (📡) icon corresponding to an inbound message type, the **Inbound Message Type** zone appears with the details of the respective inbound message type.

Inbound Message Type

The **Inbound Message Type** zone displays the details of the inbound message type. It contains the following sections:

- **Main** - This section displays basic information about the inbound message type. It contains the following fields:

Field Name	Field Description
Inbound Message Type	Displays the inbound message type.
Customer Registration Type	Indicates the customer registration type using which the customer registration object is created through a health care inbound message.
	Note: It has a link. On clicking the link, the **Customer Registration Type** screen appears where you can view the details of the respective customer registration type. This field appears when you are viewing the details of an inbound message type which is created using the **C1-HCInboundMsgType** business object.
Inbound Message Business Object	Indicates the business object using which the inbound message is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

Field Name	Field Description
Healthcare Product Business Object	Indicates the business object using which the health product is created through a health product and plan inbound message. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object. This field appears when you are viewing the details of an inbound message type which is created using the **C1-HCProdHlthPlnInboundTyp** business object.
Health Plan Business Object	Indicates the business object using which the health plan is created through a health product and plan inbound message. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object. This field appears when you are viewing the details of an inbound message type which is created using the **C1-HCProdHlthPlnInboundTyp** business object.
Description	Displays the description of the inbound message type.
Status	Indicates the status of the inbound message type. The valid values are: • Active • Inactive
Detailed Description	Displays additional information about the inbound message type.

- **Additional Data** - This section lists the additional information about the inbound message type. This section appears when you are viewing the details of an inbound message type which is created using the **C1-IndHCInboundMsgType** business object. It contains the following fields:

Field Name	Field Description
Person Business Object	Indicates the business object using which the individual customer is created through a health care inbound message. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Account Business Object	Indicates the business object using which the individual customer's account is created through a health care inbound message. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Individual Membership Business Object	Indicates the business object using which the individual membership is created through a health care inbound message.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Benefits Business Object	Indicates the business object using which the individual membership benefit is created through a health care inbound message.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Address Business Object	Indicates the business object using which the address is created through a health care inbound message.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Statement Construct Business Object	Indicates the business object using which the statement construct is created through a health care inbound message.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

- **Characteristics** - This section lists the characteristics defined for the inbound message type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the inbound message type.
Delete	Used to delete the inbound message type.
	Note: You can delete an inbound message type when an inbound message is not created using the inbound message type.
Duplicate	Used to create a new inbound message type using an existing inbound message type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the inbound message type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Inbound Message Type** zone does not appear in the **Inbound Message Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to an inbound message type in the **Inbound Message Type List** zone.

Defining an Inbound Message Type

Prerequisites

The following table lists the prerequisites for defining various inbound message types:

If you want to define a..	Then, you should have...
Health Care Inbound Message Type	• Health care inbound message type business object defined in the application • Health care inbound message business object defined in the application • Customer registration types defined in the application

Copyright © 2026, Oracle and/or its affiliates.

If you want to define a..	Then, you should have...
Health Product and Plan Inbound Message Type	• Health product and plan inbound message type business object defined in the application • Health product and plan inbound message business object defined in the application • Health product business object defined in the application • Health plan business object defined in the application
Individual Inbound Message Type	• Health care inbound message type business object defined in the application • Health care inbound message business object defined in the application • Required person, account, individual membership, membership benefit, address, and statement construct business objects defined in the application

Procedure

To define an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Inbound Message Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type Business Object	Used to indicate the business object using which you want to create the inbound message type. The following table lists the business objects using which you can create the respective inbound message type: **Inbound Message Type** / **Business Object** Health Care Inbound Message Type / C1-HCInboundMsgType Health Product and Plan Inbound Message Type / C1-HCProdHlthPlnInbound Individual Inbound Message Type / C1-IndHCInboundMsgType	Yes

4. Select the required business object to create the respective inbound message type.
5. Click **OK**.

   The **Inbound Message Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the inbound message type. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Used to specify the inbound message type.	Yes
Business Object	Indicates the business object using which you are defining the inbound message type.	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to indicate the customer registration type using which you want to create the customer registration object through a health care inbound message. **Note:** This field appears when you are defining an inbound message type using the **C1-HCInboundMsgType** business object. While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the **Approval Required**, **Final Approval Required**, and **Manual Billing Hierarchy and Pricing** options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the **Final Approval Required** and **Manual Billing Hierarchy and Pricing** options are selected, but the **Approval Required** option is not selected.	Yes
Inbound Message Business Object	Used to indicate the business object using which you want to create the respective inbound message.	Yes
Health Product Business Object	Used to indicate the business object using which you want to create a health product through a health product and plan inbound message. **Note:** This field appears when you are defining a health product and plan inbound message type using the **C1-HCProdHlthPlnInbound** business object.	Yes
Health Plan Business Object	Used to indicate the business object using which you want to create a health plan through a health product and plan inbound message. **Note:** This field appears when you are defining a health product and plan inbound message type using the **C1-HCProdHlthPlnInbound** business object.	Yes
Description	Used to specify the description for the inbound message type.	Yes
Status	Used to indicate the status of the inbound message type. The valid values are: • Active • Inactive	Yes
Detailed Description	Used to specify additional information about the inbound message type.	No

- **Additional Data** - Used to specify additional details about the inbound message type. This section appears when you are specifying the details of an inbound message type which is created using the **C1-IndHCInboundMsgType** business object. This section contains the following fields:

How to define a characteristic for an inbound message type	Defining a Characteristic for an Inbound Message Type on page 2772

Defining a Characteristic for an Inbound Message Type

Prerequisites

To define a characteristic for an inbound message type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Inbound Message Type**)

Procedure

To define a characteristic for an inbound message type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an inbound *m*essage type.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Inbound Message Type**.	**Note:** This field is required while defining a characteristic for the inbound message type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required while defining a characteristic for the inbound message type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the inbound message type, click the **Add** (+) icon and *t*hen repeat step 2.

Copyright © 2026, Oracle and/or its affiliates.

Note: However, if you want to remove a characteristic from the inbound message type, click the **Delete** (🗑) icon corresponding to the characteristic.

Editing an Inbound Message Type

Prerequisites

The following table lists the prerequisites for editing various inbound message types:

If you want to define a..	Then, you should have...
Health Care Inbound Message Type	• Health care inbound message type business object defined in the application • Health care inbound message business object defined in the application • Customer registration types defined in the application
Health Product and Plan Inbound Message Type	• Health product and plan inbound message type business object defined in the application • Health product and plan inbound message business object defined in the application • Health product business object defined in the application • Health plan business object defined in the application
Individual Inbound Message Type	• Health care inbound message type business object defined in the application • Health care inbound message business object defined in the application • Required person, account, individual membership, membership benefit, address, and statement construct business objects defined in the application

Procedure

To edit an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.
   The **Inbound Message Type** screen appears.
4. In the **Inbound Message Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *I*nbound message type whose details you want to edit.

   The **Inbound Message Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the inbound message type. This section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Displays the inbound message type.	Not applicable
Business Object	Indicates the business object which is used while defining the inbound message type.	Not applicable
Customer Registration Type	Used to indicate the customer registration type using which you want to create the customer registration object through a health care inbound message. **Note:** This field appears when you are defining an inbound message type using the **C1-HCInboundMsgType** business object. Copying an Inbound Message Type

Instead of creating an inbound message type from scratch, you can create a new inbound message type using an existing inbound message type. This is possible through copying an inbound message type. On copying an inbound message type, the details including the characteristics are copied to the new inbound message type. You can then edit the details, if required.

Prerequisites

The following table lists the prerequisites for copying various inbound message types:

If you want to define a..	Then, you should have...
Health Care Inbound Message Type	• Health care inbound message type business object defined in the application • Health care inbound message business object defined in the application • Customer registration types defined in the application
Health Product and Plan Inbound Message Type	• Health product and plan inbound message type business object defined in the application • Health product and plan inbound message business object defined in the application • Health product business object defined in the application • Health plan business object defined in the application
Individual Inbound Message Type	• Health care inbound message type business object defined in the application • Health care inbound message business object defined in the application

Copyright © 2026, Oracle and/or its affiliates.

If you want to define a..	Then, you should have...
	• Required person, account, individual membership, membership benefit, address, and statement construct business objects defined in the application

Procedure

To copy an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.
   The **Inbound Message Type** screen appears.
4. In the **Inbound Message Type List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the inbound message type whose copy you want to create.

   The **Inbound Message Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the inbound message type. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Used to specify the inbound message type.	Yes
Business Object	Indicates the business object which is used while defining the inbound message type.	Not applicable
Customer Registration Type	Used to indicate the customer registration type using which you want to create the customer registration object through a health care inbound message. **Note:** This field appears when you are defining an inbound message type using the **C1-HCInboundMsgType** business object. While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the **Approval Required**, **Final Approval Required**, and **Manual Billing Hierarchy and Pricing** options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the **Final Approval Required** and **Manual Billing Hierarchy and Pricing** options are selected, but the **Approval Required** option is not selected.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Created To	Used to search inbound messages which are created till a particular date. **Note:** This field appears when the **Message Details** option is selected from the **Search By** list.	No
External Transaction ID	Used to search the inbound message which was a result of a particular transaction in the external source system. **Note:** This field appears when the **Message Details** option is selected from the **Search By** list.	No
User ID	Used to search inbound messages which are created by a particular user. **Note:** This field appears when the **Message Details** option is selected from the **Search By** list.	No
External Batch ID	Used to search inbound messages which are created through a particular batch job. **Note:** This field appears when the **Message Details** option is selected from the **Search By** list.	No
Inbound Message Type	Used to search inbound messages which are created using a particular inbound message type. **Note:** This field appears when the **Message Details** option is selected from the **Search By** list.	No

Note: You must specify at least one search criterion while searching for an inbound message.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date	Displays the date when the inbound message is created in the system.
Inbound Message Information	Displays information about the inbound message. **Note:** It has a link. On clicking the link, the **Inbound Message** screen appears where you can view the details of the respective inbound message.
Status	Indicates the status of the inbound message. The valid values are: • Pending • Processed • Rejected • Voided
Inbound Message Type	Indicates the inbound message type using which the inbound message is created.
Source System	Indicates the source system from where the inbound message is received.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.
External Source ID	Displays the external source system ID.
External Batch ID	Indicates the batch job in the external source system through which the inbound message is created.
Person Information	Indicates the person whose record is created or updated in the system through the inbound message. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person. This column appears when the **Person Details** option is selected from the **Search By** list.
Created By	Indicates the user who has created the inbound message.
	Note: This column appears when the **Message Details** option is selected from the **Search By** list.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for an Inbound Message

Prerequisites

To search for an inbound message, you should have:

- Inbound message types defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup
- Person identifier types defined in the application

Procedure

To search for an inbound message:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Integration** and then click **Inbound Message**.
   The **Inbound Message** screen appears.
3. Enter the search criteria in the **Search Inbound Message** zone.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   A list of inbound messages that meet the search criteria appears in the **Search Results** section.

Creating an Inbound Message

The following table lists the different types of inbound messages that you can create through the respective inbound web service:

Inbound Message	Inbound Web Service
Health Care Inbound Message on page 2360	C1-HCInboundMessage on page 2784
Health Product and Plan Inbound Message on page 2734	C1-HCProdHlthPlnInboundMessage on page 2785
	C1-HCProdHlthPlnInboundMes on page 2785

You cannot create the above inbound messages from the user interface. However, you can define, edit, and remove a characteristic from the above inbound messages from the user interface. You can delete and submit the above inbound messages for validation and processing from the user interface and through a batch process.

C1-HCInboundMessage

The **C1-HCInboundMessage** inbound web service is a SOAP based Web service which can be used for the self-funded, fully-insured group, and fully-insured individual businesses. It enables you to create or update a parent customer, bill group, individual customer and their account, self-funded or fully-insured group policy, policy plan, group or individual membership, group or individual membership benefits, and statement constructs. It allows you to define and edit pricing rules for the fully-insured group business. It allows you to create or update a pass-through billable charge for a fully-insured group policy. It allows you to terminate, reinstate, or renew a fully-insured group policy. It also allows you to terminate an individual membership.

On calling the **C1-HCInboundMessage** inbound web service, a health care inbound message is created in the **Pending** status. A health care inbound message goes through various statuses in its lifecycle. You can search for a health care inbound message through the **Inbound Message** screen.

Before calling the **C1-HCInboundMessage** inbound web service, you need to ensure that the prerequisites are setup as mentioned in Prerequisites on page 2368.

Viewing the Inbound Message Details

Procedure

To view the details of an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to *t*he inbound message whose details you want to view.
   The **Inbound Message** screen appears.
3. Ensure that the **Main** tab is selected.
4. View the details of the inbound message in the **Inbound Message** zone.

Related Topics

For more information on...	See...

Inbound Message screen	Inbound Message (Used for Viewing) on page 2786
Inbound Message zone	Inbound Message on page 2787

Inbound Message (Used for Viewing)

Once an inbound message is created, the **Inbound Message** screen allows you to:

- View the details of the inbound message
- Edit the details of the inbound message
- Delete the inbound message
- Submit the inbound message for validation and processing
- Resubmit the inbound message for validation and processing on failure
- Void the inbound message
- View the content of the inbound message
- View the log of the inbound message
- Add a log entry for the inbound message

The **Inbound Message** screen contains the following tabs:

- Inbound Message - Main on page 2786
- Inbound Message - Message on page 2788
- Inbound Message - Log on page 2789

Inbound Message - Main

The **Main** tab displays information about the inbound message. It contains the following zone:

- Inbound Message on page 2787

Copyright © 2026, Oracle and/or its affiliates.

Inbound Message

The **Inbound Message** zone displays the details of the inbound message. It contains the following sections:

- **Main** - Displays basic information about the inbound message. It contains the following fields:

Field Name	Field Description
Inbound Message Information	Displays information about the inbound message.
Status	Indicates the status of the inbound message. The valid values are: • Pending • Processed • Rejected • Voided
Inbound Message Type	Indicates the inbound message type using which the inbound message is created. **Note:** It has a link. On clicking the link, the **Inbound Message Type** screen appears where you can view the details of the respective inbound message type.
Source System	Indicates the external source system from where the inbound message is received.
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.
External Batch ID	Indicates the external batch job through which the inbound message is created.
External Source ID	Displays the external source system ID.
Person	Indicates the person specified in the inbound message. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person. This field appears when the **Person Details** option is selected from the **Search By** list in the **Search Inbound Message** zone.

- **Characteristics** - Lists the characteristics defined for the inbound message. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the inbound message.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit, or remove characteristics of the inbound message. **Note:** The **Edit** button appears when the inbound message is in the **Pending** or **Rejected** status.
Delete	Used to delete the inbound message.

Copyright © 2026, Oracle and/or its affiliates.

Button Name	Button Description
	Note: The **Delete** button appears when the inbound message is in the **Pending** status.
Submit for Processing	Used to submit the inbound message for validation and processing.
	Note: The **Submit for Processing** button appears only when the inbound message is in the **Pending** status.
Retry	Used when you want to change the status of the inbound message from **Rejected** to **Pending** so that the inbound message can be considered once again for validation and processing.
	Note: The **Retry** button appears when the inbound message is in the **Rejected** status.
Void	Used to cancel the inbound message.
	Note: The **Void** button appears when the inbound message is in the **Rejected** status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the inbound message is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the status of the inbound message is updated.
Create Date/Time	Displays the date and time when the inbound message is created.

Inbound Message	XML Format
Health Product and Plan Inbound Message	Health Product and Plan Inbound Message XML Format on page 2740

Once the inbound message is validated and processed either from the user interface or through a batch process, the following tags appear at the bottom of the inbound message in the **Inbound Message Content** zone:

Tag Name	Tag Description
toDoRetry	Displays the information about the retry option used for the inbound message.
retryDateTime	Displays the date and time when the retry option is used to change the status of the inbound message from **Rejected** to **Pending**.
numberOfRetries	Indicates the number of times the retry option is used for the inbound message.
currentErrorState	Indicates the status to which the inbound message is transitioned when its validation or processing fails. The valid value is: • REJECTED
isRetried	Indicates whether the retry option is used to change the status of the inbound message. The valid values are: • true • false

Editing an Inbound Message

Procedure

To edit an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding *t*o the inbound message whose details you want to edit.
   The **Inbound Message** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Inbound Message** zone.

   The **Inbound Message** screen appears. It contains the following sections:

   - **Main** - Displays the basic information about the inbound message. It contains the following fields:

Field Name	Field Description
Inbound Message Information	Displays information about the inbound message.
Inbound Message Type	Indicates the inbound message type using which the inbound message is created.
Source System	Indicates the source system from where the inbound message is received.
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.
External Batch ID	Indicates the batch job in the external source system through which the inbound message is created.
External Source ID	Displays the external source system ID.

   - **Characteristics** - Used to define, edit, or remove characteristics of the inbound message.

   Note: The **Edit** button appears when the inbound message is in the **Pending** or **Rejected** status.

5. Define, edit, or remove characteristics of the inbound message, if required.
6. Click **Save**.
   The changes made to the inbound message are saved.

How to define a characteristic for an inbound message	Defining a Characteristic for an Inbound Message on page 2791

Defining a Characteristic for an Inbound Message

Prerequisites

To define a characteristic for an inbound message, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Inbound Message**)

Procedure

To define a characteristic for an inbound message:

1. Ensure that the **Characteristics** section is expanded when you are editing an inbound message.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the inbound message.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the inbound message.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Inbound Message**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the inbound message.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the inbound message.

2. Enter the required details in the **Characteristics** section.

Copyright © 2026, Oracle and/or its affiliates.

3. If you want to define more than one characteristic for the inbound message, click the **Add** (+) icon and *t*hen repeat step 2.

> **Note:** However, if you want to remove a characteristic from the inbound message, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the inbound message.

Deleting an Inbound Message

There might be situations when incorrect inbound messages are received in the system. In such case, the system provides you with an ability to delete the inbound message when it is not yet validated or processed. Note that you can delete an inbound message when the inbound message is in the **Pending** status.

Procedure

To delete an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding *t*o the inbound message that you want to delete.
   The **Inbound Message** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Delete** button in the **Inbound Message** zone.
   A message appears confirming whether you want to delete the inbound message.

> **Note:** The **Delete** button appears when the inbound message is in the **Pending** status.

5. Click **OK**.
   The inbound message is deleted.

Processing an Inbound Message

Prerequisites

The following table lists the prerequisites which you should setup before processing the respective inbound message:

Inbound Message	Refer to...
Health Care Inbound Message	Prerequisites on page 2368

Copyright © 2026, Oracle and/or its affiliates.

Inbound Message	Refer to...
Health Product and Plan Inbound Message	Prerequisites on page 2734

Procedure

To process an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding *t*o the inbound message that you want to submit for validation and processing.
   The **Inbound Message** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Submit for Processing** button in the **Inbound Message** zone.

   The status of the inbound message is changed to **Validation** and the algorithms attached to the **Validation** status are invoked in the specified sequence. If the validation is successful, the status of the inbound message is changed to **Processing** and the algorithms attached to the **Processing** status are invoked in the specified sequence. The following table lists how the system behaves when the respective inbound message is processed:

If the inbound message is a...	Then...
Health Care Inbound Message	Creates or updates a person, account and fully-insured group or self-funded policy. It creates or updates a policy plan, membership, and pass-through billable charge for a fully-insured group policy. In addition, if requested, it terminates, reinstates, or renews a fully-insured group policy. Finally, the status of the inbound message is changed to **Processed**. The system uses the **C1-PERSTYPE** feature configuration to decide whether the person type specified in the health care inbound message represents **Parent Customer** or **Bill Group**. If the person type specified in the health care inbound message matches the person type specified in the **Bill Group Person Type** or **Parent Person Type** option type of the **C1-PERSTYPE** feature configuration, the system creates or updates the person, account, policy, policy plan, and address through a customer registration object. Note that the memberships, pass-through billable charges, and pricing rules are created directly and not via customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the **Bill Group Person Type** or **Parent Person Type** option type, the system creates or updates the person and its other entities directly and not through a customer registration object. In this case, the system only refers the customer registration type for the business objects using which the person, account, policy plan, membership, and address should be created or updated in the system. If the derivation and pricing parameters are specified for a bill group, the system automatically creates one sort record for the bill group. Here, the sort ID is set to the bill group ID. The start and end dates of the sort record are set to the bill group and parent customer's relationship start and end dates. Once the sort record is created, the system creates the derivation and pricing parameters for the bill group and sort ID combination.
Health Product and Plan Inbound Message	Creates or updates a health product, health plan, and pricing rules for individual memberships. In addition, it also maintains a log of the entities that are either added or updated through the health product and plan inbound message. Note that the system allows to upload the health product, health plan, and pricing rules together in a single inbound message or by creating

Copyright © 2026, Oracle and/or its affiliates.

If the inbound message is a...	Then...
	three separate inbound messages. Finally, the status of the inbound message is changed to **Processed**. The system uses the **C1-HLTPRDVAL** algorithm to validate the uploaded data through the health product and plan inbound message. Once the data is successfully validated, entities like health product, health plan, and pricing rules are created in the system.

However, if the validation or processing fails due to any reason, the status of the inbound message is changed to **Rejected** and the algorithms attached to the **Rejected** status are invoked in the specified sequence. A To Do is created using the To Do type specified in the **C1-TDCRINMSG** algorithm and assigned to the users with the To Do role specified in the **C1-TDCRINMSG** algorithm.

Note: The **Submit for Processing** button appears when the inbound message is in the **Pending** status.

Related Topics

Using the Retry Option for an Inbound Message

If the validation or processing fails due to any reason, the status of the inbound message is changed to **Rejected**. The system enables you to resubmit the inbound messages for validation and processing on failure. However, to resubmit the inbound message for validation and processing, you need to change the status of the inbound message from **Rejected** to **Pending**. This is possible through using the **Retry** option.

Procedure

To use the retry option for an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding *t*o the inbound message for which you want to use the retry option.
   The **Inbound Message** screen appears.
3. Ensure that the **Main** tab is selected.
4. Ensure that the To Dos created for the inbound message are in the **Complete** status.
5. Click the **Retry** button in the **Inbound Message** zone.
   The status of the inbound message is changed to **Pending**.

Note: The **Retry** button appears when the inbound message is in the **Rejected** status.

Voiding an Inbound Message

There might be situations when incorrect inbound messages are received in the system. In such case, the system provides you with an ability to void or cancel the inbound message after the validation or processing fails. Note that you can void or cancel an inbound message when the inbound message is in the **Rejected** status.

Procedure

To void an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding *t*o the inbound message that you want to void.
   The **Inbound Message** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Void** button in the **Inbound Message** zone.
   The status of the inbound message is changed to **Voided**.

Note: The **Void** button appears when the inbound message is in the **Rejected** status.

Statement Construct Preference

Oracle Revenue Management and Billing enables you to create and edit the statement construct of a person through a health care inbound message. However, note that you can create and edit the statement construct of only those persons through a health care inbound message whose record is created via a customer registration object. While creating or editing a statement construct, the system uses the statement construct business object of the customer registration type which is specified in the respective inbound message type.

If the data is not available in the following tags of a health care inbound message while creating a statement construct for a person, the system uses the default value from the respective attribute of the statement construct preference:

Tag Name	Considers Default Value from the Following Attribute...
statementAddressSource	Default Statement Address Source
effectiveStatus	Default Statement Status
statementCycle	Default Statement Cycle
statementFormat	Default Statement Format
statementRouteType	Default Statement Route Type
numberOfCopies	Default Statement Number of Copies

In addition, if the data is not available in the following tag of a health care inbound message while adding an account or contract in a statement construct, the system uses the default value from the respective attribute of the statement construct preference:

Tag Name	Considers Default Value from the Following Attribute...
printOrder	Default Statement Print Order

The system considers the statement construct preference which is specified in the **Field Mapping** parameter of the **C1-HCINPROC** algorithm. You can define, edit, delete, and copy a statement construct preference through the **Field Mapping** screen.

Searching for a Statement Construct Preference

Procedure

To search for a statement construct preference:

1. Click the **Menu** (☰) icon in the **Application** toolbar.
   A list appears.
2. Click the **Admin Menu** option from the list.
   A sub-menu appears.
3. Select **F** and then click **Field Mapping**.
   The **Field Mapping** screen appears.
4. Select the **Statement Construct** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.
   A list of statement construct preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Statement Construct Preference Details

Procedure

To view the details of a statement construct preference:

1. Search for the statement construct preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the statement construct preference whose details you want to view.
   The **Field Mapping** zone appears.
3. View the details of the statement construct preference in the **Field Mapping** zone.

How to search for a statement construct preference	Searching for a Statement Construct Preference on page 2798

Defining a Statement Construct Preference

Prerequisites

To define a statement construct preference, you should have:

- Field mapping business objects defined in the application.
- Statement cycles and statement route types defined in the application.
- Values defined in the **STM_ADDR_SRC_FLG** and **STM_FORMAT_FLG** lookup fields.

Procedure

Copyright © 2026, Oracle and/or its affiliates.

To define a statement construct preference:

1. Click the **Menu** (☰) icon in the **Application** toolbar.
   A list appears.
2. Click the **Admin Menu** option from the list.
   A sub-menu appears.
3. Select **F** and then click the **Add** button corresponding to the **Field Mapping** option from the sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)

Field Mapping Business Object	Used to indicate the business object using which you want to create the statement construct preference. The valid values are:
	• **Bill Route Method - Contact Method Mapping (i.e., C1_BillRouteCntMethMap)** - Enables you to maintain a routing method - contact method mapping preference.
	• **Field Mapping (i.e., C1-FieldMapping)** - Enables you to maintain the following:
	  • Automatic Refund/Write-Off Preference
	  • Billing Preference
	  • Binder Payment Preference
	  • Configuration for Match Type - Handling Overpayment Preference
	  • Delinquency Process Preference
	  • Delinquency Process Type Preference
	  • Geographic Rating Area Preference
	  • Hold Request Preference
	  • Individual Membership Preference
	  • Medicare Preference
	  • Member Reconciliation Preference
	  • Member Relationship and Subscription Tier Preference
	  • Membership Repricing Reasons Preference
	  • MNI Derivation Input Preference
	  • Statement Construct Preference
	  • Transaction Paid Status Count Preference
	• **Group Membership Status Reason Mapping (i.e., C1-MemStatusReasonMapGroup)** - Enables you to maintain a group membership status reason preference.
	• **Medicare Plan Benefit Package (i.e., C1-BenefitPackage)** - Enables you to maintain a Medicare plan benefit package.
	• **Membership Status Reason Mapping (i.e., C1-MemStatusReasonMapping)** - Enables you to maintain an individual membership status reason preference.
	Note: The above business objects are shipped with the product. The list includes those business objects which are created using the **Field Mapping** (i.e., **C1-FIELDMAP**) maintenance object.
		Yes

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.
5. Click **OK**.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details for the statement construct preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the statement construct preference.	Yes
Description	Used to specify the description for the statement construct preference.	Yes
Detailed Description	Used to specify additional information about the statement construct preference.	No
Status	Used to indicate the status of the statement construct preference. The valid values are: • Active • Inactive	Yes

- **Preference Category** - Used to specify the preference category. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: • Automatic Refund/Write-Off • Billing • Binder Payment • Configuration for Match Type - Handling Overpayment • Delinquency Process • Delinquency Process Type • Geographic Rating Area • Hold Request • Individual Membership • Medicare • Medicare Plan Benefit • Member Reconciliation • Member Relationship and Subscription Tier • Membership Repricing Reasons • Membership Status Reason • MNI Derivation Input • Routing Method - Contact Method Mapping • Statement Construct • Transaction Paid Status Count	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those values which are defined in the **FIELD_CAT_FLG** lookup field. You must select the **Statement Construct** option from the list while creating a statement construct preference.	

- **Preference Settings** - Used to set the attributes in the statement construct preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the statement construct preference. The valid values are: • **Default Statement Address Source** - Used when the address source is not specified while creating a statement construct through a health care inbound message. • **Default Statement Status** - Used when the status is not specified while creating a statement construct through a health care inbound message. • **Default Statement Cycle** - Used when the statement cycle is not specified while creating a statement construct through a health care inbound message. • **Default Statement Format** - Used when the statement format is not specified while creating a statement construct through a health care inbound message. • **Default Statement Route Type** - Used when the statement route type is not specified while creating a statement construct through a health care inbound message. • **Default Statement Number of Copies** - Used when the number of statement copies is not specified while creating a statement construct through a health care inbound message. • **Default Statement Print Order** - Used when the print order is not specified for an account or contract while creating or updating a statement construct through a health care inbound message.	Yes (Conditional) **Note:** This field is required while setting an attribute in the statement construct preference.
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the statement construct preference: **If the attribute is set to...** / **Then, this field is...** Default Statement Address Source / Used to indicate the source whose address should be used for sending the statements to the person. The valid value is: • Person	Yes (Conditional) **Note:** This field is required while setting an attribute in the statement construct preference.

Copyright © 2026, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>
<table>
<tr><th>If the attribute is set to...</th><th>Then, this field is...</th></tr>
<tr><td></td><td>Note: The list includes only those values which are defined in the STM_ADDR_SRC_FLG lookup field.</td></tr>
<tr><td>Default Statement Status</td><td>Used to indicate the status of the statement construct. The valid values are:
Active
Inactive</td></tr>
<tr><td>Default Statement Cycle</td><td>Used to indicate when statements should be generated for the statement construct.
Note: The list includes only those statement cycles which are already defined in the system.</td></tr>
<tr><td>Default Statement Format</td><td>Used to indicate the format in which the statements should be printed. The valid values are:
Detail
Summary
Note: The list includes only those values which are defined in the STM_FORMAT_FLG lookup field.</td></tr>
<tr><td>Default Statement Route Type</td><td>Used to indicate how to route the statements to the person.
Note: The list includes only those statement route types which are already defined in the system.</td></tr>
<tr><td>Default Statement Number of Copies</td><td>Used to indicate how many copies of the statement should be sent to the person.
Note: You must specify a positive integer for this attribute.</td></tr>

Field Name	Field Description	Mandatory (Yes or No)
	If the attribute is set to... / **Then, this field is...** **Note:** You must specify a positive integer for this attribute.	
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account • Adjustment • Billable Charge • Membership • Payment • Policy **Note:** At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types in the **MAP_ENTITY_FLG** lookup field.	No

Note: While defining a statement construct preference, you must set at least one attribute in the statement construct preference.

6. Select the **Statement Construct** option from the **Preference Category** list.
   The **Preference Category** section disappears and the **Preference Category** field appears in the **Main** section.
7. Enter the required details in the **Main** section.
8. Set the required attributes in the statement construct preference.
9. If you want to set more than one attribute in the statement construct preference, click the **Add** (+) icon and then repeat step 8.

Note: However, if you want to remove an attribute from the statement construct preference, click the **Delete** (🗑) icon corresponding to the attribute.

10. Click **Save**.
    The statement construct preference is defined.

Editing a Statement Construct Preference

Prerequisites

To edit a statement construct preference, you should have:

- Statement cycles and statement route types defined in the application
- Values defined in the **STM_ADDR_SRC_FLG** and **STM_FORMAT_FLG** lookup fields.

Procedure

To edit a statement construct preference:

1. Search for the statement construct preference in the **Field Mapping** screen.

Copyright © 2026, Oracle and/or its affiliates.

2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column *c*orresponding to the statement construct preference whose details you want to edit.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for the statement construct preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the statement construct preference.	Not applicable
Description	Used to specify the description for the statement construct preference.	Yes
Detailed Description	Used to specify additional information about the statement construct preference.	No
Status	Used to indicate the status of the statement construct preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Statement Construct	Not applicable

   - **Preference Settings** - Used to set the attributes in the statement construct preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the statement construct preference. The valid values are: • **Default Statement Address Source** - Used when the address source is not specified while creating a statement construct through a health care inbound message. • **Default Statement Status** - Used when the status is not specified while creating a statement construct through a health care inbound message. • **Default Statement Cycle** - Used when the statement cycle is not specified while creating a statement construct through a health care inbound message. • **Default Statement Format** - Used when the statement format is not specified while creating a statement construct through a health care inbound message. • **Default Statement Route Type** - Used when the statement route type is not specified while creating a statement construct through a health care inbound message. • **Default Statement Number of Copies** - Used when the number of statement copies is not specified while creating a statement construct through a health care inbound message.	Yes (Conditional) **Note:** This field is required while setting an attribute in the statement construct preference.

Copying a Statement Construct Preference

Instead of creating a statement construct preference from scratch, you can create a new statement construct preference using an existing statement construct preference. This is possible through copying a statement construct preference. On copying a statement construct preference, the details including the attributes are copied to the new statement construct preference. You can then edit the details, if required.

Prerequisites

To copy a statement construct preference, you should have:

- Statement construct preference (whose copy you want to create) defined in the application.
- Statement cycles and statement route types defined in the application.
- Values defined in the **STM_ADDR_SRC_FLG** and **STM_FORMAT_FLG** lookup fields.

Procedure

To copy a statement construct preference:

1. Search for the statement construct preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the statement construct preference whose copy you want to create.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for the statement construct preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the statement construct preference.	Yes
Description	Used to specify the description for the statement construct preference.	Yes
Detailed Description	Used to specify additional information about the statement construct preference.	No
Status	Used to indicate the status of the statement construct preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Statement Construct	Not applicable

   - **Preference Settings** - Used to set the attributes in the statement construct preference. It contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Attribute</td><td>Used to indicate the attribute which you want to set in the statement construct preference. The valid values are:
• Default Statement Address Source - Used when the address source is not specified while creating a statement construct through a health care inbound message.
• Default Statement Status - Used when the status is not specified while creating a statement construct through a health care inbound message.
• Default Statement Cycle - Used when the statement cycle is not specified while creating a statement construct through a health care inbound message.
• Default Statement Format - Used when the statement format is not specified while creating a statement construct through a health care inbound message.
• Default Statement Route Type - Used when the statement route type is not specified while creating a statement construct through a health care inbound message.
• Default Statement Number of Copies - Used when the number of statement copies is not specified while creating a statement construct through a health care inbound message.
• Default Statement Print Order - Used when the print order is not specified for an account or contract while creating or updating a statement construct through a health care inbound message.</td><td>Yes (Conditional)
Note: This field is required while setting an attribute in the statement construct preference.</td></tr>
<tr><td>Value</td><td>Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the statement construct preference:
<table>
<tr><th>If the attribute is set to...</th><th>Then, this field is...</th></tr>
<tr><td>Default Statement Address Source</td><td>Used to indicate the source whose address should be used for sending the statements to the person. The valid value is:
• Person
Note: The list includes only those values which are defined in the STM_ADDR_SRC_FLG lookup field.</td></tr>
<tr><td>Default Statement Status</td><td>Used to indicate the status of the statement construct. The valid values are:
• Active</td></tr>
</table></td><td>Yes (Conditional)
Note: This field is required while setting an attribute in the statement construct preference.</td></tr>
</table>

Customer Integration Bill Level Characteristic Types

Until now, the customer setup for a customer was conducted through customized **File Request Type** and **Bill Levels**, where the characteristic types were uploaded through the **Bill Level Upload** feature. Now, Oracle Revenue Management and Billing enables you to add the characteristic type at the bill level in the **Health Care Inbound Message (C1-HCInboundMessage)** business object.

Inbound Processing Discrepancy

Healthcare Integrations (automated data exchanges between healthcare-related source systems and ORMB) routinely move many records through an inbound message queue. In such kind of setup, the time ORMB system receives an inbound message may differ from the time the source system created the original record.

When multiple messages reach the ORMB system at nearly the same time, relying only on ORMB creation timestamp may process those inbound messages based on the arrival timing instead of the order in which they were created in the source system. To counter such scenario, the **Pricing Discrepancy** design resolves this issue by storing the source system transaction timestamp in the inbound message record. The goal is to process batch records in the most accurate available time sequence, while using a consistent fallback whenever timestamps are missing or identical.

Timing Distinctions - Driving the Design

The system design maintains two timestamps, each serving a distinct purpose. The **CRE_DTTM** column continues to store the system date, whereas the newly introduced **TXN_DTTM** column stores the exact timestamp when the inbound message is created in the source system. For instance, if **Person A** is created in the source system on **01 August 2026 at 09:00:00 A.M.** and **Person B** is created on the same day at **09:15:00 A.M.**, and the source system creates a single inbound message for both the persons on the same day at **09:30:00 A.M.**, where that inbound message arrives in the ORMB application at **09:45:00 A.M.** Now, in this scenario, the system does the following:

- Stores the date and time as **01 August 2026, 09:30:00 A.M.** in the **TXN_DTTM** field.
- Stores the date and time as **01 August 2026, 09:45:00 A.M.** in the **CRE_DTTM** field.

Capturing both values makes the difference explicit and preserves the existing system record.

Design Level Changes

The following design level changes are done in the ORMB application:

Column/Parameter	**Action/Purpose**
Table: C1_INBOUND_MESSAGE **Column:** TXN_DTTM **Data type:** TIMESTAMP(6)	The new **TXN_DTTM** column stores the precise point in time, combining both a calendar date and clock time. **Note:** If the **TXN_DTTM** contains NULL in the inbound message, system stamps the **System Date** in the **TXN_DTTM** column.
Batch: C1-HCEXS (HC Inbound Message Monitor Process) **Batch Parameters:** • externalSourceId • inboundMessageType	• The **externalSourceId** parameter filters the inbound messages based on the specified external source ID. Only inbound messages with a matching **externalSourceId** are selected for processing. The **externalSourceId** parameter is defined as a **String**. It filters the inbound messages on the **C1_EXT_SOURCE_ID** column of the **C1_INBOUND_MESSAGE** table. The behavior of externalSourceId parameter completely depends on the **restrictNumberOfChars** batch parameter, such as: • If the **restrictNumberOfChars** parameter is blank or set to zero, **externalSourceId** parameter is treated as an exact external source ID.

Copyright © 2026, Oracle and/or its affiliates.

Column/Parameter	Action/Purpose
	The batch therefore creates a work unit only for that specific source and processes its eligible inbound messages. • If the **restrictNumberOfChars** parameter is greater than zero, system uses the specified number of leading characters in the **externalSourceId** parameter as the matching pattern for external source. The system first finds external source IDs that start with the specified prefix and creates a separate work unit for each matching group. It then processes all eligible inbound messages from every source ID in that group. Now, for instance, if the **externalSourceId** is 9111 and **restrictNumberOfChars** is 3, batch selects the 911 group and may go ahead and process the eligible inbound messages where the source ID is 9111, 9112, and the ones that begin with 911 series. • The **inboundMessageType** batch parameter filters the inbound message based on the specified inbound message type. Only inbound messages with a matching **inboundMessageType** are selected for processing. The **inboundMessageType** parameter references the **C1_INBOUND_MSG_TYPE_CD** column of the **C1_INBOUND_MESSAGE** table. When the **inboundMessageType** parameter is populated, the batch adds the filter of the **inboundMessageType** to both job-work and execute work unit selection. By applying this restriction at both the stages: • Work units are created only for external source groups which contain the respective inbound message type. • If the **inboundMessageType** parameter is blank, the system processes the inbound messages regardless of their inbound message type.
	Note: The **externalSourceId** and **inboundMessageType** are optional. These parameters narrow the set of inbound messages selected during both job-work and execute-work-unit processing. If neither parameter is specified, the batch continues to use its existing external-source partitioning behavior. When both the parameters are specified, system applies both the conditions. An inbound message is eligible for processing only if it matches the external source criteria and the specified inbound message type.

Parent and Bill Group Date Effective Relationships

This specific enhancement enriches the healthcare inbound message processing capability for Pharmacy Line of Business. It enables date-effective parent group to bill group relationships so that a bill group can be associated with different parent groups across distinct business periods without losing historical context. The dates provided for inbound processing determine which **Parent Group**, **Bill Group Sort**, **Bill Level**, **Policy**, and **Policy Person** records apply for a given period.

The optional parent identifiers provided at bill group improves the outcome when the same billing group has more than one parent relationship over time. A bill group may have multiple parent group relationships, each with its own effective period. The relationship start date is part of the key used to determine the appropriate **Bill Group Sort**. The generated sort ID uses the **RYYMMDDNNN** format, making the sort period aware instead of being equivalent to the parent identifier where:

Copyright © 2026, Oracle and/or its affiliates.

- YYMMDD represents the relationship START_DT.
- NNN is the sequence number for that date.

Note: The **Bill Level** records are created, retained, updated, or inactivated according to the resolved parent group and the sort context for that relationship period.

The healthcare inbound message is the source of truth for **Parent Group** to **Bill Group** relationship dates. A replacement parent does not, by itself, close an existing relationship. The outgoing relationship should be explicitly end-dated before a new **Person-to-Person** relationship is defined for the same bill group and a different parent group. The following table lists various inbound conditions and the respective system behavior:

Inbound Condition	**System Behavior**
If same parent and same relationship start date exist	The system updates Person-to-Person Relation with the provided end date, and the related Bill Group Sort period is kept aligned with the same relationship period.
If a different parent exists for the same billing group with same relationship start date	The system allows new parent only when the existing relationship represents one-day correction history, otherwise system treats the setup as ambiguous.
If the matching relationship period does not exist	The system creates a new Person-to-Person relationship period, and then either creates or reuses the period-specific Bill Group Sort period and processes the related Bill Level, Policy, and Policy Person records for the provided period.

Note: The configured Person-to-Person relation type must already define the **Parent Group–to–Bill Group** relationship through the applicable configuration.

The **Bill Level** input supports two optional fields that help identify the intended parent group. If the optional fields are present, the inbound message processing mechanism uses them to resolve the parent context for bill level processing. If the optional fields are missing, system continues to rely on the relationship context provided in the inbound structure and the existing relationship period. Following are the optional parent identifier fields:

- **parentPersonIdentifierType** – Used to specify the parent person identifier type intended to identify the applicable parent group during bill level processing.
- **parentPersonIdentifier** – Used to specify the parent person identifier value intended to identify the applicable parent group during bill level processing.

This enhancement also supports the following business scenarios:

- **Same Day Correction** – Preserve the incorrect parent as one-day historical record, and then establish the corrected parent relationship.
- **Move a Bill Group to a Different Parent** – Explicitly end-date the outgoing parent group relationship, and then create a new relationship period.
- **Return a Bill Group to a Previous Parent** – Create a separate, later relationship period for the returning parent group containing separate **Bill Group Sort** and **Bill Level Context**.

The following existing artifacts are modified or continue to be used with the new period-aware parent and sort context:

Artifacts	**Impact**
Add/Edit Bill Level Details (C1-BillLevelAddEditAction) Business Service	The business service uses the existing Bill Level add and edit lifecycle processing mechanism.
	Note: Parent and **Sort** context passed to the **Bill Level** is enhanced for multiple parent periods.
Sort Search (C1-BGSRT) Zone	The system continues to show period-specific **Bill Group Sort** records.

Copyright © 2026, Oracle and/or its affiliates.

Artifacts	Impact
	Note: Created or updated sort reflects the Bill Group, Parent Group, and Relationship Start Date.
Parent Customer Pricing Rules (C1-PRPCRULE) Zone	The **Pricing Rule** search is available with **Bill Group** and **Sort** context and now supports display for multiple parent groups.
Customer Registration - Person Common Data (C1-PersonDataCommonDA) Data Area	Continues to carry person relationship data used during inbound processing.
Healthcare Inbound Message Extension (C1-HCInboundMsgExtDA) Data Area	Continues to carry Healthcare-specific inbound data used during inbound processing.
PHARMACY Policy Type	Indicates the business object using which you want to create the pharmacy policy type.
Pharmacy Policy (C1-PharmaPolicy) Business Object	Carries different policy-related attributes like Policy Number, Policy Start Date, Policy End Date, Policy Persons, etc. It contains the following statuses: • Pending • Active • Cancel

Upload Lockbox Payment and Remittance Advices

Topics:

- Prerequisites
- EDI 820 Flat File Description
- Sample EDI 820 Flat File
- Upload EDI 820 Files in ORMB

Oracle Revenue Management and Billing enables you to upload lockbox payment and remittance advices received in the **Electronic Data Exchange (EDI) 820** format. Under this feature, the payments made by customers are directed to a special post office box instead of going to the company directly. The bank goes to this post office box, retrieves the payments, processes them and deposits the funds directly into the company's bank account.

An EDI 820 payment order or remittance advice is an electronic document that can be used to initiate payments and send remittance information. EDI 820 sends information to vendor furnishing details of payment for his supplies. A remittance advice is a note sent from a customer to their supplier, informing the supplier that they have paid their invoice. The advice may contain elements such as a text note, the invoice number and the invoice amount, among others. Remittance advice is not required, but they are seen as a courtesy since they make it easier for the supplier to match invoices with payments.

To enable this feature, lockbox payment files are required to be uploaded on ORMB and these files have to be allocated to the appropriate accounts. To support multiple lines of business, the lockbox upload needs to:

- Consider the primary identifier when looking for a source customer number match. For customers having multiple source system identifiers, the lockbox process only matches against the one identified as primary customer.
- Incorporate the payment allocation logic in the system on the basis of which the lockbox uploads the payments for the identified customer.

To support remittances which can split a tender across multiple customers:

- Allow source customer number or tax id to be provided as remittance (RMR) values. In case of multiple source customer number or tax id, remittance values are provided for a single tender, the account associated with the first remittance value is set as the payor account. If there is at least one remittance value where a single customer account cannot be determined, the entire tender is placed into general suspense.
- A new payment upload batch **C1-PUPSG** is developed to read lockbox payment files from the bank and load the payment details into the ORMB payment upload staging tables for processing.
- Once the text file is uploaded, the deposit control staging, tender control staging, and payment upload staging records are created in the respective tables. You can then execute the **Payment Upload (PUPL)** batch to create the deposit control, tender controls, payment events, tenders, payments, and payment segments using payment records in the staging area.

Note: For more information about the batches, refer to the *Oracle Revenue Management and Billing Batch Guide*.

Prerequisites

To setup the upload lockbox payment process, you need to do the following:

- Define the values in the parameters of the **C1-CCPYTSADS** and **C1-MATSATYP** algorithms.
- Lockbox tender types defined in the **C1_LBX_TENDER_TYPE** lookup field.
- Lockbox record type, lockbox reference identification qualifier, and lockbox remittance identification types defined in the **C1_LBX_820_RECORD_TYPE** , **C1_LBX_REF_IDQ_LKP**, and **C1_LBX_RMR_ID_TYPE** lookup fields respectively.

EDI 820 Flat File Description

Following is the description of the key field segments in the EDI 820 flat file format:

<table>
<tr><th>Field Name</th><th>Description</th></tr>
<tr><td>External Source ID</td><td>Uniquely identifies the lockbox.</td></tr>
<tr><td>External Transmission ID</td><td>Uniquely identifies the transmission. To ensure this transmission, the date component (such as, 20150813) should match the deposit date and there should only be one file per deposit date.</td></tr>
<tr><td>External Batch ID</td><td>Uniquely identifies the batch of payments in a transmission. To ensure these payments, if there are multiple ST records in a file, the transaction set control number (such as, 0101, 0202, ..) should be unique.</td></tr>
<tr><td>Payment Transaction</td><td>The following table describes the fields that are included in the payment transaction:
<table>
<tr><th>Field</th><th>Description</th></tr>
<tr><td>Attributes</td><td>Following are the attributes of payment transaction:
Payment Amount
Payment Method
Payment Date
Payor Name</td></tr>
<tr><td>Reference Records</td><td>Uniquely identifies the transaction. This is retrieved from different reference records based on the payment method. The following table indicates the external reference ID based on the payment methods used in the transaction:
<table>
<tr><th>External Reference ID Value</th><th>Description</th></tr>
<tr><td>ACH</td><td>Use the automated clearinghouse trace number. (Reference Identifier Code is 8G).</td></tr>
<tr><td>CHK</td><td>Use the transaction reference number. (Reference Identifier Code TN).</td></tr>
</table></td></tr>

Upload EDI 820 Files in ORMB

A new batch named **Lockbox Payment Upload - Small Group (C1-PUPSG)** is introduced in this release. This batch is used to read the EDI 820 lockbox file received from the bank containing payment details for accounts and uploads the payment details into the ORMB payment upload staging tables. The batch uses the reference ID available in the payment and remittance record (in the specified order) to identify the account in the system:

- Source System Customer Number
- Invoice ID (if the source system customer number is not available)
- MICR (if the source system customer number and invoice ID are not available)

If all three reference IDs are available in the payment and remittance record, the system uses the source system customer number to identify the customer in ORMB. If the customer is found in ORMB, the system then checks whether the identified customer has an account. If the identified customer has one account, the system checks the following:

- If the **Check Binder Payment** parameter in the **Pay Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm is set to Y, the system checks whether the payment is the first payment for the account and the tender used for the payment is not automatic payment. If so, the payment is applied to the **Binder Payment** contract.

Copyright © 2026, Oracle and/or its affiliates.

- If the **Check Promise To Pay** parameter in the **Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm is set to **Y**, the system checks whether there is an active promise to pay for the account. If so, the payment is applied to the **On Account** contract.
- If the **Check Payment Agreement** parameter in the **Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm is set to Y, the system checks whether there is an active payment agreement request for the account. If so, the payment is applied to the **On Account** contract.

However, if the **Check Binder Payment**, **Check Promise To Pay**, and **Check Payment Agreement** parameters are set to **N**, the payment is applied to the account's open bills in the order of the due date (i.e. oldest bill first). If the payment amount is greater than the account's billed balance plus overpayment threshold amount (defined in the **Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm), the entire amount is applied on the On Account contract. However, if the payment amount is greater than the account's billed balance, but less than account's billed balance plus overpayment threshold amount, the overpayment amount is applied on the On Account contract.

Let us understand this with the help of an example:

Payment Amount	**Bill 1 (Due Date 01-Feb-2017)**	**Bill 2 (Due Date 01-April-2016)**	**Overpayment Threshold Amount**	**System Behavior**
100	50	50	50	One payment (50$) is created for Bill 2 (oldest due date); One payment (50$) is created for Bill 1.
150	50	100	120	One payment (100$) is created for Bill 2 (oldest due date); One payment (50$) is created for Bill 1.
175	60	75	50	One payment (75$) is created for Bill 2 (oldest due date); One payment (60$) is created for Bill 1; The remaining amount (40$) is applied on the On Account contract.
200	50	50	50	The entire amount (200$) is applied on the On Account contract. This is because the payment amount is greater than the account's billed balance plus overpayment threshold amount.

If the identified customer has multiple accounts, then the payment is applied to the On Account contract. If there are no accounts for the identified customer, or account could not be found in ORMB, or the customer could not be found in ORMB, the payment is applied to the suspense contract defined on the tender source associated with the external source (lockbox) ID.

If the source system customer number is not available, but the invoice ID and MICR are available in the payment and remittance record, then batch uses the invoice ID to find the account for which the invoice is created. Once the account is identified, the system behaves in the similar manner (listed above) when the identified customer has one account.

If the source system customer number and invoice ID are not available, but the MICR is available in the payment and remittance record, then system finds the payment where the same MICR is stamped as a characteristic and then finds the account for which the respective payment is created. In this way, the system derives the account for which the payment must be applied. However, the MICR is used to derive the account only when the **Search Customer Using MICR (Y/N)** parameter in the batch is set to **Y**. Once the account is derived, the system behaves in the similar manner (listed above) when the identified customer has one account.

Copyright © 2026, Oracle and/or its affiliates.

Following scenarios must be considered before uploading the **EDI 820** file in the system.

Scenario	System Behavior
If the **RMR** tag contains the bill Id and the **NM1** tag contains the binder payment identification value	The system initiates the payment for the bill Id and defines the binder payment identifier value in the **Characteristics** tab of the **Payment** screen.
If the **RMR** tag contains the bill Id but the **NM1** tag does not contains the binder payment identification value	The system initiates the payment for the bill Id and does not process further.
If the **RMR** tag contains some other information besides the bill Id and the **NM1** tag contains the binder payment identification value	The system performs the following actions: **1.** Identifies the appropriate membership using the binder payment identification value provided in the **NM1** tag. The binder payment identification value must contain the binder payment applicability flag set to **Y**. **2.** Once the membership is identified and is in the **Pending Effectuation** status, the system identifies the account of the membership, using the information provided in the **RMR** tag, and applies the payment against the binder contract. **3.** If the membership is in the **Active** status, the system applies the payment against the account's contract.
If the **RMR** tag contains some other information besides the bill Id and the **NM1** tag does not contains the binder payment identification value	The system identifies the account of the membership using the information provided in the **RMR** tag and applies the payment against the account's contract.

You can upload payment and remittance advice in the TXT format. You need to ensure that the text file is in the required format; otherwise the file will not be uploaded.

Once the text file is uploaded through the **Lockbox Payment Upload - Small Group (C1-PUPSG)** batch, the deposit control staging, tender control staging, and payment upload staging records are created in the respective tables. You can then execute the **Payment Upload (PUPL)** batch to create the deposit control, tender controls, payment events, tenders, payments, and payment segments using payment records in the staging area.

Note: For more information about the batches, refer to the *Oracle Revenue Management and Billing Batch Guide*.

Chapter 34

Deferred Revenue Recognition

Topics:

- Prerequisites
- Deferred Revenue Recognition Status Transition
- Algorithms Used in Deferred Revenue Recognition
- Deferred Revenue Recognition Template (Used for Searching)
- Deferred Revenue Recognition Template (Used for Viewing)
- Deferred Revenue Recognition (Used for Searching)
- Deferred Revenue Recognition (Used for Viewing)

Most often, insurance company bill policies in installments, but Accounts Receivable (AR) and revenue for the total premium are booked as new business in the beginning of the policy term. Regulations, restrictions, or company policies may require that revenue for the total premium must be initially booked to the general ledger as deferred revenue. As time passes, the deferred revenue is realized as earned revenue. For example, the total premium for six months auto-policy (July 1 to Dec 31) is $1200. When this new business is booked, the revenue of $1200 is initially booked as deferred revenue. However, on July 31, August 31, September 30, October 31, November 30, and December 31, $200 must be transferred from deferred revenue GL to earned revenue GL. In order to manage this process, adjustments are created that transfer amount from deferred revenue GL to earned revenue GL.

A deferred revenue recognition schedule determines when these deferred revenue recognition adjustments must be created and posted. On the recognition date, the deferred revenue recognition adjustment is created to transfer a portion of deferred revenue to earned revenue. The corresponding financial transaction does not impact customer's account balance.

You need to create a deferred revenue recognition template for each distribution code and contract type combination for which you want to create a deferred revenue recognition (when the bill segment and adjustment financial transactions created against the respective contracts are frozen). It is the deferred revenue recognition template which helps the system to determine:

- Adjustment type using which the adjustment should be created when the deferred revenue is recognized
- Whether the recognition amount and date in the deferred revenue recognition schedule are editable until recognized
- Whether the deferred revenue recognition schedule must be generated automatically or manually
- Whether the deferred revenue must be recognized daily, weekly, or monthly
- Whether the deferred revenue amount must be prorated when the recognition schedule is set to Monthly
- Algorithm using which the recognition lines in the deferred revenue recognition schedule should be created
- Algorithm using which the adjustment must be generated when the deferred revenue is recognized

During the deferred revenue recognition process, a deferred revenue recognition creation goes through various statuses in its lifecycle. For more information about the deferred revenue recognition statuses, see Deferred Revenue Recognition Status Transition on page 2825.

Note: The lifecycle of a deferred revenue recognition creation is driven by the respective business object using which the deferred revenue recognition is generated. The deferred revenue recognition feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the deferred revenue recognition process, see Prerequisites on page 2825.

Copyright © 2026, Oracle and/or its affiliates.

Prerequisites

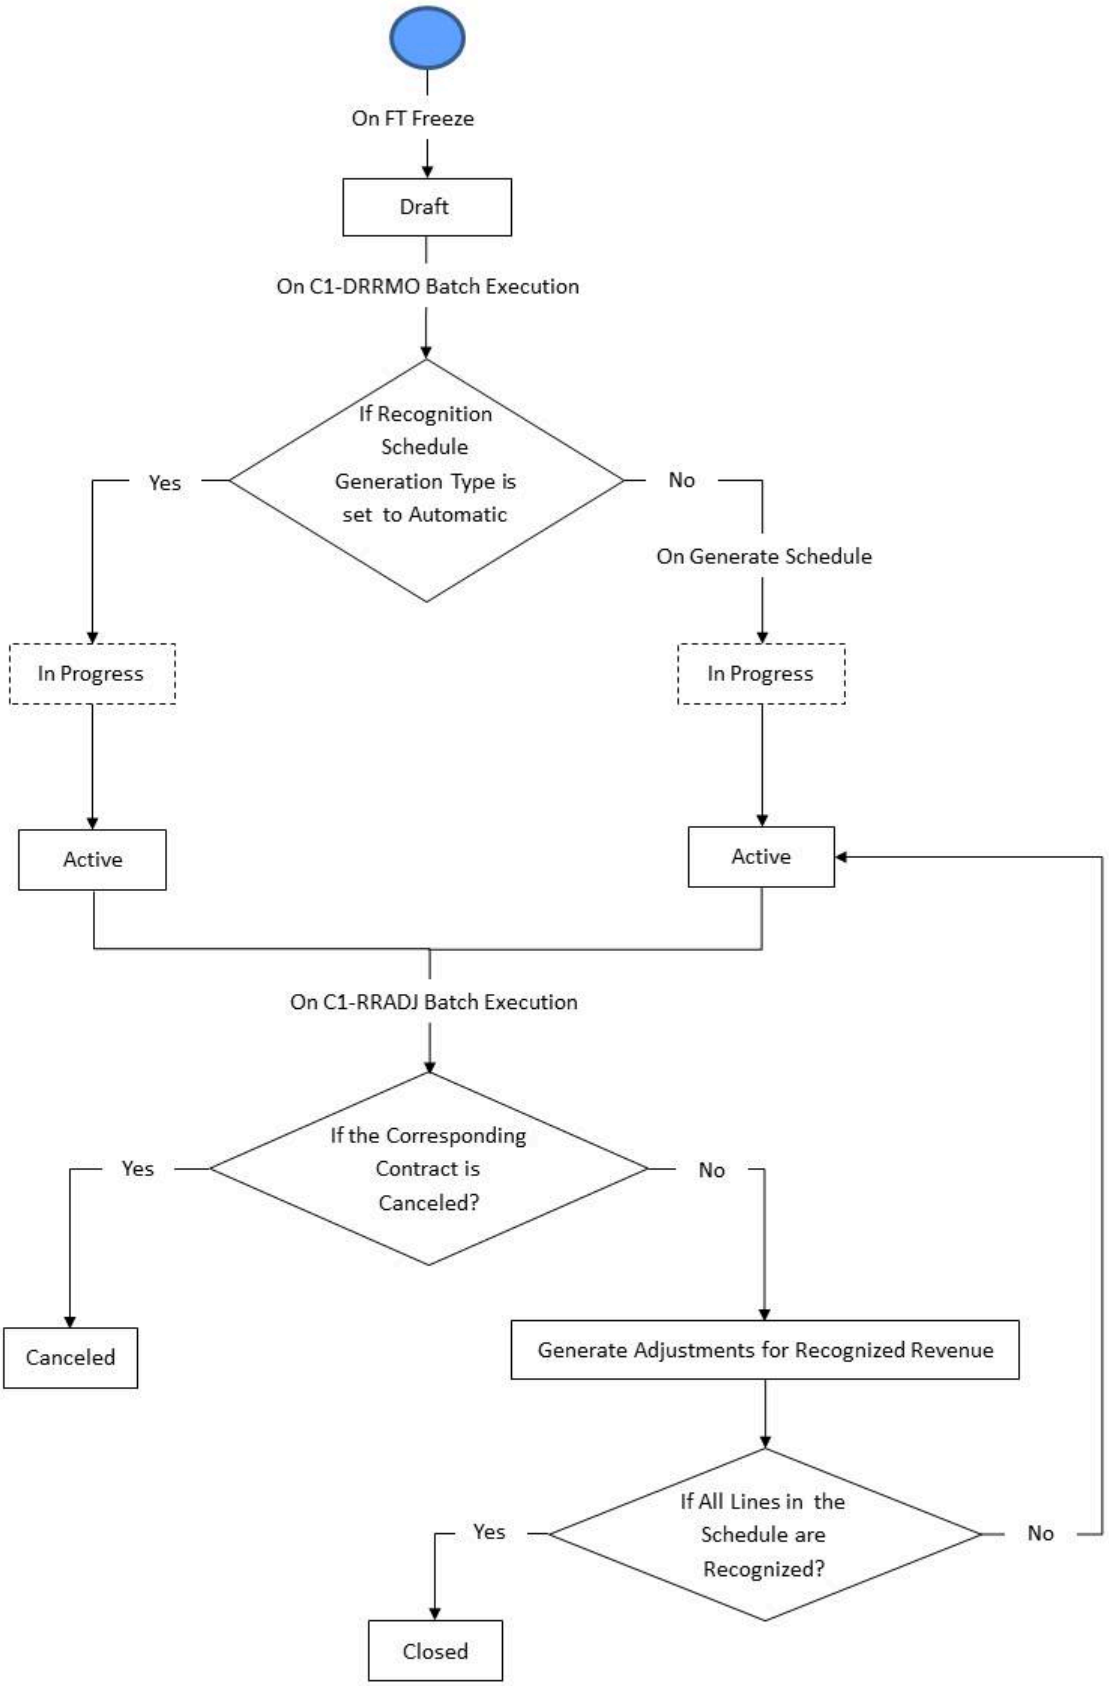
To setup the deferred revenue recognition feature, you need to do the following:

- Define the required deferred revenue recognition templates in the system.
- Define the required characteristic types where the characteristic entity is set to **Deferred Revenue Recognition**.
- Define the values for the following parameters in the **C1-REVRECITM** algorithm:
  - Use Calendar or Business Days (C or B)
  - Override Default Recognition Date (Y or N)
  - Override Default Weekly Recognition Day (Mon, Tue, Wed, Thu, Fri, Sat, Sun)
  - Override Default Monthly Recognition Date (1-31)
- Define the value for the **Use Contract Expiration Date (Y or N)** parameter in the **C1-REVRECSCH** algorithm.
- Define the value for the **Create Adjustments (Y or N)** parameter in the **C1-REVITMREC** algorithm.
- Set the batch control type of the **Deferred Revenue Recognition Periodic Monitor (C1-RRSMO)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

Deferred Revenue Recognition Status Transition

The following figure graphically indicates how a deferred revenue recognition status transition moves from one status to another:

Copyright © 2026, Oracle and/or its affiliates.



Copyright © 2026, Oracle and/or its affiliates.

Algorithms Used in Deferred Revenue Recognition

The following table lists the algorithms which are used in the lifecycle of the business object:

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECSCH	C1-REVRECSCH	This algorithm is invoked when the status of the bill segment and adjustment financial transactions created against the contracts (of the contract type to which the algorithm is attached) is set to Frozen. It checks whether an active deferred revenue recognition template exists for the distribution code and contract type combination. If so, it creates a deferred revenue recognition using the template and sets the status of the deferred revenue recognition to Draft. It then checks whether the type of the corresponding financial transaction is Bill Segment or Adjustment. If the type of the corresponding financial transaction is Bill Segment, it sets the valid until date of the deferred revenue recognition to the bill segment end date. However, if the type of the corresponding financial transaction is Adjustment, it checks whether the Use Contract Expiration Date (Y or N) parameter is set to Y or N. If the Use Contract Expiration Date (Y or N) parameter is set to Y, it sets the valid until date of the deferred revenue recognition to the contract expiration date. However, if the Use Contract Expiration Date (Y or N) parameter is set to N, it sets the valid until date of the deferred revenue recognition to the financial transaction arrears date. In addition, on creating the deferred revenue recognition, an appropriate log entry is added which you can view in the Deferred Revenue Recognition Log zone. It contains the following parameter: • Use Contract Expiration Date (Y or N) - Used to indicate whether the valid until date must be set to the contract expiration date when the type of the corresponding financial transaction is Adjustment. The valid values are Y and N. This parameter is mandatory.
		C1-REVRECITM	C1-REVRECITM	This algorithm creates schedule for the deferred revenue recognition. It considers the valid until date and accordingly creates the recognition lines within the schedule. If the recognition schedule is Weekly, by default, the recognition day is set to Mon

Copyright © 2026, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
				(which means Monday of each week). However, if the recognition schedule is Monthly, by default, the recognition date is set to the last day of the month (i.e. 28, 29, 30, or 31) It contains the following parameters: • **Use Calendar or Business Days (C or B)** - Used to indicate whether you want to use the calendar or business days while generating the recognition schedule. The business days are derived using the work calendar defined on the financial transaction. If you do not specify any value for this parameter, by default, it is set to C. This parameter is mandatory. • **Override Default Recognition Date (Y or N)** - Used to indicate whether you want to override the default weekly or monthly recognition date. The valid values are Y and N. This parameter is mandatory. • **Override Default Weekly Recognition Day (Mon, Tue, Wed, Thu, Fri, Sat, Sun)** - Used to indicate the day of the week when you want to recognize the deferred revenue. The valid values are Mon, Tue, Wed, Thu, Fri, Sat, and Sun. This parameter is required when you want to override the default weekly recognition day. • **Override Default Monthly Recognition Date (1-31)** - Used to indicate the day of the month when you want to recognize the deferred revenue. The valid values are 1, 2, 3, …, 31. This parameter is required when you want to override the default monthly recognition date.
		C1-REVRECADJ	C1-REVRECADJ	This algorithm creates deferred revenue recognition adjustment using the adjustment type defined on the respective deferred revenue recognition template. Before creating the deferred revenue recognition adjustment, it checks whether the contract for which the deferred revenue recognition is created is cancelled. If so, the status of the deferred revenue recognition is set to Canceled. If all lines in the recognition schedule are recognized, the status of the deferred revenue recognition is set to Closed.

Copyright © 2026, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVITMREC	C1-REVITMREC	If this algorithm is attached in the deferred revenue recognition template, it is invoked while executing the C1-RRADJ batch. It contains the following parameter: • **Create Adjustments (Y or N)** - Used to indicate whether the deferred revenue recognition adjustment must be created or not when the recognition date is earlier than or equal to the batch business date. The valid values are Y and N. This parameter is mandatory.
		C1-DRRTM-INF	C1-DRRTM-INF	This algorithm generates the deferred revenue recognition template information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order: **1.** Deferred Revenue Recognition Template **2.** Description
		C1-DRRTMPVAL	C1-DRRTMPVAL	This algorithm validates the deferred revenue recognition template. It checks the following: • Whether the data is specified in the mandatory fields, such as Deferred Revenue Recognition Template, Description, Status, Distribution Code, Contract Type, Adjustment Type, Recognition Schedule Generation Type, and Recognition Schedule. • Whether an algorithm is attached to the Create Deferred Revenue Recognition Schedule and Generate Deferred Revenue Recognition Adjustment system events. • Whether a deferred revenue recognition template already exists for the specified distribution code and contract type combination. • Whether special characters except underscore are specified in the Deferred Revenue Recognition Template field. • Whether the high proration limit is between 0 to 31 and is greater than the low proration limit.>> Whether the low proration limit is between 0 to 31 and is less than the high proration limit. In addition, it does not allow you to:

Copyright © 2026, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
				• Delete a deferred revenue recognition template when it is used to create a deferred revenue recognition. • Edit a deferred revenue recognition template when the corresponding deferred revenue recognition is in the Draft status. • Inactivate a deferred revenue recognition template when the corresponding deferred revenue recognition is not in the Closed status. You must attach this validation algorithm to the custom business object which is used to create a deferred revenue recognition template. Otherwise, erroneous results might occur.
		C1-DRRSC-INF	C1-DRRSC-INF	This algorithm generates the deferred revenue recognition information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order: **1.** Deferred Revenue Recognition Template **2.** Deferred Revenue Recognition Status **3.** Distribution Code **4.** Deferred Revenue Recognition ID
		C1-REVMON	C1-REVMON	This algorithm is invoked when the C1-DRRMO batch is executed. It checks whether there are any deferred revenue recognitions in the Draft status. If there is any deferred revenue recognition in the Draft status, it checks whether the recognition schedule generation type in the respective deferred revenue recognition template is set to Automatic or Manual. If the recognition schedule generation type is set to Automatic, the status of the deferred revenue recognition is changed to In Progress. However, if the recognition schedule generation type is set to Manual, the status of the deferred revenue recognition remains as Draft.
		C1-REVRECINP	C1-REVRECINP	This algorithm creates an appropriate log entry when the status of the deferred revenue recognition is changed to In Progress. It invokes the algorithm attached to the Create Deferred Revenue Recognition Schedule system event of the respective deferred revenue recognition template. Once the recognition schedule is successfully created, the status of the deferred revenue recognition is changed to Active.

Copyright © 2026, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECACT	C1-REVRECACT	This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters: • Next Status • Next Transition Condition At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle. This algorithm creates an appropriate log entry when the status of the deferred revenue recognition is changed to Active.

