Third-Party Content, Products, and Services Disclaimer

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

About this Document

This document lists and describes various features in Oracle Revenue Management and Billing which can be used in the health insurance domain. It describes all screens related to these features and explains how to perform various tasks through these screens.

Intended Audience

This document is intended for the following audience:

- End-users
- System Administrators
- Consulting Team
- Implementation Team
- Development Team

Organization of the Document

Each insurance feature is described in a separate chapter in this document. All screens related to the feature and tasks related to the screen are explained in each chapter. This document contains the following chapters:

Chapter Number	Chapter Name	Chapter Description
Chapter 1	Leveraging User Experience Features	Describes various features that enhance the user experience.
Chapter 2	Fully-Insured Group Customer Management	Explains how to create customers and accounts for billing the fully-insured group health plans.
Chapter 3	Self-Funded Customer Management	Explains how to create customers and accounts for billing the self-funded plans.
Chapter 4	Health Insurance Business Management	Describes how to setup the pricing and billing engines for the following three lines of health insurance business - **Fully-Insured Group Health Insurance**, **Self-Funded Group Health Insurance**, and **Individual Health Insurance**.
Chapter 5	Fully-Insured Group Health Insurance	Explains how to design the pricing and billing models for the fully-insured group health insurance business in ORMB. It also explains how to create policies, plans, and memberships for the fully-insured group health insurance.
Chapter 6	Self-Funded Group Health Insurance	Explains how to design the pricing and billing models for the self-funded group health insurance business in ORMB. It also explains how to create policies for the self-funded group health insurance.
Chapter 7	Individual Health Insurance	Explains how to design the pricing and billing models for the individual health insurance business in ORMB. It also explains how to create health products, plans, and memberships for the individual health insurance.
Chapter 8	Customer Registration	Describes how to create a person, account, policy, and policy plan through a customer registration object.

Chapter Number	Chapter Name	Chapter Description
Chapter 9	Customer 360° View	Explains how to view in-depth information about the person, account, or policy in the **Customer 360° View** screen. It explains how to create sort records for bill groups and derivation and pricing parameters for bill groups. It explains how to view the pricing rules of a parent customer and the pricing rules defined for a policy of a bill group. It also explains how to define, edit, and delete the different types of pricing rules of a parent customer and bill group. In addition, it explains how to view the detailed information about the bill.
Chapter 10	Health Product 360° View	Explains how to view in-depth information about the health product or health plan in the **Health Product 360° View** screen.
Chapter 11	Pricing Management	Explains the different concepts of the pricing model supported in the application. It explains how to define a parameter, price item, price list, and tiering criterion. It also explains how to define pricing for a price item, how to assign a price item to a price list, and how to assign a price list to a person or account.
Chapter 12	Division	Describes the different types of division. It also explains how to define a division.
Chapter 13	Approval Workflow	Describes the approval workflow process and explains how to perform various tasks involved in the process. It explains how to implement the approval workflow process for an entity, such as account, person, and so on. It explains how to define an approval workflow group, approval workflow chain, approval workflow criterion type, approval workflow group chain linkage, approval workflow reasons, and approval workflow settings.
Chapter 14	Rules Engine	Describes how the rules engine function. It explains how to define, execute, and maintain business rules separately from the application code.
Chapter 15	Alternate Sequential Bill Numbers	Explains how to generate alternate sequential bill numbers which are either unique throughout the system or within the division.
Chapter 16	Transaction Feed Management	Describes the transaction feed management process and its sub-processes. It explains how to execute each sub-process. It also explains how to view the details of various transactions uploaded in the system. In addition, it explains how to create a transaction source, transaction record type, transaction aggregation rule, aggregation schedule, and disaggregation request.
Chapter 17	Upload Validated Payment Data	Explains how to upload and validate the payment records before you move them to the staging area. It also explains how to create payment events and payments using the validated payment records.
Chapter 18	Freeze Payments on Notification	Explains how the system freezes or cancels the automatic payments, voids the refund requests and cancels the refund

Chapter Number	Chapter Name	Chapter Description
		adjustments when the review comments are received from the auto clearing house.
Chapter 19	Trial Billing	Explains how to generate trial bills before the actual bill is generated for an account. It also explains how to view the trial bills in the system.
Chapter 20	GL Account Validation	Explains how to enable the static or dynamic GL account validation feature.
Chapter 21	Upload Validated Adjustment Data	Explains how to validate and upload an adjustment data file and create adjustments through an adjustment upload request.
Chapter 22	Payment Request	Explains how to create or transfer payments through a payment request.
Chapter 23	Account Receivable Central	Explains how to use the **Account Receivable Central** screen to search for a bill which you need to offset against another bill. It explains how to perform single, mass, and cross currency offset against one or more bills. It also enables you to create a hold request, refund request, write off request, and dispute request through this screen.
Chapter 24	Offset Request	Explains how to offset the bill's outstanding amount against one or more bills through an offset request. It explains how to create the offset request types and offset requests in the system.
Chapter 25	Funding Request	Describes how to change the automatic payment amount through the funding process. It explains how to create the funding request types and funding requests in the system.
Chapter 26	Refund/Write Off Request	Describes how to refund a payment or credit bill or bill line item and write off a debit bill or bill line item through a refund or write off request, respectively. It explains how to create the refund or write off request types and refund or write off requests in the system.
Chapter 27	Hold Request	Describes how to hold some processes and/or bills at the account or person level for a time period through a hold request. It explains how to create the hold request types and hold requests in the system.
Chapter 28	Delinquency Central	Explains how to track the overdue processes of a delinquent account through the **Delinquency Central** screen. It also explains how to create a hold request, payment arrangement, and promise to pay for a delinquent account from this screen.
Chapter 29	Upload Request	Explains how to do the following through an upload request: • Update bill cycle of accounts • Update contract riders in contracts • Create hold requests, refund requests, write off requests, or billable charges • Reinstate the policies • Create sort records for bill groups • Create derivation and pricing parameters for bill groups

Chapter Number	Chapter Name	Chapter Description
Chapter 30	General Ledger (GL) Accounting Template	Describes how to override the distribution code used for creating FT GL entries using the **GL Accounting Template** feature. It explains how to create the GL accounting templates for each process and sub processes combination.
Chapter 31	Payment Agreement Request	Describes how to schedule payments in installments for a set of unpaid bills of an account through a payment agreement request. It explains how to create the payment agreement request types and payment agreement requests in the system.
Chapter 32	Inbound Message	Explains how to create the customer and membership inbound messages through the web services. It explains the XML format in which the customer and membership data should be available while calling the respective web service. It also explains how to create the inbound message types and how to process the inbound messages in the system.
Chapter 33	Upload Lockbox Payment and Remittance Advices	Explains how to upload lockbox payment and remittance advices received in the **Electronic Data Exchange (EDI) 820** format. It also explains the format in which EDI 820 flat file should be uploaded in the system.
Chapter 34	Deferred Revenue Recognition	Describes how to recognize the deferred revenue in the system. It explains how to create a deferred revenue recognition template for each distribution code and contract type combination. It also explains how to generate the schedule for a deferred revenue recognition. In addition, it explains how to edit the deferred revenue recognition schedule.
Chapter 35	Reconciliation	Describes how to reconcile pay instructions received from the external system against the bill segments based on the account identifier, policy number, plan number, member identifier, and coverage period combination. It explains the CSV and EDI 820 file formats in which you can upload the pay instructions. It also explains how to create reconciliation types, reconciliations, discrepancy report types, and discrepancy reports in the system.
Chapter 36	Self-Funded Pricing	Explains how to create the following in the system: • Claim, Specific Stop-Loss, Aggregate Stop-Loss, Retention Type Claim Based, Retention Type Enrollment Based, One-Time Flat Fees, Bill Period Based Recurring Flat Fees, Frequency Based Recurring Flat Fees, Ancillary, Discount, and Level-Funded pricing rule types • Claim, Specific Stop-Loss, Aggregate Stop-Loss, Retention Type Claim Based, Retention Type Enrollment Based, Ancillary, and Level-Funded pricing rules for the parent customers and the policies of the bill groups • One-Time Flat Fees, Bill Period Based Recurring Flat Fees, and Frequency Based Recurring Flat Fees pricing rules for the policies of the bill groups • Discount pricing rules for the parent customers
Chapter 37	Stop-Loss	Explains how to accumulate the specific stop-loss and aggregate stop-loss and create billable charges for them.

Copyright © 2026, Oracle and/or its affiliates.

Chapter Number	Chapter Name	Chapter Description
Chapter 38	Self-Funded Billing	Explains the billing process for the self-funded plans.
Chapter 39	Fully-Insured Pricing	Explains how to create the following in the system: • Age Based, Tier Based, and Pass-Through Billable Charge pricing rule types • Age Based and Tier Based pricing rules for the fully-insured group policy plans
Chapter 40	Fully-Insured Billing	Explains how the system creates the fully-insured pass-through billable charges.
Chapter 41	Off-Process Request	Describes how to amend the agreed limits, funds, or calculated amounts of the accumulation products within the policy period through an off-process request. It explains how to create the off-process request types and off-process requests in the system.
Chapter 42	Individual Health Insurance Pricing	Explains how to define the pricing for different services offered in a health plan.
Chapter 43	Individual Health Insurance Billing	Explains how the system calculates premium for an individual using the fully-insured pricing and new born business rules.
Chapter 44	Entity Audit	Explains how to use the entity audit framework to track various actions, such as add, update, and delete for an entity.
Chapter 45	Invoice Request	Describes how to create adhoc regular and trial bills for an account through an invoice request for the fully-insured group and fully-insured individual business. It explains how to create the invoice request types and invoice requests in the system.
Chapter 46	Hold Request Creation, Modification, Release, and View Through Inbound Web Service	Lists various business services using which you can create, edit, and release a hold request and view the details of a hold request.
Chapter 47	Hold Direct Debit Instruction	Describes how to hold a direct debit (i.e. automatic payment) for a bill until the confirmation is received from the customer. It explains how to create the auto pay request types and auto pay requests in the system.
Chapter 48	Garbling Customer Information	Explains how to garble the personal information of a customer, such as the customer name, address, email ID, social security number or any other identifier, birth date, gender, and so on, on receiving the data erasure request from the customer.
Chapter 49	Deleting Inactive Customer or Closed Account Information	Explains how to delete all records of a person or account from the system.
Chapter 50	Automatic Refund	Explains how the automatic refunds are created in the system.
Chapter 51	Payment Distribution	Explains how the system distributes payments against the unpaid bills of the account or statement.
Chapter 52	Mass Payment Transfer	Explains how the system facilitates mass payment transfer using the **File Upload Interface** utility.

Copyright © 2026, Oracle and/or its affiliates.

Chapter Number	Chapter Name	Chapter Description
Chapter 53	Reporting	Explains how to create reports in various formats using the Apache FOP (Formatting Objects Processor) framework. It also lists and describes various FOP reports that are shipped with the product.
Chapter 54	Automatic Refund/Write Off	Explains how to automatically refund/write off for an account when a fully-insured group policy or individual membership is terminated.
Chapter 55	Delinquency Management	Explains how to manage delinquency for the individual health care business.
Chapter 56	On Demand Billing	Explains how to generate adhoc bills using the on demand billing process. It explains how to create a file type and file group, how to upload a usage data file, how to generate adhoc bills for a file group, and how to freeze the adhoc bills of a file group.
Chapter 57	Accounts Payable Inbound and Outbound	Describes how to extract the accounts payable (i.e. refund adjustments) in a flat file. You can then share the flat file with an external system (i.e. Accounts Payable Processing System). The external system will then accordingly make the refund payments to the customers as appropriate.
Chapter 58	Generic Extract from Datasets	Describes how to extract high-volume transactional data from the pre-defined datasets. This feature enables bulk extraction and is specifically recommended for extracting large quantities of data for downstream consumption in data warehouses or data lakes.
Chapter 59	Transaction Anomaly Detection	Explains machine learning techniques to analyze historical transaction data and detect anomalies within current datasets for preventing fraud and ensuring security in transactions.
Chapter 60	Billing Dashboard for Healthcare	Describes how the billing dashboard grants users and managers of billing operations with a centralized and interactive view of billing performance along with day-to-day operational status.
Appendix A	Most Commonly Used Tasks	Lists and describes some of the common tasks that you may perform while using the application.
Appendix B	Administration	Describes how to create UI maps and set various feature configurations in the system.

Conventions

The following conventions are used across this document:

Convention	Meaning
boldface	Boldface indicates graphical user interface elements associated with an action, or terms defined in the text.
italic	Italic indicates a document or book title.
`Monospace`	Monospace indicates information that an end-user needs to enter in the application.

Document Name	Description
Oracle Revenue Management and Billing Version 26.1.0.0.0 Release Notes	Lists the new features and enhancements made in this release. It contains high-level information about the supported platforms, framework upgrade, supported upgrades, unsupported integrations, and media pack downloads. It also lists the discontinued features, bug fixes, and known issues in this release.
Oracle Revenue Management and Billing Version 26.1.0.0.0 Release Overview Guide	Describes the new features, enhancements, user interface level changes, and database level changes made in this release. The new features and enhancements are classified under three categories – Generic (which is intended for both domains), Financial Services, and Insurance. It lists and describes enhancements made in the framework. It also encloses the ORMB and OUAF deprecation notices and enables you to access the product documentation.
Oracle Utilities Application Framework Business Process Guide	Explains how to get acquainted with the user interface. It explains the different types of pages or portals that you may come across in the application. It explains how to set the user preferences and how to create, manage, assign, and complete a To Do in the application. It also explains how to submit reports and view historic reports in the application.
Oracle Utilities Application Framework Administrative Guide	Explains the general, security, user, designing, developing, and scripting options available in Oracle Utilities Application Framework (OUAF). It describes the user interface, database, configuration, and reporting tools available in OUAF. In addition, it provides information about the application viewer, how to configure incoming and outgoing messages, and how to integrate Lightweight Directory Access Protocol (LDAP), Oracle Identity Manager (OIM), and Batch Scheduler with Oracle Revenue Management and Billing (ORMB).
Oracle Revenue Management and Billing Business Process Guide	Explains how to maintain the demographic, geographic, and financial objects (i.e. accounts) of a customer. It explains how to manage a customer's bills, payments, adjustments, credits, collections processing, statements and deposits in Oracle Revenue Management and Billing (ORMB). It also describes the financial transactions, case management, sales and marketing functions, rates engine, quotations, loans, how to monitor and execute job streams, and how to manage workflows, notifications and overdue processing. In addition, it explains how to extract the data from the system using an extract template. The features listed and described in this document can be used in both financial services and health insurance domains.
Oracle Revenue Management and Billing Administrative Guide	Explains how to configure various features and functionalities in Oracle Revenue Management and Billing (ORMB). For example, billing, payments, adjustments, financial transactions, credits, collections processing, loans, service credits, background processes, quotations, case management, security, overdue processing, batch scheduler, workflow and notifications, etc. The information available in this document can be used in both financial services and health insurance domains.

Chapter 1

Leveraging User Experience Features

Topics:

- Unified Search Feature
- Enabling Mandatory Field Indicator

This chapter describes how to use the following features that enhance the user experience:

- **Unified Search Feature** - Helps to quickly access the screens by eliminating number of clicks rather than using the navigation menus.
- **Enabling Mandatory Field Indicator** - Helps to identify the fields which are mandatory while defining the respective entity.

Unified Search Feature

The **Search** field in the **Application** toolbar allows you to search for business entities (such as persons and accounts) in addition to the standard search for menu items. For example, you can search for a person using its name or primary identifier and account using its primary identifier. The unified search feature is a simplified version of search that allows you to search for records using free form search text or hint codes. For more complex queries, you may navigate to the corresponding advanced search screens.

You can use the following hints to search for the respective entities:

Hint	Description	Example
/	Used to search for a menu item to navigate directly to the corresponding page or BPA script rather than using the menus to navigate to the desired page or script.	/Customer Registration
n:	Used to search for a customer using the person or customer name. Here, you can specify the percentage (%) symbol as a wildcard character. The customers that meet the search criteria are shown in the drop-down list. Once you select a customer from the list, the **Customer 360° Information** screen appears with the details of the respective customer.	n: james n: leo%do
id:	Used to search for a customer using its primary identifier. Here, you cannot specify the percentage (%) symbol as a wildcard character. The customers that meet the search criteria are shown in the drop-down list. Once you select a customer from the list, the **Customer 360° Information** screen appears with the details of the respective customer.	id: 344234423
aid:	Used to search for an account using its primary identifier. Here, you cannot specify the percentage (%) symbol as a wildcard character. The accounts that meet the search criteria are shown in the drop-down list. Once you select an account from the list, the **Customer 360° Information** screen appears with the details of the respective account.	aid: 0586096368

If you want to search for a person or account using any additional search criteria, you can directly access the **Customer 360° View** screen by clicking the **Advanced Search** link in the **Search** field.

Enabling Mandatory Field Indicator

Until now, the mandatory field indicator (i.e., the Asterisk symbol (*)) was not displayed in the user interfaces. This resulted in bad user experience and increased the lead time to complete a process in the application. Now, to overcome

Copyright © 2026, Oracle and/or its affiliates.

these issues, you can configure the system such that mandatory field indicator '*' is displayed for the required fields in the user interface.

To enable the mandatory field indicator for the required fields in the user interface, you need to set the `com.oracle.ouaf.ui.disableRequiredFieldIndicators` property in the `spl.template.properties` file to **False**. Note that, by default, the `com.oracle.ouaf.ui.disableRequiredFieldIndicators` property is set to **True**. On changing the value of this property from **True** to **False**, the mandatory field indicator (*) appears next to the required fields in the user interface.

On enabling the mandatory field indicator, the **Asterisk** (*) symbol appears corresponding to the required fields on almost all screens throughout the application. There is no way to disable it for a specific screen. However, there are some exceptions on enabling the mandatory field indicator:

- The **Asterisk** (*) symbol does not appear corresponding to the required fields in the **Search** portals or AWB pop-up windows.
- If a field is required for an algorithm program, the **Asterisk** (*) symbol does not appear corresponding to the respective field.
- The **Asterisk** (*) symbol does not appear corresponding to the required checkboxes whose data is stored as the Boolean value (i.e. True or False) in the database.
- There are some screens where the mandatory field indicator feature is not operational at present. We are working on such screens and it would be fixed in the upcoming releases. You can refer to the 36919824 bug for the list of such screens where the mandatory field indicator is not displayed at present.

Note:

This configuration works as expected only when the **Style Sheet** option type of the **C1_UICONFIG** feature configuration is set to **c1/c1_cisDisabled.css**.

At present, this feature is tested and certified only for those user interfaces which are accessible to the financial services domain.

Chapter 2

Fully-Insured Group Customer Management

Topics:

- Fully-Insured Entities

A fully-insured group health plan is the traditional way to structure an employer-sponsored health plan. In the fully-insured group health plan, the employer contracts an insurance company to cover the employees and dependents. The employer pays a premium to the insurance carrier. The premium rates are fixed for a year, based on the number of employees enrolled in the plan each month. The monthly premium changes during the year when the number of enrolled employees in the plan changes. The insurance carrier collects the premiums and pays the health insurance claims based on the coverage benefits outlined in the policy. The covered persons (i.e. employees and dependents) are responsible to pay any deductible amounts or co-payments required for covered services under the policy.

The system enables you to create customers and accounts for the fully-insured group health insurance business. This chapter explains how to create different entities involved in the fully-insured group health insurance business.

Parent Customer

The fully-insured employers must be defined as parent customers in the system. You can define a person as the parent customer by setting its person type to **Parent Customer**. You can create a parent customer through a customer registration object or a health care inbound message.

Bill Groups

The system allows you to define one or more bill groups for a parent customer. The membership premium of the employees are billed to a bill group. Each bill group will handle the membership premium of employees based on the employee attributes, such as location, employment status, employment department, and so on. The system allows you to define the derivation and pricing parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4 for a bill group. These parameters are used to derive the bill group against which the membership premium should be billed in the system. You can define a person as the bill group by setting its person type to **Bill Group**. The bill groups should be defined as the child persons of the parent customer (i.e. fully-insured employer) using the relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. You can create a bill group through a customer registration object or a health care inbound message.

Related Topics

For more information on...	**See...**
Bill Group Derivation and Pricing Parameters	Bill Group Derivation and Pricing Parameters on page 3462
How to setup the **C1-ASOBLLNG** feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4639

Bill Groups' Account

The membership premium of employees are billed to the bill group's account. Therefore, every bill group should have at least one account in the system. You can create multiple accounts for a bill group. You can create an account for a bill group through a customer registration object or a health care inbound message.

Depending on the employer's preference, the charges for one or more membership and price item combinations can be billed on the same or different accounts of the bill group. The system enables you to create different types of accounts (such as, MEDCARE1 and MEDCARE2) for a bill group. You can specify the type of account by defining the **Invoice Type (C1INVTYP)** characteristic for the account.

Note: At present, we have not shipped any predefined values for the **Invoice Type (C1INVTYP)** characteristic type. You must define the predefined characteristic values as per the business requirements.

You can also set the priority for an account based on the invoice type while specifying the billing account information for a price item in a pricing rule type. Let us understand this with the help of an example.

The following table illustrates the accounts to which the P1 and P2 price items should be billed based on the given priority:

Price Item	**Priority**	**Invoice Type**	**Account**
P1	10	MEDCARE1	A1
	20	MEDCARE2	A2
P2	10	MEDCARE2	A2
	20	MEDCARE1	A1

Copyright © 2026, Oracle and/or its affiliates.

Now, when the effective pricing rule is derived for P1 on the policy plan, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **MEDCARE1** exists for the bill group. If so, it considers the account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **MEDCARE1** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **MEDCARE2** exists for the bill group. If so, it considers the account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **MEDCARE2** does not exist for the bill group, the status of the record in the **CI_REPRC_ENTITY_DTL** table is set to **Error (E)**.

Similarly, when the effective pricing rule is derived for P2 on the policy plan, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

The system searches the account of the bill group based on the priority when the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration is set to **C1INVTYP**.

Related Topics

For more information on...	See...
How to setup the **C1-ASOBLLNG** feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4639

Fully-Insured Group Policy

You can create a fully-insured group policy using a policy type where the policy category is set to **Fully-Insured Group**. You can create a fully-insured group policy through a customer registration object or a health care inbound message. If the fully-insured group policy information is given for a bill group in a health care inbound message, the system does the following:

- Associates the bill group with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration
- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration

However, if the fully-insured group policy information is given for a parent customer in a health care inbound message, the system does the following:

- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration

Note: At present, the **Fully-Insured Individual** policy category is not yet supported in the system.

Policy Plans

A fully-insured group policy may cover various plans for medical, dental, or disability benefits. You can subscriber a person for one or more policy plans within or across policies. The system creates one membership for each person who is subscribed to the policy plan. You can then add dependent members in each membership whenever required.

While creating a policy plan, you need to specify either a price item or at least one pricing rule type. The price item given in the policy plan is used to create a pass-through billable charge for pre-calculated premium amount which is received in an inbound message.

Alternatively, you can associate a pricing rule type with a policy plan. You can only associate a pricing rule type where the pricing rule type category is set to **Age Based**, **Tier Based**, or **Pass-Through Billable Charge**. If you associate an age based pricing rule type with the policy plan, the system creates the SQI based billable charge whenever the membership premium is calculated for eligible members. If you associate a tier based pricing rule type with the policy plan, the system creates the SQI based billable charge whenever the premium is calculated for membership. However,

Copyright © 2026, Oracle and/or its affiliates.

if you associate a pass-through billable charge pricing rule type with the policy plan, the system creates an SQI based billable charge using the pass-through billable charge pricing rule type whenever the price item information is given, but the account information is not given in a health care inbound message. Note that if both the price item and account details are given in the billable charge information, the system directly creates the SQI based billable charge for the pre-calculated premium and does not refer the pass-through billable charge pricing rule type which is associated with the policy plan.

Price Items

Each service offered in the fully-insured group health plan should be defined as a price item in the system. You can define a price item from the user interface. You must add the price item in a pricing rule type. The system then enables you to create a pricing rule for a price item using the respective pricing rule type.

Pricing Rule Types

You can create a pricing rule using the respective pricing rule type. The system enables you to create pricing rule types of the following categories for the fully-insured group health plan through a health care inbound message:

Pricing Rule Type	Pricing Rule Type Category	Sample Shipped with the Product
Age Based	Age Based	AGE_BASED
Tier Based	Tier Based	TIER_BASED
Pass-Through Billable Charge	Pass-Through Billable Charge	FI_PASSTBC

Note: You cannot define a pricing rule using a pricing rule type where the pricing rule type category is set to **Pass-Through Billable Charge**.

Pricing Rules

The fully-insured group health plan may offer various services to the employer, such as medical insurance, dental insurance, vision care, life insurance, short-term and long-term disability benefits, and so on. Oracle Revenue Management and Billing enables you to define pricing rules for various services offered in the fully-insured group health plan.

The following table lists the pricing rules which you can define for the following services offered in the fully-insured group health plan:

Service	Pricing Rule	Created for....
Medical Insurance, Dental Insurance, Vision Care, Life Insurance, Short-Term and Long-Term Disability Benefits, etc.	Age Based	Fully-Insured Group Policy Plan
	Tier Based	Fully-Insured Group Policy Plan

You can create the above mentioned pricing rules for the fully-insured group policy plans through a health care inbound message and not from the user interface. The system creates a price assignment for each pricing rule. In the age based pricing rules, you can define different premium fee for employees who belong different age band. You can also offer different premium fee for the employees with the same age band, but with the different set of attributes. The system also enables you to charge additional fee for the eligible member based on certain modifiers. For example, you can charge additional fee when the eligible member is alcoholic and/or consumes tobacco. However, in the tier based pricing rules, you can define different premium fee for employees who belong to different membership tier, such as Employee (E), Employee + Spouse (ES), Employee + Spouse + Children (F), and so on.

Copyright © 2026, Oracle and/or its affiliates.

The system searches for the pricing rule of a price item (i.e. service) on the policy plan to which the membership belongs. If the effective pricing rule for a price item is not available on the policy plan, the system does not consider the respective price item for billing.

Price Assignments

The system creates a price assignment for each fully-insured pricing rule. If different premium fee is defined for employees with different set of employee attributes, then the system creates a separate price component for each set of employee attributes. If the modifiers are used in the age based pricing rule, the system creates a price component for each modifier. In the price component, the age band or tier band parameter, the employee attributes, and modifiers are used to define the pricing eligibility criteria. Once the age based or tier based pricing rule is defined for a policy plan, the system creates a price item pricing and price list, and then assigns the price item pricing to the price list.

Chapter 3

Self-Funded Customer Management

Topics:

- Self-Funded Entities

Self-funded health insurance, also known as Administrative Services Only (ASO), is a self insurance arrangement whereby an employer provides health or disability benefits to employees using the company's own funds. In self-funded health plan, employers operate their own health plan. However, in the fully-insured group health plan, the employer contracts an insurance company to cover the employees and dependents. Employers choose to self-insure because it allows them to save the profit margin that an insurance company adds to its premium for a fully-insured group health plan. However, self-insuring exposes the company to much larger risk in the event that more claims than expected must be paid.

Oracle Revenue Management and Billing (ORMB) supports the following types of self-funding approach:

- **Fully Self-Funded** - In the fully self-funded approach, the employer retains all the risk and bears the claim costs irrespective of any limit.
- **Partially Self-Funded** - In the partially self-funded approach, the employer purchases reinsurance or stop loss coverage to pass the risk to insurance company.

The system enables you to create customers and accounts for the self-funded health insurance business. This chapter explains how to create different entities involved in the self-funded health insurance business.

For more information on...	See...
Self-Funded Entities	Self-Funded Entities on page 12

Self-Funded Entities

The following figure graphically represents the different entities involved in the self-funded health insurance business:

Parent Customer

The self-funded employers must be defined as parent customers in the system. You can define a person as the parent customer by setting its person type to **Parent Customer**. You can create a parent customer through a customer registration object or a health care inbound message.

Bill Groups

The system allows you to define one or more bill groups for a parent customer. The claim, enrollment, and ancillary transactions of the employees are billed to a bill group. Each bill group will handle the claim, enrollment, and ancillary transactions of employees based on the employee attributes, such as location, employment status, employment department, and so on. The system allows you to define the derivation and pricing parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4 for a bill group. These parameters are used to derive the bill group against which the claim, enrollment, and ancillary charges should be billed in the system. The derived bill group is also used for billing the claim based fees, specific stop-loss credits, aggregate stop-loss credits, discount, and level funding charges.

You can define a person as the bill group by setting its person type to **Bill Group**. The bill groups should be defined as the child persons of the parent customer (i.e. self-funded employer) using the relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. You can create a bill group through a customer registration object or a health care inbound message.

Related Topics

For more information on...	See...
Bill Group Derivation and Pricing Parameters	Bill Group Derivation and Pricing Parameters on page 3462
How to setup the **C1-ASOBLLNG** feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4639

Bill Group's Account

The claim charges, specific stop-loss credits, aggregate stop-loss credits, claim based fees, enrollment based fees, ancillary charges, discount, and level funding charges are billed to the bill group's account. Therefore, every bill group should have at least one account in the system. You can create multiple accounts for a bill group. You can create an account for a bill group through a customer registration object or a health care inbound message.

Depending on the employer's preference, the claim charges, specific stop-loss credits, aggregate stop-loss credits, claim based fees, enrollment based fees, ancillary charges, discount, and level funding charges can be billed on the same or different accounts of the bill group. The system enables you to create different types of accounts (such as, standard and retention) for a bill group. You can specify the type of account by defining the **Invoice Type (C1INVTYP)** characteristic for the account.

Note: At present, we have not shipped any predefined values for the **Invoice Type (C1INVTYP)** characteristic type. You must define the predefined characteristic values as per the business requirements.

You can also set the priority for an account based on the invoice type while specifying the billing account information for a price item in a pricing rule type.

For example, the following table illustrates the accounts of different types to which the charges of P1 and P2 should be billed based on the given priority:

Price Item	Priority	Invoice Type	Account
	10	Standard	A1

Copyright © 2026, Oracle and/or its affiliates.

Price Item	Priority	Invoice Type	Account
	20	Retention	A2
	10	Retention	A2
	20	Standard	A1

Now, when a claim transaction is mapped to P1, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **Standard** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **Retention** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, when a claim transaction is mapped to P2, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

The system searches the account of the bill group based on the priority when the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration is set to **C1INVTYP**.

Related Topics

How to setup the **C1-ASOBLLNG** feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4639

Self-Funded Policy

You can create a self-funded policy using a policy type where the policy category is set to **Self-Funded**. You can create a self-funded policy through a customer registration object or a health care inbound message. If the self-funded policy information is given for a bill group in a health care inbound message, the system does the following:

- Associates the bill group with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration
- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration

Price Items

Each service offered in the self-funded plan should be defined as a price item in the system. You must add the price item in a pricing rule type. The system then enables you to create a pricing rule for a price item using the respective pricing rule type.

You can define a price item and associate the required parameters with the price item from the user interface. You can use the price item parameters for defining multi parameter based pricing or for aggregating the transactions.

Pricing Rule Types

You can create a pricing rule using the respective pricing rule type. The system enables you to create pricing rule types of the following categories for the self-funded plan from the user interface:

Copyright © 2026, Oracle and/or its affiliates.

Pricing Rule Type	Pricing Rule Type Category	Sample Shipped with the Product
Claim	Claim	CLAIM
Retention Type Claim Based	Retention Type Claim Based	RETCLMBSD
Discount Share	Discount Arrangement	DISSHARE
Discount Guarantee	Discount Arrangement	DISGUAR
One-Time Flat Fees	Flat Fees	ONETIMEFLATFEES
Bill Period Based Recurring Flat Fees	Flat Fees	RECFLATFEES_BP
Frequency Based Recurring Flat Fees	Flat Fees	RECFLATFEES_FREQ
Retention Type Enrollment Based	Retention Type Enrollment Based	RETENRLBSD
Ancillary	Ancillary	ANCILLARY
Specific Stop-Loss	Specific Stop-Loss	SSL
Aggregate Stop-Loss	Aggregate Stop-Loss	ASL
Enrollment Based Premium	Level Funded	LVLENRLPRE
Flat Rate Based Premium	Level Funded	LVLFLATPRE

Pricing Rules

The self-funded plan may offer various services to the employer, such as claim administration, reinsurance or stop-loss, discount or level funding arrangement, and so on. Oracle Revenue Management and Billing enables you to define pricing rules for various services offered in the self-funded plan. The below table lists the pricing rules which you can define for the following services offered in the self-funded plan:

Service	Pricing Rule	Created for....
Claim Administration	Claim	Parent Customer
Claim Administration	Claim	Bill Group's Policy where the Parent Customer is the Policy Holder
Claim Administration	Retention Type Claim Based	Parent Customer
Claim Administration	Retention Type Claim Based	Bill Group's Policy where the Parent Customer is the Policy Holder
Claim Administration	Discount Share	Parent Customer
Claim Administration	Discount Guarantee	Parent Customer
Claim Administration	One-Time Flat Fees	Bill Group's Policy where the Parent Customer is the Policy Holder
Claim Administration	Bill Period Based Recurring Flat Fees	Bill Group's Policy where the Parent Customer is the Policy Holder
Claim Administration	Frequency Based Recurring Flat Fees	Bill Group's Policy where the Parent Customer is the Policy Holder
Enrollment	Retention Type Enrollment Based	Parent Customer

Copyright © 2026, Oracle and/or its affiliates.

Service	Pricing Rule	Created for....
Enrollment	Retention Type Enrollment Based	Bill Group's Policy where the Parent Customer is the Policy Holder
Ancillary, such as Laboratory, Radiology, Pharmacy, Physical Therapy, or Preventive Care	Ancillary	Parent Customer
Ancillary, such as Laboratory, Radiology, Pharmacy, Physical Therapy, or Preventive Care	Ancillary	Bill Group's Policy where the Parent Customer is the Policy Holder
Stop-Loss	Specific Stop-Loss	Parent Customer
Stop-Loss	Specific Stop-Loss	Bill Group's Policy where the Parent Customer is the Policy Holder
Stop-Loss	Aggregate Stop-Loss	Parent Customer
Stop-Loss	Aggregate Stop-Loss	Bill Group's Policy where the Parent Customer is the Policy Holder
Level Funding Arrangement	Enrollment Based Premium	Parent Customer
Level Funding Arrangement	Enrollment Based Premium	Bill Group's Policy where the Parent Customer is the Policy Holder
Level Funding Arrangement	Flat Rate Based Premium	Parent Customer
Level Funding Arrangement	Flat Rate Based Premium	Bill Group's Policy where the Parent Customer is the Policy Holder

You can create the above mentioned self-funded pricing rules for a parent customer or for the policy of the bill group from the user interface and not through a health care inbound message.

The system creates a price assignment for each pricing rule. In case of the retention type claim and enrollment based pricing rules, the system creates multiple price assignments when different claim based or enrollment based fee is offered for employees with different set of employee attributes.

The system first searches for the pricing rule of a price item (i.e. service) at the bill group level. If the effective pricing rule for a price item is available at the bill group level, the system uses it for deriving the price assignment. However, if the effective pricing rule for a price item is not available at the bill group level, the system searches for the pricing rule of a price item at the parent customer level. If the effective pricing rule for a price item is available at the parent customer level, the system uses it for deriving the price assignment. However, if the effective pricing rule for a price item is not available at the bill group or parent customer level, the system does not consider the respective price item for billing.

Price Assignments

The system creates a price assignment for each self-funded pricing rule. In case of the retention type claim and enrollment based pricing rules, the system creates multiple price assignments when different claim based or enrollment based fee is offered for employees with different set of employee attributes.

The system automatically creates a price assignment whenever you create a self-funded pricing rule. The system creates the price assignment in a price list and assigns the price list to the parent customer or bill group. The system creates multiple price assignments when you define a pricing rule for a policy of a bill group using a pricing group.

Chapter 4

Health Insurance Business Management

Topics:

- Policy Type
- Policy Person Role
- Contract Relationship Type
- Source System Extendable Lookup
- Extendable Lookup (Source System)
- Membership Identifier Type
- Pricing Parameters
- Membership Benefits
- Geographic Rating Area Preference
- Member Relationship and Subscription Tier Preference
- Health Insurance Billing and Financial Operations

Health insurance is a type of insurance coverage that typically pays for medical, surgical, prescription drug and sometimes dental expenses incurred by the insured. Health insurance can reimburse the insured for expenses incurred from illness or injury, or pay the care provider directly. It is often included in employer benefit packages as a means of enticing quality employees, with premiums partially covered by the employer but often also deducted from employee paychecks.