Deferred Revenue Recognition Template (Used for Searching)

The **Deferred Revenue Recognition** screen allows you to search for a deferred revenue recognition template using various search criteria. Through this screen, you can navigate to the following screen:

- Deferred Revenue Recognition Template (Used for Viewing) on page 2838

This screen consists of the following zone:

- Search Deferred Revenue Recognition Template on page 2831

Search Deferred Revenue Recognition Template

The **Search Deferred Revenue Recognition Template** zone allows you to search for a deferred revenue recognition template using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition Template	Used to search the basic information about the deferred revenue recognition template.	Yes
Description	Used to search the description of the deferred revenue recognition template.	No
Recognition Schedule	Used to search deferred revenue recognition with a particular schedule. The valid values are: • Daily • Monthly • Weekly	No
Status	Used to indicate the deferred revenue recognition template with a particular status. The valid values are:	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Active • Inactive	

Note: You must specify at least one search criterion while searching for a deferred revenue recognition template.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Template	Displays the deferred revenue recognition.
	Note: It has a link. On clicking the link, the **Deferred Revenue Recognition Template** screen appears where you can view the details of the respective deferred revenue recognition template.
Distribution Code	Indicates the distribution code associated with the rate component.
Contract Type	Displays the contract which is generated against a particular type of contract.
Recognition Schedule	Displays the schedule when the deferred revenue is recognized.

Related Topics

For more information on...	See...
How to view the details of a deferred revenue recognition template	Viewing the Deferred Revenue Recognition Template Details on page 2838
How to search for a deferred revenue recognition template	Searching for a Deferred Revenue Recognition Template on page 2832

Searching for a Deferred Revenue Recognition Template

Prerequisites

To search for a deferred revenue recognition template, you should have:

- Deferred revenue recognition template defined in the system.
- Deferred Revenue Recognition Schedule defined in the system.

Procedure

To search for a deferred revenue recognition template:

1. Click the **Admin** menu in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.
   The **Deferred Revenue Recognition Template** screen appears.
3. Enter the search criteria in the **Search Deferred Revenue Recognition Template** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Copyright © 2026, Oracle and/or its affiliates.

4. Click **Search**.
   A list of deferred revenue recognition templates that meet the search criteria appears in the **Search Results** section.

Defining a Deferred Revenue Recognition Template

Prerequisites

To define a deferred revenue recognition template, you should have:

- Contract types defined in the system

Procedure

To define a deferred revenue recognition template:

1. Click the **Admin** menu in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.
   The **Deferred Revenue Recognition Template** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Deferred Revenue Recognition Template** screen.

   The **Deferred Revenue Recognition Template** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the deferred revenue recognition template.
   - **Parameters** - Used to specify the various parameters for the deferred revenue recognition template.
   - **Algorithms** - Used to associate algorithms with the deferred revenue recognition template.
   - **Divisions** - Used to associate a deferred revenue recognition template with a division.
   - **Characteristics** - Used to define the characteristics for the deferred revenue recognition template.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition Template	Used to specify the deferred revenue recognition template.	Yes
Description	Used to specify the description of the deferred revenue recognition template.	No
Status	Used to indicate the status of the deferred revenue recognition template. The valid values are: • Active • Inactive	Yes

   The **Parameters** section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Distribution Code	Used to indicate the distribution code associated with the deferred revenue recognition. **Note:** The **Search** (icon appears corresponding to this field. On clicking the **Search** icon, the **Distribution Code Search** window appears.	Yes
Contract Type	Used to indicate a particular type of contract. **Note:** The **Search** (icon appears corresponding to this field. On clicking the **Search** icon, the **Contract Type Search** window appears.	Yes
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created. **Note:** The **Search** ( ) icon appears corresponding to this field. On clicking the **Search** icon, the **Adjustment Type Search** window appears.	No
Allow Editing	Used to allow editing of recognition schedule.	No
Generation Type	Used to indicate the type of deferred revenue recognition generation. The valid values are: • Automatic • Manual	Yes (Conditional)
Recognition Schedule	Used to indicate the schedule of deferred revenue recognition generation. The valid values are: • Daily • Monthly • Weekly	Yes
Allow Proration	Used to allow proration. **Note:** The **Allow Proration** field appears when you select **Recognition Schedule** as **Monthly**.	Yes
High Proration Limit (Days)	Used to specify whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is greater than the specified limit, then the amount is prorated. **Note:** This field appears when you check the tick-box for **Allow Proration**.	Yes (Conditional) **Note:** This field is required when the recognition schedule is selected as monthly and when the **Allow Proration** check box is selected.
Low Proration Limit (Days)	Used to specify whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	(in which it is enrolled) is less than the specified limit, then the amount is prorated. **Note:** This field appears when you check the tick-box for **Allow Proration**.	**Note:** This field is required when the recognition schedule is selected as monthly and when the **Allow Proration** check box is selected.

4. Enter the required details.
5. Associate algorithms with the deferred revenue recognition template, if required.
6. View the division to which the deferred revenue recognition template is associated in the **Divisions** section.
7. Define the characteristics specific to division to which the deferred revenue recognition template is associated in the **Characteristics** section.
8. Click **Save**.
   The deferred revenue recognition template is created.

Associating Algorithms with a Deferred Revenue Recognition Template

Procedure

To associate algorithms with a deferred revenue recognition template:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing a deferred revenue *r*ecognition template.

   The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event for an algorithm.	Yes
Sequence	Used to specify the sequence number. **Note:** On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes
Algorithm	Used to associate an algorithm to the system event that you have selected.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Algorithm Search** window appears. On specifying the algorithm for a system event, the description of the algorithm appears corresponding to the **Algorithm** field.	

2. Enter the required details in the **Algorithms** section.
3. If you want to define more than one algorithm for the deferred revenue recognition template, click the **Add** (+) icon, and then repeat 2.

Note: However, if you want to remove an algorithm from the deferred revenue recognition template, click the **Delete** (🗑) icon corresponding to the algorithm.

Associating Deferred Revenue Recognition Template With A Division

Prerequisites

To associate deferred revenue recognition template with a division, you should have:

- Divisions defined in the application

Procedure

To associate deferred revenue recognition template with a division:

1. Ensure that the **Divisions** section is expanded when you are creating or *e*diting a deferred revenue recognition template.

   The **Divisions** section appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division to which you want to associate the deferred revenue recognition template. **Note:** You can only view those divisions to which you have access in the **Division** list.	No

2. Select the required division from the list.
3. If you want to associate the deferred revenue recognition template with more than one division, click the **Add** (+) icon and then repeat step *2*.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** However, if you want to remove the deferred revenue recognition template from a division, click the **Delete** (🗑) icon corresponding to the division.

4. Click **Save**.
   The deferred revenue recognition template is associated with the divisions.

Defining a Characteristic for a Deferred Revenue Recognition Template

Prerequisites

To define a characteristic for a deferred revenue recognition template, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deferred Revenue Recognition Template**)

Procedure

To define a characteristic for a deferred revenue recognition template:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a deferred revenue recognition template.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the deferred revenue recognition template.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value**d field.	**Note:** This field is required when you are defining a characteristic for the deferred revenue recognition template.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the deferred revenue recognition template, click the **Add** (+) icon *a*nd then repeat step 2.

> **Note:** However, if you want to remove a characteristic from the deferred revenue recognition template, click the **Delete** (🗑) icon corresponding to the characteristic.

Viewing the Deferred Revenue Recognition Template Details

Procedure

To view the details of a deferred revenue recognition template:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.
   The **Deferred Revenue Recognition Template** screen appears.
3. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
4. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column *c*orresponding to the deferred revenue recognition template whose details you want to view.

   The **Deferred Revenue Recognition Template** screen appears.
5. View the details of the deferred revenue recognition template in the **Deferred Revenue Recognition Template** zone.

Deferred Revenue Recognition Template (Used for Viewing)

Once the deferred revenue recognition templates are created, the **Deferred Revenue Recognition Template** screen allows you to:

- Generate the deferred revenue recognition schedule
- View the details of a deferred revenue recognition template
- Edit a deferred revenue recognition template
- Delete a deferred revenue recognition template

This screen consists of the following zone:

- Deferred Revenue Recognition Template on page 2839

Copyright © 2026, Oracle and/or its affiliates.

Deferred Revenue Recognition Template

The **Deferred Revenue Recognition Template** zone displays the details of the deferred revenue recognition template. It contains the following sections:

- **Main** - Displays basic information about the deferred revenue recognition template. It contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Template	Displays the deferred revenue recognition template
Description	Used to specify the description of the deferred revenue recognition template
Status	Used to indicate the status of the deferred revenue recognition template. The valid values are: • Active • Inactive

- **Parameters** - Displays the parameters used in the deferred revenue recognition template.

Field Name	Field Description
Distribution Code	Indicates the distribution code. **Note:** It has a link. On clicking the link, the **Distribution Code** screen appears where you can view the details of the respective distribution code.
Contract Type	Displays the **Deferred Revenue Recognition Template** which are generated against a particular type of contract.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created. **Note:** It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Generation Type	Displays the type of deferred revenue recognition template. The valid values are: • Manual • Automatic
Allow Editing	Indicates the editing of recognition schedule.
Recognition Schedule	Indicates the schedule when the deferred revenue is recognized. The valid values are: • Daily • Monthly • Weekly
Allow Proration	Used to allow proration. **Note:** The **Allow Proration** field appears when you select **Recognition Schedule** as **Monthly**.
High Proration Limit (Days)	Displays whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	of the month (in which it is enrolled) is greater than the specified limit, then the amount is prorated. **Note:** This field appears when you check the tick-box for **Allow Proration**.
Low Proration Limit (Days)	Displays whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is less than the specified limit, then the amount is prorated. **Note:** This field appears when you check the tick-box for **Allow Proration**.

- **Divisions** - Displays the associated deferred revenue recognition template with one or more divisions. It contains the following column:

Column Name	Column Description
Division	Displays the division to which you want to associate the deferred revenue recognition template.

- **Algorithms** - Lists the algorithms associated with the deferred revenue recognition template. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Indicates the system event on which the algorithm must be executed	No
Sequence	Displays the sequence number.	No
Algorithm	Displays an algorithm that needs to be attached to the selected system event. **Note:** It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective algorithm.	No

- **Characteristics** - Lists the characteristics defined for the deferred revenue recognition template. It contains the following fields:

Column Name	Column Description
Characteristic Type	Displays the characteristic type.
Characteristic Type	Displays the value of the characteristic type.

- **Record Actions** -This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit, and remove algorithms of the deferred revenue recognition template. **Note:** The **Edit** button appears when the deferred revenue recognition template is in the **Active** status.
Delete	Used to delete the deferred revenue recognition template.

Copyright © 2026, Oracle and/or its affiliates.

-
- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the deferred revenue recognition template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

Editing a Deferred Revenue Recognition Template

Procedure

To edit a deferred revenue recognition template:

1. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column *c*orresponding to the deferred revenue recognition template whose details you want to edit.
   The **Deferred Revenue Recognition Template** screen appears.
3. Click the **Edit** button in the **Deferred Revenue Recognition Template** zone.
   The **Deferred Revenue Recognition Template** screen appears.

   Note: The **Edit** button appears when the deferred revenue recognition template is in the **Active** status.
4. Associate, edit, or remove algorithms from the deferred revenue recognition template, if required.
5. Define, edit, or remove characteristics of the deferred revenue recognition template, if required.
6. Associate deferred revenue recognition template with a division, if required.
7. Click **Save**.
   The changes made to the deferred revenue recognition template are saved.

Deleting a Deferred Revenue Recognition Template

Procedure

To delete a deferred revenue recognition template:

1. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.

Copyright © 2026, Oracle and/or its affiliates.

2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column *c*orresponding to the deferred revenue recognition template that you want to delete.
   The **Deferred Revenue Recognition Template** screen appears.
3. Click the **Delete** button in the **Deferred Revenue Recognition Template** zone.
   A message appears confirming whether you want to delete the deferred revenue recognition template.
4. Click **OK**.
   The deferred revenue recognition template is deleted.

This screen consists of the following zone:

Copyright © 2026, Oracle and/or its affiliates.

- Search Deferred Revenue Recognition on page 2843

Search Deferred Revenue Recognition

The **Search Deferred Revenue Recognition** zone allows you to search for a deferred revenue recognition using various search criteria. It contains the following two sections:

- **Search Criteria** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a deferred revenue recognition using the deferred revenue recognition, person, account, or policy details. The valid values are: • Account Details • Person Details • Deferred Revenue Recognition Details • Financial Transaction Details • Policy Details **Note:** By default, the **Account Details** option is selected.	Yes
Person ID	Used to search deferred revenue recognition which are assigned to a particular person. **Note:** This field appears when you select the **Person Details** option from the **Search By** list.	No
Account ID	Used to search the account ID. **Note:** This field appears only when you select the **Account Details** option from the **Search By** list.	No
Person Identifier Type	Used to select the identifier type based on which you want to search deferred revenue recognition through which the person's record is created or updated in the system.	Yes (Conditional) **Note:** If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to specify the value for the person identifier type.	Yes (Conditional) **Note:** If you specify the person identifier type as a search criteria, you have to specify the person identifier.
Account Identifier Type	Used to specify the account identifier type of the account whose details you want to search.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Account Details** option from the **Search By** list.	**Note:** If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value of the account identifier. **Note:** This field appears when you select the **Account Details** option from the **Search By** list.	Yes (Conditional) **Note:** If you specify the account identifier type as a search criteria, you have to specify the account identifier.
Contract ID	Used to specify the contract ID linked to the account. **Note:** This field appears when you select the **Account Details** option from the **Search By** list.	No
Person Hierarchy	Used to indicate whether to display hierarchy of the person linked to a particular bill. **Note:** This field appears when you select the **Person Details** option from the **Search By** list.	No
Status	Used to search deferred revenue recognition with a particular status. The valid values are: • Active • Closed • Canceled • Draft **Note:** This field appears when you select the **Person Details**, **Account Details**, or **Deferred Revenue Recognition Details** option from the **Search By** list.	No
Deferred Revenue Recognition Template	Used to indicate the template used for deferred revenue recognition. **Note:** This field appears when you select the **Person Details**, **Account Details**, or **Deferred Revenue Recognition Details** option from the **Search By** list.	No
Valid Until Date	Used to specify the date till which the deferred revenue recognition is valid. **Note:** This field appears when you select the **Person Details** or **Account Details** option from the **Search By** list.	No
Deferred Revenue Recognition ID	Used to search a particular deferred revenue recognition	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Deferred Revenue Recognition Details** option from the **Search By** list.	
Description	Used to specify the description of the deferred revenue recognition. **Note:** This field appears when you select the **Deferred Revenue Recognition Details** option from the **Search By** list.	No
Recognition Schedule	Used to search deferred revenue recognition with a particular schedule. The valid values are: • Daily • Monthly • Weekly **Note:** This field appears when you select the **Deferred Revenue Recognition Details** option from the **Search By** list.	No
Financial Transaction ID	Used to search deferred revenue recognition which are assigned to a particular financial transaction. **Note:** This field appears only when you select the **Financial Transaction Details** option from the **Search By** list.	
Policy Type	Used to indicate the type of policy. **Note:** This field appears when you select the **Policy Details** option from the **Search By** list.	Yes
Policy Number	Used to indicate the policy number. **Note:** This field appears when you select the **Policy Details** option from the **Search By** list.	No
Plan Number	Used to indicate the plan number of the policy. **Note:** This field appears when you select the **Policy Details** option from the **Search By** list.	No
Source System	Used to indicate the name of the external system from where the policy originated. **Note:** This field appears when you select the **Policy Details** option from the **Search By** list.	No
Start Date	Used to indicate the date from when the policy is effective.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Policy Details** option from the **Search By** list.	
End Date	Used to indicate the date till when the policy is effective.	No
	Note: This field appears when you select the **Policy Details** option from the **Search By** list.	

Note: You must specify at least one search criterion while searching for a deferred revenue recognition.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
	Note: It has a link. On clicking the link, the **Deferred Revenue Recognition** screen appears where you can view the details of the respective deferred revenue recognition.
Contract Information	Displays the basic information about the contract corresponding to the deferred revenue recognition. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	Note: It has a link. On clicking the link, the **Financial Transaction** screen appears where you can view the details of the respective financial transaction.

Searching for a Deferred Revenue Recognition

Prerequisites

To search for a deferred revenue recognition, you should have:

- Deferred Revenue Recognition Template defined in the application.
- Person identifier types defined in the application
- Account identifier types defined in the application

Copyright © 2026, Oracle and/or its affiliates.

- Recognition Schedules defined in the application
- Source Systems defined in the application

Procedure

To search for a deferred revenue recognition:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Accounting and Receivable**.
   A sub-menu appears.
3. Click the **Search** option from the **Deferred Revenue Recognition** sub-menu.
   The **Deferred Revenue Recognition** screen appears.
4. Enter the search criteria in the **Search Deferred Revenue Recognition** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
5. Click **Search**.
   A list of deferred revenue recognition that meet the search criteria appears in the **Search Results** section.

Viewing the Deferred Revenue Recognition Details

Procedure

To view the details of a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose details you want to view.

   The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:

   - Deferred Revenue Recognition - Main on page 2848
   - Deferred Revenue Recognition - Log on page 2851
3. Ensure that the **Main** tab is selected.
4. View the details of the deferred revenue recognition in the **Deferred Revenue Recognition** zone.

Deferred Revenue Recognition (Used for Viewing)

The **Deferred Revenue Recognition** screen allows you to:

- View the details of a deferred revenue recognition
- Edit a deferred revenue recognition
- Generate the deferred revenue recognition schedule
- Add related deferred revenue recognitions
- Edit the details of a deferred revenue recognition schedule
- View the log of a deferred revenue recognition
- Add a log entry for a deferred revenue recognition

This screen consists of the following tabs:

- Deferred Revenue Recognition - Main on page 2848
- Deferred Revenue Recognition - Log on page 2851

Deferred Revenue Recognition - Main

The **Main** tab displays information about the deferred revenue recognition. It contains the following zones:

- Deferred Revenue Recognition on page 2848
- Associated Deferred Revenue Recognitions on page 2850
- Recognition Schedule on page 2850
- Revenue Recognition Items on page 2851

Deferred Revenue Recognition

The **Deferred Revenue Recognition** zone displays the details of the deferred revenue recognition. It contains the following sections:

- **Main** - Displays basic information about the deferred revenue recognition. It contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
Deferred Revenue Recognition Template Information	Displays information about the deferred revenue recognition template.
	Note: It has a link. On clicking the link, the **Deferred Revenue Recognition Template** screen appears where you can view the details of the deferred revenue recognition template.
Distribution Code	Displays the distribution code which indicates the template associated with the deferred revenue recognition.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	Note: It has a link. On clicking the link, the **Financial Transaction Information** screen appears where you can view the details of the financial transaction.
Total Revenue Deferred	Displays the total revenue deferred.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Total Revenue Recognized	Displays the total revenue recognized.
Status	Indicates the status of the deferred revenue recognition. The valid values are: • Active • Closed • Canceled • Draft

- **Related Deferred Revenue Recognitions** - Lists the related deferred revenue recognitions. It contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays the basic information of the related Deferred Revenue Recognition Schedules (i.e. DRR Schedule of the BS/AD, corresponding to the BX/AX)
Create Date Time	Displays the date and time when the deferred revenue recognition is created.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit and remove characteristics, related deferred revenue recognitions of the deferred revenue recognition.
	Note: The **Edit** button appears when the deferred revenue recognition is in the **Active** status.
Generate Schedule	Used to generate the deferred revenue recognition schedule.
	Note: The **Generate Schedule** button appears only when the deferred revenue recognition is in the **Draft** status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the deferred revenue recognition is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Create Date/Time	Displays the date and time when the deferred revenue recognition schedule is created.
Status Date/Time	Displays the date and time when the deferred revenue recognition status is updated.

- **Characteristics** - Lists the characteristics defined for the deferred revenue recognition. It contains the following columns:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the deferred revenue recognition.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Associated Deferred Revenue Recognitions

The **Associated Deferred Revenue Recognitions** zone Displays the basic information of the other schedules linked to the same **FT** having a separate **Schedule** due to the different **Distribution Code**. Purpose of this section is to show all the associated **Schedules** generated for a single **FT**. It contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
	Note: It has a link. On clicking the link, the **Deferred Revenue Recognition** screen appears where you can view the details of the deferred revenue recognition.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	Note: It has a link. On clicking the link, the **Financial Transaction** screen appears where you can view the details of the respective deferred revenue recognition.
Distribution Code	Displays the distribution code which indicates the template associated with the deferred revenue recognitions.
Deferred Revenue Recognition Template Information	Displays information about the deferred revenue recognition template.
	Note: It has a link. On clicking the link, the **Deferred Revenue Recognition Template** screen appears where you can view the details of the deferred revenue recognition template.
Status	Indicates the status of the associated deferred revenue recognition. The valid values are: • Active • Closed • Canceled

Recognition Schedule

The **Recognition Schedule** zone lists the adjustment information and the recognition amount of the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Recognition Date	Displays the date on which the recognition is scheduled.
Recognition Amount	Displays the amount of the recognition scheduled.
Adjustment Information	Displays information about the adjustments in recognition schedule.

Copyright © 2026, Oracle and/or its affiliates.

This zone contains the **Edit** button. It is used to edit the details of recognition schedule

Note: This zone appears when the deferred revenue recognition is in the **Active** status.

Revenue Recognition Items

The **Revenue Recognition Items** zone displays the adjustment information about the recognition items. It contains the following columns:

Column Name	Column Description
Recognition Date	Displays the date on which the recognition is scheduled.
Recognition Amount	Displays the amount of the recognition scheduled.
Adjustment Information	Displays information about the adjustments in recognition schedule. "
	Note: It has a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the deferred revenue recognition.

Deferred Revenue Recognition - Log

The **Log** tab contains the following zone:

- Deferred Revenue Recognition Log on page 2851

Deferred Revenue Recognition Log

The **Deferred Revenue Recognition Log** zone lists the complete trail of actions performed on the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the deferred revenue recognition
Details	Displays the details about the action performed on the deferred revenue recognition
User	Indicates the user who has performed the action on the deferred revenue recognition
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the deferred revenue recognition.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the status of the deferred revenue recognition is changed.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Note: You can manually add a log entry for the deferred revenue recognition by clicking the **Add Log Entry** link in the upper right corner of the **Deferred Revenue Recognition Log** zone.

Editing a Deferred Revenue Recognition

Procedure

To edit a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column \orresponding to the deferred revenue recognition whose details you want to edit.
   The **Deferred Revenue Recognition** screen appears.
3. Click the **Edit** button in the **Deferred Revenue Recognition** zone.
   The **Deferred Revenue Recognition** screen appears.

> **Note:** The **Edit** button appears when the deferred revenue recognition is in the **Active** status.

4. Modify the required details in the **Main** section.
5. Define, edit, or remove related deferred revenue recognitions from the deferred revenue recognition, if required.
6. Define, edit, or remove characteristics of the deferred revenue recognition, if required.
7. Click **Save**.
   The changes made to the deferred revenue recognition are saved.

Creating the Deferred Revenue Recognition Schedule

Prerequisites

To create the deferred revenue recognition schedule, you should have:

- Should have **Revenue Recognition Schedule Creation Algorithm** attached in the **DRR Template**

Procedure

To create the deferred revenue recognition schedule:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.

Copyright © 2026, Oracle and/or its affiliates.

2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose recognition schedule you want to generate.
   The **Deferred Revenue Recognition** screen appears.
3. Click the **Generate Schedule** button in the **Deferred Revenue Recognition** zone.

   Note: The **Generate Schedule** button appears when the deferred revenue recognition is in the **Draft** status.

   The status of the deferred revenue recognition is changed to **Active**.

Defining a Characteristic for a Deferred Revenue Recognition

Prerequisites

To define a characteristic for a deferred revenue recognition, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deferred Revenue Recognition**)

Procedure

To define a characteristic for a deferred revenue recognition:

1. Ensure that the **Characteristics** section is expanded when you are editing a deferred revenue recognition.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the deferred revenue recognition.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the deferred revenue recognition.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Deferred Revenue Recognition**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the deferred revenue recognition.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** On specifying the value for a characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the deferred revenue recognition.

Copyright © 2026, Oracle and/or its affiliates.

2. Enter the required details in the **Characteristics** section.

> **Note:** If you select a characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a characteristic value.

3. If you want to define more than one characteristic for the deferred revenue recognition, click the **Add** (+) icon *a*nd then repeat step 2.

> **Note:** However, if you want to remove a characteristic from the deferred revenue recognition, click the **Delete** (🗑) icon corresponding to the characteristic.

Adding Related Deferred Revenue Recognitions

Prerequisites

To add related deferred revenue recognitions, you should have:

- Deferred revenue recognition template defined in the system.

Procedure

To add related deferred revenue recognitions:

1. Ensure that the **Related Deferred Revenue Recognitions** section is expanded when you are editing a deferred *r*evenue recognition.

   The **Related Deferred Revenue Recognitions** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition ID	Used to specify the ID of the deferred revenue recognition. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Deferred Revenue Recognition Search** window appears.	Yes
Create Date Time	Used to indicate the creation date and time of the deferred revenue recognition.	Yes
Financial Transaction ID	Used to specify the ID of the financial transaction corresponding to the deferred revenue recognition. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Financial Transactions Search** window appears.	Yes

2. Enter the required details in the **Related Deferred Revenue Recognitions** section.
3. If you want to add more than one related deferred revenue recognition for the deferred revenue recognition, click *t*he **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a related deferred revenue recognition from the deferred revenue recognition, click the **Delete** (🗑) icon corresponding to the related deferred revenue recognition.

Editing the Deferred Revenue Recognition Schedule Details

Prerequisites

To edit the details of the deferred revenue recognition schedule, you should have:

- Should have **Allow Editing Switch** as **Yes** on deferred revenue recognition template.

Procedure

To edit the details of the deferred revenue recognition schedule:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose deferred revenue recognition schedule details you want to edit.

   The **Deferred Revenue Recognition** screen appears.
3. Select the recognition whose details you want to edit in the **Recognition Schedule** zone and click the **Edit** button available in the upper left corner above the table in this zone.
   The **Edit Recognition Schedule** screen appears.

> **Note:** A recognition schedule from the deferred revenue recognition can be edited when the deferred revenue recognition is in the **Active** status.

The **Edit Recognition Schedule** screen contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Information	Displays the information about the deferred revenue recognition.
Financial Transaction Information	Displays the information of the financial transaction corresponding to the deferred revenue recognition.

In addition to these fields, this screen contains following columns:

Column Name	Column Description	Mandatory (Yes or No)
Recognition Date	Used to display the date on which the deferred revenue is recognized.	Yes
Recognition Amount	Used to display the amount of the deferred revenue.	Yes
Adjustment ID	Used to display the adjustment id.	Not applicable

4. Modify the details of the recognition schedule.
5. If you want to define more than one recognition schedule for the deferred revenue recognition, click the **Add** (+) icon and then repeat step 4.

> **Note:** However, if you want to remove a recognition schedule from the deferred revenue recognition, click the **Delete** ( ) icon corresponding to the recognition schedule.

6. Click **Save**.

Viewing the Log of a Deferred Revenue Recognition

Procedure

To view the log of a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose log you want to view.

   The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:

   - Deferred Revenue Recognition - Main on page 2848
   - Deferred Revenue Recognition - Log on page 2851
3. Click the **Log** tab.
   The **Log** tab appears.
4. View the complete trail of actions performed on the deferred revenue recognition in the **Deferred Revenue Recognition Log** zone.

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the dispute request.
Details	Displays the details about the deferred revenue recognition log
User	Indicates the user who has performed deferred revenue recognition
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the deferred revenue recognition
Status Reason	Displays the status reason of action performed on the deferred revenue recognition

- Reconciliation Type
- Reconciliation (Used for Searching)
- Reconciliation (Used for Viewing)
- Pay Instruction (Used for Viewing)
- Discrepancy Report Type
- Discrepancy Report (Used for Searching)

Oracle Revenue Management and Billing enables you to reconcile pay instructions received from the external system against the bill segments based on the account identifier, policy number, plan number, member identifier, and coverage period combination. The system enables you to upload a pay instruction file in the following formats:

- CSV File Format - You can upload pay instruction files in the CSV format from the specified location on the server using the **Pay Instruction CSV File Upload (C1-RECUP)** batch.
- EDI 820 File Format - You can upload pay instruction files in the EDI 820 file format from the specified location on the server using the **Upload Lockbox Payment and Pay Instruction Files (C1-PUPSG)** batch.

> **Note:** The **BPR** tag in the EDI 820 file must be set to **I** to indicate that the file contains pay instructions for reconciliation.

While uploading pay instruction files, you need to specify the reconciliation type using which you want to create the reconciliation. A reconciliation type indicates the algorithm which validates the pay instruction file and creates a pay instruction for each record in the file. Two algorithm types named **C1-PAYINSUPL** and **C1-RECONPROC** are shipped with the product. You need to maintain separate reconciliation types for different file formats. If you want to use a reconciliation type while uploading a pay instruction file in the CSV format, you need to create an algorithm using the **C1-PAYINSUPL** algorithm type and attach it to the reconciliation type. However, if you want to use a reconciliation type while uploading a pay instruction file in the EDI 820 format, you need to create an algorithm using the **C1-RECONPROC** algorithm type and attach it to the reconciliation type.

Once a file is successfully validated, the reconciliation is created for the file in the **Draft** status. The reconciliation is immediately transitioned to the **Send Notification** status and the algorithms attached to the Send Notification status are executed. Once the To Do is created, the status of the reconciliation is changed to **Pending**. A pay instruction is created for each record in the file and its status is set to either **Pending** or **Error** depending on whether it is successfully validated or not.

You need to then specify the payment ID against which you want to reconcile the billed items for which you have received the pay instructions. Once you specify the payment information and submit the pay instructions for reconciliation, the payment amount is distributed against the reconciliation contract of the accounts for which you have received the pay instruction. The status of the reconciliation is changed to **Pending Reconciliation**.

On reconciling the pay instructions, the system finds the bill segment against which the pay instruction must be reconciled using the account identifier, policy number, plan number, member identifier, and coverage period combination.

- Discrepancy Report (Used for Viewing)
- Member Reconciliation Preference

Once the bill segment is identified, the transfer adjustment is created against the bill segment and offset adjustment is created against the respective reconciliation contract. If all pay instructions in the file are successfully reconciled, the status of the reconciliation is changed to **Completed**. However, if one or more pay instruction in the file could not be successfully reconciled, the status of the reconciliation is changed to **Open**. If a file contains a pay instruction for previous coverage period, then system checks whether there is any open pay instruction for that coverage period in the system and accordingly tries to reconcile the pay instruction. However, if an open pay instruction for that coverage period does not exist in the system, the system tries to reconcile the pay instruction against the billed item.

You may manually reconcile the pay instructions which are in the **Pending Reconciliation** status. Alternatively, you can execute the **Reconciliation Periodic Monitor (C1-RCNM)** batch at regular interval to reconcile the pay instructions.

During reconciliation, a pay instruction also goes through various statues in its lifecycle. You may configure the following two batches to execute at the regular intervals:

- **Pay Instruction Periodic Monitor (for Pending Status) (C1-PIPMO)** - It monitors whether there are any pay instructions in the **Pending** status. If so, it tries to reconcile the pay instruction against a billed item. If the pay instruction is successfully reconciled, the status of the pay instruction is changed to **Completed**. However, if the pay instruction could not be reconciled, the status of the pay instruction is changed to **Open**.
- **Pay Instruction Periodic Monitor (for Open Status) (C1-PIMDF)** - It monitors whether there are any pay instructions in the **Open** status. If so, it tries to reconcile the pay instruction against a billed item. If the pay instruction is successfully reconciled, the status of the pay instruction is changed to **Completed**. However, if the pay instruction could not be reconciled, the status of the pay instruction is changed to **Open**.

If you cancel the payment tender, the payment and reconciliation associated with the payment are automatically canceled. The status of the reconciliation is changed to **Pending Cancelation**. And, the status of all pay instructions in the reconciliation is changed to **Canceled**. If required, you can manually cancel a reconciliation. However, you can cancel a reconciliation when it is in the **Open** or **Completed** status. On canceling a reconciliation, the status of the reconciliation is changed to **Pending Cancelation** and the status of all pay instructions in the reconciliation is changed to **Canceled**.

You need to configure the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch to execute at the regular intervals. It monitors whether there are reconciliations in the **Pending Cancelation** status. If there is a reconciliation in the **Pending Cancelation** status, the status of the reconciliation is changed to **Canceled**.

The system enables you to create a copy of reconciliation when it is in the **Canceled** status. If the number of pay instructions in the reconciliation does not exceed the value specified in the **Defer Processing Count** option type of the **C1-RECDUPBH** feature configuration, a copy of the reconciliation and pay instructions is created in the real time (i.e. immediately). The status of the reconciliation is set to **Pending**. And, the status of the pay instruction is set to either **Pending** or **Error** depending on whether it is successfully validated or not.

Copyright © 2026, Oracle and/or its affiliates.

However, if the number of pay instructions in the reconciliation exceeds the value specified in the **Defer Processing Count** option type of the **C1-RECDUPBH** feature configuration, a batch job is automatically created using the **Duplicate Reconciliation (C1-RECDU)** batch. A message appears indicating the batch job ID. This batch job creates a copy of the reconciliation and pay instructions. The status of the reconciliation is set to **Pending**. And, the status of the pay instruction is set to either **Pending** or **Error** depending on whether it is successfully validated or not.

If the policy number, plan number, and member identifier are specified in a pay instruction, then the pay instruction is reconciled at the main subscriber level. If the policy number and plan number are specified in a pay instruction, then the pay instruction is reconciled at the plan level. However, if the policy number is only specified in a pay instruction, then the pay instruction is reconciled at the policy level.

On reconciling, some pay instructions are fully reconciled against the bill segments, some pay instructions are partially reconciled against the bill segments, and some pay instructions are not reconciled against any bill segments. The system enables you to capture such discrepancies for the reporting purposes. If required, you can generate the discrepancy report at the file or account level. If you generate the discrepancy report at the file level, the system lists the following:

- All pay instructions in the file which were partially reconciled due to rate variance
- All pay instructions in the file which could not be reconciled as the amount was paid, but not yet billed

However, if you generate the discrepancy report at the account level, the system lists the following:

- All billed items which were partially reconciled against pay instructions due to rate variance
- All billed items which could not be reconciled as the amount was billed, but not yet paid
- All pay instructions for the account which could not be reconciled as the amount was paid, but not yet billed

While generating a discrepancy report, you need to specify the discrepancy report type using which you want to create the discrepancy report. Once you review and finalize the discrepancy report, its status is changed to **Completed**. At a time, you can only have one discrepancy report for the file or account in the **Pending** status. Until, you finalize a discrepancy report, you cannot create another discrepancy report for the file or account. Also, note that you can create a discrepancy report for a file only when its corresponding reconciliation is in the **Open** status.

The reconciliation process goes through various statuses in its entire lifecycle. For more information about the reconciliation statuses, see...

- Reconciliation Status Transition on page 2866
- Pay Instruction Status Transition on page 2867
- Discrepancy Report Status Transition on page 2869

Copyright © 2026, Oracle and/or its affiliates.

Pre-requisites

To setup the Member to Member Reconciliation feature, you need to do the following:

- **Configure the following Characteristics:**
  - Define an account eligible for reconciliation process from an **On-Account Contract** of a Universal Generic account.
  - Populate the Policy ID, or Plan ID, or Membership ID linked with the billable charges.
- Define the bills having the status as **Completed** for reconciliation.
- Define the **Contract Types** for reconciliation.
- Ensure that payment on **Suspense Contract** is available to match against the bills.
- Configure the **Customer Class** algorithm for a payer account.

Reconciliation of Individual Health Insurance Subsidy Payments

Several states have established health insurance exchanges to offer health and dental insurance coverage options to their respective residents. Individuals within these states can compare and purchase coverage from a selection of health and dental plans, which are referred to as Qualified Health Plan (QHP).

Individuals who enroll for these QHPs may be eligible for Federal Tax Credits and Cost-Sharing Reductions (CSRs), which are subsidies based on the subscriber's income, to help pay for their health insurance and lower their out-of-pocket costs. The Centers for Medicare & Medicaid Services (CMS) makes monthly payments to insurers for the individuals who receive these credits.

CMS has established and instituted the State-Based Exchange (SBE) or Federally Facilitated Marketplace (FFM) reconciliation process to ensure that insurers enrollment information aligns with Marketplace enrollment information. The dispute process provides a mechanism for insurers to correct an FFM enrollment record or related payment information that the monthly reconciliation process cannot resolve.

Oracle Revenue Management and Billing (ORMB) may receive either the exact or different payment amount from the exchange for the sponsored charges due to various reasons. ORMB now enables you to reconcile the payments from the exchange against the bill line items for the fully insured individual business, thereby ensuring that the discrepancy is identified and resolved on time to quickly recover the money from CMS via the dispute process.

The reconciliation process in ORMB is enhanced to support both the fully insured group business and fully insured individual business. For the fully insured group business, the system stamped the policy ID and plan ID in the **C1_FT_EXT** table while freezing a financial transaction on the bill completion. These details were later used to reconcile the pay instructions against the bill line items. In this release, the **C1-STMPFTINF** algorithm type (which is attached on the **FT Freeze** system event of a customer class) is enhanced to support the fully insured individual business. It stamps the health plan code and price item in the **C1_FT_EXT** table while freezing a financial transaction on the bill completion for the fully insured individual business. These details are later used to reconcile the pay instructions received from the exchange against the bill line items of the exchange account.

A new field named **Reconciliation Category** is available while defining a reconciliation type. It helps to differentiate between the fully insured group and fully insured individual reconciliation objects. If you want to upload and process a pay instruction file for a fully insured group business using a reconciliation type, you must set the reconciliation category of the reconciliation type to **Group**. However, if you want to upload and process a pay instruction file for a fully insured individual business using a reconciliation type, you must set the reconciliation category of the reconciliation type to **Individual**.

A new algorithm type named **C1-PAYINSEXC** is introduced in this release. You need to attach an algorithm created using the **C1-PAYINSEXC** algorithm type to the **Upload Pay Instructions** system event of a reconciliation type where the reconciliation category is set to **Individual**. This algorithm parses a pay instruction file which is received from the

Copyright © 2026, Oracle and/or its affiliates.

exchange. It reads each record in the pay instruction file and creates one or more pay instructions in a reconciliation object depending on the number of exchange payment types received in the record. For example, if a record contains information about two exchange payment types (i.e. EP1 and EP2), the system will create two pay instructions for the record - one for EP1 and another for EP2. The exchange payment types (i.e. health insurance coverage) maintained in the CMS system might be different from the price items maintained in ORMB. Therefore, ORMB enables you to map an exchange payment type with a price item using the **C1-PayTypePrcItemMap** extendable lookup. Note that no values are shipped for this extendable lookup from the product. You need to create a value for the **C1-PayTypePrcItemMap** extendable lookup wherein each payment type received from the exchange is mapped to a price item. You can map a price item to one or more payment types based on the requirements.

While creating an algorithm using the **C1-PAYINSEXC** algorithm type, you need to specify the following parameters:

- **Pay Instruction Business Object** - Used to indicate the business object using which you want to create a pay instruction.
- **Date Format** - Used to indicate the format in which you want to store the coverage period start and end dates.
- **Payment Type - Price Item mapping** - Used to indicate the **C1-PayTypePrcItemMap** extendable lookup value using which you want the system to derive the price item for each payment type received from the exchange.

The system enables you to upload a pay instruction file received from the exchange in the CSV file format. You can upload pay instruction files in the CSV format from the specified location on the server using the **Pay Instruction CSV File Upload (C1-RECUP)** batch. While receiving a pay instruction file from the exchange, you need to ensure that each record in the pay instruction file contains the following information:

- Payor (i.e. exchange person) or its account from where the payment is received
- Subscriber (i.e. individual membership) for whom the payment is received
- Health plan and its coverage period for which the payment is received
- At least one exchange payment type (i.e. health insurance coverage) and its subsidy amount which is sponsored by the exchange

Note:

The system assumes that the exchange person will have only one account. Therefore, if an exchange person has multiple accounts, the system will not allow you to upload and process a pay instruction file received from the respective exchange. Hence, if the exchange person has a single account in the system, you can either provide the payor or its account details in the record. However, if the exchange person has multiple accounts in the system, you must provide the payor's account details in the record.

You can create an exchange person and its account in the system through the health care inbound message. While creating an account for an exchange person, ensure that you set the **Eligible for Member Reconciliation (C1-RCELG)** characteristic of the account to **Y**.

You can specify either the health plan code or Health Insurance Oversight System (HIOS) ID in the record. If you are planning to use the Health Insurance Oversight System (HIOS) ID for a health plan, you need to attach an algorithm created using the **C1-STMPHLPN** algorithm type to the **Enter** system event (with the lowest sequence number) of the **Pending** status in the **C1-MemberReconciliation** business object. This algorithm will then derive the code of the health plan, to which the individual is enrolled for the coverage period, using the HIOS ID. Note that, while creating a pay instruction, the system will derive the health plan code when the HIOS ID is present in the record irrespective of whether the health plan code is present in the record or not. However, if the HIOS ID is not present in the record, the system will use the health plan code that is present in the record.

If a subscriber has enrolled for multiple insurance coverages of a health plan for the same coverage period and if the subscriber is eligible for subsidy for one or more insurance coverages, you will receive the subsidy amount for the respective insurance coverages from the CMS system. The subsidy information is received in the form of exchange payment type and amount. At a time, you can specify maximum 10 exchange payment types and their amounts in each record of a pay instruction file.

The **C1-RECUP** batch is enhanced to support the fully insured individual business. On executing the **C1-RECUP** batch, the system reads the pay instruction file from the specified location and validates it. Once a file is successfully validated, the reconciliation object is created for the file in the **Draft** status. The reconciliation object is immediately transitioned

Copyright © 2026, Oracle and/or its affiliates.

to the **Send Notification** status and the algorithms attached to the **Send Notification** status are executed. Once the To Do is created, the status of the reconciliation object is changed to **Pending**. One or more pay instructions are created for a record of a pay instruction file and its status is set to either **Pending** or **Error** depending on whether it is successfully validated or not. While creating a pay instruction, the system derives the health plan code (if not available), individual membership and the exchange account. For more information about the **C1-RECUP** batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

You need to then specify the payment ID against which you want to reconcile the bill line items for which you have received the pay instructions. Once you specify the payment information and submit the pay instructions for reconciliation, the payment amount is distributed against the reconciliation contract of the exchange accounts for which you have received the pay instruction. The status of the reconciliation object is changed to **Pending Reconciliation**. On reconciling the pay instructions, the system finds the open and unmatched bill line item of the exchange account against which the pay instruction must be reconciled using the health plan, subscriber, price item, and coverage period combination. The system creates a reconciliation adjustment for a pay instruction which is successfully reconciled. While reconciling the pay instructions, the system sets the pay instruction matching level characteristic type of the reconciliation object to **MEMBER**.

You can manually reconcile the pay instructions of a reconciliation object, or you can execute the **Reconciliation Periodic Monitor (C1-RCNM)** or **Pay Instruction Processing Batch (C1-RCPM)** batch at regular intervals to reconcile the pay instructions.

Note: While executing the **C1-RCPM** batch, you need to specify a member reconciliation preference whose attributes you want to use while reconciling all pay instructions of a file at the member level.

For more information about the above batches, refer to *Oracle Revenue Management and Billing Batch Guide*.

If you attach an algorithm created using the **C1-VALMRPYCN** algorithm type to the **Payment Cancellation** system event of the required customer class, the system automatically cancels the payment and reconciliation object associated with the payment when you cancel its corresponding payment tender. The status of the reconciliation object is changed to **Pending Cancelation** and the status of all pay instructions in the reconciliation object is changed to **Canceled**.

If required, you can also manually cancel a reconciliation object. However, you can cancel a reconciliation object only when it is in the **Open** or **Completed** status. On canceling a reconciliation object, the status of the reconciliation object is changed to **Pending Cancelation**. Before canceling a pay instruction, the reconciliation adjustment (if any) corresponding to the pay instruction is also canceled.

You need to configure the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch to execute at the regular intervals. This batch monitors whether there are any reconciliation objects in the **Pending Cancelation** status. If there is a reconciliation object in the **Pending Cancelation** status, the status of the reconciliation object and the status of all pay instructions in the reconciliation object is changed to **Canceled**. For more information about the **C1-RCNMD** batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

If all pay instructions in a reconciliation object are successfully reconciled, the system changes the status of the reconciliation object to **Completed**. However, if one or more pay instruction in a reconciliation object is not successfully reconciled, the system changes the status of the reconciliation object to **Open**. If you want the system to automatically reconcile the open pay instructions of the account when you bill the account each time, you need to attach an algorithm created using the **C1-RCLOPNRCN** algorithm type to the **Post Bill Completion** system event of the required customer class. The system will then trigger the reconciliation process to reconcile the open pay instruction against the open and unmatched bill line item of the exchange account and will accordingly update the status of the pay instruction and reconciliation object.

If you attach an algorithm created using the **C1-VLPYINACN** algorithm type to the **Adjustment Cancellation** system event of the adjustment type (using which the reconciliation adjustments are created), the system ensures that no one can cancel a reconciliation adjustment until it is linked to a non-canceled pay instruction.

Reconciliation Discrepancy Report of Individual Health Insurance Subsidy Payments

Until now, you were able to generate the reconciliation discrepancy report at the file or account level for the fully insured group business. Now, in addition, you can generate the reconciliation discrepancy report at the file or account level for the individual health insurance subsidy payments. If you generate the discrepancy report at the file level, the system lists the following:

- All pay instructions in the file which were partially reconciled due to rate variance
- All pay instructions in the file which could not be reconciled as the amount was paid, but not yet billed

However, if you generate the discrepancy report at the account level, the system lists the following:

- All bill line items which were partially reconciled against pay instructions due to rate variance
- All bill line items which could not be reconciled as the amount was billed, but not yet paid
- All pay instructions for the account which could not be reconciled as the amount was paid, but not yet billed

While generating a discrepancy report, you need to specify the discrepancy report type using which you want to create the discrepancy report. The system will create the discrepancy report in either **Pending** or **Deferred Processing** status. Once you review the discrepancy line items and finalize the discrepancy report, its status is changed to **Completed**.

At a time, you can only have one discrepancy report for a file or an account in the **Pending** or **Deferred Processing** status. Until you finalize a discrepancy report, you cannot create another discrepancy report for the respective file or account. Also, note that you can create a discrepancy report for a file only when its corresponding reconciliation object is in the **Open** status.

When you generate a discrepancy report for a pay instruction file which is received from the exchange or when you generate a discrepancy report for an exchange account, the system displays the following additional information for each discrepancy line item along with other details:

- Payor Identifier Type
- Payor Identifier
- Health Plan
- HIOS ID
- Payment Type

Note: Policy number and plan number are displayed instead of the above information when you generate discrepancy report for the fully insured group business.

Deferred Processing Mode for Discrepancy Report Creation

Until now, the reconciliation discrepancy report at the file or account level was only created in the online mode (i.e. immediately). Now, the system provides you with the ability to configure deferred processing mechanism for the reconciliation discrepancy report creation. A new status named **Deferred Processing** is introduced in the lifecycle of the **C1-DiscrepancyReport** business object. On generating a discrepancy report at the file or account level, the discrepancy report is created in the **Draft** status. A new algorithm named **C1-DISCDEF** is attached to the **Enter** system event of the **Draft** status. This algorithm checks whether the number of pay instructions in the non-final status exceeds the deferred count specified in the algorithm. If the number of pay instructions in the non-final status does not exceed the deferred count, the status of the discrepancy report is changed to **Pending**. The system then adds the discrepancy line items in the discrepancy report by comparing each non-final pay instruction against the open and unmatched bill line item of the exchange account.

However, if the number of pay instructions in the non-final status exceeds the deferred count, the status of the discrepancy report is changed to **Deferred Processing**. A new batch named **C1-DRMT** is introduced in this release. This batch

Copyright © 2026, Oracle and/or its affiliates.

is used to monitor or check whether there are any discrepancy reports in the **Deferred Processing** status. If there is a discrepancy report in the **Deferred Processing** status, the batch changes the status of the discrepancy report to **Pending**. Then, the system adds the discrepancy line items in the discrepancy report by comparing each non-final pay instruction against the open and unmatched bill line item of the exchange account.

This batch is a multi-threaded batch. The multi-threading is based on discrepancy request ID and chunks for multi-threading are created based on numerical distribution of discrepancy request ID. This batch contains the following parameters:

Parameter Name	Mandatory (Yes or No)	Description
Maintenance Object	Yes	Used to indicate that you want to monitor discrepancy reports which are created using the business objects of a particular maintenance object. **Note:** By default, the parameter value is set to **C1-DISCR-RPT**.
Restrict by Batch Code	No	Used when you want to monitor discrepancy reports whose current status is linked to the **Discrepancy Report Monitor (C1-DRMT)** batch. The valid value is **true**.
Restrict by Discrepancy Report Type	No	Used when you want to monitor the discrepancy reports which are created using a particular discrepancy report type.
Restrict by Business Object	No	Used when you want to monitor discrepancy reports which are created using a particular business object.
Restrict by Status Code	No	Used when you want to monitor discrepancy reports which are in a particular status. **Note:** This parameter is useful when this batch is invoked from more than one status in the lifecycle of the business object.
Override maximum errors	No	Used to override the maximum number of errors after which the batch must be terminated.
Threadpool	No	Used to specify the thread pool on which you want to execute the batch.

Reconciliation Status Transition

EDI 820 File Format For Reconciliation

Before uploading an EDI 820 file, you need to ensure that the EDI 820 file contains the following columns:

Tag	Attribute	Description	Mandatory (Yes or No)
Algo Param	Account Identifier Type	Used to specify the account identifier type. The valid values are: • Account Name • Base Global Account ID • Bill Group Identifier • Demo Bank Account Number • External Account Identifier • Flexcube Account ID • International Bank Account Number	Yes (Conditional) **Note:** This data is required when Account Identifier is provided.
N1[3]	Account Identifier value	Used to specify the value of the account identifier type.	Yes (Conditional) **Note:** This data is required when Account Identifier Type is provided.

Copyright © 2026, Oracle and/or its affiliates.

Tag	Attribute	Description	Mandatory (Yes or No)
Batch Param	Member Identifier type	Used to specify the member identifier type.	Yes
RMR[2]	Policy Number	Used to specify the policy number of the member.	Yes
Algo Param	Plan Number	Used to specify the plan number of the member.	No
ENT[4]	Member Identifier Value	Used to specify the value of the member identifier type.	Yes
RMR[4]	Amount	Used to specify the amount that has to be paid to the member.	Yes **Note:** The data value of this column must be 0, if no amount is provided.
DTM[6]	Coverage Start Date	Used to specify the date of the policy from where the coverage starts. **Note:** The Coverage Start Date cannot be later than the coverage end date.	Yes
DTM[6]	Coverage End Date	Used to specify the date of the policy till when the coverage ends. **Note:** The coverage end date cannot be earlier than the coverage start date.	Yes
NM1[4][5]	Member Name	Used to specify the name of the member.	Yes
REF[2]	Plan Number	Used to specify the plan number of the member.	Yes (Conditional) **Note:** This data is required when Algo Param tag does not have a value.
Batch Param	Reconciliation Type	Used to specify the type of reconciliation.	Yes
Batch Param	Reconciliation Cancel Status	Used to specify the Reconciliation Cancelation status.	Yes

Algorithms Used in C1-MemberReconType

The following table lists the algorithms which are attached to the **C1-MemberReconType** business object:

System Event	Algorithm	Algorithm Type	Description
Pre-Processing	C1-REOCNPEP	C1-REOCNPEP	Refer to C1-REOCNPEP on page 2871

C1-REOCNPEP

This algorithm validates a reconciliation type.

It checks the following:

- A duplicate algorithm is not added.
- A duplicate characteristic type is not added.

In addition, it does not allow you to:

- Delete a reconciliation type when the corresponding reconciliation is in a status other than **Completed** or **Canceled**.

Algorithms Used in C1-MemberReconciliation

The following table lists the algorithms which are attached to the **C1-MemberReconciliation** business object:

C1-RECONINFO

This algorithm generates the reconciliation information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

- Reconciliation Type Description
- Reconciliation Status
- Reconciliation ID

C1-RECONVAL

This algorithm is invoked when the status of the reconciliation is changed to **Pending Reconciliation**. It validates the following before the pay instructions are reconciled:

- The reconciliation is associated with the payor account against which the payment is made.
- At least one pay instruction exists in the reconciliation.
- The reconciliation is associated with a payment which is in the Frozen status.
- The payment amount is equal to the total payment instruction amount.

C1-MRECONVAL

This algorithm is invoked when you submit the pay instruction file for reconciliation. It checks the following:

- The payment is not associated with any other reconciliation which is in the status other than **Pending Cancelation** or **Canceled**.
- The payment ID and payor account ID are both available for further processing.

It contains the following parameters:

- **Reconciliation Canceled Status** - Used to specify the status code to which the reconciliation in the **Pending Cancelation** status is transitioned when the **Reconciliation Cancelation Periodic Monitor (C1-RCNMD)** batch is executed.
- **Reconciliation Pending Cancelation Status** - Used to specify the status code to which the reconciliation is transitioned when you click the **Cancel** button.

Both these parameters are mandatory.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

F1-TDCREATE

This algorithm is invoked when the status of the reconciliation is changed to **Send Notification**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

Copyright © 2026, Oracle and/or its affiliates.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the reconciliation is created for a pay instruction file.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the reconciliation is created for a pay instruction file.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

C1-VALPAYINS

This algorithm is invoked when the status of the reconciliation is changed to **Pending**. Once a pay instruction is created, this algorithm validates the following:

- The coverage end date is not earlier than the coverage start date.
- Either the account identifier type and account identifier or the account ID is available in the pay instruction record.
- The member identifier type is available when the member identifier is specified and vice versa.
- A person with the given member identifier type and member identifier combination exists in the system.
- An account with the specified account ID exists in the system.
- The account ID is derived using the account identifier type and account identifier combination when the account ID is not available in the pay instruction record.
- The account is eligible for reconciliation.

If the above mentioned validations are successful, the status of the pay instruction is set to **Pending**. However, if any of the above validation fails, the status of the pay instruction is set to **Error**.

This algorithm contains the following parameters:

- **Eligible for Reconciliation Characteristic Type** - Used to specify the characteristic type which indicates whether the account is eligible for reconciliation. This type of characteristic is defined on the account. You must specify a characteristic type where the characteristic entity is set to Account.
- **Maintenance Object for Generating Pay Instruction Logs** - Used to specify the maintenance object using which you want to generate logs for the pay instruction.
- **Pay Instruction Error Status** - Used to specify the status code to which you want to transition the pay instruction when the validation fails.
- **Pay Instruction Pending Status** - Used to specify the status code to which you want to transition the pay instruction when the validation is successful.

All these parameters are mandatory.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Copyright © 2026, Oracle and/or its affiliates.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-MRECONVAL

This algorithm is invoked when you submit the pay instruction file for reconciliation. It checks the following:

- The payment is not associated with any other reconciliation which is in the status other than **Pending Cancelation** or **Canceled**.
- The payment ID and payor account ID are both available for further processing.

It contains the following parameters:

- **Reconciliation Canceled Status** - Used to specify the status code to which the reconciliation in the **Pending Cancelation** status is transitioned when the **Reconciliation Cancelation Periodic Monitor (C1-RCNMD)** batch is executed.
- **Reconciliation Pending Cancelation Status** - Used to specify the status code to which the reconciliation is transitioned when you click the **Cancel** button.

Both these parameters are mandatory.

C1-MONPAYINS

This algorithm is invoked when the status of the reconciliation is changed to **Initial Reconciliation in Progress** or **Reconciliation in Progress**. It monitors or checks whether there are any pay instructions in the following statuses:

- Reconciliation Pending Processing
- Derivation Pending Processing
- Completed

If all pay instructions in the reconciliation are in the **Completed** status, then the status of the reconciliation is changed to Completed. However, if there are any pay instructions in the **Reconciliation Pending Processing** or **Derivation Pending Processing** status, then the status of reconciliation is changed to **Open**.

This algorithm contains the following parameters:

- **Pay Instruction Derivation Pending Processing Status** - Used to specify the status code to which the pending pay instruction is transitioned when the number of pay instructions in the reconciliation exceeds the deferred processing threshold (specified in an algorithm which is created using the **C1-RCOPNPYIN** algorithm type).
- **Pay Instruction Reconciliation Pending Processing Status** - Used to specify the status code to which the open pay instruction is transitioned when the number of pay instructions in the reconciliation exceeds the deferred processing threshold (specified in an algorithm which is created using the **C1-RCOPNPYIN** algorithm type).
- **Pay Instruction Completed Status** - Used to specify the status code to which the pay instruction is transitioned when it is fully reconciled.
- **Reconciliation Open Status** - Used to specify the status code to which you want to transition the reconciliation when there is a pay instruction in the status which is specified in the **Pay Instruction Derivation Pending Processing Status** or **Pay Instruction Reconciliation Pending Processing Status** parameter.
- **Reconciliation Completed Status** - Used to specify the status code to which you want to transition the reconciliation when all its pay instructions are in the status which is specified in the **Pay Instruction Completed Status** parameter.

All these parameters are mandatory.

Copyright © 2026, Oracle and/or its affiliates.

C1-TRNPAYRCN

This algorithm transfers the payment amount from the payor account's contract to the reconciliation contract of the accounts for which you have received the pay instruction. In this process, the payment against the payor account's contract is canceled and the payment against the payee account's reconciliation contract is created in the **Frozen** status.

It contains the following parameters:

- **Payment Cancel Reason** - Used to indicate the reason that you want to use when the payment on the payor account's contract is canceled.
- **Reconciliation Contract Match Type** - Used to specify the match type using which you want to apply payment against the reconciliation contract.

Both these parameters are mandatory.

C1-RCOPNPYIN

This algorithm checks whether the number of pay instructions in the reconciliation exceeds the limit defined in the **Deferred Processing Threshold** parameter. If the status of the pay instruction is **Pending** and the number of pay instructions in the reconciliation exceeds the limit defined in the **Deferred Processing Threshold** parameter, then the status of the pay instruction is changed to the value defined in the **Pay Instruction Derivation Pending Processing Status** parameter.

However, if the status of the pay instruction is **Open** and the number of pay instructions in the reconciliation exceeds the limit defined in the **Deferred Processing Threshold** parameter, then the status of the pay instruction is changed to the value defined in the **Pay Instruction Reconciliation Pending Processing Status** parameter.

It contains the following parameters:

- **Pay Instruction Pending Status** - Used to specify the status code to which a pay instruction is transitioned when its validation is successful.
- **Pay Instruction Open Status** - Used to specify the status code to which a pay instruction is transitioned when it is not fully reconciled.
- **Pay Instruction Derivation Pending Processing Status** - Used to specify the status code to which you want to transition the pending pay instruction when the number of pay instructions in the reconciliation exceeds the deferred processing threshold limit.
- **Pay Instruction Reconciliation Pending Processing Status** - Used to specify the status code to which you want to transition the open pay instruction when the number of pay instructions in the reconciliation exceeds the deferred processing threshold limit.
- **Deferred Processing Threshold** - Used to specify the maximum number of pay instructions that can be reconciled in the real time (i.e. immediately). If the number of pay instructions in the reconciliation exceeds the deferred processing threshold limit, the pay instruction is reconciled in the deferred mode.

All these parameters are mandatory.

C1-RCNOPNMR

This algorithm initiates the reconciliation process for the past open reconciliation records of the account. It contains the following parameters:

- **Reconciliation Open Status** - Used to specify the status code to which the reconciliation is transitioned when its pay instruction is not fully reconciled.
- **Reconciliation In Progress Status** - Used to specify the status code to which you want to transition the past open reconciliation record when the current reconciliation record of the account is reconciled.

Both these parameters are mandatory.

Copyright © 2026, Oracle and/or its affiliates.

C1-RCMONPNCN

This algorithm is invoked when the **Reconciliation Cancelation Periodic Monitor (C1-RCNMD)** batch is executed. It checks whether the reason is specified while canceling the reconciliation. If the cancel reason is specified, the status of the reconciliation is changed to **Canceled**. However, if the cancel reason is not specified, an error occurs while executing the **Reconciliation Cancelation Periodic Monitor (C1-RCNMD)** batch.

It contains the following parameters:

- **Reconciliation Cancel Status Reason** -

  Used to specify the cancel reason. If you specify the value for this parameter, the system will validate whether the cancel reason specified while canceling the reconciliation matches the cancel reason specified in this parameter. If the cancel reason does not match, an error occurs while executing the **Reconciliation Cancelation Periodic Monitor (C1-RCNMD)** batch. You must specify a reason which is defined for the **Pending Cancelation** status of the **C1-MemberReconciliation** business object.

C1-CANPAYINS

This algorithm is invoked when the **Reconciliation Cancelation Periodic Monitor (C1-RCNMD)** batch is executed. It changes the status of all pay instructions in the reconciliation.

It contains the following parameter:

- **Pay Instruction Canceled Status** - Used to specify the status code to which you want to transition a pay instruction when the reconciliation is canceled. This parameter is mandatory.

C1-CANRCNPAY

This algorithm transfers the payment amount from the payee account's reconciliation contract to the payor account's contract. In this process, the payment against the reconciliation contract is canceled and the payment against the payor account's contract is created in the **Frozen** status.

It contains the following parameters:

- **Payment Cancel Reason** - Used to indicate the reason that you want to use when the payment against the payee account's reconciliation contract is canceled.
- **On Account Match Type** - Used to specify the match type using which you want to apply the payment against the contract of the payor account.

Both these parameters are mandatory.

C1-RCNCANLTD

This algorithm is invoked when the status of the reconciliation is changed to **Canceled**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the reconciliation is canceled.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the reconciliation is canceled.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

Copyright © 2026, Oracle and/or its affiliates.

Algorithms Used in C1-PayInstruction

The following table lists the algorithms which are attached to the **C1-PayInstruction** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-MPAYININF	C1-MPAYININF	Refer to C1-MPAYININF on page 2878

The following table lists the algorithms which are used in the lifecycle of the **C1-PayInstruction** business object:

Reconciliation Pending Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 289
Error	-	-	-	-

C1-MPAYININF

This algorithm generates the pay instruction information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

- "Period:" Start Date - End Date
- Pay Instruction Amount
- Pay Instruction Status
- Payor Name
- Pay Instruction ID

C1-PYINDRVAN

This algorithm is invoked when the status of the pay instruction is changed to **Derivation in Progress**. It derives the following:

- Policy using the policy number

Copyright © 2026, Oracle and/or its affiliates.

- Plan using the plan number
- Member using the member identifier type and member identifier
- Payee account using the account identifier type and account identifier

If the policy, plan, and member information is available, it validates whether the member is covered under the specified plan of the policy. However, if the policy and plan information is available, it validates whether the plan is included in the specified policy. If the derivation and validation process is successful, the related object information is derived for policy, plan, and/or member from the system.

However, if the derivation and validation process fails, the related object information is not derived for policy, plan, and/or member and the status of the pay instruction remains as **Pending**.

In addition, the system determines whether the pay instruction must be reconciled at the member, plan, or policy level depending on the information available in the pay instruction. If the policy, plan, and member information is available, the pay instruction is reconciled at the member level. If the policy and plan information is available, the pay instruction is reconciled at the policy plan level. However, if the policy information is available, the pay instruction is reconciled at the policy level.

It contains the following parameters:

- **Unsuccessful Processing Status** - Used to specify the status code to which you want to transition the pay instruction when the derivation and validation process fails.
- **Pay Instruction Matching Level Characteristic Type** - Used to specify the characteristic type which indicates whether the pay instruction must be reconciled at the member, plan, or policy level. This type of characteristic is defined on the pay instruction. Here, you must specify a characteristic type where the characteristic entity is set to **Payment Instruction**.
- **Member Matching Level Characteristic Value** - Used to specify the value that you want to define for the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter when the pay instruction must be reconciled at the member level.
- **Plan Matching Level Characteristic Value** - Used to specify the value that you want to define for the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter when the pay instruction must be reconciled at the policy plan level.
- **Policy Matching Level Characteristic Value** - Used to specify the value that you want to define for the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter when the pay instruction must be reconciled at the policy level.

All these parameters are mandatory.

C1-PIRECOCIL

This algorithm is invoked when the status of the pay instruction is changed to **Reconciliation in Progress**. It searches whether there is an open bill segment with the policy, plan, member, and coverage period combination for the payee account. If such bill segment exists in the system, this algorithm reconciles the pay instruction against the open bill segment. It creates two reconciliation adjustments - one against the payee account's reconciliation contract and another against the bill segment's contract.

If the amount on the pay instruction is fully reconciled, then the status of the pay instruction is changed to **Completed**. However, if the amount on the pay instruction is not fully reconciled, then the status of the pay instruction is changed to **Open**.

It contains the following parameters:

- **Payment Instruction Match Level Char Type** - Used to specify the characteristic type which indicates whether the pay instruction must be reconciled at the member, plan, or policy level. This type of characteristic is defined on the pay instruction. Here, you must specify a characteristic type where the characteristic entity is set to **Payment Instruction**.
- **Subscriber Match Level Char Value** - Used to specify the value of the characteristic type specified in the **Payment Instruction Match Level Char Type** parameter which indicates that the pay instruction must be reconciled at the member level.

Copyright © 2026, Oracle and/or its affiliates.

- **Policy Plan Match Level Char Value** - Used to specify the value of the characteristic type specified in the **Payment Instruction Match Level Char Type** parameter which indicates that the pay instruction must be reconciled at the policy plan level.
- **Policy Match Level Char Value** - Used to specify the value of the characteristic type specified in the **Payment Instruction Match Level Char Type** parameter which indicates that the pay instruction must be reconciled at the policy level.
- **Billed Transfer Recon Adjustment Type** - Used to specify the adjustment type using which you want to create the adjustment on the bill segment's contract when the pay instruction is reconciled.
- **Payment Instruction Recon Adjustment Type** - Used to specify the adjustment type using which you want to create the adjustment on the reconciliation contract when the pay instruction is reconciled.
- **Recon Open Status** - Used to specify the status code to which you want to transition the reconciliation when the status of the pay instruction is changed to **Open**.
- **Payment Instruction Open Status** - Used to specify the status code to which you want to transition the pay instruction when it is not fully reconciled.
- **Payment Instruction Complete Status** - Used to specify the status code to which you want to transition the pay instruction when it is fully reconciled.
- **Reconciliation Char Type** - Used to specify the characteristic type which you want to use to store the reconciliation ID. This type of characteristic is defined on the adjustments which are created on reconciliation. Here, you must specify a characteristic type where the characteristic entity is set to **Adjustment Type**.
- **Payment Event Characteristic Type** - Used to specify the characteristic type which you want to use to store the payment event ID. This type of characteristic is defined on the reconciliation adjustments to indicate the payment event whose payment is distributed against the bill segment.
- **Reconciliation Adjustment Type for Offsetting Debits using Billed Credits** - Used to specify the adjustment type using which you want to create the adjustments when offsetting billed debit verses billed credits.

All these parameters are mandatory.

C1-PYICNADJ

This algorithm is invoked when the status of the pay instruction is changed to **Canceled**. It cancels the reconciliation adjustments which are created while reconciling the pay instruction. It cancels the reconciliation adjustment irrespective of whether the status of the pay instruction is **Open** or **Completed**.

It contains the following parameters:

- **Adjustment Cancel Reason** - Used to indicate the reason that you want to use when the reconciliation adjustments are canceled.
- **Pay Instruction Completed Status** - Used to specify the status code to which the pay instruction is transitioned when it is fully reconciled.
- **Pay Instruction Open Status** - Used to specify the status code to which the pay instruction is transitioned when it is not fully reconciled.
- **Reconciliation Completed Status** - Used to specify the status code to which the reconciliation is transitioned when all its pay instructions are fully reconciled.
- **Reconciliation Open Status** - Used to specify the status code to which the reconciliation is transitioned when its pay instruction is not fully reconciled.

All these parameters are mandatory.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.

Copyright © 2026, Oracle and/or its affiliates.

- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

Algorithms Used in C1-MemberDiscReportType

The following table lists the algorithms which are attached to the **C1-MemberDiscReportType** business object:

System Event	Algorithm	Algorithm Type	Description
Pre-Processing	C1-DISCPEP	C1-DISCPEP	Refer to C1-DISCPEP on page 2881

C1-DISCPEP

This algorithm validates a discrepancy report type. It checks the following:

- A duplicate characteristic type is not added.

In addition, it does not allow you to:

- Delete a discrepancy report type when the corresponding discrepancy report is in a status other than **Completed**.

Algorithms Used in C1-DiscrepancyReport

The following table lists the algorithms which are used in the lifecycle of the **C1-DiscrepancyReport** business object:

The following table lists the algorithms which are used in the lifecycle of the **C1-DiscrepancyReport** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-VALNEWDIS	C1-VALNEWDIS	Refer to C1-VALNEWDIS on page 2882
	Enter	C1-DISCDEF	C1-DISCDEF	Refer to C1-DISCDEF on page 2882
Deferred Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 289
Pending	Enter	C1-CRDSLNITM	C1-CRDSLNITM	Refer to C1-CRDSLNITM on page 2882
	Exit	F1-TODOCOMPL	F1-TODOCOMPL	Refer to F1-TODOCOMPL on page 1549
Completed	Enter	C1-VALCMPDIS	C1-VALCMPDIS	Refer to C1-VALCMPDIS on page 2883

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.

Copyright © 2026, Oracle and/or its affiliates.

- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-DISRINFO

This algorithm generates the discrepancy report information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

- Discrepancy Report Type Description
- Discrepancy Report Status
- Discrepancy Report ID

C1-DISCDEF

This algorithm checks whether the number of pay instructions in the non-final status exceeds the deferred count specified in the algorithm. If the total number of pay instructions exceed the defer processing count, the status of the discrepancy report is set to **Deferred Processing** else the status of the discrepancy report is set to **Pending**.

It contains the following parameters:

- **Deferred Count** - Used to specify the count which helps to determine whether the pay instructions must be processed in the deferred mode (i.e. in the background) or in real time (i.e. immediately).

  Note: If the defer processing count is not provided, the system sets the default value to 1000.

- **Reconciliation Open Status** - Used to specify the status code to which you want to transition the reconciliation when its corresponding pay instruction is either in the **Deferred Processing** or **Pending** status.

C1-VALNEWDIS

This algorithm allows you to create a discrepancy report when the following conditions are met:

- The account for which discrepancy report is created is eligible for reconciliation.
- A discrepancy report in the **Pending** status does not exist for the account or file.
- A reconciliation record in the **Open** status exists for the account or file.

It contains the following parameters:

- **Eligible for Reconciliation Characteristic Type** - Used to specify the characteristic type which indicates whether the account is eligible for reconciliation. Here, you must specify a characteristic type where the characteristic entity is set to **Account**.
- **Eligible for Reconciliation Characteristic Value** - Used to specify the value of the characteristic type specified in the **Eligible for Reconciliation Characteristic Type** parameter which indicates that the account is eligible for reconciliation.

Both these parameters are mandatory.

C1-CRDSLNITM

This algorithm is invoked when the status of the discrepancy report is changed to **Pending**. If the discrepancy report is created at the account level, this algorithm creates a discrepancy line item for each policy, plan, member, and coverage

Copyright © 2026, Oracle and/or its affiliates.

period combination for which there is an open bill segment for the account and for which there are open and pending pay instructions in the open reconciliation.

However, if the discrepancy report is created at the file level, this algorithm creates a discrepancy line item for each policy, plan, member, and coverage period combination for which there are open and pending pay instructions in the open reconciliation. Note that the discrepancy line items are created for each account whose pay instructions are received in the pay instruction file.

It contains the following parameters:

- **Consumer Status Characteristic Type** - Used to specify the characteristic type which stores the consumer status of the member. The system retrieves the consumer status of the member and stores it against the respective discrepancy line item. Here, you must specify a characteristic type where the characteristic entity is set to **Person**. This parameter is mandatory.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-VALCMPDIS

This algorithm is invoked when you click the **Finalize** button. It changes the status of the discrepancy report to **Completed** when the discrepancy category is specified for each discrepancy line item in the report.

Reconciliation Type

Oracle Revenue Management and Billing allows you to define a reconciliation type using which you can create the reconciliation. It is the reconciliation type which helps the system to determine the following:

- The business object using which the reconciliation should be created.
- The file format through which the pay instruction records can be uploaded in the system.

In addition, a reconciliation type indicates the algorithm which validates the pay instruction file and creates a pay instruction for each record in the file. Two algorithm types named **C1-PAYINSUPL** and **C1-RECONPROC** are shipped with the product. You need to maintain separate reconciliation types for different file formats. If you want to use a reconciliation type while uploading a pay instruction file in the CSV format, you need to create an algorithm using the **C1-PAYINSUPL** algorithm type and attach it to the reconciliation type. However, if you want to use a reconciliation type while uploading a pay instruction file in the EDI 820 format, you need to create an algorithm using the **C1-RECONPROC** algorithm type and attach it to the reconciliation type.

The **Reconciliation Type** screen allows you to define, edit, copy, and delete a reconciliation type. It contains the following zones:

- Reconciliation Type List on page 2884
- Reconciliation Type on page 2884

Copyright © 2026, Oracle and/or its affiliates.

Reconciliation Type List

The **Reconciliation Type List** zone lists the reconciliation types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Reconciliation Type	Displays the reconciliation type.
Description	Displays the description of the reconciliation type.
Edit	On clicking the **Edit** (✎) icon, the **Reconciliation Type** screen appears where you can edit the details of the reconciliation type.
Reconciliation Category	Indicates the category to which the reconciliation belongs. The valid values are: • Group • Individual
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Reconciliation Type** screen appears where you can define a new reconciliation type using an existing reconciliation type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the reconciliation type.
	Note: You can delete a reconciliation type only when a reconciliation is not yet created using the reconciliation type.

On clicking the **Broadcast** (📡) icon corresponding to a reconciliation type, the **Reconciliation Type** zone appears with the details of the respective reconciliation type.

How to view the details of a reconciliation type	Viewing the Reconciliation Type Details on page 2894

Reconciliation Type

The **Reconciliation Type** zone displays the details of the reconciliation type. It contains the following sections:

- **Main** - Displays basic information about the reconciliation type. It contains the following fields:

Field Name	Field Description
Reconciliation Type	Displays the reconciliation type.
Reconciliation Business Object	Indicates the business object using which the reconciliation is created. In addition, a context menu (⌄) icon appears corresponding to this field which helps in navigating to other screens in the application.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Description	Displays the description of the reconciliation type.
Detailed Description	Displays additional information about the reconciliation type.
Reconciliation Category	Used to indicate the category to which the reconciliation belongs. The valid values are: • Group • Individual
	Note: The list includes only those values which are defined in the **RECON_CAT_FLG** lookup field.
Status	Indicates the status of the reconciliation type. The valid values are: • Active • Inactive

- **Algorithms** - Lists the algorithms which are associated with the reconciliation type. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the algorithm with the same system event should be executed.
System Event	Indicates the system event when the algorithm should be executed. The valid value is: • Upload Pay Instructions
Algorithm	Indicates the algorithm attached to the system event.
	Note: It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective algorithm.

- **Characteristics** - Lists the characteristics defined for the reconciliation type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
	Note: It has a link. On clicking the link, the **Characteristic Type** screen appears where you can view the details of the respective characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.
	Note: The data appears in this column when the type of characteristic value is set to **Predefined Value** or **Foreign Key Value**.

- **Record Actions** - Enables you to perform various actions on the reconciliation type. It contains the following buttons:

Copyright © 2026, Oracle and/or its affiliates.

Button Name	Button Description
Edit	Used to edit the details of the reconciliation type.
Delete	Used to delete the reconciliation type.
	Note: You can delete a reconciliation type only when a reconciliation is not yet created using the reconciliation type.
Duplicate	Used to create a new reconciliation type using an existing reconciliation type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the reconciliation type is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Reconciliation Type** zone does not appear in the **Reconciliation Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a reconciliation type in the **Reconciliation Type List** zone.

Defining a Reconciliation Type

Prerequisites

To define a reconciliation type, you should have:

- Reconciliation type and reconciliation business objects defined in the application
- Field mapping and reconciliation category defined in the application.

Procedure

To define a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.
   A sub-menu appears.

Copyright © 2026, Oracle and/or its affiliates.

3. Click the **Add** option from the **Reconciliation Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Type Business Object	Used to indicate the business object using which you want to create the reconciliation type. The valid value is: • Claims Reconciliation Type • Member Reconciliation Type **Note:** The above business object is shipped with the product. The list includes those business objects which are created using the **Reconciliation Type** (i.e., **C1-RECONTY**) maintenance object.	Yes

Tip: Alternatively, you can access **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Reconciliation Type** screen.

Note: The **Select Business Object** screen appears when there are multiple reconciliation type business objects defined in the application. If there is only one reconciliation type business object defined in the application, the **Reconciliation Type** screen appears.

4. Select the required reconciliation type business object from the respective field.
5. Click **OK**.

   The **Reconciliation Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the reconciliation type.
   - **Algorithms** - Used to associate algorithms with the reconciliation type.
   - **Characteristics** - Used to define the characteristics for the reconciliation type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Type	Used to specify the reconciliation type.	Yes
Business Object	Indicates the reconciliation type business object using which you are defining the reconciliation type.	Not applicable
Reconciliation Business Object	Used to indicate the business object using which you want to create the reconciliation. The valid value is: • Member Reconciliation **Note:** The above business object is shipped with the product. The list includes those business objects which are created using the **Reconciliation** (i.e., **C1-RECON**) maintenance object.	Yes
Description	Used to specify the description for the reconciliation type.	Yes
Detailed Description	Used to specify additional information about the reconciliation type.	No
Reconciliation Category	Used to indicate the category to which the reconciliation belongs. The valid values are:	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Group • Individual **Note:** The list includes only those values which are defined in the **RECON_CAT_FLG** lookup field.	
Status	Used to indicate the status of the reconciliation type. The valid values are: • Active • Inactive	Yes

6. Enter the required details in the **Main** section.
7. Associate algorithms with the reconciliation type, if required.
8. Define characteristics for the reconciliation type, if required.
9. Click **Save**.
   The reconciliation type is defined.

Defining a Characteristic for a Reconciliation Type

Prerequisites

To define a characteristic for a reconciliation type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Reconciliation Type**).

Procedure

To define a characteristic for a reconciliation type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a reconciliation type.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Reconciliation Type**.	**Note:** This field is required when you are defining a characteristic for the reconciliation type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the reconciliation type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the reconciliation type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the reconciliation type, click the **Delete** (🗑) icon corresponding to the characteristic.

Associating an Algorithm with a Reconciliation Type

You can upload a pay instruction file in the CSV and EDI 820 file formats. While uploading a pay instruction file, you need to specify the reconciliation type using which you want to create the reconciliation. A reconciliation type indicates the algorithm which validates the pay instruction file and creates a pay instruction for each record in the file. Two algorithm types named **C1-PAYINSUPL** and **C1-RECONPROC** are shipped with the product. You need to maintain separate reconciliation types for different file formats. If you want to use a reconciliation type while uploading a pay instruction file in the CSV format, you need to create an algorithm using the **C1-PAYINSUPL** algorithm type and attach it to the reconciliation type. However, if you want to use a reconciliation type while uploading a pay instruction file in the EDI 820 format, you need to create an algorithm using the **C1-RECONPROC** algorithm type and attach it to the reconciliation type.

Prerequisites

To associate an algorithm with a reconciliation type, you should have:

- Algorithm defined using the **C1-PAYINSUPL** or **C1-RECONPROC** algorithm type depending on whether you want to use the reconciliation type while uploading a pay instruction file in the CSV or EDI 820 file format
- System event defined in the application.

Procedure

To associate an algorithm with a reconciliation type:

1. Ensure that the **Algorithms** section is expanded when you are defining, editing, or copying a *r*econciliation type.

   The **Algorithms** section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithms for each system event should be executed.	Yes (Conditional) **Note:** This field is required when you are associating an algorithm with the reconciliation type.
System Event	Used to indicate the system event on which the algorithm should be executed. The valid value is: • **Upload Pay Instructions** - Used when you want to execute the attached algorithm while uploading a pay instruction file using the **Pay Instruction CSV File Upload (C1-RECUP)** or **Upload Lockbox Payment and Pay Instruction Files (C1-PUPSG)** batch.	Yes (Conditional) **Note:** This field is required when you are associating an algorithm with the reconciliation type.
Algorithm	Used to indicate the algorithm that you want to attach to the system event. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Algorithm Search** window appears. On specifying the value for a algorithm, the description of the algorithm appears corresponding to the **Algorithm** field.	Yes (Conditional) **Note:** This field is required when you are associating an algorithm with the reconciliation type.

2. Enter the required details in the **Algorithms** section.
3. If you want to associate more than one algorithm with the reconciliation type, click the **Add** (+) icon and *t*hen repeat step *2*.

Note: However, if you want to remove an algorithm from the reconciliation type, click the **Delete** (🗑) icon corresponding to the algorithm.

4. Click **Save**.
   The algorithms are associated with the reconciliation type.

Editing a Reconciliation Type

Prerequisites

To edit a reconciliation type, you should have:

- Reconciliation type and reconciliation business objects defined in the application
- Field mapping and reconciliation category defined in the application

Copyright © 2026, Oracle and/or its affiliates.

Procedure

To edit a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Reconciliation Type** sub-menu.
   The **Reconciliation Type** screen appears.
4. In the **Reconciliation Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *r*econciliation type whose details you want to edit.

   The **Reconciliation Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the reconciliation type.
   - **Algorithms** - Used to associate algorithms with the reconciliation type.
   - **Characteristics** - Used to define the characteristics for the reconciliation type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Type	Displays the reconciliation type.	Not applicable
Business Object	Indicates the reconciliation type business object using which you are defining the reconciliation type.	Not applicable
Reconciliation Business Object	Used to indicate the business object using which you want to create the reconciliation. The valid value is: • Member Reconciliation **Note:** The above business object is shipped with the product. The list includes those business objects which are created using the **Reconciliation** (i.e., **C1-RECON**) maintenance object.	Yes
Description	Used to specify the description for the reconciliation type.	Yes
Detailed Description	Used to specify additional information about the reconciliation type.	No
Reconciliation Category	Used to indicate the category to which the reconciliation belongs. The valid values are: • Group • Individual **Note:** The list includes only those values which are defined in the **RECON_CAT_FLG** lookup field.	Yes
Status	Used to indicate the status of the reconciliation type. The valid values are: • Active • Inactive	Yes

Tip: Alternatively, you can click the **Edit** button in the **Reconciliation Type** zone to edit the details of the reconciliation type.

Copyright © 2026, Oracle and/or its affiliates.

5. Modify the required details in the **Main** section.
6. Associate or remove an algorithm from the reconciliation type, if required.
7. Define, edit, or remove characteristics of the reconciliation type, if required.
8. Click **Save**.
   The changes made to the reconciliation type are saved.

Deleting a Reconciliation Type

Procedure

To delete a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Reconciliation Type** sub-menu.
   The **Reconciliation Type** screen appears.
4. In the **Reconciliation Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the *r*econciliation type that you want to delete.
   A message appears confirming whether you want to delete the reconciliation type.

   Note: You can delete a reconciliation type only when a reconciliation is not yet created using the reconciliation type.

   Tip: Alternatively, you can click the **Delete** button in the **Reconciliation Type** zone to delete the reconciliation type.
5. Click **OK**.
   The reconciliation type is deleted.

Copying a Reconciliation Type

Instead of creating a reconciliation type from scratch, you can create a new reconciliation type using an existing reconciliation type. This is possible through copying a reconciliation type. On copying a reconciliation type, the details including the algorithms and characteristics are copied to the new reconciliation type. You can then edit the details, if required.

Prerequisites

To copy a reconciliation type, you should have:

- Reconciliation type (whose copy you want to create) defined in the application
- Reconciliation business objects defined in the application
- Field mapping and reconciliation category defined in the application.

Procedure

To copy a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Reconciliation Type** sub-menu.
   The **Reconciliation Type** screen appears.
4. In the **Reconciliation Type List** zone, click the **Duplicate** (⎘) icon in the **Duplicate** column *c*orresponding to the reconciliation type whose copy you want to create.

   The **Reconciliation Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the reconciliation type.
   - **Algorithms** - Used to associate algorithms with the reconciliation type.
   - **Characteristics** - Used to define the characteristics for the reconciliation type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Type	Used to specify the reconciliation type.	Yes
Business Object	Indicates the business object using which you are defining the reconciliation type.	Not applicable
Reconciliation Business Object	Used to indicate the business object using which you want to create the reconciliation. The valid value is: • Member Reconciliation **Note:** The above business object is shipped with the product. The list includes those business objects which are created using the **Reconciliation** (i.e., **C1-RECON**) maintenance object.	Yes
Description	Used to specify the description for the reconciliation type.	Yes
Detailed Description	Used to specify additional information about the reconciliation type.	No
Reconciliation Category	Used to indicate the category to which the reconciliation belongs. The valid values are:	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Group • Individual **Note:** The list includes only those values which are defined in the **RECON_CAT_FLG** lookup field.	
Status	Used to indicate the status of the reconciliation type. The valid values are: • Active • Inactive	Yes

Tip: Alternatively, you can click the **Duplicate** button in the **Reconciliation Type** zone to create a copy of the reconciliation type.

5. Enter the required details in the **Main** section.
6. Associate or remove an algorithm from the reconciliation type, if required.
7. Define, edit, or remove characteristics of the reconciliation type, if required.
8. Click **Save**.
   The new reconciliation type is defined.

Viewing the Reconciliation Type Details

Procedure

To view the details of a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Reconciliation Type** sub-menu.
   The **Reconciliation Type** screen appears.
4. In the **Reconciliation Type List** zone, click the **Broadcast** (ᯤ) icon corresponding to the reconciliation type whose details you want to view.
   The **Reconciliation Type** zone appears.
5. View the details of the reconciliation type in the **Reconciliation Type** zone.

Reconciliation (Used for Searching)

The **Reconciliation** screen allows you to search for a reconciliation using various search criteria. It contains the following zone:

- Search Reconciliation on page 2895

Through this screen, you can navigate to the following screen:

- Reconciliation (Used for Viewing) on page 2900

Search Reconciliation

The **Search Reconciliation** zone allows you to search for a reconciliation using various search criteria. This zone contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a reconciliation using the reconciliation, account, or payment tender details. The valid values are: • Reconciliation Details • Account Details • Payment Tender Details **Note:** By default, the **Reconciliation Details** option is selected.	Yes
Reconciliation ID	Used to search for a particular reconciliation. **Note:** This field appears when the **Reconciliation Details** option is selected from the **Search By** list.	No
Reconciliation Type	Used to search for reconciliations which are created using a particular reconciliation type. **Note:** This field appears when the **Reconciliation Details** option is selected from the **Search By** list. The list includes only those reconciliation types which are already defined in the system.	No
Created From	Used to search reconciliations which are created from a particular date onwards.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Reconciliation Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** () icon corresponding to the field.	
Status	Used to search for reconciliations with a particular status. The valid values are: • Canceled • Completed • Draft • Initial Reconciliation in Progress • Open • Pending Cancelation • Pending • Pending Reconciliation • Reconciliation in Progress • Void **Note:** This field appears when the **Reconciliation Details** option is selected from the **Search By** list.	No
Created Until	Used to search for reconciliations which are created till a particular date. **Note:** This field appears when the **Reconciliation Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** () icon corresponding to the field.	No
File Name	Used to search for a reconciliation which is created for a particular pay instruction file. **Note:** This field appears when the **Reconciliation Details** option is selected from the **Search By** list.	No
Person Name	Used to search for reconciliations which contain a particular member's pay instructions. **Note:** This field appears when the **Account Details** option is selected from the **Search By** list.	No
Account Identifier Type	Used to select the identifier type based on which you want to search reconciliations which contain pay instructions for a particular payee account.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Account Details** option is selected from the **Search By** list. The list includes only those account identifier types which are already defined in the system.	**Note:** If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account ID	Used to search for reconciliations which contain pay instructions for a particular payee account.	No
	Note: This field appears when the **Account Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Account ID** field. On clicking the **Search** icon, the **Account Search** window appears.	
Account Identifier	Used to specify the value for the account identifier type.	Yes (Conditional)
	Note: This field appears when the **Account Details** option is selected from the **Search By** list.	**Note:** If you specify the account identifier type as a search criteria, you have to specify the account identifier.
Check Number	Used to search a reconciliation associated with a payment tender which is received through a particular check.	No
	Note: This field appears when the **Payment Tender Details** option is selected from the **Search By** list.	
Payor Account ID	Used to search reconciliations which are associated with a particular payor account.	No
	Note: This field appears when the **Payment Tender Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Payor Account ID** field. On clicking the **Search** icon, the **Account Search** window appears.	
MICR ID	Used to search a reconciliation associated with a payment tender which contains a particular MICR code.	No
	Note: This field appears when the **Payment Tender Details** option is selected from the **Search By** list.	
Tender Amount	Used to search reconciliations associated with payment tenders with a particular amount.	No
	Note: This field appears when the **Payment Tender Details** option is selected from the **Search By** list.	

Copyright © 2026, Oracle and/or its affiliates.

Note: You must specify at least one search criterion while searching for a reconciliation.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date/ Time	Displays the date and time when the reconciliation is created.
Reconciliation Information	Displays information about the reconciliation. **Note:** It has a link. On clicking the link, the **Reconciliation** screen appears where you can view the details of the respective reconciliation.
Status	Indicates the status of the reconciliation. The valid values are: • Canceled • Completed • Draft • Initial Reconciliation in Progress • Open • Pending Cancelation • Pending • Pending Reconciliation • Reconciliation in Progress • Void
Payor Account ID	Indicates the payor account to which the reconciliation is associated. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective payor account.
Payment ID	Indicates the payment to which the reconciliation is associated. **Note:** It has a link. On clicking the link, the **Payment** screen appears where you can view the details of the respective payment.
File Name	Indicates the pay instruction file for which the reconciliation is created in the system.
Duplicate	Used to create a new reconciliation using an existing reconciliation. **Note:** The **Duplicate** button appears when the reconciliation is in the **Canceled** status.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Reconciliation

Prerequisite

To search for a reconciliation, you should have:

- Reconciliation types and account identifier types defined in the application.

Procedure

To search for a reconciliation:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Reconciliation**.
   The **Reconciliation** screen appears.
3. Enter the search criteria in the **Search Reconciliation** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   A list of reconciliations that meet the search criteria appears in the **Search Results** section.

Viewing the Reconciliation Details

Procedure

To view the details of a reconciliation:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation whose details you want to view.
   The **Reconciliation** screen appears. It contains following tabs:
   - Reconciliation - Main on page 2900
   - Reconciliation - Pay Instruction on page 2903
   - Reconciliation - Log on page 2906
3. Ensure that the **Main** tab is selected.
4. View the details of the reconciliation in the **Reconciliation** zone.
5. View the list of pay instructions uploaded through the file in the **Pay Instructions** zone.

- Reconciliation on page 2900

Reconciliation

The **Reconciliation** zone displays the details of the reconciliation. It contains the following sections:

- **Main** - Displays basic information about the reconciliation. It contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Reconciliation Information	Displays information about the reconciliation.
Reconciliation Type	Indicates the reconciliation type using which the reconciliation is created. **Note:** It has a link. On clicking the link, the **Reconciliation Type** screen appears where you can view the details of the reconciliation type.
Status	Indicates the status of the reconciliation. The valid values are: • Canceled • Completed • Draft • Initial Reconciliation in Progress • Open • Pending Cancelation • Pending • Pending Reconciliation • Reconciliation in Progress • Void
Status Reason	Indicates the reason why the status of the reconciliation is changed. **Note:** This field appears when the reconciliation is in the **Pending Cancelation** or **Canceled** status. It has a link. On clicking the link, the **Status Reason Display** screen appears where you can view the details of the respective status reason.
File Name	Indicates the pay instruction file for which the reconciliation is created in the system.
Payment Information	Indicates the payment to which the reconciliation is associated. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Payment** screen appears where you can view the details of the respective payment. This field does not appear when the reconciliation is in the **Draft** or **Pending** status.
Account Information	Indicates the payor account to which the reconciliation is associated. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account. This field does not appear when the reconciliation is in the **Draft** or **Pending** status.

- **Characteristics** - Lists the characteristics defined for the reconciliation. It contains the following columns:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Effective Date	Indicates the date from when the characteristic is effective.
Characteristic Type	Indicates the characteristic type. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value. **Note:** The data appears in this column when the type of characteristic value is set to **Predefined Value** or **Foreign Key Value**.

- **Pay Instruction Statistics** - Lists the statistics of records in the reconciliation. It contains the following fields:

Field Name	Field Description
Total Records	Displays total number of records in the reconciliation file.
Total Records in Error	Displays the count of data records in error status.
Total Records Processed	Displays the count of data records derived after processing.
Total Records Pending	Displays the count of data records pending after successful derivation.
Total Records Cancelled	Displays the count of data records derived after unsuccessful processing.
Total Records in Open	Displays the count of data records in open status.
Total Amount	Indicated the sum of money involved in the payment instructions.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the reconciliation. **Note:** The **Edit** button appears when the reconciliation is in the **Pending** or **Draft** status.
Delete	Used to delete the reconciliation. **Note:** The **Delete** button appears when the reconciliation is in the **Pending** or **Draft** status.
Submit for Reconciliation	Used to submit the pay instructions for reconciliation. **Note:** The **Submit for Reconciliation** button appears when the reconciliation is in the **Pending** status.
Cancel	Used to cancel the reconciliation. **Note:** The **Cancel** button appears when the reconciliation is in the **Completed** or **Open** status.
Reconcile	Used to reconcile the pay instructions in the reconciliation.

Copyright © 2026, Oracle and/or its affiliates.

Button Name	Button Description
	Note: The **Reconcile** button appears when the reconciliation is in the **Pending Reconciliation** status.
Revert to Pending	Used to revert the status of the reconciliation to **Pending**.
	Note: The **Revert to Pending** button appears when the reconciliation is in the **Pending Reconciliation** status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the reconciliation is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date Time	Displays the date and time when the reconciliation status is updated.
Creation/Date Time	Displays the date and time when the reconciliation is created.

Reconciliation - Pay Instruction

The **Pay Instruction** tab allows you to search for a pay instruction using various search criteria. It contains the following zone:

- Pay Instructions on page 2903

Pay Instructions

The **Pay Instructions** zone allows you to search for a pay instruction using various search criteria. This zone contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search for pay instructions which are created for a particular payee account.	No
	Note: The Search (🔍) icon appears corresponding to the **Account ID** field. On clicking the **Search** icon, the **Account Search** window appears.	
Policy Number	Used to search for pay instructions that are linked to a particular policy.	No
	Note: This field appears only when you have selected the **Group** option from the **Reconciliation Type** list while defining a reconciliation type.	

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Health Plan	Used to search for pay instructions that are linked to a particular health plan. **Note:** The **Search** (🔍) icon appears corresponding to the **Health Plan** field. On clicking the **Search** icon, the **Health Plan Search** window appears. This field appears only when you have selected the **Individual** option from the **Reconciliation Type** list while defining a reconciliation type.	No
Subscriber Identifier Type	Used to search for pay instructions with a particular member identifier type. **Note:** The list includes only those member identifier types which are already defined in the system.	No
Subscriber Identifier	Used to search for pay instructions with a particular member identifier.	No
Coverage Start Date	Used to search for pay instructions which are created on or after the specified date. **Note:** You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	No
Coverage End Date	Used to search pay instructions which are created on or before the specified date. **Note:** You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	No
Amount From	Used to search for pay instructions with a particular lower limit of the pay instruction amount.	No
Amount To	Used to search for pay instructions with a particular higher limit of the pay instruction amount.	No
Status	Used to search pay instructions with a particular status. The valid values are: • Canceled • Complete • Derivation Pending Processing • Error • Open • Pending • Reconciliation Pending Processing	No
Payment Type	Used to specify the exchange type through which the payment is recieved.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears only when you have selected the **Individual** option from the **Reconciliation Type** list while defining a reconciliation type.	

Note: You must specify at least one search criterion while searching for a pay instruction.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account Identifier Type	Indicates the account identifier type for the account.
Account Identifier	Indicates the value for the account identifier type.
Account ID	Indicates the payee account which made the payment. **Note:** It has a link. On clicking the link, the **Account** screen appears with the details of the respective account.
Policy Number	Indicates the policy number linked to a particular pay instruction. **Note:** This field appears when you search pay instruction for fully-insured group business.
Plan Number	Displays the plan number associated with the policy. **Note:** This field appears when you search pay instruction for fully-insured group business.
Payor Identifier Type	Displays the identifier type of the payor. **Note:** This field appears when you search pay instruction for fully-insured individual business.
Payor Identifier	Displays the value for the payor identifier type. **Note:** This field appears when you search pay instruction for fully-insured individual business.
Subscriber Identifier Type	Displays the identifier type of the member.
Subscriber Identifier	Displays the value for the member identifier type.
Subscriber Name	Displays the member name.
Health Plan	Displays information about the health plan. **Note:** This field appears when you search pay instruction for fully-insured individual business.
HIOS ID	Displays the health insurance oversight system (HIOS) ID.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: This field appears when you search pay instruction for fully-insured individual business.
Coverage Start Date	Displays the date from when the coverage is effective.
Coverage End Date	Displays the date till when the coverage is effective.
Payment Type	Displays the exchange type through which the payment is recieved. **Note:** This field appears when you search pay instruction for fully-insured individual business.
Amount	Displays the amount that has to be paid to the member.
Open Amount	Displays the amount which has not been paid to the member and is still in the open state.
Status	Displays the status of the pay instruction. The valid values are: • Canceled • Complete • Derivation Pending Processing • Error • Open • Pending • Reconciliation Pending Processing
Pay Instruction ID	Displays the pay instruction ID.

On clicking the **View** (🔗) icon corresponding to an **Account Identifier Type** column, the **Pay Instruction** screen appears with the details of the respective pay instruction record.

You can filter the list using various search criteria (such as, **Account ID**, **Health Plan** or **Policy Number**, **Subscriber Identifier Type**, **Subscriber Identifier**, **Coverage Start Date**, **Coverage End Date**, **Amount From**, **Amount To**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages. Note that the navigation links appear in the **Search Results** section only when the records in the search results exceed 20.

Editing a Reconciliation

Procedure

To edit a reconciliation:

1. Search for the reconciliation in **Reconciliation** screen.
   A list appears.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation whose details you want to edit.
   The **Reconciliation** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Reconciliation** zone.
   The **Member Reconciliation** screen appears.

   It contains the following sections:

   - **Main** - Used to specify the basic details for the reconciliation.
   - **Characteristics** - Used to define the characteristics for the reconciliation.

Copyright © 2026, Oracle and/or its affiliates.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Information	Displays information about the reconciliation.	Not applicable
Reconciliation Type	Indicates the reconciliation type using which the reconciliation is created.	Not applicable
File Name	Indicates the pay instruction file for which the reconciliation is created in the system.	Not applicable
Payment Information	Indicates the payment to which the reconciliation is associated. **Note:** The **Search** (🔍) icon appears corresponding to the **Payment Information** field. On clicking the **Search** icon, the **Payment Search** window appears. On specifying the value for a payment, the description of the payment appears corresponding to the **Payment Information** field.	No

Note: The **Edit** button appears only when the reconciliation is in the **Pending** status.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the reconciliation, if required.
7. Click **Save**.
   The changes made to the reconciliation are saved.

Defining a Characteristic for a Reconciliation

Prerequisites

To define a characteristic for a reconciliation, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Reconciliation**)

Procedure

To define a characteristic for a reconciliation:

1. Ensure that the **Characteristics** section is expanded when you are editing a reconciliation.

   The **Characteristics** section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the reconciliation. **Note:** You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the reconciliation.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Reconciliation**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the reconciliation.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the reconciliation.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the reconciliation, click the **Add** (+) icon and then repeat *s*tep 2.

Note: However, if you want to remove a characteristic from the reconciliation, click the **Delete** (🗑) icon corresponding to the characteristic.

Submitting Pay Instructions for a Reconciliation

Prerequisites

To submit pay instructions for reconciliation, you should have:

- Reconciliation BO status as pending.
- The account information of the payment defined in the application.

Procedure

To submit pay instructions for a reconciliation:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the *r*econciliation that you want to submit.
   The **Reconciliation** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Submit for Reconciliation** button in the **Reconciliation** zone.
   The pay instruction is submitted for reconciliation and the reconciliation status gets changed to **Pending Reconciliation**.

> **Note:**
>
> The **Submit for Reconciliation** button appears when the reconciliation is in the **Pending** status.

Reconciling Pay Instructions

Prerequisites

To reconcile pay instructions, you should have:

- Account ID defined in the application.

Copyright © 2026, Oracle and/or its affiliates.

- Reconciliation status must be in **Pending Reconciliation**.

Procedure

To reconcile pay instructions:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the *r*econciliation that you want to reconcile.
   The **Reconciliation** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Reconcile** button in the **Reconciliation** zone.
   The pay instructions gets reconciled and the reconciliation status gets changed to **Open**.

> **Note:**
>
> The **Reconcile** button appears when the reconciliation is in the **Pending Reconciliation** status.

Adding a Log Entry for a Reconciliation

Procedure

To add a log entry for a reconciliation:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the *r*econciliation for which you want to add a log entry.
   The **Reconciliation** screen appears.
3. Click the **Log** tab.
   The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Reconciliation Log** zone.

   The **Add Reconciliation Log** window appears. It contains the following fields:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Reconciliation Information	Displays information about the reconciliation.	Not applicable
Log Details	Used to specify additional comments for the reconciliation.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.
   The log entry is added in the **Reconciliation Log** zone.

Canceling a Reconciliation

Prerequisites

To cancel a reconciliation, you should have:

- Reasons defined for the **Canceled** status of the **C1-MemberReconciliation** business object in the **Status Reason** screen.

Procedure

To cancel a reconciliation:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation that you want to cancel.
   The **Reconciliation** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Cancel** button in the **Reconciliation** zone.

   The **Status Reason** window appears. It contains following field:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to cancel the reconciliation. **Note:** The list includes only those reasons which are defined for the **Canceled** status of the **C1-MemberReconciliation** business object through the **Status Reason** screen.	Yes

Note: The **Cancel** button appears when the reconciliation is in the **Open** or **Completed** status.

5. Select the reason for canceling the reconciliation from the **Status Reason** list.
6. Click **Save**.
   The status of the reconciliation is changed to **Canceled**.

Searching for a Pay Instruction

Prerequisite

To search for a pay instruction, you should have:

- Pay instruction statuses and subscriber identifier types defined in the application.

Procedure

To search for a pay instruction:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation whose details you want to view.
   The **Reconciliation** screen appears.
3. Click the **Pay Instruction** tab.
   The **Pay Instruction** tab appears.
4. Enter the search criteria in the **Pay Instruction** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of pay instructions that meet the search criteria appears in the **Search Results** section.

Viewing the Pay Instruction Details

Procedure

To view the details of a pay instruction:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation whose pay instruction details you want to view.
   The **Reconciliation** screen appears. It contains following tabs:
   - Reconciliation - Main on page 2900
   - Reconciliation - Pay Instruction on page 2903
   - Reconciliation - Log on page 2906
3. Click the **Pay Instruction** tab.
   The **Pay Instruction** tab appears.
4. Enter the search criteria in the **Pay Instructions** zone.
5. Click **Search**.
   A list of pay instruction that meet the search criteria appears in the **Search Results** section.
6. In the **Search Results** section, click the **View** (🔗) icon corresponding to the **Account Identifier Type** column.
   The **Pay Instruction** screen appears.
7. Ensure that the **Main** tab is selected.
8. View the details of the pay instruction in the **Pay Instruction** zone.

Pay Instruction (Used for Viewing)

The **Pay Instruction** screen allows you to search for a pay instruction which is the part of reconciliation using various search criteria. It also allows you to:

- View the details and characteristics of the pay instruction
- View the details of the reconciliation adjustments
- View the related objects

Copyright © 2026, Oracle and/or its affiliates.

This screen contains of the following tabs:

- Pay Instruction - Main on page 2915
- Pay Instruction - Log on page 2918

Pay Instruction - Main

The **Pay Instruction - Main** tab displays information about the pay instruction. It contains the following zones:

- Pay Instruction on page 2915
- Reconciliation Adjustments on page 2917
- Related Objects on page 2918

Pay Instruction

The **Pay Instruction** zone displays the payment related information that is specific to each member. It contains the following sections:

- **Main** - Displays the basic information about the pay instruction. It contains the following fields:

Field Name	Field Description
Pay Instruction Information	Displays information about the pay instruction in brief.
Reconciliation Information	Displays information about the reconciliation. **Note:** It has a link. On clicking the link, the **Reconciliation** screen appears where you can view the details of the respective reconciliation.
Status	Indicates the status of the pay instruction. The valid values are: • Canceled • Completed • Derivation Pending Processing • Error • Open • Pending • Reconciliation Pending Processing
Coverage Start Date	Displays the date of the policy from when the coverage starts.
Coverage End Date	Displays the date of the policy till when the coverage ends.
Account Identifier Type	Displays the account identifier type of the member.
Account Identifier	Displays the value for the account identifier type.
Account Information	Displays information about the account of the member. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Policy Number	Displays the policy number of the member. **Note:** This field appears only when you are viewing the details of a pay instruction which is created for the fully insured group business.
Plan Number	Displays the plan number of the member.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears only when you are viewing the details of a pay instruction which is created for the fully insured group business.
Health Plan	Displays information about the health plan. **Note:** This field appears only when you are viewing the details of a pay instruction which is created for the fully insured individual business.
HIOS ID	**Note:** This field appears only when you are viewing the details of a pay instruction which is created for the fully insured individual business.
Payment Type	Displays the type of tender through which the payment is made. **Note:** This field appears only when you are viewing the details of a pay instruction which is created for the fully insured individual business.
Payor Identifier Type	Displays the payor identifier type. **Note:** This field appears only when you are viewing the details of a pay instruction which is created for the fully insured individual business.
Payor Identifier	Displays the payor identifier. **Note:** This field appears only when you are viewing the details of a pay instruction which is created for the fully insured individual business.
Subscriber Identifier Type	Displays the subscriber identifier type of the member.
Subscriber Identifier	Displays the subscriber identifier of the member.
Subscriber Name	Displays the subscriber name of the member.
Payment Instruction Amount	Displays the amount that has to be paid to the member.
Open Amount	Displays the amount which has not been paid to the member and is still in the open state.

In addition, the following sub-section appears in the **Main** section:

- **Pay Instruction Amount** - This sub-section provides information about the pay instruction amount. It contains the following fields:

Field Name	Field Description
Payment Instruction Amount	Displays the amount that has to be paid to the member.
Open Amount	Displays the amount which has not been paid to the member and is still in the open state.

- **Record Information** - This section provides information on the pay instruction business object. It contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the pay instructions are executed. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date Time	Displays the date and time when the pay instruction object status is updated.
Creation Date/Time	Displays the date and time when the pay instruction object is created.

- **Characteristics** - This section provides characteristic information for the pay instruction.

Field Name	Field Description
Characteristic Type	Displays the characteristic type.
	Note: It has a link. On clicking the link, the **Characteristic Type** screen appears where you can view the details of the respective characteristic type.
Characteristic Value	Displays the value of characteristic type.
Description	Displays the description of the characteristic type.

Reconciliation Adjustments

The **Reconciliation Adjustments** zone displays the adjustment information for each pay instruction. It contains the following columns:

Column Name	Column Description
Transfer Adjustment	Indicates the amount to be transferred from a reconciliation contract against a pay instruction.
	Note: It has a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the transferred adjustment.
Transfer Type	Displays the type of transaction made against a pay instruction or an internal offsetting.
Transfer Financial Transaction ID	Displays the transfer financial transaction ID.
Offset Adjustment	Indicates a reciprocal adjustment that is associated with a transfer adjustment.
	Note: It has a link. On clicking the link, the **Adjustment** screen appears where you can view the offset adjustment details.
Related Object Type	Displays the related object type whether it is pay instruction or financial transaction.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Related Object ID	Indicates the ID of the related pay instruction or financial transaction created in reconciliation process.
	Note: It has a link. On clicking the link, the **Financial Transaction** screen appears where you can view the details of the financial transaction of reconciliation adjustments.

Note: Pagination is used to display limited number of records in the **Reconciliation Adjustments** zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the adjustments using **Show All Adjustments** available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of the **Reconciliation Adjustments** zone.

Related Objects

The **Related Objects** zone displays all those business objects based on which reconciliation process takes place. It contains the following columns:

Column Name	Column Description
Related Object Type	Displays the related object type that was used in the pay instruction process.
Related Object Information	Displays the details of related object in brief.
	Note: It has a link. On clicking the link, the respective related object screen appears with the details of the related object depending on the related object type.

Note: Pagination is used to display limited number of records in the **Related Topics** zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Pay Instruction - Log

The **Pay Instruction - Log** tab contains the following zone:

- Pay Instruction Log on page 2918

Pay Instruction Log

The **Pay Instruction Log** zone lists the complete trail of actions performed on the pay instructions. It contains the following columns:

Column Name	Column Description
Creation Date/Time	Displays the date and time when the action was performed on the pay instruction.
Details	Displays the details about the action performed on the pay instruction.
User	Indicates the user who has performed the action on the pay instruction.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the pay instruction.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the status reason of action performed on the pay instruction.

Note: You can manually add a log entry for the pay instruction by clicking the **Add Log Entry** link in the upper right corner of the **Pay Instruction Log** zone.

Discrepancy Report Type

Oracle Revenue Management and Billing allows you to define a discrepancy report type using which you can create a discrepancy report. It is the discrepancy report type which helps the system to determine the following:

- Business object using which the discrepancy report should be created in the system.

The **Discrepancy Report Type** screen allows you to define, edit, copy, and delete a discrepancy report type. It consists of the following zones:

- Discrepancy Report Type List on page 2921
- Discrepancy Report Type on page 2922

For more information on...	See...
How to define a discrepancy report type	Defining a Discrepancy Report Type on page 2923

How to copy a discrepancy report type	Copying a Discrepancy Report Type on page 2928
How to delete a discrepancy report type	Deleting a Discrepancy Report Type on page 2928

Discrepancy Report Type List

The **Discrepancy Report Type List** zone lists the various types of discrepancy report types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Discrepancy Report Type	Displays the discrepancy report type.
Description	Displays the description of the discrepancy report type.
Edit	On clicking the **Edit** (✎) icon, the **Discrepancy Report Type** screen appears where you can edit the details of the discrepancy report type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Discrepancy Report Type** screen appears where you can define a new discrepancy report type using an existing discrepancy report type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the discrepancy report type.
	Note: You can delete a discrepancy report type only when a discrepancy report is not yet created using the discrepancy report type.

On clicking the **Broadcast** (📡) icon corresponding to a discrepancy report type, the **Discrepancy Report Type** zone appears with the details of the respective discrepancy report type.

Discrepancy Report Type

The **Discrepancy Report Type** zone displays the details of the discrepancy report type. It consists of the following sections:

- **Main** - Displays the basic information about the discrepancy report type. It contains the following fields:

Field Name	Field Description
Discrepancy Report Type	Displays the discrepancy report type.
Discrepancy Report Business Object	Indicates the business object using which a discrepancy report should be created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Description	Displays the description of the discrepancy report type.
Detailed Description	Displays additional information about the discrepancy report type.
Status	Indicates the status of the discrepancy report type. The valid values are: • Active • Inactive

- **Record Actions** - Enables you to perform various actions on the discrepancy report type. It contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the discrepancy report type.
Delete	Used to delete the discrepancy report type. **Note:** You can delete a discrepancy report type when a discrepancy report is not yet created using the discrepancy report type.
Duplicate	Used to create a new discrepancy report type using an existing discrepancy report type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the discrepancy report type is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

- **Characteristics** - Lists the characteristics of the discrepancy report type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
	Note: It has a link. On clicking the link, the **Characteristic Type** screen appears where you can view the details of the respective account.
Characteristic Value	Displays the value of the characteristic type.
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.
Description	Displays the description of the characteristic value.

By default, the **Discrepancy Report Type** zone does not appear in the **Discrepancy Report Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a discrepancy report type in the **Discrepancy Report Type List** zone.

Defining a Discrepancy Report Type

Prerequisites

To define a discrepancy report type, you should have:

- Discrepancy report business objects defined in the application.
- Characteristic type defined for the discrepancy report.

Procedure

Copyright © 2026, Oracle and/or its affiliates.

To define a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **D**, and then click **Discrepancy Report Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Discrepancy Report Type** sub-menu.
   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type Business Object	Used to indicate the business object using which you want to create the discrepancy report type. The valid value is: • **Discrepancy Report Type (i.e., C1-MemberDiscReportType)** - Enables you to maintain a discrepancy report type. **Note:** The above business object is shipped with the product. The list includes those business objects which are created using the **Discrepancy Report Type** (i.e., **C1-DSC-RP-TY**) maintenance object.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Discrepancy Report Type** screen.

Note: The **Select Business Object** screen appears when there are multiple discrepancy report type business objects defined in the application. If there is only one discrepancy report type business object defined in the application, the **Discrepancy Report Type** screen appears.

4. Select the required discrepancy report type business object from the respective field.
5. Click **OK**.
   The **Discrepancy Report Type** screen appears. It contains the following sections:
   - **Main** - Used to specify the basic details for the discrepancy report type.
   - **Characteristics** - Used to define the characteristics for the discrepancy report type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Used to specify the discrepancy report type.	Yes
Business Object	Indicates the business object using which you are defining the discrepancy report type.	Not applicable
Discrepancy Report Business Object	Used to indicate the business object using which you want to create the discrepancy report. The valid value is: • **Discrepancy Report (i.e., C1-DiscrepancyReport)**- Enables you to create a discrepancy report. **Note:** The above mentioned business object is shipped with the product. The list includes those business objects which are created using the **Discrepancy Report Type** (i.e., **C1-DSC-RP-TY**) maintenance object.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the discrepancy report type.	Yes
Detailed Description	Used to specify additional information about the discrepancy report type. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⌟) icon at the bottom right corner of the text box.	No
Status	Used to indicate the status of the discrepancy report type. The valid values are: • Active • Inactive	Yes

6. Enter the required details in the **Main** section.
7. Define characteristics for the discrepancy report type, if required.
8. Click **Save**.
   The discrepancy report type is defined.

Defining a Characteristic for a Discrepancy Report Type

Prerequisites

To define a characteristic for a discrepancy report type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Discrepancy Report Type**).

Procedure

To define a characteristic for a discrepancy report type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a discrepancy *r*eport type.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Discrepancy Report Type**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the discrepancy report type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the discrepancy report type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the discrepancy report type, click the **Add** (+) icon and then *r*epeat step 2.

Note: However, if you want to remove a characteristic from the discrepancy report type, click the **Delete** (🗑) icon corresponding to the characteristic.

Editing a Discrepancy Report Type

Prerequisites

To edit a discrepancy report type, you should have:

- Discrepancy report business objects defined in the application.
- Characteristic type defined for the discrepancy report.

Procedure

To edit a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **D** and then click **Discrepancy Report Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Discrepancy Report Type** sub-menu.
   The **Discrepancy Report Type** screen appears.
4. In the **Discrepancy Report Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the discrepancy *r*eport type whose details you want to edit.

   The **Discrepancy Report Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for the discrepancy report type.

Copyright © 2026, Oracle and/or its affiliates.

- **Characteristics** - Used to define the characteristics for the discrepancy report type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Used to specify the discrepancy report type.	Not applicable
Business Object	Indicates the business object using which you are defining the discrepancy report type.	Not applicable
Discrepancy Report Business Object	Used to indicate the business object using which you want to create the discrepancy report. The valid value is: • **Discrepancy Report (i.e., C1-DiscrepancyReport)**- Enables you to create a discrepancy report. **Note:** The above mentioned business object is shipped with the product. The list includes those business objects which are created using the **Discrepancy Report Type** (i.e., **C1-DSC-RP-TY**) maintenance object.	Yes
Description	Used to specify the description for the discrepancy report type.	Yes
Detailed Description	Used to specify additional information about the discrepancy report type. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⊿) icon at the bottom right corner of the text box.	No
Status	Used to indicate the status of the discrepancy report type. The valid values are: • Active • Inactive	Yes

Tip: Alternatively, you can click the **Edit** button in the **Discrepancy Report Type** zone to edit the details of the discrepancy report type.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the discrepancy report type, if required.
7. Click **Save**.
   The changes made to the discrepancy report type are saved.

Deleting a Discrepancy Report Type

Procedure

To delete a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **D** and then click **Discrepancy Report Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Discrepancy Report Type** sub-menu.
   The **Discrepancy Report Type** screen appears.
4. In the **Discrepancy Report Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the *d*iscrepancy report type that you want to delete.
   A message appears confirming whether you want to delete the discrepancy report type.

> **Note:** You can delete a discrepancy report type only when a discrepancy report is not yet created using the discrepancy report type.

> **Tip:** Alternatively, you can click the **Delete** button in the **Discrepancy Report Type** zone to delete the discrepancy report type.

5. Click **OK**.
   The discrepancy report type is deleted.

Copying a Discrepancy Report Type

Instead of creating a discrepancy report type from scratch, you can create a new discrepancy report type using an existing discrepancy report type. This is possible through copying a discrepancy report type. On copying a discrepancy report type, the details including the characteristics are copied to the new discrepancy report type. You can then edit the details, if required.

Prerequisites

To copy a discrepancy report type, you should have:

- Discrepancy report business objects defined in the application.
- Characteristic type defined for the discrepancy report.

Procedure

To copy a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **D** and then click **Discrepancy Report Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Discrepancy Report Type** sub-menu.

Copyright © 2026, Oracle and/or its affiliates.

The **Discrepancy Report Type** screen appears.

4. In the **Discrepancy Report Type List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the discrepancy report type whose copy you want to create.

   The **Discrepancy Report Type** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details for the discrepancy report type.
   - **Characteristics** - Used to define the characteristics for the discrepancy report type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Used to specify the discrepancy report type.	Yes
Business Object	Indicates the business object using which you are defining the discrepancy report type.	Not applicable
Discrepancy Report Business Object	Used to indicate the business object using which you want to create the discrepancy report. The valid value is: • **Discrepancy Report (i.e., C1-DiscrepancyReport)**- Enables you to create a discrepancy report. **Note:** The above mentioned business object is shipped with the product. The list includes those business objects which are created using the **Discrepancy Report Type** (i.e., **C1-DSC-RP-TY**) maintenance object.	Yes
Description	Used to specify the description for the discrepancy report type.	Yes
Detailed Description	Used to specify additional information about the discrepancy report type. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⇲) icon at the bottom right corner of the text box.	No
Status	Indicates the status of the discrepancy report type. The valid values are: • Active • Inactive	Yes

Tip: Alternatively, you can click the **Duplicate** button in the**Discrepancy Report Type** zone to create a copy of the discrepancy report type.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove characteristics of the discrepancy report type, if required.
7. Click **Save**.
   The new discrepancy report type is defined.

Discrepancy Report (Used for Searching)

The **Discrepancy Report** screen allows you to search for a discrepancy report using various search criteria. It also allows you to create a discrepancy report. It contains the following zone:

- Search Discrepancy Report on page 2930

Through this screen, you can navigate to the following screen:

- Discrepancy Report (Used for Viewing) on page 2936

Search Discrepancy Report

The **Search Discrepancy Report** zone allows you to search for a discrepancy report using various search criteria. It contains the following two sections:

Search Criteria - The **Search Criteria** section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a discrepancy report using the discrepancy or account details. The valid values are: • Discrepancy Details • Account Details **Note:** By default, the **Discrepancy Details** option is selected.	Yes
Discrepancy Report ID	Used to search for a particular discrepancy report. **Note:** This field appears when the **Discrepancy Details** option is selected from the **Search By** list.	No
Discrepancy Report Type	Used to search for discrepancy report which are created using a particular discrepancy report type. **Note:** This field appears when the **Discrepancy Details** option is selected from the **Search By** list. The list includes only those discrepancy report types which are already defined in the system.	No
Created From	Used to search for discrepancy reports that are created on or after the specified date. **Note:** This field appears when the **Discrepancy Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
Status	Used to search for discrepancy reports with a particular status. The valid values are: • Completed • Deferred Processing • Draft • Pending **Note:** This field appears when the **Discrepancy Details** option is selected from the **Search By** list.	No
Created To	Used to search for discrepancy reports that are created on or before the specified date.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Discrepancy Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	
File Name	Used to search for discrepancy reports with a particular file name. **Note:** This field appears when the **Discrepancy Details** option is selected from the **Search By** list.	No
Person Name	Used to search for discrepancy reports with a particular person name. **Note:** This field appears when the **Account Details** option is selected from the **Search By** list.	No
Account Identifier Type	Used to specify the account identifier type based on which you want to search for discrepancy reports. **Note:** This field appears when the **Account Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to search for discrepancy reports belonging to a particular account identifier. **Note:** This field appears when the **Account Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the account identifier type as a search criteria, you have to specify the account identifier.
Account ID	Used to search for discrepancy reports which are created for a particular account. **Note:** This field appears when the **Account Details** option is selected from the **Search By** list. The **Search** () icon appears corresponding to the **Account ID** field. On clicking the **Search icon**, the **Account Search** window appears. On selecting the account, the respective information string appears corresponding to the **Account ID** field. It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.	No

Note: You must specify at least one search criterion while searching for a discrepancy report.

Copyright © 2026, Oracle and/or its affiliates.

Search Results - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date/Time	Displays the date and time when the discrepancy report is created.
Discrepancy Report Information	Displays information about the discrepancy report. **Note:** It has a link. On clicking the link, the **Discrepancy Report** screen appears where you can view the details of the respective discrepancy report.
Status	Indicates the status of the discrepancy report. The valid values are: • Completed • Deferred Processing • Draft • Pending
Account ID	Displays the account ID of the person who created the discrepancy report. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
File Name	Displays the file name provided (to the discrepancy report) when a discrepancy report is created at the file level.

Searching for a Discrepancy Report

Prerequisites

To search for a discrepancy report, you should have:

- Discrepancy report types and account identifier types defined in the application.
- Status defined in the application.

Procedure

To search for a discrepancy report:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Discrepancy Report**.
   A sub-menu appears.
3. Click the **Search** option from the **Discrepancy Report** sub-menu.
   The **Discrepancy Report** screen appears.

Copyright © 2026, Oracle and/or its affiliates.

4. Enter the search criteria in the **Search Discrepancy Report** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of discrepancy reports that meet the search criteria appear in the **Search Results** section.

Creating a Discrepancy Report

Prerequisites

To create a discrepancy report, you should have:

- Discrepancy report types defined in the application.
- Report levels defined in the application.

Procedure

To create a discrepancy report:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Accounting and Receivable**and then click **Discrepancy Report**.
   A sub-menu appears.
3. Click the **Add** option from the **Discrepancy Report** sub-menu.
   The **Discrepancy Report** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Used to indicate the discrepancy report type using which you want to create the discrepancy report. **Note:** The list includes only those discrepancy report types which are already defined in the system.	Yes
Report Level	Used to specify the level at which the discrepancy report is created. The valid values are: • At Account Level • At File Level **Note:** The list includes only those values which are defined in the **C1_DISCRE_REPORT_LEVEL** lookup field.	Yes
Account ID	Used to specify an account ID when report level is selected as **At Account Level**.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Account ID** field. On clicking the **Search** icon, the **Account Search** window appears. On specifying the value for an account ID, the description of the account appears corresponding to the **Account ID** field.	**Note:** This field is required when the report level is selected as **At Account Level** while creating a discrepancy report.
File Name	Used to specify a name for the file when report level is selected as **At File Level**.	Yes (Conditional) **Note:** This field is required when the report level is selected as **At File Level** while creating a discrepancy report.

Tip: Alternatively, you can access the **Select Discrepancy Report Type** screen by clicking the **Add** button in the **Page Title** area of the **Discrepancy Report** screen.

4. Enter the required details.
5. Click **Save**.
   The **Discrepancy Report** is created.

Discrepancy Report

The **Discrepancy Report** zone displays the details of the discrepancy report. It contains the following sections:

- **Main** - Displays basic information about the discrepancy report. It contains the following fields:

Field Name	Field Description
Discrepancy Report Information	Displays information about the discrepancy report.
Discrepancy Report Type	Indicates the discrepancy report type using which the discrepancy report is created. **Note:** It has a link. On clicking the link, the **Discrepancy Report Type** screen appears where you can view the details of the discrepancy report type.
File Name	Displays the file name for which the discrepancy report is generated. **Note:** This field appears when **At File Level** option is selected from the **Report Level** field while creating the discrepancy report.
Account Information	Displays the details of the account for which discrepancy report is generated. **Note:** This field appears when **At Account Level** option is selected from the **Report Level** field while creating the discrepancy report. It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Status	Indicates the status of the discrepancy report. The valid values are: • Completed • Deferred Processing • Draft • Pending

- **Record Actions** - Enables you to perform various actions on the discrepancy report. It contains the following buttons:

Button Name	Button Description
Delete	Used to delete the discrepancy report. **Note:** The **Delete** button appears when the discrepancy report is in the **Pending** status.
Finalize	Used to finalize all the changes and process the discrepancy report. **Note:** The **Finalize** button appears when the discrepancy report is in the **Pending** status. You cannot create more than one discrepancy report for a file or an account until you finalize the respective discrepancy report.

- **Record Information** - This section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Business Object	Indicates the business object using which the discrepancy report is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date Time	Displays the date and time when the discrepancy report status is updated.
Creation Date/Time	Displays the date and time when the discrepancy report is created.

Discrepancy Line Items

The **Discrepancy Line Items** zone displays the details of the discrepancy report. It contains the following columns:

Column Name	Column Description
Account ID	Indicates the account for which the discrepancy line item is created. **Note:** This column appears when the discrepancy report is generated for fully-insured group business.
Policy Number	Indicates the policy number. **Note:** This column appears when the discrepancy report is generated for fully-insured group business.
Plan Number	Indicates the plan number of the policy. **Note:** This column appears when the discrepancy report is generated for fully-insured group business.
Payor Identifier Type	Displays the payor identifier type. **Note:** This field appears when the discrepancy report is generated for the fully-insured individual business.
Payor Identifier	Displays the payor identifier. **Note:** This field appears when the discrepancy report is generated for the fully-insured individual business.
Subscriber Identifier Type	Displays the member identifier type.
Subscriber Identifier	Displays the value of the member identifier type.
Subscriber Name	Displays the name of the member to whom the discrepancy report belongs.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Health Plan	Displays information about the health plan. **Note:** This field appears when you generate discrepancy report for fully-insured individual business.
HIOS ID	Displays the Health Insurance Oversight System (HIOS) ID. **Note:** This field appears when you generate discrepancy report for fully-insured individual business.
Coverage Start Date	Displays the date from when the coverage starts.
Coverage End Date	Displays the date till when the coverage ends.
Payment Type	Displays the type of tender through which the payment is made. **Note:** This field appears when you generate discrepancy report for fully-insured individual business.
Billed Amount	Displays the bill segment amount.
Paid Amount	Displays the paid amount of the bill.
Discrepancy Amount	Displays the discrepancy amount.
Discrepancy Category	Displays the discrepancy category.
Consumer Status	Displays the status of the consumer for its existence in the application.
Comments	Displays the comments, added for the discrepancy line items.
Edit	On clicking the **Edit** (✎) icon, the **Discrepancy Line Item** screen appears where you can edit the details of the discrepancy line item. **Note:** The **Edit** icon appears when the discrepancy report is in **Pending** or **Draft** status.

Note:

On clicking the **Broadcast** (📡) icon corresponding to the discrepancy line item, the **Discrepancy Line Item Related Objects** and **Discrepancy Line Item Characteristics** zones appear.

You can filter the discrepancy line items using various search criteria available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of the **Discrepancy Line Items** zone.

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Deleting a Discrepancy Report

Procedure

To delete a discrepancy report:

1. Search for the discrepancy report in the **Discrepancy Report** screen.
2. In the **Search Results** section, click the link in the **Discrepancy Report Information** column corresponding *t*o the discrepancy report that you want to delete.

   The **Discrepancy Report** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Delete** button in the **Discrepancy Report** zone.
   A message appears confirming whether you want to delete the discrepancy report.

Note: The **Delete** button appears when the discrepancy report is in the **Pending** or **Draft** status.

5. Click **OK**.
   The discrepancy report is deleted.

Finalizing a Discrepancy Report

Procedure

To finalize a discrepancy report:

1. Search for the discrepancy report in the **Discrepancy Report** screen.
2. In the **Search Results** section, click the link in the **Discrepancy Report Information** column corresponding *t*o the discrepancy report that you want to finalize.
   The **Discrepancy Report** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Finalize** button in the **Discrepancy Report** zone.
   The status of the discrepancy report is changed to **Completed**.

Note: The **Finalize** button appears when the discrepancy report is in the **Pending** status.

Member Reconciliation Preference

Oracle Revenue Management and Billing enables you to reconcile all pay instructions of a file at the member level through a batch named **C1-RCPM**. While executing the **C1-RCPM** batch, you need to specify a member reconciliation preference whose attributes you want to use while reconciling all pay instructions of a file at the member level. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

A member reconciliation preference consists of the following attributes:

Copyright © 2026, Oracle and/or its affiliates.

- Payment Event Characteristic Type
- Pay Instruction Completed Status
- Reconciliation Matching Level Characteristic Type
- Pay Instruction Open Status
- Reconciliation Open Status

For more information about these attributes, see Defining a Member Reconciliation Preference on page 2947. You can define, edit, delete, and copy a member reconciliation preference through the **Field Mapping** screen.

Searching for a Member Reconciliation Preference

Procedure

To search for a member reconciliation preference:

1. Click the **Menu** (☰) icon in the **Application** toolbar.
   A list appears.
2. Click the **Admin Menu** option from the list.
   A sub-menu appears.
3. Select **F** and then click **Field Mapping**.
   The **Field Mapping** screen appears.
4. Select the **Member Reconciliation** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
6. Click **Search**.
   A list of member reconciliation preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Member Reconciliation Preference Details

Procedure

To view the details of a member reconciliation preference:

1. Search for the member reconciliation preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the member reconciliation preference whose details you want to view.
   The **Field Mapping** zone appears.
3. View the details of the member reconciliation preference in the **Field Mapping** zone.

Defining a Member Reconciliation Preference

Prerequisites

To define a member reconciliation preference, you should have:

- Field mapping business objects defined in the application.
- Required statuses defined in the lifecycle of the **C1-MemberReconciliation** and **C1-PayInstruction** business objects.
- Required characteristic types defined in the application (where the characteristic entity is set to **Adjustment**).
- Required characteristic types defined in the application (where the characteristic entity is set to **Member Reconciliation**).

Procedure

To define a member reconciliation preference:

1. Click the **Menu** (☰) icon in the **Application** toolbar.
   A list appears.
2. Click the **Admin Menu** option from the list.
   A sub-menu appears.
3. Select **F** and then click the **Add** button corresponding to the **Field Mapping** option from the sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)

Field Mapping Business Object	Used to indicate the business object using which you want to create a member reconciliation preference. The valid values are:
	• **Bill Route Method - Contact Method Mapping (i.e., C1_BillRouteCntMethMap)** - Enables you to maintain a routing method - contact method mapping preference.
	• **Field Mapping (i.e., C1-FieldMapping)** - Enables you to maintain the following:
	  • Automatic Refund/Write-Off Preference
	  • Billing Preference
	  • Binder Payment Preference
	  • Configuration for Match Type - Handling Overpayment Preference
	  • Delinquency Process Preference
	  • Delinquency Process Type Preference
	  • Geographic Rating Area Preference
	  • Hold Request Preference
	  • Individual Membership Preference
	  • Medicare Preference
	  • Member Reconciliation Preference
	  • Member Relationship and Subscription Tier Preference
	  • Membership Repricing Reasons Preference
	  • MNI Derivation Input Preference
	  • Statement Construct Preference
	  • Transaction Paid Status Count Preference
		Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Group Membership Status Reason Mapping (i.e., C1-MemStatusReasonMapGroup)** - Enables you to maintain a group membership status reason preference. • **Medicare Plan Benefit Package (i.e., C1-BenefitPackage)** - Enables you to maintain a Medicare plan benefit package. • **Membership Status Reason Mapping (i.e., C1-MemStatusReasonMapping)** - Enables you to maintain an individual membership status reason preference. **Note:** The above business objects are shipped with the product. The list includes those business objects which are created using the **Field Mapping** (i.e., **C1-FIELDMAP**) maintenance object.	

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.
5. Click **OK**.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details for the member reconciliation preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the member reconciliation preference.	Yes
Description	Used to specify the description for the member reconciliation preference.	Yes
Detailed Description	Used to specify additional information about the member reconciliation preference. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⇲) icon at the bottom right corner of the text box.	No
Status	Used to indicate the status of the member reconciliation preference. The valid values are: • Active • Inactive	Yes

- **Preference Category** - Used to specify the preference category. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: • Automatic Refund/Write-Off • Billing	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Binder Payment • Configuration for Match Type - Handling Overpayment • Delinquency Process • Delinquency Process Type • Geographic Rating Area • Hold Request • Individual Membership • Medicare • Medicare Plan Benefit • Member Reconciliation • Member Relationship and Subscription Tier • Membership Repricing Reasons • Membership Status Reason • MNI Derivation Input • Routing Method - Contact Method Mapping • Statement Construct • Transaction Paid Status Count **Note:** The list includes only those values which are defined in the **FIELD_CAT_FLG** lookup field. You must select the **Member Reconciliation** option from the list while creating a member reconciliation preference.	

- **Preference Settings** - Used to set the attributes in the member reconciliation preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the member reconciliation preference. The valid values are: • **Billed Transfer Recon Adjustment Type** - Used when a reconciliation adjustment type is applied to the billed transactions for offsetting the corresponding bill segment. • **Payment Event Characteristic Type** - Used when a pay instruction is reconciled at the member level through the **C1-RCPM** batch. • **Pay Instruction Completed Status** - Used when a pay instruction is fully reconciled at the member level through the **C1-RCPM** batch. • **Pay Instruction Open Status** - Used when a pay instruction is not fully reconciled at the member level through the **C1-RCPM** batch. • **Payment Instruction Recon Adjustment Type** - Used when you want the system to create an adjustment on the reconciliation contract when the payment instruction is reconciled.	Yes (Conditional) **Note:** This field is required while setting an attribute in the member reconciliation preference.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Reconciliation Char Type** - Used when you want the system to store the reconciliation ID for adjustments created on reconciliation. • **Recon Adj Type for Offsetting Debits using Billed Credits** - Used when you want the system to create adjustments for offsetting billed debits against billed credits during the reconciliation process. • **Reconciliation Matching Level Characteristic Type** - Used when reconciliation is created for a pay instruction file where all pay instructions have member data. • **Reconciliation Open Status** - Used when one or more pay instructions of a file are not yet fully reconciled at the member level through the **C1-RCPM** batch. • **Subscriber Match Level Char Value** - Used when you want the system to determine the characteristic type specified in the **Payment Instruction Match Level Char Type** parameter, indicating that the payment instruction to be reconciled at member level.	
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the member reconciliation preference. The valid values are: • **Billed Transfer Recon Adjustment Type** - The **Value** field is used to specify the reconciliation adjustment type applied to offset the bill segment for billed transfer transactions. • **Payment Event Characteristic Type** - The **Value** field is used to specify the characteristic type where you can store the payment event ID. This type of characteristic is defined for the reconciliation adjustments. It indicates the payment event whose payment is distributed against the bill segment. Here, you must specify a characteristic type where the characteristic entity is set to **Adjustment**. **Note:** The **C1PAYEVT** characteristic type is shipped with the product. • **Pay Instruction Completed Status** - The **Value** field is used to specify the status code to which you want to transition the pay instruction when it is fully reconciled. **Note:** Here, you must specify the status code which is already defined in the lifecycle of the **C1-PayInstruction** business object. • **Reconciliation Matching Level Characteristic Type** - The **Value** field is used to specify the characteristic type which indicates all pay instructions in the file must be reconciled at the member level. This type of characteristic is defined for the reconciliation when all pay instructions in a file have member data. Here, you must specify a characteristic type where the characteristic entity is set to **Member Reconciliation**.	Yes (Conditional) **Note:** This field is required while setting an attribute in the member reconciliation preference.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **C1-MTLVL** characteristic type is shipped with the product. • **Pay Instruction Open Status** - The **Value** field is used to specify the status code to which you want to transition the pay instruction when it is not fully reconciled. **Note:** Here, you must specify the status code which is already defined in the lifecycle of the **C1-PayInstruction** business object. • **Payment Instruction Recon Adjustment Type** - The **Value** field is used to specify the reconciliation adjustment type which transfers the applicable balance to the reconciliation contract when the payment instruction is reconciled. • **Reconciliation Char Type** - The **Value** field is used to specify the characteristic defined on the adjustments which are created on reconciliation. **Note:** Here, you must specify a characteristic type where the characteristic entity is set to **Adjustment Type**. • **Recon Adj Type for Offsetting Debits using Billed Credits** - The **Value** field is used to specify the adjustment type used to create adjustments for offsetting billed debits against billed credits during the reconciliation process. • **Reconciliation Open Status** - The **Value** field is used to specify the status code to which you want to transition the reconciliation when the status of the pay instruction is changed to **Open**. **Note:** Here, you must specify the status code which is already defined in the lifecycle of the **C1-MemberReconciliation** business object. • **Subscriber Match Level Char Value** - The **Value** field is used to specify the characteristic type specified in the **Payment Instruction Match Level Char Type** parameter which indicates that the payment instruction must be reconciled at member level.	
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account • Adjustment • Billable Charge • Membership • Payment • Policy	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the **MAP_ENTITY_FLG** lookup field.	