Oracle Revenue Management and Billing has extended its pricing and billing engines to meet the requirements of the following three lines of health insurance business:

- Fully-Insured Group Policy on page 249
- Self-Funded Group Policy on page 403
- Individual Health Insurance on page 449

To use the pricing and billing engines for the above three lines of health insurance business, you need to set the respective prerequisites:

Line of Business	Prerequisites
Fully-Insured Group Health Insurance	Refer to the Pre-requisites on page 250 section.
Self-Funded Group Health Insurance	Refer to the Pre-requisites on page 404 section.
Individual Health Insurance	Refer to the Pre-requisites on page 451 section.

Policy Type

Oracle Revenue Management and Billing enables you to define a policy type using which you can create a policy. The policy type helps the system to determine:

- **Policy Category** - The category implies the line of business in the health insurance domain for which the policy should be created using the policy type. The valid values are:
  - Fully-Insured Group
  - Fully-Insured Individual
  - Self-Funded

  Note: At present, the **Fully-Insured Individual** policy category is not supported in the system.
- **Policy Business Object** - The business object using which the policy should be created in the system. You can specify the **C1-POLICY** or **C1-ASOPolicy** business object depending on whether you want to create the policy type for the fully-insured group or self-funded health insurance business.

The **Policy Type** screen allows you to define, edit, copy, and delete a policy type. It contains the following zones:

- Policy Type List on page 20
- Policy Type on page 21

Policy Type List

The **Policy Type List** zone lists the policy types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Policy Type	Displays the policy type.
Description	Displays the description of the policy type.
Policy Category	Indicates the category to which the policy type belongs. The valid values are: • Self-Funded • Fully-Insured Group • Fully-Insured Individual
Edit	On clicking the **Edit** (✎) icon, the **Policy Type** screen appears where you can edit the details of the policy type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Policy Type** screen appears where you can define a new policy type using an existing policy type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the policy type. **Note:** You can delete a policy type when a policy is not created using the policy type.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a policy type, the **Policy Type** zone appears with the details of the respective policy type.

You can filter the list using the **Policy Category** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Policy Type

The **Policy Type** zone displays the details of the policy type. It contains the following sections:

- **Main** - Displays basic information about the policy type. It contains the following fields:

Field Name	Field Description
Policy Type	Displays the policy type.
Policy Business Object	Indicates the business object using which the policy should be created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Description	Displays the description of the policy type.
Status	Indicates the status of the policy type. The valid values are: • Active • Inactive
Policy Category	Indicates the category to which the policy type belongs. The valid values are: • Self-Funded • Fully-Insured Group • Fully-Insured Individual
Detailed Description	Displays additional information about the policy type.

- **Characteristics** - Lists the characteristics defined for the policy type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the policy type.
Delete	Used to delete the policy type.

Copyright © 2026, Oracle and/or its affiliates.

Button Name	Button Description
	Note: You can delete a policy type when a policy is not created using the policy type.
Duplicate	Used to create a new policy type using an existing policy type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the policy type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Policy Type** zone does not appear in the **Policy Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the policy type in the **Policy Type List** zone.

Defining a Policy Type

Prerequisites

To define a policy type, you should have:

- Required policy business object defined in the application

Note: The **C1-POLICY** and **C1-ASOPolicy** business objects are shipped with the product. You can use the **C1-POLICY** business object to create a fully-insured group policy and the **C1-ASOPolicy** business object to create a self-funded policy.

Procedure

To define a policy type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Policy Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Policy Type** sub-menu.

   The **Policy Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the policy type.
   - **Characteristics** - Used to define the characteristics for the policy type.

Copyright © 2026, Oracle and/or its affiliates.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Used to specify the policy type.	Yes
Business Object	Indicates the business object using which you are defining the policy type.	Not applicable
Policy Business Object	Used to indicate the business object using which you want to create a policy.	Yes
Description	Used to specify the description for the policy type.	Yes
Status	Used to indicate the status of the policy type. The valid values are: • Active • Inactive	Yes
Policy Category	Used to indicate the category to which the policy type belongs. The valid values are: • Fully-Insured Group • Fully-Insured Individual • Self-Funded **Note:** At present, the **Fully-Insured Individual** policy category is not supported in the system.	Yes
Detailed Description	Used to specify additional information about the policy type.	No

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Policy Type** screen.

4. Enter the required details in the **Main** section.

Note: If you want to create a policy type for the fully-insured group health insurance business, select the **C1-POLICY** business object from the **Policy Business Object** list and the **Fully-Insured Group** option from the **Policy Category** list. However, if you want to create a policy type for the self-funded health insurance business, select the **C1-ASOPolicy** business object from the **Policy Business Object** list and the **Self-Funded** option from the **Policy Category** list.

5. Define the characteristics for the policy type, if required.
6. Click **Save**.
   The policy type is defined.

Defining a Characteristic for a Policy Type

Prerequisites

To define a characteristic for a policy type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Policy Type**).

Procedure

To define a characteristic for a policy type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a policy type.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to the **Policy Type**.	**Note:** This field is required when you are defining a characteristic for the policy type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the policy type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the policy type, click the **Add** (+) icon and then repeat *step 2*.

> **Note:** However, if you want to remove a characteristic from the policy type, click the **Delete** (🗑) icon corresponding to the characteristic.

Editing a Policy Type

Prerequisites

To edit a policy type, you should have:

Copyright © 2026, Oracle and/or its affiliates.

- Required policy business object defined in the application

> **Note:** The **C1-POLICY** and **C1-ASOPolicy** business objects are shipped with the product. You can use the **C1-POLICY** business object to create a fully-insured group policy and the **C1-ASOPolicy** business object to create a self-funded policy.

Procedure

To edit a policy type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Policy Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Policy Type** sub-menu.
   The **Policy Type** screen appears.
4. In the **Policy Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the policy type *w*hose details you want to edit.

   The **Policy Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the policy type.
   - **Characteristics** - Used to define the characteristics for the policy type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Displays the policy type.	Not applicable
Business Object	Indicates the business object using which you are defining the policy type.	Not applicable
Policy Business Object	Used to indicate the business object using which you want to create a policy.	Yes
Description	Used to specify the description for the policy type.	Yes
Status	Used to indicate the status of the policy type. The valid values are: • Active • Inactive	Yes
Policy Category	Used to indicate the category to which the policy type belongs. The valid values are: • Fully-Insured Group • Fully-Insured Individual • Self-Funded **Note:** At present, the **Fully-Insured Individual** policy category is not supported in the system.	Yes
Detailed Description	Used to specify additional information about the policy type.	No

> **Tip:** Alternatively, you can edit the details of a policy type by clicking the **Edit** button in the **Policy Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the policy type, if required.

Copyright © 2026, Oracle and/or its affiliates.

7. Click **Save**.
   The changes made to the policy type are saved.

Copying a Policy Type

Instead of creating a policy type from scratch, you can create a new policy type using an existing policy type. This is possible through copying a policy type. On copying a policy type, the details including the characteristics are copied to the new policy type. You can then edit the details, if required.

Prerequisites

To copy a policy type, you should have:

- Policy type (whose copy you want to create) defined in the application
- Required policy business object defined in the application

> **Note:** The **C1-POLICY** and **C1-ASOPolicy** business objects are shipped with the product. You can use the **C1-POLICY** business object to create a fully-insured group policy and the **C1-ASOPolicy** business object to create a self-funded policy.

Procedure

To copy a policy type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Policy Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Policy Type** sub-menu.
   The **Policy Type** screen appears.
4. In the **Policy Type List** zone, click the **Duplicate**(⧉) icon in the **Duplicate** column corresponding to the *p*olicy type whose copy you want to create.

   The **Policy Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the policy type.
   - **Characteristics** - Used to define the characteristics for the policy type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Used to specify the policy type.	Yes
Business Object	Indicates the business object using which you are defining the policy type.	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Policy Business Object	Used to indicate the business object using which you want to create a policy.	Yes
Description	Used to specify the description for the policy type.	Yes
Status	Used to indicate the status of the policy type. The valid values are: • Active • Inactive	Yes
Policy Category	Used to indicate the category to which the policy type belongs. The valid values are: • Fully-Insured Group • Fully-Insured Individual • Self-Funded **Note:** At present, the **Fully-Insured Individual** policy category is not supported in the system.	Yes
Detailed Description	Used to specify additional information about the policy type.	No

Tip: Alternatively, you can copy a policy type by clicking the **Duplicate** button in the **Policy Type** zone.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove characteristics of the policy type, if required.
7. Click **Save**.
   The new policy type is defined.

Deleting a Policy Type

Procedure

To delete a policy type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Policy Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Policy Type** sub-menu.
   The **Policy Type** screen appears.

Copyright © 2026, Oracle and/or its affiliates.

4. In the **Policy Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the policy type *t*hat you want to delete.
   A message appears confirming whether you want to delete the policy type.

   Note: You can delete a policy type when a policy is not created using the policy type.

   Tip: Alternatively, you can delete a policy type by clicking the **Delete** button in the **Policy Type** zone.
5. Click **OK**.
   The policy type is deleted.

Policy Person Role

Oracle Revenue Management and Billing enables you to specify the role of a person while associating the person to a policy. This helps to indicate whether the person is a policy holder, broker, underwriter, and so on in a policy. The **Policy Person Role** screen allows you to define, edit, and delete a policy person role. It contains the following zone:

- Policy Person Role List on page 29

Copyright © 2026, Oracle and/or its affiliates.

Policy Person Role List

The **Policy Person Role List** zone lists the roles which you can assign to a person in a policy. It contains the following columns:

Column Name	Column Description
Policy Person Role	Displays the policy person role.
Description	Displays the description of the policy person role.
Edit	On clicking the **Edit** (✎) icon, the **Policy Person Role** screen appears where you can edit the details of the policy person role.
Delete	On clicking the **Delete** (🗑) icon, you can delete the policy person role.
	Note: You can delete a policy person role when it is not used while associating a person with a policy.

You can define a new policy person role by clicking the **Add** link in the upper-right corner of this zone.

You can filter the list using various search criteria (such as **Policy Person Role** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper-right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4632.

Contract Relationship Type

Oracle Revenue Management and Billing enables you to define various relationship types using which you can relate main subscriber and other dependent persons in a membership. The **Contract Relationship Type** screen allows you to define, edit, and delete such relationship types. It also allows you to filter the contract relationship types using various search criteria.

Filtering the Contract Relationship Types

Prerequisites

To filter the contract relationship types, you should have:

- Contract relationship types defined in the application

Procedure

To filter the contract relationship types:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **C** and then click **Contract Relationship Type**.

   The **Contract Relationship Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Relationship Type	Used to search a particular contract relationship type.	Yes

3. Enter the search criteria in the **Relationship Type** field.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   The search results are filtered based on the specified criteria.

Defining a Contract Relationship Type

Procedure

To define a contract relationship type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **C** and then click **Contract Relationship Type**.

   The **Contract Relationship Type** screen appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Relationship Type	Used to specify the contract relationship type.	Yes
Description	Used to specify the description for the contract relationship type.	Yes

3. Enter the required details in the **Contract Relationship Type** screen.
4. If you want to define more than one contract relationship type, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a contract relationship type, click the **Delete** (🗑) icon corresponding to the contract relationship type.

5. Click **Save**.
   The contract relationship type is defined.

Source System Extendable Lookup

Oracle Revenue Management and Billing enables you to track the external system from where the fully-insured group or self-funded policies are received for billing. Each external system must be defined in the system using the **Source System (C1-SourceSystemLookup)** extendable lookup.

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- Extendable Lookup Search on page 34

Copyright © 2026, Oracle and/or its affiliates.

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No
Description	Used to search extendable lookups with a particular description.	No

Note: You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object. **Note:** It has a link. On clicking the link, the **Extendable Lookup** screen appears where you can view the details of the respective extendable lookup.

Searching for the Source System Extendable Lookup

Procedure

To search for the **Source System** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
   The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-SourceSystemLookup** in the **Business Object** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Copyright © 2026, Oracle and/or its affiliates.

4. Click **Search**.
   The **Source System** extendable lookup business object appears in the **Search Results** section.

Viewing the Values of the Source System Extendable Lookup

Procedure

To view the values of the **Source System** extendable lookup:

1. Search for the **Source System** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup *b*usiness object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. View the values of the **Source System** extendable lookup in the **Extendable Lookup Value List** zone.

Extendable Lookup (Source System)

The **Extendable Lookup** screen allows you to view the values of the **Source System (C1-SourceSystemLookup)** extendable lookup. It also allows you to define, edit, copy, and delete a source system. It contains the following zones:

- Extendable Lookup Value List on page 35
- Extendable Lookup Value on page 36

Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Source System** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the source system.
Description	Displays the description of the source system.
Owner	Indicates who has created the source system. The valid values are: • Framework

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	• Base • Customer Modification
Edit	On clicking the **Edit** (✎) icon, the **Extendable Lookup** screen appears where you can edit the details of the source system.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Extendable Lookup** screen appears where you can define a new source system using an existing source system.
Delete	On clicking the **Delete** (🗑) icon, you can delete the source system.
	Note: You can delete a source system when it is not yet used in the system.
Detailed Description	Displays additional information about the source system.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a source system, the **Extendable Lookup Value** zone appears with the details of the respective source system.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the source system. It contains the following sections:

- **Main** - Displays basic information about the source system. It contains the following fields:

Field Name	Field Description
Source System	Displays the source system.
Description	Displays the description of the source system.
Override Description	Displays the overridden description of the source system.
Detailed Description	Displays additional information about the source system.
Status	Indicates the status of the source system. The valid values are: • Active • Inactive

Copyright © 2026, Oracle and/or its affiliates.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the source system.
Delete	Used to delete the source system. **Note:** You can delete a source system when it is not yet used in the system.
Duplicate	Used to create a source system using an existing source system.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the source system is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the source system. The valid values are: • Framework • Base • Customer Modification

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the source system in the **Extendable Lookup Value List** zone.

Copying a Source System

Instead of creating a source system from scratch, you can create a new source system using an existing source system. This is possible through copying a source system. On copying a source system, the details of the source system are copied to the new source system. You can then edit the details, if required.

Prerequisites

To copy a source system, you should have:

- Source system (whose copy you want to create) defined in the application

Procedure

To copy a source system:

1. Search for the **Source System** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup *b*usiness object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Duplicate** (⎘) icon in the **Duplicate** column *c*orresponding to the source system whose copy you want to create.

   The **Extendable Lookup** screen appears. It contains the following section:

   - **Main** - Used to specify basic details about the source system.

Copyright © 2026, Oracle and/or its affiliates.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to specify the external system from where the policies are received for billing.	Yes
Description	Used to specify the description for the source system.	Yes
Override Description	Used when you want to override the description of the source system.	No
Detailed Description	Used to specify additional information about the source system.	No
Status	Used to indicate the status of the source system. The valid values are: • Active • Inactive	Yes

Tip: Alternatively, you can copy a source system by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

4. Enter the required details in the **Main** section.
5. Click **Save**.
   The new source system is added in the **C1-SourceSystemLookup** extendable lookup.

Deleting a Source System

Procedure

To delete a source system:

1. Search for the **Source System** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup *b*usiness object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding *t*o the source system that you want to delete.
   A message appears confirming whether you want to delete the source system.

Note: You can delete a source system when it is not yet used in the system.

Copyright © 2026, Oracle and/or its affiliates.

> **Tip:** Alternatively, you can delete a source system by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.
   The source system is deleted from the **C1-SourceSystemLookup** extendable lookup.

Membership Identifier Type

Oracle Revenue Management and Billing enables you to define an identifier for the group and individual memberships using a membership identifier type. For example, beneficiary ID, exchange subscriber ID, and so on for a group and/or individual membership. The **Membership Identifier Type** screen allows you to create, edit, delete, and copy a membership identifier type. It contains the following zones:

- Membership Identifier Type List on page 42
- Membership Identifier Type on page 43

Copyright © 2026, Oracle and/or its affiliates.

When you create or edit a group or individual membership through a health care inbound message or through a membership repricing request, you can define various identifiers associated with the membership using the membership identifier type. You can also add and edit membership identifiers for a group or individual membership from the user interface.

Defining a Membership Identifier Type

Prerequisites

To define a membership identifier type, you should have:

- Validation algorithm defined in the application (in case you want to use it)

Note: We have not shipped any algorithm type for the**Membership Identifier Type - Validation** algorithm entity. You can create a custom validation algorithm type for the **Membership Identifier Type - Validation** algorithm entity, if required.

Procedure

To define a membership identifier type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **M** and then click **Membership Identifier Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Membership Identifier Type** sub-menu.

   The **Membership Identifier Type** screen appears. It contains the following section:

   - **Main** - Used to specify the basic details of the membership identifier type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Membership Identifier Type	Used to specify the membership identifier type.	Yes
Description	Used to specify the description for the membership identifier type.	Yes
Validation Algorithm	Used to indicate the algorithm using which you want to validate the value of the membership identifier type. It is triggered when you define an identifier for a membership using the membership identifier type.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Validation Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears. Note that you can only specify an algorithm which is created for the **Membership Identifier Type - Validation** algorithm entity.	
Detailed Description	Used to specify additional information about the membership identifier type.	No

Tip: Alternatively, you can access the **Membership Identifier Type** screen by clicking the **Add** button in the **Page Title** area of the **Membership Identifier Type** screen.

4. Enter the required details in the **Main** section.
5. Click **Save**.
   The membership identifier type is defined.

Deleting a Membership Identifier Type

Procedure

To delete a membership identifier type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **M** and then click **Membership Identifier Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Membership Identifier Type** sub-menu.
   The **Membership Identifier Type** screen appears.
4. In the **Membership Identifier Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to *t*he membership identifier type that you want to delete.

   A message appears confirming whether you want to delete the membership identifier type.

   Note: You can delete a membership identifier type when it is not yet used in the system.

   Tip: Alternatively, you can delete a membership identifier type by clicking the **Delete** button in the **Membership Identifier Type** zone.
5. Click **OK**.
   The membership identifier type is deleted.

Viewing the Membership Identifier Type Details

Procedure

To view the details of a membership identifier type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **M** and then click **Membership Identifier Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Membership Identifier Type** sub-menu.
   The **Membership Identifier Type** screen appears.
4. In the **Membership Identifier Type List** zone, click the **Broadcast** (📡) icon corresponding *t*o the membership identifier type whose details you want to view.
   The **Membership Identifier Type** zone appears.
5. View the details of the membership identifier type in the **Membership Identifier Type** zone.

Pricing Parameters

Oracle Revenue Management and Billing enables you to create new set of pricing parameters, such as, Geographic Rating Area, Member Relationship, and Subscription Tier for a fully-insured group and individual customers.

To create a geographic rating area pricing parameter the ORMB system uses the policy plan and geographical details (of a member person) to retrieve the appropriate rating area. This rating area is further used to obtain the rate information defined on the pricing rule that is eventually based on a particular geographical rating area. To create a member relationship pricing parameter, the ORMB system retrieves the appropriate member relationship through the post processing algorithm and stamps the retrieved member relationship on the member person belonging to a particular membership. However, to create a subscription tier pricing parameter, the ORMB system retrieves the subscription tier information through the post processing algorithm and stamps the tier information on the desired membership.

Subscription Tier Pricing Parameter	Subscription Tier Pricing Parameter on page 77

Geographic Rating Area

Oracle Revenue Management and Billing enables you to use the geographic rating area as a pricing parameter while defining the age based, tier based, and additional fee pricing rules. This feature facilitates you to offer different rates for a price item based on different geographic rating area.

The system enables you to add and edit a geographic rating area from the user interface. You can also add or edit a set of geographic rating areas at once using the **File Upload Interface** utility. However, note that while editing a geographic rating area, you can only change the end date to a far future date and the status from **Active** to **Inactive**.

While maintaining a geographic rating area in the system, you can also list the policy plans available in the geographic rating area. You can add the policy plan information for a geographic rating area from the user interface or through the **File Upload Interface** utility. But, you cannot edit the policy plan information of a geographic rating area through the **File Upload Interface** utility.

You can upload the geographic rating areas from the CSV file using the **C1GEORATINGARCSVUPLD** file request type through the **File Transformation and Upload (C1-FTRAN)** batch.

Note: You need to set the **Include Plan** Or **Product Details** parameter in the **C1-GEORAVALD** algorithm to Y or N. If the value for this parameter is set to Y, the system identifies the record using the State, Zip From, Zip Plus4 From, Zip To, Zip Plus4 To, Start Date, Policy Number, Plan Number, and Source System combination. However, if the value for this parameter is set to N, the system identifies the record using the State, Zip From, Zip Plus4 From, Zip To, Zip Plus4 To, and Start Date combination.

Once you define a geographic rating area, the system can derive the geographic rating area for a membership using the **Address Source** and **Address Type** characteristic types. The system supports two address sources named **Policy Holder** and **Main Subscriber** and three address types named **Person Mailing**, **Person Seasonal**, and **Account Override**.

Copyright © 2026, Oracle and/or its affiliates.

On adding a membership to a policy plan, the system first derives the characteristic types from the **Address Source Characteristic Type** and **Address Type Characteristic Type** attributes of a geographic rating area preference. The system considers the geographic rating area preference which is specified in the **Rating Area Field Mapping for Group** option type of the **C1-ASOBLLNG** feature configuration. Then, the system searches for these characteristics on the following entities in the specified sequence:

1. Policy Plan
2. State where the Policy Plan is Issued
3. Policy
4. State where the Policy is Issued

If these characteristics are not defined for any of the above listed entities, the system derives the default address source and address type from the geographic rating area preference.

Note: By default, the **Address Source (C1-ADSRC)** and **Address Type (C1-ADTYP)** characteristic types are shipped with the product. You need to set these characteristic types in the respective attribute of the geographic rating area preference.

If the address source is set to **Policy Holder**, the system fetches the value from the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration. The system then derives the person who is associated with the policy using the parent customer policy person role. Once the address source and address type are derived, the system fetches the state and zip code from the address type of the address source. For example, if the address source is set to **Policy Holder** and address type is set to **Person Mailing**, the system fetches the state and zip code from the policy holder's mailing address. Once the state and zip code are fetched from the address, the system checks whether the zip code is a 9-digit code. If not, the system appends zeros to make it a 9-digit zip code. The system then derives the value of the **Use Plan Details** attribute from the geographic rating area preference. If the attribute is set to **Y**, the system then derives a geographic rating area for the state, zip code, policy number, plan number, and source system combination. However, if the attribute is set to **N**, the system then derives a geographic rating area for the state and zip code combination. If the system could not derive the geographic rating area, the system derives the default geographic rating area from the geographic rating area preference. Once the geographic rating area is derived, the system stores the geographic rating area for the membership. The characteristic type specified in the **Geographic Rating Area Characteristic Type** attribute of the geographic rating area preference is used to store geographic rating area for the membership. The effective date of the characteristic is set to effective date of the address.

The geographic rating area of the membership must be changed when the address of the policy holder or main subscriber is updated. Therefore, when an address of a person is change, the system identifies the following:

- Memberships of policies where the person is the policy holder
- Memberships where the person is the main customer

For each membership, the system searches for the **Address Source** and **Address Type** characteristics on the following entities in the specified sequence:

1. Policy Plan
2. State where the Policy Plan is Issued
3. Policy
4. State where the Policy is Issued

If these characteristics are not defined for any of the above listed entities, the system derives the default address source and address type from the geographic rating area preference. If the address source is set to **Policy Holder**, the system fetches the value from the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration. The system then derives the person who is associated with the policy using the parent customer policy person role.

Once the address source and address type are derived, the system fetches the state and zip code from the address type of the address source. The system then derives a geographic rating area for the state, zip code, policy number, plan number, and source system combination or for the state and zip code combination depending on the value defined for the **Use Plan Details** attribute. If the system could not derive the geographic rating area, the system derives the default geographic rating area from the geographic rating area preference. If the geographic rating area is different, the system creates a

Copyright © 2026, Oracle and/or its affiliates.

new characteristic to store the geographic rating area for the membership. The effective date of the characteristic is set to effective date of the address.

To use the geographic rating area as a pricing parameter, you need to define the Geographic Rating Area parameter where:

- **Value Type** is to **Adhoc**
- **Source Entity** is set to **Membership**
- **Source Type** is set to **Characteristic**
- **Source Type Code** is set to a characteristic type which is specified in the **Geographic Rating Area Characteristic Type** attribute of the geographic rating area preference
- **Parameter Usage** is set to **Price Item** and **Pricing Eligibility Criteria**

Once the Geographic Rating Area parameter is defined, you need to associate the parameter with the price items for which you want to define different rates in a pricing rule using the parameter. This helps to define different base fee for a price item based on geographic rating area to which the membership belongs.

A new screen named **Geographic Rating Area** is introduced in this release. It enables you to add, edit, and inactivate a geographic rating area.

Prerequisites

To create a geographic rating area pricing parameter, you need to do the following:

- Ensure that the upstream system contains the geographic rating area details in **CSV** file.
- Ensure that the **CSV** file is available at the desired path on the server, before the file upload batch is triggered.
- Set the **C1-GeoRatingArea** business object validation soft parameter (**Include Plan Value Details**) to either include or exclude plan details (**Y/N**) before the file is uploaded.
- Include the **C1GEORATINGARCSVUPLD** file request type for file upload purposes.
- Ensure that **C1_GEO_RATING_AREA** and **C1_GEO_RATING_AREA_REL_OBJ** tables are populated before any memberships are created in the system for derivation purposes.
- Configure the pricing parameter with the geographic rating area on the pricing rule.
- Define the required **Address Source (C1-ADSRC)** and **Address Type (C1-ADTYP)** characteristic types in the system. Values for these characteristics can be defined either on the policy or plan characteristics level. The address source and address type can also be defined on the state of issue of the policy or plan.
- Define the parent policy role in the **C1-ASOBLLNG** feature configuration.
- Define the following billing preferences in the **Field Mapping** screen:
  - Default Address Source
  - Default Address Type
  - Use Plan Details
  - Address Source Value for Policy Holder
  - Address Source Value for Main Subscriber
  - Geographic Rating Area Characteristic Type
  - Address Source Characteristic Type
  - Address Type Characteristic Type
- Define the default value for **Geographic Rating Area Characteristic Type** in the **Field Mapping** screen.
- Define the required health plan in the system.

Uploading a Geographic Rating Area File in the CSV Format

To upload a geographic rating area file in the CSV format using the **File Upload Interface** utility, you need to do the following:

- Define a file request type for uploading geographic rating area in the CSV format. To define a file request type:

1. Click the **Admin** link in the **Application** toolbar.

   A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.

   A sub-menu appears.
3. Click the **Add** option from the **File Request Type** sub-menu.

   The **File Request Type** screen appears.
4. Enter the file request type and description in the respective fields.
5. Select the **Data Transformation Required** option.

   The **File Format** field is enabled.
6. Select the **Comma Separated Values** option from the **File Format** list.
7. Select the Upload and Process File Simultaneously option.
8. Attach an algorithm created using the **C1-FRTA** algorithm type to the **Data Transformation Algorithm** field.
9. In the **Services** section, enter the required sequence number.
10. Select the **Business Object** option from the **Service Type** list.
11. Enter the **C1-GeoRatingArea** business object or custom price item business object in the **Service Name** field.
12. Select the **Add** or **Update** option from the **Operation** list depending on whether you want to create new geographic rating area details or edit the existing geographic rating area details using the file request type.
13. In the **Field Transformation** section, specify the following details:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the data field in the CSV record which you want to upload in the system.	Yes
Field Name	Used to indicate the field for which the data is uploaded in the system.	Yes
Map Field XPath	Used to specify the XPath of the field where you want to store the data field from the CSV record.	Yes
Default Value	Used to specify the default value for the field.	No

14. Click **Save**.

    The file request type is defined for uploading the geographic rating area in the CSV format.

CSV File Format for Uploading Geographic Rating Areas

Before uploading a geographic rating area file through the **File Upload Interface** utility, you need to ensure that the CSV file contains the following data:

Data	Description	Mandatory (Yes or No)
GEO_RATING_AREA	Used to specify the geographic rating area.	Yes
STATE	Used to specify the state code which belongs to the geographical rating area.	Yes
ZIP_FROM	Used to specify the zip code from where the geographic rating area begins.	Yes
ZIP_PLUS4_FROM	Used to specify the additional four digits after the zip code from where the geographic rating area begins.	Yes
ZIP_TO	Used to specify the zip code till where the geographic rating area ends.	Yes
ZIP_PLUS4_TO	Used to specify the additional four digits after the zip code till where the geographic rating area ends.	Yes
START_DT	Used to specify the date from when the geographic rating area is effective.	Yes
END_DT	Used to specify the date till when the geographic rating area is effective.	Yes
PLAN_NBR	Used to specify the plan number belonging to a particular geographical rating area.	No
HEALTH_PLAN_CD	Used to specify the health plan belonging to a particular geographical rating area.	No
POLICY_NBR	Used to specify the policy number belonging to a particular geographical rating area.	No
SOURCE_SYSTEM	Used to specify the source system from where the policy is originated.	No
STATUS	Used to indicate the status for the geographic rating area. The valid values are: • Active • Inactive	Yes

Related Topics

Sample CSV Format for Uploading Geographic Rating Areas

Let us assume that a file request type with the below field transformation details is used for uploading the geographic rating area information in the system.

Copyright © 2026, Oracle and/or its affiliates.

The following table illustrates the field transformation details used for uploading the geographic rating area information:

Sequence	Field Name	Map Field XPath
1	GEO_RATING_AREA	C1-GeoRatingArea/geoRatingArea
2	STATE	C1-GeoRatingArea/state
3	ZIP_FROM	C1-GeoRatingArea/zipFrom
4	ZIP_PLUS4_FROM	C1-GeoRatingArea/zipPlus4From
5	ZIP_TO	C1-GeoRatingArea/zipTo
6	ZIP_PLUS4_TO	C1-GeoRatingArea/zipPlus4To
7	START_DT	C1-GeoRatingArea/startDate
8	END_DT	C1-GeoRatingArea/endDate
9	PLAN_NBR	C1-GeoRatingArea/0/geoRatingAreaRelatedObject/planNumber
10	HEALTH_PLAN_CD	C1-GeoRatingArea/0/geoRatingAreaRelatedObject/healthPlanCode
11	POLICY_NBR	C1-GeoRatingArea/0/geoRatingAreaRelatedObject/policyNumber
12	SOURCE_SYSTEM_CD	C1-GeoRatingArea/0/geoRatingAreaRelatedObject/sourceSystem
13	STATUS	C1-GeoRatingArea/boStatus

In such case, you need to ensure that the sample CSV file contains records with comma-separated values in the sequence as mentioned in the above table.

Sample CSV

```
100,AR,15000,0,15000,10,02/02/2019,02/02/2030,45675767565,MED_PLN_01,7.87E
+11,SOURCE,ACTIVE
```

Geographic Rating Area (Used for Searching)

The **Geographic Rating Area** screen allows you to search for a geographic rating area using various search criteria. It also allows you to create a geographic rating area. This screen consists of the following zone:

- Search Geographic Rating Area on page 54

Search Geographic Rating Area

The **Search Geographic Rating Area** zone allows you to search for geographic rating area using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a geographic rating area detail record using the geographic rating area details or through policy or plan details. The valid values are: • Geographic Rating Area Details • Policy or Plan Details • Health Plan Details **Note:** By default, the **Geographic Rating Area Details** option is selected.	No
State Code	Used to search the geographic rating area details belonging to a particular state code. **Note:** You must specify a state code which is already defined in the system.	No
Geographic Rating Area	Used to search the geographic rating area details based on a geographic rating area.	No
Zip Code From	Used to search the geographic rating area details which are effective from a particular zip code.	No
Zip Code To	Used to search the geographic rating area details which are effective till a particular zip code.	No
Start Date	Used to search the geographic rating area details which are effective from a particular date. **Note:** The geographic rating area start date cannot be later than the geographic rating area end date.	No
End Date	Used to search the geographic rating area details which are effective till a particular date. **Note:** The geographic rating area end date cannot be earlier than the geographic rating area start date	No
Status	Used to search the geographic rating area details based on a particular status. The valid values are: • Active • Inactive	No
Policy Number	Used to search the geographic rating area details with a particular policy number.	No
Plan Number	Used to search the geographic rating area details with a particular plan number.	No
Health Plan	Used to search the geographic rating area details which are associated with a health plan.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Health Plan Search** window appears. This field appears when the **Health Plan Details** option is selected from the **Search By** list.	

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Geographic Rating Area	Displays the geographic rating area.
State Code	Displays the state code to which the geographic rating area belongs.
Zip Code From	Displays the zip code from where the geographic rating area is effective.
Zip Code Plus 4 From	Displays the zip code plus four additional digits which identify from where the geographic rating area is effective.
Zip Code To	Displays the zip code till where the geographic rating area is effective.
Zip Code Plus 4 To	Displays the zip code plus four additional digits which identify till where the geographic rating area is effective.
Start Date	Displays the date from when the geographic rating area is effective.
End Date	Displays the date till when the geographic rating area is effective.
Status	Indicates the status of the geographic rating area. The valid values are: • Active • Inactive

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **State Code**, **Geographic Rating Area**, **Zip Code From**, **Zip Code To**, **Start Date**, **End Date**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the Filters (▽) icon in the upper right corner of this zone.

Geographic Rating Area

The **Geographic Rating Area** zone displays the details of the geographic rating area. It contains the following sections:

- **Main** - Displays basic information about the geographic rating area. It contains the following fields:

Field Name	Field Description
Geographic Rating Area	Displays information about the geographic rating area.
State Code	Displays the state code to which the geographic rating area belongs.
Zip Code From	Displays the zip code from where the geographic rating area is effective.
Zip Code Plus 4 From	Displays the zip code plus four additional digits which identify from where the geographic rating area is effective.
Zip Code To	Displays the zip code till where the geographic rating area is effective.
Zip Code Plus 4 To	Displays the zip code plus four additional digits which identify till where the geographic rating area is effective.
Start Date	Displays the date from when the geographic rating area is effective.
End Date	Displays the date till when the geographic rating area is effective.
Status	Displays the status of the geographic rating area. The valid values are: • Active • Inactive

- **Plan Details** - Lists the plan information of the geographic rating area. It contains the following columns:

Column Name	Column Description
Policy Number	Displays the policy number which is associated with the geographic rating area.
Plan Number	Displays the plan number of the policy.
Health Plan	Indicates the health plan to which the geographic rating area is associated. **Note:** The data in this column appears only when the geographic rating area is specified for fully-insured individual.
Source System	Displays the name of the external system from where the policy is originated.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the geographic rating area. **Note:** The **Edit** button appears when the geographic rating area is in the **Active** status.
Inactive	Used to change the status of the geographic rating area. **Note:** The **Inactive** button appears when the geographic rating area is in the **Active** status.

- **Record Information** - This section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Business Object	Indicates the business object using which the geographic rating area is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the geographic rating area status is updated.
Creation Date/Time	Displays the date and time when the geographic rating area is created.

Searching for a Geographic Rating Area

Prerequisites

To search for a geographic rating area, you should have:

- Geographic rating area defined in the application.
- Policy and plan defined in the application.

Procedure

To search for a geographic rating area:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **G** and then click **Geographic Rating Area**.
   The **Geographic Rating Area** screen appears.
3. Enter the search criteria in the **Search Geographic Rating Area** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   A list of geographic rating area that meet the search criteria appears in the **Search Results** section.

Defining a Geographic Rating Area

Procedure

Copyright © 2026, Oracle and/or its affiliates.

To define a geographic rating area

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **G** and then click **Geographic Rating Area**.
   The **Geographic Rating Area** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Geographic Rating Area** screen.

   The **Geographic Rating Area** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the geographic rating area.
   - **Plan Details** - Used to specify the plan details for the geographic rating area.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Geographic Rating Area	Used to specify the geographic rating area.	Yes
State Code	Used to specify the state code which belongs to the geographical rating area. **Note:** You must specify a state code which is already defined in the system.	Yes
Zip Code From	Used to specify the zip code from where the geographic rating area begins.	Yes
Zip Code Plus 4 From	Used to specify the additional four digits after the zip code from where the geographic rating area begins.	Yes
Zip Code To	Used to specify the zip code till where the geographic rating area ends.	Yes
Zip Code Plus 4 To	Used to specify the additional four digits after the zip code till where the geographic rating area ends.	Yes
Start Date	Used to specify the date from when the geographic rating area is effective. **Note:** The geographic rating area start date cannot be later than the geographic rating area end date.	Yes
End Date	Used to specify the date till when the geographic rating area is effective. **Note:** The geographic rating area end date cannot be earlier than the geographic rating area start date	No
Status	Used to indicate the status for the geographic rating area. The valid values are: • Active • Inactive **Note:** You cannot assign an **Inactive** status to the geographic rating area record while you are defining a geographic rating area.	Yes

Copyright © 2026, Oracle and/or its affiliates.