Note: While defining a member reconciliation preference, you must set at least one attribute in the member reconciliation preference.

6. Select the **Member Reconciliation** option from the **Preference Category** list.
   The **Preference Category** section disappears and the **Preference Category** field appears in the **Main** section.
7. Enter the required details in the **Main** section.
8. Select the required attributs in the member reconciliation preference.
9. If you want to set more than one attribute in the member reconciliation preference, click the **Add** (+) icon and then repeat step 8.

Note: However, if you want to remove an attribute from the member reconciliation preference, click the **Delete** ( ) icon corresponding to the attribute.

10. Click **Save**.
    The member reconciliation preference is defined.

Editing a Member Reconciliation Preference

Prerequisites

To edit a member reconciliation preference, you should have:

- Required statuses defined in the lifecycle of the **C1-MemberReconciliation** and **C1-PayInstruction** business objects
- Required characteristic types defined in the application (where the characteristic entity is set to **Adjustment**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Member Reconciliation**)

Procedure

To edit a member reconciliation preference:

1. Search for the member reconciliation preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** ( ) icon in the **Edit** column *c*orresponding to the member reconciliation preference whose details you want to edit.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for the member reconciliation preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the member reconciliation preference.	Not applicable
Description	Used to specify the description for the member reconciliation preference.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Detailed Description	Used to specify additional information about the member reconciliation preference. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⇲) icon at the bottom right corner of the text box.	No
Status	Used to indicate the status of the member reconciliation preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Member Reconciliation	Not applicable

- **Preference Settings** - Used to set the attributes in the member reconciliation preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the member reconciliation preference. The valid values are: • **Billed Transfer Recon Adjustment Type** - Used when a reconciliation adjustment type is applied to the billed transactions for offsetting the corresponding bill segment. • **Payment Event Characteristic Type** - Used when a pay instruction is reconciled at the member level through the **C1-RCPM** batch. • **Pay Instruction Completed Status** - Used when a pay instruction is fully reconciled at the member level through the **C1-RCPM** batch. • **Pay Instruction Open Status** - Used when a pay instruction is not fully reconciled at the member level through the **C1-RCPM** batch. • **Payment Instruction Recon Adjustment Type** - Used when you want the system to create an adjustment on the reconciliation contract when the payment instruction is reconciled. • **Reconciliation Char Type** - Used when you want the system to store the reconciliation ID for adjustments created on reconciliation. • **Recon Adj Type for Offsetting Debits using Billed Credits** - Used when you want the system to create adjustments for offsetting billed debits against billed credits during the reconciliation process. • **Reconciliation Matching Level Characteristic Type** - Used when reconciliation is created for a pay instruction file where all pay instructions have member data.	Yes (Conditional) **Note:** This field is required while setting an attribute in the member reconciliation preference.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Reconciliation Open Status** - Used when one or more pay instructions of a file are not yet fully reconciled at the member level through the **C1-RCPM** batch. • **Subscriber Match Level Char Value** - Used when you want the system to determine the characteristic type specified in the **Payment Instruction Match Level Char Type** parameter, indicating that the payment instruction to be reconciled at member level.	
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the member reconciliation preference. The valid values are: • **Billed Transfer Recon Adjustment Type** - The **Value** field is used to specify the reconciliation adjustment type applied to offset the bill segment for billed transfer transactions. • **Payment Event Characteristic Type** - The **Value** field is used to specify the characteristic type where you can store the payment event ID. This type of characteristic is defined for the reconciliation adjustments. It indicates the payment event whose payment is distributed against the bill segment. Here, you must specify a characteristic type where the characteristic entity is set to **Adjustment**. **Note:** The **C1PAYEVT** characteristic type is shipped with the product. • **Pay Instruction Completed Status** - The **Value** field is used to specify the status code to which you want to transition the pay instruction when it is fully reconciled. **Note:** Here, you must specify the status code which is already defined in the lifecycle of the **C1-PayInstruction** business object. • **Reconciliation Matching Level Characteristic Type** - The **Value** field is used to specify the characteristic type which indicates all pay instructions in the file must be reconciled at the member level. This type of characteristic is defined for the reconciliation when all pay instructions in a file have member data. Here, you must specify a characteristic type where the characteristic entity is set to **Member Reconciliation**. **Note:** The **C1-MTLVL** characteristic type is shipped with the product. • **Pay Instruction Open Status** - The **Value** field is used to specify the status code to which you want to transition the pay instruction when it is not fully reconciled. **Note:** Here, you must specify the status code which is already defined in the lifecycle of the **C1-PayInstruction** business object.	Yes (Conditional) **Note:** This field is required while setting an attribute in the member reconciliation preference.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Payment Instruction Recon Adjustment Type** - The **Value** field is used to specify the reconciliation adjustment type which transfers the applicable balance to the reconciliation contract when the payment instruction is reconciled. • **Reconciliation Char Type** - The **Value** field is used to specify the characteristic defined on the adjustments which are created on reconciliation. **Note:** Here, you must specify a characteristic type where the characteristic entity is set to **Adjustment Type**. • **Recon Adj Type for Offsetting Debits using Billed Credits** - The **Value** field is used to specify the adjustment type used to create adjustments for offsetting billed debits against billed credits during the reconciliation process. • **Reconciliation Open Status** - The **Value** field is used to specify the status code to which you want to transition the reconciliation when the status of the pay instruction is changed to **Open**. **Note:** Here, you must specify the status code which is already defined in the lifecycle of the **C1-MemberReconciliation** business object. • **Subscriber Match Level Char Value** - The **Value** field is used to specify the characteristic type specified in the **Payment Instruction Match Level Char Type** parameter which indicates that the payment instruction must be reconciled at member level.	
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account • Adjustment • Billable Charge • Membership • Payment • Policy **Note:** At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the **MAP_ENTITY_FLG** lookup field.	No

Tip: Alternatively, you can click the **Edit** button in the **Field Mapping** zone to edit the details of the member reconciliation preference.

3. Modify the required details in the **Main** section.
4. Define, edit, or remove the attribute from the member reconciliation preference, if required.

Note: You must set at least one attribute in a member reconciliation preference.

5. Click **Save**.

Copying a Member Reconciliation Preference

Instead of creating a member reconciliation preference from scratch, you can create a new member reconciliation preference using an existing member reconciliation preference. This is possible through copying a member reconciliation preference. On copying a member reconciliation preference, the details including the attributes are copied to the new member reconciliation preference. You can then edit the details, if required.

Prerequisites

To copy a member reconciliation preference, you should have:

- Member reconciliation preference (whose copy you want to create) defined in the application
- Required statuses defined in the lifecycle of the **C1-MemberReconciliation** and **C1-PayInstruction** business objects
- Values defined in the **MAP_ENTITY_FLG** lookup field

Procedure

To copy a member reconciliation preference:

1. Search for the member reconciliation preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the member reconciliation preference whose copy you want to create.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for the member reconciliation preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the member reconciliation preference.	Yes
Description	Used to specify the description for the member reconciliation preference.	Yes
Detailed Description	Used to specify additional information about the member reconciliation preference. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⇲) icon at the bottom right corner of the text box.	No
Status	Used to indicate the status of the member reconciliation preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Member Reconciliation	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

- **Preference Settings** - Used to set the attributes in the member reconciliation preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the member reconciliation preference. The valid values are: • **Billed Transfer Recon Adjustment Type** - Used when a reconciliation adjustment type is applied to the billed transactions for offsetting the corresponding bill segment. • **Payment Event Characteristic Type** - Used when a pay instruction is reconciled at the member level through the **C1-RCPM** batch. • **Pay Instruction Completed Status** - Used when a pay instruction is fully reconciled at the member level through the **C1-RCPM** batch. • **Pay Instruction Open Status** - Used when a pay instruction is not fully reconciled at the member level through the **C1-RCPM** batch. • **Payment Instruction Recon Adjustment Type** - Used when you want the system to create an adjustment on the reconciliation contract when the payment instruction is reconciled. • **Reconciliation Char Type** - Used when you want the system to store the reconciliation ID for adjustments created on reconciliation. • **Recon Adj Type for Offsetting Debits using Billed Credits** - Used when you want the system to create adjustments for offsetting billed debits against billed credits during the reconciliation process. • **Reconciliation Matching Level Characteristic Type** - Used when reconciliation is created for a pay instruction file where all pay instructions have member data. • **Reconciliation Open Status** - Used when one or more pay instructions of a file are not yet fully reconciled at the member level through the **C1-RCPM** batch. • **Subscriber Match Level Char Value** - Used when you want the system to determine the characteristic type specified in the **Payment Instruction Match Level Char Type** parameter, indicating that the payment instruction to be reconciled at member level.	Yes (Conditional) **Note:** This field is required while setting an attribute in the member reconciliation preference.
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the member reconciliation preference. The valid values are: • **Billed Transfer Recon Adjustment Type** - The **Value** field is used to specify the reconciliation adjustment type applied to offset the bill segment for billed transfer transactions. • **Payment Event Characteristic Type** - The **Value** field is used to specify the characteristic type where you can store the payment event ID. This type of characteristic	Yes (Conditional) **Note:** This field is required while setting an attribute in the member reconciliation preference.

Field Name	Field Description	Mandatory (Yes or No)
	the reconciliation when the status of the pay instruction is changed to **Open**. **Note:** Here, you must specify the status code which is already defined in the lifecycle of the **C1-MemberReconciliation** business object. • **Subscriber Match Level Char Value** - The **Value** field is used to specify the characteristic type specified in the **Payment Instruction Match Level Char Type** parameter which indicates that the payment instruction must be reconciled at member level.	
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account • Adjustment • Billable Charge • Membership • Payment • Policy **Note:** At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the **MAP_ENTITY_FLG** lookup field.	No

Note: While defining a member reconciliation preference, you must set at least one attribute in the member reconciliation preference.

Tip: Alternatively, you click the **Duplicate** button in the **Field Mapping** zone to create a copy of the member reconciliation preference.

3. Enter the required details in the **Main** section.
4. Define, edit, or remove the attribute from the member reconciliation preference, if required.
5. Click **Save**.
   The new member reconciliation preference is defined.

Deleting a Member Reconciliation Preference

Procedure

To delete a member reconciliation preference:

1. Search for the member reconciliation preference in the **Field Mapping** screen.

Copyright © 2026, Oracle and/or its affiliates.

2. In the **Search Results** section, click the **Delete** (🗑) icon in the **Delete** column corresponding to the member reconciliation preference that you want to delete.
   A message appears confirming whether you want to delete the member reconciliation preference.

   Tip: Alternatively, you can click the **Delete** button in the **Field Mapping** zone to delete the member reconciliation preference.

3. Click **OK**.
   The member reconciliation preference is deleted.

Chapter 36

Self-Funded Pricing

Topics:

- Prerequisites
- Approval Workflow for the Self-Funded Pricing Rules
- Write-Off Charges during Post Runout
- Line Item Extendable Lookup
- Extendable Lookup (Line Item)
- Claim Template Extendable Lookup
- Extendable Lookup (Claim Template)
- Rate Option Extendable Lookup
- Extendable Lookup (Rate Option)
- Rate Type Extendable Lookup
- Extendable Lookup (Rate Type)
- Pricing Group
- Pricing Rule Type
- Claim Pricing
- Specific Stop-Loss (SSL) Pricing
- Aggregate Stop-Loss (ASL) Pricing
- Retention Type Claim Based Pricing
- Retention Type Enrollment Based Pricing
- Flat Fee Pricing
- Ancillary Pricing
- Discount Pricing
- Level Funding Pricing
- Minimum Premium Program
- Self-Funded Pricing Rule Versioning
- Retention Type Enrollment Tier Based Pricing

Oracle Revenue Management and Billing introduces a new pricing model for the self-funded health insurance business. In this pricing model, you can define pricing rules using a pricing rule type. You can define the following pricing rule types in ORMB:

- Claim
- Aggregate Stop-Loss
- Specific Stop-Loss
- Retention Type Claim Based
- Retention Type Enrollment

Prerequisites

To setup the self-funded pricing feature, you need to do the following:

- Define values for claim template extendable lookup
- Define values for rate option extendable lookup
- Define values for line item extendable lookup
- Setup the **C1-ASOBLLNG** feature configuration
- Define price items for the pricing rules
- Define parameters for the pricing rules
- Associate parameters to the price items for the pricing rules

Related Topics

For more information on...	See...
How to setup the **C1-ASOBLLNG** feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4639

Approval Workflow for the Self-Funded Pricing Rules

Oracle Revenue Management and Billing enables you to configure the approval workflow process for the claim, specific stop-loss, aggregate stop-loss, retention type claim based, retention type enrollment based, flat fees, ancillary, discount, or level funded pricing rules. The following approval workflow groups are shipped with the product:

Approval Workflow Group	Description
C1PRCRLCLM	Claim Pricing Rule
C1PRCSSL	Specific Stop-Loss Pricing Rule
C1PRCASL	Aggregate Stop-Loss Pricing Rule
C1PRETCLM	Retention Type Claim Based Pricing Rule
C1PRRETENR	Retention Type Enrollment Based Pricing Rule
C1PRFLTFEE	Flat Fees Pricing Rule
C1PRCANC	Ancillary Pricing Rule
C1PRCDA	Discount Arrangement Pricing Rule
C1PRCLVLFN	Level Funded Pricing Rule

To enable the approval workflow process for the pricing rules, you need to do the following:

1. Create the required approval workflow chains, approval workflow criterion types, approval workflow group chain linkages, and approval workflow reasons.

   Note: The **Field Level Approval** feature is not supported for the self-funded pricing rules. Therefore, you should not define field approval rule criteria while creating the approval workflow group chain linkage for the above listed approval workflow groups.
2. Define the approval workflow settings for the respective approval workflow group and set the **Active** field to **Yes**.
3. Ensure that the following value is set in the respective option type of the **C1-ASOBLLNG** feature configuration:

Copyright © 2026, Oracle and/or its affiliates.

Option Type	Value
Approval Workflow Group for Claim	C1PRCRLCLM
Approval Workflow Group for SSL	C1PRCSSL
Approval Workflow Group for ASL	C1PRCASL
Approval Workflow Group for Retention Type Claim Based	C1PRETCLM
Approval Workflow Group for Retention Type Enrollment Based	C1PRRETENR
Approval Workflow Group for Flat Fees	C1PRFLTFEE
Approval Workflow Group for Ancillary	C1PRCANC
Approval Workflow Group for Discount Arrangement	C1PRCDA
Approval Workflow Group for Level Funded	C1PRCLVLFN

Once the approval workflow process is enabled for the pricing rules of a particular category (for example, Claim), the system creates an approval transaction whenever you define, edit, or delete a pricing rule of the respective category (i.e. whenever you define, edit, or delete a claim pricing rule). You can view the approval transactions which are created while defining, editing, and deleting the parent customer's and bill groups' pricing rules in the **Pricing Rule Approval Transactions** zone of the **Customer 360° Information** screen. On clicking the link in the **Approval Transaction ID** column corresponding to an approval transaction, the **Comparison: New versus Existing** screen appears. It allows the approver to review the pricing rule and accordingly approve, reject, or cancel the approval transaction.

Tip: Alternatively, you can review the approval transaction and take appropriate action from the **Approval Transaction** screen.

Write-Off Charges during Post Runout

Oracle Revenue Management and Billing enables you to write-off the claim, specific stop-loss, aggregate stop-loss, claim based fees, enrollment based fees, ancillary, discount, and funds charges when the bill is generated in the post runout period of the policy. In this case, a write-off adjustment is created against the respective bill segment during the post bill completion. The write-off adjustment is created using the post runout write-off adjustment type which is specified in the respective pricing rule type.

To enable this feature, you need to do the following:

1. Set the **Eligible for Write-Off in Post Runout** field in the respective pricing rule type to **Yes**.
2. Specify the post runout write-off adjustment type in the respective pricing rule type.
3. Attach the **C1-PRCRLWOFF** algorithm to the **Post-Bill Completion** system event in the customer class of the accounts for which you want to write-off the charges in the post runout period of the policy.

Copyright © 2026, Oracle and/or its affiliates.

Line Item Extendable Lookup

Different charges, such as consumer-driven amount, traditional health insurance amount, network access fees, and so on are received as part of the claim transaction. These charges which contribute to the total claim amount are defined as the line items in the system. Each line item must be defined in the system using the **Line Item (C1-ExtLookPricingRuleLineItem)** extendable lookup. A line item encapsulates the following information:

- Service Quantity Identifier (SQI) which indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the charge.
- Billable charge line type using which you want to create the calculation line for the charge.
- Whether the system should write off the charge when it is not eligible for billing.
- Billable charge line type using which you want to create the write off calculation line for the charge.
- Whether the charge should be considered while calculating the percentage based retention type claim based fee.
- The pricing rule type categories to which the charge is associated.

For example, the following table illustrates few line items which are applicable to different pricing rule type categories:

Charge	**Line Item**	**Write Off, If Not Eligible for Billing**	**Pricing Rule Type Category**
Consumer-Driven Amount	CDH	Yes	Claim
			Specific Stop-Loss
			Aggregate Stop-Loss
			Ancillary
Traditional Health Insurance Amount	THC	Yes	Claim
			Specific Stop-Loss
			Aggregate Stop-Loss
Preventive Care Charges	PCC	No	Ancillary

The CDH and THC line items can be included in a claim template. They can also be considered while calculating specific and aggregate stop-loss. The CDH and PCC line items can be considered while defining pricing arrangements in an ancillary pricing rule type. In addition, any charge received for the CDH and THC line items in a claim transaction will be written off when these line items are not eligible for billing.

The **C1-ExtLookPricingRuleLineItem** extendable lookup is redesigned to:

- Specify a billable charge line type using which the calculation line should be created for a rate type when the system calculates the fees separately for each applicable claim charge
- Specify a billable charge line type using which the calculation line should be created for a rate type when the system calculates the minimum and maximum markup or markdown separately for each eligible claim charge
- Specify a billable charge line type using which the calculation line should be created for a rate type when the system calculates the minimum and maximum amount for a line item

Once you derive the pricing information from a claim pricing rule in a specific stop-loss pricing rule, you need to specify whether the additional fee (if any) is eligible for specific stop-loss. If so, it is considered for calculating specific stop-loss.

Once you derive the pricing information from a claim pricing rule in an aggregate stop-loss pricing rule, you need to specify whether the additional fee (if any) is eligible for aggregate stop-loss. If so, it is considered for calculating aggregate stop-loss.

Once you derive the pricing information from a claim pricing rule in a level-funded pricing rule, you need to specify whether the additional fee (if any) should be settled through level funding. If so, it is considered while accumulating level funded charges.

Copyright © 2026, Oracle and/or its affiliates.

Until now, when the **Include In Settlement** column was selected corresponding to a line item in a level funded pricing rule, the system settled the charge as well as its markup or markdown through level funding. However, now, the system provides two different options - one which helps to determine whether the charge should be settled through level funding and another which helps to determine whether the corresponding markup or markdown should be settled through level funding.

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- Extendable Lookup Search on page 2965

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No
Description	Used to search extendable lookups with a particular description.	No

Note: You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.
	Note: It has a link. On clicking the link, the **Extendable Lookup** screen appears where you can view the details of the respective extendable lookup.

Searching for the Line Item Extendable Lookup

Procedure

To search for the **Line Item** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.

Copyright © 2026, Oracle and/or its affiliates.

The **Extendable Lookup Query** screen appears.

3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookPricingRuleLineItem** in the **Business Object** field.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   The **Line Item** extendable lookup business object appears in the **Search Results** section.

Viewing the Values of the Line Item Extendable Lookup

Procedure

To view the values of the **Line Item** extendable lookup:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. View the values of the **Line Item** extendable lookup in the **Extendable Lookup Value List** zone.

Extendable Lookup (Line Item)

The **Extendable Lookup** screen allows you to view the values of the **Line Item (C1-ExtLookPricingRuleLineItem)** extendable lookup. It also allows you to define, edit, copy, and delete a line item. It contains the following zones:

- Extendable Lookup Value List on page 2967
- Extendable Lookup Value on page 2967

Copyright © 2026, Oracle and/or its affiliates.

Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Line Item** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the line item.
Description	Displays the description of the line item.
Owner	Indicates who has created the line item. The valid values are: • Base • Customer Modification • Framework
Edit	On clicking the **Edit** (✎) icon, the **Line Item** screen appears where you can edit the details of the line item.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Line Item** screen appears where you can define a new line item using an existing line item.
Delete	On clicking the **Delete** (🗑) icon, you can delete the line item.
	Note: You can delete a line item when it is not yet used in the claim template or while defining the self-funded pricing.
Detailed Description	Displays additional information about the line item.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a line item, the **Extendable Lookup Value** zone appears with the details of the respective line item.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the line item. It contains the following sections:

- **Main** - Displays basic information about the line item. It contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Line Item	Indicates the charge for which the line item is created.
Description	Displays the description of the line item.
Override Description	Displays the overridden description of the line item.
Detailed Description	Displays additional information about the line item.
Status	Indicates the status of the line item. The valid values are: • Active • Inactive
Service Quantity Identifier	Indicates the service quantity identifier associated with the line item.
Billable Charge Line Type	Indicates the billable charge line type using which the calculation line is created for the charge (i.e. line item).
Write Off Billable Charge Line Type	Indicates the billable charge line type using which the write off calculation line is created for the charge (i.e. line item).
Write Off, if Not Eligible for Billing	Indicates whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: • Yes • No
Retention Claim Based Percentage Calculation	Indicates whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: • Yes • No

- **Line Item Usage** - Indicates the pricing rule type categories to which the line item is associated. It contains the following column in a grid:

Column Name	Column Description
Pricing Rule Type Category	Indicates the pricing rule type category which is associated with the charge (i.e. line item). The valid values are: • Aggregate Stop-Loss • Ancillary • Claim • Retention Type Claim Based • Specific Stop-Loss

- **Markup or Markdown Billing Information** - Indicates the markup or markdown billing information defined for the line items. It contains the following columns in a grid:

Column Name	Column Description
Rate Type	Indicates the minimum and maximum markup or markdown billing information defined using the rate type.
Billable Charge Line Type	Indicates the billable charge line type using which the calculation line is created for a rate type when the system calculates the minimum and maximum markup or markdown separately for each eligible claim charge.

Copyright © 2026, Oracle and/or its affiliates.

- **Line Item Billing Information** - Indicates the rate type and billable charge line type to which the line item is associated. It contains the following columns in a grid:

Column Name	Column Description
Rate Type	Indicates the rate type defined for the line item.
Billable Charge Line Type	Indicates the billable charge line type billable charge line type using which the calculation line is created for a rate type when the system calculates the minimum and maximum amount for a line item.

- **Claim Handling Fees Billing Information** - Indicates the claim handling fees billing information. It contains the following columns in a grid:

Column Name	Column Description
Fee Type	Indicates the type of charge applicable on the line items.
Fee	Indicates the fee defined for the line items.
Rate	Indicates the rate and billable charge line type defined for the line items. **Column Name** / **Column Description** Rate Type – Indicates the rate type defined for a line item. Billable Charge Line Type – Indicates the billable charge line type using which the calculation line is created for a rate type when the system calculates the fees separately for each applicable claim charge.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the line item.
Delete	Used to delete the line item. **Note:** You can delete a line item when it is not yet used in the claim template or while defining the self-funded pricing.
Duplicate	Used to create a new line item using an existing line item.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the line item is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the line item. The valid values are: • Framework • Base • Customer Modification

Copyright © 2026, Oracle and/or its affiliates.

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the line item in the **Extendable Lookup Value List** zone.

Defining a Line Item

Prerequisites

To define a line item, you should have:

- Service quantity identifiers and billable charge line types defined in the application

Procedure

To define a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

   The **Line Item** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the line item.
   - **Line Item Usage** - Used to associate the line item with one or more pricing rule type categories.
   - **Markup or Markdown Billing Information** - Used to define the markup or markdown billing information for the line items.
   - **Line Item Billing Information** - Used to define line item billing information for the line items.
   - **Claim Handling Fees Billing Information** - Used to define the claim handling fees billing information for the line items.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Line Item	Used to specify the charge (for example, consumer-driven amount, traditional health insurance amount, and so on) for which the line item is created.	Yes
Description	Used to specify the description for the line item.	Yes
Override Description	Used when you want to override the description of the line item.	No
Detailed Description	Used to specify additional information about the line item.	No
Status	Used to indicate the status of the line item. The valid values are:	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Active • Inactive **Note:** By default, the value is set to **Active**.	
Service Quantity Identifier	Used to indicate the service quantity identifier (SQI) for the line item. The SQI indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the line item.	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). **Note:** The **Search** (🔍) icon appears corresponding to the **Billable Charge Line Type Search** field. On clicking the **Search** icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	No
Write Off Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the write off calculation line for the charge (i.e. line item). **Note:** The **Search** (🔍) icon appears corresponding to the **Write Off Billable Charge Line Type** field. On clicking the **Search** icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Write Off Billable Charge Line Type** field.	Yes (Conditional) **Note:** This field is required when the **Write Off, if Not Eligible for Billing** field is set to **Yes**.
Write Off, if Not Eligible for Billing	Used to indicate whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: • Yes • No **Note:** By default, the value is set to **No**.	No
Retention Claim Based Percentage Calculation	Used to indicate whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: • Yes • No	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: By default, the value is set to **No**.	

4. Enter the required details in the **Main** section.
5. Associate the line item with one or more pricing rule type categories.
6. Define the markup or markdown billing information for the line items.
7. Define line item billing information for the line items.
8. Define the claim handling fees billing information for the line items.
9. Click **Save**.
   The line item is added in the **C1-ExtLookPricingRuleLineItem** extendable lookup.

Associating a Line Item with a Pricing Rule Type Category

Procedure

To associate a line item with a pricing rule type category:

1. Ensure that the **Line Item Usage** section is expanded when you are defining, editing, or copying a line item.

   The **Line Item Usage** section contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	Used to indicate the pricing rule type category which you want to associate with the charge (i.e. line item). The valid values are: • Aggregate Stop-Loss • Ancillary • Claim • Retention Type Claim Based • Specific Stop-Loss The following table describes the significance of each category that can be associated with the line item:	Yes (Conditional) **Note:** This field is required when you are associating the line item with a pricing rule type category.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Pricing Rule Type Category / **Significance** Claim: Whether the line item can be included in a claim template and thereby while defining a claim pricing rule for a parent customer and bill group. Specific Stop-Loss: Whether the line item can be considered while calculating specific stop-loss. Aggregate Stop-Loss: Whether the line item can be considered while calculating aggregate stop-loss. Retention Type Claim Based: Whether the line item can be used while calculating the percentage based retention type claim based fee. Ancillary: Whether the line item can be considered while defining pricing arrangements in an ancillary pricing rule type. **Note:** At present, the line items are not used in the pricing rule types where the pricing rule type category is set to **Retention Type Enrollment Based** and **Flat Fees**.	

2. Enter the required details in the **Line Item Usage** section.
3. If you want to associate the line item with more than one pricing rule type category, click the **Add** (+) icon and *t*hen repeat step 3.

Note: However, if you want to remove a pricing rule type category from the line item, click the **Delete** (🗑) icon corresponding to the pricing rule type category.

4. Click **Save**.
   The line item is associated with the pricing rule type category.

Procedure

To define the markup or markdown billing information for the line items:

Copyright © 2026, Oracle and/or its affiliates.

1. Ensure that the **Markup or Markdown Billing Information** section is expanded when you are defining, editing, or copying a line item.

   The **Markup or Markdown Billing Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Type	Used to indicate the rate type.	Yes (Conditional) **Note:** This field is required when you select a billable charge line type from the **Billable Charge Line Type** field.
Billable Charge Line Type	Used to specify the billable charge line type. **Note:** On clicking the **Search** (🔍) icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	Yes (Conditional) **Note:** This field is required when you select an option from the **Rate Type** field.

2. Enter the required details in the **Markup or Markdown Billing Information** section.
3. If you want to add more than one markup or markdown billing information for the line item, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a markup or markdown billing information from the line item, click the **Delete** (🗑) icon corresponding to the line item.

4. Click **Save**.
   The markup or markdown billing information is defined for the line items.

		Note: This field is required when you select a billable charge line type from the **Billable Charge Line Type** field.
Billable Charge Line Type	Used to specify the billable charge line type.	Yes (Conditional)
	Note: On clicking the **Search** (🔍) icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	**Note:** This field is required when you select an option from the **Rate Type** field.

2. Enter the required details in the **Line Item Billing Information** section.
3. If you want to add more than one line item billing information for the line item, click the **Add** (+) icon and *t*hen repeat step 2.

Note: However, if you want to remove a line item billing information from the line item, click the **Delete** (🗑) icon corresponding to the line item.

4. Click **Save**.
   The line item billing information is defined for the line items.

Defining the Claim Handling Fees Billing Information for the Line Items

Procedure

To define the claim handling fees billing information for the line items:

1. Ensure that the **Claim Handling Fees Billing Information** section is expanded *w*hen you are defining, editing, or copying a line item.

   The **Claim Handling Fees Billing Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Fee Type	Used to indicate the type of charge applicable on the line items.	Yes (Conditional) **Note:** This field is required when fee is selected from the **Fee** field.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Fee	Used to indicate the fee defined for the line items.	Yes (Conditional) **Note:** This field is required when fee type is selected from the **Fee Type** field.
Rate	Used to indicate the rate and billable charge line type for the line items. **Field Name** / **Field Description** / **Mandatory (Yes or No)** Rate Type — Used to indicate the rate type. — Yes (Conditional) **Note:** This field is required when you select a billable charge line type from the **Billable Charge Line Type** field. Billable Charge Line Type — Used to specify the billable charge line type. — Yes (Conditional) **Note:** This field is required when you select an option from the **Rate Type** field. **Note:** On clicking the **Search** (🔍) icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	Yes

2. Enter the required details in the **Claim Handling Fees Billing Information** section.
3. If you want to add more than one claim handling fee billing information for the line item, click the **Add** (+) icon and *t*hen repeat step 2.

> **Note:** However, if you want to remove a claim handling fee billing information from the line item, click the **Delete** (🗑) icon corresponding to the line item.

4. If you want to add more than one rate for the line item, click the **Add** (+) icon and *t*hen repeat step 2.

> **Note:** However, if you want to remove a rate from the line item, click the **Delete** (🗑) icon corresponding to the line item.

5. Click **Save**.
   The claim handling fees billing information is defined for the line items.

Editing a Line Item

Prerequisites

To edit a line item, you should have:

- Service quantity identifiers and billable charge line types defined in the application

Procedure

To edit a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the line item whose details you want to edit.

   The **Line Item** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the line item.
   - **Line Item Usage** - Used to associate the line item with one or more pricing rule type categories.
   - **Markup or Markdown Billing Information** - Used to define the markup and markdown billing information for the line item.
   - **Line Item Billing Information** - Used to define the line item billing information for the line item.
   - **Claim Handling Fees Billing Information** - Used to define the claim handling fees billing information for the line item.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Line Item	Indicates the charge (for example, consumer-driven amount, traditional health insurance amount, and so on) for which the line item is created.	Not applicable
Description	Used to specify the description for the line item.	Yes
Override Description	Used when you want to override the description of the line item.	No
Detailed Description	Used to specify additional information about the line item.	No
Status	Used to indicate the status of the line item. The valid values are: • Active • Inactive	Yes
Service Quantity Identifier	Used to indicate the service quantity identifier (SQI) for the line item. The SQI indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the line item.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). **Note:** The **Search** (🔍) icon appears corresponding to the **Billable Charge Line Type Search** field. On clicking the **Search** icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	Yes
Write Off Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the write off calculation line for the charge (i.e. line item). **Note:** The **Search** (🔍) icon appears corresponding to the **Write Off Billable Charge Line Type** field. On clicking the **Search** icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Write Off Billable Charge Line Type** field.	Yes (Conditional) **Note:** This field is required when the **Write Off, if Not Eligible for Billing** field is set to **Yes**.
Write Off, if Not Eligible for Billing	Used to indicate whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: • Yes • No	No
Retention Claim Based Percentage Calculation	Used to indicate whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: • Yes • No	No

Tip: Alternatively, you can edit the details of a line item by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section.
5. Associate or remove a pricing rule type category from the line item, if required.
6. Modify the markup or markdown billing information for the line items, if required.
7. Add, edit, or remove the line item billing information for the line items, if required.
8. Add, edit, or remove the claim handling fees billing information for the line items, if required.
9. Click **Save**.
   The changes made to the line item are saved.

Copying a Line Item

Instead of creating a line item from scratch, you can create a new line item using an existing line item. This is possible through copying a line item. On copying a line item, the details including the pricing rule type categories to which the line item is associated are copied to the new line item. You can then edit the details, if required.

Prerequisites

To copy a line item, you should have:

- Line item (whose copy you want to create) defined in the application
- Service quantity identifiers and billable charge line types defined in the application

Procedure

To copy a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column corresponding to the line item whose copy you want to create.

   The **Line Item** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the line item.
   - **Line Item Usage** - Used to associate the line item with one or more pricing rule type categories.
   - **Markup or Markdown Billing Information** - Used to define the markup or markdown billing information for the line item.
   - **Line Item Billing Information** - Used to define the line item billing information for the line item.
   - **Claim Handling Fees Billing Information** - Used to define the claim handling fees billing information for the line item.

   The **Main** section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Line Item	Used to specify the charge (for example, consumer-driven amount, traditional health insurance amount, and so on) for which the line item is created.	Yes
Description	Used to specify the description for the line item.	Yes
Override Description	Used when you want to override the description of the line item.	No
Detailed Description	Used to specify additional information about the line item.	No
Status	Used to indicate the status of the line item. The valid values are: • Active • Inactive	Yes
Service Quantity Identifier	Used to indicate the service quantity identifier (SQI) for the line item. The SQI indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the line item.	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). **Note:** The **Search** (🔍) icon appears corresponding to the **Billable Charge Line Type Search** field. On clicking the **Search** icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	Yes
Write Off Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the write off calculation line for the charge (i.e. line item). **Note:** The **Search** (🔍) icon appears corresponding to the **Write Off Billable Charge Line Type** field. On clicking the **Search** icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Write Off Billable Charge Line Type** field.	Yes (Conditional) **Note:** This field is required when the **Write Off, if Not Eligible for Billing** field is set to **Yes**.
Write Off, if Not Eligible for Billing	Used to indicate whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: • Yes • No	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Retention Claim Based Percentage Calculation	Used to indicate whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: • Yes • No	No

Tip: Alternatively, you can copy a line item by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

4. Enter the required details in the **Main** section.
5. Associate or remove a pricing rule type category from the line item, if required.
6. Modify the markup or markdown billing information for the line items, if required.
7. Add, edit, or remove the line item billing information for the line items, if required.
8. Add, edit, or remove the claim handling fees billing information for the line items, if required.
9. Click **Save**.
   The new line item is added in the **C1-ExtLookPricingRuleLineItem** extendable lookup.

Deleting a Line Item

Procedure

To delete a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding *to* the extendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding *to* the line item that you want to delete.
   A message appears confirming whether you want to delete the line item.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** You can delete a line item when it is not yet used in the claim template or while defining the Administrative Services Only (ASO) pricing.

> **Tip:** Alternatively, you can delete a line item by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.
   The line item is deleted from the **C1-ExtLookPricingRuleLineItem** extendable lookup.

Claim Template Extendable Lookup

The ASO service provider may bill different charges for a claim transaction to different employers. The system enables you to create different claim templates for different employers. A claim template contains a set of charges (i.e. line items) which can be billed to a parent customer or bill group. You can define multiple claim templates in the system. Each

Copyright © 2026, Oracle and/or its affiliates.

claim template must be defined in the system using the **Claim Template (C1-ExtLookClaimTemplate)** extendable lookup. A claim template encapsulates the following information:

- Whether the claim template can be used while defining a claim pricing rule for a policy which is in the **In Force/ Active**, **Post Runout**, or **Runout** status.
- Line items which can be billed to a parent customer or bill group.
- Whether you want to calculate the markup or markdown on the line items which are included in the claim template.
- Whether you want to specify a flat markup or markdown amount for the line items or the markup or markdown percentage for the line items which are eligible for percentage based markup or markdown
- Whether a line item is eligible for billing or not.
- Whether you want to define rule based billing eligibility for a line item.
- Whether you want to define billing eligibility for a line item while defining a claim pricing rule.
- Rule type which indicates the rules that should be executed to determine whether the line item is eligible for billing.
- Whether the line item is eligible for percentage based markup or markdown when the markup or markdown type is set to **Percentage**.

Once a claim template is defined in the extendable lookup, you can associate the claim template with a claim pricing rule type. You can associate multiple claim templates with a claim pricing rule type. Then, while defining a claim pricing rule for a parent customer, you can use any one of the claim template associated with the respective claim pricing rule type. The system then inherits the line items and the default markup and markdown values in the claim pricing rule from the claim template.

However, while defining a claim pricing rule for a policy of a bill group, you can only use the claim templates which are defined for the respective policy status and associated with the respective claim pricing rule type.

For example, the following table illustrates few claim templates with different line items:

Claim Template	Policy Status	Line Item	Billing Eligibility	Pricing Strategy	Markup or Markdown Type	Markup or Markdown Amount	Markdown or Markdown Percentage
CT1	In Force/ Active	CDH	Yes	Markup	Flat Amount	$2	-
		THC	Yes				
		PCC	No				
CT2	Runout	CDH	Yes	Markdown	Percentage	-	2.00
		THC	Yes				
CT3	Post Runout	PCC	Yes	None	-	-	-
		NAF	No				

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- Extendable Lookup Search on page 2983

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to search extendable lookups with a particular description.	No

Note: You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object. **Note:** It has a link. On clicking the link, the **Extendable Lookup** screen appears where you can view the details of the respective extendable lookup.

Related Topics

For more information on...	See...

Searching for the Claim Template Extendable Lookup

Procedure

To search for the **Claim Template** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
   The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookClaimTemplate** in the **Business Object** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   The **Claim Template** extendable lookup business object appears in the **Search Results** section.

Viewing the Values of the Claim Template Extendable Lookup

Procedure

To view the values of the **Claim Template** extendable lookup:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. View the values of the **Claim Template** extendable lookup in the **Extendable Lookup Value List** zone.

Related Topics

Extendable Lookup (Claim Template)

The **Extendable Lookup** screen allows you to view the values of the **Claim Template (C1-ExtLookClaimTemplate)** extendable lookup. It also allows you to define, edit, copy, and delete a claim template. It contains the following zones:

- Extendable Lookup Value List on page 2985
- Extendable Lookup Value on page 2986

Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Claim Template** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the claim template.
Description	Displays the description of the claim template.
Owner	Indicates who has created the claim template. The valid values are: • Framework • Base • Customer Modification
Edit	On clicking the **Edit** (✎) icon, the **Claim Template** screen appears where you can edit the details of the claim template.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Claim Template** screen appears where you can define a new claim template using an existing claim template.
Delete	On clicking the **Delete** (🗑) icon, you can delete the claim template.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: You can delete a claim template when it is not yet used in a claim pricing rule type.
Detailed Description	Displays additional information about the claim template.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a claim template, the **Extendable Lookup Value** zone appears with the details of the respective claim template.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the claim template. It contains the following sections:

- **Main** - Displays basic information about the claim template. It contains the following fields:

Field Name	Field Description
Claim Template	Displays the claim template.
Description	Displays the description of the claim template.
Override Description	Displays the overridden description of the claim template.
Detailed Description	Displays additional information about the claim template.
Status	Indicates the status of the claim template. The valid values are: • Active • Inactive

- **Claim Template Usage** - Indicates when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description
Policy Status	Indicates whether the claim template should be used while defining a claim pricing rule for a policy which is in the **In Force/Active**, **Post Runout**, or **Runout** status. The valid values are: • In Force/Active • Post Runout

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	• Runout

- **Claim Handling Fees** - Indicates the claim handling fees which are applicable to one ore more line items in the claim template. It contains the following columns:

Column Name	Column Description
Show Line Items in Pricing Rule	Indicates that claim line item appears when you are defining or editing a claim pricing rule.
Fee Type	Indicates the type of charge applicable on the line items.
Fee	Indicates the fee defined for the line items.
Fee Significance	Indicates the purpose of the imposing the claim handling fees on the line items.
Fee Applicability	Indicates the fee applicability on which the claim handling fees are defined.
Rating Information	Indicates the rate type and value that you want to use while defining the rating information for the line items. **Column Name** / **Column Description** Editable – Indicates that rate type and rate value fields are editable while defining or editing the claim handling fees for the line items. Rate Type – Indicates the rate type that you want to use while defining or editing the claim handling fees for the line items. Rate – Displays the rate that you want to use while defining or editing the claim handling fees for the line items.

- **Default Markup or Markdown Values** - Indicates the default markup or markdown values defined for the line items in the claim template. It contains the following fields:

Field Name	Field Description
Pricing Strategy	Indicates whether you want to markup or markdown the line items. The valid values are: • Markup • Markdown • None
Markup or Markdown Type	Indicates whether you want a flat or percentage based markup or markdown on the line items. The valid values are: • Flat Amount • Percentage **Note:** This field appears when the **Markup** or **Markdown** option is selected from the **Pricing Strategy** list.
Markup or Markdown Amount	Displays the default flat markup or markdown amount for the line items. **Note:** This field appears when the **Flat Amount** option is selected from the **Markup or Markdown Type** list.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Markup or Markdown Percentage	Displays the default percentage of markup or markdown for all line items. **Note:** This field appears when the **Percentage** option is selected from the **Markup or Markdown Type** list.
Editable	Indicates that rate type and rate value fields are editable while defining or editing the markup or markdown values for the line items.
Rate Type	Displays minimum and maximum markup or markdown defined using the rate type.
Rate	Displays the rate for minimum and maximum markup or markdown defined using the rate type.

- **Line Items** - Lists the line items which are added in the claim template. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the calculation line should be generated for the line item.
Line Item	Indicate the line item which is added in the claim template.
Billing Eligibility	Indicates whether the line item is eligible for billing. The valid values are: • Eligible • Not Eligible • Rule Based • Used Defined (Default No) • User Defined (Default Yes)
Rule Type	Indicates that rules of the specified rule type should be executed to determine whether the line item is eligible for billing. **Note:** The data appears in this column when the **Rule Based** option is selected from the **Billing Eligibility** list.
Markup or Markdown Percentage Eligibility	Indicates whether the line item is eligible for percentage based markup or markdown when the **Markup or Markdown Type** field is set to **Percentage**. The valid values are: • Eligible • Not Eligible
Post-Processing Required	Indicates that the line item is applicable for post-processing once the claim pricing rule is derived for a claim transaction.
Rating Information	Displays the rate type and rate value that you want to use while defining the rate for the line items.

Column Name	Column Description
Editable	Indicates that the rate type and rate value fields are editable while defining a claim pricing rule.
Rate Type	Indicates the rate type that you want to use while defining the rate for the line items.
Rate	Used to specify the rate that you want to use while defining the rate for the line items.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Column Name / **Column Description** **Note:** This field is editable when the **Editable** checkbox is selected in the **Rate** column of the **Additional Fees** section while defining or editing the **C1-ExtLookClaimTemplate** extendable lookup.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the claim template.
Delete	Used to delete the claim template. **Note:** You can delete a claim template when it is not yet used in a claim pricing rule type.
Duplicate	Used to create a new claim template using an existing claim template.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the claim template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the claim template. The valid values are: • Framework • Base • Customer Modification

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the claim template in the **Extendable Lookup Value List** zone.

Defining a Claim Template

Procedure

Copyright © 2026, Oracle and/or its affiliates.

To define a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

   The **Claim Template** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the claim template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Template	Used to specify the claim template.	Yes
Description	Used to specify the description for the claim template.	Yes
Override Description	Used when you want to override the description of the claim template.	No
Detailed Description	Used to specify additional information about the claim template.	No
Status	Used to indicate the status of the claim template. The valid values are: • Active • Inactive **Note:** By default, the value is set to **Active**.	Yes

   - **Claim Template Usage** - Used to indicate when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate whether you want to use the claim template while defining a claim pricing rule for a policy which is in the **In Force/Active**, **Post Runout**, or **Runout** status. The valid values are: • In Force/Active • Post Runout • Runout	Yes

   - **Claim Handling Fees** - Used to define the claim handling fees for the claim lines items which are added in the claim template.
   - **Default Markup or Markdown Values** - Used to indicate the default markup or markdown values for the claim line items which are added in the claim template.
   - **Line Items** - Used to add the claim line items in the claim template.
4. Enter the required details in the **Main** section.
5. Select the **In Force/Active**, **Post Runout**, or **Runout** option from the **Policy Status** dropdown list depending on whether you want to use the claim template while defining a claim pricing rule for a policy in a particular status.
6. Define the claim handling fees for the line items in the claim template, if required.
7. Define the default markup or markdown values for the line items in the claim template, if required.
8. Add the required the line items in the claim template.
9. Click **Save**.

Copyright © 2026, Oracle and/or its affiliates.

The claim template is added in the **C1-ExtLookClaimTemplate** extendable lookup.

Defining the Claim Handling Fees for Line Items in the Claim Template

Procedure

To define the claim handling fees for the line items in the claim template:

1. Ensure that the **Claim Handling Fees** section is expanded *w*hen you are defining, editing, or copying a claim template.

   The **Claim Handling Fees** section contains the following fields:

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Show Line Items in Pricing Rule</td><td>Used to indicate whether the claim line item is visible while defining or editing the pricing rules.</td><td>Not applicable</td></tr>
<tr><td>Fee Type</td><td>Used to indicate the charge type defined on the line items.</td><td>Yes</td></tr>
<tr><td>Fee</td><td>Used to indicate the type of rate defined on the line items.</td><td>Yes</td></tr>
<tr><td>Fee Significance</td><td>Used to indicate the purpose of the imposing the fees on the line items.</td><td>Yes</td></tr>
<tr><td>Fee Applicability</td><td>Displays one or more applicable claim line item on which the claim handling fees are imposed.<table><tr><th>Field Name</th><th>Field Description</th></tr><tr><td>Line Items</td><td>Indicates the line item that you want to use while defining claim handling fees for the claim pricing rule.</td></tr></table></td><td>Yes</td></tr>
<tr><td>Rating Information</td><td>Used to indicate one or more rate options which are valid for a line item.<table><tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr><tr><td>Editable</td><td>Used to indicate whether the rate specified for a rate type is editable when you use the claim template in a claim pricing rule.</td><td>No</td></tr></table></td><td>Yes</td></tr>
</table>

Copyright © 2026, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>
<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Rate Type</td><td>Indicates the rate type that you want to use while defining the rate for the line items.</td><td>Yes</td></tr>
<tr><td>Rate</td><td>Used to specify the rate that you want to use while defining the rate for the line items.

Note: This field is editable when the Editable checkbox is selected in the Rating Information column of the Claim Handling Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup.</td><td>Yes</td></tr>
</table>
</td><td></td></tr>
</table>

2. Enter the required details in the **Claim Handling Fees** section.
3. If you want to add more than one claim handling fee in the claim template, click the **Add** (+) icon and *t*hen repeat step 2.

> **Note:** However, if you want to remove a claim handling fee from the claim template, click the **Delete** (🗑) icon corresponding to the line item.

4. If you want to add more than one fee applicability in the claim template, click the **Add** (+) icon and *t*hen repeat step 2.

> **Note:** However, if you want to remove a fee applicability from the claim template, click the **Delete** (🗑) icon corresponding to the line item.

5. If you want to add more than one rating information in the claim template, click the **Add** (+) icon and *t*hen repeat step 2.

> **Note:** However, if you want to remove a rating information from the claim template, click the **Delete** (🗑) icon corresponding to the line item.

6. Click **Save**.
   The claim handling fees are defined for the line items in the claim template.

Defining the Default Markup or Markdown Values for Line Items in a Claim Template

Procedure

To define the markup or markdown values for line items in a claim pricing rule:

1. Ensure that the **Default Markup or Markdown Values** section is expanded *w*hen you are defining, editing, or copying a claim template.

   The **Default Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate the pricing strategy. The valid values are: • Markdown • Markup • None	No
Markup or Markdown Type	Used to indicate the markup or markdown type for the claim line items. The valid values are: • Flat Amount • Percentage	No
Markup or Markdown Amount	Used to specify the markup or markdown amount.	No
Markup or Markdown Percentage	Used to specify the markup or markdown percentage.	No
Editable	Used to indicate whether the rate specified for a rate type is editable when you use the claim template in a claim pricing rule.	Not applicable
Rate Type	Indicates the minimum and maximum markup or markdown defined using the rate type.	Yes (Conditional) **Note:** This field is required when you define the rate from the respective field.
Rate	Used to specify the value for minimum and maximum markup or markdown using the rate type.	Yes (Conditional) **Note:** This field is required when you select the rate type from the respective field.

2. Enter the required details in the **Markup or Markdown Values** section.
3. If you want to add more than one default markup or markdown value in the claim template, click the **Add** (+) icon and *t*hen repeat step 2.

   Note: However, if you want to remove a default markup or markdown value from the claim template, click the **Delete** (🗑) icon corresponding to the line item.

4. Click **Save**.
   The markup or markdown values for line items are defined for the claim template.

Adding a Line Item in a Claim Template

Prerequisites

To add a line item in a claim template, you should have:

- The line item defined in the **C1-ExtLookPricingRuleLineItem** extendable lookup.
- Rule types defined in the application (where the rule type usage is set to **ASO Billing Line Item Eligibility**) when you want to define rule based billing eligibility for a line item.

Procedure

To add a line item in a claim template:

1. Ensure that the **Line Items** section is expanded when you are defining, editing, or copying a claim template.

   The **Line Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the calculation line should be generated for the line item.	Yes (Conditional) **Note:** This field is required while adding a line item in the claim template.
Line Item	Used to indicate the line item that you want to include in the claim template. **Note:** The list includes only those line items which are associated to the **Claim** pricing rule type category.	Yes (Conditional) **Note:** This field is required while adding a line item in the claim template.
Billing Eligibility	Used to indicate whether the line item is eligible for billing. If line item is not eligible for billing, the system does not create the calculation line for the line item. The valid values are: • **Eligible** - Used when the line item is eligible for billing. • **Not Eligible** - Used when the line item is not eligible for billing. • **Rule Based** - Used when you want to determine whether the line item is eligible for billing using certain business rules while executing the **Update Status (C1-TXNEX)** batch. • **Used Defined (Default No)** - Used when you want to define billing eligibility for the line item while defining a claim pricing rule using the claim template. If you select this option, by default, the **User Defined Billing Option** option is not selected for the line item in the claim pricing rule.	Yes (Conditional) **Note:** This field is required while adding a line item in the claim template.

Copyright © 2026, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>• User Defined (Default Yes) - Used when you want to define billing eligibility for the line item while defining a claim pricing rule using the claim template. If you select this option, by default, the User Defined Billing Option option is selected for the line item in the claim pricing rule.</td><td></td></tr>
<tr><td>Rule Type</td><td>Used to indicate that rules of the specified rule type should be executed to determine whether the line item is eligible for billing.
Note:
The list includes only those rule types where the rule type usage is set to ASO Billing Line Item Eligibility.
The values appear in this list when you select the Rule Based option from the Billing Eligibility list.</td><td>Yes (Conditional)
Note: This field is required when you select the Rule Based option from the Billing Eligibility list.</td></tr>
<tr><td>Markup or Markdown Percentage Eligibility</td><td>Used to indicate whether the line item is eligible for percentage based markup or markdown when the Markup or Markdown Type field is set to Percentage. The valid values are:
• Eligible
• Not Eligible</td><td>Yes (Conditional)
Note: This field is required while adding a line item in the claim template.</td></tr>
<tr><td>Post-Processing Required</td><td>Used to indicate that the line item is applicable for post-processing once the claim pricing rule is derived for a claim transaction.</td><td>Yes (Conditional)
Note: This field is required while adding a line item in the claim template.</td></tr>
<tr><td>Rating Information</td><td>Displays the rate type and rate value that you want to use while defining the rate for the line items.
<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Editable</td><td>Used to indicate that the rate type and rate value fields are editable while defining a claim pricing rule.</td><td>Not applicable</td></tr>
<tr><td>Rate Type</td><td>Used to indicate the rate type that you want to use while defining the rate for the line items.</td><td>Yes (Conditional)
Note: This field is required when you define the rate from the respective field.</td></tr>
<tr><td>Rate</td><td>Used to specify the rate that you want to use while defining the rate for the line items.</td><td>Yes (Conditional)</td></tr>
</table></td><td>Yes (Conditional)
Note: This field is required while adding a line item in the claim template.</td></tr>
</table>

How to edit a claim template	Editing a Claim Template on page 2996
How to copy a claim template	Copying a Claim Template on page 2998

Editing a Claim Template

Procedure

To edit a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding *t*o the extendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding *t*o the claim template whose details you want to edit.

   The **Claim Template** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the claim template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Template	Displays the claim template.	Not applicable
Description	Used to specify the description for the claim template.	Yes
Override Description	Used when you want to override the description of the claim template.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Detailed Description	Used to specify additional information about the claim template.	No
Status	Used to indicate the status of the claim template. The valid values are: • Active • Inactive	Yes

- **Claim Template Usage** - Used to indicate when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate whether you want to use the claim template while defining a claim pricing rule for a policy which is in the **In Force/Active**, **Post Runout**, or **Runout** status. The valid values are: • In Force/Active • Post Runout • Runout	Yes

- **Claim Handling Fees** - Used to indicate the claim handling fees for the lines items which are added in the claim template.
- **Default Markup or Markdown Values** - Used to indicate the default markup or markdown values for the claim line items which are added in the claim template.
- **Line Items** - Used to indicate the line items in the claim template.

Tip: Alternatively, you can edit the details of a claim template by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section.
5. Modify the policy status in the **Claim Template Usage** section, if required.
6. Add, edit, or remove the claim handling fees for the line items in the claim template, if required.
7. Modify the default markup or markdown values for the line items in the claim template, if required.
8. Add, edit, or remove line items from the claim template, if required.
9. Click **Save**.
   The changes made to the claim template are saved.

Copying a Claim Template

Instead of creating a claim template from scratch, you can create a new claim template using an existing claim template. This is possible through copying a claim template. On copying a claim template, the details including the line items and default markup or markdown values are copied to the new claim template. You can then edit the details, if required.

Prerequisites

To copy a claim template, you should have:

- Claim template (whose copy you want to create) defined in the application

Procedure

To copy a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the claim template whose copy you want to create.

   The **Claim Template** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the claim template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Template	Used to specify the claim template.	Yes
Description	Used to specify the description for the claim template.	Yes
Override Description	Used when you want to override the description of the claim template.	No
Detailed Description	Used to specify additional information about the claim template.	No
Status	Used to indicate the status of the claim template. The valid values are: • Active • Inactive	Yes

   - **Claim Template Usage** - Used to indicate when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate whether you want to use the claim template while defining a claim pricing rule for a policy which is in the **In Force/Active**, **Post Runout**, or **Runout** status. The valid values are: • In Force/Active	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Post Runout • Runout	

- **Claim Handling Fees** - Used to indicate the claim handling fees for the lines items which are added in the claim template.
- **Default Markup or Markdown Values** - Used to indicate the default markup or markdown values for the line items which are added in the claim template.
- **Line Items** - Used to add the claim line items in the claim template.

Tip: Alternatively, you can copy a claim template by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

4. Enter the required details in the **Main** section.
5. Select the **In Force/Active**, **Post Runout**, or **Runout** option from the **Policy Status** list depending on *w*hether you want to use the claim template while defining a claim pricing rule for a policy in a particular status.
6. Add, edit, or remove the claim handling fees for the line items in the claim template, if required.
7. Modify the default markup or markdown values for the line items in the claim template, if required.
8. Add, edit, or remove the line items from the claim template, if required.
9. Click **Save**.
   The new claim template is added in the **C1-ExtLookClaimTemplate** extendable lookup.

Deleting a Claim Template

Procedure

To delete a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the claim template that you want to delete.
   A message appears confirming whether you want to delete the claim template.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** You can delete a claim template when it is not yet used in a claim pricing rule type.

> **Tip:** Alternatively, you can delete a claim template by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.
   The claim template is deleted from the **C1-ExtLookClaimTemplate** extendable lookup.

Viewing the Claim Template Details

Procedure

To view the details of a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Broadcast** (ᯤ) icon corresponding to the claim template whose details you want to view.
   The **Extendable Lookup Value** zone appears.
4. View the details of the claim template in the **Extendable Lookup Value** zone.

Rate Option Extendable Lookup

The basic pricing details (such as rate schedule, pricing currency) and the transaction aggregation details may vary from one bill group or parent customer to another and from one price item to another. The basic pricing and transaction aggregation details are defined in the rate option. Each rate option must be defined in the system using the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup. A rate option encapsulates the following information:

Copyright © 2026, Oracle and/or its affiliates.

- The rate schedule that you want to use while defining the price item pricing.
- Currency in which you want to define the price item pricing.
- Whether zero pricing should be displayed in the bill.
- Whether the transactions mapped to the price item should be ignored for billing.
- Whether the transactions mapped to the price item should be aggregated for billing.
- The aggregation schedule using which the transactions should be aggregated for billing.
- How and when you want to rate the transaction legs which are mapped to the price item.
- Whether you want the price item pricing to be applied to all customers or only to the new customers.

Once the rate options are defined in the extendable lookup, you can associate one or more rate options with a price item while adding the price item in a claim, specific stop-loss, aggregate stop-loss, retention type claim based, retention type enrollment based, or ancillary pricing rule type. You can then use the rate option while defining pricing rule for the respective price item using the respective pricing rule type. The rate option specified in a pricing rule is used while creating the price item pricing or price assignment for the pricing rule.

For example, the following table illustrates how the rate options can be used for different price items in a pricing rule type:

Claim Pricing Rule Type	**Price Item**	**Rate Option**	**Claim Pricing Rule**	**Price Item Pricing**
CPRT1	P1	R1	CPR1 (Price Item: P1, Rate Option: R1)	PA1 is created for P1 using the details specified in R1.
		R2	-	-
		R3	CPR2 (Price Item: P1, Rate Option: R3)	PA2 is created for P1 using the details specified in R3.
	P2	R1	-	-
		R4	CPR3 (Price Item: P2, Rate Option: R4)	PA3 is created for P2 using the details specified in R4.
CPRT2	P1	R1	CPR4 (Price Item: P1, Rate Option: R1)	PA4 is created for P1 using the details specified in R1.

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- Extendable Lookup Search on page 3001

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Business Object	Used to search a particular extendable lookup business object.	No
Description	Used to search extendable lookups with a particular description.	No

Note: You must specify at least one search criterion while searching for an extendable lookup.

Copyright © 2026, Oracle and/or its affiliates.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.
	Note: It has a link. On clicking the link, the **Extendable Lookup** screen appears where you can view the details of the respective extendable lookup.

Related Topics

Searching for the Rate Option Extendable Lookup

Procedure

To search for the **Rate Option** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
   The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookRetTypeRateOpt** in the **Business Object** field.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
4. Click **Search**.
   The **Rate Option** extendable lookup business object appears in the **Search Results** section.

Extendable Lookup (Rate Option)

The **Extendable Lookup** screen allows you to view the values of the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup. It also allows you to define, edit, copy, and delete a rate option. It contains the following zones:

- Extendable Lookup Value List on page 3003
- Extendable Lookup Value on page 3004

Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Rate Option** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the rate option.
Description	Displays the description of the rate option.
Owner	Indicates who has created the rate option. The valid values are: • Framework • Base • Customer Modification
Edit	On clicking the **Edit** (✎) icon, the **Rate Option** screen appears where you can edit the details of the rate option.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Rate Option** screen appears where you can define a new rate option using an existing rate option.
Delete	On clicking the **Delete** (🗑) icon, you can delete the rate option. **Note:** You can delete a rate option when it is not yet used in a pricing rule type.
Detailed Description	Displays additional information about the rate option.

Copyright © 2026, Oracle and/or its affiliates.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a rate option, the **Extendable Lookup Value** zone appears with the details of the respective rate option.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the rate option. It contains the following sections:

- **Main** - Displays basic information about the rate option. It contains the following fields:

Field Name	Field Description
Rate Option	Displays the rate option.
Description	Displays the description of the rate option.
Override Description	Displays the overridden description of the rate option.
Detailed Description	Displays additional information about the rate option.
Status	Indicates the status of the rate option. The valid values are: • Active • Inactive
Rate Schedule	Indicates the rate schedule that will be used while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg. **Note:** It has a link. On clicking the link, the **Rate Schedule** screen appears where you can view the details of the respective rate schedule.
Pricing Currency	Indicates the currency in which the price item pricing will be defined.
Print Zero	Indicates whether zero pricing will be displayed in the bill. The valid values are: • Yes • No
Ignore Transaction	Indicates whether the transactions mapped to the price item will be ignored for billing. The valid values are: • Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	• No
Aggregate Transaction	Indicates whether the transactions mapped to the price item will be aggregated for billing. The valid values are: • Yes • No
Aggregation Schedule	Indicates the aggregation schedule using which the transactions will be aggregated for billing.
Transaction Rating Criteria	Indicates how and when the transaction legs which are mapped to the price item are rated. The valid values are: • Aggregate Transactions and Then Rate SQs • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines • Rate Transactions
Apply To	Indicates whether the price item pricing will be applied to all customers or only to the new customers. The valid values are: • All Customers • New Customers

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the rate option.
Delete	Used to delete the rate option. **Note:** You can delete a rate option when it is not yet used in a pricing rule type.
Duplicate	Used to create a new rate option using an existing rate option.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the rate option is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the rate option. The valid values are: • Framework • Base • Customer Modification

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the rate option in the **Extendable Lookup Value List** zone.

Defining a Rate Option

Prerequisites

To define a rate option, you should have:

- Rate schedules, currencies, and aggregation schedules defined in the application

Procedure

To define a rate option:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding *t*o the extendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

   The **Rate Option** screen appears. It contains the following section:

   - **Main** - Used to specify basic details about the rate option. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to specify the rate option.	Yes
Description	Used to specify the description for the rate option.	Yes
Override Description	Used when you want to override the description of the rate option.	No
Detailed Description	Used to specify additional information about the rate option.	No
Status	Used to indicate the status of the rate option. The valid values are: • Active • Inactive **Note:** By default, the value is set to **Active**.	Yes
Rate Schedule	Used to indicate the rate schedule that you want to use while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Rate Schedule Search** window appears.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: • Yes • No **Note:** By default, the value is set to **Yes**.	Yes
Ignore Transaction	Used to indicate whether the transactions mapped to the price item should be ignored for billing. The valid values are: • Yes • No **Note:** By default, the value is set to **No**.	Yes
Aggregate Transaction	Used to indicate whether the transactions mapped to the price item should be aggregated for billing. The valid values are: • Yes • No **Note:** By default, the value is set to **No**. This field is disabled when the **Ignore Transaction** field is set to **Yes**.	Yes
Aggregation Schedule	Used to indicate the aggregation schedule using which the transactions should be aggregated for billing. **Note:** This field is disabled when the **Ignore Transaction** field is set to **Yes**.	Yes (Conditional) **Note:** This field is required when the **Aggregate Transaction** field is set to **Yes**.
Transaction Rating Criteria	Used to indicate how and when you want to rate the transaction legs which are mapped to the price item. The valid values are: • Aggregate Transactions and Then Rate SQs **Note:** This value appears in the list when the **Ignore Transaction** field is set to **No** and the **Aggregate Transaction** field is set to **Yes**. • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines **Note:** This value appears in the list when the **Ignore Transaction** field is set to **No** and the **Aggregate Transaction** field is set to **Yes**.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Rate Transactions **Note:** This value appears in the list only when the **Ignore Transaction** field is set to either **Yes** or **No** and the **Aggregate Transaction** field is set to **No**. **Note:** By default, the value is set to **Do Not Rate Transactions**.	
Apply To	Used to indicate whether you want the price item pricing to be applied to all customers or only to the new customers. The valid values are: • All Customers • New Customers **Note:** By default, the value is set to **All Customers**.	Yes

4. Enter the required details in the **Main** section.
5. Click **Save**.
   The rate option is added in the **C1-ExtLookRetTypeRateOpt** extendable lookup.

Editing a Rate Option

Prerequisites

To edit a rate option, you should have:

- Rate schedules, currencies, and aggregation schedules defined in the application

Procedure

To edit a rate option:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the rate option whose details you want to edit.

   The **Rate Option** screen appears. It contains the following section:

   - **Main** - Used to specify basic details about the rate option. It contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Displays the rate option.	Not applicable
Description	Used to specify the description for the rate option.	Yes
Override Description	Used when you want to override the description of the rate option.	No
Detailed Description	Used to specify additional information about the rate option.	No
Status	Used to indicate the status of the rate option. The valid values are: • Active • Inactive	Yes
Owner	Indicates who has created the rate option. The valid values are: • Framework • Base • Customer Modification	Not applicable
Rate Schedule	Used to indicate the rate schedule that you want to use while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Rate Schedule Search** window appears.	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: • Yes • No	Yes
Ignore Transaction	Used to indicate whether the transactions mapped to the price item should be ignored for billing. The valid values are: • Yes • No	Yes
Aggregate Transaction	Used to indicate whether the transactions mapped to the price item should be aggregated for billing. The valid values are: • Yes • No **Note:** This field is disabled when the **Ignore Transaction** field is set to **Yes**.	Yes
Aggregation Schedule	Used to indicate the aggregation schedule using which the transactions should be aggregated for billing.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field is disabled when the **Ignore Transaction** field is set to **Yes**.	**Note:** This field is required when the **Aggregate Transaction** field is set to **Yes**.
Transaction Rating Criteria	Used to indicate how and when you want to rate the transaction legs which are mapped to the price item. The valid values are: • Aggregate Transactions and Then Rate SQs **Note:** This value appears in the list when the **Ignore Transaction** field is set to **No** and the **Aggregate Transaction** field is set to **Yes**. • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines **Note:** This value appears in the list when the **Ignore Transaction** field is set to **No** and the **Aggregate Transaction** field is set to **Yes**. • Rate Transactions **Note:** This value appears in the list only when the **Ignore Transaction** field is set to either **Yes** or **No** and the **Aggregate Transaction** field is set to **No**.	Yes
Apply To	Used to indicate whether you want the price item pricing to be applied to all customers or only to the new customers. The valid values are: • All Customers • New Customers	Yes

Tip: Alternatively, you can edit the details of a rate option by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section.
5. Click **Save**.
   The changes made to the rate option are saved.

Copying a Rate Option

Instead of creating a rate option from scratch, you can create a new rate option using an existing rate option. This is possible through copying a rate option. On copying a rate option, the pricing and transaction aggregation details are copied to the new rate option. You can then edit the details, if required.

Prerequisites

To copy a rate option, you should have:

- Rate option (whose copy you want to create) defined in the application
- Rate schedules, currencies, and aggregation schedules defined in the application

Procedure

To copy a rate option:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column corresponding to the rate option whose copy you want to create.

   The **Rate Option** screen appears. It contains the following section:

   - **Main** - Used to specify basic details about the rate option. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to specify the rate option.	Yes
Description	Used to specify the description for the rate option.	Yes
Override Description	Used when you want to override the description of the rate option.	No
Detailed Description	Used to specify additional information about the rate option.	No
Status	Used to indicate the status of the rate option. The valid values are: • Active • Inactive	Yes
Rate Schedule	Used to indicate the rate schedule that you want to use while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Rate Schedule Search** window appears.	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: • Yes	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• No	
Ignore Transaction	Used to indicate whether the transactions mapped to the price item should be ignored for billing. The valid values are: • Yes • No	Yes
Aggregate Transaction	Used to indicate whether the transactions mapped to the price item should be aggregated for billing. The valid values are: • Yes • No **Note:** This field is disabled when the **Ignore Transaction** field is set to **Yes**.	Yes
Aggregation Schedule	Used to indicate the aggregation schedule using which the transactions should be aggregated for billing. **Note:** This field is disabled when the **Ignore Transaction** field is set to **Yes**.	Yes (Conditional) **Note:** This field is required when the **Aggregate Transaction** field is set to **Yes**.
Transaction Rating Criteria	Used to indicate how and when you want to rate the transaction legs which are mapped to the price item. The valid values are: • Aggregate Transactions and Then Rate SQs **Note:** This value appears in the list when the **Ignore Transaction** field is set to **No** and the **Aggregate Transaction** field is set to **Yes**. • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines **Note:** This value appears in the list when the **Ignore Transaction** field is set to **No** and the **Aggregate Transaction** field is set to **Yes**. • Rate Transactions **Note:** This value appears in the list only when the **Ignore Transaction** field is set to either **Yes** or **No** and the **Aggregate Transaction** field is set to **No**.	Yes
Apply To	Used to indicate whether you want the price item pricing to be applied to all customers or only to the new customers. The valid values are: • All Customers • New Customers	Yes

Tip: Alternatively, you can copy a rate option by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

Copyright © 2026, Oracle and/or its affiliates.

4. Enter the required details in the **Main** section.
5. Click **Save**.
   The new rate option is added in the **C1-ExtLookRetTypeRateOpt** extendable lookup.

Deleting a Rate Option

Procedure

To delete a rate option:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the rate option that you want to delete.
   A message appears confirming whether you want to delete the rate option.

> **Note:** You can delete a rate option when it is not yet used in a pricing rule type.

> **Tip:** Alternatively, you can delete a rate option by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.
   The rate option is deleted from the **C1-ExtLookRetTypeRateOpt** extendable lookup.

Rate Type Extendable Lookup

A new extendable lookup for rate type named **C1-ExtLookRateType** is introduced in the system. A rate type extendable lookup enables you to specify the following:

- Whether the system should calculate fees on sum of all applicable claim charges or separately for each applicable claim charge.
- The billable charge line type using which the calculation line should be created when the fee is calculated on sum of all applicable claim charges
- Whether the system should calculate percentage based markup or markdown on sum of all eligible claim charges or separately for each eligible claim charge
- The billable charge line type using which the calculation line should be created when the minimum and maximum markup or markdown is calculated on sum of all eligible claim charges
- Whether the rate type can be used while adding fees, default markup or markdown, or claim line items

Following rate types are used in the system:

- Maximum Fee
- Minimum Fee
- Retained Percentage
- Minimum Markup or Markdown
- Maximum Markup or Markdown
- Minimum Amount
- Maximum Amount

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- Extendable Lookup Search on page 3014

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No
Description	Used to search extendable lookups with a particular description.	No

Note: You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.
	Note: It has a link. On clicking the link, the **Extendable Lookup** screen appears where you can view the details of the respective extendable lookup.

Related Topics

Searching for the Rate Type Extendable Lookup

Procedure

To search for the **Rate Type** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
   The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookRateType** in the **Business Object** field.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
4. Click **Search**.
   The **Rate Type** extendable lookup business object appears in the **Search Results** section.

Viewing the Values of the Rate Type Extendable Lookup

Procedure

To view the values of the **Rate Type** extendable lookup:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. View the values of the **Rate Type** extendable lookup in the **Extendable Lookup Value List** zone.

Extendable Lookup (Rate Type)

The **Extendable Lookup** screen allows you to view the values of the **Rate Type (C1-ExtLookRateType)** extendable lookup. It also allows you to define, edit, copy, and delete a rate type. It contains the following zones:

- Extendable Lookup Value List on page 3003
- Extendable Lookup Value on page 3004

Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Rate Type** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the rate type.
Description	Displays the description of the rate type.
Owner	Indicates the user who has created the rate type. The valid values are: • Framework • Base • Customer Modification
Edit	On clicking the **Edit** (✎) icon, the **Rate Type** screen appears where you can edit the details of the rate type.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Rate Type** screen appears where you can define a rate type item using an existing rate type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the rate type.
	Note: You can delete a rate type when it is not yet used in a pricing rule type.
Detailed Description	Displays additional information about the rate type.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a rate type, the **Extendable Lookup Value** zone appears with the details of the respective rate type.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the rate type. It contains the following sections:

- **Main** - Displays basic information about the rate type. It contains the following fields:

Field Name	Field Description
Rate Type	Displays the rate type.
Description	Displays the description for the rate type.
Override Description	Displays the overridden description of the rate type.
Detailed Description	Displays the additional information about the rate type.
Status	Indicates the status of the rate type. The valid values are: • Active • Inactive
Line-Specific Calculation	Indicates whether the calculation of fees, percentage, or markup and markdown should take place for each and every claim charge or not. The valid values are: • Yes • No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Billable Charge Line Type	Indicates the billable charge line type using which the calculation line is created for the charge.

Rate Type Usage - Lists the various charges to which the rate type is associated. It contains the following column in a grid:

Column Name	Column Description
Applicable To	Indicates the claim handling fees that are associated with the rate type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the rate type.
Delete	Used to delete the rate type. **Note:** You can delete a rate type when it is not yet used in a pricing rule type.
Duplicate	Used to create a new rate type using an existing line item.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the rate type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the line item. The valid values are: • Framework • Base • Customer Modification

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the line item in the **Extendable Lookup Value List** zone.

Defining a Rate Type

Prerequisites

Copyright © 2026, Oracle and/or its affiliates.

To define a rate type, you should have:

- Billable charge line type and rate types defined in the application.

Procedure

To define a rate type:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding *t*o the extendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

   The **Rate Type** screen appears. It contains the following section:

   - **Main** - Used to specify basic details about the rate type. It contains the following fields:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Rate Type	Used to specify the rate type.	Yes
Description	Used to specify the description for the rate type.	Yes
Override Description	Used when you want to override the description of the rate type.	No
Detailed Description	Used to specify additional information about the rate type.	No
Status	Used to indicate the status of the rate type. The valid values are: • Active • Inactive **Note:** By default, the value is set to **Active**.	No
Line-Specific Calculation	Used to indicate whether the calculation of fees, percentage, or markup and markdown should take place for each and every claim charge or not. The valid values are: • Yes • No	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). **Note:** The **Search** (🔍) icon appears corresponding to the **Billable Charge Line Type** field. On clicking the **Search** icon, the **Billable Charge Line Type Search** window appears. On specifying the value for a billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	No

Copyright © 2026, Oracle and/or its affiliates.

- **Rate Type Usage** - Used to specify the usage of a rate type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Applicable To	Used to indicate whether the rate type can be used while adding fees, default markup or markdown, or claim line items. The valid values are: • Claim Handling Fees • Claim Line Items • Markup or Markdown	Yes

4. Enter the required details in the **Main** section.
5. Select the required rate type usage (for the rate type) from the **Rate Type Usage** section.
6. If you want to define more than one rate type usage for the rate type, click the **Add** (+) icon and then repeat step 5.

> **Note:** However, if you want to remove a rate type usage from the rate type, click the **Delete** (🗑) icon corresponding to the **Applicable To** field.

7. Click **Save**.
   The rate type is added in the **C1-ExtLookRateType** extendable lookup.

Editing a Rate Type

Prerequisites

To edit a rate type, you should have:

- Billable charge line type and rate type usage defined in the application.

Procedure

To edit a rate type:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding *t*o the extendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the rate type whose details you want to edit.

   The **Rate Type** screen appears. It contains the following section:

   - **Main** - Used to specify basic details about the rate type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Type	Displays the rate type.	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the rate type.	Yes
Override Description	Used when you want to override the description of the rate type.	No
Detailed Description	Used to specify additional information about the rate type.	No
Status	Used to indicate the status of the rate type. The valid values are: • Active • Inactive	No
Line-Specific Calculation	Used to indicate whether the calculation of fees, percentage, or markup and markdown should take place for each and every claim charge or not. The valid values are: • Yes • No	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). **Note:** The **Search** (🔍) icon appears corresponding to the **Billable Charge Line Type** field. On clicking the **Search** icon, the **Billable Charge Line Type Search** window appears. On specifying the value for a billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	No

- **Rate Type Usage** - Used to specify the usage of a rate type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Applicable To	Used to indicate whether the rate type can be used while adding fees, default markup or markdown, or claim line items. The valid values are: • Claim Handling Fees • Claim Line Items • Markup or Markdown	Yes

Tip: Alternatively, you can edit the details of a rate type by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section, if required.
5. Add, edit, or remove usage (for the rate type) from the **Usage** section, if required.
6. If you want to define more than one rate type usage for the rate type, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a rate type usage from the rate type, click the **Delete** (🗑) icon corresponding to the **Applicable To** field.

Copyright © 2026, Oracle and/or its affiliates.

7. Click **Save**.
   The changes made to the rate type are saved.

Copying a Rate Type

Instead of creating a rate type from scratch, you can create a new rate type using an existing rate type. This is possible through copying a rate type. On copying a rate type, the line specific calculation, billable charge type, and usage detailed are copied to the new rate type. You can then edit the details, if required.

Prerequisites

To copy a rate type, you should have:

- Rate type (whose copy you want to create) defined in the application.
- Billable charge line type and rate type usage defined in the application.

Procedure

To copy a rate type:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding *t*o the extendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column corresponding to the rate type whose copy you want to create.

   The **Rate Type** screen appears. It contains the following section:

   - **Main** - Used to specify basic details about the rate type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Type	Used to specify the rate type.	Yes
Description	Used to specify the description for the rate type.	Yes
Override Description	Used when you want to override the description of the rate type.	No
Detailed Description	Used to specify additional information about the rate type.	No
Status	Used to indicate the status of the rate type. The valid values are: • Active • Inactive	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Line-Specific Calculation	Used to indicate whether the calculation of fees, percentage, or markup and markdown should take place for each and every claim charge or not. The valid values are: • Yes • No	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). **Note:** The **Search** (🔍) icon appears corresponding to the **Billable Charge Line Type** field. On clicking the **Search** icon, the **Billable Charge Line Type Search** window appears. On specifying the value for a billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	No

- **Rate Type Usage** - Used to specify the usage of a rate type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Applicable To	Used to indicate whether the rate type can be used while adding fees, default markup or markdown, or claim line items.	Yes

Tip: Alternatively, you can copy a rate type by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

4. Enter the required details in the **Main** section, if required.
5. Select the required rate type usage (for the rate type) from the **Rate Type Usage** section.
6. If you want to define more than one rate type usage for the rate type, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a rate type usage from the rate type, click the **Delete** (🗑) icon corresponding to the **Applicable To** field.

7. Click **Save**.
   The new rate type is added in the **C1-ExtLookRateType** extendable lookup.

Deleting a Rate Type

Procedure

Copyright © 2026, Oracle and/or its affiliates.

To delete a rate type:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the rate type that you want to delete.
   A message appears confirming whether you want to delete the rate type.

> **Note:** You can delete a rate type when it is not yet used in a pricing rule type.

> **Tip:** Alternatively, you can delete a rate type by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.
   The rate type is deleted from the **C1-ExtLookRateType** extendable lookup.

Viewing the Rate Type Details

Procedure

To view the details of a rate type:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Broadcast** (📡) icon corresponding to the rate option whose details you want to view.
   The **Extendable Lookup Value** zone appears.
4. View the details of the rate type in the **Extendable Lookup Value** zone.

Pricing Group

Oracle Revenue Management and Billing enables you to create pricing groups for a bill group. It consists of one or more rules. Each rule has a unique priority. A rule contains one or more criteria. Each criterion can contain the following:

- **Source System** - Indicates the external system from where the claim or enrollment transaction is received.
- **Parameter 1**, **Parameter 2**, **Parameter 3**, and **Parameter 4** - Indicates employee attributes based on which you want to define the pricing.

Note that the source system and parameter 1 are mandatory when you are defining a criterion in a rule. In the **Parameter 1** field, you can only specify the employee attribute which is defined for the bill group and source system combination in the **Bill Group Derivation and Pricing Parameters** zone.

You can specify multiple parameter 2, parameter 3, and parameter 4 combinations in the criterion. You can also specify multiple source system, parameter 1, parameter 2, parameter 3, and parameter 4 combinations (i.e. multiple criteria) in a rule. Once a pricing group is defined for a bill group, you can then use the pricing group while defining a pricing rule for the bill group. This enables you to define various rates for employees with different set of attributes. For example, in a claim pricing rule, you can maintain different markup and markdown values for employees who belong to the Western, Eastern, and Central location of United States.

You can define, edit, copy, and delete a pricing group through the **Bill Group Pricing Groups** zone in the **Pricing** tab of the **Customer 360° Information** screen.

Viewing the Pricing Groups of a Bill Group

Procedure

To view the pricing groups of a bill group:

1. Search for the bill group whose is associated with the self-funded policy in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the bill group whose *d*etails you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing Information** tab.
   The **Pricing Information** tab appears.
4. In the **Bill Group Self-Funded Policy Information** zone, click the **Broadcast** (📡) icon corresponding *t*o a bill group whose pricing groups you want to view.
   The **Bill Group Self-Funded Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.
5. View the pricing groups which are defined for the bill group and are currently active in the **Bill Group Pricing Groups** zone.

Defining a Pricing Group for a Bill Group

Prerequisites

To define a pricing group for a bill group, you should have:

- Values defined for the **C1-SourceSystemLookup** extendable lookup

Procedure

To define a pricing group for a bill group:

1. Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want *t*o view.
   The **Person** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** (📡) icon corresponding to a bill group for *w*hom you want to define a pricing group.
   The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.
5. Click the **Add** link in the upper right corner of the **Bill Group Pricing Groups** zone.

   The **Pricing Group** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the pricing group. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Indicates the bill group for whom you want to define the pricing group.	Not applicable
Status	Used to indicate the status of the pricing group. The valid values are: • Active • Inactive	Yes
Description	Used to specify the description for the pricing group.	Yes

   - **Pricing Group Rules** - Used to define rules in the pricing group. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Priority	Used to indicate the order in which the rule should be executed while determining the pricing for the price item. **Note:** You cannot define multiple rules in the pricing group with the same priority.	Yes
Rule	Used to specify the rule in the pricing group.	Yes
Description	Used to specify the description for the pricing group rule.	Yes
Criteria	On clicking the **Add** (📄) icon, you can define criteria for the pricing group rule.	Not applicable

6. Enter the required details in the **Main** section.
7. Define the required rules in the **Pricing Group Rules** section.
8. Click the **Add** (📄) icon in the **Criteria** field corresponding to the pricing group rule for which you want to *d*efine the criteria.

Copyright © 2026, Oracle and/or its affiliates.

The following fields appear in another grid:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the external system from where the claim or enrollment transaction is received.	Yes
Parameter 1	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You can only specify the employee attribute which is defined for the bill group and source system combination in the **Bill Group Derivation and Pricing Parameters** zone. You must not specify the ampersand (&) character in this field. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Parameter 1 List for Bill Group** window appears.	Yes
Parameter 2	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You must not specify the ampersand (&) character in this field.	No
Parameter 3	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You must not specify the ampersand (&) character in this field.	No
Parameter 4	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You must not specify the ampersand (&) character in this field.	No

9. Enter the source system and parameter 1 in the pricing group rule criteria.

> **Note:** You must define at least one rule in the pricing group and at least one source system and parameter 1 combination in the pricing group rule.

10. If required, enter the parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination *i*n the pricing group rule criteria.
11. If you want to define more than one parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 *c*ombination, click the **Add** (+) icon corresponding to the **Parameter 2** field and then repeat step 10.

> **Note:** However, if you want to remove a parameter 2, parameter 3, and parameter 4 from the source system and parameter 1 combination, click the **Delete** (🗑) icon corresponding to the parameter 2, parameter 3, and parameter 4.

12. If you want to define more than one source system and parameter 1 combination in the pricing group rule, click the **Add** (+) icon corresponding to the **Source System** field and then repeat step 9 and 10.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** However, if you want to remove a source system and parameter 1 combination from the pricing group rule, click the **Delete** (🗑) icon corresponding to the combination.

13. If you want to define more than one rule in the pricing group, click the **Add** (+) icon corresponding to the **Priority** field and then repeat the steps from 7 to 10.

> **Note:** However, if you want to remove a rule from the pricing group, click the **Delete** (🗑) icon corresponding to the pricing group rule.

14. Click **Save**.
    The pricing group is defined for the bill group.

Editing a Pricing Group of a Bill Group

Prerequisites

To edit a pricing group of a bill group, you should have:

- Values defined for the **C1-SourceSystemLookup** extendable lookup

Procedure

To edit a pricing group of a bill group:

1. Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want *t*o view.
   The **Person** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** (📡) icon corresponding to a bill group whose *p*ricing group you want to edit.
   The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.
5. In the **Bill Group Pricing Groups** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *p*ricing group whose details you want to edit.

   The **Pricing Group** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the pricing group. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Indicates the bill group for whom you want to define the pricing group.	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the pricing group. The valid values are: • Active • Inactive	Yes
Description	Used to specify the description for the pricing group.	Yes

- **Pricing Group Rules** - Used to define rules in the pricing group. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Priority	Used to indicate the order in which the rule should be executed while determining the pricing for the price item. **Note:** You cannot define multiple rules in the pricing group with the same priority.	Yes
Rule	Used to specify the rule in the pricing group.	Yes
Description	Used to specify the description for the pricing group rule.	Yes
Criteria	On clicking the **Add** (+) icon, you can define criteria for the pricing group rule.	Not applicable

Note: You cannot define, edit, or remove a rule when the pricing group is already used while defining a pricing rule for the bill group.

6. Modify the required details in the **Main** section.
7. Edit the required rules in the **Pricing Group Rules** section.
8. Click the **Add** (+) icon in the **Criteria** field corresponding to the pricing group rule for which you want to *e*dit the criteria.

   The following fields appear in another grid:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the external system from where the claim or enrollment transaction is received.	Yes
Parameter 1	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You can only specify the employee attribute which is defined for the bill group and source system combination in the **Bill Group Derivation and Pricing Parameters** zone. You must not specify the ampersand (&) character in this field. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Parameter 1 List for Bill Group** window appears.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Parameter 2	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You must not specify the ampersand (&) character in this field.	No
Parameter 3	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You must not specify the ampersand (&) character in this field.	No
Parameter 4	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You must not specify the ampersand (&) character in this field.	No

Note: You cannot define, edit, or remove the source system, parameter 1, parameter 2, parameter 3, and parameter 4 from a rule when the pricing group is already used while defining a pricing rule for the bill group.

9. If required, enter the source system and parameter 1 in the pricing group rule criteria.

Note: You must define at least one rule in the pricing group and at least one source system and parameter 1 combination in the pricing group rule.

10. If required, enter the parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination in the pricing group rule criteria.
11. If you want to define more than one parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination, click the **Add** (+) icon corresponding to the **Parameter 2** field and then repeat step 10.

Note: However, if you want to remove a parameter 2, parameter 3, and parameter 4 from the source system and parameter 1 combination, click the **Delete** (🗑) icon corresponding to the parameter 2, parameter 3, and parameter 4.

12. If you want to define more than one source system and parameter 1 combination in the pricing group rule, click the **Add** (+) icon corresponding to the **Source System** field and then repeat step 9 and 10.

Note: However, if you want to remove a source system and parameter 1 combination from the pricing group rule, click the **Delete** (🗑) icon corresponding to the combination.

13. If you want to define more than one rule in the pricing group, click the **Add** (+) icon corresponding to the **Priority** field and then repeat the steps from 7 to 10.

Note: However, if you want to remove a rule from the pricing group, click the **Delete** (🗑) icon corresponding to the pricing group rule.

14. Click **Save**.
    The changes made to the pricing group are saved.

Deleting a Pricing Group of a Bill Group

Procedure

To delete a pricing group of a bill group:

1. Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want *t*o view.
   The **Person** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** (📡) icon corresponding to a bill group whose *p*ricing group you want to delete.
   The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.
5. In the **Bill Group Pricing Groups** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the *p*ricing group that you want to delete.

   A message appears confirming whether you want to delete the pricing group.

   Note: You can delete a pricing group when it is not yet used while defining a pricing rule for the bill group.
6. Click **OK**.
   The pricing group is deleted.

Copying a Pricing Group of a Bill Group

Instead of creating a pricing group from scratch, you can create a new pricing group using an existing pricing group. This is possible through copying a pricing group. On copying a pricing group, the details including the rules are copied to the new pricing group. You can then edit the details, if required.

Prerequisites

To copy a pricing group of a bill group, you should have:

Copyright © 2026, Oracle and/or its affiliates.

- Pricing group (whose copy you want to create) defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup

Procedure

To copy a pricing group of a bill group:

1. Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want *t*o view.
   The **Person** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** (📡) icon corresponding to a bill group whose *p*ricing group you want to copy.
   The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.
5. In the **Bill Group Pricing Groups** zone, click the **Duplicate** (📋) icon in the **Duplicate** column *c*orresponding to the pricing group whose copy you want to create.

   The **Pricing Group** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the pricing group. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Indicates the bill group for whom you want to define the pricing group.	Not applicable
Status	Used to indicate the status of the pricing group. The valid values are: • Active • Inactive	Yes
Description	Used to specify the description for the pricing group.	Yes

   - **Pricing Group Rules** - Used to define rules in the pricing group. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Priority	Used to indicate the order in which the rule should be executed while determining the pricing for the price item. **Note:** You cannot define multiple rules in the pricing group with the same priority.	Yes
Rule	Used to specify the rule in the pricing group.	Yes
Description	Used to specify the description for the pricing group rule.	Yes
Criteria	On clicking the **Add** (➕) icon, you can define criteria for the pricing group rule.	Not applicable

6. Enter the required details in the **Main** section.
7. Define, edit, or remove the required rules from the **Pricing Group Rules** section.
8. Click the **Add** (➕) icon in the **Criteria** field corresponding to the pricing group rule for which you want to *d*efine or edit the criteria.

   The following fields appear in another grid:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the external system from where the claim or enrollment transaction is received.	Yes
Parameter 1	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You can only specify the employee attribute which is defined for the bill group and source system combination in the **Bill Group Derivation and Pricing Parameters** zone. You must not specify the ampersand (&) character in this field. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Parameter 1 List for Bill Group** window appears.	Yes
Parameter 2	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You must not specify the ampersand (&) character in this field.	No
Parameter 3	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You must not specify the ampersand (&) character in this field.	No
Parameter 4	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You must not specify the ampersand (&) character in this field.	No

9. Enter the source system and parameter 1 in the pricing group rule criteria.

> **Note:** You must define at least one rule in the pricing group and at least one source system and parameter 1 combination in the pricing group rule.

10. If required, enter the parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination in the pricing group rule criteria.
11. If you want to define more than one parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination, click the **Add** (+) icon corresponding to the **Parameter 2** field and then repeat step 10.

> **Note:** However, if you want to remove a parameter 2, parameter 3, and parameter 4 from the source system and parameter 1 combination, click the **Delete** (🗑) icon corresponding to the parameter 2, parameter 3, and parameter 4.

12. If you want to define more than one source system and parameter 1 combination in the pricing group rule, click the **Add** (+) icon corresponding to the **Source System** field and then repeat step 9 and 10.

> **Note:** However, if you want to remove a source system and parameter 1 combination from the pricing group rule, click the **Delete** (🗑) icon corresponding to the combination.

Copyright © 2026, Oracle and/or its affiliates.

13. If you want to define more than one rule in the pricing group, click the **Add** (+) icon corresponding to the **Priority** field and then repeat the steps from 7 to 10.

> **Note:** However, if you want to remove a rule from the pricing group, click the **Delete** (🗑) icon corresponding to the pricing group rule.

14. Click **Save**.
    The new pricing group is defined for the bill group.

Pricing Rule Type

Oracle Revenue Management and Billing enables you to define a pricing rule type using which you can create a pricing rule. Through this screen you can define the following pricing rule types:

- **Claim**
- **Specific Stop-Loss (SSL)**
- **Aggregate Stop-Loss (ASL)**
- **Retention Type Claim Based**
- **Retention Type Enrollment Based**
- **Flat Fee**
- **Ancillary**
- **Discount Arrangement**
- **Level Funded**
- **Minimum Premium Pricing**
- **Age Based**
- **Tier Based**
- **Pass-Through Billable Charge**
- **Additional Fee**
- **Benefit**
- **Discount Charge**

This screen consists of the following zones:

- Pricing Rule Type List on page 3035
- Pricing Rule Type on page 3038

Copyright © 2026, Oracle and/or its affiliates.

Pricing Rule Type List

The **Pricing Rule Type List** zone lists the pricing rule types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Pricing Rule Type	Displays the pricing rule type.
Description	Displays the description of the pricing rule type.
Pricing Rule Type Category	Indicates the category to which the pricing rule type belongs. The valid values are: • Claim • Specific Stop-Loss • Aggregate Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • Flat Fees • Ancillary • Discount Arrangement • Discount Charge • Level Funded • Age Based • Tier Based • Pass-Through Billable Charge • Benefit • Additional Fee • Minimum Pricing Rule Type
Edit	On clicking the **Edit** (✎) icon, the **Claim Pricing Rule Type**, **Specific Stop-Loss (SSL) Pricing Rule Type**, **Aggregate Stop-Loss (ASL) Pricing Rule Type**, **Retention Type Claim Based Pricing Rule Type**, **Retention Type Enrollment Based Pricing Rule Type**, **Flat Fees Pricing Rule Type**, **Ancillary Pricing Rule Type**, **Discount Arrangement Pricing Rule Type**, **Discount Charge Pricing Rule Type**, **Level Funded Pricing Rule Type**, **Age Based Pricing Rule Type**, **Tier Based Pricing Rule Type**, **Pass-Through Billable Charge Pricing Rule Type**, **Benefit Pricing Rule Type**, **Additional Fee Pricing Rule Type**, or **Minimum Pricing Rule Type** screen appears, based on the pricing rule type category, where you can edit the details of the respective pricing rule type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the pricing rule type. **Note:** You can delete a pricing rule type when it is not yet used in the system.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a pricing rule type, the **Pricing Rule Type** zone appears with the details of the respective pricing rule type.

You can filter the list using the **Pricing Rule Type**, **Description**, **Pricing Rule Type Category**, and **Status** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Copyright © 2026, Oracle and/or its affiliates.

The **Pricing Rule Type** and **Description** field support case-insensitive partial-match searches, while **Pricing Rule Type Category** and **Status** field provide exact-match filtering. You can apply any combination of filters or leave all the fields blank to display the available pricing rule types.

Pricing Rule Type

The **Pricing Rule Type** zone displays the details of the pricing rule type for claim, aggregate stop-loss, specific stop-loss, retention type enrollment based, retention type claim based, one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee. This zone contains the following sections:

- **Main** - This section provides basic information about the pricing rule type. It contains the following fields:

Field Name	Field Description
Pricing Rule Type	Displays the pricing rule type.
Description	Displays the description for the pricing rule type.
Detailed Description	Displays additional information about the pricing rule type category.
Pricing Rule Business Object	Indicates the pricing rule business object. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Flat Fee Pricing Rule • Ancillary Pricing Rule • Discount Arrangement Pricing Rule

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	• Level Funded (LF) Pricing Rule • Minimum Premium Program Pricing Rule **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Business Object	Indicates the pricing rule type business object. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. The valid values are: • Claim Pricing Rule Type • Aggregate Stop-Loss (ASL) Pricing Rule Type • Specific Stop-Loss (SSL) Pricing Rule Type • Retention Type Claim Based Pricing Rule Type • Retention Type Enrollment Based Pricing Rule Type • Flat Fee Pricing Rule Type • Ancillary Pricing Rule Type • Discount Arrangement Pricing Rule Type • Level Funded (LF) Pricing Rule Type • Minimum Premium Program Pricing Rule Type **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status	Indicates the status of the pricing rule type. The valid values are: • Active • Inactive
Primary	Displays whether the pricing rule type is primary or not.
Pricing Rule Type Category	Indicates the pricing rule type category for the pricing rule type. The valid values are: • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • Flat Fees • Ancillary • Discount Arrangement • Level Funded • Minimum Premium Program

- **Related Pricing Rule Types** - This section lists the pricing rule types which are related to the parent pricing rule type. It contains the following columns:

Column Name	Column Description
Sequence	Displays the order in which pricing rule type is executed.
Pricing Rule Type	Displays the related pricing rule type for the parent rule type.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Pricing Rule Type** screen appears where you can view the details of the respective pricing rule type.
Eligibility Rule Type	Indicates the rule type eligibility for the related pricing rule type.
	Note: It has a link. On clicking the link, the **Rule Type** screen appears where you can view the eligibility details of the respective pricing rule type.

Note: This section appears when the pricing rule type is a primary pricing rule type.

- **Transaction Field Mapping** - This section displays the transaction related data mapped to the pricing rule type. It contains the following fields:

Field Name	Field Description
Source System	Displays the external system from where the transaction data is mapped.
Parameter 1 ... Parameter 4	Displays the parameters mapped for the transactions.
Incurred Date	Displays the date incurred for transaction.
Paid Date	Displays the transaction paid date.
Source of Funds	Displays the source of funds used to make the payment.
Composite	Displays the composite transaction data.
Claim Disposition	Displays the disposition of the claims transaction.
Provider's Tax Identification Number	Displays the tax identification number of the provider.
Member ID	Displays the member ID.
Main Subscriber ID	Displays the customer ID.
Run-in Identifier	Displays the run-in identifier.
Runout Identifier	Displays the runout identifier.
Coverage Start Date	Displays the transaction coverage start date.
Coverage End Date	Displays the transaction coverage end date.
Retroactivity Indicator	Displays information of the retroactivity indicator.

Note: This section appears when the pricing rule type is a primary pricing rule type.

- **Algorithms** - This section displays the algorithms used for the pricing rule type. It contains the following columns:

Column Name	Column Description
System Event	Indicates the system event on which the algorithm must be executed. The valid values are: • Account and Price Item Derivation • Account and Price Item Derivation Post-Processing • Accumulation Billable Charge Post-Processing • Accumulation Billable Charge Pre-Processing • Accumulation Post-Processing

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	• Accumulation Pre-Processing • Bill After Date Determination • Bill Group Derivation • Billable Charge Creation Post-Processing • Billable Charge Creation Pre-Processing • Final Settlement Derivation • New Born Waiver Calculation • Premium Calculation • Pricing Rule Derivation • Pricing Rule Post-Processing • Pricing Rule Pre-Processing • Pricing Rule Proration Amount Calculation • Skip Month Premium Calculation • Transaction Validation
Sequence	Displays the order in which the algorithms for each system event must be executed.
Algorithm	Displays the algorithm. **Note:** It has a link. On clicking the link, the **Algorithm** screen appears with the details of the respective algorithm.

- **Additional Data** - This section displays the additional information about the pricing rule type. It contains the following fields:

Field Name	Field Description
Eligible for Level Funding	Indicates whether the pricing rule type is eligible for level funding or not. The valid values are: • Yes • No
Eligible for Specific Stop-Loss	Indicates whether the pricing rule type is eligible for specific stop-loss or not. The valid values are: • Yes • No **Note:** This field appears when the option selected for the **Pricing Rule Type Category** is **Claim**, **Retention Type Claim Based**, or **Retention Type Enrollment Based**.
Eligible for Minimum Premium Program	Indicates whether the pricing rule type is eligible for minimum premium program or not. The valid values are: • Yes • No **Note:** This field appears when the option selected for the **Pricing Rule Type Category** is
Run-in Identifier Value	Displays the value for run-in identifier.
Runout Identifier Value	Displays the value for runout identifier.

Copyright © 2026, Oracle and/or its affiliates.

Note: This section does not appear when the pricing rule type category is flat fees.

- **Price Items** - This section displays the price items assigned to the pricing rule type. It contains the following columns:

Column Name	Column Description
Price Item	Displays the price item information. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the respective price item.
Rate Option	On clicking the **Add** (icon) icon, the following column appears: **Column Name** / **Column Description** Rate Option / Indicates the rate option for the price item. **Note:** This column does not appear when the pricing rule type category is flat fees.
Bill To Account	On clicking the **Add** (icon) icon, the following columns appear: **Column Name** / **Column Description** Priority / Displays the order in which the invoice type was considered while defining a price item. Invoice Type / Displays the invoice type for the price item.
Eligibility Rule Type	Indicates the rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing. **Note:** It has a link. On clicking the link, the **Rule Type** screen appears where you can view the eligibility details of the respective pricing rule type.

- **Price Item Parameters** - This section displays the price item parameters in the pricing rule type. It contains the following columns:

Column Name	Column Description
Price Item Parameter	Displays the parameter associated with the price item. **Note:** It has a link. On clicking the link, the **Parameter** screen appears where you can view the details of the respective parameter.
Transaction Field	Displays the additional transaction data. **Note:** It has a link. On clicking the link, the **Field** screen appears where you can view the details of the respective transaction field. This column does not appear when the pricing rule type category is flat fees.
Eligible for Specific Stop-Loss	Displays the parameter eligible for Specific Stop-Loss when the eligibility checkbox was checked.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: This field appears only when the option selected for the **Pricing Rule Type Category** is **Claim**, **Retention Type Claim Based**, or **Retention Type Enrollment Based**.
Eligible for Level Funding	Displays the parameter eligible for level funding when the eligibility checkbox was checked.

- **Characteristics** - This section displays the pricing rule type characteristics. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

- **Event Management** - This section displays the audit event details. It contains the following columns:

Column Name	Column Description
Audit Event Type	Displays the audit event type which you can use while adding elements for audit in a fully-insured benefit pricing rule type.
Element Type	Indicates the type of audit element for a fully-insured benefit pricing rule type. The valid values are: • Business Object Status • Characteristic • Field
Element Name	Displays the element name for a fully-insured benefit pricing rule type.
Element Value	Displays the value for an element name.

- **Claim Templates** - This section list the pricing rule type for claim template. It contains the following field:

Field Name	Field Description
Claim Template	Indicates the claim template.

Note: This section appears when the **Business Object** is **Claim Pricing Rule Type**.

- **Claim-Specific Additional Data** - This section displays the claim specific additional data. It contains the following fields:

Field Name	Field Description
Rule Based Billing Eligibility Field	Displays whether the rule based field is eligible for billing or not. **Note:** It has a link. On clicking the link, the **Field** screen appears where you can view the details of the respective field.
Rule Based Markup or Markdown Eligibility Field	Displays whether the rule based markup or markdown field is eligible for billing or not. **Note:** It has a link. On clicking the link, the **Field** screen appears where you can view the details of the respective field.
Markup or Markdown Billable Charge Line Type	Displays the markup or markdown billable charge line type.

Copyright © 2026, Oracle and/or its affiliates.

Note: This section appears when the **Business Object** is **Claim Pricing Rule Type**.

- **ASL-Specific Additional Data** - This section displays the Aggregated Stop-Loss specific additional data. It contains the following fields:

Field Name	Field Description
ASL Billable Charge Line Type	Displays the Aggregated Stop-Loss billable charge line type.
Domestic Provider Claim Billable Charge Line Type	Displays the claim billable charge line type for domestic provider.
Rule Based Domestic Provider Claim Eligibility Field	Displays the rule based domestic provider for claim eligibility field.
ASL Limit Price Item	Displays the Aggregated Stop-Loss limit price item.
Rule Based Billing Eligibility Field	Displays whether the rule based field is eligible for billing or not. **Note:** It has a link. On clicking the link, the **Field** screen appears where you can view the details of the respective field.
Rule Based Markup or Markdown Eligibility Field	Displays whether the rule based markup or markdown field is eligible for billing or not. **Note:** It has a link. On clicking the link, the **Field** screen appears where you can view the details of the respective field.
Markup or Markdown Billable Charge Line Type	Displays the markup or markdown billable charge line type.

Note: This section appears when the **Business Object** is **Aggregate Stop-Loss (ASL) Pricing Rule Type**.

- **Enrollment-Specific Additional Data** - This section displays the enrollment specific additional data. It contains the following fields:

Field Name	Field Description
Retroactivity Indicator Value	Displays the value for the retroactivity indicator.

Note: This section appears when the **Business Object** is **Retention Type Enrollment Based Pricing Rule Type**.

- **Claim Disposition Details** - This section displays the details of claim disposition. It contains the following columns:

Column Name	Column Description
Claim Disposition	Indicates the claim disposition.
Disposition Mode	Indicates the claim disposition mode. The valid values are: • Align Signage • Zero Out

Note: This section appears when the **Business Object** is **Retention Type Claim Based Pricing Rule Type**.

- **SSL-Specific Additional Data** - This section displays the Specific Stop-Loss additional data. It contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
SSL Billable Charge Line Type	Displays the Specific Stop-Loss billable charge line type.
Domestic Provider Claim Billable Charge Line Type	Displays the claim billable charge line type for domestic provider.
Rule Based Domestic Provider Claim Eligibility Field	Displays the rule based domestic provider for claim eligibility field.
Rule Based Billing Eligibility Field	Displays whether the rule based field is eligible for billing or not. **Note:** It has a link. On clicking the link, the **Field** screen appears where you can view the details of the respective field.
Rule Based Markup or Markdown Eligibility Field	Displays whether the rule based markup or markdown field is eligible for billing or not. **Note:** It has a link. On clicking the link, the **Field** screen appears where you can view the details of the respective field.
Markup or Markdown Billable Charge Line Type	Displays the markup or markdown billable charge line type.

Note: This section appears when the **Business Object** is **Specific Stop-Loss (SSL) Pricing Rule Type**.

- **Billable Charge Line Types** - This section list the billable charge line type. It contains the following column:

Column Name	Column Description
Billable Charge Line Type	Indicates the billable charge line type.

Note: This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

- **Flat Fees - Specific Additional Data** - This section displays the recurring flat fee that is specific and considered as additional data. It contains the following fields:

Field Name	Field Description
Bill Segment Cancel Reason	Indicates the reason for cancelling the bill segment.
Recurring Fee	Displays whether the recurring flat fee is required or not.
Recurring Method	Indicates the recurring method if recurring fee is required. The valid values are: • Bill Period • Frequency **Note:** This field appears when the checkbox for **Recurring Fee** field is selected.

Note: This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

This section contains the following sub-section:

- **Bill Periods** - This section displays the bill period for the recurring flat fee. It contains the following column:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Bill Period	Indicates the bill period.

Note: This section appears when the **Recurring Method** is **Bill Period**.

- **Additional Fee Indicator** - This section displays the additional fees which are applicable to one or more line items in the claim pricing rule. It contains the following fields:

Column Name	Column Description
Fee	Indicates the charge type category for the claim pricing rule.
Claim Additional Fee Indicator	Indicates the charge type sub category for the claim pricing rule.

Note: This section appears when the **Business Object** is **Claim Pricing Rule Type**.

- **Minimum Premium Program - Specific Additional Data** -

Column Name	Column Description

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the pricing rule type.
Delete	Used to delete the pricing rule type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the extendable lookup value for pricing rule type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears with the details of the respective business object.

By default, the **Pricing Rule Type** zone does not appear in the **Pricing Rule Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the pricing rule type in the **Pricing Rule Type List** zone.

Claim Pricing

The ASO service provider processes the claims as part of the ASO agreement and pays the claim amount to either hospital or main subscriber. The employer, in turn, reimburses the claim amount to the ASO service provider at the end of the bill period (i.e. typically, every month). Apart from charging the claim amount to the employer, the ASO service provider charges various additional fees, such as fee for network access, fee for non-network access, fee for collection services provided by external vendor, fee for hospital audit performed by external vendor, and so on.

Oracle Revenue Management and Billing allows the ASO service provider to bill the employers for the claim amount and various additional fees. You can use any custom mechanism or the file upload utility in ORMB to upload the claim transactions. The pricing for the claim transactions can be defined using the claim pricing rules. You can define a claim pricing rule at the parent customer and bill group levels. The claim pricing rule at the bill group level takes precedence over the claim pricing rule at the parent customer level. You can define claim pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a claim pricing rule using a claim pricing rule type.

It is the claim pricing rule type which helps the system to determine:

- Business object using which the claim pricing rule should be created in the system.
- Whether it is the primary pricing rule type from where the related pricing rule types, such as *s*pecific stop-loss, aggregate stop-loss, and retention type claim based pricing rule types, will inherit the attributes.

Note: You must select the **Primary** option while defining a claim pricing rule type. On selecting the **Primary** option, the **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear in the **Claim Pricing Rule Type** screen.

- Pricing rule types which are related to claim pricing rule type.
- Transaction fields from where the data for claim, specific stop-loss, aggregate stop-loss, retention type claim based processing should be retrieved.
- Algorithm which should be triggered while validating a transaction.

Note: An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving bill group, account, and price item for a transaction.

Copyright © 2026, Oracle and/or its affiliates.

Note: You must create an algorithm using the **C1_TXNBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event. Similarly, you must create an algorithm using the **C1_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered while determining the bill after date.

Note: You must create an algorithm using the **C1_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event. The **C1_BAFTDRV** algorithm sets the bill after date to the end date of the aggregation schedule which is specified in the respective rate option. For example, if the aggregation schedule is monthly, the bill after date is set to the last day of the month.

- Post-processing algorithm which should be triggered once the claim pricing rule is derived.

Note: A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define claim pricing rules using the claim pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.
- Price item parameters which you can use while accumulating specific stop-loss and aggregate stop-loss and while aggregating transactions.
- Claim templates which can be used while defining claim pricing rules using the claim pricing rule type.
- Additional information, such as:
    - Whether the price items included in the claim pricing rule type are eligible for specific stop-loss and aggregate stop-loss.
    - Identifiers which help to determine whether the claim transaction is received during the run-in period of the policy.
    - Billable charge line type using which you want to create markup or markdown calculation lines.
    - Transaction field which you want to use in the rules as the output parameter to determine whether the line item is eligible for billing.
    - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.

Once a claim pricing rule type is defined, you can create claim pricing rules using the claim pricing rule type. While defining a claim pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option and claim template which you want to use while defining the claim pricing.
- Whether you want to markup or markdown the various charges.
- Whether you want to use a flat amount for markup or markdown on overall charges.
- Whether you want to calculate markup or markdown amount based on percentage for each eligible charge.
- Whether a line item is eligible for billing when the billing eligibility for the line item in the claim template is set to **User Defined**.

Note: You can override the default markup and markdown values which are retrieved from the claim template.

In addition, while defining a claim pricing rule for a bill group, you need to specify the status of the policy for which you want to define the claim pricing rule. You can also specify a pricing group while defining a claim pricing rule for a bill group. If you specify a pricing group while defining a claim pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Whether you want to markup or markdown the various charges.
- Whether you want to use a flat amount for markup or markdown on overall charges.
- Whether you want to calculate markup or markdown amount based on percentage for each eligible charge.

Copyright © 2026, Oracle and/or its affiliates.

- Whether a line item is eligible for billing when the billing eligibility for the line item in the claim template is set to **User Defined**.

Once a claim pricing rule is defined for a parent customer and bill group, the system creates one price assignment, one price list, and one price list assignment.

Defining a Claim Pricing Rule Type

Prerequisites

To define a claim pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeClaim** defined for pricing rule type.
- Business Object **C1-PricingRuleClaim** defined for pricing rule.
- Pricing rule type category for claim defined in the application

Procedure

To define a claim pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type. **Note:** You can create a claim pricing rule type using the **Claim Pricing Rule Type** business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Claim Pricing Rule Type** business object.
5. Click **OK**.

   The **Claim Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the claim pricing rule type.
   - **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the parent pricing rule type.
   - **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type
   - **Algorithms** - Used to define the algorithms used for the pricing rule type.
   - **Additional Data** - Used to specify the additional information about the pricing rule type.
   - **Price Items** - Used to define the price items assigned to the pricing rule type.
   - **Price Item Parameters** - Used to define the price item parameters in the pricing rule type.
   - **Characteristics** - Used to define the characteristics for the pricing rule type.
   - **Claim Templates** - Used to define the pricing rule type for claim template.
   - **Claim-Specific Additional Data** - Used to specify the claim specific additional data.

   The **Main** section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule	Yes
Business Object	Indicate the pricing rule type business object for claim.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based	Yes

6. Enter the required details in the **Main** section.
7. Add the related pricing rule types in the primary pricing rule type, if required.

Note: Related Pricing Rule Types section appears when the pricing rule type is primary.

8. Define the transaction field mapping in the primary pricing rule type, if required.

Note: Transaction Field Mapping section appears when the pricing rule type is primary.

9. Associate algorithms with the pricing rule type, if required.
10. Define additional data for the pricing rule type, if required.
11. Add pricing items in the pricing rule type, if required.
12. Add price item parameters in the pricing rule type, if required.
13. Define characteristics for the pricing rule type, if required.
14. Add claim templates in the claim pricing rule type, if required.
15. Add the claim-specific data in the pricing rule type, if required.
16. Define claim handling fees indicator in the claim pricing rule type, if required.

Copyright © 2026, Oracle and/or its affiliates.

17. Click **Save**.
    The claim pricing rule type is defined.

Adding Related Pricing Rule Types in a Primary Pricing Rule Type

Prerequisites

To add related pricing rule types in a primary pricing rule type, you should have:

- Aggregate Stop Loss pricing rule type defined in the application.
- Specific Stop Loss pricing rule type defined in the application.
- Level Funding pricing rule type defined in the application.

Procedure

To add related pricing rule types in a primary pricing rule type:

1. Ensure that the **Related Pricing Rule Types** section is expanded when you are defining or editing a primary pricing rule type.

   Note:
   This section appears when you have chosen the **Primary** from the **Main** section.

   The **Related Pricing Rule Types** section contains the following columns in a grid:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the order in which the related pricing rule type should be invoked.	Yes (Conditional) **Note:** This field is required when you are defining a pricing rule type for the related pricing rule type.
Pricing Rule Type	Used to specify the pricing rule type which should be executed to determine whether the related pricing rule type is eligible for deriving the transaction legs. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Pricing Rule Type** field, the **Pricing Rule Type Search** window appears. On specifying the related pricing rule type, the description of the pricing rule type appears corresponding to the **Pricing Rule Type** field.	Yes (Conditional) **Note:** This field is required when the corresponding **Sequence** and **Eligibility Rule Type** field is specified for the related pricing rule type.
Eligibility Rule Type	Used to indicate the rule type eligibility for the related pricing rule type. **Note:** The **Eligibility Rule Type** list includes only those rule-types where the rule type eligibility is **Related Pricing Rule Type Eligibility**.	No

2. Enter the required details in the **Related Pricing Rule Types** section.
3. If you want to define more than one related pricing rule type for the primary pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a related pricing rule type from the primary pricing rule type, click the **Delete** (🗑) icon corresponding to the related pricing rule type.

4. Click **Save**.
   The related pricing rule types are added for the primary pricing rule type.

Defining Transaction Field Mapping in a Primary Pricing Rule Type

Prerequisites

To define the transaction field mapping for a primary pricing rule type, you should have:

- Transaction fields defined in the application

Procedure

To define the transaction field mapping for a primary pricing rule type:

1. Ensure that the **Transaction Field Mapping** section is expanded when you are defining a primary pricing rule type.

> **Note:**
> This section appears when you have chosen the **Primary** option from the **Main** section.

The **Transaction Field Mapping** section contains the following fields:

Field Name	Field Description
Source System	Used to specify the external system from where the transaction data is mapped.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Source System** field, the **Transaction Field Search** window appears. On specifying the source system, the description of the source system appears corresponding to the **Source System** field.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Parameter 1.....Parameter 4	Used to specify the parameters mapped for the transaction.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Parameter 1**, **Parameter 2**, **Parameter 3**, **Parameter 4** field, the **Transaction Field Search** window appears. On specifying the parameter, the description of the parameter appears corresponding to the **Parameter 1**, **Parameter 2**, **Parameter 3**, **Parameter 4** field respectively.
Incurred Date	Used to specify the date incurred for transaction.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Incurred Date** field, the **Transaction Field Search** window appears. On specifying the incurred date, the description of the incurred date appears corresponding to the **Incurred Date** field.
Paid Date	Used to specify the transaction paid date.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Paid Date** field, the **Transaction Field Search** window appears. On specifying the paid date, the description of the paid date appears corresponding to the **Paid Date** field.
Source of Funds	Used to specify the source of funds used to make the payment.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Source of Funds** field, the **Transaction Field Search** window appears. On specifying the source of funds, the description of the source of funds appears corresponding to the **Source of Funds** field.
Composite	Used to specify the composite transaction data.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Composite** field, the **Transaction Field Search** window appears. On specifying the composite, the description of the composite appears corresponding to the **Composite** field.
Claim Disposition	Used to specify the disposition of the claims transaction.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Claim Disposition** field, the **Transaction Field Search** window appears. On specifying the claim disposition, the description of the claim disposition appears corresponding to the **Claim Disposition** field.
Provider's Tax Identification Number	Used to specify the tax identification number of the provider.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Provider's Tax Identification Number** field, the **Transaction Field Search** window appears. On specifying the provider's tax identification number, the description of the provider's tax identification number appears corresponding to the **Provider's Tax Identification Number** field.
Member ID	Used to specify the member ID.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Member ID** field, the **Transaction Field Search** window appears. On specifying the member ID, the description of the member ID appears corresponding to the **Member ID** field.
Main Subscriber ID	Used to specify the customer ID.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Main Subscriber ID** field, the **Transaction Field Search** window appears. On specifying the main subscriber ID, the description of the main subscriber ID appears corresponding to the **Main Subscriber ID** field.
Run-in Identifier	Used to specify the run-in identifier.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Run-in Identifier** field, the **Transaction Field Search** window appears. On specifying the run-in identifier, the description of the run-in identifier appears corresponding to the **Run-in Identifier** field.
Runout Identifier	Used to specify the runout identifier.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Runout Identifier** field, the **Transaction Field Search** window appears. On specifying the runout identifier, the description of the runout identifier appears corresponding to the **Runout Identifier** field.
Third Party Identifier	Used to specify the third party identifier to determine that the claim transaction is received from an external source system while defining a claim pricing rule type.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Third Party Identifier** field, the **Transaction Field Search** window appears. On specifying the third party identifier, the description of the third party identifier appears corresponding to the **Third Party Identifier** field.
Coverage Start Date	Used to specify the transaction coverage start date.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Coverage Start Date** field, the **Transaction Field Search** window appears. On specifying the coverage start date, the description of the coverage start date appears corresponding to the **Coverage Start Date** field.
Coverage End Date	Used to specify the transaction coverage end date.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Coverage End Date** field, the **Transaction Field Search** window appears. On specifying the coverage end date, the description of the coverage end date appears corresponding to the **Coverage End Date** field.
Retroactivity Indicator	Used to specify information of the retroactivity indicator.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Retroactivity Indicator** field, the **Transaction Field Search** window appears. On specifying the retroactivity indicator, the description of the retroactivity indicator appears corresponding to the **Retroactivity Indicator** field.
Network Indicator	Used to map to a transaction field which indicates whether the service provider is in network or out of network.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Network Indicator** field, the **Transaction Field Search** window appears. On specifying the network indicator, the description of the network indicator appears corresponding to the **Network Indicator** field.
Covered Charged Amount	Used to map to a transaction field which indicates the amount which is covered for the employee in the policy.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Covered Charged Amount** field, the **Transaction Field Search** window appears. On specifying the covered charged amount, the description of the covered charged amount appears corresponding to the **Covered Charged Amount** field.
Discount Savings Amount	Used to map to a transaction field which indicates the amount which is offered as the discount to the service provider.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Discount Savings Amount** field, the **Transaction Field Search** window appears. On specifying the discount savings amount, the description of the discount savings amount appears corresponding to the **Discount Savings Amount** field.
Accumulation Only Identifier	Used to map to a transaction field which indicates that the claim transaction should only be used for calculating charges for the accumulated products, such as Specific Stop-Loss, Aggregate Stop-Loss, and so on. This means that the system should not derive the claim transaction leg. Instead, it should only derive the specific stop-loss or aggregate stop loss transaction legs for the claim transaction.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Accumulation Only Identifier** field, the **Transaction Field Search** window appears. On specifying the accumulation only identifier, the description of the accumulation only identifier appears corresponding to the **Accumulation Only Identifier** field.
Billing Eligibility Identifier	Used to specify whether the transaction is eligible for billing or not.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Billing Eligibility Identifier** field, the **Transaction Field Search** window appears. On specifying the billing eligibility identifier, the description of the billing eligibility identifier appears corresponding to the **Billing Eligibility Identifier** field.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Transaction Upload Date	Used to map to a transaction field which indicates the date when the transaction was uploaded in the external system. The system does not derive the discount transaction leg when the transaction upload date is later than the settlement date.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Transaction Upload Date** field, the **Transaction Field Search** window appears. On specifying the transaction upload date, the description of the transaction upload date appears corresponding to the **Transaction Upload Date** field.
Claim Handling Fees Indicator	Used to specify the claim handling fees which are applicable to one or more line items in the claim pricing rule.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Claim Handling Fees Indicator** field, the **Transaction Field Search** window appears. On specifying the claim handling fees indicator, the description of the claim handling fees indicator appears corresponding to the **Claim Handling Fees Indicator** field.

2. Enter the required details in the **Transaction Field Mapping** section.
3. Click **Save**.
   The transaction field mapping is defined for the primary pricing rule type.

Associating Algorithms with a Pricing Rule Type

Prerequisites

To associate algorithms with a pricing rule type, you should have:

- Algorithm and Algorithm Type defined in the application.
- System event defined in the application.

Procedure

To associate algorithms with a pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining a pricing rule type.

   The **Algorithms** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicate the system event on which the algorithm is executed. The valid values are: • Account and Price Item Derivation • Accumulation Billable Charge Post-Processing • Accumulation Billable Charge Pre-Processing • Accumulation Post-Processing • Accumulation Pre-Processing • Bill After Date Determination • Bill Group Derivation • Final Settlement Derivation • Billable Charge Creation Pre-Processing • Billable Charge Creation Post-Processing • Pricing Rule Post-Processing • Pricing Rule Pre-Processing • Premium Calculation • Transaction Validation	Yes **Note:** This field is required when you are defining an algorithm for the pricing rule type.
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
		Note: This field is required when you are defining an algorithm for the pricing rule type.
Algorithm	Used to specify the algorithm.	Yes (Conditional)
	Note: If you select the system event option, the **Search** (🔍) icon appears corresponding to the **Algorithm** field. On clicking the **Search** (🔍) icon, the **Algorithm Search** window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the **Algorithm** field.	**Note:** This field is required when you are defining an algorithm for the pricing rule type.

2. Enter the required details in the **Algorithms** section.
3. If you want to associate more than one algorithm for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to disassociate an algorithm from the pricing rule type, click the **Delete** (🗑) icon corresponding to the algorithm.

4. Click **Save**.
   The algorithms are associated with the pricing rule type.

Defining Additional Data for a Pricing Rule Type

Procedure

To define additional data for a pricing rule type:

1. Ensure that the **Additional Data** section is expanded when you are defining a pricing rule type.

   Note: This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

   The **Additional Data** section contains the following fields:

Field Name	Field Description
Eligible for Specific Stop-Loss	Used to whether the pricing rule type is eligible for specific stop-loss or not. The valid values are: • Yes • No **Note:** This field appears when the option selected for the **Pricing Rule Type Category** is **Claim**, **Retention Type Claim Based**, or **Retention Type Enrollment Based**.
Eligible for Level Funding	Used to indicate whether the pricing rule type is eligible for level funding or not. The valid values are: • Yes • No
Eligible for Minimum Premium Program	Used to indicate whether price items included in the pricing rule type are eligible for minimum premium program. The valid values are: • Yes • No
Run-in Identifier Value	Used to specify the identifier value to determine that the ancillary transaction is received during the run-in period of the policy.
Third Party Identifier Value	Used to specify the identifier value to determine that the ancillary transaction is received from an external source system.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Accumulation Only Identifier Value	Used to specify the identifier value to determine that the ancillary transaction contains the accumulated information of ASL, SSL, and Level Funding pricing types.
Eligible for Write-Off in Post Runout	Used to indicate whether the pricing rule is eligible for Write-Off in Post Runout or not. The valid values are: • Yes • No
Post Runout Write-Off Adjustment Type	Used to specify the adjustment type using which the post runout write-off adjustments must be created.
Rule Based Price Item Eligibility Field	Used to specify the price item eligibility field that satisfies the pricing rule.
Rule Based Related Pricing Rule Type Eligibility Field	Used to specify the pricing rule type eligibility field that satisfies the pricing rule.
Rule Based Eligibility Value	Used to specify the eligibility value that satisfies the pricing rule.

2. Enter the required details in the **Additional Data** section.
3. Click **Save**.
   The additional data is defined for the ppricing rule type.

Adding Price Items in a Pricing Rule Type

Prerequisites

To add price items in a pricing rule type, you should have:

- Price items defined in the application
- Rate Options defined in the application
- Invoice Type defined in the application

Procedure

To add price items in a pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or *e*diting a pricing rule type.

   The **Price Items** section contains the following columns in a grid:

Column Name	Column Description
Price Item	Used to specify the price item information. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Price Item** field, the **Price Item Search** window appears. On specifying the price item, the description of the price item appears corresponding to the **Price Items** field.
Rate Option	On clicking the **Add** (📄) icon, the following column appears in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Rate Option	Used to indicate the rate option for the price item. The valid values are: • Aggregate Stop Loss • Ancillary • Claims • Discount Share • Enrollment Based Retention Per Member Per Month • Enrollment Based Retention Per Subscriber Per Month	Yes (Conditional) **Note:** This field is required when the **Price Item** field is present.

Copyright © 2026, Oracle and/or its affiliates.

Note: The Rate Option column does not appear when the Pricing Rule Type Category is Flat Fees.
</td></tr>
<tr><td>Bill To Account</td><td>On clicking the Add (+) icon, the following columns appear in a grid:
<table>
<tr><th>Column Name</th><th>Column Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Priority</td><td>Used to specify the order in which the invoice type is considered for a price item.</td><td>Yes (Conditional)
Note: This field is required when you are defining the invoice type.</td></tr>
<tr><td>Invoice Type</td><td>Used to specify the invoice type for the price item.
Note: On clicking the Search (search) icon that appears corresponding to the Invoice Type field, the Invoice Type Search window appears.</td><td>No</td></tr>
</table>
</td></tr>
</table>

2. Enter the required details in the **Price Items** section.
3. If you want to define more than one price item for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from the pricing rule type, click the **Delete** (trash) icon corresponding to the price item.

4. If you want to define more than one rate option to the price item for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a rate option from the price item for the pricing rule type, click the **Delete** (trash) icon corresponding to the rate option.

5. If you want to define more than one invoice types to the price item for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a invoice type from the price item for the pricing rule type, click the **Delete** (trash) icon corresponding to the invoice type.

6. Click **Save**.
   The price items are added for the pricing rule type.

Adding a Price Item Parameter in a Pricing Rule Type

Prerequisites

To add a price item parameter in a pricing rule type, you should have:

- Parameters defined in the application
- Transaction field defined in the application
- Price item parameter associated with the price item

Procedure

To add a price item parameter in a pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or *e*diting a pricing rule type.

Copyright © 2026, Oracle and/or its affiliates.

The **Price Item Parameters** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining the pricing for the price item. **Note:** On clicking the **Search** (🔍) icon corresponding to the **Price Item Parameter** field, the **Parameter Search** window appears. On specifying the parameter, the description of the price item parameter appears corresponding to the **Price Item Parameter** field.	Yes (Conditional) **Note:** This field is required when you are defining the pricing rule type.
Transaction Field	Used to specify the transaction field from where the data should be retrieved. **Note:** On clicking the **Search** (🔍) icon corresponding to the **Transaction Field** field, the **Transaction Field Search** window appears. On specifying the transaction field, the description of the transaction field appears corresponding to the **Transaction Field**.	Yes (Conditional) **Note:** This field is required once the price item parameter is specified.
Eligible for Specific Stop-Loss	Used to indicate whether the price item parameter can be used in accumulation criteria.	No
Eligible for Level Funding	Used to indicate whether the price item parameter can be used in level funding.	No
Eligible for Minimum Premium Program	Used to indicate whether the price item parameter can be used in minimum premium program.	No

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one price item parameter for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a price item parameter from the pricing rule type, click the **Delete** (🗑) icon corresponding to the price item parameter.

4. Click **Save**.
   A price item parameter is added for the pricing rule type.

Defining a Characteristic for a Pricing Rule Type

Prerequisites

To define the characteristics for a pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for a pricing rule type:

Copyright © 2026, Oracle and/or its affiliates.

1. Ensure that the **Characteristics** section is expanded when you are defining a pricing rule type.

   The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule Type**.	**Note:** This field is required when you are defining a characteristic for the pricing rule type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the pricing rule type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a characteristic from the pricing rule type, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the pricing rule type.

Adding Claim Templates in a Claim Pricing Rule Type

Prerequisites

To add claim templates in a claim pricing rule type, you should have:

- Claim templates defined in the application

Procedure

To add claim templates in a claim pricing rule type:

1. Ensure that the **Claim Templates** section is expanded when you are defining or editing a pricing rule type.

   The **Claim Templates** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Claim Template	Used to indicate the claim template.	Yes (Conditional) **Note:** This field is required when you are defining a claim template for the pricing rule type.

2. Enter the required details in the **Claim Templates** section.
3. If you want to define more than one claim template for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a claim template from the pricing rule type, click the **Delete** (🗑) icon corresponding to the claim template.

4. Click **Save**.
   The claim templates are defined for the pricing rule type.

Adding the Claim-Specific Data in a Pricing Rule Type

Procedure

To add the Claim-Specific additional data in a pricing rule type:

1. Ensure that the **Claim-Specific Additional Data** section is *e*xpanded when you are defining or editing a pricing rule type.

   The **Claim-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Billing Eligibility Field	Used to specify whether the rule based field is eligible for billing or not. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Rule Based Billing Eligibility Field** field, the **Field Search** window appears. On specifying the field, the description of the field appears corresponding to the **Rule Based Billing Eligibility Field** field.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Markup or Markdown Eligibility Field	Used to specify whether the rule based markup or markdown field is eligible for billing or not. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Rule Based Markup or Markdown Eligibility Field** field, the **Field Search** window appears. On specifying the field, the description of the field appears corresponding to the **Rule Based Markup or Markdown Eligibility Field** field.	No
Markup or Markdown Billable Charge Line Type	Used to specify the markup or markdown billable charge line type. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Markup or Markdown Billable Charge Line Type** field, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge lien type appears corresponding to the **Markup or Markdown Billable Charge Line Type** field.	No

2. Enter the required details in the **Claim-Specific Additional Data** section.
3. Click **Save**.
   The Claim-Specific Additional data is added in the pricing rule type.

Adding Claim Handling Fees Indicator in a Claim Pricing Rule Type

Procedure

To add claim handling fees indicator in a claim pricing rule type:

1. Ensure that the **Claim Handling Fees Indicator** section is expanded when you are defining or editing a claim pricing rule type.

   The **Claim Handling Fees Indicator** section contains the following fields in a grid:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Fee	Used to indicate the charge type category for the claim pricing rule type.	Yes (Conditional) **Note:** This field is required while adding claim handling fees indicator in a claim pricing rule.
Fee Indicator	Used to specify the charge type sub category for the claim pricing rule type.	No

2. Enter the required details in the **Claim Handling Fees Indicator** section.
3. If you want to define more than one claim handling fees indicator for the claim pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a claim handling fees indicator from the claim pricing rule type, click the **Delete** (🗑) icon corresponding to the fee.

4. Click **Save**.
   The claim handling fees indicator is defined for the claim pricing rule type.

Editing a Claim Pricing Rule Type

Prerequisites

To edit the claim pricing rule type, you should have:

- Business Object **C1-PricingRuleClaim** defined for pricing rule.
- Pricing rule type category for claim defined in the application

Procedure

To edit a claim pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding *t*o the pricing rule type for claim whose details you want to edit.

   The **Claim Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the claim pricing rule type.
   - **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the parent pricing rule type.
   - **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type
   - **Algorithms** - Used to define the algorithms used for the pricing rule type.
   - **Additional Data** - Used to specify the additional information about the pricing rule type.
   - **Price Items** - Used to define the price items assigned to the pricing rule type.
   - **Price Item Parameters** - Used to define the price item parameters in the pricing rule type.
   - **Characteristics** - Used to define the characteristics for the pricing rule type.
   - **Claim Templates** - Used to define the pricing rule type for claim template.
   - **Claim-Specific Additional Data** - Used to specify the claim specific additional data.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule	Yes
Business Object	Displays the pricing rule type business object for claim.	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based	Yes

Tip: Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for claim.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the primary pricing rule type, if required.
7. Modify the transaction field mapping in the primary pricing rule type, if required.
8. Add, edit, or remove algorithms with the pricing rule type, if required.
9. Modify the additional data for the pricing rule type, if required.
10. Add, edit, or remove pricing items in the pricing rule type, if required.
11. Add, edit, or remove price item parameters in the pricing rule type, if required.
12. Add, edit, or remove characteristics for the pricing rule type, if required.
13. Add, edit, or remove claim templates in the claim pricing rule type, if required.
14. Modify the claim-specific data in the pricing rule type, if required.
15. Click **Save**.
    The changes made to the claim pricing rule type are saved.

Deleting a Claim Pricing Rule Type

Procedure

To delete a claim pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the claim pricing rule type that you want to delete.
   A message appears confirming whether you want to delete the claim pricing rule type.

   Note: You can delete a claim pricing rule type when it is not yet used in the system.

   Tip: Alternatively, you can delete a claim pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.
5. Click **OK**.
   The claim pricing rule type is deleted.

Defining a Claim Pricing Rule for a Parent Customer

Prerequisites

To define a claim pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Pricing rule type defined in the application.
- Price item defined in the application.
- Rate options defined in the Rate Option (**C1-ExtLookRateType**) extendable lookup.
- Claim template defined in the Claim Template (**C1-ExtLookClaimTemplate**) extendable lookup.
- Line items defined in the Line Item (**C1-ExtLookPricingRuleLineItem**) extendable lookup.

Procedure

To define a claim pricing rule for a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.
   The **Account**, **Person**, *or* **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. **Note:** You can create a claim pricing rule using the **Pricing Rule Type** for claim.	Yes

4. Click **OK**.

The **Claim Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** - Displays the customer information.
- **Main** - Used to specify basic details about the claim pricing rule.
- **Claim Handling Fees** - Used to define the claim handling fees for the line items in the claim pricing rule.
- **Markup or Markdown Values** - Used to define the markup or markdown values for the line items in the claim pricing rule.
- **Line Items** - Used to associate line items eligible for billing in the claim pricing rule.
- **Characteristics** - Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description
Parent Customer Information	Displays the parent customer information.
Pricing Rule Type	Indicates the pricing rule type.
Status	Indicates the status of the parent customer for the claim pricing rule. The valid values are: • Active • Inactive • Pending

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
Pricing Start Date	Used to specify the pricing rule start date. **Note:** This field is enabled when an option from **Price Item** field is selected. By default it displays the **Policy Start Date**.	Yes
Pricing End Date	Used to specify the pricing rule end date.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field is enabled when an option from **Price Item** field is selected. By default it displays the **Policy End Date**.	
Rate Option	Used to indicate the rate option to define the claim pricing rule for the price item.	Yes
Claim Template	Used to indicate the claim template to define the claim pricing rule for a parent customer.	Yes
	Note: This field is enabled for selection when an option from **Price Item** field is selected.	

5. Enter the required details in the **Main** section.
6. Define the claim handling fees for the line items in a claim pricing rule, if required.

   Note: The **Claim Handling Fees** section appears when an option from **Claim Template** field is selected.
7. Define the markup or markdown values for the line items in a claim pricing rule, if required.

   Note: The **Markup or Markdown Values** section appears when an option from **Claim Template** field is selected.
8. Define line items in a claim pricing rule, if required.

   Note: The **Line Items** section appears when an option from **Claim Template** field is selected.
9. Define characteristics for a claim pricing rule, if required.
10. Click **Save**.
    The claim pricing rule for a parent customer is defined.

Defining the Claim Handling Fees For Line Items in a Claim Pricing Rule

Procedure

To define claim handling fees for the line items in a claim pricing rule:

1. Ensure that the **Claim Handling Fees** section is expanded when you have selected an option from the **Claim Template** field of **Main** section while defining a claim pricing rule.

   The **Claim Handling Fees** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Fee Type	Indicates the charge type defined on the line items.	Not applicable
Fee	Indicates the type of rate defined on the line items.	Not applicable
Fee Significance	Indicates the purpose of the imposing the fees on the line items.	Not applicable
Fee Applicability	Displays one or more applicable claim line item on which additional fees are imposed. **Field Name** / **Field Description** Line Item: Indicates the line item that you want to use while defining additional fees for the claim pricing rule.	Not applicable
Rating Information	Displays the rating information that you want to use while defining the rate for the line items. **Field Name** / **Field Description** Rate Type: Indicates the rate type that you want to use while defining the rate for the line items. Rate: Used to specify the rate that you want to use while defining the rate for the line items. **Note:** This field is editable when the **Editable** checkbox is selected in the **Rate** column of the **Claim Handling Fees** section while defining or editing the **C1-ExtLookClaimTemplate** extendable lookup.	No

2. Enter the required details in the **Claim Handling Fees** section.
3. Click **Save**.
   The claim handling fees for the line items are defined in a claim pricing rule.

Defining the Markup or Markdown Values For Line Items in a Claim Pricing Rule

Procedure

To define the markup or markdown values for the line items in a claim pricing rule:

1. Ensure that the **Markup or Markdown Values** section is expanded when you have selected an option from the **Claim Template** field of **Main** section while defining a claim pricing rule.