4. Enter the required details in the **Main** section.
5. Add the plan details for the geographic rating area, if required.
6. Click **Save**.
   The geographic rating area is defined in the **Active** status.

Adding the Plan Details for a Geographic Rating Area

Prerequisites

To add plan details for a geographic rating area, you should have:

- Policy and plan defined in the application.
- Source system defined in the application.
- Health plan defined in the application.

Procedure

To add plan details for a geographic rating area:

1. Ensure that the **Plan Details** section is expanded when you are defining or editing the geographic rating area information.

   Note: If you want to use the geographic rating area for a fully-insured group and individual businesses, you need to specify policy number, plan number, and source system fields. You can specify the health plan only when you want to use the geographic rating area for a fully-insured individual membership.

   The **Plan Details** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Policy Number	Used to specify the policy number which is associated with the geographic rating area.	No
Plan Number	Used to specify the plan number of the policy.	No
Health Plan	Used to specify the health plan which is associated with the geographic rating area. **Note:** You need to specify the health plan, if you want to use the geographic rating area for a fully-insured individual membership.	No
Source System	Used to specify the name of the external system from where the policy is originated.	No

2. Enter the required details in the **Plan Details** section.
3. If you want to define more than one plan information for the geographic rating area, click the **Add** (+) icon and then *r*epeat step *2*.

   Note: However, if you want to remove a plan information from the geographic rating area, click the **Delete** (🗑) icon corresponding to the policy number column.

Editing a Geographic Rating Area

Procedure

To edit a geographic rating area

1. Search for the geographic rating area in the **Geographic Rating Area** screen.
2. In the **Search Results** section, click the **Broadcast** (((•))) icon corresponding to the geographic rating area column whose details you want to view.
   The **Geographic Rating Area** zone appears.
3. Click the **Edit** button in the **Geographic Rating Area** screen.

   The **Geographic Rating Area** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the geographic rating area.
   - **Plan Details** - Used to specify the plan details for the geographic rating area.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Geographic Rating Area	Used to specify the geographic rating area.	Yes
State Code	Used to specify the state code which belongs to the geographical rating area. **Note:** You must specify a state code which is already defined in the system.	Yes
Zip Code From	Used to specify the zip code from where the geographic rating area begins.	Yes
Zip Code Plus 4 From	Used to specify the additional four digits after the zip code from where the geographic rating area begins.	Yes
Zip Code To	Used to specify the zip code till where the geographic rating area ends.	Yes
Zip Code Plus 4 To	Used to specify the additional four digits after the zip code till where the geographic rating area ends.	Yes
Start Date	Used to specify the date from when the geographic rating area is effective. **Note:** The geographic rating area start date cannot be later than the geographic rating area end date.	Yes
End Date	Used to specify the date till when the geographic rating area is effective. **Note:** The geographic rating area end date cannot be earlier than the geographic rating area start date	No
Status	Used to indicate the status for the geographic rating area. The valid values are:	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Active • Inactive **Note:** You cannot assign an **Inactive** status to the geographic rating area record while you are defining a geographic rating area.	

4. Modify the geographic rating area details, if required.
5. Define, edit, or remove plan details for the geographic rating area, if required.
6. Click **Save**.
   The changes made to the geographic rating area are saved.

Inactivating a Geographic Rating Area

Procedure

To inactivate a geographic rating area:

1. Search for the geographic rating area in the **Geographic Rating Area** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the geographic rating area column whose details you want to view.
   The **Geographic Rating Area** zone appears.
3. Click the **Inactive** button in the **Geographic Rating Area** zone.
   The status of the geographic rating area is changed to **Inactive**.

Note: The **Inactive** button appears when the geographic rating area is in the **Active** status.

Member Relationship Pricing Parameter

Oracle Revenue Management and Billing enables you to use the member relationship (i.e. how a member is related to the main subscriber of the membership) as a pricing parameter while defining the age based, tier based, and additional fee pricing rules. This feature facilitates you to offer different rates for a price item based on different member relationship.

While adding a membership to a policy plan or while adding or inactivating a member person in a membership, the system automatically derives member relationship for each member person of the membership from a member relationship structure. You can define a member relationship structure through a characteristic on the policy plan. While defining a member relationship structure for a policy plan, you must use the characteristic type specified in the **Member Relationship Structure Characteristic Type** attribute of a member relationship and subscription tier preference. The system considers the member relationship and subscription tier preference which is specified in the **Relation Structure Code Field Mapping** option type of the **C1-ASOBLLNG** feature configuration.

The system enables you to define two types of member relationship structure:

- **Step Member Relationship Structure** - A step member relationship structure helps the system to determine how each member person is related to the main subscriber of the membership. You can specify a list of member relationships in a step member relationship structure. A member relationship is derived for a member person depending on the following:
  - Whether the member person is a self, spouse, or dependent
  - Number of spouses, dependents, and young adults in the membership

  A relationship matrix indicates whether a member person with a particular relationship type should be considered as self, spouse, or dependent while deriving the member relationship. In a step member relationship structure, a spouse is never considered as a dependent. Only children are considered as dependents.

  For example, you can create a step member relationship structure named STEPEX1 as shown below:

Member Relationship	Self	Number of Spouses	Number of Dependents	Number of Young Adults
Self	1	0	0	0
Spouse 1	1	1	0	0
Spouse 2	1	2	0	0
Child 1	1	1	1	0
Young Adult 1	1	1	0	1
CD1 and YA1	1	1	1	1
Child 2	1	1	2	0
Young Adult 2	1	1	0	2
CD2 and YA2	1	1	2	2
Additional Dependent	1	3	3	3

Copyright © 2026, Oracle and/or its affiliates.

Note: You can only define one member relationship in a step member relationship structure where the sum of self, number of spouses, number of dependents, and number of young adults exceeds the maximum member count specified in the step member relationship structure.

In addition, you can create a relationship matrix in the STEPEX1 member relationship structure as shown below:

Relation	Relationship Type	Relationship
Main Subscriber	Owner	Self
Main Subscriber	Member	Self
Children	Child	Dependent
Spouse	Wife	Spouse
Spouse	Spouse	Spouse

- **Party Member Relationship Structure** - A party member relationship structure helps the system to determine how each member person is related to the main subscriber of the membership. You can specify a list of member relationships in a party member relationship structure. A member relationship is derived for a member person depending on the following:
  - Whether the member person is a self or dependent
  - Number of dependents in the membership

  A relationship matrix indicates whether a member person with a particular relationship type should be considered as self or dependent while deriving the member relationship. In a party member relationship structure, a spouse is always considered as a dependent. Also, children are not categorized as young adults.

  For example, you can create a party member relationship structure named PARTYEX1 as shown below:

Member Relationship	Self	Number of Spouses	Number of Dependents	Number of Young Adults
Self	1	0	0	0
Dependent 1	1	0	1	0
Dependent 2	1	0	2	0
Dependent 3	1	0	3	0
Additional Dependents	1	0	9	0

Note: You can only define one member relationship in a party member relationship structure where the sum of self and number of dependents exceeds the maximum member count specified in the party member relationship structure.

In addition, you can create a relationship matrix in the PARTYEX1 member relationship structure as shown below:

Relation	Relationship Type	Relationship
Main Subscriber	Owner	Self
Main Subscriber	Member	Self
Children	Child	Dependent
Spouse	Wife	Dependent
Spouse	Spouse	Dependent

Copyright © 2026, Oracle and/or its affiliates.

Once the member relationship structure is derived from the policy plan, the system determines the member relationship for each member person in the membership. While determining the member relationship for a member person, the system derives the following characteristic types from the respective attributes of the member relationship and subscription tier preference:

- Age Calculation Date Basis
- Max Age Limit for Max Dependent Count
- Max Number of Dependents Order Priority
- Maximum Number of Dependents
- Member Relationship Derivation Date
- New Born Gift Days
- New Born Gift Days Applicability
- Young Adult Max Age Limit
- Young Adult Max Age Limit Applicability

The system then derives these characteristics from the policy plan. If the **Member Relationship Derivation Date** characteristic type is set to **Enrollment Date**, the system derives the member relationship for each member person of the membership in order of the member start date. However, if the Member Relationship Derivation Date characteristic type is set to Date of Birth, the system derives the member relationship for each member person of the membership in order of the date of birth. For example, if a membership with the following member persons is added to a policy plan:

Member Start Date	Member End Date	Person Name	Main Subscriber	Relationship Type	Member	Date of Birth
1-Jan-18	31-Dec-20	Mark	Yes	Self	Yes	15-Jan-68
1-Jan-18	31-Dec-20	Nancy	No	Wife	Yes	20-Apr-72
1-Jan-18	31-Dec-20	Roger	No	Child	Yes	15-May-01
1-Jan-18	31-Dec-20	Tom	No	Child	Yes	16-May-04

Now, if the following characteristics are defined on the policy plan:

- Member Relationship Structure - STEPEX1
- Member Relationship Derivation Date - Date of Birth
- Age Calculation Date Basis - Enrollment Date
- Maximum Number of Dependents - 3
- Max Number of Dependents Order Priority - YOUNGEST

The system will consider the STEPEX1 member relationship structure and derives the member relationship for each member person as shown below:

Member Person	Effective Date	Characteristic Type	Characteristic Value
Mark	1-Jan-18	Member Relationship	Self
Nancy	1-Jan-18	Member Relationship	Spouse 1
Tom	1-Jan-18	Member Relationship	Child 1
Roger	1-Jan-18	Member Relationship	Child 2

Note that the member relationship of Tom is derived before Roger because he is youngest of all dependents. Now, assume if one more member person named Harry with the date of birth as 05-11-08 and relationship type as Child is added to the membership on 05-Jan-18, then the system derives the member relationship for each member person of the membership as shown below:

Copyright © 2026, Oracle and/or its affiliates.

Effective Date	Member	Member Person Characteristics	Value
1-Jan-18	Mark	Member Relationship	Self
1-Jan-18	Nancy	Member Relationship	Spouse 1
5-Jan-18	Harry	Member Relationship	Child 1
5-Jan-18	Tom	Member Relationship	Child 2
5-Jan-18	Roger	Member Relationship	Additional Dependent

The member relationship for Harry, Tom, and Roger is derived in the order of their age which is calculated from the enrollment date. Because the member relationship derived for Tom and Roger is different, the system creates a new characteristic to store the member relationship for Tom and Roger. Here, the effective date of the characteristics is set to the new member person's start date.

If a new born is added to the membership, the effective date of the new born's member relationship characteristic is calculated considering the gift days if applicable. If a member person is end dated, the system derives the member relationship of all other member persons once again. If the member relationship for a member person is different, the system creates a new characteristic to store the member relationship for the member person. The effective date of the new characteristic is set to member person's end date + 1. However, if a member person is inactivated, the system derives the member relationship of all other member persons once again. If the member relationship for a member person is different, the system updates the existing member relationship characteristic of the member person.

To use the member relationship as a pricing parameter, you need to define the Member Relationship parameter where:

- **Value Type** is to **Adhoc**
- **Source Entity** is set to **Membership Person**
- **Source Type** is set to **Characteristic**
- **Source Type Code** is set to a characteristic type which is specified in the **Member Relationship Characteristic Type** attribute of the member relationship and subscription tier preference
- **Parameter Usage** is set to **Price Item** and **Pricing Eligibility Criteria**

Once the Member Relationship parameter is defined, you need to associate the parameter with the price items for which you want to define different rates in a pricing rule using the parameter. This helps to define different base fee for a price item based on the member relationship.

A new screen named **Member Relationship/Subscription Tier Structure** is introduced in this release. It enables you to add, edit, copy, and delete the member relationship and subscription tier structures.

Prerequisites

To create a member relationship pricing parameter, you need to do the following:

- Define the pricing parameter with the member relationship.
- The **Admin** user must define different types of member relationship structures for step or party, where all the member relationships must be defined in the **Member Relationship/Subscription Tier Structure** screen. These member relationships must also exist in the **C1-ASOBLLNG** feature configuration.
- Define the required characteristic types, such as, **Member Relationship Structure (C1-MRLST)**, **Member Relationship - Derivation Date Basis (C1-MRDDB)**, and **Age Calculation Date Basis (C1-AGCAL)** on the policy plan.
- Define the following set of characteristics while adding the characteristics for the policy plan and also when the premium billing preferences are defined:
  - Max Age of Dependent
  - Max Number of Dependents
  - Order Priority
  - Young Adult Max Age Limit

Copyright © 2026, Oracle and/or its affiliates.

  - Young Adult Inclusion Applicability
- The above characteristic types along with the **Member Relationship (C1-MEMRL)** characteristic type would be stamped on the member person, must be specified in the **Field Mapping** screen.

Member Relationship/Subscription Tier Structure (Used for Searching)

The **Member Relationship/Subscription Tier Structure** screen allows you to search for a member relationship/subscription tier using various search criteria. It also allows you to create a member relationship/subscription tier. Through this screen, you can navigate to the following screen. It contains the following zone:

This screen consists of the following zone:

- Member Relationship/Subscription Tier Structure List on page 67
- Member Relationship/Subscription Tier Structure on page 68

Member Relationship/Subscription Tier Structure List

The **Member Relationship/Subscription Tier Structure List** zone displays the member relationship or subscription tier structure information. It contains the following columns:

Column Name	Column Description
Structure	Used to specify the structure code for the structure.
Description	Used to specify the description for the structure.
Edit	On clicking the **Edit** (✎) icon, the **Member Relationship/Subscription Tier Structure** screen appears where you can edit the structural details of the member relationship or subscription tier.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Member Relationship/Subscription Tier Structure** screen appears where you can define a new member relationship or subscription tier using an existing member relationship or subscription tier.
Delete	On clicking the **Delete** (🗑) icon, you can delete the member relationship or subscription tier structure.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Structure** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the Filters (▽) icon in the upper right corner of this zone.

Member Relationship/Subscription Tier Structure

The **Member Relationship/Subscription Tier Structure** zone displays the details of the member relationship or subscription tier structure. It contains the following sections:

- **Main** - Displays basic information about the member relationship or subscription tier structure. It contains the following fields:

Field Name	Field Description
Structure	Displays the type of structure.
Description	Displays the description of the structure.
Detailed Description	Displays additional information about the structure.
Maximum Member Count	Displays the maximum count of the members allowed in the structure.

- **Member Relationship/Subscription Tier Criteria** - Lists the criteria details of the member relationship or subscription tier. It contains the following columns:

Column Name	Column Description
Member Relationship/ Subscription Tier	Displays the criteria code for the member relationship or subscription tier.
Self	Displays the main subscriber who meets the member relationship or subscription tier criteria. **Note:** The total count in the **Self** column cannot exceed more than one.
Number of Spouses	Displays the total number of spouses in the membership who meet the member person relationship criteria.
Number of Dependents	Displays the total number of dependents in the membership who meet the member person relationship criteria.
Number of Young Adults	Displays the total number of young adults in the membership who meet the member person relationship criteria.

- **Relationship Matrix** - Lists the relationship matrix details defined for the member relationship or subscription tier structure. It contains the following columns:

Column Name	Column Description
Relation	Indicates an entity defined in the relationship matrix.
Relationship Type	Indicates how a member person is associated with the main subscriber using a relationship type.
Relationship	Indicates how a member person is associated with the relationship type.

- **Record Actions** - This section contains the following buttons:

Copyright © 2026, Oracle and/or its affiliates.

Button Name	Button Description
Edit	Used to edit the structural details of the member relationship or subscription tier.
Delete	Used to delete the member relationship or subscription tier structure.
Duplicate	Used to create a new member relationship or subscription tier structure using an existing structure.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the member relationship or subscription tier structure is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

Defining a Member Relationship Structure

Procedure

To define a member relationship structure:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.
   A sub-menu appears.
3. Click the **Add** option from the **Member Relationship/Subscription Tier Structure** sub-menu.

   The **Member Relationship/Subscription Tier Structure** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the member relationship structure. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Structure	Used to specify a code name for the structure.	Yes
	Note: You must specify a unique code name for the structure.	
Description	Used to specify the description for the structure.	Yes
Detailed Description	Used to specify additional information about the structure.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Maximum Member Count	Used to specify the maximum number of members allowed in the structure. **Note:** If you do not specify the value, by default, it is set to zero (0).	No

- **Member Relationship/Subscription Tier Criteria** - Used to specify the criteria details for the member relationship. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Member Relationship/ Subscription Tier	Used to specify a code name for the criteria. **Note:** You must specify a unique code name for the member relationship/subscription criteria.	No
Self	Used to specify the main subscriber for the member relationship. **Note:** The value for this field must be a positive integer.	No
Number of Spouses	Used to specify the total number of spouses in the membership who meet the member relationship criteria. **Note:** The value for this field must be a positive integer.	No
Number of Dependents	Used to specify the total number of dependents in the membership who meet the member relationship criteria. **Note:** The value for this field must be a positive integer.	No
Number of Young Adults	Used to specify the total number of young adults in the membership who meet the member relationship criteria. **Note:** The value for this field must be a positive integer.	No

Note: You must specify at least one criteria for the member relationship structure. However, you can specify only a single member relationship criteria, if the maximum member count is set to zero (0) or one (1).

Relationship Matrix - Used to specify the relationship matrix for the member relationship. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Relation	Used to indicate an entity in the relationship matrix.	No
Relationship Type	Used to indicate how a member person is associated with the main subscriber using a relationship type.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Relationship	Used to indicate how the relation is associated with the relationship type in the relationship matrix	No

Note: You must specify at least one relationship matrix.

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Member Relationship/Subscription Tier Structure** screen.

4. Enter the required details in the **Main** section.
5. Define a criteria (for the member relationship structure) in the **Member Relationship/Subscription Tier Criteria** section.
6. If you want to define more than one criteria for the member relationship structure, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a criteria from the member relationship structure, click the **Delete** (🗑) icon corresponding to the **Member Relationship/Subscription Tier** field.

7. Define the relationship matrix (for the member relationship structure) in the **Relationship Matrix** section.
8. If you want to define more than one relationship matrix for the member relationship structure, click the **Add** (+) icon and then repeat step 7.

Note: However, if you want to remove a relationship matrix from the member relationship structure, click the **Delete** (🗑) icon corresponding to the **Relation** field.

9. Click **Save**.
   The member relationship structure is defined.

Editing a Member Relationship Structure

Procedure

To edit a member relationship structure:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.
   The **Member Relationship/Subscription Tier Structure** screen appears.
3. In the **Member Relationship/Subscription Tier Structure List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the member relationship structure whose details you want to edit.

   The **Member Relationship/Subscription Tier Structure** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the member relationship structure. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Structure	Displays the member relationship structure name.	Not applicable
Description	Used to specify the description for the structure.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Detailed Description	Used to specify additional information about the structure.	No
Maximum Member Count	Used to specify the maximum number of members allowed in the structure. **Note:** If you do not specify the value, by default, it is set to zero (0).	No

- **Member Relationship/Subscription Tier Criteria** - Used to define a criteria for the member relationship. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Member Relationship/ Subscription Tier	Used to specify a code name for the criteria. **Note:** You must specify a unique code name for the member relationship/subscription criteria.	No
Self	Used to specify the main subscriber for the member relationship. **Note:** The value for this field must be a positive integer.	No
Number of Spouses	Used to specify the total number of spouses in the membership who meet the member relationship criteria. **Note:** The value for this field must be a positive integer.	No
Number of Dependents	Used to specify the total number of dependents in the membership who meet the member relationship criteria. **Note:** The value for this field must be a positive integer.	No
Number of Young Adults	Used to specify the total number of young adults in the membership who meet the member relationship criteria. **Note:** The value for this field must be a positive integer.	No

Note:

You must specify at least one criteria for the member relationship structure. However, you can specify only a single member relationship criteria, if the maximum member count is set to zero (0) or one (1).

Relationship Matrix - Used to define a relationship matrix for the member relationship. It contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Relation	Used to indicate an entity in the relationship matrix.	No
Relationship Type	Used to indicate how a member person is associated with the main subscriber using a relationship type.	No
Relationship	Used to indicate how the relation is associated with the relationship type in the relationship matrix	No

Note: You must specify at least one relationship matrix.

Tip: Alternatively, you can edit the details of a member relationship structure by clicking the **Edit** button in the **Member Relationship/Subscription Tier Structure** zone.

4. Modify the details in the **Main** section.
5. Define, edit, or remove the criteria (for the member relationship structure) in the **Member Relationship/Subscription Tier Criteria** section.
6. If you want to define more than one criteria for the member relationship structure, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a criteria from the member relationship structure, click the **Delete** (🗑) icon corresponding to the **Member Relationship/Subscription Tier** field.

7. Define, edit, or remove the relationship matrix (for the member relationship structure) in the **Relationship Matrix** section.
8. If you want to define more than one relationship matrix for the member relationship structure, click the **Add** (+) icon and then repeat step 7.

Note: However, if you want to remove a relationship matrix from the member relationship structure, click the **Delete** (🗑) icon corresponding to the **Relation** field.

9. Click **Save**.
   The changes made to the member relationship structure are saved.

3. In the **Member Relationship/Subscription Tier Structure List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the member relationship structure whose copy you want to create.

   The **Member Relationship/Subscription Tier Structure** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the member relationship structure. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Structure	Used to specify a code name for the structure. **Note:** You must specify a unique code name for the structure.	Not applicable
Description	Used to specify the description for the structure.	Yes
Detailed Description	Used to specify additional information about the structure.	No
Maximum Member Count	Used to specify the maximum number of members allowed in the structure. **Note:** If you do not specify the value, by default, it is set to zero (0).	No

   - **Member Relationship/Subscription Tier Criteria** - Used to specify the criteria details for the member relationship. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Member Relationship/ Subscription Tier	Used to specify a code name for the criteria. **Note:** You must specify a unique code name for the member relationship/subscription criteria.	No
Self	Used to specify the main subscriber for the member relationship. **Note:** The value for this field must be a positive integer.	No
Number of Spouses	Used to specify the total number of spouses in the membership who meet the member relationship criteria. **Note:** The value for this field must be a positive integer.	No
Number of Dependents	Used to specify the total number of dependents in the membership who meet the member relationship criteria. **Note:** The value for this field must be a positive integer.	No
Number of Young Adults	Used to specify the total number of young adults in the membership who meet the member relationship criteria.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The value for this field must be a positive integer.	

Note:

You must specify at least one criteria for the member relationship structure. However, you can specify only a single member relationship criteria, if the maximum member count is set to zero (0) or one (1).

Relationship Matrix - Used to specify the relationship matrix for the member relationship. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Relation	Used to indicate an entity in the relationship matrix.	No
Relationship Type	Used to indicate how a member person is associated with the main subscriber using a relationship type.	No
Relationship	Used to indicate how the relation is associated with the relationship type in the relationship matrix	No

Note: You must specify at least one relationship matrix.

Tip: Alternatively, you can copy a member relationship structure by clicking the **Duplicate** button in the **Member Relationship/Subscription Tier Structure** zone.

4. Enter the required details in the **Main** section.
5. Define, edit, or remove a criteria (for the member relationship structure) in the **Member Relationship/Subscription Tier Criteria** section.
6. If you want to define more than one criteria for the member relationship structure, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a criteria from the member relationship structure, click the **Delete** (🗑) icon corresponding to the **Member Relationship/Subscription Tier** field.

7. Define, edit, or remove the relationship matrix (for the member relationship structure) in the **Relationship Matrix** section.
8. If you want to define more than one relationship matrix for the member relationship structure, click the **Add** (+) icon and then repeat step 7.

Note: However, if you want to remove a relationship matrix from the member relationship structure, click the **Delete** (🗑) icon corresponding to the **Relation** field.

9. Click **Save**.
   The new member relationship structure is created.

Deleting a Member Relationship Structure

Procedure

To delete a member relationship structure:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.
   A sub-menu appears.
3. Click the **Search** option from the **Member Relationship/Subscription Tier Structure** sub-menu.
   The **Member Relationship/Subscription Tier Structure** screen appears.
4. In the **Member Relationship/Subscription Tier Structure List** section, click the **Delete** (🗑) icon in the **Delete** column *c*orresponding to the member relationship structure that you want to delete.
   A message appears confirming whether you want to delete the member relationship structure.

> **Tip:** Alternatively, you can click the **Delete** button in the **Member Relationship/Subscription Tier Structure** zone to delete the member relationship structure.

5. Click **OK**.
   The member relationship structure is deleted.

Viewing the Member Relationship Structure Details

Procedure

To view the details of the member relationship structure:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.
   A sub-menu appears.
3. Click the **Search** option from the **Member Relationship/Subscription Tier Structure** sub-menu.
   The **Member Relationship/Subscription Tier Structure** screen appears.
4. In the **Member Relationship/Subscription Tier Structure List** zone, click the **Broadcast** (📡) icon corresponding to the structure column whose details you want to view.
   The **Member Relationship/Subscription Tier Structure** zone appears.
5. View the details of the member relationship structure in the **Member Relationship/Subscription Tier Structure** zone.

Subscription Tier Pricing Parameter

Oracle Revenue Management and Billing enables you to use the subscription tier as a pricing parameter while defining the tier based pricing rules. This feature facilitates you to offer different rates for a price item based on different subscription tier.

On creating the bill period timelines, the system executes the **Derive Subscription Tier for Membership (C1-DERSUBTR)** algorithm attached to the **Account and Price Item Derivation Post-Processing** system event in the respective tier based pricing rule type. This algorithms determines the subscription tier of the membership for each bill period timeline. While determining the subscription tier for a membership, the system derives subscription tier for the membership from a subscription tier structure. Note that while deriving the subscription tier of a membership for a bill period timeline, the system refers the proration rules defined on the respective policy plan and accordingly derives the subscription tier for the membership. The system invokes the **C1-DERSUBTR** algorithm in the **C1-REPC1** batch.

You can define a subscription tier structure through a characteristic on the policy plan. While defining a subscription tier structure for a policy plan, you must use the characteristic type specified in the **Subscription Tier Structure Characteristic Type** attribute of a member relationship and subscription tier preference. The system considers the member relationship and subscription tier preference which is specified in the **Relation Structure Code Field Mapping** option type of the **C1-ASOBLLNG** feature configuration.

A subscription tier structure helps the system to determine the subscription tier to which the membership belongs. You can specify a list of subscription tiers in a subscription tier structure. A subscription tier is derived for a membership depending on the following:

- Whether the member person is a self, spouse, or dependent
- Number of spouses, dependents, and young adults in the membership in the respective bill period timeline

A relationship matrix indicates whether a member person with a particular relationship type should be considered as self, spouse, or dependent while deriving the subscription tier. In a subscription tier structure, a spouse is never considered as a dependent. Only children are considered as dependents.

Let us understand this with the help of an example.

The following table illustrates the structure of a subscription tier named STEX1:

Subscription Tier	Self	Number of Spouses	Number of Dependents	Number of Young Adults
E	1	0	0	0
ES	1	1	0	0
ESC1	1	1	1	0
ESC2	1	1	2	0
EC1	1	0	1	0
EC2	1	0	2	0
EC3	1	0	3	0

Copyright © 2026, Oracle and/or its affiliates.

Subscription Tier	Self	Number of Spouses	Number of Dependents	Number of Young Adults
F	1	9	9	9

Note: You can only define one subscription tier in a subscription tier structure where the sum of self, number of spouses, number of dependents, and number of young adults exceeds the maximum member count specified in the subscription tier structure.

In addition, you can create a relationship matrix for a subscription tier. Let us understand this with the help of an example.

The following table illustrates the relationship matrix defined for the STEX1 subscription tier:

Relation	Relationship Type	Relationship
Main Subscriber	Owner	Self
Main Subscriber	Member	Self
Children	Child	Dependent
Spouse	Wife	Spouse
Spouse	Spouse	Spouse

Once the subscription tier structure is derived from the policy plan, the system determines the subscription tier of the membership for the bill period timeline. While determining the subscription tier of a membership for the bill period timeline, the system derives the following characteristic types from the respective attributes of the member relationship and subscription tier preference:

- Age Calculation Date Basis
- Max Age Limit for Max Dependent Count
- Max Number of Dependents Order Priority
- Maximum Number of Dependents
- New Born Gift Days
- New Born Gift Days Applicability
- Young Adult Max Age Limit
- Young Adult Max Age Limit Applicability

The system then derives these characteristics from the policy plan. Let us understand this with the help of an example.

The following table illustrates different member persons included in a membership that is defined for a policy plan:

Member Start Date	Member End Date	Person Name	Main Subscriber	Relationship Type	Member	Date of Birth
1-Jan-20	31-Dec-20	Mark	Yes	Self	Yes	15-Jan-68
1-Jan-20	31-Dec-20	Nancy	No	Wife	Yes	20-Apr-72
1-Jan-20	31-Dec-20	Roger	No	Child	Yes	15-May-01
1-Jan-20	31-Dec-20	Tom	No	Child	Yes	16-May-04

Now, if the following characteristics are defined on the policy plan:

- Subscription Tier Structure - STEX1
- Age Calculation Date Basis - Enrollment Date
- Maximum Number of Dependents - 3
- Max Number of Dependents Order Priority - ELDEST
- Max Age Limit for Max Dependent Count - 21

Copyright © 2026, Oracle and/or its affiliates.

- New Born Gift Days - 30
- New Born Gift Days Applicability - Y
- Young Adult Max Age Limit - 25
- Young Adult Max Age Limit Applicability - Y

The system considers the STEX1 subscription tier structure and derives the subscription tier of the membership for each bill period timeline. Let us understand this with the help of an example.

The following table illustrates the subscription tier derived for the respective bill period timeline:

Bill Period Timeline	**Characteristic Type**	**Characteristic Value**
1-Jan-20 to 31-Jan-20	Subscription Tier	ESC2
1-Feb-20 to 29-Feb-20	Subscription Tier	ESC2
1-Mar-20 to 31-Mar-20	Subscription Tier	ESC2
1-Apr-20 to 30-Apr-20	Subscription Tier	ESC2
1-May-20 to 31-May-20	Subscription Tier	ESC2
1-Jun-20 to 30-Jun-20	Subscription Tier	ESC2
1-Jul-20 to 31-Jul-20	Subscription Tier	ESC2
1-Aug-20 to 31-Aug-20	Subscription Tier	ESC2
1-Sep-20 to 30-Sep-20	Subscription Tier	ESC2
1-Oct-20 to 31-Oct-20	Subscription Tier	ESC2
1-Nov-20 to 30-Nov-20	Subscription Tier	ESC2
1-Dec-20 to 31-Dec-20	Subscription Tier	ESC2

Because the characteristic value is same across all bill period timelines, the system will create one subscription tier characteristic with the effective date as 01-Jan-2020. Now, assume if one more member person named Harry with the date of birth as 05-11-08 and relationship type as Child is added to the membership on 05-Mar-20, then the system derives the subscription tier of the membership for each bill period timeline. Let us understand this with the help of an example.

The following table illustrates the subscription tier derived for the respective bill period timeline:

Bill Period Timeline	**Characteristic Type**	**Characteristic Value**
5-Mar-20 to 31-Mar-20	Subscription Tier	F
1-Apr-20 to 30-Apr-20	Subscription Tier	F
1-May-20 to 31-May-20	Subscription Tier	F
1-Jun-20 to 30-Jun-20	Subscription Tier	F
1-Jul-20 to 31-Jul-20	Subscription Tier	F
1-Aug-20 to 31-Aug-20	Subscription Tier	F
1-Sep-20 to 30-Sep-20	Subscription Tier	F
1-Oct-20 to 31-Oct-20	Subscription Tier	F
1-Nov-20 to 30-Nov-20	Subscription Tier	F
1-Dec-20 to 31-Dec-20	Subscription Tier	F

Copyright © 2026, Oracle and/or its affiliates.

In this case, the system will have two subscription tier characteristics for the membership - one with the effective date as 01-Jan-2020 where the characteristic value is set to **ESC2** and another with the effective date as 05-Mar-2020 where the characteristic value is set to **F**.

If a new born is added to the membership, the effective date of the new subscription tier characteristic is calculated considering the gift days if applicable. If a member person is end dated, the system derives the subscription tier of the membership once again. If the subscription tier for the membership is different, the system creates a new characteristic to store the subscription tier for the membership. The effective date of the new characteristic is set according to the proration rule defined for the termination event. If a member person is inactivated, the system derives the subscription tier of the membership once again. In this case, if the subscription tier for the membership is different, the system updates the existing subscription tier characteristic of the membership.

To use the subscription tier as a pricing parameter, you need to define the Subscription Tier parameter where:

- **Value Type** is to **Adhoc**
- **Source Entity** is set to **Membership**
- **Source Type** is set to **Characteristic**
- **Source Type Code** is set to a characteristic type which is specified in the **Subscription Tier Characteristic Type** attribute of the member relationship and subscription tier preference
- **Parameter Usage** is set to **Price Item** and **Pricing Eligibility Criteria**

Once the Subscription Tier parameter is defined, you need to associate the parameter with the price items for which you want to define different rates in a pricing rule using the parameter. This helps to define different base fee for a price item based on the subscription tier.

A new screen named **Member Relationship/Subscription Tier Structure** is introduced in this release. It enables you to add, edit, copy, and delete the member relationship and subscription tier structures.

Prerequisites

To create a subscription tier pricing parameter, you need to do the following:

- Define the pricing parameter with the subscription tier.
- The **Admin** user must define different types of subscription tiers, where all the tiers must be defined in the **Member Relationship/Subscription Tier Structure** screen. These subscription tiers must also exist in the **C1-ASOBLLNG** feature configuration.
- Define the required characteristic types, such as, **Subscription Tier Structure (C1-STRST)** and **Age Calculation Date Basis (C1-AGCAL)** on the policy plan.
- Define the following set of characteristics while adding the characteristics for the policy plan and also when the premium billing preferences are defined:
  - Max Age of Dependent
  - Max Number of Dependents
  - Order Priority
  - Young Adult Max Age Limit
  - Young Adult Inclusion Applicability
- The above characteristic types along with the **Subscription (C1-SUBST)** characteristic type would be stamped on member person, must be specified in the **Field Mapping** screen.

Member Relationship/Subscription Tier Structure (Used for Searching)

The **Member Relationship/Subscription Tier Structure** screen allows you to search for a member relationship/subscription tier using various search criteria. It also allows you to create a member relationship/subscription tier. Through this screen, you can navigate to the following screen. It contains the following zone:

This screen consists of the following zone:

- Member Relationship/Subscription Tier Structure List on page 67
- Member Relationship/Subscription Tier Structure on page 68

Member Relationship/Subscription Tier Structure List

The **Member Relationship/Subscription Tier Structure List** zone displays the member relationship or subscription tier structure information. It contains the following columns:

Column Name	Column Description
Structure	Used to specify the structure code for the structure.
Description	Used to specify the description for the structure.
Edit	On clicking the **Edit** (✎) icon, the **Member Relationship/Subscription Tier Structure** screen appears where you can edit the structural details of the member relationship or subscription tier.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Member Relationship/Subscription Tier Structure** screen appears where you can define a new member relationship or subscription tier using an existing member relationship or subscription tier.
Delete	On clicking the **Delete** (🗑) icon, you can delete the member relationship or subscription tier structure.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Structure** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the Filters (▽) icon in the upper right corner of this zone.

Member Relationship/Subscription Tier Structure

The **Member Relationship/Subscription Tier Structure** zone displays the details of the member relationship or subscription tier structure. It contains the following sections:

Copyright © 2026, Oracle and/or its affiliates.

- **Main** - Displays basic information about the member relationship or subscription tier structure. It contains the following fields:

Field Name	Field Description
Structure	Displays the type of structure.
Description	Displays the description of the structure.
Detailed Description	Displays additional information about the structure.
Maximum Member Count	Displays the maximum count of the members allowed in the structure.

- **Member Relationship/Subscription Tier Criteria** - Lists the criteria details of the member relationship or subscription tier. It contains the following columns:

Column Name	Column Description
Member Relationship/ Subscription Tier	Displays the criteria code for the member relationship or subscription tier.
Self	Displays the main subscriber who meets the member relationship or subscription tier criteria.
	Note: The total count in the **Self** column cannot exceed more than one.
Number of Spouses	Displays the total number of spouses in the membership who meet the member person relationship criteria.
Number of Dependents	Displays the total number of dependents in the membership who meet the member person relationship criteria.
Number of Young Adults	Displays the total number of young adults in the membership who meet the member person relationship criteria.

- **Relationship Matrix** - Lists the relationship matrix details defined for the member relationship or subscription tier structure. It contains the following columns:

Column Name	Column Description
Relation	Indicates an entity defined in the relationship matrix.
Relationship Type	Indicates how a member person is associated with the main subscriber using a relationship type.
Relationship	Indicates how a member person is associated with the relationship type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the structural details of the member relationship or subscription tier.
Delete	Used to delete the member relationship or subscription tier structure.
Duplicate	Used to create a new member relationship or subscription tier structure using an existing structure.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the member relationship or subscription tier structure is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

Defining a Subscription Tier Structure

Procedure

To define a subscription tier structure:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.
   A sub-menu appears.
3. Click the **Add** option from the **Member Relationship/Subscription Tier Structure** sub-menu.

   The **Member Relationship/Subscription Tier Structure** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the subscription tier structure. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Structure	Used to specify a code name for the structure. **Note:** You must specify a unique code name for the structure.	Yes
Description	Used to specify the description for the structure.	Yes
Detailed Description	Used to specify additional information about the structure.	No
Maximum Member Count	Used to specify the maximum number of members allowed in the structure. **Note:** If you do not specify the value, by default, it is set to zero (0).	No

   - **Member Relationship/Subscription Tier Criteria** - Used to specify a criteria for the subscription tier. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Member Relationship/ Subscription Tier	Used to specify a code name for the criteria.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You must specify a unique code name for the subscription tier criteria.	
Self	Used to specify the main subscriber for the subscription tier. **Note:** The value for this field must be a positive integer.	No
Number of Spouses	Used to specify the total number of spouses in the membership who meet the subscription tier criteria. **Note:** The value for this field must be a positive integer.	No
Number of Dependents	Used to specify the total number of dependents in the membership who meet the subscription tier criteria. **Note:** The value for this field must be a positive integer.	No
Number of Young Adults	Used to specify the total number of young adults in the membership who meet the subscription tier criteria. **Note:** The value for this field must be a positive integer.	No

Note: You must specify at least one criteria for the subscription tier structure. However, you can specify only a single subscription tier criteria, if the maximum member count is set to zero (0) or one (1).

Relationship Matrix - Used to specify the relationship matrix for the subscription tier. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Relation	Used to indicate an entity in the relationship matrix.	No
Relationship Type	Used to indicate how a member person is associated with the main subscriber using a relationship type.	No
Relationship	Used to indicate how the relation is associated with the relationship type in the relationship matrix	No

Note: You must specify at least one relationship matrix.

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Member Relationship/Subscription Tier Structure** screen.

4. Enter the required details in the **Main** section.
5. Define a criteria (for the subscription tier structure) in the **Member Relationship/Subscription Tier Criteria** section.
6. If you want to define more than one criteria for the subscription tier structure, click the **Add** (+) icon and then repeat step 5.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** However, if you want to remove a criteria from the subscription tier structure, click the **Delete** (🗑) icon corresponding to the **Member Relationship/Subscription Tier** field.

7. Define a relationship matrix (for the subscription tier structure) in the **Relationship Matrix** section.
8. If you want to define more than one relationship matrix for the subscription tier structure, click the **Add** (+) icon and then repeat step 7.

> **Note:** However, if you want to remove a relationship matrix from the subscription tier structure, click the **Delete** (🗑) icon corresponding to the **Relation** field.

9. Click **Save**.
   The subscription tier structure is defined.

Editing a Subscription Tier Structure

Procedure

To edit a subscription tier structure:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.
   The **Member Relationship/Subscription Tier Structure** screen appears.
3. In the **Member Relationship/Subscription Tier Structure List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the subscription tier structure whose details you want to edit.

   The **Member Relationship/Subscription Tier Structure** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the subscription tier structure. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Structure	Displays the subscription tier structure name.	Not applicable
Description	Used to specify the description for the structure.	Yes
Detailed Description	Used to specify additional information about the structure.	No
Maximum Member Count	Used to specify the maximum number of members allowed in the structure. **Note:** If you do not specify the value, by default, it is set to zero (0).	No

   - **Member Relationship/Subscription Tier Criteria** - Used to specify a criteria for the subscription tier. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Member Relationship/ Subscription Tier	Used to specify a code name for the criteria.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You must specify a unique code name for the criteria.	
Self	Used to specify the main subscriber for the subscription tier. **Note:** The value for this field must be a positive integer.	No
Number of Spouses	Used to specify the total number of spouses in the membership who meet the subscription tier criteria. **Note:** The value for this field must be a positive integer.	No
Number of Dependents	Used to specify the total number of dependents in the membership who meet the subscription tier criteria. **Note:** The value for this field must be a positive integer.	No
Number of Young Adults	Used to specify the total number of young adults in the membership who meet the subscription tier criteria. **Note:** The value for this field must be a positive integer.	No

Note:

You must specify at least one criteria for the subscription tier structure. However, you can specify only a single subscription tier criteria, if the maximum member count is set to zero (0) or one (1).

Relationship Matrix - Used to specify a relationship matrix for the subscription tier. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Relation	Used to indicate an entity in the relationship matrix.	No
Relationship Type	Used to indicate how a member person is associated with the main subscriber using a relationship type.	No
Relationship	Used to indicate how the relation is associated with the relationship type in the relationship matrix.	No

Note: You must specify at least one relationship matrix.

Tip: Alternatively, you can edit the details of a member relationship structure by clicking the **Edit** button in the **Member Relationship/Subscription Tier Structure** zone.

4. Modify the details in the **Main** section.
5. Define, edit, or remove a criteria (for the subscription tier structure) in the **Member Relationship/Subscription Tier Criteria** section.
6. If you want to define more than one criteria for the subscription tier structure, click the **Add** (+) icon and then repeat step 5.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** However, if you want to remove a criteria from the subscription tier structure, click the **Delete** (🗑) icon corresponding to the **Member Relationship/Subscription Tier** field.

7. Define, edit, or remove a relationship matrix (for the subscription tier structure) in the **Relationship Matrix** section.
8. If you want to define more than one relationship matrix for the subscription tier structure, click the **Add** (+) icon and then repeat step 7.

> **Note:** However, if you want to remove a relationship matrix from the subscription tier structure, click the **Delete** (🗑) icon corresponding to the **Relation** field.

9. Click **Save**.
   The changes made to the subscription tier structure are saved.

Copying a Subscription Tier Structure

Procedure

To copy a subscription tier structure:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.
   The **Member Relationship/Subscription Tier Structure** screen appears.
3. In the **Member Relationship/Subscription Tier Structure List** zone, click the **Duplicate** (📋) icon in the **Duplicate** column *c*orresponding to the subscription tier structure whose copy you want to create.

   The **Member Relationship/Subscription Tier Structure** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the subscription tier structure. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Structure	Used to specify a code name for the structure. **Note:** You must specify a unique code name for the structure.	Not applicable
Description	Used to specify the description for the structure.	Yes
Detailed Description	Used to specify additional information about the structure.	No
Maximum Member Count	Used to specify the maximum number of members allowed in the structure.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you do not specify the value, by default, it is set to zero (0).	

- **Member Relationship/Subscription Tier Criteria** - Used to specify the criteria details for the subscription tier. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Member Relationship/ Subscription Tier	Used to specify a code name for the criteria. **Note:** You must specify a unique code name for the member relationship/subscription criteria.	No
Self	Used to specify the main subscriber for the subscription tier. **Note:** The value for this field must be a positive integer.	No
Number of Spouses	Used to specify the total number of spouses in the membership who meet the subscription tier criteria. **Note:** The value for this field must be a positive integer.	No
Number of Dependents	Used to specify the total number of dependents in the membership who meet the subscription tier criteria. **Note:** The value for this field must be a positive integer.	No
Number of Young Adults	Used to specify the total number of young adults in the membership who meet the subscription tier criteria. **Note:** The value for this field must be a positive integer.	No

Note:

You must specify at least one criteria for the subscription tier structure. However, you can specify only a single subscription tier criteria, if the maximum member count is set to zero (0) or one (1).

Relationship Matrix - Used to specify the relationship matrix for the subscription tier. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Relation	Used to indicate an entity in the relationship matrix.	No
Relationship Type	Used to indicate how a member person is associated with the main subscriber using a relationship type.	No
Relationship	Used to indicate how the relation is associated with the relationship type in the relationship matrix	No

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** You must specify at least one relationship matrix.

> **Tip:** Alternatively, you can copy a member relationship structure by clicking the **Duplicate** button in the **Member Relationship/Subscription Tier Structure** zone.

4. Enter the required details in the **Main** section.
5. Define, edit, or remove a criteria (for the subscription tier structure) in the **Member Relationship/Subscription Tier Criteria** section.
6. If you want to define more than one criteria for the subscription tier structure, click the **Add** (+) icon and then repeat step 5.

> **Note:** However, if you want to remove a criteria from the subscription tier structure, click the **Delete** (🗑) icon corresponding to the **Member Relationship/Subscription Tier** field.

7. Define, edit, or remove the relationship matrix (for the subscription tier structure) in the **Relationship Matrix** section.
8. If you want to define more than one relationship matrix for the subscription tier structure, click the **Add** (+) icon and then repeat step 7.

> **Note:** However, if you want to remove a relationship matrix from the subscription tier structure, click the **Delete** (🗑) icon corresponding to the **Relation** field.

9. Click **Save**.
   The new subscription tier structure is created.

Procedure

To view the details of the subscription tier structure:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.
   A sub-menu appears.
3. Click the **Search** option from the **Member Relationship/Subscription Tier Structure** sub-menu.
   The **Member Relationship/Subscription Tier Structure** screen appears.
4. In the **Member Relationship/Subscription Tier Structure List** zone, click the **Broadcast** (📡) icon corresponding to the structure column whose details you want to view.
   The **Member Relationship/Subscription Tier Structure** zone appears.
5. View the details of the subscription tier structure in the **Member Relationship/Subscription Tier Structure** zone.

Membership Benefits

Oracle Revenue Management and Billing enables you to maintain the following types of membership benefits for the fully-insured group and individual businesses:

- Medicare benefits, such as, Part A, Part B, Part D for which premium is calculated using the age-based or tier-based pricing rules
- Medicare benefits, such as Medicare Part D Low-Income Subsidy (LIS) and Medicare Part D Late Enrollment Penalty (LEP) for which charges are calculated using the benefit pricing rule type
- Advance Premium Tax Credit (APTC) benefits for which charges are calculated using the benefit pricing rule type

In addition, it enables you to setup the following Medicare membership benefits for the fully insured individual business:

- PW (Premium with Hold)
- LEPWH (LEP with Hold)

Copyright © 2026, Oracle and/or its affiliates.

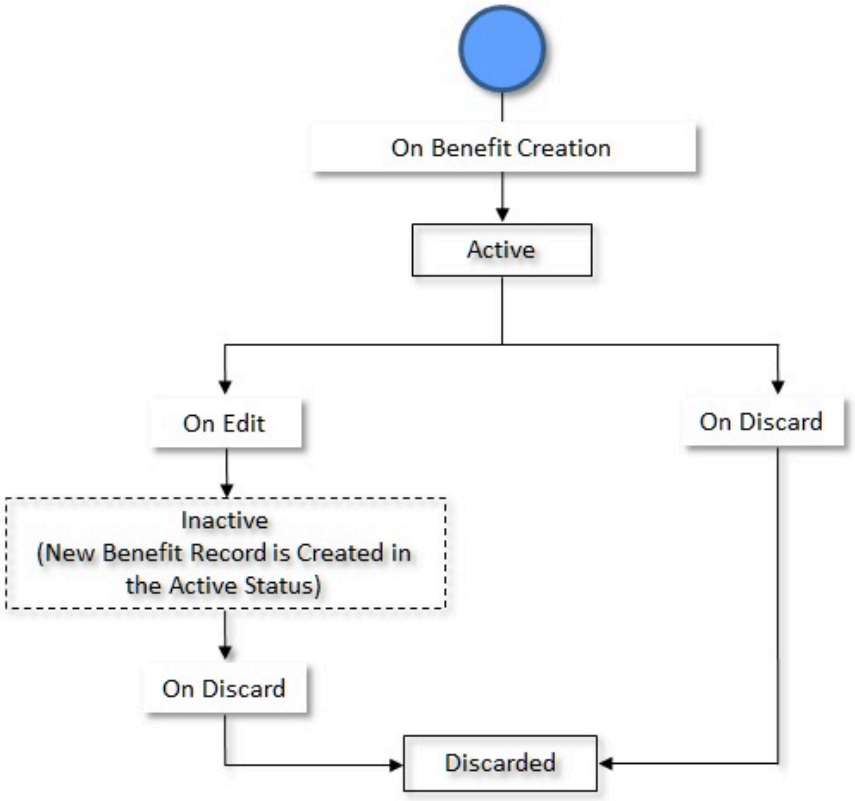
- LEP (LEP Memo Only)
- LEPD (LEP Direct Pay)
- LIS

The system enables you to define a benefit at the membership level and not at the member person level. This is because the system assumes the following:

- There will be only one member person in the Medicare membership who will avail the Membership benefit.
- The other benefits such as APTC would be availed by all member persons of the group or individual membership.

Benefit Status Transition

The following figure graphically indicates how a membership benefit moves from one status to another in its lifecycle:



Membership Benefits (Such as Medicare, APTC, and Others)

The system enables you to define and edit the membership benefits from the user interface (i.e. through the **Benefit** screen), through a health care inbound message, or through the membership repricing inbound web service. While defining a membership benefit, you need to specify the following details:

- The date range for which the benefit is availed for the membership.
- The source (i.e. health insurance exchange) from where the benefit is received for the membership. The valid values are:
  - Centers for Medicare and Medicaid Services

Copyright © 2026, Oracle and/or its affiliates.

    - State
- The type of benefit availed for the membership. The valid values are:
    - Commercial
    - Medicare Affiliated
- The benefit sub type that indicates whether the membership benefit is a Medicare Part A, Part B, or Part D benefit, Medicare Part D LIS, Medicare Part D LEP, APTC benefit, or any other membership benefit.
- The Medicare plan benefit package (i.e. 800 series plan) which is applicable for Medicare Part A, Part B, or Part D membership benefit.

  Note: You can define an Employer Group Waiver Plan (EGWP) (i.e. 800 series plan) as a Medicare plan benefit package in the system. While defining a Medicare Part A, Part B, or Part D membership benefit, you need to indicate the Medicare plan benefit package which is applicable for the membership benefit. You can then use the Medicare plan benefit package as a pricing parameter in the age-based or tier-based pricing rules using which the Medicare Part A, Part B, or Part D membership premium is calculated. In this way, the system enables you to offer different pricing for different EGWPs (i.e. 800 series plans).

  The system enables you to define, edit, delete, and copy a Medicare plan benefit package through the **Field Mapping** screen. For more information, refer to Medicare Plan Benefit Package on page 134.
- The pass-through amount for Medicare Part D LIS, Medicare Part D LEP or other benefits such as APTC.

Once the membership benefit is created, the status of the benefit is set to **Active**. You can also edit a membership benefit from the user interface (i.e. through the **Benefit** screen), through a health care inbound message, or through the membership repricing inbound web service. On editing a membership benefit, the system inactivates the old record and creates a new record in the system. The status of the old benefit record is set to **Inactive** and the status of the new benefit record is set to **Active**.

The system also enables you to discard an active or inactive membership benefit from the user interface by clicking the **Discard** button or by changing its status through a health care inbound message or through the membership repricing inbound web service.

For more information on how to maintain the membership benefits through the **Benefit** screen, refer to Benefit (Used for Searching) on page 110. For more information on how to maintain the membership benefits through a health care inbound message, refer to Health Care Inbound Message on page 2360. For more information on how to maintain the membership benefits through the membership repricing inbound web service, refer to C1-MembershipRepricing Business Service on page 3665.

Membership Benefit Sub Type

You can create a membership benefit using the respective benefit sub type. Therefore, you need to create an appropriate benefit sub type for the following:

- **Medicare Part A, Part B, or Part D** - While creating a benefit sub type for Medicare Part A, Part B, or Part D membership benefits, you need to set the value type to **Not applicable**.
- **Medicare Part D LIS** - While creating a benefit sub type for Medicare Part D LIS, you need to set the value type to **Flat** and ensure that the **Charge Negatively** option is selected.
- **Medicare Part D LEP** - While creating a benefit sub type for Medicare Part D LEP, you need to set the value type to **Flat** and ensure that the **Charge Negatively** option is not selected.
- **APTC or Any Other Benefits** - While creating a benefit sub type for APTC or any other benefits, you need to set the value type to **Flat** and ensure that the **Charge Negatively** option is selected.

The **Charge Negatively** option indicates that you want to create a negative charge for the benefit amount. The system will then accordingly deduct the negative charge from the membership premium while billing.

The system also enables you to create the reverse membership benefit charges on the benefit sponsor account (i.e. for the health benefit exchange; for example, CMS or State account who has offered the membership benefit). If you want to create the reverse membership benefit charges on the benefit sponsor account, you need to select the **Charge Benefit**

Copyright © 2026, Oracle and/or its affiliates.

Sponsor option and specify the benefit sponsor account while defining the benefit sub type. The system will then create a reverse charge on the membership benefit sponsor account. The reverse charge can then be used by the health insurance payer for reconciliation.

In the individual health insurance business, the benefit sponsor account for the membership benefits varies depending on the health benefit exchange through which the benefit is availed. Therefore, there arises a need to derive the benefit sponsor account for each individual membership. The system also provides the ability to derive the benefit sponsor account for the respective health benefit exchange. You can attach an algorithm to the **Sponsor Account Derivation Algorithm** field which will derive the benefit sponsor account for the respective health benefit exchange. The system will then create a reverse charge on the derived membership benefit sponsor account.

A new algorithm type named **C1-SPONSAC** is shipped with the product. You can create an algorithm using the **C1-SPONSAC** algorithm type and attach it to the **Sponsor Account Derivation Algorithm** field while defining a benefit sub type. This algorithm contains the following parameter:

- **Account Identifier Type** - Used to indicate that account identifier type that you want to use while deriving the benefit sponsor account.

The **C1-SPONSAC** algorithm validates the account identifier type and derives the membership exchange ID from the respective individual membership. It considers the membership exchange ID as the account identifier and derives the account using the account identifier type and membership exchange ID.

Note: If the **Charge Benefit Sponsor** option is selected while defining or editing a benefit sub type, you must either specify the benefit sponsor account or sponsor account derivation algorithm in the benefit sub type.

Algorithms Used in C1-Benefits

The following table lists the algorithms which are attached to the **C1-Benefits** business object:

System Event	Algorithm	Algorithm Type	Description
Audit	C1-FIAUDEV	C1-FIAUDEV	Refer to C1-FIAUDEV on page 93.
Post Processing	C1-BENP	C1-BENP	Refer to C1-BENP on page 94
Validation	C1-BENVAL	C1-BENVAL	Refer to C1-BENVAL on page 94

C1-FIAUDEV

If this algorithm is attached to the **Audit** system event of the **Group Membership** (**C1-Membership**), **Individual Membership** (**C1-IndMembership**), **Benefit** (**C1-Benefits**), and **Person** (**C1_PERSON_BO**) business objects, it is invoked whenever you define, edit, or delete the respective entity. It checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event whenever a group membership is added to a policy plan, an individual membership is added to a health plan, member person is added to a group or individual membership, and a membership benefit is added for a group or individual membership. It also creates the audit event whenever the group or individual membership, member person, and membership benefit details are updated. However, note that the audit events are created in the update scenario when the element listed for auditing in the age-based, tier-based, or benefit pricing rule type is updated. The system considers only those pricing rule types whose pricing rules are effective during the respective entity (i.e. group or individual membership, member person, or membership benefit whichever is updated) date range.

It creates one or more audit events in the **Pending** status. The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1_AUDIT_EVENT** table. In addition, the effective date is stamped corresponding to the audit event in the **C1_AUDIT_EVENT** table.

Copyright © 2026, Oracle and/or its affiliates.

Note:

The system creates an audit event whenever the group or individual membership start and end dates and member person's start and end dates are changed in the system irrespective of whether these fields are listed for auditing or not in the age-based or tier-based pricing rule types.

Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event.

For each audit event, this algorithm derives the group or individual memberships on the policy or health plan, respectively, which is impacted and the pricing rule types whose pricing rules are defined on the respective policy or health plan. A repricing entity detail record is then created for each membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of the repricing entity detail record is set to **Pending**. Once the repricing entity detail records are created successfully, the status of the audit event is changed to **Complete**.

It contains the following parameters:

- **Audit Event Business Object** - Used to specify the business object using which you want to create the audit event.
- **Audit Event Pending Status** - Used to specify the status in which you want to create the audit event. This parameter is also used for determining whether an audit event for the entity ID already exists in the system.
- **Audit Event Error Status** - Used to specify the status in which an audit event is transitioned when an error occurs while processing the audit event. This parameter is used for determining whether an audit event for the entity ID already exists in the system.

All the above parameters are mandatory.

C1-BENP

This algorithm creates a log entry whenever the benefit amount or benefit end date of a membership benefit is updated. The log entry stores the old and new values of the benefit amount and the benefit end date (whichever is updated).

C1-BENVAL

This algorithm validates a membership benefit. It checks the following:

- Whether the membership benefit end date is not earlier than the membership benefit start date.
- Whether the membership details are specified while defining a membership benefit.
- Whether the benefit amount is specified in the membership benefit when the value type is set to **FLAT** in the respective benefit sub type.
- Whether the Medicare plan benefit package is specified in the membership benefit when the value type is set to **Not applicable** in the respective benefit sub type.

Copyright © 2026, Oracle and/or its affiliates.

While editing a membership benefit, this algorithm only allows you to edit the following information:

- Benefit Amount
- Benefit End Date
- Benefit Status
- Benefit Characteristics

Benefit Sub Type

The **Benefit Sub Type** screen enables you to create, edit, delete, and copy a benefit sub type. It contains the following zones:

- Benefit Sub Type List on page 95
- Benefit Sub Type on page 96

For more information on...	**See...**

How to delete a benefit sub type	Deleting a Benefit Sub Type on page 109
How to view the details of a benefit sub type	Viewing the Details of a Benefit Sub Type on page 109

Benefit Sub Type List

The **Benefit Sub Type List** zone lists the benefit sub types that are already defined in the system. It contains the following columns:

Column Name	**Column Description**
Benefit Sub Type	Displays the benefit sub type.
Description	Displays the description of the benefit sub type.
Status	Indicates the status of the benefit sub type. The valid values are: • Active • Inactive
Value Type	Indicates the type of value that you want to store in the benefit sub type. The valid values are: • Flat • NA
Edit	On clicking the **Edit** ( ) icon, the **Benefit Sub Type** screen appears where you can edit the details of the benefit sub type. **Note:** The **Edit** icon appears only when the benefit sub type is not yet used.
Duplicate	On clicking the **Duplicate** ( ) icon, the **Benefit Sub Type** screen appears where you can define a benefit sub type using an existing benefit sub type.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Delete	On clicking the **Delete** ( ) icon, you can delete a benefit sub type.

You can filter the list using various search criteria (such as **Benefit Sub Type**, **Status**, **Description**, **Value Type**, **Reconciliation Required**, **Price**, and **Validate**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filter** ( ) icon in the upper right corner of this zone.

On clicking the **Broadcast** ( ) icon corresponding to the benefit sub type, the **Benefit Sub Type** zone appears with the details of the respective benefit sub type.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Benefit Sub Type

The **Benefit Sub Type** zone displays the details of the benefit sub type. It contains the following sections:

- **Main** - Displays the basic information about the benefit sub type. It contains the following fields:

Field Name	Field Description
Benefit Sub Type	Displays the benefit sub type.
Description	Displays the description of the benefit sub type.
Status	Indicates the status of the benefit sub type. The valid values are: • **Active** • **Inactive**
Value Type	Indicates whether the benefit amount should be a flat or calculated amount. The valid values are: • **Flat** - Used when you want to specify the pass-through amount while creating a membership benefit for Medicare Part D LIS, Medicare Part D LEP, APTC, etc. • **Not Applicable** - Used when you to want the system to calculate the benefit amount for the availed Medicare Part A, Part B, or Part D membership benefit.
Externally Priced	Indicates whether the benefit amount is calculated in the enrollment system. **Note:** This field appears when **Flat** option is selected from the **Value Type** list.
Validate External Price	Indicates that you want to validate whether the externally calculated benefit amount is within the threshold range.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the **Externally Priced** option is selected.
Validate Price Item	Indicates the price item using which you want to create the membership benefit charge for validation.
	Note: It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the respective price item. This field appears when the **Validate External Price** option is selected.
Charge Negatively	Indicates whether you want to create a negative charge for the benefit amount.
	Note: This field appears when the **Flat** option is selected from the **Value Type** list and the **Externally Priced** option is not selected.
Benefit SQI	Indicates the SQI using which you want to create an SQI based billable charge for the membership benefit. If you do not specify the value, the system will derive the SQI from the **Proration SQI** option type of the **C1-ASOBLLNG** feature configuration.
	Note: This field appears when the **Flat** option is selected from the **Value Type** list and the **Externally Priced** option is not selected.
Charge Benefit Sponsor	Indicates whether you want to create a reverse charge for the benefit sponsor. The reverse charge can then be used by the health insurance payer for reconciliation.
	Note: This field appears when **Flat** option is selected from the **Value Type** list and the **Externally Priced** option is not selected.
Benefit Sponsor Account	Indicates the account of sponsor on which you want to create the reverse charge.
	Note: This field appears when the **Charge Benefit Sponsor** option is selected.
Sponsor Account Derivation Algorithm	Indicates an algorithm using which the system can derive the sponsor account for the individual membership. The **C1-SPONSAC** algorithm is shipped with the product. For more information about the algorithm, refer to Membership Benefit Sub Type on page 92.
	Note: It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective algorithm. This field appears when the **Charge Benefit Sponsor** option is selected.
Benefit Sponsor Price Item	Indicates the price item using which you want to create the reverse charge.
	Note: This field appears when the **Charge Benefit Sponsor** option is selected.
Benefit Sponsor SQI	Indicates the SQI using which you want to create a reverse SQI based billable charge for the benefit sponsor. If you do not specify the value, the system will derive the SQI from the **Proration SQI** option type of the **C1-ASOBLLNG** feature configuration.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the **Charge Benefit Sponsor** option is selected.

- **Characteristics** - Lists the characteristics defined for the benefit sub type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the benefit sub type.
	Note: The **Edit** button appears only when the benefit sub type is not yet used.
Delete	Used to delete the benefit sub type.
Duplicate	Used to create a new benefit sub type using an existing benefit sub type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the benefit sub type is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Benefit Sub Type** zone does not appear in the **Benefit Sub Type** screen. It appears only when you click the**Broadcast** ( ) icon corresponding to a benefit sub type in the **Benefit Sub Type List** zone.

Defining a Benefit Sub Type

Prerequisites

To define a benefit sub type, you should have:

- Value defined for the **Proration SQI** option type in the **C1-ASOBLLNG** feature configuration.
- Required price items and SQIs defined in the application.
- Sponsor account defined in the application.

Procedure

Copyright © 2026, Oracle and/or its affiliates.

To define a benefit sub type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **B** and then click **Benefit Sub Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Benefit Sub Type** sub-menu.

   The **Benefit Sub Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the benefit sub type. It contains the following fields:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Benefit Sub Type	Used to specify the benefit sub type.	Yes
Description	Used to specify the description for the benefit sub type.	Yes
Status	Used to indicate the status of the benefit sub type. • **Active** • **Inactive**	Yes
Value Type	Used to indicate whether the benefit amount should be a flat or calculated amount. The valid values are: • **Flat** - Used when you want to specify the pass-through amount while creating a membership benefit for Medicare Part D LIS, Medicare Part D LEP, APTC, etc. • **Not Applicable** - Used when you to want the system to calculate the benefit amount for the availed Medicare Part A, Part B, or Part D membership benefit.	Yes
Externally Priced	Used to indicate whether the benefit amount is calculated in the enrollment system. **Note:** This field appears when **Flat** option is selected from the **Value Type** list.	No
Validate External Price	Used when you want to validate whether the externally calculated benefit amount is within the threshold range. **Note:** This field appears when the **Externally Priced** option is selected.	No
Validate Price Item	Used to indicate the price item using which you want to create the membership benefit charge for validation. **Note:** The **Search** (🔍) icon appears corresponding to the **Validate Price Item** field. On clicking the **Search** icon, the **Search** window appears. This field appears when the **Validate External Price** option is selected.	Yes (Conditional) **Note:** This field is required when the **Validate External Price** option is selected.
Charge Negatively	Used to indicate whether you want to create a negative charge for the benefit amount.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Flat** option is selected from the **Value Type** list and the **Externally Priced** option is not selected.	
Benefit SQI	Used to specify the SQI using which you want to create an SQI based billable charge for the membership benefit. If you do not specify the value, the system will derive the SQI from the **Proration SQI** option type of the **C1-ASOBLLNG** feature configuration. **Note:** This field appears when the **Flat** option is selected from the **Value Type** list and the **Externally Priced** option is not selected.	No
Charge Benefit Sponsor	Used to indicate whether you want to create a reverse charge for the benefit sponsor. The reverse charge can then be used by the health insurance payer for reconciliation. **Note:** This field appears when **Flat** option is selected from the **Value Type** list and the **Externally Priced** option is not selected.	No
Benefit Sponsor Account	Used to indicate the account of sponsor on which you want to create the reverse charge. **Note:** The **Search** (🔍) icon appears corresponding to the **Benefit Sponsor Account** field. On clicking the **Search** icon, the **Search** window appears. On specifying the benefit sponsor amount, the description of the benefit sponsor amount appears corresponding to the **Benefit Sponsor Account** field. This field appears when the **Charge Benefit Sponsor** option is selected.	Yes (Conditional) **Note:** This field is required when the **Charge Benefit Sponsor** option is selected and the value is not specified in the **Sponsor Account Derivation Algorithm** field.
Sponsor Account Derivation Algorithm	Used to attach an algorithm using which the system can derive the sponsor account for the individual membership. The **C1-SPONSAC** algorithm is shipped with the product.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	For more information about the algorithm, refer to Membership Benefit Sub Type on page 92. **Note:** The **Search** (🔍) icon appears corresponding to the **Sponsor Account Derivation Algorithm** field. On clicking the **Search** icon, the **Search** window appears. On specifying the sponsor account derivation algorithm, the description of the sponsor account derivation algorithm appears corresponding to the **Sponsor Account Derivation Algorithm** field. This field appears when the **Charge Benefit Sponsor** option is selected.	**Note:** This field is required when the **Charge Benefit Sponsor** option is selected.
Benefit Sponsor Price Item	Used to indicate the price item using which you want to create the reverse charge. **Note:** The **Search** (🔍) icon appears corresponding to the **Benefit Sponsor Price Item** field. On clicking the **Search** icon, the **Search** window appears. This field appears when the **Charge Benefit Sponsor** option is selected.	Yes (Conditional) **Note:** This field is required when the **Charge Benefit Sponsor** option is selected.
Benefit Sponsor SQI	Used to specify the SQI using which you want to create a reverse SQI based billable charge for the benefit sponsor. If you do not specify the value, the system will derive the SQI from the **Proration SQI** option type of the **C1-ASOBLLNG** feature configuration. **Note:** This field appears when the **Charge Benefit Sponsor** option is selected.	No

Note: If the **Charge Benefit Sponsor** option is selected, you need to specify the value in either the **Benefit Sponsor Account** or **Sponsor Account Derivation Algorithm** field.

Tip: Alternatively, you can access the **Benefit Sub Type** screen by clicking the **Add** button in the **Page Title** area of the **Benefit Sub Type** screen.

4. Enter the required details in the **Main** section.
5. Click **Save**.
   The benefit sub type is defined.

How to define a characteristic for a benefit sub type	Defining a Characteristic for a Benefit Sub Type on page 102

Defining a Characteristic for a Benefit Sub Type

To define a characteristic for a benefit sub type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Benefit Sub Type**)

Procedure

To define a characteristic for a benefit sub type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a benefit *s*ub type.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Benefit Sub Type**.	**Note:** This field is required when you are defining the characteristics for a benefit sub type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: This field is required when you are defining the characteristics for a benefit sub type.

2. Enter the required characteristic in the **Characteristics** section.
3. If you want to define more than one characteristic for the benefit sub type, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a characteristic from the benefit sub type, click the **Delete** ( ) icon corresponding to the characteristic

4. Click **Save**.
   The characteristic is defined for the benefit sub type.

Editing a Benefit Sub Type

Prerequisites

To edit a benefit sub type, you should have:

- Value defined for the **Proration SQI** option type in the **C1-ASOBLLNG** feature configuration.

Copyright © 2026, Oracle and/or its affiliates.

- Required price items and SQIs defined in the application.
- Sponsor account defined in the application.

Procedure

To edit a benefit sub type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **B** and then click **Benefit Sub Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Benefit Sub Type** sub-menu.
   The **Benefit Sub Type** screen appears.
4. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the benefit sub *t*ype whose details you want to edit.

> **Note:** The Edit icon appears only when a benefit is not defined using the benefit sub type.

The **Benefit Sub Type** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the benefit sub type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Benefit Sub Type	Displays the benefit sub type.	Not applicable
Description	Used to specify the description for the benefit sub type.	Yes
Status	Used to indicate the status of the benefit sub type. • **Active** • **Inactive**	Yes
Value Type	Used to indicate whether the benefit amount should be a flat or calculated amount. The valid values are: • **Flat** - Used when you want to specify the pass-through amount while creating a membership benefit for Medicare Part D LIS, Medicare Part D LEP, APTC, etc. • **Not Applicable** - Used when you to want the system to calculate the benefit amount for the availed Medicare Part A, Part B, or Part D membership benefit.	Yes
Externally Priced	Used to indicate whether the benefit amount is calculated in the enrollment system. **Note:** This field appears when **Flat** option is selected from the **Value Type** list.	No
Validate External Price	Used when you want to validate whether the externally calculated benefit amount is within the threshold range. **Note:** This field appears when the **Externally Priced** option is selected.	No
Validate Price Item	Used to indicate the price item using which you want to create the membership benefit charge for validation.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Validate Price Item** field. On clicking the **Search** icon, the **Search** window appears. This field appears when the **Validate External Price** option is selected.	**Note:** This field is required when the **Validate External Price** option is selected.
Charge Negatively	Used to indicate whether you want to create a negative charge for the benefit amount. **Note:** This field appears when the **Flat** option is selected from the **Value Type** list and the **Externally Priced** option is not selected.	No
Benefit SQI	Used to specify the SQI using which you want to create an SQI based billable charge for the membership benefit. If you do not specify the value, the system will derive the SQI from the **Proration SQI** option type of the **C1-ASOBLLNG** feature configuration. **Note:** This field appears when the **Flat** option is selected from the **Value Type** list and the **Externally Priced** check box is not selected.	No
Charge Benefit Sponsor	Used to indicate whether you want to create a reverse charge for the benefit sponsor. The reverse charge can then be used by the health insurance payer for reconciliation. **Note:** This field appears when **Flat** option is selected from the **Value Type** list and the **Externally Priced** option is not selected.	No
Benefit Sponsor Account	Used to indicate the account of sponsor on which you want to create the reverse charge. **Note:** The **Search** (🔍) icon appears corresponding to the **Benefit Sponsor Account** field. On clicking the **Search** icon, the **Search** window appears. On specifying the benefit sponsor amount, the description of the benefit sponsor amount appears corresponding to the **Benefit Sponsor Account** field. This field appears when the **Charge Benefit Sponsor** option is selected.	Yes (Conditional) **Note:** This field is required when the **Charge Benefit Sponsor** option is selected and the value is not specified in the **Sponsor Account Derivation Algorithm** field.
Sponsor Account Derivation Algorithm	Used to attach an algorithm using which the system can derive the sponsor account for the individual membership. The **C1-SPONSAC** algorithm is shipped with the product.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	For more information about the algorithm, refer to Membership Benefit Sub Type on page 92. **Note:** The **Search** (🔍) icon appears corresponding to the **Sponsor Account Derivation Algorithm** field. On clicking the **Search** icon, the **Search** window appears. On specifying the sponsor account derivation algorithm, the description of the sponsor account derivation algorithm appears corresponding to the **Sponsor Account Derivation Algorithm** field. This field appears when the **Charge Benefit Sponsor** option is selected.	**Note:** This field is required when the **Charge Benefit Sponsor** option is selected.
Benefit Sponsor Price Item	Used to indicate the price item using which you want to create the reverse charge. **Note:** The **Search** (🔍) icon appears corresponding to the **Benefit Sponsor Price Item** field. On clicking the **Search** icon, the **Search** window appears. This field appears when the **Charge Benefit Sponsor** option is selected.	Yes (Conditional) **Note:** This field is required when the **Charge Benefit Sponsor** option is selected.
Benefit Sponsor SQI	Used to specify the SQI using which you want to create a reverse SQI based billable charge for the benefit sponsor. If you do not specify the value, the system will derive the SQI from the **Proration SQI** option type of the **C1-ASOBLLNG** feature configuration. **Note:** This field appears when the **Charge Benefit Sponsor** option is selected.	No

Note: If the **Charge Benefit Sponsor** option is selected, you need to specify the value in either the **Benefit Sponsor Account** or **Sponsor Account Derivation Algorithm** field.