   The **Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate the pricing strategy. The valid values are: • Markdown • Markup • None	No
	Note: This field is disabled when the **Post Run Out Claims** option is selected from the **Claim Template** field of the **Main** section.	
Markup or Markdown Type	Used to indicate the markup or markdown value type for claim pricing rule. The valid values are: • Flat Amount • Percentage	No
	Note: This field is disabled when the **Post Run Out Claims** option is selected from the **Claim Template** field of **Main** section.	
Markup or Markdown Amount	Used to specify the markup or markdown amount.	Yes (Conditional)
	Note: This field is disabled when you select, • the **Post Run Out Claims** option from the **Claim Template** field of the **Main** section. • or the **Percentage** option from the **Markup or Markdown Type** field.	**Note:** This field is required when you select **Flat Amount** option from the **Markup or Markdown Type** field.
Rate Type	Indicates the minimum and maximum markup or markdown defined using the rate type.	Not applicable
Rate Value	Used to specify the value for minimum and maximum markup or markdown using the rate type.	Yes (Conditional)
	Note: This field is editable only when the **Editable** checkbox is selected in the **Rate** column of the **Additional Fees** section while defining or editing the **C1-ExtLookClaimTemplate** extendable lookup.	**Note:** This field is required when you select **Percentage** option from the **Markup or Markdown Type** field.

2. Enter the required details in the **Markup or Markdown Values** section.
3. Click **Save**.

Copyright © 2026, Oracle and/or its affiliates.

The markup or markdown values for the line items are defined for the claim pricing rule.

Defining the Markup or Markdown Values for Line Items for Each Rule in a Claim Pricing Rule

Procedure

To define the markup or markdown values for line items for each rule in a claim pricing rule:

1. Ensure that sections for each rule are expanded when you have selected an option from the **Claim Template** field of **Main** section while defining a claim pricing rule.
2. Expand the **Markup or Markdown Values** and **Line Items** sections relevant to each rule.

   The **Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate the pricing strategy. The valid values are: • Markdown • Markup • None	No
Markup or Markdown Type	Used to indicate the markup or markdown value type for claim pricing rule. The valid values are: • Flat Amount • Percentage	No
Markup or Markdown Amount	Used to specify the markup or markdown amount.	Yes (Conditional)
	Note: This field is disabled when you select the **Flat Amount** option from the **Markup or Markdown Type** field.	**Note:** This field is required when you selecting **Percentage** option from the **Markup or Markdown Type** field.

   The **Line Items** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Displays the sequence number for the line items.	Not applicable
Line Item	Displays the billing line items.	Not applicable
Billing Eligibility	Displays whether the line item is user defined, eligible or not eligible for billing. The valid values are:	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Eligible • Not Eligible • User Defined (Default Yes) • User Defined (Default No)	
User Defined Billing Option	Used to specify whether the billing option is user defined, eligible or not eligible. **Note:** The checkbox for this field is by default checked and disabled for values **Eligible**, **Rule Based**, or **Not Eligible** in the **Billing Eligibility** field. The checkbox for this field is enabled for values **User Defined (Default Yes)** or **User Defined (Default No)** in the **Billing Eligibility**.	Yes
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: • Eligible • Not Eligible	Not applicable
Markup or Markdown Percentage	Used to specify the percentage for markup or markdown value. **Note:** This field is enabled when the **Markup or Markdown Percentage Eligibility** is **Eligible** and when the **Markup or Markdown Type** is **Percentage**.	Yes

3. Enter the required details in the **Markup or Markdown Values** section.
4. Enter the required details in the **Line Items** section.
5. Click **Save**.
   The markup or markdown values for line items for each rule are defined in the claim pricing rule.

Defining the Line Items in a Claim Pricing Rule

Procedure

To define the line items in a claim pricing rule:

1. Ensure that the **Line Items** section is expanded when you are defining or editing a claim template.

   The **Line Items** section contains the following fields in a grid:

Copyright © 2026, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Sequence</td><td>Displays the sequence number for the line items.</td><td>Not applicable</td></tr>
<tr><td>Line Item</td><td>Displays the billing line items.</td><td>Not applicable</td></tr>
<tr><td>Billing Eligibility</td><td>Displays whether the line item is user defined, eligible or not eligible for billing. The valid values are:
Eligible
Not Eligible
Rule Based
User Defined (Default No)
User Defined (Default Yes)</td><td>Not applicable</td></tr>
<tr><td>User Defined Billing Option</td><td>Used to specify whether the billing option is user defined, eligible or not eligible for billing.

Note:
This option appears selected and disabled when the Billing Eligibility column displays either Eligible, Rule Based, or Not Eligible.
This option appears selected and enabled when the Billing Eligibility column displays User Defined (Default Yes).
This option appears unchecked and enabled when the Billing Eligibility column displays User Defined (Default No).</td><td>Yes (Conditional)

Note: This field is required when the Billing Eligibility column displays User Defined (Default No).</td></tr>
<tr><td>Markup or Markdown Percentage Eligibility</td><td>Indicates whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are:
Eligible
Not Eligible</td><td>Not applicable</td></tr>
<tr><td>Markup or Markdown Percentage</td><td>Used to specify the percentage for markup or markdown value.

Note: This field is enabled when the Markup or Markdown Percentage Eligibility is Eligible and when the Markup or Markdown Type is Percentage.</td><td>Yes (Conditional)

Note: This field is required when Markup or Markdown Percentage Eligibility is Eligible and when the Markup or Markdown Type is Percentage</td></tr>
<tr><td>Rating Information</td><td>Displays the rate type and rate value that you want to use while defining the rate for the line items.

<table><tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr><tr><td>Rate Type</td><td>Indicates the rate type that you want to use while defining the rate for the line items.</td><td>Not applicable</td></tr></table></td><td>Yes</td></tr>
</table>

Defining a Characteristic for a Claim Pricing Rule

Prerequisites

To define a characteristic for a claim pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a claim pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the claim pricing rule.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: This field is required when you are defining a characteristic for the claim pricing rule.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule**.	**Note:** This field is required when you are defining a characteristic for the claim pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the claim pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the claim pricing rule, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a characteristic from the claim pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the claim pricing rule.

How to edit the claim pricing rule for a parent customer	Editing a Claim Pricing Rule of a Parent Customer on page 3085

Editing a Claim Pricing Rule of a Parent Customer

Prerequisites

To edit a claim pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Rate options defined in the Rate Option (**C1-ExtLookRateType**) extendable lookup.
- Claim template defined in the Claim Template (**C1-ExtLookClaimTemplate**) extendable lookup.
- Line items defined in the Line Item (**C1-ExtLookPricingRuleLineItem**) extendable lookup.

Copyright © 2026, Oracle and/or its affiliates.

Procedure

To edit a claim pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, *or* policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing Information** tab.
   The **Pricing Information** tab appears.
4. In the **Parent Customer Pricing Rules** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for claim whose claim pricing rule details you want to edit.

   The **Claim Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information.
   - **Main** - Used to specify basic details about the claim pricing rule.
   - **Claim Handling Fees** - Used to define the claim handling fees for the lines items in the claim pricing rule.
   - **Markup or Markdown Values** - Used to define the markup or markdown values for the lines items in the claim pricing rule.
   - **Line Items** - Used to associate line items eligible for billing in the claim pricing rule.
   - **Characteristics** - Used to define the characteristics for the claim pricing rule.

   The **Customer Information** section contains the following fields:

Column Name	Column Description
Parent Customer Information	Displays the parent customer information
Pricing Rule Type	Indicates the pricing rule type.
Status	Indicates the status of the parent customer for the claim pricing rule. The valid values are: • Active • Inactive • Pending

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to edit the pricing.	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item. **Note:** The pricing start date cannot be later than the pricing end date.	Yes (Conditional) **Note:** Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item. **Note:** The pricing end date cannot be earlier than the pricing start date.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to indicate the rate option that you want to use while editing the pricing for the price item.	Yes
Claim Template	Used to indicate the claim template of the claim pricing rule for a parent customer.	Yes (Conditional) **Note:** This field is required when you are reapplying for a claim template.

Note: This section also consists of a button, **Reapply**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the pricing rule.

5. Modify the details in the **Main** section, if required.
6. Modify the claim handling fees specified for the line items in a claim pricing rule, if required.
7. Modify the markup or markdown values for the line items in a claim pricing rule, if required.
8. Modify the line items in a claim pricing rule, if required.
9. Add, edit, or remove characteristics for a claim pricing rule, if required.
10. Click **Save**.
    The changes made to a claim pricing rule for a parent customer are saved.

Viewing a Claim Pricing Rule of a Parent Customer

Procedure

To view a claim pricing rule of a parent customer:

1. Search for a parent customer whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, *or* policy whose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. In the **Parent Customer Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the claim pricing rule type whose claim pricing rule parent customer details you want to view.
   The **Claim** screen appears. It contains the following zone:

   - **Claim** - Displays the pricing rule claim details for a parent customer. It contains the following sections:

Copyright © 2026, Oracle and/or its affiliates.

- **Main** - Displays the basic details of the claim pricing rule.
- **Claim Handling Fees** - Displays the claim handling fees defined for the lines items in the claim pricing rule.
- **Markup or Markdown Values** - Displays the markup or markdown values for the lines items in the claim pricing rule.
- **Line Items** - Displays the associated line items eligible for billing in the claim pricing rule.
- **Characteristics** - Displays the characteristics defined for the claim pricing rule.

5. View the basic details of claim pricing rule in the **Main** section.
6. View the claim handling fees defined for the line items in the **Claim Handling Fees** section.
7. View the markup or markdown values for the lines items in the **Markup or Markdown Values** section.
8. View the associated line items eligible for billing in the **Line Items** section.
9. View the characteristics of the claim pricing rule in the **Characteristics** section.

Defining a Claim Pricing Rule for a Bill Group

Prerequisites

To define a claim pricing rule for a bill group, you should have:

Copyright © 2026, Oracle and/or its affiliates.

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate options defined in the Rate Option (**C1-ExtLookRateType**) extendable lookup.
- Claim template defined in the Claim Template (**C1-ExtLookClaimTemplate**) extendable lookup.
- Line items defined in the Line Item (**C1-ExtLookPricingRuleLineItem**) extendable lookup.

Procedure

To define a claim pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the name of the parent customer.	Not applicable
Person Type	Indicates the type of the parent customer.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create a claim pricing rule for the bill group. **Note:** You can create a claim pricing rule using the **Pricing Rule Type** for claim.	Yes
Pricing Group	Used to indicate the pricing group for the bill group. **Note:** Select the pricing group option when the claim pricing rule has to be defined for a bill group using the pricing group.	No
Policy Status	Used to indicate the policy status for the bill group. The valid values are: • In Force/Active • Post Runout • Runout **Note:** Claim pricing rule cannot be created for **Runout** or **Post Runout** policy statuses, where the policy run out end date is missing.	Yes

4. Click **OK**.

   The **Claim Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information for bill group.
   - **Main** - Used to specify basic details about the claim pricing rule.
   - **Claim Handling Fees** - Used to define the claim handling fees on the lines items for the claim pricing rule.

Copyright © 2026, Oracle and/or its affiliates.

- **Markup or Markdown Values** - Used to define the markup or markdown values for the line items in the claim pricing rule.
- **Line Items** - Used to associate line items eligible for billing in the claim pricing rule.
- **Characteristics** - Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description
Bill Group Information	Displays the bill group information.
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Indicates the policy status for the claim pricing rule. The valid values are: • In Force/Active • Post Runout • Runout
Pricing Rule Type	Indicates the pricing rule type.
Status	Indicates the bill group status for the claim pricing rule. The valid values are: • Active • Inactive • Pending

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to edit the pricing.	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item. **Note:** The pricing start date cannot be later than the pricing end date.	Yes (Conditional) **Note:** Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item. **Note:** The pricing end date cannot be earlier than the pricing start date.	No
Rate Option	Used to indicate the rate option that you want to use while editing the pricing for the price item.	Yes
Claim Template	Used to indicate the claim template of the claim pricing rule for a bill group.	Yes (Conditional) **Note:** This field is required when you are reapplying for a claim template.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** This section also consists of a button, **Reapply**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the pricing rule.

5. Enter the required details in the **Main** section.
6. Define the claim handling fees for the line items in a claim pricing rule, if required.

> **Note:** The **Claim Handling Fees** section appears when an option from **Claim Template** field is selected.

7. Define the markup or markdown values for the line items in a claim pricing rule, if required.

> **Note:** The **Markup or Markdown Values** section appears when an option from **Claim Template** field is selected.

8. Define line items in a claim pricing rule, if required.

> **Note:** The **Line Items** section appears when an option from **Claim Template** field is selected.

9. Define characteristics for a claim pricing rule, if required.
10. Click **Save**.
    The claim pricing rule for a bill group is defined.

> **Note:** A price list and price assignment is created, the created price list is assigned to the claim pricing rule.

Defining a Claim Pricing Rule for a Bill Group Using a Pricing Group

Prerequisites

To define a claim pricing rule for a bill group using a pricing group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Pricing rule type defined in the application.
- Pricing group defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.
- Claim template defined in the application.

Copyright © 2026, Oracle and/or its affiliates.

Procedure

To define a claim pricing rule for a bill group using a pricing group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. **Note:** You can create a claim pricing rule using the **Pricing Rule Type** for claim.	Yes
Pricing Group	Used to indicate the pricing group.	Yes
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout • Runout **Note:** Claim pricing rule cannot be created for **Runout** or **Post Runout** policy status where the policy run out End Date is missing.	Yes

4. Click **OK**.

   The **Claim Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information for bill group using pricing group.
   - **Main** - Used to specify basic details about the claim pricing rule.
   - **Markup or Markdown Values** - Used to define the markup or markdown values for line items for each rule.
   - **Line Items** - Used to associate line items eligible for billing for each rule.
   - **Characteristics** - Used to define the characteristics for the claim pricing rule.

   The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Post Runout • Runout	
Pricing Group	Displays the pricing group.	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
Pricing Start Date	Used to specify the pricing rule start date. **Note:** This field is enabled when an option from **Price Item** field is selected. By default it displays the **Policy Start Date**.	Yes
Pricing End Date	Used to specify the pricing rule end date. **Note:** This field is enabled when an option from **Price Item** field is selected. By default it displays the **Policy End Date**.	Yes
Rate Option	Used to indicate the rate option to define the claim pricing rule for the price item.	Yes
Claim Template	Used to indicate the claim template to define the claim pricing rule for a bill group. **Note:** This field is enabled for selection when an option from **Price Item** field is selected.	Yes

5. Enter the required details in the **Main** section.
6. Define markup or markdown values for line items for each rule in a claim pricing rule, if required.

Note: The **Markup or Markdown Values** section appears in the rule section and the rule section appears when an option from **Claim Template** field is selected.

7. Define line items for each rule in a claim pricing rule, if required.

Note: The **Line Items** section appears in the rule section and the rule section appears when an option from **Claim Template** field is selected.

8. Define characteristics for a claim pricing rule, if required.
9. Click **Save**.
   The claim pricing rule for a bill group using a pricing group is defined.

Note: A price list and price assignment is created, the price list created is assigned to the claim pricing rule.

Editing a Claim Pricing Rule of a Bill Group

Prerequisites

To edit a claim pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Rate options defined in the Rate Option (**C1-ExtLookRateType**) extendable lookup.
- Claim template defined in the Claim Template (**C1-ExtLookClaimTemplate**) extendable lookup.
- Line items defined in the Line Item (**C1-ExtLookPricingRuleLineItem**) extendable lookup.

Procedure

To edit a claim pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding *t*o the account, person, or policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing Information** tab.
   The **Pricing Information** tab appears.
4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.
   The **Bill Group ASO Policy Pricing Rules** zone appears.
5. Click the **Edit** (✎) icon in the **Bill Group ASO Policy Pricing Rules** zone, corresponding to the **Pricing Group Information** column, whose pricing details you want to edit.

   The **Claim Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information for the bill group.
   - **Main** - Used to specify basic details about the claim pricing rule.
   - **Claim Handling Fees** - Used to define the claim handling fees on the lines items in the claim pricing rule.
   - **Markup or Markdown Values** - Used to define the markup or markdown values on the lines items in the claim pricing rule.
   - **Line Items** - Used to associate line items eligible for billing.
   - **Characteristics** - Used to define the characteristics for the claim pricing rule.

   The **Customer Information** section contains the following fields:

Column Name	Column Description
Bill Group Information	Displays the bill group name.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Indicates the policy status for the claim pricing rule. The valid values are: • In Force/Active • Post Runout • Runout
Pricing Rule Type	Indicates the pricing rule type.
Status	Indicates the bill group status for the claim pricing rule. The valid values are: • Active • Inactive • Pending

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to edit the pricing.	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional)
	Note: The pricing start date cannot be later than the pricing end date.	**Note:** Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
	Note: The pricing end date cannot be earlier than the pricing start date.	
Rate Option	Used to indicate the rate option that you want to use while editing the pricing for the price item.	Yes
Claim Template	Used to indicate the claim template of the claim pricing rule for a bill group.	Yes

Note: This section also consists of a button, **Reapply**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the pricing rule.

6. Modify the details in the **Main** section, if required.
7. Modify the claim handling fees specified on the line items in a claim pricing rule, if required.
8. Modify the markup or markdown values on the line items in a claim pricing rule, if required.
9. Modify the line items in a claim pricing rule, if required.
10. Add, edit, or remove the characteristics for a claim pricing rule, if required.
11. Click **Save**.
    The changes made to a claim pricing rule for a bill group are saved.

Viewing a Claim Pricing Rule of a Bill Group

Procedure

To view a claim pricing rule of a bill group:

1. Search for a bill group in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding *t*o the account, person, or policy whose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** (📡) icon corresponding *t*o the bill group whose claim pricing rule bill group details you want to view.
5. In the **Bill Group ASO Policy Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the claim pricing rule type whose claim pricing rule bill group you want to view.

   The **Pricing Rule** screen appears. It contains the following zone:

   - **Claim** - Displays the pricing rule claim details for a bill group. It contains the following sections:
     - **Main** - Displays the basic details of the claim pricing rule.
     - **Claim Handling Fees** - Displays the claim handling fees specified for the lines items in the claim pricing rule.
     - **Markup or Markdown Values** - Displays the markup or markdown values for the lines items in the claim pricing rule.
     - **Line Items** - Displays the associated line items eligible for billing.
     - **Characteristics** - Displays the characteristics defined for the claim pricing rule.
6. View the basic details of claim pricing rule in the **Main** section.
7. View the claim handling fees specified for the line items in the **Claim Handling Fees** section.
8. View the markup or markdown values for the line items in the **Markup or Markdown Values** section.
9. View the associated line items eligible for billing in the **Line Items** section.
10. View the characteristics of the claim pricing rule in the **Characteristics** section.

Deleting a Claim Pricing Rule of a Bill Group

Procedure

To delete a claim pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding *to* the account, person, or policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding *to* the pricing rule type that you want to delete.
   A message appears confirming whether you want to delete the claim pricing rule.
4. Click **OK**.
   The claim pricing rule of a bill group is deleted.

Specific Stop-Loss (SSL) Pricing

Stop-Loss coverage provides liability limits on claims for individuals and for the employer group as a whole. Specific Stop-Loss (SSL) is the form of excess risk coverage that provides protection for the employer against a high claim on any one individual. This is protection against abnormal severity of a single member claim rather than abnormal frequency of claims in total. Specific stop-loss is also known as individual stop-loss. The specific stop-loss is calculated on the claim transactions received for an individual.

You can define a specific stop-loss pricing rule at the parent customer and bill group levels. The specific stop-loss pricing rule at the bill group level takes precedence over the specific stop-loss pricing rule at the parent customer level. You can define specific stop-loss pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a specific stop-loss pricing rule using a specific stop-loss pricing rule type.

It is the specific stop-loss pricing rule type which helps the system to determine:

- Business object using which the specific stop-loss pricing rule should be created in the system.

Copyright © 2026, Oracle and/or its affiliates.

Note: The specific stop-loss pricing rule type is not a primary pricing rule type. It inherits the attributes from a claim pricing rule type where it is included as a related pricing rule type.

- Algorithm which should be triggered while validating a transaction.

Note: An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving account and price item for a transaction.

Note: You must create an algorithm using the **C1_ACCPRISL** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Post-processing algorithm which should be triggered once the specific stop-loss pricing rule is derived.

Note: A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define specific stop-loss pricing rules using the specific stop-loss pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.

Note: Ideally, the price item parameters should not be specified in a specific stop-loss pricing rule type. The price item parameters which are specified in the claim pricing rule type are used for accumulating specific stop-loss.

- Additional information, such as:
  - Identifier which helps to determine whether the specific stop-loss should be calculated for claim transactions which are received during the run-in period of the policy.
  - SSL billable charge line type using which you want to create specific stop-loss billable charges.
  - Domestic provider claim billable charge line type using which you want to create domestic provider claim calculation lines.
  - Markup or markdown billable charge line type using which you want to create markup or markdown calculation lines.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the line item is eligible for billing.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the domestic provider claim calculation line is eligible for billing.

Once a specific stop-loss pricing rule type is defined, you can create specific stop-loss pricing rules using the specific stop-loss pricing rule type. While defining a specific stop-loss pricing rule for a parent customer, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option which you want to use while defining the specific stop-loss pricing.
- Whether the specific stop-loss pricing rule must be used for only pricing or for pricing and billing.
- Whether the specific stop-loss must be accumulated at the member or main subscriber level.
- Settlement frequency which helps to determine the bill after date. The valid values are:
  - Immediately - If you select this option from the list, the bill after date is not calculated. The specific stop-loss billable charge is billed immediately in the next bill cycle.
  - Manually (At Required Intervals) - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCSSL** batch is stamped on the specific stop-loss billable charge.

Copyright © 2026, Oracle and/or its affiliates.

  - Never - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCSSL** batch is stamped on the specific stop-loss billable charge.
  - Yearly - If you select this option from the list, the bill after date in the specific stop-loss billable charge is set to the pricing end date.

- Accumulation parameters (such as incurred start date, incurred end date, paid start date, paid end date, etc.) based on which you want to accumulate the specific stop-loss for the claim transactions which are processed in the run-in or active period of the policy.
- The maximum limit defined for specific stop-loss at the member or main subscriber level.
- Settlement days which helps to calculate the settlement date (i.e. pricing end date, incurred end date, or paid end date whichever is later + settlement days)
- Whether the Aggregate Specific Stop-Loss (ASSL) should be calculated during the C1-BCSSL batch run for each bill group
- The ASSL limit indicating that the aggregate specific stop-loss amount beyond this limit will be paid by the insurance company to the ASSL credit account.
- Whether any member, main subscriber, or provider is excluded during the specific stop-loss calculation Different SSL limit (i.e. lasered amount) for a member, main subscriber, or provider who are expected to have higher claim amount.

However, while defining a specific stop-loss pricing rule for a bill group, you need to specify the following:

- The status of the policy for which you want to define the specific stop-loss pricing rule.
- Price item for which you want to define the pricing.
- Parent customer's SSL pricing rule from which you want to inherit the accumulation parameters and exclusion and lasering information.

Note: The pricing date range is derived from the parent customer's specific stop-loss pricing rule because the specific stop-loss pricing rules for parent customer and bill group should have the same date range.

- Rate option which you want to use while defining the specific stop-loss pricing.
- Whether the specific stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- The SSL limit indicating that the specific stop-loss amount beyond this limit will be paid by the insurance company.
- The maximum specific stop-loss limit defined for the member when the claim transactions are received in the run-in period of the policy.
- Whether line items in a claim pricing rule are eligible for specific stop-loss

Note: By default, the line items where the pricing rule type category is set to Specific Stop-Loss appear in the Line Items section. If you want to set specific stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of SSL should be excluded while calculating specific stop-loss for domestic provider claim.

You can also specify a pricing group while defining a specific stop-loss pricing rule for a bill group. If you specify a pricing group while defining a stop-loss pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Whether the specific stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- The SSL limit indicating that the specific stop-loss amount beyond this limit will be paid by the insurance company.
- The maximum specific stop-loss limit defined for the member when the claim transactions are received in the run-in period of the policy.
- Whether line items in a claim pricing rule are eligible for specific stop-loss.

Copyright © 2026, Oracle and/or its affiliates.

Note: By default, the line items where the pricing rule type category is set to Specific Stop-Loss appear in the Line Items section. If you want to set specific stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of SSL should be excluded while calculating specific stop-loss for domestic provider claim.

Once a specific stop-loss pricing rule is defined for a parent customer and bill group, the system creates one price assignment, one price list, and one price list assignment.

Defining a Specific Stop-Loss (SSL) Pricing Rule Type

Prerequisites

To define a specific stop-loss (SSL) pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeSSL** defined for pricing rule type.
- Business Object **C1-PricingRuleSSL** defined for pricing rule.
- Pricing rule type category for specific stop-loss defined in the application

Procedure

To define a specific stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type. **Note:** You can create a specific stop-loss pricing rule type using the **Specific Stop-Loss (SSL) Pricing Rule Type** business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Specific Stop-Loss (SSL) Pricing Rule Type** business object.
5. Click **OK**.

   The **Specific Stop-Loss (SSL) Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the specific stop-loss pricing rule type.
   - **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the parent pricing rule type.
   - **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type
   - **Algorithms** - Used to define the algorithms used for the pricing rule type.
   - **Additional Data** - Used to specify the additional information about the pricing rule type.
   - **Price Items** - Used to define the price items assigned to the pricing rule type.
   - **Price Item Parameters** - Used to define the price item parameters in the pricing rule type.

Copyright © 2026, Oracle and/or its affiliates.

- **Characteristics** - Used to define the characteristics for the pricing rule type.
- **SSL-Specific Additional Data** - Used to specify the specific stop-loss related additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule	Yes
Business Object	Indicate the pricing rule type business object for specific stop-loss.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based	Yes

6. Enter the required details in the **Main** section.
7. Add the related pricing rule types in the primary pricing rule type, if required.

Note: Related Pricing Rule Types section appears when the pricing rule type is primary.

8. Define the transaction field mapping in the primary pricing rule type, if required.

Note: Transaction Field Mapping section appears when the pricing rule type is primary.

9. Associate algorithms with the pricing rule type, if required.
10. Define additional data for the pricing rule type, if required.
11. Add pricing items in the pricing rule type, if required.
12. Add price item parameters in the pricing rule type, if required.
13. Define characteristics for the pricing rule type, if required.

Copyright © 2026, Oracle and/or its affiliates.

14. Add the SSL-Specific data in the pricing rule type, if required.
15. Click **Save**.
    The specific stop-loss pricing rule type is defined.

Adding the SSL-Specific Data in a Pricing Rule Type

Procedure

To add the SSL-Specific additional data in a pricing rule type:

1. Ensure that the **SSL-Specific Additional Data** section is expanded when you are *d*efining or editing a pricing rule type.

   The **SSL-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
SSL Billable Charge Line Type	Used to specify the Specific Stop-Loss billable charge line type. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **SSL Billable Charge Line Type** field, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **SSL Billable Charge Line Type** field.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Domestic Provider Claim Billable Charge Line Type	Used to specify the claim billable charge line type for domestic provider. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Domestic Provider Claim Billable Charge Line Type** field, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Domestic Provider Claim Billable Charge Line Type** field.	No
Markup or Markdown Billable Charge Line Type	Used to specify the markup or markdown billable charge line type. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Markup or Markdown Billable Charge Line Type** field, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Markup or Markdown Billable Charge Line Type** field.	No
Rule Based Billing Eligibility Field	Used to specify whether the rule based field is eligible for billing or not. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Rule Based Billing Eligibility Field** field, the **Field Search** window appears. On specifying the field, the description of the field appears corresponding to the **Rule Based Billing Eligibility Field** field.	No
Rule Based Markup or Markdown Eligibility Field	Used to specify whether the rule based markup or markdown field is eligible for billing or not.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Rule Based Markup or Markdown Eligibility Field** field, the **Field Search** window appears. On specifying the field, the description of the field appears corresponding to the **Rule Based Markup or Markdown Eligibility Field** field.	
Rule Based Domestic Provider Claim Eligibility Field	Used to specify the rule based domestic provider for claim eligibility field. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Rule Based Domestic Provider Claim Eligibility Field** field, the **Field Search** window appears. On specifying the field, the description of the field appears corresponding to the **Rule Based Domestic Provider Claim Eligibility Field** field.	No

2. Enter the required details in the **SSL-Specific Additional Data** section.
3. Click **Save**.
   The SSL-Specific Additional data is added in the pricing rule type.

Editing a Specific Stop-Loss (SSL) Pricing Rule Type

Prerequisites

To edit the specific stop-loss (SSL) pricing rule type, you should have:

- Business Object **C1-PricingRuleSSL** defined for pricing rule.
- Pricing rule type category for specific stop-loss (SSL) defined in the application

Procedure

To edit the specific stop-loss (SSL) pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.

Copyright © 2026, Oracle and/or its affiliates.

3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding *t*o the pricing rule type for specific stop-loss (SSL) whose details you want to edit.

   The **Specific Stop-Loss (SSL) Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the specific stop-loss pricing rule type.
   - **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the parent pricing rule type.
   - **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type
   - **Algorithms** - Used to define the algorithms used for the pricing rule type.
   - **Additional Data** - Used to specify the additional information about the pricing rule type.
   - **Price Items** - Used to define the price items assigned to the pricing rule type.
   - **Price Item Parameters** - Used to define the price item parameters in the pricing rule type.
   - **Characteristics** - Used to define the characteristics for the pricing rule type.
   - **SSL-Specific Additional Data** - Used to specify the specific stop-loss additional data.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule	Yes
Business Object	Displays the pricing rule type business object for specific stop-loss.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based	Yes

Copyright © 2026, Oracle and/or its affiliates.

> **Tip:** Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for specific stop-loss.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the primary pricing rule type, if required.
7. Modify the transaction field mapping in the primary pricing rule type, if required.
8. Add, edit, or remove algorithms with the pricing rule type, if required.
9. Modify the additional data for the pricing rule type, if required.
10. Add, edit, or remove pricing items in the pricing rule type, if required.
11. Add, edit, or remove price item parameters in the pricing rule type, if required.
12. Add, edit, or remove characteristics for the pricing rule type, if required.
13. Modify the SSL-Specific data in the pricing rule type, if required.
14. Click **Save**.
    The changes made to the specific stop-loss pricing rule type are saved.

Deleting a Specific Stop-Loss (SSL) Pricing Rule Type

Procedure

To delete a specific stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.

Copyright © 2026, Oracle and/or its affiliates.

2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding *t*o the specific stop-loss pricing rule type that you want to delete.
   A message appears confirming whether you want to delete the specific stop-loss pricing rule type.

   Note: You can delete a specific stop-loss pricing rule type when it is not yet used in the system.

   Tip: Alternatively, you can delete a specific stop-loss pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.
5. Click **OK**.
   The specific stop-loss pricing rule type is deleted.

Viewing the Specific Stop-Loss (SSL) Pricing Rule Type Details

Procedure

To view the details of a specific stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Broadcast** (📡) icon corresponding to the specific stop-loss *p*ricing rule type whose details you want to view.
   The **Pricing Rule Type** zone appears.
5. View the details of the specific stop-loss pricing rule type in the **Pricing Rule Type** zone.

Defining a Specific Stop-Loss Pricing Rule for a Parent Customer

Prerequisites

Copyright © 2026, Oracle and/or its affiliates.

To define a specific stop-loss pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule type defined in the application.
- Price item defined in the application.
- Rate option defined in the application.
- Pricing rule usage defined in the application.
- SSL accumulation level defined in the application.
- Settlement frequency defined in the application.
- Underwriter review defined in the application.

Procedure

To define a specific stop-loss pricing rule for a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy *w*hose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. **Note:** You can create a specific stop-loss pricing rule using the **Pricing Rule Type** for specific stop-loss.	Yes

4. Click **OK**.

   The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information.
   - **Main** - Used to specify basic details about the specific stop-loss pricing rule.
   - **Accumulation Parameters** - Used to define the accumulation parameters based on which you want to accumulate the specific stop-loss for the transactions which are processed in the run-in or active period of the policy.
   - **Run-In Parameters** - Used to define run-in parameters in the run-in period of the policy.
   - **Lasering and Exclusion** - Used to define the lasering and exclusion information to inherit the accumulation parameters.
   - **Characteristics** - Used to define the characteristics for a specific stop-loss pricing rule.

   The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item which you want to define for pricing.	Yes
Pricing Start Date	Used to specify the pricing rule start date. **Note:** This field is enabled when an option from **Price Item** field is selected. By default it displays the **Policy Start Date**.	Yes
Pricing End Date	Used to specify the pricing rule end date. **Note:** This field is enabled when an option from **Price Item** field is selected. By default it displays the **Policy End Date**.	Yes
Rate Option	Used to indicate the rate option which you want to use for defining the specific stop-loss pricing rule for the price item.	Yes
Pricing Rule Usage	Used to indicate whether the pricing rule is used only for pricing or for pricing and billing. The valid values are: • Pricing • Pricing and Billing **Note:** This field is enabled when an option from **Price Item** field is selected.	Yes
SSL Accumulation Level	Used to indicate whether the specific stop-loss must be accumulated at the member or main subscriber level. The valid values are: • Member • Main Subscriber	
Settlement Frequency	Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are: • **Immediately** - The bill after date is not calculated. The specific stop-loss billable charge is billed immediately in the next cycle. • **Manually (At Required Intervals)** - The bill after date specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCSSL** batch is stamped on the specific stop-loss billable charge.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Never** - The bill after date specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCSSL** batch is stamped on the specific stop-loss billable charge. • **Yearly** - The bill after date in the specific stop-loss billable charge is set to the pricing end date. **Note:** This field is disabled when you select **Pricing and Billing** option from the **Pricing Rule Usage** field.	
Underwriter Review	Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: • Yes • No	Yes
Claim Template	Used to indicate the claim template to define the claim pricing rule for a parent customer. **Note:** This field is enabled for selection when an option from **Price Item** field is selected.	Yes

5. Enter the required details in the **Main** section.
6. Define accumulation parameters in a specific stop-loss pricing rule, if required.

   Note: The **Accumulation Parameters** section appears when an option from the **Price Item** field is selected.
7. Define run-in parameters in a specific stop-loss pricing rule, if required.

   Note: The **Run-In Parameters** section appears when an option from the **Price Item** field is selected.
8. Define lasering and exclusion information in a specific stop-loss pricing rule, if required.

   Note: The **Lasering and Exclusion** section appears when an option from the **Price Item** field is selected.
9. Define characteristics for a specific stop-loss pricing rule, if required.
10. Click **Save**.
    The specific stop-loss pricing rule for a parent customer is defined.

Defining Accumulation Parameters in a Specific Stop-Loss Pricing Rule

Procedure

To define accumulation parameters in a specific stop-loss pricing rule:

1. Ensure that the **Accumulation Parameters** section is expanded when you have *s*elected an option from the **Price Item** field of **Main** section while defining a specific stop-loss pricing rule.

   The **Accumulation Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank field, accumulation group ID is generated when accumulation parameter values are defined for a specific stop-loss.	Not applicable
Incurred Start Date	Used to specify the incurred start date based on which you want to accumulate the specific stop-loss. **Note:** The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.	Yes
Incurred End Date	Used to specify the incurred end date based on which you want to accumulate the specific stop-loss. **Note:** The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.	Yes
SSL Payout Limit	Used to specify the maximum limit defined for specific stop-loss at the member or main subscriber level.	Yes
Paid Start Date	Used to specify the paid start date based on which you want to accumulate the specific stop-loss. **Note:** The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.	Yes
Paid End Date	Used to specify the paid end date based on which you want to accumulate the specific stop-loss. **Note:** The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.	Yes
Settlement Days	Used to indicate the settlement days which helps to calculate the settlement date.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: Settlement date is calculated as the pricing end date, incurred end date, or paid end date whichever is later added with the settlement days.	
Compute Aggregate SSL (ASSL)	Used to indicate whether the aggregate specific stop-loss (ASSL) should be calculated or not during the **C1-BCSSL** batch run for each bill group. The valid values are: • Yes • No	Yes
ASSL Credit Count	Used to indicate that the aggregate specific stop-loss amount beyond the ASSL limit will be paid by the insurance company to the ASSL credit account. **Note:** This field is enabled when you select **Yes** option from the **Compute Aggregate SSL (ASSL)** field.	Yes
ASSL Limit	**Note:** This field is enabled when you select **Yes** option from the **Compute Aggregate SSL (ASSL)** field.	Yes

2. Enter the required details in the **Accumulation Parameters** section.
3. Click **Save**.
   The accumulation parameters are defined in the specific stop-loss pricing rule.

Defining Run-in Parameters in a Specific Stop-Loss Pricing Rule

Procedure

To define run-in parameters in a specific stop-loss pricing rule:

1. Ensure that the **Run-In Parameters** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining a specific stop-loss pricing rule.

   The **Run-In Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Run-In	Used to specify whether the run-in parameters of the run-in period of policy are to be considered or not in a specific stop-loss pricing	No
Incurred Start Date	Used to specify the incurred start date based on the run-in period of the policy in the specific stop-loss.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field is enabled when you select the checkbox for the **Run-In** field.	
Incurred End Date	Used to specify the incurred end date based on the run-in period of the policy in the specific stop-loss. **Note:** This field is enabled when you select the checkbox for the **Run-In** field.	Yes
Paid Start Date	Used to specify the paid start date based on the run-in period of the policy in the specific stop-loss. **Note:** This field is enabled when you select the checkbox for the **Run-In** field.	Yes
Paid End Date	Used to specify the paid end date based on the run-in period of the policy in the specific stop-loss. **Note:** This field is enabled when you select the checkbox for the **Run-In** field.	Yes

2. Enter the required details in the **Run-In Parameters** section.
3. Click **Save**.
   The run-in parameters are defined in the specific stop-loss pricing rule.

Defining Lasering and Exclusion Information in a Specific Stop-Loss Pricing Rule

Prerequisites

To define lasering and exclusion information in a specific stop-loss pricing rule, you should have:

- Lasering or exclusion level defined in the application.
- Exception type defined in the application.

Procedure

To define lasering and exclusion information in a specific stop-loss pricing rule:

1. Ensure that the **Lasering and Exclusion** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining a specific stop-loss pricing rule.

Copyright © 2026, Oracle and/or its affiliates.

The **Lasering and Exclusion** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank column, accumulation group ID is generated when accumulation parameter values are defined for a specific stop-loss.	Not applicable
Level Identifier	Used to specify the lasering or exclusion level identifier.	Yes
Lasering or Exclusion Level	Used to indicate the lasering or exclusion in a specific stop-loss. The valid values are: • Main Subscriber • Member • Provider	Yes
Exception Type	Used to indicate the exception type. The valid values are: • Lasering • Exclusion **Note:** This field displays **Exclusion** option and is disabled on selection of **Provider** option from the **Lasering or Exclusion Level** column.	Yes
Comments	Used to specify the comments.	No
Lasered Amount	Used to specify the lasered amount. **Note:** This field is disabled when **Exclusion** option is selected from the **Exception Type** column.	Yes (Conditional) **Note:** This column is mandatory when **Lasering** option is selected from the **Exception Type** column.

2. Enter the required details in the **Lasering and Exclusion** section.
3. If you want to define more than one lasering and exclusion information in a specific stop-loss pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a lasering and exclusion information from the specific stop-loss pricing rule, click the **Delete** (🗑) icon corresponding to the level identifier.

4. Click **Save**.
   The lasering and exclusion information is defined in a specific stop-loss pricing rule.

Defining a Characteristic for a Specific Stop-Loss Pricing Rule

Prerequisites

To define a characteristic for a specific stop-loss pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a specific stop-loss pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

   The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the specific stop-loss pricing rule.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the specific stop-loss pricing rule.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the specific stop-loss pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the specific stop-loss pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the specific stop-loss pricing rule, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a characteristic from the specific stop-loss pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the specific stop-loss pricing rule.

Editing a Specific Stop-Loss Pricing Rule of a Parent Customer

Prerequisites

To edit a specific stop-loss pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule usage defined in the application.
- SSL accumulation level defined in the application.
- Underwriter review defined in the application.

Procedure

To edit a specific stop-loss pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Parent Customer Pricing Rules** zone click the **Edit** (🔗) icon in the **Edit** column corresponding to the pricing rule type for specific stop-loss whose specific stop-loss pricing rule details you want to edit.

   The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information.
   - **Main** - Used to specify basic details about the specific stop-loss pricing rule.
   - **Accumulation Parameters** - Used to define the accumulation parameters based on which you want to accumulate the specific stop-loss for the transactions which are processed in the run-in or active period of the policy.
   - **Run-In Parameters** - Used to define run-in parameters in the run-in period of the policy.
   - **Lasering and Exclusion** - Used to define the lasering and exclusion information to inherit the accumulation parameters.
   - **Characteristics** - Used to define the characteristics for a specific stop-loss pricing rule.

   The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item defined for pricing.	Not applicable
Pricing Start Date	Used to specify the pricing rule start date.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing End Date	Used to specify the pricing rule end date.	Yes
Rate Option	Indicates the rate option used for defining the specific stop-loss pricing rule for the price item.	Not applicable
Pricing Rule Usage	Used to indicate whether the pricing rule is used only for pricing or for pricing and billing. The valid values are: • Pricing • Pricing and Billing	Yes
SSL Accumulation Level	Used to indicate whether the specific stop-loss must be accumulated at the member or main subscriber level. The valid values are: • Member • Main Subscriber	
Settlement Frequency	Indicates the settlement frequency to determine the bill after date. The valid values are: • **Immediately** - The bill after date is not calculated. The specific stop-loss billable charge is billed immediately in the next cycle. • **Manually (At Required Intervals)** - The bill after date specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCSSL** batch is stamped on the specific stop-loss billable charge. • **Never** - • **Yearly** - The bill after date in the specific stop-loss billable charge is set to the pricing end date. **Note:** This field is disabled when you select **Pricing and Billing** option from the **Pricing Rule Usage** field.	Not applicable
Underwriter Review	Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: • Yes • No	Yes

4. Modify the details in the **Main** section, if required.
5. Modify the accumulation parameters in a specific stop-loss pricing rule, if required.
6. Modify the run-in parameters in a specific stop-loss pricing rule, if required.
7. Add, edit, or remove the lasering and exclusion information for the specific stop-loss pricing rule, if required.
8. Add, edit, or remove characteristics for the specific stop-loss pricing rule, if required.
9. Click **Save**.
   The changes made to a specific stop-loss pricing rule for a parent customer are saved.

Viewing a Specific Stop-Loss Pricing Rule of a Parent Customer

Procedure

To view a specific stop-loss pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab.
4. In the **Parent Customer Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the specific stop-loss pricing rule type whose specific stop-loss pricing rule parent customer details you want to view.
   The **Pricing Rule** screen appears. It contains the following zone:
   - **Specific Stop-Loss** - Displays the pricing rule specific stop-loss details for a parent customer. It contains the following sections:
     - **Main** - Displays the basic details of the specific stop-loss pricing rule.
     - **Accumulation Parameters** - Displays the accumulation parameters based on which accumulated specific stop-loss for the transactions are processed in the run-in or active period of the policy.
     - **Run-In Parameters** - Displays the run-in parameters in the run-in period of the policy.
     - **Lasering and Exclusion** - Displays the lasering and exclusion information that inherits the accumulation parameters
     - **Characteristics** - Displays the characteristics defined for the specific stop-loss pricing rule.
5. View the basic details of specific stop-loss pricing rule in the **Main** zone.
6. View the accumulated parameters in the **Accumulation Parameters** zone.
7. View the run-in parameters in the **Run-In Parameters** zone.
8. View the lasering and exclusion information in the **Lasering and Exclusion** zone.
9. View the characteristics of the specific stop-loss pricing rule in the **Characteristics** zone.

Defining a Specific Stop-Loss Pricing Rule for a Bill Group

Prerequisites

To define a specific stop-loss pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.
- Values defined for the **Reinsurer Person Relationship Type** option type in the **C1-ASOBLLNG** feature configuration.

Procedure

To define a specific stop-loss pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy *w*hose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

Copyright © 2026, Oracle and/or its affiliates.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. **Note:** You can create a specific stop-loss pricing rule using the **Pricing Rule Type** for specific stop-loss.	Yes
Pricing Group	Used to indicate the pricing group.	No
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout • Runout **Note:** Specific stop-loss pricing rule cannot be created for **Runout** or **Post Runout** policy status where the policy run out end date is missing.	Yes

4. Click **OK**.

   The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information for bill group.
   - **Main** - Used to specify basic details about the specific stop-loss pricing rule.
   - **Accumulation Criteria** - Used to define the accumulation criteria in a specific stop-loss pricing rule.
   - **Pricing Information** - Used to define stop-loss eligibility for claim line items.
   - **Characteristics** - Used to define the characteristics for the specific stop-loss pricing rule.

   The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout • Runout	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

   The **Main** section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item. **Note:** Once an option is selected for this field, the field appears disabled.	Yes
Parent Customer's SSL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss pricing rule. **Note:** This field is enabled for selection when an option from **Price Item** field is selected.	Yes
Pricing Start Date	Displays the pricing rule start date. **Note:** This field displays the **Policy Start Date**.	Not applicable
Pricing End Date	Displays the pricing rule end date. **Note:** This field displays the **Policy End Date**.	Not applicable
Rate Option	Used to indicate the rate option to define the specific stop-loss pricing rule for the price item. **Note:** Rate options in this field appears for selection, when you select an option from the **Price Item** field.	Yes
Reinsurer Account	Used to indicate the account of the reinsurer person (associated with the parent customer of the bill group) which you want to use for defining the specific stop-loss pricing rule for the price item.	No

5. Enter the required details in the **Main** section.
6. Define accumulation criteria in a specific stop-loss pricing rule, if required.

Note:

The **Accumulation Criteria** section appears when an option from **Parent Customer's SSL Pricing Rules** field is selected.

You can also define the **Accumulation Criteria** for each rule in a specific stop-loss pricing rule.

7. Define stop-loss eligibility for claim line items, if required.

Note:

The **Pricing Information** section appears when an option from **Parent Customer's SSL Pricing Rules** field is selected.

You can also define the **Pricing Information** for each rule in a specific stop-loss pricing rule.

8. Define characteristics for a specific stop-loss pricing rule, if required.
9. Click **Save**.
   The specific stop-loss pricing rule for a bill group is defined.

Note: A price list and price assignment is created, the price list created is assigned to the specific stop-loss pricing rule.

Defining Accumulation Criteria in a Specific Stop-Loss Pricing Rule

Procedure

To define accumulation criteria in a specific stop-loss pricing rule:

1. Ensure that the **Accumulation Criteria** section is expanded when you have selected an option from the **Parent Customer's SSL Pricing Rules** field of **Main** section while defining or editing a specific stop-loss pricing rule.

   The **Accumulation Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank field, accumulation group ID is generated when accumulation criteria values are defined for a specific stop-loss.	Not applicable
Run-In Maximum Limit	Used to specify the maximum specific stop-loss limit defined for the member when the claim transactions are received in the run-in period of the policy. **Note:** This field is enabled when the start date and end date selected from the **Parent Customer's SSL Pricing Rules** field of **Main** section is greater than today's date.	Yes
SSL Limit	Used to specify whether the SSL limit indicating that the specific stop-loss amount beyond this limit will be paid by the insurance company.	Yes
Price Item	Used to specify the price item information. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Price Item** field, the **Price Item Search** window appears.	No
Price Item Parameters	This field contains the following columns:	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description			Mandatory (Yes or No)
	Column Name	**Column Description**	**Mandatory (Yes or No)**	
	Price Item Parameter	Used to specify multiple parameters based on which you want to determine the price item utilization. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Price Item Parameter** field, the **Price Item Parameter Search** window appears.	No	
	Parameter Value	Used to specify the value of the parameter. **Note:** On selecting the **Price Item Parameter**, the **Search** (🔍) icon appears corresponding to this field, and on clicking the icon, the **Parameter Value Search** window appears.	No	

2. Enter the required details in the **Accumulation Criteria** section.
3. If you want to define more than one price item in the accumulation group, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a price item from the accumulation group, click the **Delete** (🗑) icon corresponding to the price item.

4. If you want to define more than one price item parameters for the price item, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a price item parameter from the price item, click the **Delete** (🗑) icon corresponding to the price item parameter.

5. Click **Save**.
   The accumulation criteria is defined in the specific stop-loss pricing rule.
6. You can define accumulation rules for each rule in a specific stop-loss pricing rule.

> **Note:** You can exclude a rule from the specific stop-loss pricing by selecting the **Exclude Rule** checkbox.

Defining Claim Pricing Information in a Specific Stop Loss Pricing Rule

Procedure

To define the stop-loss eligibility for claim line items:

1. Ensure that the **Pricing Information** section is expanded when you have selected an option from the **Parent Customer's SSL Pricing Rules** field of **Main** section while defining or editing a specific stop-loss pricing rule.

   The **Pricing Information** section contains the following section:

   - **Claim Pricing Rule** - Used to indicate the claim pricing rule. It contains the following sub-sections:
     - **Domestic Provider Claims** - Used to specify the domestic provider claim while calculating specific stop-loss.
     - **Markup or Markdown Values** - Used to define the markup or markdown values for billable charge line.
     - **Line Items** - Used to associate line items eligible for billing.

   The **Claim Pricing Rule** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Effective Claim Pricing Rule	Used to indicate the claim pricing rule effective for pricing.	No

   On clicking the **Reapply Claim Template** button to the right side of the **Effective Claim Pricing Rule** field you can reapply for claim pricing rule.

   Note: The **Reapply Claim Template** button appears when you are editing a specific stop-loss.

   The **Domestic Provider Claims** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Exclude SSL (Percentage)	Used to specify the domestic provider claim billable charge line excluding the specific stop-loss in percentage to create domestic provider claim calculation lines.	No

   The **Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Indicates the pricing strategy. The valid values are: • Markdown • Markup • None	Not applicable
Markup or Markdown Type	Indicates the markup or markdown value type for claim line items. The valid values are:	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Flat Amount • Percentage	
Markup or Markdown Amount	Displays the markup or markdown amount. **Note:** This field displays amount when **Markup or Markdown Type** field is **Flat Amount**.	Not applicable

The **Line Items** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Displays the sequence number for the line items.	Not applicable
Line Item	Displays the billing line items.	Not applicable
Eligible for Specific Stop-Loss	Used to specify whether the line item is eligible or not eligible for specific stop-loss.	No
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: • Eligible • Not Eligible	Not applicable
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.	Not applicable

2. Select the required details in the **Claim Pricing Rule** section, if required.
3. Enter the required details in the **Domestic Provider Claims** section, if required.
4. Select the required details in the **Line Items** section, if required.
5. Click **Save**.
   The claim line items are defined in the specific stop-loss pricing rule.
6. You can define eligibility claim line items for each rule in a specific stop-loss pricing rule.

Note: You can exclude a rule from the specific stop-loss pricing by selecting the **Exclude Rule** checkbox.

Defining a Specific Stop-Loss Pricing Rule for a Bill Group Using a Pricing Group

Prerequisites

To define a specific stop-loss pricing rule for a bill group using a pricing group, you should have:

Copyright © 2026, Oracle and/or its affiliates.

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule type defined in the application.
- Pricing group defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.

Procedure

To define a specific stop-loss pricing rule for a bill group using a pricing group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy *w*hose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. **Note:** You can create a specific stop-loss pricing rule using the **Pricing Rule Type** for specific stop-loss.	Yes
Pricing Group	Used to indicate the pricing group.	Yes
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout • Runout **Note:** Specific stop-loss pricing rule cannot be created for **Runout** or **Post Runout** policy status where the policy run out End Date is missing.	Yes

4. Click **OK**.

   The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information for bill group using pricing group.
   - **Main** - Used to specify basic details about the claim pricing rule.
   - **Markup or Markdown Values** - Used to define the markup or markdown values for billable charge line for each rule.
   - **Line Items** - Used to associate line items eligible for billing for each rule.
   - **Characteristics** - Used to define the characteristics for the claim pricing rule.

   The **Customer Information** section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout • Runout	Not applicable
Pricing Group	Displays the pricing group.	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item. **Note:** Once an option is selected for this field, the field appears disabled.	Yes
Parent Customer's SSL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss pricing rule. **Note:** This field is enabled for selection when an option from **Price Item** field is selected.	Yes
Pricing Start Date	Displays the pricing rule start date.	Yes
Pricing End Date	Displays the pricing rule end date.	Yes
Rate Option	Used to indicate the rate option to define the specific stop-loss pricing rule for the price item. **Note:** Rate options in this field appears for selection, when you select an option from the **Price Item** field.	Yes

5. Enter the required details in the **Main** section.
6. Define accumulation criteria for each rule in a specific stop-loss pricing rule pricing rule, if required.

Note: The **Accumulation Criteria** section appears in the rule section and the rule section appears when an option from **Parent Customer's SSL Pricing Rules** field is selected.

7. Define stop-loss eligibility for claim line items, if required.

Note: The **Pricing Information** section appears in the rule section and the rule section appears when an option from **Parent Customer's SSL Pricing Rules** field is selected.

8. Define characteristics for a specific stop-loss pricing rule, if required.
9. Click **Save**.

Copyright © 2026, Oracle and/or its affiliates.

The specific stop-loss pricing rule for a bill group using a pricing group is defined.

Note: A price list and price assignment is created, the price list created is assigned to the specific stop-loss pricing rule.

Editing a Specific Stop-Loss Pricing Rule of a Bill Group

Prerequisites

To edit a specific stop-loss pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Values defined for the **Reinsurer Person Relationship Type** option type in the **C1-ASOBLLNG** feature configuration.

Procedure

To edit a specific stop-loss pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, *or* policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for specific stop-loss whose specific stop-loss pricing rule details you want to edit.

   The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information for bill group.
   - **Main** - Displays the basic details of the specific stop-loss pricing rule.
   - **Accumulation Criteria** - Used to define the accumulation criteria in a specific stop-loss pricing rule.
   - **Pricing Information** - Used to define stop-loss eligibility for claim line items.
   - **Characteristics** - Used to define the characteristics for the specific stop-loss pricing rule.

   The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout • Runout	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item.	Not applicable
Parent Customer's SSL Pricing Rules	Indicates the pricing date range derived from the parent customer's specific stop-loss pricing rule.	Not applicable
Pricing Start Date	Displays the pricing rule start date.	Not applicable
Pricing End Date	Displays the pricing rule end date.	Not applicable
Rate Option	Indicates the rate option of the specific stop-loss pricing rule for the price item.	Not applicable
Reinsurer Account	Used to indicate the account of the reinsurer person (associated with the parent customer of the bill group) which you want to use for defining the specific stop-loss pricing rule for the price item. **Note:** You cannot update the reinsurer account when the reinsurer billable charges are already created for the accumulation group. Ideally, you should first cancel the reinsurer charges and then update the reinsurer account in the specific stop-loss pricing rule.	No

4. Modify the accumulation criteria in a specific stop-loss pricing rule, if required.

Note: You can add, edit, or remove price item and its price item parameters in the accumulation criteria for a specific stop-loss, if required.

5. Modify the stop-loss eligibility for claim line items, if required.

Note: This section also consists of a button, **Reapply Claim Template**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the claim pricing rule.

6. Add, edit, or remove characteristics for a specific stop-loss pricing rule, if required.
7. Click **Save**.
   The changes made to a specific stop-loss pricing rule for a bill group are saved.

Viewing a Specific Stop-Loss Pricing Rule of a Bill Group

Procedure

To view a claim pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy *w*hose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab.
4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** (📡) icon corresponding *t*o the bill group whose specific stop-loss pricing rule bill group details you want to view.
5. In the **Bill Group ASO Policy Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding *t*o the specific stop-loss pricing rule type whose specific stop-loss pricing rule bill group you want to view.
   The **Pricing Rule** screen appears. It contains the following zone:
   - **Specific Stop-Loss** - Displays the pricing rule specific stop-loss details for a bill group. It contains the following sections:
     - **Main** - Displays the basic details of the specific stop-loss pricing rule.
     - **Accumulation Criteria** - Displays the accumulation criteria in a specific stop-loss pricing rule.
     - **Pricing Information** - Displays the stop-loss eligibility for claim line items.
     - **Characteristics** - Displays the characteristics defined for the specific stop-loss pricing rule.
6. View the basic details of specific stop-loss pricing rule in the **Main** section.
7. View the accumulation criteria in the **Markup or Markdown Values** section.
8. View the stop-loss eligibility for claim line items in the **Line Items** section.
9. View the characteristics of the specific stop-loss pricing rule in the **Characteristics** section.

Deleting a Specific Stop-Loss Pricing Rule of a Bill Group

Procedure

To delete a specific stop-loss pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy *w*hose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the specific stop-loss pricing rule type whose specific stop-loss pricing rule you want to delete.
   A message appears confirming whether you want to delete the specific stop-loss pricing rule.
4. Click **OK**.
   The specific stop-loss pricing rule is deleted.

Aggregate Stop-Loss (ASL) Pricing

ASL provides a ceiling on the eligible expenses that an employer would pay, in total for all members or subscribers, during a contract period. The amount that exceeds this limit will be paid by the insurance company.

You can define an aggregate stop-loss pricing rule at the parent customer and bill group levels. The aggregate stop-loss pricing rule at the bill group level takes precedence over the aggregate stop-loss pricing rule at the parent customer level. You can define aggregate stop-loss pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define an aggregate stop-loss pricing rule using an aggregate stop-loss pricing rule type. It is the aggregate stop-loss pricing rule type which helps the system to determine:

- Business object using which the aggregate stop-loss pricing rule should be created in the system.

Note: The aggregate stop-loss pricing rule type is not a primary pricing rule type. It inherits the attributes from a claim pricing rule type where it is included as a related pricing rule type.

- Algorithm which should be triggered while validating a transaction.

Note: An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving account and price item for a transaction.

Note: You must create an algorithm using the **C1_ACCPRISL** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Post-processing algorithm which should be triggered once the aggregate stop-loss pricing rule is derived.

Note: A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

Copyright © 2026, Oracle and/or its affiliates.

- Price items for which you can define aggregate stop-loss pricing rules using the aggregate stop-loss pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.

Note: Ideally, the price item parameters should not be specified in an aggregate stop-loss pricing rule type. The price item parameters which are specified in the claim pricing rule type are used for accumulating aggregate stop-loss.

- Additional information, such as:
  - Identifier which helps to determine whether the aggregate stop-loss should be calculated for claim transactions which are received during the run-in period of the policy.
  - ASL billable charge line type using which you want to create aggregate stop-loss billable charges.
  - Domestic provider claim billable charge line type using which you want to create domestic provider claim calculation lines.
  - Markup or markdown billable charge line type using which you want to create markup or markdown calculation lines.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the line item is eligible for billing.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the domestic provider claim calculation line is eligible for billing.
  - ASL limit price item whose effective retention type enrollment based pricing should be used to calculate the enrollment based limit when the ASL Limit (During Policy Period) or ASL Limit (During Settlement Period) field is set to Enrollment Based Limit, Enrollment Based or Minimum ASL Limit (Whichever is Greater), or Percentage of Enrollment Based Limit in the aggregate stop-loss pricing rule which is defined for a parent customer.

Once an aggregate stop-loss pricing rule type is defined, you can create aggregate stop-loss pricing rules using the aggregate stop-loss pricing rule type. While defining an aggregate stop-loss pricing rule for a parent customer, you need to specify the following:

- Price item for which you want to define the pricing.
- Parent customer's SSL pricing rule from which you want to inherit the settlement frequency, settlement days, accumulation parameters (such as incurred start date, incurred end date, paid start date, and paid end date).

Note: The pricing date range is derived from the parent customer's specific stop-loss pricing rule because the specific stop-loss and aggregate stop-loss pricing rules for a parent customer should have the same date range.

- Rate option which you want to use while defining the aggregate stop-loss pricing.
- Settlement frequency which helps to determine the bill after date. The valid values are:
  - Immediately - If you select this option from the list, the bill after date is not calculated. The aggregate stop-loss billable charge is billed immediately in the next bill cycle.
  - Manually (At Required Intervals) - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Date** parameter while executing the **C1-BCASL** batch is stamped on the aggregate stop-loss billable charge.
  - Monthly - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Date** parameter while executing the **C1-BCASL** batch is stamped on the aggregate stop-loss billable charge.
  - Yearly - If you select this option from the list, the bill after date in the aggregate stop-loss billable charge is set to the pricing end date.
- Account in which the aggregate stop-loss amount should be credited.
- Accumulation parameters (such as incurred start date, incurred end date, paid start date, paid end date, etc.) based on which you want to accumulate the aggregate stop-loss for the claim transactions which are processed in the run-in or active period of the policy.
- The maximum limit defined for aggregate stop-loss at the parent customer level.

Copyright © 2026, Oracle and/or its affiliates.

- Settlement days which helps to calculate the settlement date (i.e. pricing end date, incurred end date, or paid end date whichever is later + settlement days)
- Whether the ASL limit should be set to either of the following during the policy period:
  - Policy Based Limit
  - Enrollment Based or Minimum ASL Limit (Whichever is Greater)
  - Enrollment Based Limit
  - Percentage of Enrollment Based Limit
- Whether the ASL limit should be set to either of the following during the settlement period:
  - Policy Based Limit
  - Enrollment Based or Minimum ASL Limit (Whichever is Greater)
  - Enrollment Based Limit

However, while defining an aggregate stop-loss pricing rule for a bill group, you need to specify the following:

- The status of the policy for which you want to define the aggregate stop-loss pricing rule.
- Price item for which you want to define the pricing.
- Parent customer's ASL pricing rule from which you want to inherit the pricing date range.

Note: The pricing date range is derived from the parent customer's aggregate stop-loss pricing rule because the aggregate stop-loss pricing rules for parent customer and bill group should have the same date range.

- Rate option which you want to use while defining the aggregate stop-loss pricing.
- Whether the aggregate stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- Whether line items in a claim pricing rule are eligible for aggregate stop-loss.

Note: By default, the line items where the pricing rule type category is set to Aggregate Stop-Loss appear in the Line Items section. If you want to set aggregate stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of ASL should be excluded while calculating aggregate stop-loss for domestic provider claim.

You can also specify a pricing group while defining an aggregate stop-loss pricing rule for a bill group. If you specify a pricing group while defining an aggregate stop-loss pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Whether the aggregate stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- Whether line items in a claim pricing rule are eligible for aggregate stop-loss.

Note: By default, the line items where the pricing rule type category is set to Aggregate Stop-Loss appear in the Line Items section. If you want to set aggregate stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of ASL should be excluded while calculating aggregate stop-loss for domestic provider claim.

Once an aggregate stop-loss pricing rule is defined for a parent customer and bill group, the system creates one price assignment, one price list, and one price list assignment.

Defining a Aggregate Stop-Loss (ASL) Pricing Rule Type

Prerequisites

To define an aggregate stop-loss (SSL) pricing rule type, you should have:

Copyright © 2026, Oracle and/or its affiliates.

- Business Object **C1-PricingRuleTypeASL** defined for pricing rule type.
- Business Object **C1-PricingRuleASL** defined for pricing rule.
- Pricing rule type category for aggregate stop-loss defined in the application

Procedure

To define an aggregate stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type.	Yes
	Note: You can create an aggregate stop-loss pricing rule type using the **Aggregate Stop-Loss (ASL) Pricing Rule Type** business object.	

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Aggregate Stop-Loss (ASL) Pricing Rule Type** business object.
5. Click **OK**.

   The **Aggregate Stop-Loss (ASL) Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the aggregate stop-loss pricing rule type.
   - **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the parent pricing rule type.
   - **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type
   - **Algorithms** - Used to define the algorithms used for the pricing rule type.
   - **Additional Data** - Used to specify the additional information about the pricing rule type.
   - **Price Items** - Used to define the price items assigned to the pricing rule type.
   - **Price Item Parameters** - Used to define the price item parameters in the pricing rule type.
   - **Characteristics** - Used to define the characteristics for the pricing rule type.
   - **ASL-Specific Additional Data** - Used to specify the aggregate stop-loss related additional data.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: • Claim Pricing Rule	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule	
Business Object	Indicate the pricing rule type business object for aggregate stop-loss.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based	Yes

6. Enter the required details in the **Main** section.
7. Add the related pricing rule types in the primary pricing rule type, if required.

Note: Related Pricing Rule Types section appears when the pricing rule type is primary.

8. Define the transaction field mapping in the primary pricing rule type, if required.

Note: Transaction Field Mapping section appears when the pricing rule type is primary.

9. Associate algorithms with the pricing rule type, if required.
10. Define additional data for the pricing rule type, if required.
11. Add pricing items in the pricing rule type, if required.
12. Add price item parameters in the pricing rule type, if required.
13. Define characteristics for the pricing rule type, if required.
14. Add the ASL-Specific additional data in the pricing rule type, if required.
15. Click **Save**.
    The aggregate stop-loss pricing rule type is defined.

Adding the ASL-Specific Data in a Pricing Rule Type

Procedure

To add the ASL-Specific additional data in a pricing rule type:

1. Ensure that the **ASL-Specific Additional Data** section is expanded when you are defining *or* editing a pricing rule type.

   The **ASL-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
ASL Billable Charge Line Type	Used to specify the Aggregate Stop-Loss billable charge line type. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **ASL Billable Charge Line Type** field, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **ASL Billable Charge Line Type** field.	No
Domestic Provider Claim Billable Charge Line Type	Used to specify the claim billable charge line type for domestic provider.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Domestic Provider Claim Billable Charge Line Type** field, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Domestic Provider Claim Billable Charge Line Type** field.	
Markup or Markdown Billable Charge Line Type	Used to specify the markup or markdown billable charge line type. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Markup or Markdown Billable Charge Line Type** field, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Markup or Markdown Billable Charge Line Type** field.	No
Rule Based Billing Eligibility Field	Used to specify whether the rule based field is eligible for billing or not. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Rule Based Billing Eligibility Field** field, the **Field Search** window appears. On specifying the field, the description of the field appears corresponding to the **Rule Based Billing Eligibility Field** field.	No
Rule Based Markup or Markdown Eligibility Field	Used to specify whether the rule based markup or markdown field is eligible for billing or not. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Rule Based Markup or Markdown Eligibility Field** field, the **Field Search** window appears. On specifying the field, the description of the field appears corresponding to the **Rule Based Markup or Markdown Eligibility Field** field.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Domestic Provider Claim Eligibility Field	Used to specify the rule based domestic provider for claim eligibility field. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Rule Based Domestic Provider Claim Eligibility Field** field, the **Field Search** window appears. On specifying the field, the description of the field appears corresponding to the **Rule Based Domestic Provider Claim Eligibility Field** field.	No
ASL Limit Price Item	Used to specify the Aggregated Stop-Loss limit price item.	No

2. Enter the required details in the **ASL-Specific Additional Data** section.
3. Click **Save**.
   The ASL-Specific Additional data is added in the pricing rule type.

How to define an aggregate stop-loss (ASL) pricing rule type	Defining a Aggregate Stop-Loss (ASL) Pricing Rule Type on page 3133
How to edit the aggregate stop-loss (ASL) pricing rule type	Editing an Aggregate Stop-Loss (ASL) Pricing Rule Type on page 3138

Editing an Aggregate Stop-Loss (ASL) Pricing Rule Type

Prerequisites

To edit the aggregate stop-loss (ASL) pricing rule type, you should have:

- Business Object **C1-PricingRuleASL** defined for pricing rule.
- Pricing rule type category for aggregate stop-loss (ASL) defined in the application

Procedure

To edit the aggregate stop-loss (ASL) pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding *t*o the pricing rule type for aggregate stop-loss (ASL) whose details you want to edit.

   The **Aggregate Stop-Loss (ASL) Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the aggregate stop-loss pricing rule type.
   - **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the parent pricing rule type.

Copyright © 2026, Oracle and/or its affiliates.

- **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** - Used to define the algorithms used for the pricing rule type.
- **Additional Data** - Used to specify the additional information about the pricing rule type.
- **Price Items** - Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** - Used to define the price item parameters in the pricing rule type.
- **Characteristics** - Used to define the characteristics for the pricing rule type.
- **ASL-Specific Additional Data** - Used to specify the aggregate stop-loss additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule	Yes
Business Object	Displays the pricing rule type business object for aggregate stop-loss.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based	Yes

Tip: Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for specific stop-loss.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the primary pricing rule type, if required.
7. Modify the transaction field mapping in the primary pricing rule type, if required.
8. Add, edit, or remove algorithms with the pricing rule type, if required.
9. Modify the additional data for the pricing rule type, if required.

Copyright © 2026, Oracle and/or its affiliates.

10. Add, edit, or remove pricing items in the pricing rule type, if required.
11. Add, edit, or remove price item parameters in the pricing rule type, if required.
12. Add, edit, or remove characteristics for the pricing rule type, if required.
13. Modify the ASL-Specific data in the pricing rule type, if required.
14. Click **Save**.
    The changes made to the aggregate stop-loss pricing rule type are saved.

Deleting an Aggregate Stop-Loss (ASL) Pricing Rule Type

Procedure

To delete an aggregate stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the aggregate stop-loss pricing rule type that you want to delete.
   A message appears confirming whether you want to delete the aggregate stop-loss pricing rule type.

> **Note:** You can delete an aggregate stop-loss pricing rule type when it is not yet used in the system.

Copyright © 2026, Oracle and/or its affiliates.

> **Tip:** Alternatively, you can delete an aggregate stop-loss pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.
   The aggregate stop-loss pricing rule type is deleted.