Tip: Alternatively, you can edit the details of a benefit sub type by clicking the **Edit** button in the **Benefit Sub Type** zone.

5. Modify the required details in the **Main** section, if required.
6. Define, edit, or remove characteristics of the benefit sub type, if required
7. Click **Save**.
   The changes made to the benefit sub type are saved.

How to define a characteristic for a benefit sub type	Defining a Characteristic for a Benefit Sub Type on page 102

Copying a Benefit Sub Type

Instead of creating a benefit sub type from scratch, you can create a new benefit sub type using an existing benefit sub type. This is possible through copying a benefit sub type. On copying a benefit sub type, the details are copied to the new benefit sub type. You can then edit the details, if required.

Prerequisites

To define a benefit sub type, you should have:

- Value defined for the **Proration SQI** option type in the **C1-ASOBLLNG** feature configuration.
- Required price items and SQIs defined in the application.
- Sponsor account defined in the application.

Procedure

To copy a benefit sub type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **B** and then click **Benefit Sub Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Benefit Sub Type** sub-menu.
   The **Benefit Sub Type** screen appears.
4. In the **Search Results** section, click the **Duplicate** (⎘) icon in the **Duplicate** column corresponding to the benefit sub *t*ype whose details you want to edit.

   The **Benefit Sub Type** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details about the benefit sub type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Benefit Sub Type	Used to specify the benefit sub type.	Yes
Description	Used to specify the description for the benefit sub type.	Yes
Status	Used to indicate the status of the benefit sub type. • **Active** • **Inactive**	Yes
Value Type	Used to indicate whether the benefit amount should be a flat or calculated amount. The valid values are: • **Flat** - Used when you want to specify the pass-through amount while creating a membership benefit for Medicare Part D LIS, Medicare Part D LEP, APTC, etc. • **Not Applicable** - Used when you to want the system to calculate the benefit amount for the availed Medicare Part A, Part B, or Part D membership benefit.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Externally Priced	Used to indicate whether the benefit amount is calculated in the enrollment system. **Note:** This field appears when **Flat** option is selected from the **Value Type** list.	No
Validate External Price	Used when you want to validate whether the externally calculated benefit amount is within the threshold range. **Note:** This field appears when the **Externally Priced** option is selected.	No
Validate Price Item	Used to indicate the price item using which you want to create the membership benefit charge for validation. **Note:** The **Search** (🔍) icon appears corresponding to the **Validate Price Item** field. On clicking the **Search** icon, the **Search** window appears. This field appears when the **Validate External Price** option is selected.	Yes (Conditional) **Note:** This field is required when the **Validate External Price** option is selected.
Charge Negatively	Used to indicate whether you want to create a negative charge for the benefit amount. **Note:** This field appears when the **Flat** option is selected from the **Value Type** list and the **Externally Priced** option is not selected.	No
Benefit SQI	Used to specify the SQI using which you want to create an SQI based billable charge for the membership benefit. If you do not specify the value, the system will derive the SQI from the **Proration SQI** option type of the **C1-ASOBLLNG** feature configuration. **Note:** This field appears when the **Flat** option is selected from the **Value Type** list and the **Externally Priced** check box is not selected.	No
Charge Benefit Sponsor	Used to indicate whether you want to create a reverse charge for the benefit sponsor. The reverse charge can then be used by the health insurance payer for reconciliation. **Note:** This field appears when **Flat** option is selected from the **Value Type** list and the **Externally Priced** option is not selected.	No
Benefit Sponsor Account	Used to indicate the account of sponsor on which you want to create the reverse charge.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Benefit Sponsor Account** field. On clicking the **Search** icon, the **Search** window appears. On specifying the benefit sponsor amount, the description of the benefit sponsor amount appears corresponding to the **Benefit Sponsor Account** field. This field appears when the **Charge Benefit Sponsor** option is selected.	**Note:** This field is required when the **Charge Benefit Sponsor** option is selected and the value is not specified in the **Sponsor Account Derivation Algorithm** field.
Sponsor Account Derivation Algorithm	Used to attach an algorithm using which the system can derive the sponsor account for the individual membership. The **C1-SPONSAC** algorithm is shipped with the product. For more information about the algorithm, refer to Membership Benefit Sub Type on page 92.	Yes (Conditional) **Note:** This field is required when the **Charge Benefit Sponsor** option is selected.
	Note: The **Search** (🔍) icon appears corresponding to the **Sponsor Account Derivation Algorithm** field. On clicking the **Search** icon, the **Search** window appears. On specifying the sponsor account derivation algorithm, the description of the sponsor account derivation algorithm appears corresponding to the **Sponsor Account Derivation Algorithm** field. This field appears when the **Charge Benefit Sponsor** option is selected.	
Benefit Sponsor Price Item	Used to indicate the price item using which you want to create the reverse charge.	Yes (Conditional) **Note:** This field is required when the **Charge Benefit Sponsor** option is selected.
	Note: The **Search** (🔍) icon appears corresponding to the **Benefit Sponsor Price Item** field. On clicking the **Search** icon, the **Search** window appears. This field appears when the **Charge Benefit Sponsor** option is selected.	
Benefit Sponsor SQI	Used to specify the SQI using which you want to create a reverse SQI based billable charge for the benefit sponsor. If you do not specify the value, the system will derive the SQI from the **Proration SQI** option type of the **C1-ASOBLLNG** feature configuration. **Note:** This field appears when the **Charge Benefit Sponsor** option is selected.	No

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** If the **Charge Benefit Sponsor** option is selected, you need to specify the value in either the **Benefit Sponsor Account** or **Sponsor Account Derivation Algorithm** field.

> **Tip:** Alternatively, you can copy a benefit sub type by clicking the **Duplicate** button in the **Benefit Sub Type** zone.

5. Define, edit or remove the required details in the **Main** section, if required.
6. Click **Save**.
   The new benefit sub type is saved.

Deleting a Benefit Sub Type

Procedure

To delete a benefit sub type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **B** and then click **Benefit Sub Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Benefit Sub Type** sub-menu.
   The **Benefit Sub Type** screen appears.
4. In the **Benefit Sub Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to *t*he benefit sub type that you want to delete.

   A message appears confirming whether you want to delete the benefit sub type.
5. Click **OK**.
   The benefit sub type is deleted.

> **Note:** You can delete a benefit sub type only when a benefit is not defined using the benefit sub type.

> **Tip:** Alternatively, you can delete a benefit sub type by clicking the **Delete** button in the **Benefit Sub Type** zone.

Benefit (Used for Searching)

The **Benefit** screen allows you to search for a membership benefit using various search criteria. It also allows you to create a membership benefit, such as Medicare Part A, Medicare Part B, Medicare Part D, Medicare Part D LIS, Medicare Part D LEP, APTC, etc. It contains the following zone:

- Search Benefit on page 110

Search Benefit

The **Search Benefit** zone allows you to search for a membership benefit using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a membership benefit using the benefit, policy, or person details. The valid values are: • Benefit Details • Policy Details • Person Details **Note:** By default, the **Benefit Details** option is selected.	Yes
Benefit ID	Used to search a particular membership benefit. **Note:** This field appears when the **Benefit Details** option is selected from the **Search By** list.	No
Membership ID	Used to search membership benefits of a particular membership.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Benefit Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Membership ID** field. On clicking the **Search** icon, the **Membership Search** window appears.	
Start Date	Used to specify the date from when the benefit is availed for the membership.	No
	Note: This field appears when the **Benefit Details** option is selected from the **Search By** list. The start date of the membership benefit cannot be earlier than the membership start date or later than the membership end date. The membership benefit start date cannot be later than the membership benefit end date.	
End Date	Used to specify the date till when the benefit is availed for the membership.	No
	Note: This field appears when the **Benefit Details** option is selected from the **Search By** list. The end date of the membership benefit cannot be earlier than the membership start date or later than the membership end date. The membership benefit end date cannot be earlier than the membership benefit start date.	
Status	Used to search membership benefits with a particular status. The valid values are: • Active • Discarded • Inactive	No
	Note: This field appears when the **Benefit Details** option is selected from the **Search By** list.	
Benefit Type	Used to indicate the type of benefit availed for the membership. The valid values are: • Commercial • Medicare Affiliated	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Benefit Details** option is selected from the **Search By** list. The list includes the values which are defined in the **BENEFIT_TYPE_FLG** lookup field. At present, the **Commercial** benefit type is not supported. The implementation team can build the custom logic based on the business requirements.	
Benefit Sub Type	Used to indicate whether the membership benefit is a Medicare Part A, Part B, or Part D benefit, Medicare Part D LIS, Medicare Part D LEP, APTC benefit, or any other membership benefit. **Note:** This field appears when the **Benefit Details** option is selected from the **Search By** list. The list includes those benefit types which are defined through the **Benefit Sub Type** screen.	No
Benefit Source	Used to indicate the source (i.e. health insurance exchange) from where the benefit is received for the membership. The valid values are: • Centers for Medicare and Medicaid Services • State **Note:** This field appears when the **Benefit Details** option is selected from the **Search By** list. The list includes the values which are defined in the **BENEFIT_TYPE_FLG** lookup field.	No
Policy ID	Used to search membership benefits which are availed for the memberships that belong to a particular fully-insured group policy. **Note:** This field appears when the **Policy Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Policy ID** field. On clicking the **Search** icon, the **Policy Search** window appears.	No
Policy Plan ID	Used to search membership benefits which are availed for the memberships that belong to a particular policy plan.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Policy Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Policy Plan ID** field. On clicking the **Search** icon, the **Policy Plan Search** window appears.	
External Medicare Beneficiary ID	Used to search membership benefits using an external Medicare beneficiary ID. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	No
Person Name	Used to search membership benefits which are availed by a particular person. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	No
Person Identifier Type	Used to indicate the person identifier type. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to search membership benefits which are availed by a particular person. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the person identifier type as a search criteria, you have to enter the person identifier.
Relationship Type	Used to search membership benefits which are availed by persons with a particular relationship type. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	No

Note: You must specify at least one search criterion while searching for a membership benefit.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Benefit Information	Displays information about the membership benefit.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Benefit** screen appears where you can view the details of the respective benefit.
Membership Information	Indicates the membership for which the benefit is availed.
	Note: It has a link. On clicking the link, the **Membership** screen appears where you can view the details of the respective membership.
Member Person Information	Indicates the main subscriber of the membership. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in application.
	Note: It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective member person.
Status	Indicates the status of the membership benefit. The valid values are: • Active • Discarded • Inactive
Benefit Source	Indicates the source (i.e. health insurance exchange) from where the benefit is received for the membership. The valid values are: • Centers for Medicare and Medicaid Services • State
Benefit Type	Indicates the type of benefit availed for the membership. The valid values are: • Commercial • Medicare Affiliated
Benefit Sub Type	Indicates indicate whether the membership benefit is a Medicare Part A, Part B, or Part D benefit, Medicare Part D LIS, Medicare Part D LEP, APTC benefit, or any other membership benefit.
Benefit Amount	Displays the pass-through amount for the availed membership benefit.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Membership Benefit

Prerequisites

Copyright © 2026, Oracle and/or its affiliates.

To search for a membership benefit, you should have:

- Required benefit sub types defined in the application

Procedure

To search for a membership benefit:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Benefit**.
   The **Benefit** screen appears.
3. Enter the search criteria in the **Search Benefit** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   A list of membership benefits that meet the search criteria appears in the **Search Results** section.

Defining a Membership Benefit

Prerequisites

To define a membership benefit, you should have:

- Required benefit sub types defined in the application
- Required Medicare plan benefit package defined in the application

Procedure

To define a membership benefit:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Benefit**.
   A sub-menu appears.
3. Click the **Add** option from the **Benefit** sub-menu.

   The **Benefit** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the membership benefit.
   - **Characteristics** - Used to define the characteristics for the membership benefit.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Membership Information	Used to indicate the membership for which the benefit is availed.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** icon appears corresponding to the **Membership ID** field. On clicking the **Search** icon, the **Membership Search** window appears. On specifying the membership information, the membership details appears corresponding to the **Membership Information** field.	
Benefit Source	Used to indicate the source (i.e. health insurance exchange) from where the benefit is received for the membership. The valid values are: • Centers for Medicare and Medicaid Services • State **Note:** The list includes the values which are defined in the **BENEFIT_SRC_FLG** lookup field.	Yes
Benefit Type	Used to indicate the type of benefit availed for the membership. The valid value is: • Commercial • Medicare Affiliated **Note:** The list includes the values which are defined in the **BENEFIT_TYPE_FLG** lookup field.	Yes
Benefit Sub Type	Used to indicate whether the membership benefit is a Medicare Part A, Part B, or Part D benefit, Medicare Part D LIS, Medicare Part D LEP, APTC benefit, or any other membership benefit. **Note:** The list includes only those benefit types which are defined through the **Benefit Sub Type** screen.	Yes
Medicare Plan Benefit Package	Used to indicate the Medicare plan benefit package (i.e. 800 series plan) which is applicable for the membership benefit. **Note:** The list includes those Medicare plan benefit packages which are defined using the **Medicare Plan Benefit** preference category through the **Field Mapping** screen. This field appears only when the value type in the benefit sub type is set to **Not Applicable**.	Yes (Conditional) **Note:** This field is required while creating the Medicare Part A, Part B, or Part D membership benefit.
Start Date	Used to specify the date from when the benefit is availed for the membership.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The start date of the membership benefit cannot be earlier than the membership start date or later than the membership end date. The membership benefit start date cannot be later than the membership benefit end date.	
End Date	Used to specify the date till when the benefit is availed for the membership. **Note:** The end date of the membership benefit cannot be earlier than the membership start date or later than the membership end date. The membership benefit end date cannot be earlier than the membership benefit start date.	No
Benefit Amount	Used to specify the pass-through amount for the availed membership benefit. **Note:** This field appears only when the value type in the benefit sub type is set to **Flat**.	Yes (Conditional) **Note:** This field is required while creating the Medicare Part D LIS, Medicare Part D LEP, APTC, or other membership benefits.

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Benefit** screen.

4. Enter the required details in the **Main** section.
5. Define characteristics for the membership benefit, if required.
6. Click **Save**.
   The membership benefit is defined for the member person in the **Active** status.

Note: You cannot define more than one membership benefit for the same membership, member person, benefit source, benefit type, and benefit sub type combination.

Defining a Characteristic for a Membership Benefit

Prerequisites

To define a characteristic for a membership benefit, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Benefits**)

Procedure

To define a characteristic for a membership benefit:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a membership benefit.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the membership benefit.	Yes (Conditional) **Note:** This field is required while defining a characteristic for a membership benefit.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Benefits**.	Yes (Conditional) **Note:** This field is required while defining a characteristic for a membership benefit.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required while defining a characteristic for a membership benefit.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the membership benefit, click the **Add** (+) icon and then *r*epeat step *2*.

   Note: However, if you want to remove a characteristic of the membership benefit, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the membership benefit.

Benefit (Used for Viewing)

Once you create a membership benefit, the **Benefit** screen allows you to:

- View the details of the membership benefit
- Edit the details of the membership benefit
- Discard the membership benefit
- View the log of the membership benefit
- Add a log entry for the membership benefit

It consists of the following tabs:

- Benefit - Main on page 119
- Benefit - Log on page 121

Benefit - Main

The **Main** tab displays information about the membership benefit. It contains the following zones:

- Benefit on page 119
- Benefit Characteristics on page 121

Benefit

The **Benefit** zone displays the details of the membership benefit. It contains the following sections:

- **Main** - Displays basic information about the membership benefit. It contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Benefit Information	Displays information about the membership benefit.
Membership Information	Indicates the membership for which the benefit is availed. **Note:** It has a link. On clicking the link, the **Membership** screen appears where you can view the details of the respective membership.
Benefit Source	Indicates the source (i.e. health insurance exchange) from where the benefit is received for the membership. The valid values are: • Centers for Medicare and Medicaid Services • State
Benefit Type	Indicates the type of benefit availed for the membership. The valid values are: • Commercial • Medicare Affiliated
Benefit Sub Type	Indicates whether the membership benefit is a Medicare Part A, Part B, or Part D benefit, Medicare Part D LIS, Medicare Part D LEP, APTC benefit, or any other membership benefit.
Medicare Plan Benefit Package	Indicates the Medicare plan benefit package (i.e. 800 series plan) which is applicable for the membership benefit. **Note:** This field appears only when the value type in the benefit sub type is set to **Not Applicable**.
Start Date	Displays the date from when the benefit is availed for the membership.
End Date	Displays the date till when the benefit is availed for the membership.
Status	Indicates the status of the membership benefit. The valid values are: • Active • Discarded • Inactive
Benefit Amount	Displays the pass-through amount for the availed membership benefit. **Note:** This field appears only when the value type in the benefit sub type is set to **Flat**.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the membership benefit. **Note:** The **Edit** button appears when the membership benefit are in the **Active** status.
Discard	Used to discard a membership benefit. **Note:** The **Discard** button appears when the benefit is in the **Active** or **Inactive** status.

- **Record Information** - This section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Business Object	Indicates the business object using which the membership benefit is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the membership benefit status is updated.
Create Date/Time	Displays the date and time when the membership benefit is created.

Benefit Characteristics

The **Benefit Characteristics** zone lists the characteristics of the membership benefit. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the membership benefit.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value. **Note:** The data appears in this column when the type of characteristic value is set to **Predefined Value**.

You can filter the list using the **Effective Date** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Benefit - Log

The **Log** tab contains the following zone:

- Benefit Log on page 121

Benefit Log

The **Benefit Log** zone lists the complete trail of actions performed on the membership benefit. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the membership benefit.
Details	Displays the details about the action performed on the membership benefit.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
User	Indicates the user who has performed the action on the membership benefit.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the membership benefit.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the status of the membership benefit is changed.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Note: You can manually add a log entry for the membership benefit by clicking the **Add Log Entry** link in the upper right corner of the **Benefit Log** zone.

Editing a Membership Benefit

You can only edit the characteristics of a membership benefit from the user interface. On editing a membership benefit, the system inactivates the old record and creates a new record in the system. The status of the old benefit record is set to **Inactive** and the status of the new benefit record is set to **Active**.

Procedure

To edit a membership benefit:

1. Search for the membership benefit in the **Benefit** screen.
2. In the **Search Results** section, click the link in the **Benefit Information** column corresponding to the membership benefit *w*hose details you want to edit.
   The **Benefit** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Benefit** zone.

   The **Benefit** screen appears. It contains the following sections:

   - **Main** - Displays basic details of the membership benefit.
   - **Characteristics** - Used to define the characteristics for the membership benefit.

   The **Main** section contains the following fields:

Field Name	Field Description
Benefit Information	Displays information about the membership benefit.
Membership Information	Indicates the membership for which the benefit is availed.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Benefit Source	Indicates the source (i.e. health insurance exchange) from where the benefit is received for the membership. The valid values are: • Centers for Medicare and Medicaid Services • State
Benefit Type	Indicates the type of benefit availed for the membership. The valid values are: • Commercial • Medicare Affiliated
Benefit Sub Type	Indicates whether the membership benefit is a Medicare Part A, Part B, or Part D benefit, Medicare Part D LIS, Medicare Part D LEP, APTC benefit, or any other membership benefit.
Medicare Plan Benefit Package	Indicates the Medicare plan benefit package (i.e. 800 series plan) which is applicable for the membership benefit. **Note:** This field appears only when the value type in the benefit sub type is set to **Not Applicable**.
Start Date	Displays the date from when the benefit is availed for the membership.
End Date	Displays the date till when the benefit is availed for the membership. **Note:** The system enables you to edit the end date of a membership benefit through a health care inbound message or through the membership repricing inbound web service.
Benefit Amount	Displays the pass-through amount for the availed membership benefit. **Note:** This field appears only when the value type in the benefit sub type is set to **Flat**. The system enables you to edit the amount of a membership benefit through a health care inbound message or through the membership repricing inbound web service.

Note: The **Edit** button appears when the membership benefit is in the **Active** status.

5. Define, edit, or remove characteristics of the membership benefit, if required.
6. Click **Save**.
   The changes made to the membership benefit are saved.

Discarding a Membership Benefit

Procedure

To discard a membership benefit:

1. Search for the membership benefit in the **Benefit** screen.
2. In the **Search Results** section, click the link in the **Benefit Information** column corresponding to the *m*embership benefit that you want to discard.
   The **Benefit** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Discard** button in the **Benefit** zone.
   The status of the membership benefit is changed to **Discarded**.

> **Note:** The **Discard** button appears when the membership benefit is in **Active** or **Inactive** status.

Medicare Preference

The Medicare preference enables you to set the attributes which are used while creating charges for Medicare Part D Low Income Subsidy (LIS) and Late Enrollment Penalty (LEP). While deriving the LIS and LEP details, the system uses the following attributes from the medicare preference:

- Late Enrollment Penalty
- Low Income Subsidy
- Medicare Prescription Drug Coverage

For more information about these attributes, see Defining a Medicare Preference on page 126.

The system considers the medicare preference which is specified in the **Medicare** option type of the **C1-ASOBLLNG** feature configuration. You can define, edit, delete, and copy a medicare preference through the **Field Mapping** screen.

Searching for a Medicare Preference

Procedure

To search for a medicare preference:

Copyright © 2026, Oracle and/or its affiliates.

1. Click the **Menu** (☰) icon in the **Application** toolbar.
   A list appears.
2. Click the **Admin Menu** option from the list.
   A sub-menu appears.
3. Select **F** and then click **Field Mapping**.
   The **Field Mapping** screen appears.
4. Select the **Medicare** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
6. Click **Search**.
   A list of medicare preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Medicare Preference Details

Procedure

To view the details of a medicare preference:

1. Search for the medicare preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the medicare preference whose details you want to view.
   The **Field Mapping** zone appears.
3. View the details of the medicare preference in the **Field Mapping** zone.

Defining a Medicare Preference

Prerequisites

To define a medicare preference, you should have:

- Field mapping business objects defined in the application.
- Value defined for the **Medicare** option type in the **C1-ASOBLLNG** feature configuration.

Procedure

To define a medicare preference:

1. Click the **Menu** (☰) icon in the **Application** toolbar.
   A list appears.
2. Click the **Admin Menu** option from the list.
   A sub-menu appears.
3. Select **F** and then click the **Add** button corresponding to the **Field Mapping** option from the sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)

Field Mapping Business Object	Used to indicate the business object using which you want to create a medicare preference. The valid values are:
	• **Bill Route Method - Contact Method Mapping (i.e., C1_BillRouteCntMethMap)** - Enables you to maintain a routing method - contact method mapping preference.
	• **Field Mapping (i.e., C1-FieldMapping)** - Enables you to maintain the following:
	  • Automatic Refund/Write-Off Preference
	  • Billing Preference
	  • Binder Payment Preference
	  • Configuration for Match Type - Handling Overpayment Preference
	  • Delinquency Process Preference
	  • Delinquency Process Type Preference
	  • Geographic Rating Area Preference
	  • Hold Request Preference
	  • Individual Membership Preference
	  • Medicare Preference
	  • Member Reconciliation Preference
	  • Member Relationship and Subscription Tier Preference
	  • Membership Repricing Reasons Preference
	  • MNI Derivation Input Preference
	  • Statement Construct Preference
	  • Transaction Paid Status Count Preference
	• **Group Membership Status Reason Mapping (i.e., C1-MemStatusReasonMapGroup)** - Enables you to maintain a group membership status reason preference.
	• **Medicare Plan Benefit Package (i.e., C1-BenefitPackage)** - Enables you to maintain a Medicare plan benefit package.
	• **Membership Status Reason Mapping (i.e., C1-MemStatusReasonMapping)** - Enables you to maintain an individual membership status reason preference.
	Note: The above business objects are shipped with the product. The list includes those business objects which are created using the **Field Mapping** (i.e., **C1-FIELDMAP**) maintenance object.
		Yes

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.
5. Click **OK**.

Copyright © 2026, Oracle and/or its affiliates.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details for the medicare preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the medicare preference.	Yes
Description	Used to specify the description for the medicare preference.	Yes
Detailed Description	Used to specify additional information about the medicare preference.	No
Status	Used to indicate the status of the medicare preference. The valid values are: • Active • Inactive	Yes

- **Preference Category** - Used to specify the preference category. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: • Automatic Refund/Write-Off • Billing • Binder Payment • Configuration for Match Type - Handling Overpayment • Delinquency Process • Delinquency Process Type • Geographic Rating Area • Hold Request • Individual Membership • Medicare • Medicare Plan Benefit • Member Reconciliation • Member Relationship and Subscription Tier • Membership Repricing Reasons • Membership Status Reason • MNI Derivation Input • Routing Method - Contact Method Mapping • Statement Construct • Transaction Paid Status Count **Note:** The list includes only those values which are defined in the **FIELD_CAT_FLG** lookup field. You must select the **Medicare** option from the list while creating a medicare preference.	Yes

- **Preference Settings** - Used to set the attributes in the medicare preference. It contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute that you want to set in the medicare preference. The valid values are: • **Late Enrollment Penalty** - Used when you want to indicate the benefit sub type for Medicare Part D LEP in the medicare preference. • **Low Income Subsidy** - Used when you want to indicate the benefit sub type for Medicare Part D LIS in the medicare preference. • **Medicare Prescription Drug Coverage** - Used when you want to indicate the benefit sub type for Medicare Part D in the medicare preference. **Note:** The attribute list appears only when the preference category is selected from the respective list.	Yes
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the medicare preference. The valid values are: • **Late Enrollment Penalty** - The **Value** field is used to specify the benefit sub type that you want to use while creating charges for Medicare Part D LEP. • **Low Income Subsidy** - The **Value** field is used to specify the benefit sub type that you want to use while creating charges for Medicare Part D LIS. • **Medicare Prescription Drug Coverage** - The **Value** field the benefit sub type that you want to use while creating charges for Medicare Part D. **Note:** The attribute value list appears only when the attribute is selected from the respective list.	Yes
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account • Adjustment • Billable Charge • Membership • Payment • Policy **Note:** At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the **MAP_ENTITY_FLG** lookup field.	No

Note: While defining a medicare preference, you must set at least one attribute in the medicare preference.

6. Select the **Medicare** option from the **Preference Category** list.
   The **Preference Category** section disappears and the **Preference Category** field appears in the **Main** section.

Copyright © 2026, Oracle and/or its affiliates.

7. Enter the required details in the **Main** section.
8. Select the required attributes in the medicare preference.
9. If you want to set more than one attribute in the medicare preference, click the **Add** (+) icon and then repeat step 8.

> **Note:** However, if you want to remove an attribute from the medicare preference, click the **Delete** (🗑) icon corresponding to the attribute.

10. Click **Save**.
    The medicare preference is defined.

Editing a Medicare Preference

Prerequisites

To edit a medicare preference, you should have:

- Value defined for the **Medicare** option type in the **C1-ASOBLLNG** feature configuration.

Procedure

To edit a medicare preference:

1. Search for the medicare preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the medicare preference whose details you want to edit.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for the medicare preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the medicare preference.	Not applicable
Description	Used to specify the description for the medicare preference.	Yes
Detailed Description	Used to specify additional information about the medicare preference.	No
Status	Used to indicate the status of the medicare preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Medicare	Not applicable

   - **Preference Settings** - Used to set the attributes in the medicare preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute that you want to set in the medicare preference. The valid values are: • **Late Enrollment Penalty** - Used when you want to indicate the benefit sub type for Medicare Part D LEP in the medicare preference.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Low Income Subsidy** - Used when you want to indicate the benefit sub type for Medicare Part D LIS in the medicare preference. • **Medicare Prescription Drug Coverage** - Used when you want to indicate the benefit sub type for Medicare Part D in the medicare preference. **Note:** The attribute list appears only when the preference category is selected from the respective list.	
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the medicare preference. The valid values are: • **Late Enrollment Penalty** - The **Value** field is used to specify the benefit sub type that you want to use while creating charges for Medicare Part D LEP. • **Low Income Subsidy** - The **Value** field is used to specify the benefit sub type that you want to use while creating charges for Medicare Part D LIS. • **Medicare Prescription Drug Coverage** - The **Value** field the benefit sub type that you want to use while creating charges for Medicare Part D. **Note:** The attribute value list appears only when the attribute is selected from the respective list.	Yes
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account • Adjustment • Billable Charge • Membership • Payment • Policy **Note:** At present, this data is stored for informational purposes only and is not considered in the business logic. Copying a Medicare Preference

Instead of creating a medicare preference from scratch, you can create a new medicare preference using an existing medicare preference. This is possible through copying a medicare preference. On copying a medicare preference, the details including the attributes are copied to the new medicare preference. You can then edit the details, if required.

Prerequisites

To copy a medicare preference, you should have:

- Medicare preference (whose copy you want to create) defined in the application

Procedure

To copy a medicare preference:

1. Search for the medicare preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the medicare preference whose copy you want to create.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for the medicare preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the medicare preference.	Yes
Description	Used to specify the description for the medicare preference.	Yes
Detailed Description	Used to specify additional information about the medicare preference.	No
Status	Used to indicate the status of the medicare preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Medicare	Not applicable

   - **Preference Settings** - Used to set the attributes in the medicare preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute that you want to set in the medicare preference. The valid values are: • **Late Enrollment Penalty** - Used when you want to indicate the benefit sub type for Medicare Part D LEP in the medicare preference. • **Low Income Subsidy** - Used when you want to indicate the benefit sub type for Medicare Part D LIS in the medicare preference.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Medicare Prescription Drug Coverage** - Used when you want to indicate the benefit sub type for Medicare Part D in the medicare preference. **Note:** The attribute list appears only when the preference category is selected from the respective list.	
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the medicare preference. The valid values are: • **Late Enrollment Penalty** - The **Value** field is used to specify the benefit sub type that you want to use while creating charges for Medicare Part D LEP. • **Low Income Subsidy** - The **Value** field is used to specify the benefit sub type that you want to use while creating charges for Medicare Part D LIS. • **Medicare Prescription Drug Coverage** - The **Value** field the benefit sub type that you want to use while creating charges for Medicare Part D. **Note:** The attribute value list appears only when the attribute is selected from the respective list.	Yes
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account • Adjustment • Billable Charge • Membership • Payment • Policy **Note:** At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the **MAP_ENTITY_FLG** lookup field.	No

Note: While defining a medicare preference, you must set at least one attribute in the medicare preference.

Tip: Alternatively, you can click the **Duplicate** button in the **Field Mapping** zone to create a copy of the medicare preference.

3. Enter the required details in the **Main** section.
4. Define, edit, or remove the attribute from the medicare preference, if required.
5. Click **Save**.
   The new medicare preference is defined.

Medicare Plan Benefit Package

You can define an Employer Group Waiver Plan (EGWP) (i.e. 800 series plan) as a Medicare plan benefit package in the system. While defining a Membership benefit of a member person for Medicare Part A, Part B, and Part D, you need to indicate the Medicare plan benefit package which is applicable for the Membership benefit. You can then use the Medicare plan benefit package as a pricing parameter in the age based or tier based pricing rules using which the Medicare premium is calculated. In this way, the system enables you to offer different pricing for different EGWPs (i.e. 800 series plans).

The system enables you to define, edit, delete, and copy a Medicare plan benefit package through the **Field Mapping** screen.

Searching for a Medicare Plan Benefit Package

Prerequisites

To search for a Medicare plan benefit package, you should have:

- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To search for a Medicare plan benefit package:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
   A sub-menu appears.
3. Click the **Search** option from the **Field Mapping** sub-menu.
   The **Field Mapping** screen appears.
4. Select the **Medicare Plan Benefit** option from the **Preference Category** list.

Copyright © 2026, Oracle and/or its affiliates.

5. Enter the additional search criteria in the **Search Field Mapping** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.
   A list of Medicare plan benefit packages that meet the search criteria appears in the **Search Results** section.

Viewing the Medicare Plan Benefit Package Details

Procedure

To view the details of a Medicare plan benefit package:

1. Search for the Medicare plan benefit package in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (ᯤ) icon corresponding to the Medicare plan benefit package whose details you want to view.
   The **Field Mapping** zone appears.
3. View the details of the Medicare plan benefit package in the **Field Mapping** zone.

Editing a Medicare Plan Benefit Package

Procedure

To edit a Medicare plan benefit package:

1. Search for the Medicare plan benefit package in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column *c*orresponding to the Medicare plan benefit package whose details you want to edit.

   The **Medicare Plan Benefit Package** screen appears. It contains the following section:

   - **Main** - Used to specify basic details of the Medicare plan benefit package. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Medicare Plan Benefit Package	Displays the Medicare plan benefit package (i.e. 800 series plan).	Not applicable
Description	Used to specify the description for the Medicare plan benefit package.	Yes

Tip: Alternatively, you can edit the details of a Medicare plan benefit package by clicking the **Edit** button in the **Field Mapping** zone.

3. Modify the required details in the **Main** section.
4. Click **Save**.
   The changes made to the Medicare plan benefit package are saved.

Copying a Medicare Plan Benefit Package

Instead of creating a Medicare plan benefit package from scratch, you can create a new Medicare plan benefit package using an existing Medicare plan benefit package. This is possible through copying a Medicare plan benefit package. On copying a Medicare plan benefit package, the details are copied to the new Medicare plan benefit package. You can then edit the details, if required.

Prerequisites

To copy a Medicare plan benefit package, you should have:

- Medicare plan benefit package (whose copy you want to create) defined in the application

Procedure

To copy a Medicare plan benefit package:

1. Search for the Medicare plan benefit package in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the Medicare plan benefit package whose copy you want to create.

   The **Medicare Plan Benefit Package** screen appears. It contains the following section:

   - **Main** - Used to specify basic details of the Medicare plan benefit package. It contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Medicare Plan Benefit Package	Used to specify the Medicare plan benefit package (i.e. 800 series plan).	Yes
Description	Used to specify the description for the Medicare plan benefit package.	Yes

Tip: Alternatively, you can copy a Medicare plan benefit package by clicking the **Duplicate** button in the **Field Mapping** zone.

3. Enter the required details in the **Main** section.
4. Click **Save**.
   The new Medicare plan benefit package is defined.

Deleting a Medicare Plan Benefit Package

Procedure

To delete a Medicare plan benefit package:

1. Search for the Medicare plan benefit package in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Delete** (🗑) icon in the **Delete** column corresponding to the Medicare plan benefit package that you want to delete.
   A message appears confirming whether you want to delete the Medicare plan benefit package.

Tip: Alternatively, you can delete a Medicare plan benefit package by clicking the **Delete** button in the **Field Mapping** zone.

3. Click **OK**.
   The Medicare plan benefit package is deleted.

Geographic Rating Area Preference

Oracle Revenue Management and Billing enables you to use the geographic rating area as a pricing parameter while defining the age based, tier based, and additional fee pricing rules. This feature facilitates you to offer different rates for a price item based on different geographic rating area.

Once you define a geographic rating area, the system can derive the geographic rating area for a membership. While deriving the geographic rating area for a membership, the system uses the following attributes from the geographic rating area preference:

- Address Source Characteristic Type

Copyright © 2026, Oracle and/or its affiliates.

- Address Type Characteristic Type
- Default Address Source
- Default Address Type
- Default Geographic Rating Area
- Geographic Rating Area Characteristic Type
- Use Plan Details

For more information about these attributes, see Defining a Geographic Rating Area Preference on page 140.

The system considers the geographic rating area preference which is specified in the **Rating Area Field Mapping for Group** option type of the **C1-ASOBLLNG** feature configuration. You can define, edit, delete, and copy a geographic rating area preference through the **Field Mapping** screen.

How to setup the **C1-ASOBLLNG** feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4639

Searching for a Geographic Rating Area Preference

Procedure

To search for a geographic rating area preference:

1. Click the **Menu** (☰) icon in the **Application** toolbar.
   A list appears.
2. Click the **Admin Menu** option from the list.
   A sub-menu appears.
3. Select **F** and then click **Field Mapping**.
   The **Field Mapping** screen appears.
4. Select the **Geographic Rating Area** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.
   A list of geographic rating area preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Geographic Rating Area Preference Details

Procedure

To view the details of a geographic rating area preference:

1. Search for the geographic rating area preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the geographic rating area preference whose details you want to view.
   The **Field Mapping** zone appears.

Copyright © 2026, Oracle and/or its affiliates.

3. View the details of the geographic rating area preference in the **Field Mapping** zone.

Defining a Geographic Rating Area Preference

Prerequisites

To define a geographic rating area preference, you should have:

- Field mapping business objects defined in the application.
- Geographic rating areas defined in the application

Procedure

To define a geographic rating area preference:

1. Click the **Menu** (☰) icon in the **Application** toolbar.
   A list appears.
2. Click the **Admin Menu** option from the list.
   A sub-menu appears.
3. Select **F** and then click the **Add** button corresponding to the **Field Mapping** option from the sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)

Field Mapping Business Object	Used to indicate the business object using which you want to create a geographic rating area preference. The valid values are:
	• **Bill Route Method - Contact Method Mapping (i.e., C1_BillRouteCntMethMap)** - Enables you to maintain a routing method - contact method mapping preference.
	• **Field Mapping (i.e., C1-FieldMapping)** - Enables you to maintain the following:
	  • Automatic Refund/Write-Off Preference
	  • Billing Preference
	  • Binder Payment Preference
	  • Configuration for Match Type - Handling Overpayment Preference
	  • Delinquency Process Preference
	  • Delinquency Process Type Preference
	  • Geographic Rating Area Preference
	  • Hold Request Preference
	  • Individual Membership Preference
	  • Medicare Preference
	  • Member Reconciliation Preference
	  • Member Relationship and Subscription Tier Preference
	  • Membership Repricing Reasons Preference
	  • MNI Derivation Input Preference
		Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Statement Construct Preference • Transaction Paid Status Count Preference • **Group Membership Status Reason Mapping (i.e., C1-MemStatusReasonMapGroup)** - Enables you to maintain a group membership status reason preference. • **Medicare Plan Benefit Package (i.e., C1-BenefitPackage)** - Enables you to maintain a Medicare plan benefit package. • **Membership Status Reason Mapping (i.e., C1-MemStatusReasonMapping)** - Enables you to maintain an individual membership status reason preference. **Note:** The above business objects are shipped with the product. The list includes those business objects which are created using the **Field Mapping** (i.e., **C1-FIELDMAP**) maintenance object.	

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.
5. Click **OK**.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details for the geographic rating area preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the geographic rating area preference.	Yes
Description	Used to specify the description for the geographic rating area preference.	Yes
Detailed Description	Used to specify additional information about the geographic rating area preference.	No
Status	Used to indicate the status of the geographic rating area preference. The valid values are: • Active • Inactive	Yes

- **Preference Category** - Used to specify the preference category. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: • Automatic Refund/Write-Off • Billing • Binder Payment • Configuration for Match Type - Handling Overpayment • Delinquency Process	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Delinquency Process Type • Geographic Rating Area • Hold Request • Individual Membership • Medicare • Medicare Plan Benefit • Member Reconciliation • Member Relationship and Subscription Tier • Membership Repricing Reasons • Membership Status Reason • MNI Derivation Input • Routing Method - Contact Method Mapping • Statement Construct • Transaction Paid Status Count	
	Note: The list includes only those values which are defined in the **FIELD_CAT_FLG** lookup field. You must select the **Geographic Rating Area** option from the list while creating a geographic rating area preference.	

- **Preference Settings** - Used to set the attributes in the geographic rating area preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)

Attribute	Used to indicate the attribute which you want to set in the geographic rating area preference. The valid values are:
	• **Address Source Characteristic Type** - Used when the system derives the geographic rating area for a membership.
	• **Address Type Characteristic Type** - Used when the system derives the geographic rating area for a membership.
	• **Default Address Source** - Used when the address source characteristic is not defined for any of the following entities:
	  • Policy Plan
	  • State where the Policy Plan is Issued
	  • Policy
	  • State where the Policy is Issued
	• **Default Address Type** - Used when the address type characteristic is not defined for any of the following entities:
	  • Policy Plan
	  • State where the Policy Plan is Issued
	  • Policy
		Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)

	• State where the Policy is Issued
	• **Default Geographic Rating Area** - Used when the system is unable to derive the geographic rating area for the following combination:
	  • State and zip code (this combination is considered when the **Use Plan Details** attribute is set to **No**)
	  • State, zip code, policy number, plan number, and source system (this combination is considered when the **Use Plan Details** attribute is set to **Yes**)
	• **Geographic Rating Area Characteristic Type** - Used when the system stores the geographic rating area for a membership.
	• **Use Health Plan Details** - Used to indicate whether the health plan number, health product number, plan characteristics, and pricing rule should be considered while deriving the geographic rating area for a membership.
	• **Use Policy Plan Details** - Used to indicate whether the policy number, plan number, and source system should be considered while deriving the geographic rating area for a membership.	

Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the geographic rating area preference. The valid values are:
	• **Address Source Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates the address source. The system supports two address sources named **Policy Holder** and **Main Subscriber**. This type of characteristic can be defined for the following entities:
	  • Policy Plan
	  • State where the Policy Plan is Issued
	  • Policy
	  • State where the Policy is Issued
	Note:
	Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan**, **State**, and **Policy**.
	The **C1-ADSRC** characteristic type is shipped with the product.
	• **Address Type Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates the address type. The system supports three address types named **Person Mailing**, **Person Seasonal**, and **Account Override**. This type of characteristic can be defined for the following entities:
	  • Policy Plan
	  • State where the Policy Plan is Issued
	  • Policy
		Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• State where the Policy is Issued **Note:** Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan**, **State**, and **Policy**. The **C1-ADTYP** characteristic type is shipped with the product. • **Default Address Source** - The **Value** list is used to indicate the address source. The valid values are: • Main Subscriber • Policy Holder **Note:** The list includes only those values which are defined in the **ADDRESS_SRC_FLG** lookup field. • **Default Address Type** - The **Value** list is used to indicate the address type. The valid values are: • Person Mailing • Person Seasonal • Account Override **Note:** The list includes only those values which are defined in the **ADDRESS_TYPE_FLG** lookup field. • **Default Geographic Rating Area** - The **Value** field is used to specify the geographic rating area that is used as a default. **Note:** Here, you can specify a geographic rating area which is already defined in the system. • **Geographic Rating Area Characteristic Type** - The **Value** field is used to specify the characteristic type where you can store the geographic rating area. This type of characteristic is defined for the membership. Here, you must specify a characteristic type where the characteristic entity is set to **Membership**. **Note:** The **C1-GEORT** characteristic type is shipped with the product. • **Use Health Plan Details** - The **Value** field is used to indicate whether health plan details should be used as a source to derive the geographic rating area. The valid values are: • **Yes** - Used when you want to derive the geographic rating area using the health plan details. • **No** - Used when you want to derive the geographic rating area using the membership details, policy plan details, or person details. • **Use Policy Plan Details** - The **Value** field is used to indicate whether policy plan details should be used as	

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	a source to derive the geographic rating area. The valid values are: • **Yes** - Used when you want to derive the geographic rating area using the state, zip code, policy number, plan number, and source system combination. • **No** - Used when you want to derive the geographic rating area using the state and zip code combination. **Note:** The attribute value list appears only when the attribute is selected from the respective list.	
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account • Adjustment • Billable Charge • Membership • Payment • Policy **Note:** At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the **MAP_ENTITY_FLG** lookup field.	No

Note: While defining a geographic rating area preference, you must set at least one attribute in the geographic rating area preference.

6. Select the **Geographic Rating Area** option from the **Preference Category** list.
   The **Preference Category** section disappears and the **Preference Category** field appears in the **Main** section.
7. Enter the required details in the **Main** section.
8. Select the required attributes in the geographic rating area preference.
9. If you want to set more than one attribute in the geographic rating area preference, click the **Add** (+) icon and then repeat step 8.

Note: However, if you want to remove an attribute from the geographic rating area preference, click the **Delete** (🗑) icon corresponding to the attribute.

10. Click **Save**.
    The geographic rating area preference is defined.

Editing a Geographic Rating Area Preference

Prerequisites

To edit a geographic rating area preference, you should have:

- Field mapping business objects defined in the application.
- Geographic rating areas defined in the application

Procedure

Copyright © 2026, Oracle and/or its affiliates.

To edit a geographic rating area preference:

1. Search for the geographic rating area preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column *c*orresponding to the geographical rating area preference whose details you want to edit.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for the geographic rating area preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the geographic rating area preference.	Not applicable
Description	Used to specify the description for the geographic rating area preference.	Yes
Detailed Description	Used to specify additional information about the geographic rating area preference.	No
Status	Used to indicate the status of the geographic rating area preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Geographic Rating Area	Not applicable

   - **Preference Settings** - Used to set the attributes in the geographic rating area preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)

Attribute	Used to indicate the attribute which you want to set in the geographic rating area preference. The valid values are:
	• **Address Source Characteristic Type** - Used when the system derives the geographic rating area for a membership.
	• **Address Type Characteristic Type** - Used when the system derives the geographic rating area for a membership.
	• **Default Address Source** - Used when the address source characteristic is not defined for any of the following entities:
	  • Policy Plan
	  • State where the Policy Plan is Issued
	  • Policy
	  • State where the Policy is Issued
	• **Default Address Type** - Used when the address type characteristic is not defined for any of the following entities:

Copying a Geographic Rating Area Preference

Instead of creating a geographic rating area preference from scratch, you can create a new geographic rating area preference using an existing geographic rating area preference. This is possible through copying a geographic rating area preference. On copying a geographic rating area preference, the details including the attributes are copied to the new geographic rating area preference. You can then edit the details, if required.

Prerequisites

To copy a geographic rating area preference, you should have:

- Geographic rating area preference (whose copy you want to create) defined in the application
- Geographic rating areas defined in the application

Procedure

To copy a geographic rating area preference:

1. Search for the geographic rating area preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the geographical rating area preference whose copy you want to create.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the geographic rating area preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the geographic rating area preference.	Yes
Description	Used to specify the description for the geographic rating area preference.	Yes
Detailed Description	Used to specify additional information about the geographic rating area preference.	No
Status	Used to indicate the status of the geographic rating area preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Geographic Rating Area	Not applicable

   - **Preference Settings** - Used to set the attributes in the geographic rating area preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the geographic rating area preference. The valid values are: • **Address Source Characteristic Type** - Used when the system derives the geographic rating area for a membership. • **Address Type Characteristic Type** - Used when the system derives the geographic rating area for a membership.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)

	• **Default Address Source** - Used when the address source characteristic is not defined for any of the following entities:
	  • Policy Plan
	  • State where the Policy Plan is Issued
	  • Policy
	  • State where the Policy is Issued
	• **Default Address Type** - Used when the address type characteristic is not defined for any of the following entities:
	  • Policy Plan
	  • State where the Policy Plan is Issued
	  • Policy
	  • State where the Policy is Issued
	• **Default Geographic Rating Area** - Used when the system is unable to derive the geographic rating area for the following combination:
	  • State and zip code (this combination is considered when the **Use Plan Details** attribute is set to **No**)
	  • State, zip code, policy number, plan number, and source system (this combination is considered when the **Use Plan Details** attribute is set to **Yes**)
	• **Geographic Rating Area Characteristic Type** - Used when the system stores the geographic rating area for a membership.
	• **Use Health Plan Details** - Used to indicate whether the health plan number, health product number, plan characteristics, and pricing rule should be considered while deriving the geographic rating area for a membership.
	• **Use Policy Plan Details** - Used to indicate whether the policy number, plan number, and source system should be considered while deriving the geographic rating area for a membership.	

Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the geographic rating area preference. The valid values are:
	• **Address Source Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates the address source. The system supports two address sources named **Policy Holder** and **Main Subscriber**. This type of characteristic can be defined for the following entities:
	  • Policy Plan
	  • State where the Policy Plan is Issued
	  • Policy
		Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• State where the Policy is Issued **Note:** Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan**, **State**, and **Policy**. The **C1-ADSRC** characteristic type is shipped with the product. • **Address Type Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates the address type. The system supports three address types named **Person Mailing**, **Person Seasonal**, and **Account Override**. This type of characteristic can be defined for the following entities: • Policy Plan • State where the Policy Plan is Issued • Policy • State where the Policy is Issued **Note:** Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan**, **State**, and **Policy**. The **C1-ADTYP** characteristic type is shipped with the product. • **Default Address Source** - The **Value** list is used to indicate the address source. The valid values are: • Main Subscriber • Policy Holder **Note:** The list includes only those values which are defined in the **ADDRESS_SRC_FLG** lookup field. • **Default Address Type** - The **Value** list is used to indicate the address type. The valid values are: • Person Mailing • Person Seasonal • Account Override **Note:** The list includes only those values which are defined in the **ADDRESS_TYPE_FLG** lookup field. • **Default Geographic Rating Area** - The **Value** field is used to specify the geographic rating area that is used as a default.

Deleting a Geographic Rating Area Preference

Procedure

To delete a geographic rating area preference:

1. Search for the geographic rating area preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Delete** (🗑) icon in the **Delete** column *c*orresponding to the geographic rating area preference that you want to delete.
   A message appears confirming whether you want to delete the geographic rating area preference.

> **Tip:** Alternatively, you can delete a geographic rating area preference by clicking the **Delete** button in the **Field Mapping** zone.

3. Click **OK**.
   The geographic rating area preference is deleted.

Member Relationship and Subscription Tier Preference

Oracle Revenue Management and Billing enables you to use the member relationship (i.e. how a member is related to the main subscriber of the membership) as a pricing parameter while defining the age based, tier based, and additional fee pricing rules. This feature facilitates you to offer different rates for a price item based on different member relationship.

While adding a membership to a policy plan or while adding or inactivating a member person in a membership, the system automatically derives the member relationship for each member person of the membership from a member relationship structure. While deriving the member relationship for a member person, the system uses the following attributes from the member relationship and subscription tier preference:

- Age Calculation Date Basis Characteristic Type

Copyright © 2026, Oracle and/or its affiliates.

- Max Age Limit for Max Dependent Count Characteristic Type
- Max Number of Dependents Order Priority Characteristic Type
- Member Relationship Characteristic Type
- Maximum Number of Dependents Characteristic Type
- Member Relationship Derivation Date Characteristic Type
- Member Relationship Structure Characteristic Type
- New Born Gift Days Characteristic Type
- New Born Gift Days Applicability Characteristic Type
- Young Adult Max Age Limit Characteristic Type
- Young Adult Max Age Limit Applicability Characteristic Type

For more information about these attributes, see Defining a Member Relationship and Subscription Tier Preference on page 156.

Similarly, the system enables you to use the membership subscription tier as a pricing parameter while defining the tier based pricing rules. This feature facilitates you to offer different rates for a price item based on different membership subscription tier.

While determining the subscription tier for a membership, the system derives the subscription tier for the membership from a subscription tier structure. While deriving the subscription tier for a membership, the system uses the following attributes from the member relationship and subscription tier preference:

- Age Calculation Date Basis Characteristic Type
- Max Age Limit for Max Dependent Count Characteristic Type
- Max Number of Dependents Order Priority Characteristic Type
- Maximum Number of Dependents Characteristic Type
- New Born Gift Days Characteristic Type
- New Born Gift Days Applicability Characteristic Type
- Subscription Tier Structure Characteristic Type
- Subscription Tier Characteristic Type
- Young Adult Max Age Limit Characteristic Type
- Young Adult Max Age Limit Applicability Characteristic Type

For more information about these attributes, see Defining a Member Relationship and Subscription Tier Preference on page 156.

The system considers the member relationship and subscription tier preference which is specified in the **Relation Structure Code Field Mapping** option type of the **C1-ASOBLLNG** feature configuration. You can define, edit, delete, and copy a member relationship and subscription tier preference through the **Field Mapping** screen.

Searching for a Member Relationship and Subscription Tier Preference

Procedure

To search for a member relationship and subscription tier preference:

1. Click the **Menu** (☰) icon in the **Application** toolbar.
   A list appears.
2. Click the **Admin Menu** option from the list.

Copyright © 2026, Oracle and/or its affiliates.

A sub-menu appears.

3. Select **F** and then click **Field Mapping**.
   The **Field Mapping** screen appears.
4. Select the **Member Relationship and Subscription Tier** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.
   A list of member relationship and subscription tier preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Member Relationship and Subscription Tier Preference Details

Procedure

To view the details of a member relationship and subscription tier preference:

1. Search for the member relationship and subscription tier preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the member relationship and subscription tier preference whose details you want to view.
   The **Field Mapping** zone appears.
3. View the details of the member relationship and subscription tier preference in the **Field Mapping** zone.

Defining a Member Relationship and Subscription Tier Preference

Prerequisites

To define a member relationship and subscription tier preference, you should have:

- Field mapping business objects defined in the application.
- Required characteristic types defined in the application (where the characteristic entity is set to **Policy Plan** and **Policy**).
- Required characteristic types defined in the application (where the characteristic entity is set to **Membership Person**).
- Required characteristic types defined in the application (where the characteristic entity is set to **Membership**).

Procedure

To define a member relationship and subscription tier preference:

1. Click the **Menu** (☰) icon in the **Application** toolbar.
   A list appears.

Copyright © 2026, Oracle and/or its affiliates.

2. Click the **Admin Menu** option from the list.
   A sub-menu appears.
3. Select **F** and then click the **Add** button corresponding to the **Field Mapping** option from the sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)

Field Mapping Business Object	Used to indicate the business object using which you want to create the member relationship and subscription tier preference. The valid values are:
	• **Bill Route Method - Contact Method Mapping (i.e., C1_BillRouteCntMethMap)** - Enables you to maintain a routing method - contact method mapping preference.
	• **Field Mapping (i.e., C1-FieldMapping)** - Enables you to maintain the following:
	  • Automatic Refund/Write-Off Preference
	  • Billing Preference
	  • Binder Payment Preference
	  • Configuration for Match Type - Handling Overpayment Preference
	  • Delinquency Process Preference
	  • Delinquency Process Type Preference
	  • Geographic Rating Area Preference
	  • Hold Request Preference
	  • Individual Membership Preference
	  • Medicare Preference
	  • Member Reconciliation Preference
	  • Member Relationship and Subscription Tier Preference
	  • Membership Repricing Reasons Preference
	  • MNI Derivation Input Preference
	  • Statement Construct Preference
	  • Transaction Paid Status Count Preference
	• **Group Membership Status Reason Mapping (i.e., C1-MemStatusReasonMapGroup)** - Enables you to maintain a group membership status reason preference.
	• **Medicare Plan Benefit Package (i.e., C1-BenefitPackage)** - Enables you to maintain a Medicare plan benefit package.
	• **Membership Status Reason Mapping (i.e., C1-MemStatusReasonMapping)** - Enables you to maintain an individual membership status reason preference.
		Yes

	Note: The above business objects are shipped with the product. The list includes those business objects which are created using the **Field Mapping** (i.e., **C1-FIELDMAP**) maintenance object.	

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.

Copyright © 2026, Oracle and/or its affiliates.

5. Click **OK**.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for the member relationship and subscription tier preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the member relationship and subscription tier preference.	Yes
Description	Used to specify the description for the member relationship and subscription tier preference.	Yes
Detailed Description	Used to specify additional information about the member relationship and subscription tier preference.	No
Status	Used to indicate the status of the member relationship and subscription tier preference. The valid values are: • Active • Inactive	Yes

   - **Preference Category** - Used to specify the preference category. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: • Automatic Refund/Write-Off • Billing • Binder Payment • Configuration for Match Type - Handling Overpayment • Delinquency Process • Delinquency Process Type • Geographic Rating Area • Hold Request • Individual Membership • Medicare • Medicare Plan Benefit • Member Reconciliation • Member Relationship and Subscription Tier • Membership Repricing Reasons • Membership Status Reason • MNI Derivation Input • Routing Method - Contact Method Mapping • Statement Construct • Transaction Paid Status Count	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those values which are defined in the **FIELD_CAT_FLG** lookup field. You must select the **Member Relationship and Subscription Tier** option from the list while creating a member relationship and subscription tier preference.	

- **Preference Settings** - Used to set the attributes in the member relationship and subscription tier preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the member relationship and subscription tier preference. The valid values are: • **Age Calculation Date Basis Characteristic Type** - Used when you want the system to calculate the member person's age. • **Max Age Limit for Max Dependent Count Characteristic Type** - Used when you want the system to determine the maximum age limit for children who are eligible for premium calculation. • **Max Number of Dependents Order Priority Characteristic Type** - Used when you want the system to determine the order priority of the dependents during premium calculation. • **Member Relationship Characteristic Type** - Used when you want the system to determine the member relationship for a member person. • **Maximum Number of Dependents Characteristic Type** - Used when you want the system to determine the maximum number of dependents eligible for premium calculation. • **Member Relationship Derivation Date Characteristic Type** - Used when you want the system to derive the member relationship for a member person based on member person's date of birth or enrollment date. • **Member Relationship Structure Characteristic Type** - Used when you want the system to derive the member relationship structure for a member person. • **Member Relationship Characteristic Type Without Gift Days** - Used when you want the system to derive the member relationship without considering the new born gift days. • **New Born Gift Days Characteristic Type** - Used when you want the system to determine the number of days as gift days from the new born child's birth date.	Yes (Conditional) **Note:** This field is required while setting an attribute in the member relationship and subscription tier preference.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **New Born Gift Days Applicability Characteristic Type** - Used when you want the system to determine whether you want to offer gift days in case of a new born. • **Subscription Tier Structure Characteristic Type** - Used when you want the system to consider the subscription tier structure while deriving the subscription tier for a membership. • **Subscription Tier Characteristic Type** - Used when you want the system to store the subscription tier for a membership. • **Subscription Tier Characteristic Type Without Gift Days** - Used when you want the system to derive the subscription tier without considering the new born gift days. • **Young Adult Max Age Limit Characteristic Type** - Used when you want the system to determine the maximum age limit for young adults which are eligible for premium calculation. • **Young Adult Max Age Limit Applicability Characteristic Type** - Used when you want the system to consider the young adults during premium calculation.	

Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the member relationship and subscription tier preference. The valid values are:
	• **Age Calculation Date Basis Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates how the member person's age should be calculated. The system supports the following characteristic values:
	  • Member Enrollment Date
	  • Member Enrollment Nearest Age
	  • Plan Start Date
	  • Policy Renewal/Start Date
	  This type of characteristic can be defined for the following entities:
	  • Policy Plan
	  • Policy
	  Note:
	  Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy**.
	  The **C1-AGCAL** characteristic type is shipped with the product.
	• **Max Age Limit for Max Dependent Count Characteristic Type** - The **Value** field is used
		Yes (Conditional)
		Note: This field is required while setting an attribute in the member relationship and subscription tier preference.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	to specify the characteristic type that indicates the maximum age limit for children which are eligible for premium calculation. This type of characteristic can be defined for the following entities: • Policy Plan • Policy **Note:** Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy**. • **Max Number of Dependents Order Priority Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates whether the system should first consider youngest or eldest children during premium calculation. The system supports the following two characteristic values - **Youngest** and **Eldest**. This type of characteristic can be defined for the following entities: • Policy Plan • Policy **Note:** Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy** The **DEPORPRI** characteristic type is shipped with the product. • **Member Relationship Characteristic Type** - The **Value** field is used to specify the characteristic type where you can store the member relationship for a member person. This type of characteristic is defined for the member person. Here, you must specify a characteristic type where the characteristic entity is set to **Membership Person**. **Note:** The **C1-MEMRL** characteristic type is shipped with the product. • **Maximum Number of Dependents Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates the maximum number of dependent persons which are eligible for premium calculation. This type of characteristic can be defined for the following entities: • Policy Plan • Policy **Note:** Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy**.

Field Name	Field Description	Mandatory (Yes or No)

	• **Member Relationship Derivation Date Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates whether the member relationship should be derived for a member person using its date of birth or enrollment date. The system supports the following two characteristic values - **Date of Birth** and **Enrollment Date**. This type of characteristic can be defined for the following entities:
	  • Policy Plan
	  • Policy
	Note:
	Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy**.
	The **C1-MRDDB** characteristic type is shipped with the product.
	• **Member Relationship Structure Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates the member relationship structure which should be considered while deriving the member relationship for a member person. This type of characteristic can be defined for the following entities:
	  • Policy Plan
	  • Policy
	Note:
	Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy**.
	The **C1-MRLST** characteristic type is shipped with the product.
	• **Member Relationship Characteristic Type Without Gift Days** - The **Value** field is used to specify the characteristic type that indicates the member relationship without considering the gift days.
	Note:
	Here, you must specify a characteristic type where the characteristic entity is set to **Membership Person**.
	The **C1-MRWGD** characteristic type is shipped with the product.
	• **New Born Gift Days Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates the number of days you want to offer as gift days from the new born child's birth date. This type of characteristic can be defined for the following entities:	

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Policy Plan • Policy **Note:** Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy**. The **NOOFGIFT** characteristic type is shipped with the product. Here, you must define the required predefined characteristic values. • **New Born Gift Days Applicability Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates whether you want to offer gift days in case of a new born. The system supports the following two characteristic values - **Y** and **N**. This type of characteristic can be defined for the following entities: • Policy Plan • Policy **Note:** Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy**. The **NEWBORNA** characteristic type is shipped with the product. • **Subscription Tier Structure Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates the subscription tier structure which should be considered while deriving the subscription tier for a membership. This type of characteristic can be defined for the following entities: • Policy Plan • Policy **Note:** Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy**. The **C1-STRST** characteristic type is shipped with the product. • **Subscription Tier Characteristic Type** - The **Value** field is used to specify the characteristic type where you can store the subscription tier for a membership. This type of characteristic is defined for the membership. Here, you must specify a characteristic type where the characteristic entity is set to **Membership**.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **C1-SUBST** characteristic type is shipped with the product. • **Subscription Tier Characteristic Type Without Gift Days** - The **Value** field is used to specify the characteristic type that indicates the subscription tier without considering the gift days. **Note:** Here, you must specify a characteristic type where the characteristic entity is set to **Membership**. The **C1-STWGD** characteristic type is shipped with the product. • **Young Adult Max Age Limit Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates the maximum age limit for young adults which are eligible for premium calculation. This type of characteristic can be defined for the following entities: • Policy Plan • Policy **Note:** Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy**. The **YADULTAG** characteristic type is shipped with the product. Here, you must define the required predefined characteristic values. • **Young Adult Max Age Limit Applicability Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates whether you want to consider the young adults during the premium calculation. The system supports the following two characteristic values - **Y** and **N**. This type of characteristic can be defined for the following entities: • Policy Plan • Policy **Note:** Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy**.	
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account • Adjustment • Billable Charge	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Membership • Payment • Policy	
	Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the **MAP_ENTITY_FLG** lookup field.	

Note: While defining a member relationship and subscription tier preference, you must set at least one attribute in the member relationship and subscription tier preference.

6. Select the **Member Relationship and Subscription Tier** option from the **Preference Category** list.
   The **Preference Category** section disappears and the **Preference Category** field appears in the **Main** section.
7. Enter the required details in the **Main** section.
8. Set the required attributes in the member relationship and subscription tier preference.
9. If you want to set more than one attribute in the member relationship and subscription tier preference, click the **Add** (+) icon and then repeat step 8.

Note: However, if you want to remove an attribute from the member relationship and subscription tier preference, click the **Delete** (🗑) icon corresponding to the attribute.

10. Click **Save**.
    The member relationship and subscription tier preference is defined.

Editing a Member Relationship and Subscription Tier Preference

Prerequisites

To edit a member relationship and subscription tier preference, you should have:

- Required characteristic types defined in the application (where the characteristic entity is set to **Policy Plan** and **Policy**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Membership Person**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Membership**)

Procedure

To edit a member relationship and subscription tier preference:

1. Search for the member relationship and subscription tier preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the member relationship and subscription tier preference whose details you want to edit.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for the member relationship and subscription tier preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the member relationship and subscription tier preference.	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the member relationship and subscription tier preference.	Yes
Detailed Description	Used to specify additional information about the member relationship and subscription tier preference.	No
Status	Used to indicate the status of the member relationship and subscription tier preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Member Relationship and Subscription Tier	Not applicable

- **Preference Settings** - Used to set the attributes in the member relationship and subscription tier preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the member relationship and subscription tier preference. The valid values are: • **Age Calculation Date Basis Characteristic Type** - Used when you want the system to calculate the member person's age. • **Max Age Limit for Max Dependent Count Characteristic Type** - Used when you want the system to determine the maximum age limit for children who are eligible for premium calculation. • **Max Number of Dependents Order Priority Characteristic Type** - Used when you want the system to determine the order priority of the dependents during premium calculation. • **Member Relationship Characteristic Type** - Used when you want the system to determine the member relationship for a member person. • **Maximum Number of Dependents Characteristic Type** - Used when you want the system to determine the maximum number of dependents eligible for premium calculation. • **Member Relationship Derivation Date Characteristic Type** - Used when you want the system to derive the member relationship for a member person based on member person's date of birth or enrollment date. • **Member Relationship Structure Characteristic Type** - Used when you want the system to derive the member relationship structure for a member person. • **Member Relationship Characteristic Type Without Gift Days** - Used when you want the system to derive the	Yes (Conditional) **Note:** This field is required while setting an attribute in the member relationship and subscription tier preference.

If required, you can add more entity types in the **MAP_ENTITY_FLG** lookup field.	No

Tip: Alternatively, you can click the **Edit** button in the **Field Mapping** zone to edit the details of the member relationship and subscription tier preference.

3. Modify the required details in the **Main** section.
4. Define, edit, or remove the attribute from the member relationship and subscription tier preference, if required.

Note: You must set at least one attribute in a member relationship and subscription tier preference.

5. Click **Save**.
   The changes made to the member relationship and subscription tier preference are saved.

Copying a Member Relationship and Subscription Tier Preference

Instead of creating a member relationship and subscription tier preference from scratch, you can create a new member relationship and subscription tier preference using an existing member relationship and subscription tier preference. This is possible through copying a member relationship and subscription tier preference. On copying a member relationship and subscription tier preference, the details including the attributes are copied to the new member relationship and subscription tier preference. You can then edit the details, if required.

Prerequisites

To copy a member relationship and subscription tier preference, you should have:

- Member relationship and subscription tier preference (whose copy you want to create) defined in the application

Copyright © 2026, Oracle and/or its affiliates.

- Required characteristic types defined in the application (where the characteristic entity is set to **Policy Plan** and **Policy**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Membership Person**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Membership**)

Procedure

To copy a member relationship and subscription tier preference:

1. Search for the member relationship and subscription tier preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the member relationship and subscription tier preference whose copy you want to create.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for the member relationship and subscription tier preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the member relationship and subscription tier preference.	Yes
Description	Used to specify the description for the member relationship and subscription tier preference.	Yes
Detailed Description	Used to specify additional information about the member relationship and subscription tier preference.	No
Status	Used to indicate the status of the member relationship and subscription tier preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Member Relationship and Subscription Tier	Not applicable

   - **Preference Settings** - Used to set the attributes in the member relationship and subscription tier preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the member relationship and subscription tier preference. The valid values are: • **Age Calculation Date Basis Characteristic Type** - Used when you want the system to calculate the member person's age. • **Max Age Limit for Max Dependent Count Characteristic Type** - Used when you want the system to determine the maximum age limit for children who are eligible for premium calculation. • **Max Number of Dependents Order Priority Characteristic Type** - Used when you want the system to determine the order priority of the dependents during premium calculation.	Yes (Conditional) **Note:** This field is required while setting an attribute in the member relationship and subscription tier preference.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Member Relationship Characteristic Type** - Used when you want the system to determine the member relationship for a member person. • **Maximum Number of Dependents Characteristic Type** - Used when you want the system to determine the maximum number of dependents eligible for premium calculation. • **Member Relationship Derivation Date Characteristic Type** - Used when you want the system to derive the member relationship for a member person based on member person's date of birth or enrollment date. • **Member Relationship Structure Characteristic Type** - Used when you want the system to derive the member relationship structure for a member person. • **Member Relationship Characteristic Type Without Gift Days** - Used when you want the system to derive the member relationship without considering the new born gift days. • **New Born Gift Days Characteristic Type** - Used when you want the system to determine the number of days as gift days from the new born child's birth date. • **New Born Gift Days Applicability Characteristic Type** - Used when you want the system to determine whether you want to offer gift days in case of a new born. • **Subscription Tier Structure Characteristic Type** - Used when you want the system to consider the subscription tier structure while deriving the subscription tier for a membership. • **Subscription Tier Characteristic Type** - Used when you want the system to store the subscription tier for a membership. • **Subscription Tier Characteristic Type Without Gift Days** - Used when you want the system to derive the subscription tier without considering the new born gift days. • **Young Adult Max Age Limit Characteristic Type** - Used when you want the system to determine the maximum age limit for young adults which are eligible for premium calculation. • **Young Adult Max Age Limit Applicability Characteristic Type** - Used when you want the system to consider the young adults during premium calculation.	
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)

	want to set in the member relationship and subscription tier preference. The valid values are:
	• **Age Calculation Date Basis Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates how the member person's age should be calculated. The system supports the following characteristic values:
	  • Member Enrollment Date
	  • Member Enrollment Nearest Age
	  • Plan Start Date
	  • Policy Renewal/Start Date
	  This type of characteristic can be defined for the following entities:
	  • Policy Plan
	  • Policy
	  Note:
	  Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy**.
	  The **C1-AGCAL** characteristic type is shipped with the product.
	• **Max Age Limit for Max Dependent Count Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates the maximum age limit for children which are eligible for premium calculation. This type of characteristic can be defined for the following entities:
	  • Policy Plan
	  • Policy
	  Note:
	  Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy**.
	• **Max Number of Dependents Order Priority Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates whether the system should first consider youngest or eldest children during premium calculation. The system supports the following two characteristic values - **Youngest** and **Eldest**. This type of characteristic can be defined for the following entities:
	  • Policy Plan
	  • Policy
		Note: This field is required while setting an attribute in the member relationship and subscription tier preference.

Field Name	Field Description	Mandatory (Yes or No)
	Note: Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy** The **DEPORPRI** characteristic type is shipped with the product. • **Member Relationship Characteristic Type** - The **Value** field is used to specify the characteristic type where you can store the member relationship for a member person. This type of characteristic is defined for the member person. Here, you must specify a characteristic type where the characteristic entity is set to **Membership Person**. **Note:** The **C1-MEMRL** characteristic type is shipped with the product. • **Maximum Number of Dependents Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates the maximum number of dependent persons which are eligible for premium calculation. This type of characteristic can be defined for the following entities: • Policy Plan • Policy **Note:** Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy**. • **Member Relationship Derivation Date Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates whether the member relationship should be derived for a member person using its date of birth or enrollment date. The system supports the following two characteristic values - **Date of Birth** and **Enrollment Date**. This type of characteristic can be defined for the following entities: • Policy Plan • Policy **Note:** Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy**. The **C1-MRDDB** characteristic type is shipped with the product. • **Member Relationship Structure Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates the member relationship structure which should be considered while deriving the member

Field Name	Field Description	Mandatory (Yes or No)
	relationship for a member person. This type of characteristic can be defined for the following entities: • Policy Plan • Policy **Note:** Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy**. The **C1-MRLST** characteristic type is shipped with the product. • **Member Relationship Characteristic Type Without Gift Days** - The **Value** field is used to specify the characteristic type that indicates the member relationship without considering the gift days. **Note:** Here, you must specify a characteristic type where the characteristic entity is set to **Membership Person**. The **C1-MRWGD** characteristic type is shipped with the product. • **New Born Gift Days Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates the number of days you want to offer as gift days from the new born child's birth date. This type of characteristic can be defined for the following entities: • Policy Plan • Policy **Note:** Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy**. The **NOOFGIFT** characteristic type is shipped with the product. Here, you must define the required predefined characteristic values. • **New Born Gift Days Applicability Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates whether you want to offer gift days in case of a new born. The system supports the following two characteristic values - **Y** and **N**. This type of characteristic can be defined for the following entities: • Policy Plan • Policy

Field Name	Field Description	Mandatory (Yes or No)
	Note: Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy**. The **NEWBORNA** characteristic type is shipped with the product. • **Subscription Tier Structure Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates the subscription tier structure which should be considered while deriving the subscription tier for a membership. This type of characteristic can be defined for the following entities: • Policy Plan • Policy **Note:** Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy**. The **C1-STRST** characteristic type is shipped with the product. • **Subscription Tier Characteristic Type** - The **Value** field is used to specify the characteristic type where you can store the subscription tier for a membership. This type of characteristic is defined for the membership. Here, you must specify a characteristic type where the characteristic entity is set to **Membership**. **Note:** The **C1-SUBST** characteristic type is shipped with the product. • **Subscription Tier Characteristic Type Without Gift Days** - The **Value** field is used to specify the characteristic type that indicates the subscription tier without considering the gift days. **Note:** Here, you must specify a characteristic type where the characteristic entity is set to **Membership**. The **C1-STWGD** characteristic type is shipped with the product. • **Young Adult Max Age Limit Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates the maximum age limit for young adults which are eligible for premium calculation. This type of characteristic can be defined for the following entities: • Policy Plan • Policy	

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy**. The **YADULTAG** characteristic type is shipped with the product. Here, you must define the required predefined characteristic values. • **Young Adult Max Age Limit Applicability Characteristic Type** - The **Value** field is used to specify the characteristic type that indicates whether you want to consider the young adults during the premium calculation. The system supports the following two characteristic values - **Y** and **N**. This type of characteristic can be defined for the following entities: • Policy Plan • Policy **Note:** Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy**.	
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account • Adjustment • Billable Charge • Membership • Payment • Policy **Note:** At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types in the **MAP_ENTITY_FLG** lookup field.	No

Note: While defining a member relationship and subscription tier preference, you must set at least one attribute in the member relationship and subscription tier preference.