Viewing the Aggregate Stop-Loss (ASL) Pricing Rule Type Details

Procedure

To view the details of an aggregate stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Broadcast** (⦾) icon corresponding to *t*he aggregate stop-loss pricing rule type whose details you want to view.
   The **Pricing Rule Type** zone appears.
5. View the details of the aggregate stop-loss pricing rule type in the **Pricing Rule Type** zone.

Defining an Aggregate Stop-Loss Pricing Rule for a Parent Customer

Prerequisites

To define an aggregate stop-loss pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- Pricing rule type defined in the application.
- Price item defined in the application.
- Rate option defined in the application.
- Settlement frequency defined in the application.
- Underwriter review defined in the application.

Copyright © 2026, Oracle and/or its affiliates.

- Values defined for the **Reinsurer Person Relationship Type** option type in the **C1-ASOBLLNG** feature configuration.

Procedure

To define an aggregate stop-loss pricing rule for a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, *o*r policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing Information** tab and then click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. **Note:** You can create an aggregate stop-loss pricing rule using the **Pricing Rule Type** for aggregate stop-loss.	Yes

4. Click **OK**.

   The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information.
   - **Main** - Used to specify basic details about the aggregate stop-loss pricing rule.
   - **Accumulation Parameters** - Used to define the accumulation parameters based on which you want to accumulate the aggregate stop-loss for the transactions which are processed in the run-in or active period of the policy.
   - **Run-In Parameters** - Used to define run-in parameters in the run-in period of the policy.
   - **Characteristics** - Used to define the characteristics for an aggregation stop-loss pricing rule.

   The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information.	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item which you want to define for pricing.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer's SSL or ASL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rules. **Note:** This field is enabled when you select an option from the **Price Item** field.	Yes
Pricing Start Date	Displays the pricing rule start date. **Note:** By default it displays the **Policy Start Date**.	Not applicable
Pricing End Date	Displays the pricing rule end date. **Note:** This field displays date when you select the date range from **Parent Customer's SSL or ASL Pricing Rules**.	Not applicable
Rate Option	Used to indicate the rate option which you want to use for defining the aggregate stop-loss pricing rule for the price item. **Note:** Options appears in this field when you select an option from the **Price Item** field.	Yes
Settlement Frequency	Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are: • **Immediately** - The bill after date is not calculated. The aggregate stop-loss billable charge is billed immediately in the next cycle. • **Manually (At Required Intervals)** - The bill after date specified in the **Manual Settlement Date** parameter while executing the **C1-BCASL** batch is stamped on the aggregate stop-loss billable charge. • **Monthly** - The bill after date specified in the **Manual Settlement Date** parameter while executing the **C1-BCASL** batch is stamped on the aggregate stop-loss billable charge. • **Yearly** - The bill after date in the aggregate stop-loss billable charge is set to the pricing end date. **Note:** This field is enabled when you select an option from the **Price Item** field.	Yes
Underwriter Review	Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: • Yes • No **Note:** This field is enabled when you select an option from the **Price Item** field.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Reinsurer Account	Used to indicate the account of the reinsurer person (associated with the parent customer) which you want to use for defining the aggregate stop-loss pricing rule for the price item.	No

5. Enter the required details in the **Main** section.
6. Define accumulation parameters in an aggregate stop-loss pricing rule, if required.

Note: The **Accumulation Parameters** section appears when an option from the **Price Item** field is selected.

7. Define run-in parameters in an aggregate stop-loss pricing rule, if required.

Note: The **Run-In Parameters** section appears when an option from the **Price Item** field is selected.

8. Define characteristics for an aggregate stop-loss pricing rule, if required.
9. Click **Save**.
   The aggregate stop-loss pricing rule for a parent customer is defined.

Defining Accumulation Parameters in an Aggregate Stop-Loss Pricing Rule

Procedure

To define accumulation parameters in an aggregate stop-loss pricing rule:

1. Ensure that the **Accumulation Parameters** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining an aggregation stop-loss pricing rule.

   The **Accumulation Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank field, accumulation group ID is generated when accumulation parameter values are defined for an aggregation stop-loss.	Not applicable
ASL Credit Account	Used to indicate the account in which the aggregate stop-loss amount should be credited.	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field becomes read when you select a date range from the **Parent Customer's SSL or ASL Pricing Rules**.	
Incurred Start Date	Displays the incurred start date based on which you want to accumulate the aggregate stop-loss. **Note:** The accumulated aggregated stop-loss for claim transactions are processed in the run-in or active period of the policy. This field displays date when you select a date range from the **Parent Customer's SSL or ASL Pricing Rules**. **Incurred Start Date** is equal to the pricing rule start date.	Not applicable
Incurred End Date	Displays the incurred end date based on which you want to accumulate the aggregate stop-loss. **Note:** The accumulated aggregated stop-loss for claim transactions are processed in the run-in or active period of the policy. This field displays date when you select a date range from the **Parent Customer's SSL or ASL Pricing Rules**. **Incurred End Date** is equal to the pricing rule end date.	Not applicable
ASL Payout Limit	Used to specify the maximum limit defined for aggregated stop-loss at the member or main subscriber level.	Yes
Paid Start Date	Used to specify the paid start date based on which you want to accumulate the aggregate stop-loss. **Note:** The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy. This field displays date when you select a date range from the **Parent Customer's SSL or ASL Pricing Rules**. **Paid Start Date** is equal to the pricing rule start date.	Yes
Paid End Date	Used to specify the paid end date based on which you want to accumulate the aggregate stop-loss.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy. This field displays date when you select a date range from the **Parent Customer's SSL or ASL Pricing Rules**. **Paid End Date** is equal to the pricing rule end date.	
Settlement Days	Used to indicate the settlement days which helps to calculate the settlement date. **Note:** Settlement date is calculated as the pricing end date, incurred end date, or paid end date whichever is later added with the settlement days.	Yes
ASL Limit (During Policy Period)	Used to indicate the aggregate stop-loss limit set during the policy period. The valid values are: • Policy Based Limit • Enrollment Based Limit • Percentage of Enrollment Based Limit • Enrollment Based or Minimum ASL Limit (Whichever is Greater)	Yes
ASL Limit (During Settlement Period)	Used to indicate the aggregate stop-loss limit set during the settlement period. The valid values are: • Policy Based Limit • Enrollment Based Limit • Enrollment Based or Minimum ASL Limit (Whichever is Greater)	Yes
Minimum ASL Limit	Used to specify the minimum ASL limit. **Note:** This field is enabled when you select the **Enrollment Based or Minimum ASL Limit (Whichever is Greater)** option from the **ASL Limit (During Policy Period)** or **ASL Limit (During Settlement Period)** field.	Yes (Conditional) **Note:** This field is required when the **ASL Limit (During Policy Period)** or **ASL Limit (During Settlement Period)** is **Enrollment Based or Minimum ASL Limit (Whichever is Greater)**.
Percentage of Enrollment Based Limit	Used to specify the percentage of enrollment based limit. **Note:** This field is enabled when you select the **Percentage of Enrollment Based Limit** option from **ASL Limit (During Policy Period)** field.	Yes (Conditional) **Note:** This field is required when the **ASL Limit (During Policy Period)** is **Percentage of Enrollment Based Limit**.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Policy Based Limit	Used to specify the policy based limit.	Yes (Conditional)
	Note: This field is enabled when you select the **Policy Based Limit** option from the **ASL Limit (During Policy Period)** or **ASL Limit (During Settlement Period)** field.	**Note:** This field is required when the **ASL Limit (During Policy Period)** or **ASL Limit (During Settlement Period)** is **Policy Based Limit**.

2. Enter the required details in the **Accumulation Parameters** section.
3. Click **Save**.
   The accumulation parameters are defined in the aggregated stop-loss pricing rule.

Defining Run-in Parameters in an Aggregate Stop-Loss Pricing Rule

Prerequisites

To define run-in parameters in an aggregate stop-loss pricing rule, you should have:

- Settlement days defined in the application.
- ASL limit during the policy period defined in the application.
- ASL limit during the settlement period defined in the application.

Procedure

To define run-in parameters in an aggregate stop-loss pricing rule:

1. Ensure that the **Run-In Parameters** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining an aggregate stop-loss pricing rule.

   The **Run-In Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Run-In	Used to specify whether the run-in parameters of the run-in period of policy are to be considered or not in an aggregate stop-loss pricing	No
Accumulation Group ID	Displays blank column, accumulation group ID is generated when accumulation parameter values are defined for an aggregate stop-loss.	Not applicable
Incurred Start Date	Used to specify the incurred start date based on the run-in period of the policy in the aggregate stop-loss.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field is enabled when you select the checkbox for the **Run-In** field.	
Incurred End Date	Used to specify the incurred end date based on the run-in period of the policy in the aggregate stop-loss. **Note:** This field is enabled when you select the checkbox for the **Run-In** field.	Yes
Paid Start Date	Used to specify the paid start date based on the run-in period of the policy in the aggregate stop-loss. **Note:** This field is enabled when you select the checkbox for the **Run-In** field.	Yes
Paid End Date	Used to specify the paid end date based on the run-in period of the policy in the aggregate stop-loss. **Note:** This field is enabled when you select the checkbox for the **Run-In** field.	Yes
Run-In Maximum Limit	Used to specify the maximum limit of the run-in parameters. **Note:** This field is enabled when you select the checkbox for the **Run-In** field.	Yes

2. Enter the required details in the **Run-In Parameters** section.
3. Click **Save**.
   The run-in parameters are defined in the aggregate stop-loss pricing rule.

Defining a Characteristic for an Aggregate Stop-Loss Pricing Rule

Prerequisites

To define a characteristic for an aggregate stop-loss pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for an aggregate stop-loss pricing rule:

Copyright © 2026, Oracle and/or its affiliates.

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

   The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the aggregate stop-loss pricing rule.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the aggregate stop-loss pricing rule.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the aggregate stop-loss pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the aggregate stop-loss pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the aggregate stop-loss pricing rule, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a characteristic from the aggregate stop-loss pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the aggregate stop-loss pricing rule.

Editing an Aggregate Stop-Loss Pricing Rule of a Parent Customer

Prerequisites

Copyright © 2026, Oracle and/or its affiliates.

To edit an aggregate stop-loss pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- SSL accumulation level defined in the application.
- Underwriter review defined in the application.
- Values defined for the **Reinsurer Person Relationship Type** option type in the **C1-ASOBLLNG** feature configuration.

Procedure

To edit an aggregate stop-loss pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy *w*hose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Parent Customer Pricing Rules** zone click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for aggregate stop-loss whose aggregate stop-loss pricing rule details you want to edit.

   The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information.
   - **Main** - Used to specify basic details about the aggregate stop-loss pricing rule.
   - **Accumulation Parameters** - Used to define the accumulation parameters based on which you want to accumulate the aggregate stop-loss for the transactions which are processed in the run-in or active period of the policy.
   - **Run-In Parameters** - Used to define run-in parameters in the run-in period of the policy.
   - **Characteristics** - Used to define the characteristics for an aggregate stop-loss pricing rule.

   The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item defined for pricing.	Not applicable
Parent Customer's SSL or ASL Pricing Rules	Indicates the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rules.	Not applicable
Pricing Start Date	Displays the pricing rule start date.	Not applicable
Pricing End Date	Displays the pricing rule end date.	Not applicable
Rate Option	Indicates the rate option used for defining the aggregate stop-loss pricing rule for the price item.	Not applicable
Settlement Frequency	Indicates the settlement frequency to determine the bill after date. The valid values are: • **Immediately** - The bill after date is not calculated. The aggregate stop-loss billable charge is billed immediately in the next cycle.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Manually (At Required Intervals)** - The bill after date specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCASL** batch is stamped on the aggregate stop-loss billable charge. • **Monthly** - The bill after date specified in the **Manual Settlement Date** parameter while executing the **C1-BCASL** batch is stamped on the aggregate stop-loss billable charge. • **Yearly** - The bill after date in the aggregate stop-loss billable charge is set to the pricing end date.	
Underwriter Review	Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: • Yes • No	Yes
Reinsurer Account	Used to indicate the account of the reinsurer person (associated with the parent customer) which you want to use for defining the aggregate stop-loss pricing rule for the price item. **Note:** You cannot update the reinsurer account when the reinsurer billable charges are already created for the accumulation group. Ideally, you should first cancel the reinsurer charges and then update the reinsurer account in the aggregate stop-loss pricing rule.	No

4. Modify the details in the **Main** section, if required.
5. Modify the accumulation parameters in an aggregate stop-loss pricing rule, if required.
6. Modify the run-in parameters in an aggregate stop-loss pricing rule, if required.
7. Add, edit, or remove characteristics for the aggregate stop-loss pricing rule, if required.
8. Click **Save**.
   The changes made to an aggregate stop-loss pricing rule for a parent customer are saved.

Viewing an Aggregate Stop-Loss Pricing Rule of a Parent Customer

Procedure

To view an aggregate stop-loss pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy *w*hose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab.
4. In the **Parent Customer Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding *t*o the aggregate stop-loss pricing rule type whose aggregate stop-loss pricing rule parent customer details you want to view.
   The **Pricing Rule** screen appears. It contains the following zone:
   - **Aggregate Stop-Loss** - Displays the pricing rule aggregate stop-loss details for a parent customer. It contains the following sections:
     - **Main** - Displays the basic details of the aggregate stop-loss pricing rule.
     - **Accumulation Parameters** - Displays the accumulation parameters based on which accumulated aggregate stop-loss for the transactions are processed in the run-in or active period of the policy.
     - **Run-In Parameters** - Displays the run-in parameters in the run-in period of the policy.
     - **Characteristics** - Displays the characteristics defined for the aggregate stop-loss pricing rule.
5. View the basic details of aggregate stop-loss pricing rule in the **Main** zone.
6. View the accumulated parameters in the **Accumulation Parameters** zone.
7. View the run-in parameters in the **Run-In Parameters** zone.
8. View the characteristics of the aggregate stop-loss pricing rule in the **Characteristics** zone.

Defining an Aggregate Stop-Loss Pricing Rule for a Bill Group

Prerequisites

To define an aggregate stop-loss pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.

Procedure

To define an aggregate stop-loss pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy *w*hose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. **Note:** You can create an aggregate stop-loss pricing rule using the **Pricing Rule Type** for aggregate stop-loss.	Yes
Pricing Group	Used to indicate the pricing group.	No
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout • Runout	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: Aggregate stop-loss pricing rule cannot be created for **Runout** or **Post Runout** policy status where the policy run out end date is missing.	

4. Click **OK**.

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** - Displays the customer information for bill group.
- **Main** - Used to specify basic details about the aggregate stop-loss pricing rule.
- **Accumulation Criteria** - Used to define the accumulation criteria in an aggregate stop-loss pricing rule.
- **Pricing Information** - Used to define stop-loss eligibility for claim line items.
- **Characteristics** - Used to define the characteristics for the aggregate stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout • Runout	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item. **Note:** Once an option is selected for this field, the field appears disabled.	Yes
Parent Customer's SSL or ASL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule. **Note:** This field is enabled for selection when an option from **Price Item** field is selected.	Yes
Pricing Start Date	Displays the pricing rule start date. **Note:** This field displays the **Policy Start Date**.	Not applicable
Pricing End Date	Displays the pricing rule end date. **Note:** This field displays the **Policy End Date**.	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to indicate the rate option to define the aggregate stop-loss pricing rule for the price item. **Note:** Rate options in this field appears for selection, when you select an option from the **Price Item** field.	Yes

5. Enter the required details in the **Main** section.
6. Define accumulation criteria in an aggregate stop-loss pricing rule, if required.

Note:

The **Accumulation Criteria** section appears when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.

You can also define the **Accumulation Criteria** for each rule in an aggregate stop-loss pricing rule.

7. Define stop-loss eligibility for claim line items, if required.

Note:

The **Pricing Information** section appears when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.

You can also define the **Pricing Information** for each rule in an aggregate stop-loss pricing rule.

8. Define characteristics for an aggregate stop-loss pricing rule, if required.
9. Click **Save**.
   The aggregate stop-loss pricing rule for a bill group is defined.

Note: A price list and price assignment is created, the price list created is assigned to the aggregate stop-loss pricing rule.

Defining Accumulation Criteria in an Aggregate Stop-Loss Pricing Rule

Procedure

To define accumulation criteria in an aggregate stop-loss pricing rule:

Copyright © 2026, Oracle and/or its affiliates.

1. Ensure that the **Accumulation Criteria** section is expanded when you have selected an option from the **Parent Customer's SSL or ASL Pricing Rules** field of **Main** section while defining or editing an aggregate stop-loss pricing rule.

   The **Accumulation Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank field, accumulation group ID is generated when accumulation criteria values are defined for an aggregate stop-loss.	Not applicable
Price Item	Used to specify the price item information. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Price Item** field, the **Price Item Search** window appears.	No
Price Item Parameters	This field contains the following columns: **Column Name** / **Column Description** / **Mandatory (Yes or No)** Price Item Parameter — Used to specify multiple parameters based on which you want to determine the price item utilization. — No **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Price Item Parameter** field, the **Price Item Parameter Search** window appears. Parameter Value — Used to specify the value of the parameter. — No **Note:** On selecting the **Price Item Parameter**, the **Search** (🔍) icon appears corresponding to this field, and on clicking the icon, the **Parameter Value Search** window appears.	No

2. Enter the required details in the **Accumulation Criteria** section.
3. If you want to define more than one price item in the accumulation group, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from the accumulation group, click the **Delete** (🗑) icon corresponding to the price item.

4. If you want to define more than one price item parameters for the price item, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from the price item, click the **Delete** (🗑) icon corresponding to the price item parameter.

Copyright © 2026, Oracle and/or its affiliates.

5. Click **Save**.
   The accumulation criteria is defined in the aggregate stop-loss pricing rule.
6. You can define accumulation rules for each rule in an aggregate stop-loss pricing rule.

> **Note:** You can exclude a rule from the aggregate stop-loss pricing by selecting the **Exclude Rule** checkbox.

Defining Claim Pricing Rules in an Aggregate Stop-Loss Pricing Rule

Procedure

To define claim pricing rules in an aggregate stop-loss pricing rule:

1. Ensure that the **Pricing Information** section is expanded when you have selected an option from the **Parent Customer's SSL or ASL Pricing Rules** field of **Main** section while defining or editing an aggregate stop-loss pricing rule.

   The **Pricing Information** section contains the following section:

   - **Claim Pricing Rule** - Used to indicate the claim pricing rule. It contains the following sub-sections:
     - **Domestic Provider Claims** - Used to specify the domestic provider claim while calculating aggregate stop-loss.
     - **Markup or Markdown Values** - Used to define the markup or markdown values for billable charge line.
     - **Line Items** - Used to associate line items eligible for billing.

   The **Claim Pricing Rule** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Effective Claim Pricing Rule	Used to indicate the claim pricing rule effective for pricing.	No

   On clicking the **Reapply Claim Template** button to the right side of the **Effective Claim Pricing Rule** field you can reapply for claim pricing rule.

> **Note:** The **Reapply Claim Template** button appears when you are editing an aggregate stop-loss.

   The **Domestic Provider Claims** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Exclude ASL (Percentage)	Used to specify the domestic provider claim billable charge line excluding the aggregate stop-loss in percentage to create domestic provider claim calculation lines.	No

   The **Markup or Markdown Values** section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Indicates the pricing strategy. The valid values are: • Markdown • Markup • None	Not applicable
Markup or Markdown Type	Indicates the markup or markdown value type for claim line items. The valid values are: • Flat Amount • Percentage	Not applicable
Markup or Markdown Amount	Displays the markup or markdown amount. **Note:** This field displays amount when **Markup or Markdown Type** field is **Flat Amount**.	Not applicable

The **Line Items** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Displays the sequence number for the line items.	Not applicable
Line Item	Displays the billing line items.	Not applicable
Eligible for Specific Stop-Loss	Used to specify whether the line item is eligible or not eligible for aggregate stop-loss.	No
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: • Eligible • Not Eligible	Not applicable
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.	Not applicable

2. Select the required details in the **Claim Pricing Rule** section, if required.
3. Enter the required details in the **Domestic Provider Claims** section, if required.
4. Select the required details in the **Line Items** section, if required.
5. Click **Save**.
   The claim line items are defined in the aggregate stop-loss pricing rule.
6. You can define eligibility claim line items for each rule in an aggregate stop-loss pricing rule.

Note: You can exclude a rule from the aggregate stop-loss pricing by selecting the **Exclude Rule** checkbox.

Defining an Aggregate Stop-Loss Pricing Rule for a Bill Group Using a Pricing Group

Prerequisites

To define an aggregate stop-loss pricing rule for a bill group using a pricing group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- Pricing rule type defined in the application.
- Pricing group defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.

Procedure

To define an aggregate stop-loss pricing rule for a bill group using a pricing group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, *or* policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. **Note:** You can create an aggregate stop-loss pricing rule using the **Pricing Rule Type** for aggregate stop-loss.	Yes
Pricing Group	Used to indicate the pricing group.	Yes
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout • Runout	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: Aggregate stop-loss pricing rule cannot be created for **Runout** or **Post Runout** policy status where the policy run out End Date is missing.	

4. Click **OK**.

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** - Displays the customer information for bill group using pricing group.
- **Main** - Used to specify basic details about the claim pricing rule.
- **Markup or Markdown Values** - Used to define the markup or markdown values for billable charge line for each rule.
- **Line Items** - Used to associate line items eligible for billing for each rule.
- **Characteristics** - Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout • Runout	Not applicable
Pricing Group	Displays the pricing group.	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item. **Note:** Once an option is selected for this field, the field appears disabled.	Yes
Parent Customer's SSL or ASL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule. **Note:** This field is enabled for selection when an option from **Price Item** field is selected.	Yes
Pricing Start Date	Displays the pricing rule start date.	Yes
Pricing End Date	Displays the pricing rule end date.	Yes
Rate Option	Used to indicate the rate option to define the aggregate stop-loss pricing rule for the price item.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: Rate options in this field appears for selection, when you select an option from the **Price Item** field.	

5. Enter the required details in the **Main** section.
6. Define accumulation criteria for each rule in an aggregate stop-loss pricing rule pricing rule, if required.

Note: The **Accumulation Criteria** section appears in the rule section and the rule section appears when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.

7. Define stop-loss eligibility for claim line items, if required.

Note: The **Pricing Information** section appears in the rule section and the rule section appears when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.

8. Define characteristics for an aggregate stop-loss pricing rule, if required.
9. Click **Save**.
   The aggregate stop-loss pricing rule for a bill group using a pricing group is defined.

Note: A price list and price assignment is created, the price list created is assigned to the aggregate stop-loss pricing rule.

Editing an Aggregate Stop-Loss Pricing Rule of a Bill Group

Prerequisites

To edit an aggregate stop-loss pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.

Procedure

To edit an aggregate stop-loss pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

Copyright © 2026, Oracle and/or its affiliates.

3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for aggregate stop-loss whose aggregate stop-loss pricing rule details you want to edit.

   The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information for bill group.
   - **Main** - Displays the basic details of the aggregate stop-loss pricing rule.
   - **Accumulation Criteria** - Used to define the accumulation criteria in an aggregate stop-loss pricing rule.
   - **Pricing Information** - Used to define stop-loss eligibility for claim line items.
   - **Characteristics** - Used to define the characteristics for the aggregate stop-loss pricing rule.

   The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout • Runout	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item.	Not applicable
Parent Customer's SSL or ASL Pricing Rules	Indicates the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule.	Not applicable
Pricing Start Date	Displays the pricing rule start date.	Not applicable
Pricing End Date	Displays the pricing rule end date.	Not applicable
Rate Option	Indicates the rate option of the aggregate stop-loss pricing rule for the price item.	Not applicable

4. Modify the accumulation criteria in an aggregate stop-loss pricing rule, if required.

   Note: You can add, edit, or remove price item and its price item parameters in the accumulation criteria for an aggregate stop-loss, if required.

5. Modify the stop-loss eligibility for claim line items, if required.

   Note: This section also consists of a button, **Reapply Claim Template**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the claim pricing rule.

6. Add, edit, or remove characteristics for an aggregate stop-loss pricing rule, if required.
7. Click **Save**.
   The changes made to an aggregate stop-loss pricing rule for a bill group are saved.

Retention Type Claim Based Pricing

The ASO service provider provides claim administrative services and pays the claim amount on behalf of the employer. Different charges, such as administration fees, network fees, managed care fees, are typically charged as retention type claim based fees. The system enables you to charge a flat or percentage based retention type claim based fee. The rate schedule defined in the respective rate option indicates whether the retention type claim based fee is a flat fee or percentage based fee. The system considers the claim line items for calculating the percentage based retention type claim based fee when the **Retention Claim Based Percentage Calculation** field is set to **Yes**.

You can define a retention type claim based pricing rule at the parent customer and bill group levels. The retention type claim based pricing rule at the bill group level takes precedence over the retention type claim based pricing rule at the parent customer level. You can define retention type claim based pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a retention type claim based pricing rule using a retention type claim based pricing rule type. It is the retention type claim based pricing rule type which helps the system to determine:

- Business object using which the retention type claim based pricing rule should be created in the system.
- Algorithm which should be triggered while validating a transaction.

Note: An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving account and price item for a transaction.

Note: You must create an algorithm using the **C1_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event. The **C1_BAFTDRV** algorithm sets the bill after date to the end date of the aggregation schedule which is specified in the respective rate option. For example, if the aggregation schedule is monthly, the bill after date is set to the last day of the month.

- Algorithm which should be triggered while determining the bill after date.

Copyright © 2026, Oracle and/or its affiliates.

Note: You must create an algorithm using the **C1_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event.

- Post-processing algorithm which should be triggered once the claim pricing rule is derived.

Note: A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define retention type claim based pricing rules using the retention type claim based pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.
- Price item parameters which you can use while defining retention type claim based pricing rules.
- Additional information, such as:
  - Whether the price items included in the retention type claim based pricing rule type are used while accumulating specific stop-loss and aggregate stop-loss.
  - Identifiers which help to determine whether the claim transaction is received during the run-in period of the policy.
  - Indicates how the claim must be disposed. If the **Claim Disposition** field in the transaction is set to Yes, you must set the disposition mode to **Align Signage**. However, if the **Claim Disposition** field in the transaction is set to **No**, you must set the disposition mode to **Zero Out**.

Note: If the **Disposition Mode** field is set to **Align Signage**, the claim based fees is positive for positive claims and the claim based fees is negative for negative claims. However, if the **Disposition Mode** field is set to **Zero Out**, the claim based fees for the negative claims is set to zero (0).

Once a retention type claim based pricing rule type is defined, you can create retention type claim based pricing rules using the retention type claim based pricing rule type. While defining a retention type claim based pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option which you want to use while defining the retention type claim based pricing.
- Price item parameters based on which you want to define the pricing.

Note: You can only use those price item parameters which are included in the respective retention type claim based pricing rule type.

- Flat or percentage based fee which you want to charge for a price item and price item parameters combination.

In addition, while defining a retention type claim based pricing rule for a bill group, you need to specify the status of the policy for which you want to define the retention type claim based pricing rule. You can also specify a pricing group while defining a retention type claim based pricing rule for a bill group. If you specify a pricing group while defining a retention type claim based pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Price item parameters based on which you want to define the pricing.

Note: You can only use those price item parameters which are included in the respective retention type claim based pricing rule type.

- Flat or percentage based fee which you want to charge for a price item and price item parameters combination.

The system enables you to define different flat or percentage based fee for different set of price item parameters combination. For example, you can define one flat fee for the claim transactions where health coverage is set to Dental and submission type is set to Paper and another flat fee for the claim transactions where health coverage is set to Dental and submission type is set to Paper.

Copyright © 2026, Oracle and/or its affiliates.

Once a retention type claim based pricing rule is defined for a parent customer and bill group, the system creates one price assignment for each set of price item parameters combination, one price list, and one price list assignment.

Defining a Retention Type Claim Based Pricing Rule Type

Prerequisites

To define a retention type claim based pricing rule type, you should have:

- Business Object **C1-PricingRuleRetTypeClaim** defined for retention type claim based pricing rule type.
- Business Object **C1-PricingRule** defined for pricing rule.
- Pricing rule type category for the retention type claim defined in the application.

Procedure

To define a retention type claim based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the retention type claim based pricing rule type	Yes
	Note: You can create a retention type claim based pricing rule type using the **Claim Pricing Rule Type** business object.	

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Retention Type Claim Based Pricing Rule Type** business object.
5. Click **OK**.

   The **Retention Type Claim Based Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the retention type claim based pricing rule type.
   - **Algorithms** - Used to associate the algorithms with the retention type claim based pricing rule type.
   - **Additional Data** - Used to specify the additional information about the retention type claim based pricing rule type.
   - **Price Items** - Used to add the price items for which you can define the retention type claim based pricing rules using the retention type claim based pricing rule type.
   - **Price Item Parameters** - Used to add the price item parameters based on which you want to define the price item pricing.
   - **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule type.
   - **Claim Disposition Details** - Used to define the disposition details of the claims transaction.

   The **Main** section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the retention type claim based pricing rule type.	Yes
Description	Used to specify the description for the retention type claim based pricing rule type.	Yes
Detailed Description	Used to specify the additional information about the retention type claim based pricing rule type.	No
Pricing Rule Business Object	Used to indicate the retention type claim based pricing rule business object. The valid value is: • Retention Type Claim Based Pricing Rule	Yes
Business Object	Indicate the retention type claim based pricing rule type business object using which you are defining the retention type claim based pricing rule type.	Not applicable
Status	Used to indicate the status of the retention type claim based pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to indicate whether the pricing rule type is a primary pricing rule type. **Note:** You must not select the **Primary** option while defining the retention type claim based pricing rule type.	Not applicable
Pricing Rule Type Category	Used to indicate the category to which the pricing rule type belongs. The valid value is: • Retention Type Claim Based	Yes

6. Enter the required details in the **Main** section.
7. Ensure that **Primary** option is not selected when you are defining a retention type claim based pricing rule type.
8. Associate the following algorithms with the retention type claim based pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Pricing Rule Post Processing	C1-PRCRETPOS	C1-PRCRETPOS	Retention Claim Based - Post Processing
Transaction Validation	C1-RETCLMVAL	C1-RETCLMVAL	Retention Claim Based - Validation

9. Define additional data for the retention type claim based pricing rule type.
10. Add the required price items for retention type claim based pricing rule type.
11. Add price item parameters for the retention type claim based pricing rule type.
12. Define characteristics for the retention type claim based pricing rule type.
13. Add the claim disposition details for retention type claim based pricing rule type.
14. Click **Save**.
    The retention type claim based pricing rule type is defined.

Adding Claim Based Disposition Details in a Pricing Rule Type

Prerequisites

To add claim based disposition details in a pricing rule type, you should have:

- Pricing rule types defined in the application.
- Account and Price Item Derivation Algorithm defined in the application.
- Claim Disposition and Disposition Mode defined in the application.

Procedure

To add claim based disposition details in a pricing rule type:

1. Ensure that the **Claim Disposition Details** section is expanded when you are defining *or* editing for a primary pricing rule type.

   The **Claim Disposition Details** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Disposition	Used to specify the type of claim disposition.	No
Disposition Mode	Used to specify the mode of claim disposition.	No

2. Enter the required details in the **Claim Disposition Details** section.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:**
>
> If the **Claim Disposition** field in the transaction is set to **Yes,** you must set the disposition mode to **Align Signage**. However, if the **Claim Disposition** field in the transaction is set to **No**, you must set the disposition mode to **Zero Out**.
>
> If the **Disposition Mode** field is set to **Align Signage**, the claim based fees is positive for positive claims and the claim based fees is negative for negative claims. However, if the **Disposition Mode** field is set to **Zero Out**, the claim based fees for the negative claims is set to zero (0).

3. If you want to define more than one claim disposition entry for the primary pricing rule type, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a claim disposition entry for the primary pricing rule type, click the **Delete** (🗑) icon corresponding to the related pricing rule type.

Editing a Retention Type Claim Based Pricing Rule Type

Prerequisites

To edit the retention type claim based pricing rule type, you should have:

- Business Object **C1-PricingRuleRetTypeClaim** defined for the retention type claim based pricing rule type.
- Business Object **C1-PrcRuleTypRetClaimBase** defined for the retention type claim based pricing rule type.
- Pricing rule type category for the retention type claim based pricing rule type defined in the application

Procedure

To edit a retention type claim based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.

Copyright © 2026, Oracle and/or its affiliates.

2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding *t*o the pricing rule type for claim whose details you want to edit.

   The **Retention Type Enrollment Based Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the retention type claim based pricing rule type.
   - **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the parent pricing rule type.
   - **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type
   - **Algorithms** - Used to define the algorithms used for the retention type claim based pricing rule type.
   - **Additional Data** - Used to specify the additional information about the retention type claim based pricing rule type.
   - **Price Items** - Used to define the price items assigned to the retention type claim based pricing rule type.
   - **Price Item Parameters** - Used to define the price item parameters in the retention type claim based pricing rule type.
   - **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule type.
   - **Claim Templates** - Used to define the pricing rule type for retention type claim based template.
   - **Claim-Specific Additional Data** - Used to specify the retention type claim based specific additional data.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the retention type claim based pricing rule type business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule	Yes
Business Object	Displays the retention type claim based pricing rule type business object for retention type claim.	Not applicable
Status	Used to indicate the status of the retention type claim based pricing rule type. The valid values are: • Active • Inactive	
Primary	Used to select the checkbox if the retention type claim based pricing rule type is primary.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	Used to indicate the pricing rule type category for the retention type claim based pricing rule type. The valid values are: • Aggregate Stop-Loss • Claim • Discounted Agreement • Retention Type Claim Based • Retention Type Enrollment Based • Specific Stop-Loss	Yes

Tip: Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for retention type claim.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the retention type claim based pricing rule type, if required.
7. Modify the transaction field mapping in the retention type claim based pricing rule type, if required.
8. Add, edit, or remove algorithms with the retention type claim based pricing rule type, if required.
9. Modify the additional data for the retention type claim based pricing rule type, if required.
10. Add, edit, or remove pricing items in the retention type claim based pricing rule type, if required.
11. Add, edit, or remove price item parameters in the retention type claim based pricing rule type, if required.
12. Add, edit, or remove characteristics for the retention type claim based pricing rule type, if required.
13. Add, edit, or remove claim templates in the retention type claim based pricing rule type, if required.
14. Modify the claim-specific data in the retention type claim based pricing rule type, if required.
15. Click **Save**.
    The changes made to the Retention Type Claim Based Pricing Rule Type are saved.

Deleting a Retention Type Claim Based Pricing Rule Type

Procedure

To delete a retention type claim based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding *t*o the retention type claim based pricing rule type that you want to delete.
   A message appears confirming whether you want to delete the retention type claim based pricing rule type.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** You can delete a retention type claim based pricing rule type when it is not yet used in the system.

> **Tip:** Alternatively, you can delete a retention type claim based pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.
   The retention type claim based pricing rule type is deleted.

Defining a Retention Type Claim Based Pricing Rule for a Parent Customer

Prerequisites

To define a retention type claim based pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PricingRuleRetTypeClaim** defined for retention type claim based pricing rule type.
- Algorithms **C1-APPTXNBAS**, **C1-PRCRETPOS**, and **C1-RETCLMVAL** defined for retention type claim based pricing rule type.

Copyright © 2026, Oracle and/or its affiliates.

Note: A custom algorithm type must be created to validate a transaction.

Procedure

To define a retention type claim based pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
   The **Search Result** screen appears.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding *t*o the parent customer whose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. Click the **Add** link in the upper-right corner of the **Parent Customer Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Person Name	Indicates the parent customer for whom you want to create a discount arrangement pricing rule type.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type. The valid values is: • Retention Type Claim Based Pricing Rule	Yes **Note:** If the pricing rule type is not selected then the application displays an error message.

5. Select the required pricing rule type in the respective field.
6. Click **OK**.
   The **Retention Type Claim Based Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays information about the parent customer for whom you are defining the retention type claim based pricing rule. It contains the following fields:

Field Name	**Field Description**
Parent Customer Information	Indicates the parent customer for whom you are defining the retention type claim based pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you are defining the retention type claim based pricing rule.

   - **Main** - This section contains the following fields:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Price Item	Used to indicate the price item for which you want to define the retention type claim based pricing. The valid value is: • Admin Fee	Yes
Pricing Start Date	Used to specify the start date from when the retention type claim based pricing will be effective for the price item.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>Note: The pricing start date cannot be later than the pricing end date.</td><td>Note: Pricing Start Date should be entered if Pricing End Date has been mentioned.</td></tr>
<tr><td>Pricing End Date</td><td>Used to specify the end date till when the retention type claim based pricing will be effective for the price item.
Note: The pricing end date cannot be earlier than the pricing start date.</td><td>No</td></tr>
<tr><td>Rate Option</td><td>Used to indicate the rate option that you want to use while defining the pricing for the price item. The valid value is:
• Flat Dollar Per Claim - Agg Daily
On selecting an option from the Rate Option field, following fields appear in a grid:
<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Price Item Parameter</td><td>Used to specify multiple price item parameters based on which you want to determine the price item utilization.
Note:
The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search icon, the Price Item Parameter Search screen appears.
On specifying the price item, the description of the price item appears corresponding to the Price Item Parameter field.</td><td>No</td></tr>
<tr><td>Parameter Value</td><td>Used to specify multiple price item parameter values based on which you want to determine the price item utilization.
Note:
The Search (🔍) icon appears corresponding to the Parameter Value field. On clicking the Search icon, the Predefined Parameter Value Search screen appears.
On specifying the price item, the description of the price item appears corresponding to the Parameter Value Search field.</td><td>No</td></tr>
</table></td><td>Not applicable</td></tr>
</table>

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you want to define more than one price item parameter to the price item in a retention type claim based pricing rule type, click the **Add** (+) icon. However, if you want to remove a price item parameter from the price item in a retention type claim based pricing rule type, click the **Delete** (🗑) icon corresponding to the **Price Item Parameter** field.	
Fee	Used to specify the fee for the price item parameter.	

- **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule for parent customer.

7. Add the required details in the main and characteristics section.
8. Click **Save**.
   The retention type claim based pricing rule for a parent customer is defined.

Note:

If the approval workflow group setting is set as **Active** for the parent customer, for which the retention type claim based pricing rule is defined then an approval transaction is created for that particular parent customer. The retention type claim based pricing rule for a parent customer is defined, once the approval transaction is approved.

Defining a Characteristic for a Retention Type Claim Based Pricing Rule

Prerequisites

To define a characteristic for a retention type claim based pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a retention type claim based pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining *o*r editing a retention type claim based pricing rule.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes
Characteristic Type	Used to indicate the characteristic type for the retention type claim based pricing rule of a parent customer.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: This field is required when you are defining a characteristic for retention type claim based pricing rule.
Characteristic Value	Used to specify the characteristic value for the retention type claim based pricing rule of a parent customer. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for retention type claim based pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for retention type claim based pricing rule, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a characteristic from retention type claim based pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the retention type claim based pricing rule.

- **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule for parent customer. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the effective date from when the characteristic is effective for the retention type claim based pricing rule of a parent customer.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type for the retention type claim based pricing rule of a parent customer.	No
Characteristic Value	Used to specify the characteristic value for the retention type claim based pricing rule of a parent customer. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the Characteristic Value field. On clicking the **Search** icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	No

Note:

If the approval workflow group setting is set as **Active** for the parent customer, for which the retention type claim based pricing rule is edited then an approval transaction is created for that particular parent customer. The retention type claim based pricing rule for a parent customer is defined, once the approval transaction is approved.

5. Click **Save**.
   The retention type claim based pricing rule of a parent customer is edited.

Deleting a Retention Type Claim Based Pricing Rule of a Parent Customer

Procedure

To delete a retention type claim based pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° Information** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding *t*o the parent customer whose pricing details you want to view.
   The **Person** tab in the **Customer 360° Information** screen.
3. Click the **Pricing** tab. It consists of the following zones:
   The **Pricing** tab appears.
4. In the **Parent Customer Pricing Rules** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the retention type claim based pricing rule that you want to delete.
   A message appears confirming whether you want to delete the retention type claim based pricing rule type of a parent customer.
5. Click **OK**.
   The retention type claim based pricing rule of a parent customer is deleted.

Defining a Retention Type Claim Based Pricing Rule for a Bill Group

Prerequisites

To define a retention type claim based pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** and **C1-PricingRuleType**, and **C1-PricingGroup** defined for the pricing rule.
- Business Object **C1-PolicyBOStatusReason** defined for the policy status.
- Business Object **C1-PricingRuleRetTypeClaim** defined for retention type claim based pricing rule type.
- Algorithms **C1-APPTXNBAS**, **C1-PRCRETPOS**, **C1-RETCLMVAL**, **C1-PRRTPREP**, **C1-PRCRLTY** defined for retention type claim based pricing rule type.

Note: A custom algorithm type must be created to validate a transaction.

Procedure

To define a retention type claim based pricing rule for a bill group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person *w*hose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.
   The **Bill Group ASO Policy Pricing Rules** zone is displayed.
5. Click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the name of the parent customer.	Not applicable
Person Type	Indicates the type of the parent customer. **Note:** If you are defining the pricing rule type for the parent customer, then the person type will be **Parent Customer**.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create a retention type claim based pricing rule. **Note:** Select the **Retention Type Claim Based Pricing Rule Type** option, as the pricing rule type.	Yes **Note:** If the pricing rule type is not selected then the application displays an error message.
Pricing Group	Used to indicate the pricing group for the bill group.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: Select the pricing group option when the retention type claim based pricing rule has to be defined for a bill group using the pricing group.	
Policy Status	Used to indicate the policy status for the bill group. The valid values are: • In Force/Active • Post Runout • Runout	Yes (Conditional) **Note:** Policy Status is required once the Pricing Rule Type is selected.

6. Select the appropriate fields in the **Main** section.
7. Click **OK**.
   The **Retention Type Claim Based Pricing Rule** screen appears. It contains the following sections:

   - **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the pricing. The valid value are: • Admin Fee	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional) **Note:** Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
Rate Option	Used to specify the rate option for the price item. The valid value are: • Flat Dollar Per Claim - Agg Daily	Yes
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization. **Note:** The Search (🔍) icon does appear corresponding to this field. On clicking the **Search** icon, the **Price Item Parameters** screen appears.	No
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization. **Note:** The Search (🔍) icon does appear corresponding to this field. On clicking the **Search** icon, the **Parameter Value Search** screen appears.	No
Fee	Used to specify the fee for the price item parameter.	No

   - **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule for a bill group.

Copyright © 2026, Oracle and/or its affiliates.

8. Add the required details in the main and characteristics section.
9. Click **Save**.
   The retention type claim based pricing rule for a bill group is defined.

> **Note:**
>
> If the approval workflow group setting is set as **Active** for the bill group, for which the retention type claim based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type claim based pricing rule for a bill group is defined, once the approval transaction is approved.

Defining a Characteristic for a Retention Type Claim Based Pricing Rule

Prerequisites

To define a characteristic for a retention type claim based pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a retention type claim based pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a *r*etention type claim based pricing rule.

   The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes
Characteristic Type	Used to indicate the characteristic type. The valid values are: • Eligible for Billing **Note:** The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule Type**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for retention type claim based pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for retention type claim based pricing rule.

2. Enter the required details in the **Characteristics** section.

Copyright © 2026, Oracle and/or its affiliates.

3. If you want to define more than one characteristic for retention type claim based pricing rule, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a characteristic from retention type claim based pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the retention type claim based pricing rule.

Editing a Retention Type Claim Based Pricing Rule of a Bill Group

Prerequisites

To edit a retention type claim based pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PricingRuleRetTypeClaim** defined for retention type claim based pricing rule type.
- Algorithms **C1-APPTXNBAS**, **C1-PRCRETPOS**, and **C1-RETCLMVAL** defined for retention type claim based pricing rule type.

> **Note:** A custom algorithm type must be created to validate a transaction.

Procedure

To edit a retention type claim based pricing rule of a bill group:

1. Search for a bill group in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the bill group *w*hose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.
   The **Bill Group ASO Policy Pricing Rules** zone appears.
5. Click the **Edit** (✎) icon in the **Bill Group ASO Policy Pricing Rules** zone, corresponding to the **Pricing Rule Type** column, whose details you want to edit.

   The **Retention Type Claim Based Pricing Rule** screen appears. It contains the following zones:

   - **Customer Information** - Displays the basic information about the customer. It contains the following fields:

Column Name	Column Description
Bill Group Information	Displays the bill group name.
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Displays the status of the policy.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Pricing Rule Type	Displays the pricing rule type that is chosen to define the retention type claim based pricing rule of a bill group.

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item for which you want to define the pricing.	Not applicable
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item. **Note:** Pricing Start Date should be entered if Pricing End Date has been mentioned.	Yes (Conditional)
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
Rate Option	Indicates the rate option for the price item.	Not applicable
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization. **Note:** The Search (🔍) icon does appear corresponding to this field. On clicking the **Search** icon, the **Price Item Parameters** screen appears.	No
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization. **Note:** The Search (🔍) icon does appear corresponding to this field. On clicking the **Search** icon, the **Parameter Value Search** screen appears.	No
Fee	Indicates the fee for the price item parameter.	Not applicable

- **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule for parent customer. *I*t contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the effective date from when the characteristic is effective for the retention type claim based pricing rule of a bill group.	No
Characteristic Type	Used to indicate the characteristic type for the retention type claim based pricing rule of a bill group. The valid values are: • Eligible for Billing	No
Characteristic Value	Used to specify the characteristic value for the retention type claim based pricing rule of a bill group.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the Characteristic Value field. On clicking the **Search** icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	

6. Click **Save**.

   The **Approval Transaction Information** pop-up window appears with the Approval Transaction ID that is generated by the application.

7. Click **OK**
   The retention type claim based pricing rule of a bill group is edited.

> **Note:**
>
> If the approval workflow group setting is set as **Active** for the bill group, for which the retention type claim based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type claim based pricing rule for a bill group is defined, once the approval transaction is approved.

Retention Type Enrollment Based Pricing

Some of the charges, such as stop-loss premium, administrative fees, etc. are typically calculated based on the number of enrollments. In addition, the ASL limit can also be based on the number of enrollments for the month. These charges can be calculated using the retention type enrollment based pricing rules.

Copyright © 2026, Oracle and/or its affiliates.

You can define a retention type enrollment based pricing rule at the parent customer and bill group levels. The retention type enrollment based pricing rule at the bill group level takes precedence over the retention type enrollment based pricing rule at the parent customer level. You can define retention type enrollment based pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a retention type enrollment based pricing rule using a retention type enrollment based pricing rule type. It is the retention type enrollment based pricing rule type which helps the system to determine:

- Business object using which the retention type enrollment based pricing rule should be created in the system.
- Whether it is the primary pricing rule type.

Note: You must select the **Primary** option while defining a retention type enrollment based pricing rule type. On selecting the **Primary** option, the **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear in the **Retention Type Enrollment Based Pricing Rule Type** screen. At present, the system does not allow you to define any pricing rule type which inherits the attributes from the retention type enrollment based pricing rule type.

- Transaction fields from where the data for retention type enrollment based processing should be retrieved.
- Algorithm which should be triggered while validating a transaction.

Note: An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving bill group, account, and price item for a transaction.

Note: You must create an algorithm using the **C1_TXNBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event. Similarly, you must create an algorithm using the **C1_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered while determining the bill after date.

Note: You must create an algorithm using the **C1_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event. The **C1_BAFTDRV** algorithm sets the bill after date to the end date of the aggregation schedule which is specified in the respective rate option. For example, if the aggregation schedule is monthly, the bill after date is set to the last day of the month.

- Post-processing algorithm which should be triggered once the retention type enrollment based pricing rule is derived.

Note: A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define retention type enrollment based pricing rules using the retention type enrollment based pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.
- Price item parameters which you can use while defining retention type enrollment based pricing rules.
- Additional information, such as:
    - Whether the price items included in the retention type enrollment based pricing rule type are used while accumulating specific stop-loss and aggregate stop-loss.
    - Retroactivity indicator which helps to determine whether the enrollment transaction is retro or non-retro transaction.

Once a retention type enrollment based pricing rule type is defined, you can create retention type enrollment based pricing rules using the retention type enrollment based pricing rule type. While defining a retention type enrollment based pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option which you want to use while defining the retention type enrollment based pricing.

Copyright © 2026, Oracle and/or its affiliates.

- Whether you want to exempt the retrospective transactions while calculating retention type enrollment based fees.
- Price item parameters based on which you want to define the pricing.

Note: You can only use those price item parameters which are included in the respective retention type enrollment based pricing rule type.

- Price item parameters based on which you want to define the pricing.

Note: You can only use those price item parameters which are included in the respective retention type enrollment based pricing rule type.

- Flat fee which you want to charge for a price item and price item parameters combination.

The system enables you to define different flat fee for different set of price item parameters combination. For example, you can define one flat fee for the enrollment transactions where health coverage class is set to Medical and health coverage tier is set to Family and another flat fee for the enrollment transactions where health coverage class is set to Dental and health coverage tier is set to Employee.

Once a retention type enrollment based pricing rule is defined for a parent customer and bill group, the system creates one price assignment for each set of price item parameters combination, one price list, and one price list assignment.

Defining a Retention Type Enrollment Based Pricing Rule Type

Prerequisites

To define a retention type retention based pricing rule type, you should have:

- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Business Object **C1-PricingRuleRetTypeEnroll** defined for pricing rule.
- Pricing rule type category for the retention type enrollment defined in the application.

Procedure

To define a retention type retention based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the retention type enrollment based pricing rule type. **Note:** You can create a retention type enrollment based pricing rule type using the **Claim Pricing Rule Type** business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Retention Type Claim Based Pricing Rule Type** business object.
5. Click **OK**.

Copyright © 2026, Oracle and/or its affiliates.

The **Retention Type Claim Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the retention type enrollment based pricing rule type.
- **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the enrollment based parent pricing rule type.
- **Transaction Field Mapping** - Used to specify the transaction related data mapped to the enrollment based pricing rule type.
- **Algorithms** - Used to define the algorithms used for the enrollment based pricing rule type.
- **Additional Data** - Used to specify the additional information about the enrollment based pricing rule type.
- **Price Items** - Used to define the price items assigned to the enrollment based pricing rule type.
- **Price Item Parameters** - Used to define the price item parameters in the enrollment based pricing rule type.
- **Characteristics** - Used to define the characteristics for the enrollment based pricing rule type.
- **Enrollment-Specific Additional Data** - Used to specify the enrollment specific additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: • Aggregate Stop-Loss (ASL) Pricing Rule • Claim Pricing Rule • Discount Arrangement Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule	Yes
Business Object	Indicate the retention type enrollment based pricing rule type business object for the claim.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: • Active • Inactive	
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: • Aggregate Stop-Loss • Claim • Discount Arrangement • Retention Type Claim Based • Retention Type Enrollment Based • Specific Stop-Loss	Yes

6. Enter the required details in the **Main** section.
7. Add the related pricing rule types in the primary pricing rule type, if required.

Copyright © 2026, Oracle and/or its affiliates.

> **Note: Related Pricing Rule Types** section appears when the pricing rule type is primary.

8. Define the transaction field mapping in the primary pricing rule type, if required.

> **Note: Transaction Field Mapping** section appears when the pricing rule type is primary.

9. Associate algorithms with the enrollment based pricing rule type, if required.
10. Define additional data for the enrollment based pricing rule type, if required.
11. Add pricing items in the enrollment based pricing rule type, if required.
12. Add price item parameters in the enrollment based pricing rule type, if required.
13. Define characteristics for the enrollment based pricing rule type, if required.
14. Add the enrollment-specific data, if required.
15. Click **Save**.
    The retention type enrollment based pricing rule type is defined.

Adding the Enrollment Specific Data in a Pricing Rule Type

Prerequisites

To add enrollment specific data in a pricing rule type, you should have:

- Pricing rule types defined in the application.
- Account and Price Item Derivation Algorithm defined in the application.
- Bill Group Derivation Algorithm defined in the application.

Procedure

Copyright © 2026, Oracle and/or its affiliates.

To add enrollment specific data in a pricing rule type in a pricing rule type:

1. Ensure that the **Enrollment-Specific Additional Data** section is expanded when you are *a*dding enrollment specific data for a primary pricing rule type.

   The **Enrollment-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Retroactivity Indicator Value	Used to specify that retroactivity indicator value should not be a part of enrollment based pricing rule type. **Note:** Set the retroactivity indicator value to **R** if the field should be excluded from enrollment based pricing rule types.	No

2. Enter the required details in the **Enrollment-Specific Additional Data** section.
3. Click **Save**.
   The enrollment-specific data has been added in the pricing rule type.

Editing a Retention Type Enrollment Based Pricing Rule Type

Prerequisites

To edit the retention type enrollment based pricing rule type, you should have:

- Business Object **C1-PricingRuleRetTypeEnroll** defined for the retention type enrollment based pricing rule type.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for the retention type enrollment based pricing rule type.
- Pricing rule type category for retention type enrollment based pricing rule type defined in the application

Procedure

To edit a retention type enrollment based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding *t*o the pricing rule type for claim whose details you want to edit.

   The **Retention Type Enrollment Based Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the retention type enrollment based pricing rule type.
   - **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the retention type enrollment based pricing rule type.
   - **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type.
   - **Algorithms** - Used to define the algorithms used for the retention type enrollment based pricing rule type.
   - **Additional Data** - Used to specify the additional information about the retention type enrollment based pricing rule type.

Copyright © 2026, Oracle and/or its affiliates.

- **Price Items** - Used to define the price items assigned to the retention type enrollment based pricing rule type.
- **Price Item Parameters** - Used to define the price item parameters in the retention type enrollment based pricing rule type.
- **Characteristics** - Used to define the characteristics for the retention type enrollment based pricing rule type.
- **Claim Templates** - Used to define the pricing rule type for the retention type enrollment based pricing rule type.
- **Claim-Specific Additional Data** - Used to specify the retention type enrollment based specific additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the retention type claim based pricing rule type business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule	Yes
Business Object	Displays the retention type enrollment based pricing rule type business object for retention type claim.	Not applicable
Status	Used to indicate the status of the retention type enrollment based pricing rule type. The valid values are: • Active • Inactive	
Primary	Used to select the checkbox if the retention type enrollment based pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the retention type enrollment based pricing rule type. The valid values are: • Aggregate Stop-Loss • Claim • Discounted Agreement • Retention Type Claim Based • Retention Type Enrollment Based • Specific Stop-Loss	Yes

Tip: Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for retention type enrollment.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the retention type enrollment based pricing rule type, if required.

Copyright © 2026, Oracle and/or its affiliates.

7. Modify the transaction field mapping in the retention type enrollment based pricing rule type, if required.
8. Add, edit, or remove algorithms with the retention type enrollment based pricing rule type, if required.
9. Modify the additional data for the retention type enrollment based pricing rule type, if required.
10. Add, edit, or remove pricing items in the retention type enrollment based pricing rule type, if required.
11. Add, edit, or remove price item parameters in the retention type enrollment based pricing rule type, if required.
12. Add, edit, or remove characteristics for the retention type enrollment based pricing rule type, if required.
13. Modify the enrollment-specific data in the retention type enrollment based pricing rule type, if required.
14. Click **Save**.
    The changes made to the Retention Type Enrollment Based Pricing Rule Type are saved.

Defining a Retention Type Enrollment Based Pricing Rule for a Parent Customer

Prerequisites

To define a retention type enrollment based pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Algorithms **C1-APPTXNBAS** defined for retention type enrollment based pricing rule type.

> **Note:** A custom algorithm type must be created to validate a transaction.

Procedure

To define a retention type enrollment based pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
   The **Search Result** screen appears.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer *w*hose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. Click the **Add** link in the upper-right corner of the **Parent Customer Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type. The valid values are: • Retention Type Enrollment Based Pricing Rule	Yes **Note:** If the pricing rule type is not selected then the application displays an error message.

5. Select the required pricing rule type in the respective field.
6. Click **OK**.
   The **Retention Type Enrollment Based Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays information about the parent customer for whom you are defining the retention type enrollment based pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom you are defining the retention type enrollment based pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you are defining the retention type enrollment based pricing rule.

   - **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the pricing. The valid value are: • Administrative Services Fees • Administrative Services Fees (No Mandatory Parameters) • AS_RET_ENRB • Consultant Oversight Fees	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item. **Note:** The pricing start date cannot be later than the pricing end date.	Yes (Conditional) **Note:** Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the retention type enrollment based pricing will be effective for the price item. **Note:** The pricing end date cannot be earlier than the pricing start date.	No
Rate Option	Used to specify the rate option for the price item. The valid values are: • Flat Dollar Per Claim - Agg Daily • Retention - Aggregate Monthly • Claims	Yes

Copyright © 2026, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>
• Percentage of Claim - Agg Daily
• Flat Dollar Per Claim - Agg Daily
On selecting an option from the Rate Option field, following fields appear in a grid:
<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Price Item Parameter</td><td>Used to specify multiple price item parameters based on which you want to determine the price item utilization.</td><td>No</td></tr>
<tr><td></td><td>Note:
The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search icon, the Price Item Parameter Search screen appears.
On specifying the price item, the description of the price item appears corresponding to the Price Item Parameter field.</td><td></td></tr>
<tr><td>Parameter Value</td><td>Used to specify multiple price item parameter values based on which you want to determine the price item utilization.</td><td>No</td></tr>
<tr><td></td><td>Note:
The Search (🔍) icon appears corresponding to the Parameter Value field. On clicking the Search icon, the Predefined Parameter Value Search screen appears.
On specifying the price item, the description of the price item appears corresponding to the Parameter Value Search field.</td><td></td></tr>
</table>
</td><td></td></tr>
</table>

Defining a Characteristic for a Retention Type Enrollment Based Pricing Rule

Prerequisites

To define a characteristic for a retention type enrollment based pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a retention type claim based pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining *or* editing a retention type enrollment based pricing rule.

   The **Characteristics** section contains the following columns in a grid:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes
Characteristic Type	Used to indicate the characteristic type. The valid values are: • Eligible for Billing **Note:** The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule Type**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for retention type enrollment based pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for retention type enrollment based pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for retention type enrollment based pricing rule, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a characteristic from retention type enrollment based pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the retention type enrollment based pricing rule.

Defining a Retention Type Enrollment Based Pricing Rule for a Bill Group

Prerequisites

To define a retention type enrollment based pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** and **C1-PricingRuleType**, and **C1-PricingGroup** defined for the pricing rule.
- Business Object **C1-PolicyBOStatusReason** defined for the policy status.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Algorithms **C1-APPTXNBAS** defined for retention type enrollment based pricing rule type.

Note: A custom algorithm type must be created to validate a transaction.

Procedure

To define a retention type enrollment based pricing rule for a bill group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) *i*con corresponding to the person *w*hose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.
   The **Bill Group ASO Policy Pricing Rules** zone is displayed.
5. Click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the name of the parent customer.	Not applicable
Person Type	Indicates the type of the parent customer.	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you are defining the pricing rule type for the parent customer, then the person type will be **Parent Customer**.	
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create a retention type enrollment based pricing rule. **Note:** Select the **Retention Type Enrollment Based Pricing Rule** option, as the pricing rule type.	Yes **Note:** If the pricing rule type is not selected then the application displays an error message.
Pricing Group	Used to indicate the pricing group for the bill group. **Note:** Select the pricing group option when the retention type enrollment based pricing rule has to be defined for a bill group using the pricing group.	No
Policy Status	Used to indicate the policy status for the bill group. The valid values are: • In Force/Active • Post Runout • Runout	Yes (Conditional) **Note:** Policy Status is required once the Pricing Rule Type is selected.

6. Select the appropriate fields in the **Main** section.
7. Click **OK**.

The **Retention Type Enrollment Based Pricing Rule** screen appears. It contains the following sections:

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the pricing. The valid value are: • Administrative Services Fees • Administrative Services Fees (No Mandatory Parameters) • AS_RET_ENRB • Consultant Oversight Fees	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional) **Note:** Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item. **Note:** If the pricing end date is mentioned, once the price parameters and fees have been already entered, then the price parameter value and fee field values are reset.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to specify the rate option for the price item. The valid values are: • Flat Dollar Per Claim - Agg Daily • Retention - Aggregate Monthly • Claims • Percentage of Claim - Agg Daily • Flat Dollar Per Claim - Agg Daily	Yes
Exempt Retro Transactions	Used to indicate that retro transactions should not be considered for calculation purposes.	No
Pricing Group Rule Code	Displays the name of the pricing group rule code. **Note:** If a particular bill group has a single or multiple pricing group rule codes then all of those pricing group rule codes are shown along with their respective description.	No
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization. **Note:** The Search (🔍) icon does appear corresponding to this field. On clicking the **Search** icon, the **Price Item Parameters** screen appears.	No
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization. **Note:** The Search (🔍) icon does appear corresponding to this field. On clicking the **Search** icon, the **Parameter Value Search** screen appears.	No
Fee	Used to specify the fee for the price item parameter.	No

- **Characteristics** - Used to define the characteristics for the retention type enrollment based pricing rule for a bill group.

8. Add the required details in the main and characteristics section.
9. Click **Save**.
   The retention type enrollment based pricing rule for a bill group is defined.

Note:

If the approval workflow group setting is set as **Active** for the bill group, for which the retention type enrollment based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type enrollment based pricing rule for a bill group is defined, once the approval transaction is approved.

Defining a Characteristic for a Retention Type Enrollment Based Pricing Rule

Prerequisites

To define a characteristic for a retention type enrollment based pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a retention type enrollment based pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a *r*etention type claim based pricing rule.

   The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes
Characteristic Type	Used to indicate the characteristic type. The valid values are: • Eligible for Billing **Note:** The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule Type**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for retention type enrollment based pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for retention type enrollment based pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for retention type enrollment based pricing rule, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a characteristic from retention type enrollment based pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the retention type enrollment based pricing rule.

Editing a Retention Type Enrollment Based Pricing Rule of a Bill Group

Prerequisites

To edit a retention type enrollment based pricing rule of a bill group, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Algorithms **C1-APPTXNBAS** defined for retention type enrollment based pricing rule type.

> **Note:** A custom algorithm type must be created to validate a transaction.

Procedure

To edit a retention type enrollment based pricing rule of a bill group:

1. Search for a bill group in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the bill group *w*hose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.
   The **Bill Group ASO Policy Pricing Rules** zone appears.
5. Click the **Edit** (✎) icon in the **Bill Group ASO Policy Pricing Rules** zone, corresponding to the **Pricing Rule Type** column, whose details you want to edit.

   The **Retention Type Enrollment Based Pricing Rule** screen appears. It contains the following zones:

   - **Customer Information** - Displays the basic information about the customer. It contains the following fields:

Column Name	Column Description
Bill Group Information	Displays the bill group name.
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Displays the status of the policy.
Pricing Group	Displays the pricing group information.
Pricing Rule Type	Displays the pricing rule type that is chosen to define the retention type claim based pricing rule of a bill group.

   - **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item for which you want to define the pricing.	Not applicable
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
Rate Option	Indicates the rate option for the price item.	Not applicable
Exempt Retro Transactions	Used to indicate that retro transactions should not be considered for calculation purposes.	No
Pricing Group Rule Code	Displays the name of the pricing group rule code. **Note:** If a particular bill group has a single or multiple pricing group rule codes then all of those pricing group rule codes are shown along with their respective description.	Not applicable
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization. **Note:** The Search (🔍) icon does appear corresponding to this field. On clicking the **Search** icon, the **Price Item Parameters** screen appears.	No
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization. **Note:** The Search (🔍) icon does appear corresponding to this field. On clicking the **Search** icon, the **Parameter Value Search** screen appears.	No
Fee	Indicates the fee for the price item parameter.	Not applicable

Note: If you want to define more than one price item parameter information, click the **Add** (+) icon. However, if you want to remove more than one price item or price item bundle, click the Delete (🗑) icon corresponding to the price item parameter.

- **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule for parent customer. *I*t contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the effective date from when the characteristic is effective for the retention type claim based pricing rule of a bill group.	No
Characteristic Type	Used to indicate the characteristic type for the retention type claim based pricing rule of a bill group. The valid values are: • Eligible for Billing	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the characteristic value for the retention type claim based pricing rule of a bill group. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the Characteristic Value field. On clicking the **Search** icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	No

Note: If you want to define more than one characteristic, click the **Add** (+) icon. However, if you want to remove more than one characteristic, click the Delete (🗑) icon corresponding to the characteristic.

6. Click **Save**.

Note:

If the approval workflow group setting is set as **Active** for the bill group, for which the retention type enrollment based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type enrollment based pricing rule for a bill group is defined, once the approval transaction is approved.

7. Click **OK**
   The retention type enrollment based pricing rule of a bill group is edited.

Defining a Retention Type Enrollment Based Pricing Rule for a Bill Group Using a Pricing Group

Procedure

To define a retention type enrollment based pricing rule for a bill group using pricing group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person *w*hose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.
   The **Bill Group ASO Policy Pricing Rules** zone is displayed.
5. Click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following sections:

   - **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type. The valid values are: • Aggregate Stop-Loss (ASL) Pricing Rule • Claim Pricing Rule • Discount Arrangement Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule **Note:** Select the **Retention Type Enrollment Based Pricing Rule** option, as the pricing rule type.	Yes **Note:** If the pricing rule type is not selected then the application displays an error message.
Pricing Group	Used to indicate the pricing group for the bill group. **Note:** You must select a pricing group for the bill group on which a retention type enrollment based pricing rule is to be defined.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate the policy status for the bill group. The valid values are: • In Force/Active • Post Runout • Runout	Yes (Conditional) **Note:** Policy Status is required once the Pricing Rule Type is selected.

6. Select the appropriate fields in the **Main** section.
7. Click **OK**.
   The **Retention Type Enrollment Based Pricing Rule** screen appears. It contains the following sections:

   - **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the pricing. The valid value are: • Administrative Services Fees • Administrative Services Fees (No Mandatory Parameters) • AS_RET_ENRB • Consultant Oversight Fees	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional) **Note:** Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item. **Note:** If the pricing end date is mentioned, once the price parameters and fees have been already entered, then the price parameter value and fee field values are reset.	No
Rate Option	Used to specify the rate option for the price item. The valid values are: • Flat Dollar Per Claim - Agg Daily • Retention - Aggregate Monthly • Claims • Percentage of Claim - Agg Daily • Flat Dollar Per Claim - Agg Daily	Yes
Exempt Retro Transactions	Used to indicate that retro transactions should not be considered for calculation purposes.	No
Pricing Group Rule Code	Displays the code of the pricing group rule.	Not applicable
Description	Displays the description of the pricing group rule.	Not applicable
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization.	No

Flat Fee Pricing

The Administrative Services Only (ASO) provider would like to charge one-time or recurring flat fee to the self-funded employer. Oracle Revenue Management and Billing enables you to process and bill such one-time and recurring charges to the bill group. The system enables you to define one-time or recurring flat fee for a price item. You can define recurring flat fee based on bill period or frequency. The one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee can be defined using the respective flat fee pricing rules. You can only define one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee pricing rules for a bill group.

You can define the flat fee pricing rules for bill groups from the **Customer 360° Information** screen. You can define a one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee pricing rule using the respective flat fee pricing rule type. It is the flat fee pricing rule type which helps the system to determine:

- Business object using which the flat fee pricing rule should be created in the system.

  Note: You must not select the **Primary** option while defining a one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee pricing rule type.
- Price items for which you can define the flat fee pricing rules.
- Rate options that you can use while defining the pricing for the price item.
- Different type of account to which a price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Additional flat fee specific data, such as:
  - Bill segment cancel reason which you want to use when the one-time or recurring flat fee bill segment is canceled due to change in the flat fee amount.
  - Whether the pricing rule type is defined for one-time flat fee or recurring flat fee.
  - Recurring method which indicates that the system should create recurring flat fee charge based on bill period or frequency. This information is required when you are defining a recurring flat fee pricing rule type.
  - Bill period that you can use while defining a bill period based recurring flat fee pricing rule. This information is required when you are defining a bill period based recurring flat fee pricing rule type.

Once a one-time flat fee pricing rule type is defined, you can define one-time flat fee pricing rules using the one-time flat fee pricing rule type. While defining a one-time flat fee pricing rule for a bill group, you need to specify the following:

- The policy status in which the one-time flat fee pricing rule is applicable. Note that you cannot define a one-time flat fee pricing rule for the post runout period of the policy.
- Price item for which you want to create the one-time flat fee billable charge.
- Date which you want to specify as the start and end dates in the one-time flat fee billable charge.
- Billable charge line type using which you want to create the one-time flat fee billable charge.
- Bill after date which you want to stamp on the one-time flat fee billable charge.
- Flat fee amount for which you want to create the one-time flat fee billable charge.
- Override account when you want to create the one-time flat fee billable charge on a particular account. If you do not specify the bill to override account, the system will derive the account using the priority defined for the price item in the one-time flat fee pricing rule type.

Copyright © 2026, Oracle and/or its affiliates.