Tip: Alternatively, you can click the **Duplicate** button in the **Field Mapping** zone to create a copy of the member relationship and subscription tier preference.

3. Enter the required details in the **Main** section.
4. Define, edit, or remove the attribute from the member relationship and subscription tier preference, if required.
5. Click **Save**.
   The new member relationship and subscription tier preference is defined.

Deleting a Member Relationship and Subscription Tier Preference

Procedure

To delete a member relationship and subscription tier preference:

1. Search for the member relationship and subscription tier preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Delete** (🗑) icon in the **Delete** column corresponding to the member relationship and subscription tier preference that you want to delete.
   A message appears confirming whether you want to delete the member relationship and subscription tier preference.

   Tip: Alternatively, you can click the **Delete** button in the **Field Mapping** zone to delete the member relationship and subscription tier preference.
3. Click **OK**.
   The member relationship and subscription tier preference is deleted.

Health Insurance Billing and Financial Operations

The health insurance billing and financial operations topic covers the key configurations and processes used to manage billing, payments, financial transactions, extracts, and reporting in a health insurance business environment. This topic explains how the system supports generation of billing statements, credit memo series numbers, payment reference numbers, payment acknowledgment receipts, and single segment bills, ensuring that financial documents are uniquely identified, traceable, and aligned with the operational requirements.

The topic also describes the configurations required for financial data extraction and integration with downstream systems. This includes support for GL and A/P request data extraction, chart of accounts based GL account structures, draft and final billing statement extraction, overdue extracts, generic outbound files, and delayed GL financial transaction extracts. These capabilities assists in maintaining accurate financial records, support reconciliation, and streamline communication with accounting and reporting systems.

Additionally, this topic also provides information on the business rules and feature configurations that enable flexible billing and financial processing. It includes sub-topics such as balloon funding, generic match types, customer outstanding balance reporting, account and price item derivation, and C1_EXTRAINFO feature configuration, which help in customizing the financial operations according to the health insurance products, customer arrangements, and regulatory or business reporting requirements.

This topic contains the following sub-topics:

- Sequence Number Generation Business Service on page 181
- Generation of Credit Memo Series Numbers on page 184
- Generation of Billing Statement Series Numbers on page 185

Copyright © 2026, Oracle and/or its affiliates.

- Generation of Payment Reference Numbers on page 186
- Support New Fields for GL Data Extraction on page 187
- Support New Fields for A/P Request Data Extraction on page 189
- Payment Acknowledgment Receipt on page 191
- C1_EXTRAINFO Feature Configuration on page 201
- Generic Match Type on page 201
- Customer's Outstanding Balance Report on page 202
- Generating Single Segment Bills on page 204
- GL Account Structure Based on the Chart of Accounts on page 205
- Draft or Final Billing Statement Extraction on page 209
- Generic Letter Extract on page 235

Sequence Number Generation Business Service

Oracle Revenue Management and Billing provides the ability to generate sequential series numbers for an entity via a new business service named **C1-GENSEQNO**. This business service allows you to generate unique, identifiable, and incrementing series numbers (i.e., IDs), which can be stored in a field or characteristic of the entity. The sequential series number can be used as a reference in the external system integrated with ORMB. This business service can be called from a system event or a batch process.

Note:

If you want to call this business service from a batch process, ensure that the batch is designed to run in a single thread rather than multiple threads. This will help avoid duplicate ID generation issues.

This business service is tested and certified only for the health insurance business.

This business service schema contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
accountId	Used to specify the account ID using which the system can derive its bill cycle, division, main customer of the account, account characteristics, main customer's characteristics, etc.	No
field1, field2, … field10	Used to specify the parameters as mentioned in the below table.	No
seriesNumber	Used to return the sequential series number generated for the entity.	Not applicable

You can generate sequential series numbers in the required format using the following parameters:

Parameter	Description
'X'	Here, X stands for a letter or a group of letters that you want to add in the sequential series number. For example, 'ABC'. The string must be enclosed within single quotes.

Copyright © 2026, Oracle and/or its affiliates.

Parameter	Description
FIXED_PREFIX=XX	Here, X stands for a letter or a group of letters that you want to add at the beginning of the sequential series number.
CIS_DIVISION	The division to which the account belongs. **Note:** The account ID is retrieved from the entity for which the sequential series number is generated.
BILL_CYC_CD	The bill cycle of the account for which the entity is created. **Note:** The account ID is retrieved from the entity for which the sequential series number is generated.
ACCT_INDENTIFIER= <Account_Identifier_Type>, <CharStartPosition>, <CharCount>	Here, you need to specify the following information separated by a comma: • **<Account_Identifier_Type>** - Used to indicate the account identifier type whose value must be used to generate the sequential series number. • **<CharStartPosition>** - Used to indicate the starting position from where you want to extract the characters from the account identifier. If you do not specify the starting position, by default, it is set to zero (0) (i.e., from the first character). • **<CharCount>** - Used to indicate the number of characters that you want to extract from the account identifier. If you do not specify the count, by default, it is set to five. **Note:** This value is derived only when the account ID is valid. If the number of characters derived from the account identifier is less than the character count, the padding is added to the left as defined using the **LEFT_PADDING_CHAR** parameter.
ACCT_CHAR= <Characteristic_Type>, <CharStartPosition>, <CharCount>	Here, you need to specify the following information separated by a comma: • **<Characteristic_Type>** - Used to indicate the account's characteristic whose value must be used to generate the sequential series number. • **<CharStartPosition>** - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e., from the first character). • **<CharCount>** - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five. **Note:** This value is derived only when the account ID is valid. If the same characteristic is defined multiple times for an account, the system considers the characteristic value which is effective on the batch business date. If the number of characters derived from the characteristic is less than the character count, the padding is added to the left as defined using the **LEFT_PADDING_CHAR** parameter.

Copyright © 2026, Oracle and/or its affiliates.

Parameter	Description
CHARPER= <Characteristic_Type>, <CharStartPosition>, <CharCount>	Here, you need to specify the following information separated by a comma: • **<Characteristic_Type>** - Used to indicate the person's characteristic whose value must be used to generate the sequential series number. • **<CharStartPosition>** - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e., from the first character). • **<CharCount>** - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five.
	Note: This value is derived only when the account ID is valid. The system considers the characteristic of the main customer of the account. If the same characteristic is defined multiple times for a person, the system considers the characteristic value which is effective on the batch business date. If the number of characters derived from the characteristic is less than the character count, the padding is added to the left as defined using the **LEFT_PADDING_CHAR** parameter.
SEQUENCE= <SEQ_NAME>, <CharCount>	Here, you need to specify the following information separated by a comma: • **<SEQ_NAME>** - Used to indicate the sequence whose number must be used to generate the sequential series number. This sequence number is generated by the database. • **<CharCount>** - Used to indicate the number of characters that you want to extract from the sequence number.
	Note: You must specify a valid sequence from the CI_SEQ table. Once the sequence number is used by the business service, the system will generate the next available sequence number. If the number of characters derived from the characteristic is less than the character count, the padding is added to the left as defined using the **LEFT_PADDING_CHAR** parameter.
FIXED_SUFFIX=XX	Here, X stands for a letter or a group of letters that you want to add at the end of the sequential series number.
LEFT_PADDING_CHAR=ZERO OR LEFT_PADDING_CHAR=SPACE	Indicates whether you want to add zero or space when the number of characters derived is less than the character count. The padding is added to the left.

The system will concatenate the parameter values and generate sequential series number in the required format. For example, let’s assume you pass the following parameters to the business service either through an algorithm or a batch:

- Field1 - CIS_DIVISION
- Field2 - ‘|’
- Field3 - SEQ_NBR

Copyright © 2026, Oracle and/or its affiliates.

- Field4 - '-'
- Field5 - FIXED_SUFFIX=01

In this case, the system will generate the sequential series number in the CIS_DIVISION|SEQ_NBR-01 format. For example, DIV1|12345678-01. If you want to generate a unique sequential series number, we recommend you use the **SEQUENCE=<SEQ_NAME>,<CharCount>** parameter.

Generation of Credit Memo Series Numbers

Oracle Revenue Management and Billing provides the ability to generate a unique ID or series number for a credit memo that can be used as a reference in external systems. A new algorithm type named **C1-STCMSN** is shipped with the product. It enables you to generate a unique ID or series number for a credit memo using the given parameters and stamp the credit memo series number on the credit bill using a characteristic type.

Note:

This feature is tested and certified only for the fully insured group and individual lines of health insurance business.

We have only shipped the **C1-STCMSN** algorithm type with the product. You need to create an algorithm based on your business requirements.

You need to attach this algorithm to the **Post-Bill Completion** system event of the required customer class. On post bill completion, the system will trigger the algorithm in the **POSTPROC** batch. This algorithm checks the following:

- The bill is in the **Complete** status.
- A credit memo series number is not yet generated for the bill.
- The bill has at least one frozen bill segment whose corresponding billable charge does not have the given membership characteristic type stamped on it.
- The bill is a credit bill with the negative amount.

If all the above conditions are met, this algorithm generates the credit memo series number using the given parameters and stamps it on the credit bill using a characteristic type. However, if any one of the above condition fails, this algorithm will not generate credit memo series number for the credit bill. This algorithm contains the following parameters:

- **Series Num Generator Bus Serv** – Used to specify the business service that allows you to generate unique, identifiable, and incrementing series numbers (i.e., IDs), which can be stored in a field or characteristic of the entity. You must set the parameter value to **C1-GENSEQNO**. This parameter is mandatory.
- **Credit Memo Series Num Prefix** – Used to specify the prefix that you want to add at the beginning of the credit memo series number. You can specify the prefix in the following format – XX.
- **Credit Memo Series Num Name** – Used to indicate the sequence whose number must be used to generate the credit memo series number. For example, **C1_BS_SEQ**. You can specify the sequence name in the following format – <SEQ_NAME>,<CharCount>.

  This parameter is mandatory. For more information about the parameter format, see Sequence Number Generation Business Service on page 181.

  Note: You must specify a valid sequence from the **CI_SEQ** table.
- **Credit Memo Series Num Length** – Used to specify the maximum length of the credit memo series number.

  Note: You must specify a positive integer value for this parameter.
- **Credit Memo Series Nbr Char Type Code** – Used to specify the characteristic type where you can store the credit memo series number. The system then stamps the credit memo series number using the given characteristic type on the bill. This parameter is mandatory.

  Note: You must specify an adhoc characteristic type where the characteristic entity is set to **Bill**.

Copyright © 2026, Oracle and/or its affiliates.

- **Membership Char Type** – Used to specify the characteristic type which stores the membership ID. The system considers this characteristic type to determine the membership for which the billable charge is created. If the specified characteristic type is defined on the corresponding billable charge, this algorithm will not generate credit memo series number for the bill. This parameter is mandatory.

  Note: You must specify a foreign key characteristic type where the characteristic entity is set to **Billable Charge**.

Generation of Billing Statement Series Numbers

Oracle Revenue Management and Billing provides the ability to generate a unique ID or series number for a bill that can be used as a reference in external systems. A new algorithm type named **C1-STBSSN** is shipped with the product. It enables you to generate a unique ID or series number for a bill using the given parameters and stamp the billing statement series number on the bill using a characteristic type. Note that the system generates the billing statement series number only for those bills where the **Amount Category** characteristic is not stamped on any charge lines within the bill.

Note:

This feature is tested and certified only for the health insurance business.

We have only shipped the C1-STBSSN algorithm type with the product. You need to create an algorithm based on your business requirements.

You need to attach this algorithm to the **Post-Bill Completion** system event of the required customer class. On post bill completion, the system will trigger the algorithm in the **POSTPROC** batch. This algorithm checks the following:

- The bill is in the **Complete** status.
- A credit memo series number is not stamped on the bill.
- A billing statement series number is not yet generated for the bill.
- The **Amount Category** characteristic type (if given in the algorithm) is not stamped on any charge lines within the bill.
- The bill has at least one frozen bill segment.

Note: If both the **C1-STCMSN** and **C1-STBSSN** algorithms are attached to the **Post-Bill Completion** system event of any customer class, then the **C1-STCMSN** algorithm should have higher execution sequence compared to the **C1-STBSSN** algorithm.

If all the above conditions are met, this algorithm generates the billing statement series number using the given parameters and stamps it on the bill using a characteristic type. However, if any one of the above condition fails, this algorithm will not generate billing statement series number for the bill. This algorithm contains the following parameters:

- **Series Number Generation Business Service** – Used to specify the business service that allows you to generate unique, identifiable, and incrementing series numbers (i.e., IDs), which can be stored in a field or characteristic of the entity. You must set the parameter value to **C1-GENSEQNO**. This parameter is mandatory.
- **Billing Statement Series Number Prefix** – Used to specify the prefix that you want to add at the beginning of the billing statement series number. You can specify the prefix in the following format – XX.
- **Billing Statement Series Number Name** – Used to indicate the sequence whose number must be used to generate the billing statement series number. For example, **C1_BS_SEQ**. You can specify the sequence name in the following format - <SEQ_NAME>,<CharCount>.

  This parameter is mandatory. For more information about the parameter format, see Sequence Number Generation Business Service on page 181.

  Note: You must specify a valid sequence from the **CI_SEQ** table.
- **Billing Statement Series Number Length** - Used to specify the maximum length of the billing statement series number.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** You must specify a positive integer value for this parameter.

- **Billing Statement SN Characteristic Type** - Used to specify the characteristic type where you can store the billing statement series number. The system then stamps the billing statement series number using the given characteristic type on the bill. This parameter is mandatory.

> **Note:** You must specify an adhoc characteristic type where the characteristic entity is set to **Bill**.

- **Credit Memo SN Characteristic Type** - Used to specify the characteristic type which stores the credit memo series number. The system considers this characteristic type to determine whether the credit memo series number is already stamped on the bill. This parameter is mandatory.

> **Note:** You must specify an adhoc characteristic type where the characteristic entity is set to **Bill**.

- **Amount Category Characteristic Type (For Exclusion)** - Used to specify the characteristic type which stores the amount category of the billable charge line. The system considers this characteristic type to determine whether the amount category characteristic is stamped on any charge lines within the bill (i.e., on the lines of the corresponding billable charges).

> **Note:** You must specify a predefined characteristic type where the characteristic entity is set to **Billable Charge Line**.

- **Amount Category Characteristic Value (For Exclusion)** – Used to specify a predefined value of the characteristic type specified in the **Amount Category Characteristic Type (For Exclusion)** parameter. If the given combination of characteristic type and characteristic value is defined on any charge lines within the bill, this algorithm will exclude such bills and not generate the billing statement series number for them.

Generation of Payment Reference Numbers

Oracle Revenue Management and Billing provides the ability to generate a unique ID for a bill, which can be used as a payment reference in external systems. A new algorithm type named **C1-STPRNB** is shipped with the product. It generates a payment reference number for a bill and stamps it on the bill using a characteristic type. This algorithm generates the payment reference number using the check digit formula on the billing statement series number.

> **Note:**
>
> This feature is tested and certified only for the health insurance business.
>
> We have only shipped the **C1-STPRNB** algorithm type with the product. You need to create an algorithm based on your business requirements.

You need to attach this algorithm to the **Post-Bill Completion** system event of the required customer class. On post bill completion, the system will trigger the algorithm in the **POSTPROC** batch. This algorithm checks the following:

- The bill is in the **Complete** status.
- A credit memo series number is not stamped on the bill.
- A payment reference number is not yet generated for the bill.
- A billing statement series number is generated for the bill.
- The bill has at least one frozen bill segment.

> **Note:** If both the **C1-STBSSN** and **C1-STPRNB** algorithms are attached to the **Post-Bill Completion** system event of any customer class, then the **C1-STBSSN** algorithm should have higher execution sequence compared to the **C1-STPRNB** algorithm.

If all the above conditions are met, this algorithm generates the payment reference number and stamps it on the bill using a characteristic type. However, if any one of the above condition fails, this algorithm will not generate payment reference number for the bill. This algorithm contains the following parameters:

Copyright © 2026, Oracle and/or its affiliates.

- **Bill Series Number Characteristic Type** - Here, you need to specify the following information separated by a comma:
  - **<Characteristic_Type>** - Used to indicate the billing statement series number characteristic whose value must be used to generate the payment reference number.

    Note:

    You must specify an adhoc characteristic type where the characteristic entity is set to **Bill**.

    If the same characteristic is defined multiple times for a bill, the system considers the characteristic value which is effective on the batch business date.
  - **<CharStartPosition>** - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e., from the first character).
  - **<CharCount>** - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count and if the length is greater than the remaining characters, the system will return the whole string after the <CharStartPosition>.
- **Payment Reference Number Characteristic Type** - Used to specify the characteristic type where you can store the payment reference number. The system then stamps the payment reference number using the given characteristic type on the bill.

  Note: You must specify an adhoc characteristic type where the characteristic entity is set to **Bill**.
- **Credit Memo Series Number Characteristic Type** - Used to specify the characteristic type which stores the credit memo series number. The system considers this characteristic type to determine whether the credit memo series number is already stamped on the bill.

  Note: You must specify an adhoc characteristic type where the characteristic entity is set to **Bill**.

All the above parameters are mandatory.

Support New Fields for GL Data Extraction

Until now, the **C1-GLFCSEL** algorithm attached to the **Select Records** system event of the **C1-GLERP** batch enabled you to edit the SQL quey such that you can extract data from the additional or custom fields during General Ledger (GL) data extraction. However, these additional or custom fields were not supported for processing by the **C1-GLFCDTEX** algorithm, which is attached to the **Process Record** system event of the **C1-GLERP** batch. Now, the system offers a new process record algorithm type named **C1-EGLFCTEX**. It refers an extendable lookup to pass data extracted from the fields using the **C1-GetGlDetails** business service and updates the **C1-GLFCDATAEXT** data area used for the GL data extraction.

To enable support for additional fields during General Ledger (GL) data extraction, the following objects are newly introduced in the product:

- **C1-GetGlDetails** business service
- **C1-GenericExtractFields** extendable lookup
- **C1-EGLFCTEX** algorithm type

You can dynamically modify the GL extract to include additional fields based on business requirements, depending on the system's customization capabilities. To support any additional or custom fields for GL data extraction, you need to update the following components accordingly:

- C1-GLFCDATAEXT data area
- SQL query of the algorithm attached to the **Select Records** system event of the **C1-GLERP** batch (i.e., C1-GLFCSEL)
- C1-GetGlDetails business service

Copyright © 2026, Oracle and/or its affiliates.

Note: This feature is tested and certified only for the health insurance business.

C1-GetGlDetails Business Service

The **C1-GetGlDetails** business service retrieves data using the **C1-GETGLDTLS** query zone and passes it in the form of result sets (i.e., a concatenated string of field values) using an extendable lookup. The data from the result sets is then stored in the data area, which is specified in the **C1-GLERP** batch.

This business service schema contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
zone	Used to specify the query zone using which you want to retrieve the data for GL extraction.	Yes
businessDate	Used to specify the batch business date when the business service is invoked.	Yes
batchCd	Used to specify the batch control that invoked the business service.	Yes
batchNbr	Used to specify the batch run number that invoked the business service.	Yes
results	Used to specify a list of result sets.	Yes
resultSet1, resultSet2, …, resultSet14	Used to specify a concatenated value from two or more fields.	Yes

C1-GenericExtractFields Extendable Lookup

The **C1-GenericExtractFields** extendable lookup allows you to map each result set with one or more tags from the data area (i.e., specified in the **C1-GLERP** batch). This helps the system to determine which field values should be concatenated in the result set. If you specify multiple destination elements for a result set, you need to specify the output position which helps to determine the sequence in which the field values should be concatenated. The system uses the delimiter specified in the **C1-EGLFCTEX** algorithm to concatenate the field values.

Note that, an out-of-box extendable lookup value named **GL** is shipped with the product for GL data extraction. You can use the base value or create a custom value depending on your business requirements.

While creating an extendable lookup value for the **C1-GenericExtractFields** business object, you need to specify the following:

- **Lookup Value** – Used to specify the extendable lookup value.
- **Description** – Used to specify description for the extendable lookup value.
- **Override Description** – Used when you want to override the description of the extendable lookup value.
- **Detailed Description** – Used to specify additional information about the extendable lookup value.
- **Status** – Used to indicate the status of the extendable lookup value. The valid values are:
  - Active
  - Inactive

  Note: By default, the value is set to **Active**.
- **Source Element from BS** – Used to specify the tag of the business service using which you want to pass the concatenated string to the data area.

  Note: While defining an extendable lookup value for GL data extraction, the valid values for the **Source Element from BS** field are **resultSet1**, **resultSet2**, …, or **resultSet14**.
- **Output Value Position** – Used to specify the order in which you want to concatenate the value from the field.

Copyright © 2026, Oracle and/or its affiliates.

- **Destination Element** – Used to specify the tag from the data area which is used for GL data extraction. The system derives the field whose value is to be concatenated from the tag.

Note: The **C1-GLFCDATAEXT** data area is shipped with the product for GL data extraction.

For example, if you set the **resultSet1** to the following:

Output Value Position	Destination Element
1	statusCode
2	effectiveDateOfTransaction
3	journalSource

The system will then concatenate the values from the above fields in the following format - ACTV|12-02-2026|AP01 - using the delimiter (i.e.,|) set in the **C1-EGLFCTEX** algorithm. Each field value of the result set is then stored in the respective tag of the **C1-GLFCDATAEXT** data area.

C1-EGLFCTEX Algorithm

This algorithm is used to extract the GL data records. It works together with the algorithm attached to the **Select Records** system event of the same batch control.

It refers an extendable lookup to pass data extracted from the fields using the **C1-GetGlDetails** business service and updates the **C1-GLFCDATAEXT** data area used for the GL data extraction. It contains the following parameters:

- **GL Account Segment Separator (if blank, value = '.')** – Used to specify separator for the GL account.
- **Extendable Lookup for Additional Fields** – Used to indicate the extendable lookup business object whose value is specified in the Source Element from Lookup parameter. Here, you must set the parameter value to C1-GenericExtractFields. This parameter is mandatory.
- **Business Service for Retrieving GL records** – Used to indicate the business service using which you want to pass the data in the form of result sets using the given extendable lookup value. Here, you must set the parameter value to C1-GetGlDetails. This parameter is mandatory.
- **Source Element from Lookup** – Used to specify the extendable lookup value using which you want to pass the data in the form of result sets. Here, you must set the parameter value to **GL**. You can also specify a custom value created using the **C1-GenericExtractFields** extendable lookup business object. This parameter is mandatory.
- **Delimiter** – Used to specify a character symbol to separate field values in the result set. For example, the **Pipe** symbol (|). This parameter is mandatory.

Support New Fields for A/P Request Data Extraction

Until now, the **C1-APFCSEL** algorithm attached to the **Select Records** system event of the **C1-APERP** batch enabled you to edit the SQL quey such that you can extract data from the additional or custom fields during Accounts Payable (A/P) request data extraction. However, these additional or custom fields were not supported for processing by the **C1-APFCDTEX** algorithm, which is attached to the **Process Record** system event of the **C1-APERP** batch. Now, the system offers a new process record algorithm type named **C1-EAPFCDTEX**. It refers an extendable lookup to pass data extracted from the fields using the **C1-GetAPRequestDetails** business service and updates the **C1-APFCDATAEXT** data area used for the A/P request data extraction.

To enable support for additional fields during A/P request data extraction, the following objects are newly introduced in the product:

- **C1-GetAPRequestDetails** business service
- **C1-GenericExtractFields** extendable lookup
- **C1-EAPFCDTEX** algorithm type

Copyright © 2026, Oracle and/or its affiliates.

You can dynamically modify the A/P extract to include additional fields based on business requirements, depending on the system's customization capabilities. To support any additional or custom fields for A/P Request data extraction, you need to update the following components accordingly:

- C1-APFCDATAEXT data area
- SQL query of the algorithm attached to the **Select Records** system event of the **C1-APERP** batch (i.e., C1-APFCSEL)
- C1-GetAPRequestDetails business service

Note: This feature is tested and certified only for the health insurance business.

C1-GetAPRequestDetails Business Service

The **C1-GetAPRequestDetails** business service retrieves data using the **C1-GETAPDTLS** query zone and passes it in the form of result sets (i.e., a concatenated string of field values) using an extendable lookup. The data from the result sets is then stored in the data area, which is specified in the **C1-APERP** batch.

This business service schema contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
zone	Used to specify the query zone using which you want to retrieve the data for A/P request extraction.	Yes
batchCd	Used to specify the batch control that invoked the business service.	Yes
batchNbr	Used to specify the batch run number that invoked the business service.	Yes
apRequestId	Used to specify the A/P request ID.	Yes
results	Used to specify a list of result sets.	Yes
resultSet1, resultSet2, …, resultSet16	Used to specify a concatenated value from two or more fields.	Yes

C1-GenericExtractFields Extendable Lookup

The **C1-GenericExtractFields** extendable lookup allows you to map each result set with one or more tags from the data area (i.e., specified in the **C1-APERP** batch). This helps the system to determine which field values should be concatenated in the result set. If you specify multiple destination elements for a result set, you need to specify the output position which helps to determine the sequence in which the field values should be concatenated. The system uses the delimiter specified in the **C1-EAPFCDTEX** algorithm to concatenate the field values.

Note that, an out-of-box extendable lookup value named **AP** is shipped with the product for A/P request data extraction. You can use the base value or create a custom value depending on your business requirements.

While creating an extendable lookup value for the **C1-GenericExtractFields** business object, you need to specify the following:

- **Lookup Value** – Used to specify the extendable lookup value.
- **Description** – Used to specify description for the extendable lookup value.
- **Override Description** – Used when you want to override the description of the extendable lookup value.
- **Detailed Description** – Used to specify additional information about the extendable lookup value.
- **Status** – Used to indicate the status of the extendable lookup value. The valid values are:
  - Active
  - Inactive

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** By default, the value is set to **Active**.

- **Source Element from BS** – Used to specify the tag of the business service using which you want to pass the concatenated string to the data area.

> **Note:** While defining an extendable lookup value for A/P request data extraction, the valid values for the **Source Element from BS** field are **resultSet1**, **resultSet2**, …, or **resultSet16**.

- **Output Value Position** – Used to specify the order in which you want to concatenate the value from the field.
- **Destination Element** – Used to specify the tag from the data area, which is used for A/P request data extraction. The system derives the field whose value is to be concatenated from the tag.

> **Note:** The **C1-APFCDATAEXT** data area is shipped with the product for A/P request data extraction.

For example, if you set the **resultSet1** to the following:

Output Value Position	Destination Element
1	bankName
2	bankNumber
3	bankBranchName

The system will then concatenate the values from the above fields in the following format - HDFC|01202456789|HC010 - using the delimiter (i.e.,|) set in the **C1-EAPFCDTEX** algorithm. Each field value of the result set is then stored in the respective tag of the **C1-APFCDATAEXT** data area.

C1-EAPFCDTEX Algorithm

This algorithm is used to extract the A/P request data. It works together with the algorithm attached to the **Select Records** system event of the same batch control.

It refers an extendable lookup to pass data extracted from the fields using the **C1-GetAPRequestDetails** business service and updates the **C1-APFCDATAEXT** data area used for the A/P request data extraction. It contains the following parameters:

- **AP Extract FIelds Extendable Lookup BO** – Used to indicate the extendable lookup business object whose value is specified in the **Source Element** parameter. Here, you must set the parameter value to **C1-GenericExtractFields**.
- **AP Details Business Service** – Used to indicate the business service using which you want to pass the data in the form of result sets using the given extendable lookup value. Here, you must set the parameter value to **C1-GetAPRequestDetails**.
- **Source Element** – Used to specify the extendable lookup value using which you want to pass the data in the form of result sets. Here, you must set the parameter value to **AP**. You can also specify a custom value created using the **C1-GenericExtractFields** extendable lookup business object.
- **SQL Values Delimiter** – Used to specify a character symbol to separate field values in the result set. For example, the **Pipe** symbol (|).

All the above parameters are mandatory.

Payment Acknowledgment Receipt

Oracle Revenue Management and Billing provides the ability to generate the unique receipt numbers for acknowledging payments received for the accounts. This acknowledgment receipt number is stamped on the respective payment. The system enables you to create an acknowledgment receipt for each eligible payment in the predefined XML format.

If a payment is canceled due to any reason, the system also enables you to create an acknowledgment receipt cancellation file upon payment cancellation.

Copyright © 2026, Oracle and/or its affiliates.

Note: This feature is tested and certified only for the health insurance business.

Acknowledgment Receipt Number Generation

Oracle Revenue Management and Billing provides the ability to generate the unique receipt numbers for acknowledging payments received for the accounts. A batch named **C1-SARSN** is shipped with the product. This batch is used to generate acknowledgment receipt number for the eligible payments using the given parameters and stamp it on the respective payment using a characteristic type. You can then use acknowledgment receipt numbers as a reference for payments in external systems.

This batch considers those payments which meet the following conditions:

- A payment is in the **Frozen** status.
- A payment is eligible for acknowledgment receipt generation. The system considers a payment eligible for acknowledgment receipt generation when a predefined characteristic type specified in the **Eligible for AR Generation Characteristic Type** parameter is set to the value specified in the **Eligible for AR Generation Characteristic Value** parameter.
- A payment is not applied to the general suspense account.
- An acknowledgment receipt number is not yet generated for the payment.
- An acknowledgment receipt extract batch number is not yet stamped on the payment.

For more information on the **C1-SARSN** batch, see the *Oracle Revenue Management and Billing Batch Guide*.

Payment Acknowledgment Receipt Extraction

Oracle Revenue Management and Billing enables you to create an acknowledgment receipt for each eligible payment in the predefined XML format. A batch named **C1-ACKRP** is shipped with the product. It enables you to create an acknowledgment receipt for each eligible payment in the XML format. Once the acknowledgment receipt is created for a payment, the batch stamps the acknowledgment receipt extract batch number on the payment using a characteristic type. The acknowledgment receipt extract batch number indicates the batch run in which the acknowledgment receipt was created for the payment.

This batch considers those payments which meet the following conditions:

- A payment is in the **Frozen** status.
- A payment is eligible for acknowledgment receipt generation. The system considers a payment eligible for acknowledgment receipt generation when a predefined characteristic type specified in the **Generate AR Characteristic Type Code** parameter is set to the value specified in the **Generate AR Characteristic Value** parameter.
- An acknowledgment receipt number is already generated for the payment.
- An acknowledgment receipt extract batch number is not yet stamped on the payment.

For more information on the **C1-ACKRP** batch, see the *Oracle Revenue Management and Billing Batch Guide*.

Payment Acknowledgment Receipt XML Format

The following code snippet illustrates how the tags are nested in the payment acknowledgment xml format:

```
<docrequest>
    <root>
        <Key1></Key1>
        <Key2></Key2>
        <emailInfo>

```

Payment Acknowledgment Receipt XML Tags

Before calling the **C1-ACKRP** batch, you need to ensure that the payment acknowledgement receipt contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
docrequest	Displays the type of the document which is being requested for each eligible payment. **Note:** The **docrequest** tag helps in understanding what type of additional information is required in an acknowledgement receipt.	Yes
root	Displays the elements and defines the overall structure of the data in the payment acknowledgment receipt.	Yes
Key1	Displays the source, system, or provider of the payment acknowledgment receipt.	Yes
Key2	Displays the category or type of data used in the payment acknowledgment receipt.	Yes
emailInfo	Displays the email information for a person or an entity.	Yes
cwtFormSubmissionDate	Displays the date when the certificate of withholding tax was submitted in the system.	Yes
totalReceivedAmountInFigures	You can use this tag within the following tags: • **emailInfo** – Displays the total amount of money received.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	• **ackReceipt** – Displays the total amount of money received for a particular claim or period.	
ackRecNo	Displays the acknowledgement record number.	Yes
toEmailAddress	Displays the recipient's email address.	Yes
customerCode	Displays the unique identifier code assigned to a customer or account.	Yes
clientName	Displays the registered name of the company or employer.	Yes
ackReceipt	Displays the detailed acknowledgment details of a transaction.	Yes
receivedFrom	Displays who submitted or initiated the request in the system.	Yes
tinNumber	Displays the tax identification number of the entity which is paid or billed.	Yes
businessStyle	Displays the type or category of business.	No
addressline1	Displays the first line of address. It may contain details such as, street or house number.	Yes
addressline4	Displays the fourth line of address. It may contain the landmark details.	No
city	Displays the city name.	Yes
zip	Displays the zip code of the address.	Yes
emailAddress	Displays the member's email address.	Yes
statementDate	Displays the date when the billing statement was issued.	Yes
ackReceiptNo	Displays the acknowledgment receipt number for the payments received.	Yes
paymentParticularsGroup	Displays the multiple payment details in an organized format for a payment transaction.	Yes (Conditional) **Note:** This data is required while generating the payment acknowledgement receipt.
paymentParticularsDetail	Displays the granular details of a single payment transaction.	Yes (Conditional) **Note:** This data is required while generating the payment acknowledgement receipt.
paymentParticulars	Displays the details or breakdown of a payment transaction.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
		Note: This data is required while generating the payment acknowledgement receipt.
transactionAmt	Displays the payment amount.	Yes (Conditional) **Note:** This data is required while generating the payment acknowledgement receipt.
cash	Displays the mode through which the payment transaction took place.	Yes (Conditional) **Note:** This data is required while generating the payment acknowledgement receipt.
amount	You can use this tag within the following tags: • **cash** – Here the **amount** tag is used to denote the specific value of the payment transaction. • **cwt** – Here the **amount** tag is used to denote the monetary value applicable to the specific category.	Yes (Conditional) **Note:** This data is required while generating the payment acknowledgement receipt.
cwt	Displays the creditable withholding tax information.	Yes
cwtNumber	Displays the reference number of the creditable withholding tax information.	Yes

Sample of Payment Acknowledgment Receipt

Using the below example, you can create a payment acknowledgment receipt for each eligible payment.

Acknowledgment Receipt Number	Statement Date	Tin Number	Person Name	Customer Code	Amount Received
AR20000000002	2025–06–29	456-123-000-789	MARIA MENTOS	D084802	2200.00

```

```

Payment Acknowledgment Receipt Cancellation

Oracle Revenue Management and Billing enables you to cancel an acknowledgment receipt upon payment cancellation. A batch named **C1-ARXRP** is shipped with the product. It enables you to cancel a payment acknowledgment receipt upon payment cancellation by creating an acknowledgment receipt cancellation file.

This batch considers those payments which meet the following conditions:

- A payment is in the **Canceled** status.
- A payment is eligible for acknowledgment receipt generation. The system considers a payment eligible for acknowledgment receipt generation when a predefined characteristic type specified in the **Generate AR Characteristic Type Code** parameter is set to the value specified in the **Generate AR Characteristic Value** parameter.
- An acknowledgment receipt number is already generated for the payment.
- An acknowledgment receipt extract batch number is stamped on the payment.
- A payment is eligible for acknowledgment receipt cancellation. The system considers a payment eligible for acknowledgment receipt cancellation when a predefined characteristic type specified in the **AR Cancel Eligibility Characteristic Type Code** parameter is defined on the payment.
- An acknowledgment receipt cancel extract batch number is not yet stamped on the payment.

For more information on the **C1-ARXRP** batch, see the *Oracle Revenue Management and Billing Batch Guide*.

Payment Acknowledgment Receipt Cancellation XML Tags

Before calling the **C1-ACKRP** batch, you need to ensure that the payment acknowledgement receipt cancellation contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
docrequest	Displays the type of the document which is being requested for each eligible payment. **Note:** The **docrequest** tag helps in understanding what type of additional information is required in an acknowledgement receipt.	Yes
root	Displays the elements and defines the overall structure of the data in the payment acknowledgment receipt.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
Key1	Displays the source, system, or provider of the payment acknowledgment receipt.	Yes
Key2	Displays the category or type of data used in the payment acknowledgment receipt.	Yes
emailInfo	Displays the email information for a person or an entity.	Yes

arCancel	You can use this tag within the following tags:
	• **emailInfo** - Here the **arCancel** tag is used for sending an email notification to the member when the membership is canceled. The valid values are:
	  • **Y**
	  • **N**
	• **ackReceipt** - Here the **arCancel** tag is used for sending an email notification to the member when the acknowledgment is canceled. The valid values are:
	  • **Y**
	  • **N**
		Yes

cwtFormSubmissionDate	Displays the date when the certificate of withholding tax was submitted in the system.	Yes
totalReceivedAmountInFigures	You can use this tag within the following tags: • **emailInfo** – Displays the total amount of money received. • **ackReceipt** – Displays the total amount of money received for a particular claim or period.	Yes
ackRecNo	Displays the acknowledgement record number.	Yes
toEmailAddress	Displays the recipient’s email address.	Yes
customerCode	Displays the unique identifier code assigned to a customer or account.	Yes
clientName	Displays the registered name of the company or employer.	Yes
ackReceipt	Displays the detailed acknowledgment details of a transaction.	Yes
receivedFrom	Displays who submitted or initiated the request in the system.	Yes
tinNumber	Displays the tax identification number of the entity which is paid or billed.	Yes
businessStyle	Displays the type or category of business.	No
addressline1	Displays the first line of the address. It may contain details such as the house number or apartment name.	No
addressline3	Displays the third line of the address. It may contain details such as the street name.	No
addressline4	Displays the fourth line of address. It may contain the landmark details.	No

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
zip	Displays the zip code of the address.	No
emailAddress	Displays the member's email address.	Yes
statementDate	Displays the date when the billing statement was issued.	Yes
ackReceiptNo	Displays the acknowledgment receipt number for the payments received.	Yes
paymentParticularsGroup	Displays the multiple payment details in an organized format for a payment transaction.	Yes (Conditional) **Note:** This data is required while canceling the payment acknowledgement receipt.
paymentParticularsDetail	Displays the granular details of a single payment transaction.	Yes (Conditional) **Note:** This data is required while canceling the payment acknowledgement receipt.
paymentParticulars	Displays the details or breakdown of a payment transaction.	Yes (Conditional) **Note:** This data is required while canceling the payment acknowledgement receipt.
transactionAmt	Displays the payment amount.	Yes (Conditional) **Note:** This data is required while canceling the payment acknowledgement receipt.
cash	Displays the mode through which the payment transaction took place.	Yes (Conditional) **Note:** This data is required while canceling the payment acknowledgement receipt.
amount	You can use this tag within the following tags: • **cash** – Here the **amount** tag is used to denote the specific value of the payment transaction.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	• **cwt** – Here the **amount** tag is used to denote the monetary value applicable to the specific category.	**Note:** This data is required while canceling the payment acknowledgement receipt.
cwt	Displays the creditable withholding tax information.	Yes
cwtNumber	Displays the reference number of the creditable withholding tax information.	Yes

Sample of Acknowledgment Receipt Cancellation

Using the below example, you can create a payment acknowledgment receipt for each eligible payment.

Acknowledgment Receipt Cancellation Number	Statement Date	Tin Number	Person Name	Customer Code	Amount Received
AR2000000267	2026–01–31	456-123-000-789	SALLY GRIFFINS	C68221	50.00

C1_EXTRAINFO Feature Configuration

The **C1_EXTRAINFO** feature configuration enables you to concatenate email address of the account's main customer with the email addresses of one or more associated child persons. It considers those child persons that are associated with the account's main customer using the specified relationship type.

It contains the following option type:

- **Person Relationship Type** – Used to specify the relationship type. It indicates how the child person is related to the account's main customer. Note that you can define this option type multiple times in the feature configuration to specify more than one person relationship type.

Note: The **C1_EXTRAINFO** feature configuration is not shipped with the product. You need to create this feature configuration using the **Extract Extra Information** feature type.

Generic Match Type

Oracle Revenue Management and Billing allows you to define a generic match type that invokes the required match type when applying a payment. A new algorithm type named **C1-PYBLSUSP** is shipped with the product. This algorithm determines the match type using which the payment should be applied against a bill, an excess credit contract, or a general suspense contract.

You need to attach this algorithm to the **Pay Dist Override Algorithm** system event of a generic match type where the entity type is set to **Bill** and the entity flag is set to **Bill**. You must then use this generic match type when applying the payment. This algorithm checks whether the account against which payment must be applied is a suspense account using the **Suspense Account Identifier Type** and **Suspense Account Identifier Value** parameters. If so, this algorithm considers the match type specified in the **Apply To General Suspense** parameter when applying the payment. Note that an error occurs when there is no or multiple suspense accounts with the given combination or when there is no active suspense contract for the suspense account.

However, if the account is not a suspense account, this algorithm checks whether the bill ID is given as the match entity. If so, this algorithm checks the following:

- The bill ID is valid.
- The bill belongs to the given account.

If both the above conditions are met, this algorithm considers the match type specified in the **Apply To Bill Match Type** parameter when applying the payment. However, if any of the above condition fails, this algorithm considers the match type specified in the **Apply To Excess Credit** parameter when applying the payment. The system invokes the payment distribution override algorithm of the respective match type and applies the payment to the match entity. The system will stamp the derived match type and not the generic match type on the respective payment event.

This algorithm contains the following parameters:

- **Apply To Bill Match Type** – Used to specify the match type using which you want to apply the payment against a bill. Here, you must specify a match type where the payment distribution override algorithm is set to **C1-PYBLPRPD**, entity type is set to **Bill**, and the entity flag is set to **Bill**.
- **Apply To Excess Credit** – Used to specify the match type using which you want to apply the payment against an excess credit contract. Here, you must specify a match type where the payment distribution override algorithm is set to **C1-MATONACCT**, entity type is set to **Account**, and the entity flag is set to **Contract**.
- **Apply To General Suspense** – Used to specify the match type using which you want to apply the payment against a general suspense contract. Here, you must specify a match type where the payment distribution override algorithm is set to **C1-MATSUSP**, entity type is set to **Account**, and the entity flag is set to **Contract**.

Copyright © 2026, Oracle and/or its affiliates.

- **Suspense Account Identifier Type** – Used to specify the account identifier type which indicates that the account is a suspense account. For example, **ACCT_NM**.
- **Suspense Account Identifier Value** – Used to specify the account identifier which indicates that the account is a suspense account. For example, **GENSUSPENSE**.

All the above parameters are mandatory.

Note: This feature is tested and certified only for the health insurance business.

Customer's Outstanding Balance Report

Oracle Revenue Management and Billing enables you to extract the outstanding balance reports for bill groups and parent customers. You can generate an outstanding balance report for a bill group or parent customer if there is an outstanding balance on the account. If there are multiple accounts of a bill group or parent customer with an outstanding balance, the system generates a separate report for each account.

An outstanding balance report of an account presents the following information:

- The details of the bills which are unpaid.
- The details of the bills which are partially paid including information about the payments and adjustments (such as refund adjustments, write off adjustment, offset adjustments) which affected the bill balance.

To provide the ability to generate the outstanding balance reports, the following objects are newly introduced in the product:

Object Type	Object Name
Business Service	C1-OBRBreakline, C1-OBRHeader, C1-OBRExtract, C1-OBRTrailer, C1-OBRDriverQuery
Extendable Lookup Business Object	C1-ExtractDataSource
Batch Control	C1-OBREX

For more information about the **C1-OBREX** batch, see *Oracle Revenue Management and Billing Batch Guide*.

C1-ExtractDataSource Extendable Lookup

The **C1-ExtractDataSource** extendable lookup allows you to define the format in which the data should be extracted in the report. An out-of-box extendable lookup value named **C1-OBREX** is shipped with the product. It helps the system to determine which fields to extract in the header, detail, and trailer records.

The system retrieves the field values using the following business services:

- **OBR Breakline Business Service (C1-OBRBreakline)** – Used to add a line break between sections.
- **OBR Extract Business Service (C1-OBRExtract)** – Used to retrieve data using the **C1-OBREXT** query zone and concatenate the field values of a detail record (as defined in the **C1-OBREX** extendable lookup), using the delimiter specified in the **C1-OBREX** batch.
- **OBR Header Business Service (C1-OBRHeader)** – Used to retrieve data using the **C1-OBRHDR** query zone and concatenate the field values of a header record (as defined in the **C1-OBREX** extendable lookup), using the delimiter specified in the **C1-OBREX** batch.
- **OBR Trailer Business Service (C1-OBRTrailer)** – Used to retrieve data using the **C1-OBRTRL** query zone and concatenate the field values of a trailer record (as defined in the **C1-OBREX** extendable lookup), using the delimiter specified in the **C1-OBREX** batch.

An outstanding balance report will have a single header record, multiple detail records, and a single trailer record. Note that the header or trailer record appears in the report file only when the fields for the **Header** or **Trailer** section are added in the extendable lookup.

Copyright © 2026, Oracle and/or its affiliates.

While creating an extendable lookup value for the **C1-ExtractDataSource** business object, you need to specify the following:

- **Lookup Value** – Used to specify the extendable lookup value.
- **Description** – Used to specify description for the extendable lookup value.
- **Override Description** - Used when you want to override the description of the extendable lookup value.
- **Detailed Description** - Used to specify additional information about the extendable lookup value.
- **Status** - Used to indicate the status of the extendable lookup value. The valid values are:
  - Active
  - Inactive

Note: By default, the value is set to **Active**.

- **Section and Business Service Query** – Used to add the business services using which you want to retrieve data for each section. This section contains the following columns:
  - **Section** – Used to indicate the section for which you want to add the business service. The valid values are:
    - Breakline
    - Header
    - Detail
    - Trailer
  - **Business Service Query** – Used to specify the business service. The valid values are:
    - OBR Breakline Business Service
    - OBR Extract Business Service
    - OBR Header Business Service
    - OBR Trailer Business Service
  - **Print Header Column** – Used to indicate whether you want to add column names in the respective section header.

Note: Here, you must include the corresponding business service if fields from those sections are added to the section below.

- **Extract Data Source Details** – Used to lists the fields whose data you want to include in the header, detail, or trailer record. This section contains the following columns:
  - **Sequence** – Used to specify a unique identifier for the row.
  - **Section** – Used to indicate the section for which you want to add the field. The valid values are:
    - Breakline
    - Header
    - Detail
    - Trailer
  - **Data Source Column** – Used to specify the tag of the business service. Here, you must specify the tag which is relevant to the section and respective business service.
  - **Description** – Used to specify the description for the field that you want to use in the column header.
  - **Index** – Used to specify the order in which data from the field should be concatenated in the record. The index starts at 0 for each section. At present, you can specify the index value from 0 to 20.
  - **Position** – Used when you have to concatenate data from more than 20 fields. Ideally, the position of each field should be set to 1 when the fields to be concatenated meet the maximum limit. But if you want to concatenate data from more than 20 fields, you can set the position of the field to greater than 1 such that the concatenated string appears in the respective index.
  - **Format** – Used to specify the date format for fields with the **Date** data type. The data is displayed in the specified format in the report.

Generating Single Segment Bills

Oracle Revenue Management and Billing enables you to generate a bill with only a single bill segment. A new algorithm type named **C1-REMEXTRBS** is shipped with the product. You need to attach this algorithm to the **Post FT Creation** system event of the required customer class. If you want to generate a bill with only a single bill segment for an account, you must define a predefined characteristic type specified in the **C1-REMEXTRBS** algorithm for the account and set its value to **Y**.

Note:

You need to create a predefined characteristic type that indicates whether a bill with only a single bill segment should be generated for the account. While creating the predefined characteristic type, you must set the characteristic entity to **Account** and the predefined characteristic values to **Y** and **N**.

Single-segment bills are typically used when the system acts as a pass-through billing system. In this case, the original transaction occurs elsewhere, and the system receives it as a single billable charge, which should be assigned only one series number.

While creating a financial transaction for a bill segment, the **C1-REMEXTRBS** algorithm (if attached to the respective customer class) checks whether a bill with only a single bill segment should be generated for the account. The system considers the account eligible for single bill segment per bill when a predefined characteristic type specified in the **Controlled Billing Flag Characteristic Type** parameter is set to the value specified in the **Controlled Billing Flag Characteristic Value** parameter. If the account is eligible for single bill segment per bill, the system checks whether any financial transaction is already created for the bill. If so, the system does not create financial transaction for the subsequent bill segment and deletes the subsequent bill segment from the bill. In this manner, the system enforces that each bill contains only a single bill segment.

This algorithm contains the following parameters:

- **Controlled Billing Flag Characteristic Type** - Used to specify the characteristic type. The system considers this characteristic type to determine whether the account is eligible for single bill segment per bill.

Copyright © 2026, Oracle and/or its affiliates.

Note: You must specify a predefined characteristic type where the characteristic entity is set to **Account** and the predefined characteristic values are set to **Y** and **N**.

- **Controlled Billing Flag Characteristic Value** - Used to specify the value of the characteristic type specified in the **Controlled Billing Flag Characteristic Type** parameter. This value should indicate that the account is eligible for single bill segment per bill. The valid value is **Y**.

Note: This feature is tested and certified only for the health insurance business.

GL Account Structure Based on the Chart of Accounts

Oracle Revenue Management and Billing enables you to dynamically construct a GL account string when assigning it to the financial transaction records. This helps you structure a GL account string based on the chart of accounts, including segments such as company, department, location, and account. While creating a GL account string, the system refers an extendable lookup and considers the value depending on the FT type, such as Bill Segment (BS), Bill Cancellation (BX), Pay Segment (PS), Pay Cancellation (PX), Adjustment (AD), and Adjustment Cancellation (AX). You need to create an extendable lookup value for each FT type based on the business requirements.

Each extendable lookup value can include combinations based on the following factors:

- Whether the **Total Amount** option is selected on the distribution code.
- The attribute defined for the distribution code (using the **GL Category** characteristic type).

You can define separate GL account string construction rules for each combination of attributes and the **Total Amount** option. For example, you can create separate combinations for **Total Amount Selected with Attribute 1** and **Total Amount Not Selected with Attribute 1**. Based on the values defined on the distribution code, the system selects the appropriate combination from the respective extendable lookup value and dynamically generates the GL account string according to the predefined rules. The GL account string is then assigned to the financial transaction.

The system allows you to define default GL account string construction rules under an attribute named **DEFAULT**. If the **GL Category** characteristic type is not defined for the distribution code or if there are no rules defined for the attribute specified on the distribution code, the system considers the default GL account string construction rules to dynamically build the GL account string.

To provide the ability to dynamically construct a GL account string, the following objects are newly introduced in the product:

- **C1-GLBUILD** algorithm type
- **C1-GLCOABO** extendable lookup

Note: This feature is tested and certified only for the health insurance business.

C1-GLBUILD Algorithm

The **C1-GLBUILD** algorithm dynamically constructs a GL account string and assigns it to the financial transaction (FT) record. It refers to an extendable lookup value created using the given extendable lookup business object depending on the FT type, such as BS, BX, PS, PX, AD, or AX.

If the characteristic type specified in the **GL Category Characteristic Type** parameter is defined for the distribution code, the system considers the respective attribute's definition (i.e., GL account string construction rules) to dynamically build the GL account string. However, if the specified characteristic type is not defined for the distribution code or if there are no rules defined for the attribute specified on the distribution code, this algorithm considers the default GL account string construction rules to dynamically build the GL account string. It uses the **Period** (.) symbol as the delimiter while concatenating multiple values in the GL account string.

This algorithm evaluates the GL account string construction rules in ascending order, from the lowest sequence number to the highest. For each rule, it determines the source entity and accordingly derives the value from the respective source. The following table explains how the system behaves when the respective source is selected in the rule.

Copyright © 2026, Oracle and/or its affiliates.

Source	Source Entity	System Behavior…
Account Characteristic	Account	Derives the value of the specified characteristic type from the account for which the FT is created.
Billable Charge Line Item Characteristic	Billable Charge Line	Derives the value of the specified characteristic type from the corresponding billable charge line of the FT.
Distribution Code Characteristic	Distribution Code	Derives the value of the specified characteristic type from the distribution code of the FT.
Default	-	Derives the default value given in the rule.
Distribution Code GL Account	Distribution Code	Derives the GL account specified in the distribution code of the FT.
Match Event Entity GL Account	Entity on Match Event	Derives the GL account specified in the distribution code of the entity FT. For example, if the entity on the match event is bill segment, the system derives the GL account specified in the distribution code of the bill segment FT.
Billable Charge Price Item Characteristic	Price Item on Billable Charge	Derives the value of the specified characteristic type from the price item specified in the corresponding billable charge of the FT.
Person Characteristic	Person	Derives the value of the specified characteristic type from the person to whom the FT belongs.
Sibling Entity Characteristic	BS, BX – Billable Charge (sibling entity)PS, PX – Payment (sibling entity)AD, AX – Adjustment (sibling entity)	Derives the value of the specified characteristic type from the sibling entity depending on the FT type.
Sibling Entity GL Account	BX – BS (sibling entity)PX – PS (sibling entity)AX – AD (sibling entity)	Derives the GL account specified in the distribution code of the sibling entity FT.

Note: If the value (i.e., characteristic type or field) is specified in the rule and if the specified characteristic type or field is defined on the source entity, the system derives the characteristic value or field value for further processing. However, if the value (i.e., characteristic type or field) is not specified in the rule or if the specified characteristic type or field is not defined on the source entity, and if the default value is given in the rule, the system uses the default value for further processing.

Once the value is derived, the system performs the action defined in the **Action if Derived** field. But if no value is derived, the system performs the action defined in the **Action if Blank** field. If the **Action if Derived** field is set to **Next Action Based on Sequence**, the system checks whether the next sequence is specified in the **Next Sequence if derived** field. If so, the system evaluates the rule with the next sequence number. But, if the next sequence is not specified in the **Next Sequence if derived** field, the system evaluates the rule with the subsequent sequence number. Only when the **Action if Derived** field is set to **Return GL String** does the system exit and concatenate all values derived up to that point.

If the **Action if Blank** field is set to **Next Action Based on Sequence**, the system checks whether the next sequence is specified in the **Next Sequence if blank** field. If so, the system evaluates the rule with the next sequence number. But, if

Copyright © 2026, Oracle and/or its affiliates.

the next sequence is not specified in the **Next Sequence if blank** field, the system evaluates the rule with the subsequent sequence number. Only when the **Action if Blank** field is set to **Create To Do** does the system create a To Do using the **C1-GLASN** To Do type indicating that an error has occurred while assigning GL account to the financial transaction.

You need to attach this algorithm to the **GL Account Algorithm** field of the required distribution code. It is invoked through the **C1-GLASN** batch process. This algorithm contains the following parameters:

- **GL Chart of Account Extendable Lookup BO** – Used to specify the extendable lookup business object. The system uses the extendable lookup value created using the specified business object to determine the rules for constructing the GL account string. The valid value is:
  - C1-GLCOABO
- **GL Category Characteristic Type** - Used to specify the characteristic type. The system uses this characteristic type to determine the attribute defined on the distribution code.

> **Note:** You must specify an adhoc characteristic type where the characteristic entity is set to **Distribution Code**.

Both the above parameters are mandatory.

C1-GLCOABO Extendable Lookup

The **C1-GLCOABO** extendable lookup allows you to define GL account string construction rules for each FT type, such as Bill Segment (BS), Bill Cancellation (BX), Pay Segment (PS), Pay Cancellation (PX), Adjustment (AD), and Adjustment Cancellation (AX). At present, no values are shipped with the product. You need to create an extendable lookup value for each FT type. While creating extendable lookup values, ensure that you name them as BS, BX, PS, PX, AD, and AX. This helps align the lookup values with the respective FT types, based on the defined naming convention.

While creating an extendable lookup value for the **C1-GLCOABO** business object, you need to specify the following:

- **Lookup Value** – Used to specify the extendable lookup value.
- **Description** – Used to specify description for the extendable lookup value.
- **Override Description** – Used when you want to override the description of the extendable lookup value.
- **Detailed Description** – Used to specify additional information about the extendable lookup value.
- **Status** – Used to indicate the status of the extendable lookup value. The valid values are:
  - Active
  - Inactive

> **Note:** By default, the value is set to **Active**.

- **GL String Construction Rules** – Used to define separate GL account string construction rules for each combination of attributes and the Total Amount option. This section contains the following columns:
  - **Total Amount** – Used to define separate GL account string construction rules that are evaluated based on the following conditions:
    - When the **Total Amount** option is selected on the distribution code.
    - When the **Total Amount** option is not selected on the distribution code.
  - **Attribute** - Used to define separate GL account string construction rules that are evaluated based on the value defined in the **GL Category** characteristic type of the distribution code.

    The system allows you to define default GL account string construction rules under an attribute named **DEFAULT**. If the **GL Category** characteristic type is not defined for the distribution code or if there are no rules defined for the attribute specified on the distribution code, the system considers the default GL account string construction rules to dynamically build the GL account string.
  - **Rule Definition** – Used to define rules for dynamically constructing GL account string when assigning it to the financial transaction. This section contains the following columns:
    - **Sequence** - Used to specify the order in which rule should be executed.
    - **Chart of Accounts** – Used to indicate the segment of the chart of accounts whose information you want to include in the GL account string. This field is for informational purposes only. The valid values are:

Copyright © 2026, Oracle and/or its affiliates.

- BUDG
- Company Code
- Funding Arrangement
- GL String
- InterCo
- Natural Account
- Profit/Cost Center
- TBD
- Product

Note: The list includes only those values which are defined in the **CHART_OF_ACCT_FLG** lookup field.

- **Source** – Used to indicate the source entity from which you want to derive the field or characteristic value. The valid values:
  - Account Characteristic
  - Billable Charge Line Item Characteristic
  - Distribution Code Characteristic
  - Default
  - Distribution Code GL Account
  - Match Event Entity GL Account
  - Billable Charge Price Item Characteristic
  - Person Characteristic
  - Sibling Entity Characteristic
  - Sibling Entity GL Account

Note: The list includes only those values which are defined in the **GL_SRC_FLG** lookup field.

- **Value** – Used to specify the field or characteristic value based on the source entity.
- **Default** – Used to specify the default value. If the field or characteristic value is not defined on the source entity, the system uses the default value (if provided) for further processing.
- **Action if Derived** – Used to specify the next action after either the value from the source entity or the default value is determined. The valid values are:
  - **Next Action Based on Sequence** – Used when you want to the system to evaluate the rule with a particular sequence number. In this case, the system skips the subsequent sequence number and jumps to the specified sequence number. If you do not specify the sequence number in the **Next Sequence if derived** field, the system evaluates the rule with the subsequent sequence number.
  - **Override Based on Rule** – At present, this option is not supported in the product.
  - **Return GL String** – Used when you want to exit the flow and concatenate all the values derived up to that point to form the dynamic GL account string. The system uses the **Period** (.) symbol as the delimiter while concatenating multiple values in the GL account string.
- **Next Sequence if derived** – Used to specify a particular sequence number. The system evaluates the rule with this sequence number when the **Action if Derived** field is set to **Next Action Based on Sequence**.
- **Action if Blank** - Used to specify the next action if neither the value from the source entity nor the default value is derived. The valid values are:
  - **Create To Do** – Used when you want to create a To Do using the **C1-GLASN** To Do type. This To Do indicates that an error has occurred while assigning GL account to the financial transaction.
  - **Next Action Based on Sequence** - Used when you want to the system to evaluate the rule with a particular sequence number. In this case, the system skips the subsequent sequence number and jumps to the specified sequence number. If you do not specify the sequence number in the **Next Sequence if derived** field, the system evaluates the rule with the subsequent sequence number.
- **Next Sequence if blank** - Used to specify a particular sequence number. The system evaluates the rule with this sequence number when the **Action if Blank** field is set to **Next Action Based on Sequence**.

Draft or Final Billing Statement Extraction

Oracle Revenue Management and Billing allows you to extract pending and complete bill information in XML and CSV formats. While extracting the bill information, the system refers to an extendable lookup value created using the **C1-ExtractMapping** business object to determine which data should be extracted and the XML tags in which it should be placed. A separate batch is provided to extract pending and complete bill information in XML and CSV formats.

A draft billing statement file, in XML or CSV format, informs customers of their bill details for review before it is finalized. A final billing statement file, in XML or CSV format, provides details from the final bill. For more information, see the following sections:

- Draft Billing Statement Extraction in XML Format on page 209
- Draft Billing Statement Extraction in CSV Format on page 230
- Final Billing Statement Extraction in XML Format on page 217
- Final Billing Statement Extraction in CSV Format on page 232

Note: This feature is tested and certified only for the health insurance business.

Draft Billing Statement Extraction in XML Format

The **C1DRBLEX** batch is used to extract pending bill information in XML format. It considers those bills which meet the following conditions:

- The bill is in the **Pending** status.
- The bill belongs to the account whose bill cycle matches a specific pattern (defined using a regex filter).
- The bill has at least one freezable bill segment.
- A draft billing extract batch number is not yet stamped on the bill.

Once the draft billing statement XML file is created, the batch stamps the draft billing extract batch number on the pending bills using a characteristic type. The draft billing extract batch number indicates the batch run in which the draft billing statement XML file is created.

The draft billing statement XML file is named according to the following naming convention:

{fileName}.{batchNumber}.{rerunNumber}.THD{threadNumber}.xml

This batch is a multi-threaded batch. It extracts data for each pending bill in a separate thread. You can specify the following parameters while executing this batch:

Parameter Name	Mandatory (Yes or No)	Description
File Path	Yes	Used to specify the directory or bucket where you want to store the draft billing statement XML file. If the application environment is an On Premises or Cloud Service environment, you can specify the directory name along with the following relative path: • **@SHARED_DIR** – Used when you want to store the draft billing statement XML file in the shared directory on the server. For example, you can set the value to @SHARED_DIR/output. However, if the application environment is a Cloud Service, Premium Edition environment, you must specify the following information in the file-storage://<File Storage Extendable Lookup Value>/<Object Storage Bucket> format:

Copyright © 2026, Oracle and/or its affiliates.

Parameter Name	Mandatory (Yes or No)	Description
		• The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while storing the draft billing statement XML file on OCI. • The bucket or container where you want the system to store the draft billing statement XML file. **Note:** The shared directory variable (i.e., **SHARED_DIR**) is case-sensitive. If the specified directory does not exist in the shared directory, the system will create the directory with the given name in the specified location.
File Name	Yes	Used to specify the prefix that you want to add at the beginning of the file name.
Key 1	Yes	Used to specify the string that you want to display in the **Key1** tag of the draft billing statement XML file.
Key 2	Yes	Used to specify the string that you want to display in the **Key2** tag of the draft billing statement XML file.
Date Format	Yes	Used to specify the date format for fields with the **Date** data type. The data is displayed in the specified format in the draft billing statement XML file.
File Name Time Stamp Format	No	Used to specify the date and time format that you want to append to the file name to differentiate each file. For example, MMddyyyy, MMddyyyyHHmmss.
Extract Mapping BO	Yes	Used to specify the extendable lookup business object. The system uses the extendable lookup value created using the specified business object to determine the format in which the data should be extracted in the draft billing statement XML file. The valid value is **C1-ExtractMapping**.
Billing Statement Lookup Value	Yes	Used to specify the extendable lookup value using which you want to extract the data in the draft billing statement XML file. The valid value is **BILLING_STATEMENT**. **Note:** You can also specify a custom value created using the **C1-ExtractMapping** extendable lookup business object.
Membership Characteristic Type	Yes	Used to specify the characteristic type which stores the membership ID. The system uses this characteristic type to determine the membership for which the billable charge is created. If the specified characteristic type is defined on the corresponding

Copyright © 2026, Oracle and/or its affiliates.

Parameter Name	Mandatory (Yes or No)	Description
		billable charge, the system displays the membership information in the draft billing statement XML file. **Note:** You must specify a foreign key characteristic type where the characteristic entity is set to **Billable Charge**.
Amount Category Characteristic Type	Yes	Used to specify the characteristic type which stores the amount category of the billable charge line. The system uses this characteristic type to determine whether the amount category characteristic is stamped on any charge lines within the bill (i.e., on the lines of the corresponding billable charges). If so, the system calculates the sum of charge line amounts with the same amount category and displays information in the **taxDetails** tag of the draft billing statement XML file. **Note:** You must specify a predefined characteristic type where the characteristic entity is set to **Billable Charge Line** and the predefined values are set to VAT Sales (VS), VAT Exempt (VE), Zero Rated (ZR), Non-VAT (NV), and VAT (VA).
Attachment Column Characteristic Type	Yes	Used to specify the characteristic type that indicates the type of amount on the pass-through charge line. **Note:** You must specify an adhoc characteristic type where the characteristic entity is set to **Billable Charge Line**. If the characteristic type is set to **PREMIUM**, **PHILHEALTH**, or **VAT AMOUNT**, the system displays the charge line amount in the **premiumAmt**, **philhealthAmt**, or **vatAmount** tag, respectively, of the draft billing statement XML file.
Batch Number Characteristic Type	Yes	Used to specify the characteristic type which stores the draft billing extract batch number. The system uses this characteristic type to determine whether the draft billing extract batch number is stamped on the bill. **Note:** You must specify an adhoc characteristic type where the characteristic entity is set to **Bill**.
CWT Percentage Contract Characteristic Type	Yes	Used to specify the characteristic type which stores the Creditable Withholding Tax (CWT) percentage. The system uses this characteristic type to determine whether the CWT percentage is specified on the contract type of any charge within the bill. If so, the system accordingly calculates computation summary for the bill. However, if the

Copyright © 2026, Oracle and/or its affiliates.

Parameter Name	Mandatory (Yes or No)	Description
		CWT percentage is not specified on the contract type of any charge within the bill, the system uses the default CWT percentage specified in the **CWT Percentage** parameter for calculating the computation summary. **Note:** If the CWT percentage is derived from two or more contract types for a bill, the system considers the highest CWT percentage for calculating the computation summary. You must specify an adhoc characteristic type where the characteristic entity is set to **Contract Type**.
Default Broker Name	No	Used to specify the default broker name. The system displays this broker name in the **brokerName** tag when the customer is not associated with any broker.
CWT Percentage	Yes	Used to specify the default Creditable Withholding Tax (CWT) percentage. The system uses the specified percentage when the CWT percentage is not defined on the contract type of any charge within the bill. **Note:** You must specify a positive value for this parameter.
VAT Percentage	Yes	Used to specify the Value Added Tax (VAT) percentage. The system calculates the VAT using the specified percentage on the total taxable amount of the bill.
VAT Sales Predefined Value	Yes	Used to specify the predefined characteristic value of the **Amount Category** characteristic type that indicates the billable charge line represents the VAT sales amount. **Note:** You must specify a predefined characteristic value of a characteristic type that is specified in the **Amount Category Characteristic Type** parameter.
Computation Summary BS	Yes	Used to indicate the business service using which you want to calculate the computation summary of the bill. The valid value is **C1-DraftBillComputationSummary**.
Attachment Details BS	Yes	Used to indicate the business service using which you want to retrieve billable charge details, including sub-movement type, membership ID, and adjusted bill (stored as characteristics on the billable charge). The valid value is **C1-DraftBillingAttachmentDtls**.

Copyright © 2026, Oracle and/or its affiliates.

Parameter Name	Mandatory (Yes or No)	Description
Billing Group Relationship Type	Yes	Used to specify the person relationship type. The system determines the parent customer of the bill group based on the specified person relationship type. **Note:** You must specify a person relationship type which is already defined in the system.
Extract Feature Configuration	No	Used when you want to specify more than one email address in the **toEmailAddress** tag of the draft billing statement XML file. The valid value is **C1_EXTRAINFO**. **Note:** If you do not specify any value, by default, the email address of the main customer of the account (for which the bill is created) is displayed in the **toEmailAddress** tag of the draft billing statement XML file. The **C1_EXTRAINFO** feature configuration enables you to specify one or more person relationship types. The system derives the child persons who are associated with the main customer of the account (for which the bill is created) using the specified relationship type. Once the child persons are identified, the system derives the email address of each child person and concatenates the same along with the main customer's email address using the Semicolon (;) symbol. The concatenated email address string is then displayed in the **toEmailAddress** tag of the draft billing statement XML file.
Eligible Person Relationship Type Option Type	No	Used to indicate the option type using which the system should derive the child persons associated with the account's main customer. **Note:** This parameter is applicable only when the **Extract Feature Configuration** parameter is set to **C1_EXTRAINFO**.
Bill Cycle Code Regex Filter	Yes	Used to specify the regex filter using which you want to determine the bill cycles. The system then identifies accounts with bill cycles and retrieves their pending bills. **Note:** By default, the value is set to **D[0-9]{,1}**.
Thread Pool Name	No	Used to specify the thread pool on which you want to execute the batch.

Copyright © 2026, Oracle and/or its affiliates.

Parameter Name	Mandatory (Yes or No)	Description
		Note: If you do not specify any value, by default, it is set to **DEFAULT**.
Email Mode	No	Used to indicate whether you want to send the email notification on the batch job completion depending on the batch job run status. The valid values are: • **ERROR** – Used when you want to send the email notification on the batch job completion only when the batch job run is in the **Error** status. • **SUCCESS** - Used when you want to send the email notification on the batch job completion only when the batch job run is in the **Complete** status. • **ALL** - Used when you want to send the email notification on the batch job completion irrespective of the batch job run status.
		Note: If you do not specify any value, by default, it is set to **ALL**. This parameter is applicable only when the email address is specified in the batch job.
Override maximum errors	No	Used to override the maximum number of errors allowed before the batch run is terminated.
		Note: You must specify a value greater than or equal to zero.

Draft Billing Statement XML Format

The following code snippet illustrates how the tags are nested in the xml format of the draft billing statement:

```

Final Billing Statement Extraction in XML Format

The **C1BLSTEX** batch is used to extract complete bill information in XML format. It considers those bills which meet the following conditions:

- The bill is in the **Complete** status.

Copyright © 2026, Oracle and/or its affiliates.

- The batch control on the bill routing is set to **C1BLSTEX** and batch run number is set to the current batch run number.

Note:

The latter condition is met only when the batch control on the bill route type of the account's main customer is set to **C1BLSTEX**.

You must ensure that the billing statement series number is already generated for the bill before extraction.

The final billing statement XML file is named according to the following naming convention:

{fileName}.{batchNumber}.{rerunNumber}.THD{threadNumber}.xml

This batch is a multi-threaded batch. It extracts data for each complete bill in a separate thread. You can specify the following parameters while executing this batch:

Parameter Name	Mandatory (Yes or No)	Description
File Path	Yes	Used to specify the directory or bucket where you want to store the final billing statement XML file.If the application environment is an On Premises or Cloud Service environment, you can specify the directory name along with the following relative path: • **@SHARED_DIR** – Used when you want to store the final billing statement XML file in the shared directory on the server. • The file storage extendable lookup value from where the cloud storage compartment and connection details are retrieved while storing the final billing statement XML file on OCI. • The bucket or container where you want the system to store the final billing statement XML file. For example, you can set the value to @SHARED_DIR/output. However, if the application environment is a Cloud Service, Premium Edition environment, you must specify the following information in the file-storage://<File Storage Extendable Lookup Value>/<Object Storage Bucket> format: **Note:** The shared directory variable (i.e., **SHARED_DIR**) is case-sensitive. If the specified directory does not exist in the shared directory, the system will create the directory with the given name in the specified location.
File Name	Yes	Used to specify the prefix that you want to add at the beginning of the file name.
Key 1	Yes	Used to specify the string that you want to display in the **Key1** tag of the final billing statement XML file.

Copyright © 2026, Oracle and/or its affiliates.

Parameter Name	