Once a bill period based recurring flat fee pricing rule type is defined, you can define bill period based recurring flat fee pricing rules using the bill period based recurring flat fee pricing rule type. While defining a bill period based recurring flat fee pricing rule for a bill group, you need to specify the following:

- The policy status in which the bill period based recurring flat fee pricing rule is applicable. Note that you cannot define a bill period based recurring flat fee pricing rule for the post runout period of the policy.
- Price item for which you want to create the bill period based recurring flat fee billable charge.
- Dates which you want to specify as the start and end dates in the bill period based recurring flat fee billable charge.
- Billable charge line type using which you want to create the bill period based recurring flat fee billable charge.
- Bill period using which the recurring bill segments should be created in the system.
- Flat fee amount for which you want to create the bill period based recurring flat fee billable charge.
- Override account when you want to create the bill period based recurring flat fee billable charge on a particular account. If you do not specify the bill to override account, the system will derive the account using the priority defined for the price item in the bill period based recurring flat fee pricing rule type.

Once a frequency based recurring flat fee pricing rule type is defined, you can define frequency based recurring flat fee pricing rules using the frequency based recurring flat fee pricing rule type. While defining a frequency based recurring flat fee pricing rule for a bill group, you need to specify the following:

- The policy status in which the frequency based recurring flat fee pricing rule is applicable. Note that you cannot define a frequency based recurring flat fee pricing rule for the post runout period of the policy.
- Price item for which you want to create the frequency based recurring flat fee billable charge.
- Dates which you want to specify as the start and end dates in the frequency based recurring flat fee billable charge.
- Billable charge line type using which you want to create the frequency based recurring flat fee billable charge.
- Frequency using which the recurring bill segments should be created in the system.
- Flat fee amount for which you want to create the frequency based recurring flat fee billable charge.
- Override account when you want to create the frequency based recurring flat fee billable charge on a particular account. If you do not specify the bill to override account, the system will derive the account using the priority defined for the price item in the frequency based recurring flat fee pricing rule type.

Once a one-time flat fee, bill period based recurring flat fee, or frequency based recurring flat fee pricing rule is defined for a bill group, the system creates the one-time or recurring flat fee billable charge, respectively. The system does not create any price assignment, price list, or price list assignment in case of flat fee pricing.

Defining a One-Time Flat Fee Pricing Rule Type

Prerequisites

To define a one-time flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeFlatFees** defined for pricing rule type.
- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

Procedure

To define a one-time flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type. **Note:** You can create a one-time flat fee pricing rule type using the **Flat Fee Pricing Rule Type** business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Flat Fee Pricing Rule Type** business object.
5. Click **OK**.

The **Flat Fee Pricing Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the flat fee pricing rule type.
- **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** - Used to define the algorithms used for the pricing rule type.
- **Additional Data** - Used to specify the additional information about the pricing rule type.
- **Price Items** - Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** - Used to define the price item parameters in the pricing rule type.
- **Characteristics** - Used to define the characteristics for the pricing rule type.
- **Billable Charge Line Types** - Used to define the pricing rule type for billable charge line type.
- **Flat Fees - Specific Additional Data** - Used to specify the flat fees specific for additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Pricing Rule Business Object	Used to indicate the pricing rule business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Flat Fee Pricing Rule	Yes
Business Object	Indicates the pricing rule type business object for flat fees.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: • Active	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Inactive	
Primary	Used to select the checkbox if the pricing rule type is primary. **Note:** This field is not enabled for selection if the **Pricing Rule Type Category** is **Flat Fees**.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • Flat Fees	Yes

6. Enter the required details in the **Main** section.
7. Add the related pricing rule types in the primary pricing rule type, if required.

> **Note:**
>
> **Related Pricing Rule Types** section appears when the pricing rule type is primary.
>
> This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

8. Define the transaction field mapping in the primary pricing rule type, if required.

> **Note:**
>
> **Transaction Field Mapping** section appears when the pricing rule type is primary.
>
> This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

9. Associate algorithms with the pricing rule type, if required.
10. Define additional data for the pricing rule type, if required.

> **Note:** This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

11. Add pricing items in the pricing rule type, if required.
12. Add price item parameters in the pricing rule type, if required.
13. Define characteristics for the pricing rule type, if required.
14. Define billable charge line types in the flat fees pricing rule type, if required.
15. Add the flat fees - specific additional data in the pricing rule type, if required.

> **Note:** This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

16. Click **Save**.
    The one-time flat fee pricing rule type is defined.

Adding the One-Time Flat Fee Specific Data in a Pricing Rule Type

Procedure

To add the one-time flat fee specific data in a pricing rule type:

1. Ensure that the **Flat Fees - Specific Additional Data** section is expanded when you are defining or editing a pricing rule type.

   The **Flat Fees - Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Segment Cancel Reason	Used to indicate the bill segment cancel reason.	No
Recurring Fee	Used to specify whether the recurring flat fee or one-time flat fee is required. **Note:** This field cannot be edited.	No
Recurring Method	Used to indicate whether recurring bill segments must be created at the intervals defined in the bill period or at the set invoice frequency. The valid values are: • Bill Period • Frequency	Yes (Conditional) **Note:** This field is required when you are specifying whether the recurring flat fee is based on bill period or frequency.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the checkbox for **Recurring Fee** field. This field cannot be edited.	

2. Enter the required details in the **Flat Fees - Specific Additional Data** section.
3. Click **Save**.
   The Flat Fees - Specific Additional data is added in the pricing rule type.

Editing a One-Time Flat Fee Pricing Rule Type

Prerequisites

To edit a one-time flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

Procedure

To edit a one-time flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *P*ricing rule type whose details you want to edit.

   The **Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the flat fee pricing rule type.
   - **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the parent pricing rule type.
   - **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type
   - **Algorithms** - Used to define the algorithms used for the pricing rule type.
   - **Additional Data** - Used to specify the additional information about the pricing rule type.
   - **Price Items** - Used to define the price items assigned to the pricing rule type.
   - **Price Item Parameters** - Used to define the price item parameters in the pricing rule type.
   - **Characteristics** - Used to define the characteristics for the pricing rule type.
   - **Billable Charge Line Types** - Used to define the pricing rule type for billable charge line type.

Copyright © 2026, Oracle and/or its affiliates.

- **Flat Fees - Specific Additional Data** - Used to specify the flat fees specific for additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Pricing Rule Business Object	Used to indicate the pricing rule business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Flat Fee Pricing Rule	Yes
Business Object	Indicates the pricing rule type business object for flat fees.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to select the checkbox if the pricing rule type is primary. **Note:** This field is not enabled for selection if the **Pricing Rule Type Category** is **Flat Fees**.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • Flat Fees	Yes

Tip: Alternatively, you can edit the details of a one-time flat fees pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit or remove related pricing rule types from the primary pricing rule type, if required.

Defining a One-Time Flat Fee Pricing Rule for a Bill Group

Prerequisites

To define a one-time flat fee pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleFlatFees** defined for one-time flat fee pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Billable Charge Line Type defined in the application.

Procedure

To define a one-time flat fee pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. **Note:** You can create a one-time flat fee pricing rule using the **Pricing Rule Type** for flat fees.	Yes
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: • In Force/Active • Runout	Yes

4. Click **OK**.

   The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information for bill group.
   - **Main** - Used to specify basic details about the one-time flat fee pricing rule.
   - **Characteristics** - Used to define the characteristics for the one-time flat fee pricing rule.

   The **Customer Information** section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Runout	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
Charge Date	Used to specify the flat fee charge date. **Note:** By default this field displays the policy start date or policy runout start date.	Yes
Billable Charge Line Type	Used to specify the billable charge line type. **Note:** On clicking the **Search** (🔍) icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	No
Bill After Date	Used to specify the bills after the specific date.	No
Fee	Used to specify the amount of flat fee. **Note:** This field appears when you select the billable charge line type in the **Billable Charge Line Type** field.	Yes
Bill To Account Override	Used to specify the account to which the bill is override. **Note:** On clicking the **Search** (🔍) icon, the **Account Search** window appears. On specifying the account, the description of the account appears corresponding to the **Bill To Account Override** field.	Yes

5. Enter the required details in the **Main** section.

Copyright © 2026, Oracle and/or its affiliates.

6. Define characteristics for a one-time flat fee pricing rule, if required.
7. Click **Save**.
   The one-time flat fee pricing rule for a bill group is defined.

> **Note:** A billable charge is created and assigned to the one-time flat fee pricing rule.

Defining a Characteristic for a One-Time Flat Fee Pricing Rule

Prerequisites

To define a characteristic for a one-time flat fee pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a one-time flat fee pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

   The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the one-time flat fee pricing rule.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the one-time flat fee pricing rule.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the one-time flat fee pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the one-time flat fee pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the one-time flat fee pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the one-time flat fee pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the one-time flat fee pricing rule.

Editing a One-Time Flat Fee Pricing Rule of a Bill Group

Prerequisites

To edit a one-time flat fee pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleFlatFees** defined for one-time flat fee pricing rule.

Procedure

To edit a one-time flat fee pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for one-time flat fee whose one-time flat fee pricing rule details you want to edit.

   The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information for bill group.
   - **Main** - Displays the basic details of the one-time flat fee pricing rule.

Copyright © 2026, Oracle and/or its affiliates.

- **Characteristics** - Used to define the characteristics for the one-time flat fee pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Runout	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item.	Not applicable
Charge Date	Used to specify the flat fee charge date.	Yes
Billable Charge Line Type	Displays the billable charge line type.	Not applicable
Bill After Date	Displays the bills after the specific date.	Not applicable
Fee	Used to specify the amount of flat fee. **Note:** This field appears when you have added the billable charge line type in the **Billable Charge Line Type** field.	Yes
Bill To Account Override	Displays the account to which the bill is override.	Not applicable
Billable Charge Information	Displays the billable charge information.	Not applicable

4. Modify the basic details of the one-time flat fee pricing rule, if required.
5. Add, edit, or remove characteristics for a one-time flat fee pricing rule, if required.
6. Click **Save**.

Note: If **Fee** or **Charge Date** is modified then it checks whether bill segment is created, and if it is created then,

- If it is in frozen or pending cancelled status then,
  - Bill segment and billable charge is cancelled and new billable charge is created.
- If it is in any other status other than cancelled then,
  - Bill segment is deleted and existing billable charge billable charge is updated.

Charge Date is set to billable charge start date and end date.

When characteristics are updated, billable charge is updated with those characteristics.

The changes made to a one-time flat fee pricing rule for a bill group are saved.

Adding the Recurring Flat Fee Specific Data in a Pricing Rule Type

Procedure

To add the recurring flat fee specific data in a pricing rule type:

1. Ensure that the **Flat Fees - Specific Additional Data** section is expanded when you are *d*efining or editing a pricing rule type.

   The **Flat Fees - Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Segment Cancel Reason	Used to indicate the bill segment cancel reason.	No
Recurring Fee	Used to specify whether the recurring flat fee or one-time flat fee is required. **Note:** This field cannot be edited.	No
Recurring Method	Used to indicate whether recurring bill segments must be created at the intervals defined in the bill period or at the invoice frequency. The valid values are: • Bill Period • Frequency **Note:** This field appears when you select the checkbox for **Recurring Fee** field. This field cannot be edited.	Yes (Conditional) **Note:** This field is required when you are specifying whether the recurring flat fee is based on bill period or frequency.

   The **Flat Fees - Specific Additional Data** section contains the following sub-section:

   The **Bill Periods** sub-section contains the following column in a grid:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
Bill Period	Used to indicate the bill period that you want to use for specifying the intervals at which the recurring bill segments must be created.	Yes

2. Enter the required details in the **Flat Fees - Specific Additional Data** section.
3. Enter the details in the **Bill Periods** sub-section, if required.

> **Note:** This sub-section appears when you have selected **Bill Period** as**Recurring Method**.

4. Click **Save**.
   The Flat Fees - Specific Additional data is added in the pricing rule type.

Editing a Bill Period Based Recurring Flat Fee Pricing Rule Type

Prerequisites

To edit a bill period based recurring flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

Procedure

To edit a bill period based recurring flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *P*ricing rule type whose details you want to edit.

   The **Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the flat fee pricing rule type.
   - **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the parent pricing rule type.
   - **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type
   - **Algorithms** - Used to define the algorithms used for the pricing rule type.

Copyright © 2026, Oracle and/or its affiliates.

- **Additional Data** - Used to specify the additional information about the pricing rule type.
- **Price Items** - Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** - Used to define the price item parameters in the pricing rule type.
- **Characteristics** - Used to define the characteristics for the pricing rule type.
- **Billable Charge Line Types** - Used to define the pricing rule type for billable charge line type.
- **Flat Fees - Specific Additional Data** - Used to specify the flat fees specific for additional data.
    - **Bill Periods** - Used to specify the bill periods for specifying intervals for creating recurring bill segments.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Pricing Rule Business Object	Used to indicate the pricing rule business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Flat Fee Pricing Rule	Yes
Business Object	Indicates the pricing rule type business object for flat fees.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to select the checkbox if the pricing rule type is primary. **Note:** This field is not enabled for selection if the **Pricing Rule Type Category** is **Flat Fees**.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • Flat Fees	Yes

Tip: Alternatively, you can edit the details of a bill period based recurring flat fees pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

Defining a Bill Period Based Recurring Flat Fee Pricing Rule for a Bill Group

Prerequisites

To define a bill period based recurring flat fee pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleFlatFees** defined for bill period based recurring flat fee pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Billable Charge Line Type defined in the application.

Procedure

To define a bill period based recurring flat fee pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy *w*hose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. **Note:** You can create a bill period based recurring flat fee pricing rule using the **Pricing Rule Type** for flat fees.	Yes
Policy Status	Used to indicate the policy status for pricing rule. The valid values are:	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• In Force/Active • Runout	

4. Click **OK**.

The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** - Displays the customer information for bill group.
- **Main** - Used to specify basic details about the bill period based recurring flat fee pricing rule.
- **Characteristics** - Used to define the characteristics for the bill period based recurring flat fee pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Runout	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
Charge Start Date	Used to specify the flat fee charge start date.	Yes
Billable Charge Line Type	Used to specify the billable charge line type. **Note:** On clicking the **Search** (🔍) icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	No
Charge End Date	Used to specify the flat fee charge end date.	No
Bill Period	Used to indicate the bill period for flat fee.	Yes
Fee	Used to specify the amount of flat fee. **Note:** This field appears when you select the billable charge line type in the **Billable Charge Line Type** field.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Bill To Account Override	Used to specify the account to which the bill is override. **Note:** On clicking the **Search** (🔍) icon, the **Account Search** window appears. On specifying the account, the description of the account appears corresponding to the **Bill To Account Override** field.	Yes

5. Enter the required details in the **Main** section.
6. Define characteristics for a bill period based recurring flat fee pricing rule, if required.
7. Click **Save**.
   The bill period based recurring flat fee pricing rule for a bill group is defined.

Note: A billable charge is created and assigned to the bill period based recurring flat fee pricing rule.

Adding the Recurring Flat Fee Specific Data in a Pricing Rule Type

Procedure

To add the recurring flat fee specific data in a pricing rule type:

1. Ensure that the **Flat Fees - Specific Additional Data** section is expanded when you are *d*efining or editing a pricing rule type.

   The **Flat Fees - Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Segment Cancel Reason	Used to indicate the bill segment cancel reason.	No
Recurring Fee	Used to specify whether the recurring flat fee or one-time flat fee is required. **Note:** This field cannot be edited.	No
Recurring Method	Used to indicate whether recurring bill segments must be created at the intervals defined in the bill period or at the invoice frequency. The valid values are: • Bill Period • Frequency	Yes (Conditional) **Note:** This field is required when you are specifying whether the recurring flat fee is based on bill period or frequency.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the checkbox for **Recurring Fee** field. This field cannot be edited.	

The **Flat Fees - Specific Additional Data** section contains the following sub-section:

The **Bill Periods** sub-section contains the following column in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Bill Period	Used to indicate the bill period that you want to use for specifying the intervals at which the recurring bill segments must be created.	Yes

2. Enter the required details in the **Flat Fees - Specific Additional Data** section.
3. Enter the details in the **Bill Periods** sub-section, if required.

Note: This sub-section appears when you have selected **Bill Period** as**Recurring Method**.

4. Click **Save**.
   The Flat Fees - Specific Additional data is added in the pricing rule type.

Editing a Frequency Based Recurring Flat Fee Pricing Rule Type

Prerequisites

To edit a frequency based recurring flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

Procedure

To edit a frequency based recurring flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.

Copyright © 2026, Oracle and/or its affiliates.

3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *P*ricing rule type whose details you want to edit.

   The **Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the flat fee pricing rule type.
   - **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the parent pricing rule type.
   - **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type
   - **Algorithms** - Used to define the algorithms used for the pricing rule type.
   - **Additional Data** - Used to specify the additional information about the pricing rule type.
   - **Price Items** - Used to define the price items assigned to the pricing rule type.
   - **Price Item Parameters** - Used to define the price item parameters in the pricing rule type.
   - **Characteristics** - Used to define the characteristics for the pricing rule type.
   - **Billable Charge Line Types** - Used to define the pricing rule type for billable charge line type.
   - **Flat Fees - Specific Additional Data** - Used to specify the flat fees specific for additional data.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Pricing Rule Business Object	Used to indicate the pricing rule business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Flat Fee Pricing Rule	Yes
Business Object	Indicates the pricing rule type business object for flat fees.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to select the checkbox if the pricing rule type is primary. **Note:** This field is not enabled for selection if the **Pricing Rule Type Category** is **Flat Fees**.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are:	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • Flat Fees	

Tip: Alternatively, you can edit the details of a frequency based recurring flat fees pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit or remove related pricing rule types from the primary pricing rule type, if required.

Note:

Related Pricing Rule Types section appears when the pricing rule type is primary.

This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

7. Modify the details of transaction field mapping, if required.

Note:

Transaction Field Mapping section appears when the pricing rule type is primary.

This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

8. Define, edit or remove algorithms from the pricing rule type, if required.
9. Modify additional data for the pricing rule type, if required.

Note: This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

10. Define, edit or remove price items from the pricing rule type, if required.
11. Define, edit or remove price items from the pricing rule type, if required.
12. Define, edit, or remove characteristics of the pricing rule type, if required.
13. Define, edit or remove billable charge line types for the flat fees pricing rule type, if required.
14. Modify flat fees - specific additional data in the pricing rule type, if required.

Note: This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

15. Click **Save**.
    The changes made to the frequency based recurring flat fee pricing rule type are saved.

Deleting a Frequency Based Recurring Flat Fee Pricing Rule Type

Procedure

To delete a frequency based recurring flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding *t*o the frequency based recurring flat fee pricing rule type that you want to delete.
   A message appears confirming whether you want to delete the frequency based recurring flat fee pricing rule type.

   Note: You can delete a frequency based recurring flat fee pricing rule type when it is not yet used in the system.

   Tip: Alternatively, you can delete a frequency based recurring flat fee pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.
5. Click **OK**.
   The frequency based recurring flat fee pricing rule type is deleted.

Defining a Frequency Based Recurring Flat Fee Pricing Rule for a Bill Group

Prerequisites

To define a frequency based recurring flat fee pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleFlatFees** defined for frequency based recurring flat fee pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Billable Charge Line Type defined in the application.

Procedure

To define a frequency based recurring flat fee pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, *o*r policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. **Note:** You can create a frequency based recurring flat fee pricing rule using the **Pricing Rule Type** for flat fees.	Yes
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: • In Force/Active • Runout	Yes

4. Click **OK**.

The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** - Displays the customer information for bill group.
- **Main** - Used to specify basic details about the frequency based recurring flat fee pricing rule.
- **Characteristics** - Used to define the characteristics for the frequency based recurring flat fee pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Runout	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
Charge Start Date	Used to specify the flat fee charge start date.	Yes
Billable Charge Line Type	Used to specify the billable charge line type. **Note:** On clicking the **Search** (🔍) icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	No
Charge End Date	Used to specify the flat fee charge end date.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Frequency	Used to indicate the frequency for flat fee.	Yes
Fee	Used to specify the amount of flat fee. **Note:** This field appears when you select the billable charge line type in the **Billable Charge Line Type** field.	Yes
Bill To Account Override	Used to specify the account to which the bill is override. **Note:** On clicking the **Search** (🔍) icon, the **Account Search** window appears. On specifying the account, the description of the account appears corresponding to the **Bill To Account Override** field.	Yes

5. Enter the required details in the **Main** section.
6. Define characteristics for a frequency based recurring flat fee pricing rule, if required.
7. Click **Save**.
   The frequency based recurring flat fee pricing rule for a bill group is defined.

Note: A billable charge is created and assigned to the frequency based recurring flat fee pricing rule.

Defining a Characteristic for a Frequency Based Recurring Flat Fee Pricing Rule

Prerequisites

To define a characteristic for a frequency based recurring flat fee pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a frequency based recurring flat fee pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

   The **Characteristics** section contains the following columns in a grid:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the frequency based recurring flat fee pricing rule.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the frequency based recurring flat fee pricing rule.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the frequency based recurring flat fee pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the frequency based recurring flat fee pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the frequency based recurring flat fee pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the frequency based recurring flat fee pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the frequency based recurring flat fee pricing rule.

Editing a Frequency Based Recurring Flat Fee Pricing Rule of a Bill Group

Prerequisites

To edit a frequency based recurring flat fee pricing rule of a bill group, you should have:

Copyright © 2026, Oracle and/or its affiliates.

- Business Object **C1-PricingRuleFlatFees** defined for frequency based recurring flat fee pricing rule.

Procedure

To edit a frequency based recurring flat fee pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy *w*hose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for frequency based recurring flat fee whose frequency based recurring flat fee pricing rule details you want to edit.

   The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information for bill group.
   - **Main** - Displays the basic details of the frequency based recurring flat fee pricing rule.
   - **Characteristics** - Used to define the characteristics for the frequency based recurring flat fee pricing rule.

   The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Runout	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item.	Not applicable
Charge Start Date	Used to specify the flat fee charge start date.	Yes
Charge End Date	Used to specify the flat fee charge end date.	Yes
Billable Charge Line Type	Displays the billable charge line type.	Not applicable
Frequency	Indicates the frequency for flat fee.	Not applicable
Fee	Used to specify the amount of flat fee. **Note:** This field appears when you have added the billable charge line type in the **Billable Charge Line Type** field.	Yes
Bill To Account Override	Displays the account to which the bill is override.	Not applicable
Billable Charge Information	Displays the billable charge information.	Not applicable

4. Modify the basic details of the frequency based recurring flat fee pricing rule, if required.

Copyright © 2026, Oracle and/or its affiliates.

5. Add, edit, or remove characteristics for a frequency based recurring flat fee pricing rule, if required.
6. Click **Save**.

Note:

If **Fee** is modified then,

- The frequency based recurring flat fee is saved as a one time charge process.

If **Charge Start Date** is modified then it checks whether bill segment is already created for a period which is not available for the updated duration then,

- Bill segment is deleted and existing billable charge is updated.
- For recurring flat fee bill segments are not created or is in cancelled status.

Note: The modified charge start date should be a future date and not past date.

The changes made to a frequency based recurring flat fee pricing rule for a bill group are saved.

Ancillary Pricing

The Administrative Services Only (ASO) provider may process some adhoc charges with respect to preventive care, vaccination, diagnostic, and so on. These adhoc charges may also occur due to some corrections in the claim transactions which are already billed to the customer. Oracle Revenue Management and Billing enables you to process and bill these ancillary transactions to the self-funded employer.

The system enables you to create an ancillary charge in either of the following ways:

- Create a pass through charge without markup or markdown (i.e. flat charge).
- Create a pass through charge with a flat or percentage based markup or markdown.
- Create a rate based charge using the rate defined in the ancillary pricing and the service quantity specified in the ancillary transaction. You can also apply markup or markdown to a rate based charge.

You can use any custom mechanism or the file upload utility in ORMB to upload the ancillary transactions. The pricing for the ancillary transactions can be defined using the ancillary pricing rules. You can define an ancillary pricing rule at the parent customer and bill group levels. The ancillary pricing rule at the bill group level takes precedence over the ancillary pricing rule at the parent customer level. You can define the ancillary pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define an ancillary pricing rule using an ancillary pricing rule type. It is the ancillary pricing rule type which helps the system to determine:

Copyright © 2026, Oracle and/or its affiliates.

- Business object using which the ancillary pricing rule should be created in the system.
- Whether it is the primary pricing rule type from where the related pricing rule types will inherit the transaction field mapping details.

  Note: You must select the **Primary** option while defining an ancillary pricing rule type. On selecting the **Primary** option, the **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear in the **Ancillary Pricing Rule Type** screen.
- Rule type which indicates the rules that should be executed to determine whether the related pricing rule type is eligible for deriving the transaction legs.
- Transaction fields from where the data from the ancillary transaction should be stored in the respective fields (for example, the data from the **UDF_CHAR_1** transaction field must be stored in the **Parameter 1** field which will be used for deriving the bill group and pricing).
- Algorithm which should be triggered for validating an ancillary transaction.

  Note: An algorithm type for validating an ancillary transaction is not shipped with the product. You can create a custom algorithm type, if required.
- Algorithm which should be triggered for deriving the bill group, parent customer, and policy for an ancillary transaction.

  Note: You must create an algorithm using the **C1_TXNBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event.
- Algorithm which should be triggered for deriving the account and price item for an ancillary transaction.

  Note: You must create an algorithm using the **C1_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event.
- Algorithm which should be triggered for determining the bill after date.

  Note: You must create an algorithm using the **C1_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event.
- Pricing rule post-processing algorithm which should be triggered once the effective ancillary pricing rule is derived.

  Note: A pricing rule post-processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.
- Additional generic information, such as:
  - Whether the price items included in the ancillary pricing rule type are eligible for specific stop-loss and aggregate stop-loss.
  - Whether the price items included in the ancillary pricing rule type are eligible for level funding.
  - Whether the ancillary charges should be written off when the bill is generated in the post runout period of the policy. In this case, a write-off adjustment is created against the respective bill segment during the post bill completion. The write-off adjustment is created using the post runout write-off adjustment type which is specified in the ancillary pricing rule type.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the related pricing rule type should be considered for deriving the transaction legs.
  - Value which the output parameter in the rule should return when the price item and related pricing rule type in the ancillary pricing rule type should be considered for processing.
- Price items for which you can define ancillary pricing rules using the ancillary pricing rule type.
- Rate options that you can use while defining the pricing for the ancillary price items.
- Different type of account to which a price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.

Copyright © 2026, Oracle and/or its affiliates.

- Price item parameters based on which you want to define the price item pricing. Two price item parameters are mandatory in the ancillary pricing rule type - one which stores the billable charge line type from the ancillary transaction and another which stores the pricing arrangement from the ancillary transaction. The following pricing arrangements are supported in the ancillary pricing rule:
  - Pass Through Charge Without Markup and Markdown
  - Pass Through Charge With Markup and Markdown
  - Rate Based Charge Without Markup and Markdown
  - Rate Based Charge With Markup and Markdown

  Note: The price item parameters (for example, BCHGLINETYPE and PRICINGARRANGEMENT) which you include in the ancillary pricing rule type must be defined in the **Billable Charge Line Type Parameter** and **Pricing Arrangement Parameter** option types of the **C1-ASOBLLNG** feature configuration, respectively.
- Additional ancillary-specific information, such as:
  - Identifiers which help to determine whether the ancillary transaction is eligible for billing for not.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.
  - Billable charge line type using which you want to create billable charges for markup and markdown.
  - Rule type which indicates the rules which should be executed to determine whether the markup or markdown calculation line is eligible for billing.
  - How the system should interpret the value stored in the pricing arrangement price item parameter (i.e. whether the value means the ancillary charge should be a pass through charge without markup or markdown, pass through charge with markup or markdown, or rate based charge with or without markup or markdown). Accordingly, the system will search for the pricing in the effective ancillary pricing rule where:
    - Billable charge line type matches the one specified in the ancillary transaction
    - Line defined for the billable charge line type has the pricing arrangement as mentioned in the ancillary transaction
  - Line item which indicates the SQI using which the ancillary charge should be created. You need to specify the line item for each pricing arrangement which is defined in the ancillary pricing rule type.

Once an ancillary pricing rule type is defined, you can create ancillary pricing rules using the ancillary pricing rule type. While defining an ancillary pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option which you want to use while defining the ancillary pricing.
- Whether you want to define the pricing for a pass through charge without markup or markdown. If you select the **Pass Through without Markup or Markdown** option, you cannot define the pricing for a pass through charge with markup or markdown and the pricing for rate based charge with or without markup or markdown in the ancillary pricing rule. However, if the **Pass Through without Markup or Markdown** option is not selected, you can define pricing for different billable charge line types which can be with markup or markdown or which can be rate based with or without markup or markdown. In addition, if the **Pass Through without Markup or Markdown** option is not selected, by default, the system will define the pricing for a pass through charge without markup or markdown. Depending on the billable charge line type and pricing arrangement information in the ancillary transaction, the system will accordingly fetch the appropriate pricing for billing the ancillary charge. For example, if the ancillary transaction contains BCLT1 as the billable charge line type and PASSMK as the pricing arrangement and the effective ancillary pricing rule contains the following pricing:

Ancillary Pricing	Billable Charge Line Type	Pricing Arrangement	Rate	Pricing Strategy	Markup Amount	Markdown Amount
AP1	BCLT0	Pass Through with Markup or Markdown	-	Markup	$10	-

Copyright © 2026, Oracle and/or its affiliates.

Ancillary Pricing	Billable Charge Line Type	Pricing Arrangement	Rate	Pricing Strategy	Markup Amount	Markdown Amount
AP2	BCLT1	Pass Through with Markup or Markdown	-	Markdown	-	$5
AP3	BCLT2	Rate Based without Markup or Markdown	$5	-	-	-
AP4	BCLT3	Rate Based with Markup or Markdown	$5	Markup	$10	-
AP5	BCLT4	Rate Based with Markup or Markdown	$5	Markdown	-	$5
AP6	-	Pass Through without Markup or Markdown	-	-	-	-

In this case, the system will use the AP2 pricing defined in the ancillary pricing rule. The system will markdown the SQI with the specified amount (i.e. $5).

- Whether the billable charge line type is eligible for billing or not. Accordingly, the system will create billable charge for the ancillary transaction.

In addition, while defining an ancillary pricing rule for a bill group, you need to indicate the policy status for which the ancillary pricing rule is applicable. You can also specify a pricing group while defining an ancillary pricing rule for a bill group. Once an ancillary pricing rule is created, the system creates multiple price assignments in a price list and assigns the price list to the bill group.

Defining an Ancillary Pricing Rule Type

Prerequisites

To define an ancillary pricing rule type, you should have:

- Ancillary pricing rule type business object defined in the application.
- Ancillary pricing rule business object defined in the application.

Procedure

To define an ancillary pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create an ancillary pricing rule type. The valid values are: • Aggregate Stop-Loss (ASL) Pricing Rule Type • Ancillary Pricing Rule Type • Claim Pricing Rule Type • Discount Arrangement Pricing Rule Type • Flat Fee Pricing Rule Type	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Level Funded (LF) Pricing Rule Type • Retention Type Claim Based Pricing Rule Type • Retention Type Enrollment Based Pricing Rule Type • Specific Stop-Loss (SSL) Pricing Rule Type **Note:** You must select the **Ancillary Pricing Rule Type** option from the **Pricing Rule Type Business Object** list while defining an ancillary pricing rule type.	

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Ancillary Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
5. Click **OK**.

The **Ancillary Pricing Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the ancillary pricing rule type.
- **Related Pricing Rule Types** - Used to indicate the non-primary pricing rule types which should inherit the transaction field mapping details from the ancillary pricing rule type. You can add a pricing rule type which belongs to the following category:

  a. Specific Stop Loss
  b. Aggregate Stop Loss
  c. Level Funding

  Note: You can use any of the above specified pricing rule types as the related pricing rule type in an ancillary pricing rule type.
- **Transaction Field Mapping** - Used to map the transaction fields in a ancillary transaction to the appropriate fields in the ancillary pricing rule type. This helps the system to determine the field where the data from the transaction field must be stored. This data is then used in the system for various reasons, such as for deriving a bill group and pricing, deriving an effective related pricing rule, and so on.

  Note: The **Billing Eligibility Identifier** field is required when you are defining the **Transaction Field Mapping** for an ancillary pricing rule type.
- **Algorithms** - Used to associate the algorithms with an ancillary pricing rule type.
- **Additional Data** - Used to specify additional information about the ancillary pricing rule type.
- **Price Items** - Used to add the price items for which you can define the ancillary pricing rules using the ancillary pricing rule type.
- **Price Item Parameters** - Used to add the price item parameters based on which you want to define the price item pricing.

  Note: There are two price item parameters that are mandatory in the ancillary pricing rule type:
  - A price item which stores the billable charge line type from the ancillary transaction.
  - A price item which stores the pricing arrangement from the ancillary transaction.
- **Characteristics** - Used to define the characteristics for an ancillary pricing rule type.
- **Ancillary-Specific Additional Data** - Used to define the ancillary-specific additional data in an ancillary pricing rule type.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** Following fields are required when you are defining the **Ancillary-Specific Additional Data** for the ancillary pricing rule type.
>
> - **Billing Eligibility Identifier Value**
> - **Billing Non-Eligibility Identifier Value**

- **Pricing Arrangements** - Used to define the following pricing arrangements that are used while defining an ancillary pricing rule type.
  - **Pass Through (Markup or Markdown Optional)**
  - **Pass Through Without Markup or Markdown**
  - **Rate Based (Markup or Markdown Optional)**

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the ancillary pricing rule type.	Yes
Description	Used to specify the description for the ancillary pricing rule type.	Yes
Detailed Description	Used to specify additional information about the ancillary pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create the ancillary pricing rule. The valid values are: • Aggregate Stop-Loss (ASL) Pricing Rule • Ancillary Pricing Rule • Claim Pricing Rule • Discount Arrangement Pricing Rule • Flat Fee Pricing Rule • Level Funded (LF) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule **Note:** You must select the **Ancillary Pricing Rule** option from the **Pricing Rule Business Object** list while defining an ancillary pricing rule type.	Yes
Business Object	Indicates the business object using which you are defining the ancillary pricing rule type.	Not applicable
Status	Used to indicate the status of the ancillary pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to indicate whether the ancillary pricing rule type is a primary pricing rule type.	No
Pricing Rule Type Category	Used to indicate the category to which the ancillary pricing rule type belongs. The valid value are: • Aggregate Stop-Loss • Ancillary	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Claim • Discount Arrangement • Flat Fees • Level Funded • Retention Type Claim Based • Retention Type Enrollment Based • Specific Stop-Loss **Note:** You must select the **Ancillary** option from the **Pricing Rule Type Category** list while defining an ancillary pricing rule type.	

6. Enter the required details in the **Main** section.
7. Select the **Ancillary Pricing Rule** option from the **Pricing Rule Business Object** list.
8. Select the **Primary** option in the **Main** section.
   The **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear.
9. Select the **Ancillary** option from the **Pricing Rule Type Category** list.
10. Add the related pricing rule types in the ancillary pricing rule type, if required.
11. Map the transaction fields of an ancillary transaction to the appropriate fields in the ancillary pricing rule type.
12. Associate the following algorithms with the ancillary pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Bill Group Derivation	C1_TXNBGDRV	C1_TXNBGDRV	Derive Bill Group
Account and Price Item Derivation	C1_ACCPRIDRV	C1_ACCPRIDRV	Account and Price Item Derivation
Bill After Date Determination	C1_BAFTDRV	C1_BAFTDRV	Bill After Date Determination

13. Define additional data for an ancillary pricing rule type, if required.
14. Add the required price items for which you can define ancillary pricing rules using the ancillary pricing rule type.
15. Add the price item parameters based on which you want to define the ancillary pricing, if required.
16. Define the characteristics for an ancillary pricing rule type, if required.
17. Define the required ancillary-specific additional data in the ancillary pricing rule type.
18. Define the pricing arrangements for an ancillary pricing rule type, if required.
19. Click **Save**.
    The ancillary pricing rule type is defined.

Adding a Related Pricing Rule Type in an Ancillary Pricing Rule Type

The **Administrative Services Only (ASO)** feature is designed in such a way that all non-primary pricing rule types should inherit the transaction field mapping details from a primary pricing rule type. These non-primary pricing rule types are added in a primary pricing rule type as the related pricing rule types.

Prerequisites

To add related pricing rule types in an ancillary pricing rule type, you should have:

- Aggregate Stop Loss pricing rule type defined in the application.
- Specific Stop Loss pricing rule type defined in the application.
- Level Funding pricing rule type defined in the application.
- Rule types defined in the application (where the rule type usage is set to **Related Pricing Rule Type Eligibility**)

Procedure

To add related pricing rule type in an ancillary pricing rule type:

1. Ensure that the **Related Pricing Rule Types** section is expanded when you are defining or editing an ancillary pricing rule type.

   Note: The **Related Pricing Rule Types** section appears when the **Primary** option is selected in the **Main** section.

   The **Related Pricing Rule Types** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the order in which the related pricing rule type should be invoked.	Yes (Conditional) **Note:** This field is required when you are adding a related pricing rule type in the ancillary pricing rule type.
Pricing Rule Type	Used to indicate the non-primary pricing rule type which should inherit the transaction field mapping details from the claim pricing	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	rule type. You can add a non-primary pricing rule type of the following categories in the claim pricing rule type: **a.** Retention Type Claim Based **b.** Discount Arrangement **c.** Specific Stop-Loss **d.** Aggregate Stop-Loss **e.** Level Funding	**Note:** This field is required when the corresponding **Sequence** field is specified for the related pricing rule type.
	Note: We recommend you to add the required related pricing rule types in the above specified sequence. Otherwise, erroneous results might occur. The **Search** (🔍) icon appears corresponding to the **Pricing Rule Type** field.. On clicking the **Search** (🔍) icon corresponding to the **Pricing Rule Type** field, the **Pricing Rule Type Search** window appears. On specifying the pricing rule type, the description of the pricing rule type appears corresponding to the **Pricing Rule Type** field.	
Eligibility Rule Type	Used to specify the rule type which indicates the rules that should be executed to determine whether the related pricing rule type is eligible for deriving the transaction legs.	No
	Note: The list includes only those rule types where the rule type usage is set to **Related Pricing Rule Type Eligibility**.	

2. Enter the required details in the **Related Pricing Rule Types** section.
3. If you want to define more than one related pricing rule type for the ancillary pricing rule type, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a related pricing rule type from the ancillary pricing rule type, click the **Delete** (🗑) icon corresponding to the related pricing rule type.

4. Click **Save**.
   The related pricing rule type is added in the ancillary pricing rule type.

Mapping the Transaction Field in an Ancillary Pricing Rule Type

Prerequisites

To map the transaction field mapping for an ancillary pricing rule type, you should have:

Copyright © 2026, Oracle and/or its affiliates.

- Transaction fields defined in the application

Procedure

To map the transaction field mapping for an ancillary pricing rule type:

1. Ensure that the **Transaction Field Mapping** section is expanded when you are *d*efining an ancillary pricing rule type.

> **Note:**
> This section appears when you have chosen the **Primary** option from the **Main** section.

The **Transaction Field Mapping** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to map to a transaction field which indicates the external system from where the ancillary transaction is received. The information stored in this field is then used for deriving the bill group, parent customer, and policy for the ancillary transaction.	Yes
Parameter 1	Used to map to a transaction field which indicates the employee attribute based on which you want to derive the bill group.	Yes
Parameter 2	Used to map to a transaction field which indicates the employee attribute based on which you want to derive the bill group.	Yes (Conditional) **Note:** This field is required when you want to derive the bill group using multiple employee attributes.
Parameter 3	Used to map to a transaction field which indicates the employee attribute based on which you want to derive the bill group.	Yes (Conditional) **Note:** This field is required when you want to derive the bill group using multiple employee attributes.
Parameter 4	Used to map to a transaction field which indicates the employee attribute based on which you want to derive the bill group.	Yes (Conditional) **Note:** This field is required when you want to derive the bill group using multiple employee attributes.
Incurred Date	Used to map to a transaction field which contains the date when the health insurance service was availed by the employee.	Yes (Conditional) **Note:** This field is required when you want to fetch an effective specific stop-loss or aggregate stop-loss pricing rule for the claim transaction.
Paid Date	Used to map to a transaction field which contains the date when the claim amount was paid to the employee.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: This field is required when you want to fetch an effective specific stop-loss or aggregate stop-loss pricing rule for the ancillary transaction.
Source of Funds	Used to map to a transaction field which indicates the source of funding. At present, this field is not used in the system.	No
Composite	Used to map to a transaction field which indicates whether the employee is covered under the composite insurance.	No
Claim Disposition	Used to map to a transaction field which helps to determine how the claim based fees should be charged for the positive and negative claim transactions.	Yes (Conditional) **Note:** This field is required while calculating the retention type claim based fees for the claim transaction.
Provider's Tax Identification Number	Used to map to a transaction field which states the health insurance provider's identification number. The information stored in this field is then used to determine whether the health insurance provider is excluded from the specific stop-loss coverage.	Yes (Conditional) **Note:** This field is required while calculating specific stop-loss for the ancillary transaction.
Member ID	Used to map to a transaction field which states the member's identification number. The information stored in this field is then used to determine whether the member is excluded from the specific stop-loss coverage.	Yes (Conditional) **Note:** This field is required while calculating specific stop-loss for the ancillary transaction.
Main Subscriber ID	Used to map to a transaction field which states the main subscriber's identification number. The information stored in this field is then used to determine whether the main subscriber is excluded from the specific stop-loss coverage.	Yes (Conditional) **Note:** This field is required while calculating specific stop-loss for the ancillary transaction.
Run-in Identifier	Used to map to a transaction field which indicates whether the ancillary transaction is a run-in ancillary transaction.	Yes (Conditional) **Note:** This field is required while defining a ancillary pricing rule type.
Runout Identifier	Used to map to a transaction field which indicates whether the ancillary transaction is a runout ancillary transaction. At present, this field is not used in the system.	No
Third Party Identifier	Used to specify the third party identifier to determine that the ancillary transaction is received from an external	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	source system while defining an ancillary pricing rule type.	
Coverage Start Date	Used to map to a transaction field which indicates the coverage start date. The information stored in this field is then used to fetch an effective retention type enrollment based pricing rule for a non-retroactive enrollment transaction.	Yes (Conditional) **Note:** This field is required while defining a retention type enrollment based pricing rule type.
Coverage End Date	Used to map to a transaction field which indicates the coverage end date. The information stored in this field is then used to fetch an effective retention type enrollment based pricing rule for a retroactive enrollment transaction.	Yes (Conditional) **Note:** This field is required while defining a retention type enrollment based pricing rule type.
Retroactivity Indicator	Used to map to a transaction field which indicates whether the enrollment transaction is a retroactive enrollment transaction.	Yes (Conditional) **Note:** This field is required while defining a retention type enrollment based pricing rule type.
Network Indicator	Used to map to a transaction field which indicates whether the service provider is in network or out of network.	Yes (Conditional) **Note:** This field is required while defining a discount arrangement pricing rule.
Covered Charge Amount	Used to map to a transaction field which indicates the amount which is covered for the employee in the policy.	Yes (Conditional) **Note:** This field is required while calculating the discount using a discount guarantee pricing rule.
Discount Savings Amount	Used to map to a transaction field which indicates the amount which is offered as the discount to the service provider.	Yes (Conditional) **Note:** This field is required while calculating the discount using a discount guarantee or discount share pricing rule.
Accumulation Only Identifier	Used to map to a transaction field which indicates that the ancillary transaction should only be used for calculating charges for the accumulated products, such as Specific Stop-Loss, Aggregate Stop-Loss, and so on. This means that the system should not derive the ancillary transaction leg. Instead, it should only derive the specific stop-loss or aggregate stop loss transaction legs for the ancillary transaction.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Billing Eligibility Identifier	Used to map to a transaction field which indicates whether the ancillary transaction is eligible for billing.	Yes (Conditional) **Note:** This field is required while defining an ancillary pricing rule type.
Transaction Upload Date	Used to map to a transaction field which indicates the date when the transaction was uploaded in the external system. The system does not derive the discount transaction leg when the transaction upload date is later than the settlement date.	Yes (Conditional) **Note:** This field is required while calculating the discount using a discount guarantee or discount share pricing rule.

Note:

The **Search** (🔍) icon appears corresponding to each field. On clicking the **Search** icon, the **Transaction Field Search** window appears.

On specifying the transaction field, the description of the transaction field appears corresponding to the respective field.

2. Enter the required details in the **Transaction Field Mapping** section.
3. Click **Save**.
   The transaction fields are mapped to the appropriate fields in the claim pricing rule type.

Associating an Algorithm with an Ancillary Pricing Rule Type

Prerequisites

To associate algorithms with an ancillary pricing rule type, you should have:

- Algorithms defined using the **C1_TXNBGDRV**, **C1_ACCPRIDRV**, and **C1_BAFTDRV** algorithm types.

Procedure

To associate an algorithm with an ancillary pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing an ancillary pricing rule type.

   The **Algorithms** section contains the following columns in a grid:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicate the system event when you want to invoke the algorithm. The valid values are: • **Account and Price Item Derivation** - Used to derive the account and price item for the ancillary transaction. • **Accumulation Billable Charge Post Proc** - Used to introduce a custom logic after creating discount share or discount guarantee billable charges. This algorithm is invoked in the **C1-BCDA (Create Billable Charge for Discount)** batch. • **Accumulation Billable Charge Pre Proc** - Used to introduce a custom logic before creating discount share or discount guarantee billable charges. This algorithm is invoked in the **C1-BCDA (Create Billable Charge for Discount)** batch. • **Accumulation Post Processing** - Used to introduce a custom logic after accumulating the discount share or discount guarantee amount. This algorithm is invoked in the **C1-ACDA (Accumulate Discount Arrangement)** batch. • **Accumulation Pre Processing** - Used to introduce a custom logic before accumulating the discount share or discount guarantee amount. This algorithm is invoked in the **C1-ACDA (Accumulate Discount Arrangement)** batch. • **Bill After Date Determination** - Used to determine the bill after date for the ancillary transaction. • **Bill Group Derivation** - Used to derive the bill group, parent customer, and policy for the ancillary transaction. • **Pricing Rule Post Processing** - Used to introduce a custom logic once the effective ancillary pricing rule is derived for the ancillary transaction. • **Transaction Validation** - Used to introduce a custom validation for the ancillary transaction. **Note:** You must specify **Account and Price Item Derivation** and **Bill Group Derivation** algorithms when you are associating the algorithms with an ancillary pricing rule type.	Yes **Note:** This field is required when you are associating an algorithm with the ancillary pricing rule type.
Sequence	Used to specify the order in which the algorithms with the same system event should be executed.	Yes (Conditional) **Note:** This field is required when you are associating an algorithm with the ancillary pricing rule type.
Algorithm	Used to indicate the algorithm that you want to execute on the system event.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	Note: Once you select the system event, the **Search** (🔍) icon appears corresponding to the **Algorithm** field. On clicking the **Search** (🔍) icon, the **Algorithm Search** window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the **Algorithm** field.	**Note:** This field is required when you are associating an algorithm with the ancillary pricing rule type.

2. Enter the required details in the **Algorithms** section:

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Account and Price Item Derivation	C1_ACCPRIDRV	Yes	Account and Price Item Derivation (for the Claim Pricing Rule Type Category) on page 3475
Accumulation Billable Charge Post Proc	- **Note:** An accumulation billable charge post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.	No	-
Accumulation Billable Charge Pre Proc	- **Note:** An accumulation billable charge pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.	No	-
Accumulation Post Processing	- **Note:** An accumulation post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.	No	-
Accumulation Pre Processing	- **Note:** A accumulation pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.	No	-

Defining Additional Data in an Ancillary Pricing Rule Type

Procedure

To define additional data in an ancillary pricing rule type:

1. Ensure that the **Additional Data** section is expanded when you are defining *or* editing an ancillary pricing rule type.

Note: This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

The **Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Specific Stop-Loss	Used to indicate whether the price items included in the ancillary pricing rule type are eligible for specific stop-loss. The valid values are: • Yes • No	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Pricing Rule Type Category** is either **Ancillary**, **Claim**, **Retention Type Claim Based**, or **Retention Type Enrollment Based**. If you do not specify the value for this field, by default, it is set to **No**	
Eligible for Level Funding	Used to indicate whether the price items included in the ancillary pricing rule type are eligible for level funding. The valid values are: • Yes • No	No
Eligible for Minimum Premium Program	Used to indicate whether price items included in the ancillary pricing rule type are eligible for minimum premium program. The valid values are: • Yes • No	No
Run-in Identifier Value	Used to specify the identifier value to determine whether the ancillary transaction is received during the run-in period of the policy.	No
Third Party Identifier Value	Used to specify the identifier value to determine whether the ancillary transaction is received from an external source system.	No
Accumulation Only Identifier Value	Used to specify the value when received in an ancillary transaction indicates that the ancillary transaction should only be considered for calculating specific stop-loss and aggregate stop-loss. In such case, a transaction leg is not derived for the ancillary transaction.	No
Eligible for Write-Off in Post Runout	Used to indicate whether the pricing rule is eligible for Write-Off in Post Runout or not. The valid values are: • Yes • No For more information, refer to the Write-Off Charges during Post Runout section. **Note:** By default, the value is set to **No**.	No
Post Runout Write-Off Adjustment Type	Used to specify the adjustment type using which the post runout write-off adjustments must be created.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Eligible for Write-Off in Post Runout** field is set to **Yes**. The **Search** (🔍) icon appears corresponding to the **Post Runout Write-Off Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Eligible for Write-Off in Post Runout** field.	**Note:** This field is required when the **Eligible for Write-Off in Post Runout** field is set to **Yes**.
Rule Based Price Item Eligibility Field	Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing. For more information, refer to the Price Item Eligibility on page 3465. **Note:** This field appears when the **Eligible for Write-Off in Post Runout** field is set to **Yes**. The **Search** (🔍) icon appears corresponding to the **Rule Based Price Item Eligibility Field** field. On clicking the **Search** icon, the **Field Search** window appears. On specifying the field name, the description of the field name appears corresponding to the **Rule Based Price Item Eligibility Field**.	No
Rule Based Related Pricing Rule Type Eligibility Field	Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the related pricing rule type should be considered for deriving the transaction legs. For more information, refer to Related Pricing Rule Type Eligibility on page 3464. **Note:** The **Search** (🔍) icon appears corresponding to the **Rule Based Related Pricing Rule Type Eligibility Field** field. On clicking the **Search** icon, the **Field Search** window appears. On specifying the field, the description of the field appears corresponding to the **Rule Based Related Pricing Rule Type Eligibility Field** field.	No
Rule Based Eligibility Value	Used to specify the value which the output parameter in the rule should return when the price item and related	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	pricing rule type in the ancillary pricing rule type should be considered for processing.	**Note:** This field is required when a value is specified in the **Rule Based Price Item Eligibility Field** or **Rule Based Related Pricing Rule Type Eligibility Field** field.

2. Enter the required details in the **Additional Data** section.
3. Click **Save**.
   The additional data is defined in the ancillary pricing rule type.

How to define an ancillary pricing rule type	Defining an Ancillary Pricing Rule Type on page 3263
How to edit an ancillary pricing rule type	Editing an Ancillary Pricing Rule Type on page 3285

Adding a Price Item in an Ancillary Pricing Rule Type

Prerequisites

To add a price item in an ancillary pricing rule type, you should have:

- Price item defined in the application
- Rate options defined in the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in an ancillary pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining *or* editing an ancillary pricing rule type.

   The **Price Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item that you want to include in an ancillary pricing rule type.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>Note:
The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search (🔍) icon, the Price Item Search window appears.
On specifying the price item, the description of the price item appears corresponding to the Price Items field.</td><td>Note: This field is required when you are adding a rate option and bill to account in the discount arrangement pricing rule type.</td></tr>
<tr><td>Rate Option</td><td>Used to indicate one or more rate options which are valid for a price item.
On clicking the Add (📄) icon, the following field appears in a grid:
<table><tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr><tr><td>Rate Option</td><td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td><td>Yes</td></tr></table>Note:
If you want to define more than one rate option to the price item in an ancillary pricing rule type, click the Add (+) icon.
However, if you want to remove a price item from an ancillary pricing rule type, click the Delete (🗑) icon corresponding to the Rate Option field.</td><td>Not applicable</td></tr>
<tr><td>Bill To Account</td><td>Used to indicate a order in which the account should be considered while deriving a transaction leg.
On clicking the Add (📄) icon, the following fields appear in a grid:
<table><tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr><tr><td>Priority</td><td>Used to specify the order in which the invoice type is considered for a price item.</td><td>Yes</td></tr><tr><td>Invoice Type</td><td>Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 13 section.
Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears.</td><td>Yes</td></tr></table></td><td>Not applicable</td></tr>
</table>

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you want to define more than one invoice type to the price item in an ancillary pricing rule type, click the **Add** (+) icon. However, if you want to remove a invoice type from the price item in an ancillary pricing rule type, click the **Delete** (🗑) icon corresponding to the **Priority** field.	
Eligibility Rule Type	Used to indicate the rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.	No

2. Enter the required details in the **Price Items** section.
3. If you want to define more than one price item for an ancillary pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from an ancillary pricing rule type, click the **Delete** (🗑) icon corresponding to the price item.

4. Click **Save**.
   The price items are added for an ancillary pricing rule type.

Adding a Price Item Parameter in an Ancillary Pricing Rule Type

Prerequisites

To add a price item parameter in an ancillary pricing rule type, you should have:

- Parameters defined in the application where parameter usage is set to **Price Item**.
- Parameters associated with the price item.
- **Billable Charge Line Type Parameter** and **Pricing Arrangement Parameter** defined in the application.
- **Billable Charge Line Type Parameter** and **Pricing Arrangement Parameter** set as option types in the **C1-ASOBLLNG** feature configuration.
- Transaction fields defined in the application.

Procedure

To add a price item parameter in an ancillary pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing an ancillary pricing rule type.

   The **Price Item Parameters** section contains the following fields in a grid:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining an ancillary pricing for the price item. **Note:** The **Search** (🔍) icon appears corresponding to the **Price Item Parameter** field. On clicking the **Search** (🔍) icon corresponding to the **Price Item Parameter** field, the **Parameter Search** window appears. On specifying the parameter, the description of the price item parameter appears corresponding to the **Price Item Parameter** field.	Yes (Conditional) **Note:** This field is required while adding a price item parameter in an ancillary pricing rule type.
Transaction Field	Used to map to a transaction field which contains the parameter value. **Note:** The **Search** (🔍) icon appears corresponding to the **Transaction Field** field. On clicking the **Search** (🔍) icon corresponding to the **Transaction Field** field, the **Transaction Field Search** window appears. On specifying the transaction field, the description of the transaction field appears corresponding to the **Transaction Field**.	Yes (Conditional) **Note:** This field is required while adding a price item parameter in an ancillary pricing rule type.
Eligible for Specific Stop-Loss	Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the specific stop-loss or aggregate stop-loss pricing rules at the bill group level.	No
Eligible for Level Funding	Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the level funding pricing rules at the bill group level.	No
Eligible for Minimum Premium Program	Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the minimum premium program pricing rules at the bill group level.	No

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one price item parameter for an ancillary pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from an ancillary pricing rule type, click the **Delete** (🗑) icon corresponding to the price item parameter.

4. Click **Save**.
   The price item parameter is added in the ancillary pricing rule type.

Defining the Ancillary-Specific Data in an Ancillary Pricing Rule Type

Procedure

To add the ancillary-specific additional data in an ancillary pricing rule type:

1. Ensure that the **Ancillary-Specific Additional Data** section is expanded when you are defining *o*r editing an ancillary pricing rule type.

   The **Ancillary-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billing Eligibility Identifier Value	Used to specify the billing eligibility identifiers which help to determine whether the ancillary transaction is eligible for billing.	Yes (Conditional) **Note:** This field is required when you are adding the ancillary-specific additional data.
Billing Non-Eligibility Identifier Value	Used to specify the billing non-eligibility identifiers which help to determine whether the ancillary transaction is eligible for billing.	Yes (Conditional) **Note:** This field is required when you are adding the ancillary-specific additional data.
Rule Based Markup or Markdown Eligibility Field	Used to specify the transaction field that you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing. **Note:** On clicking the **Search** (🔍) icon corresponding to the **Rule Based Markup or Markdown Eligibility Field** field, the **Field Search** window appears. On specifying the field, the description of the field appears corresponding to the **Rule Based Markup or Markdown Eligibility Field** field.	Yes (Conditional) **Note:** This field is required when the Markup or Markdown Eligibility Rule Type field is specified.
Markup or Markdown Billable Charge Line Type	Used to specify the billable charge line type using which you want to create the billable charges for markup and markdown.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: On clicking the **Search** (🔍) icon corresponding to the **Markup or Markdown Billable Charge Line Type** field, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Markup or Markdown Billable Charge Line Type** field.	
Markup or Markdown Eligibility Rule Type	Used to specify the markup or markdown eligibility rule type for the ancillary pricing rule type. The valid values are: • Rule 1 **Note:** The **Markup or Markdown Eligibility Rule Type** list includes only those rule-types where the rule type eligibility is **ASO Billing Mark Up / Down Eligibility**.	No

2. Enter the required details in the **Ancillary-Specific Additional Data** section.
3. Define pricing arrangements for ancillary-specific data in the **Ancillary-Specific Additional Data** section.
4. Click **Save**.
   The ancillary-specific additional data is added in the ancillary pricing rule type.

Defining Pricing Arrangements in an Ancillary Pricing Rule Type

Prerequisites

To define pricing arrangements in an ancillary pricing rule type, you should have:

- Line Items where category is set to **Ancillary**, as defined in the application.

Procedure

To add pricing arrangements in an ancillary pricing rule type:

1. Ensure that the **Ancillary-Specific Data** and **Pricing Arrangements** section is expanded when you are *d*efining or editing a pricing rule type.

   The **Pricing Arrangements** section contains the following columns in a grid:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
Pricing Arrangement Identifier	Used to indicate the pricing arrangement identifier that you can define through an ancillary pricing rule type. The valid values are: • Pass Through (Markup or Markdown Optional) • Pass Through without Markup or Markdown • Rate Based (Markup or Markdown Optional)	Yes (Conditional) **Note:** This field is required when you are defining pricing arrangements for an ancillary pricing rule type.
Pricing Arrangement Identifier Value	Used to specify the value for the pricing arrangement identifier. The valid values are: • Pass Through (Markup or Markdown Optional) • Pass Through without Markup or Markdown • Rate Based (Markup or Markdown Optional)	Yes (Conditional) **Note:** This field is required when you are defining pricing arrangements for an ancillary pricing rule type.
Line Item	Used to indicate the line item which using the billable charge is created for a pricing arrangement.	Yes (Conditional) **Note:** This field is required when you are defining pricing arrangements for an ancillary pricing rule type.

2. Enter the required details in the **Pricing Arrangements** section.
3. If you want to define more than one pricing arrangement in an ancillary pricing rule type, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a pricing arrangement from the ancillary pricing rule type, click the **Delete** (🗑) icon corresponding to the pricing arrangement identifier.

4. Click **Save**.
   The pricing arrangements are defined for the ancillary pricing rule type.

Defining a Characteristic for a Ancillary Pricing Rule Type

Prerequisites

To define a characteristic for an ancillary pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for an ancillary pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining an ancillary pricing rule type.

   The **Characteristics** section contains the following fields in a grid:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule Type**.	**Note:** This field is required when you are defining a characteristic for an ancillary pricing rule type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for an ancillary pricing rule type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for an ancillary pricing rule type, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a characteristic from an ancillary pricing rule type, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristic is defined for an ancillary pricing rule type.

Editing an Ancillary Pricing Rule Type

Prerequisites

To edit an ancillary pricing rule type, you should have:

- Ancillary pricing rule type business object defined in the application.
- Ancillary pricing rule business object defined in the application.

Procedure

To edit an ancillary pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.

Copyright © 2026, Oracle and/or its affiliates.

2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to an ancillary pricing rule type whose details you want to edit.

   The **Ancillary Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the ancillary pricing rule type.
   - **Related Pricing Rule Types** - Used to indicate the non-primary pricing rule types which should inherit the transaction field mapping details from the ancillary pricing rule type. You can add a pricing rule type which belongs to the following category:

     a. Retention Type Claim Based
     b. Discount Arrangement
     c. Specific Stop-Loss
     d. Aggregate Stop-Loss
     e. Level Funding

     Note: We recommend you to add the required related pricing rule types in the above specified sequence. Otherwise, erroneous results might occur.
   - **Transaction Field Mapping** - Used to map the transaction fields in a claim transaction to the appropriate fields in the claim pricing rule type. This helps the system to determine the field where the data from the transaction field must be stored. This data is then used in the system for various reasons, such as for deriving a bill group and pricing, deriving an effective related pricing rule, and so on.

     Note: The **Billing Eligibility Identifier** field is required when you are defining the **Transaction Field Mapping** for the ancillary pricing rule type.
   - **Algorithms** - Used to associate the algorithms with the ancillary pricing rule type.
   - **Additional Data** - Used to specify the additional information about the ancillary pricing rule type.
   - **Price Items** - Used to add the price items for which you can define the ancillary pricing rules using the ancillary pricing rule type.
   - **Price Item Parameters** - Used to add the price item parameters based on which you want to define the price item pricing.

     Note: There are two price item parameters that are mandatory in the ancillary pricing rule type:
     - A price item which stores the billable charge line type from the ancillary transaction.
     - A price item which stores the pricing arrangement from the ancillary transaction.
   - **Characteristics** - Used to define the characteristics for the ancillary pricing rule type.
   - **Ancillary-Specific Additional Data** - Used to define ancillary-specific additional data.

     Note: Following fields are required when you are defining the **Ancillary-Specific Additional Data** for the ancillary pricing rule type.
     - **Billing Eligibility Identifier Value**
     - **Billing Non-Eligibility Identifier Value**
   - **Pricing Arrangements** - Used to define the pricing arrangements for the ancillary pricing rule type.
     - **Pass Through (Markup or Markdown Optional)**
     - **Pass Through Without Markup or Markdown**
     - **Rate Based (Markup or Markdown Optional)**

   The **Main** section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the ancillary pricing rule type.	Not applicable
Description	Used to specify the description for an ancillary pricing rule type.	Yes
Detailed Description	Used to specify additional information about the ancillary pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create an ancillary pricing rule. The valid value is: • Aggregate Stop-Loss (ASL) Pricing Rule • Ancillary Pricing Rule • Claim Pricing Rule • Discount Arrangement Pricing Rule • Flat Fee Pricing Rule • Level Funded (LF) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule **Note:** You must select the **Ancillary Pricing Rule** option from the **Pricing Rule Business Object** list while defining an ancillary pricing rule type.	Yes
Business Object	Indicates the ancillary pricing rule type business object using which you are defining the ancillary pricing rule type.	Not applicable
Status	Used to indicate the status of the ancillary pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to indicate whether the ancillary pricing rule type is a primary pricing rule type. **Note:** This field is disabled when you select the **Flat Fees** option from the **Pricing Rule Type Category** list.	No
Pricing Rule Type Category	Indicates the category to which the ancillary pricing rule type belongs. The valid values are: • Aggregate Stop-Loss • Ancillary • Claim • Discount Arrangement • Flat Fees • Level Funded • Retention Type Claim Based • Retention Type Enrollment Based • Specific Stop-Loss	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You must select the **Ancillary** option from the **Pricing Rule Type Category** list while defining an ancillary pricing rule type.	

Tip: Alternatively, you can edit the details of an ancillary pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for ancillary.

5. Modify the required details in the **Main** section, if required.
6. Ensure that the **Ancillary Pricing Rule** option is selected from the **Pricing Rule Business Object** list.
7. Ensure that the **Primary** option is selected in the **Main** section.
8. Add, edit, or remove the related pricing rule types in the ancillary pricing rule type, if required.

Note: The **Related Pricing Rule Types** section appears when the **Primary** option is selected from the **Main** section.

9. Modify the transaction field mapping in the ancillary pricing rule type, if required.

Note: The **Transaction Field Mapping** section appears when the **Primary** option is selected from the **Main** section.

10. Add, edit, or remove algorithms from the ancillary pricing rule type, if required.

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRIDIS	C1_ACCPRIDIS	Account and Priceitem Derivation For Discount Arrangement

11. Edit generic additional data for the ancillary pricing rule type, if required.
12. Add, edit, or remove price items in an ancillary pricing rule type, if required.
13. Add, edit, or remove price item parameters in an ancillary pricing rule type, if required.
14. Add, edit, or remove characteristics in an ancillary pricing rule type, if required.
15. Modify the ancillary-specific data in an ancillary pricing rule type, if required.
16. Modify the pricing arrangements in an ancillary pricing rule type, if required.
17. Click **Save**.
    The changes made to the ancillary pricing rule type are saved.

Deleting an Ancillary Pricing Rule Type

Procedure

To delete an ancillary pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding *t*o the ancillary pricing rule type that you want to delete.
   A message appears confirming whether you want to delete the ancillary pricing rule type.

   Note: You can delete an ancillary pricing rule type when it is not yet used in the system.

   Tip: Alternatively, you can delete an ancillary pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.
5. Click **OK**.
   The ancillary pricing rule type is deleted.

Defining an Ancillary Pricing Rule for a Parent Customer

Prerequisites

To define an ancillary pricing rule for a parent customer, you should have:

- Pricing rule type where the category is set to **Ancillary**.
- Price items associated with the ancillary pricing rule type.
- Pricing arrangements defined in the ancillary pricing rule type.

Procedure

To define an ancillary pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer *w*hose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. Click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the parent customer for whom you want to create an ancillary pricing rule type.	Not applicable
Person Type	Indicates the type of the parent customer. The valid value is: • Parent Customer **Note:** If you are defining the pricing rule type for the parent customer, then the person type will be **Parent Customer**.	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create an ancillary pricing rule.	Yes

5. Select the required pricing rule type in the respective field.
6. Click **OK**.

The **Ancillary Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** - Displays the information about the parent customer. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom you are defining an ancillary pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you are defining an ancillary pricing rule.

- **Main** - Used to specify basic details about the ancillary pricing rule. In addition it allows you to define pricing for different types of ancillary charges. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define an ancillary pricing rule.	Yes
Pricing Start Date	Used to specify the date from when the ancillary pricing rule is effective. **Note:** The pricing start date cannot be later than the pricing end date.	Yes
Pricing End Date	Used to specify the date till when the ancillary pricing rule is effective. **Note:** The pricing end date cannot be earlier than the pricing start date.	No
Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes
Pass Through without Markup or Markdown	Used when markup or markdown should not be calculated for the ancillary charge. **Note:** This field is enabled when the **Rate Option** field is selected.	Yes (Conditional) **Note:** This field is required when you want to calculate the ancillary pricing without the pass through charge while defining the ancillary pricing rule.

The following fields appear when the **Pass Through without Markup or Markdown** option is not selected. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the ancillary pricing rule.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Billable Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	**Note:** This field is required while creating a pricing arrangement with or without rate based billable charge line type.
Billable	Used to indicate whether the ancillary charge is eligible for billing or not.	Yes (Conditional) **Note:** This field is required while creating a pricing arrangement with or without the **Markup or Markdown Type** field and the **Rate Based** option.
Rate Based	Used to indicate whether the ancillary charge is calculated using a particular rate.	Yes (Conditional) **Note:** This field is required while creating a pricing arrangement with the **Rate Based** option.
Rate	Used to indicate the rate for calculating the ancillary charge. **Note:** This field is enabled when the **Rate Based** option is selected.	Yes (Conditional) **Note:** This field is required when **Rate Based** option is selected.
Pricing Strategy	Used to indicate the price calculation strategy which should be applied while defining the ancillary pricing rule. The valid values are: • Markup • Markdown • None	No
Markup or Markdown Type	Used to indicate the type of charge which should be applied while defining the ancillary pricing rule. The valid values are: • Flat Amount • Percentage **Note:** This field is enabled when the **Pricing Strategy** field is selected.	Yes (Conditional) **Note:** This field is required when the **Pricing Strategy** field is selected.
Amount / Percentage	Used to specify the actual proportion of the charge that should be applied while defining the ancillary pricing rule.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: This field is required when the **Markup or Markdown Type** field is selected.

- **Characteristics** - Used to define the characteristics for an ancillary pricing rule.

7. Enter the required details in the **Main** section.
8. Define the characteristics for an ancillary pricing rule, if required.
9. Click **Save**.
   The ancillary pricing rule is defined for a parent customer.

Defining a Characteristic for an Ancillary Pricing Rule

Prerequisites

To define a characteristic for an ancillary pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**).

Procedure

To define a characteristic for an ancillary pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an ancillary pricing rule.

   The **Characteristics** section contains the following fields:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the ancillary pricing rule.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the ancillary pricing rule.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the ancillary pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the ancillary pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the ancillary pricing rule, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a characteristic from the ancillary pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for an ancillary pricing rule.
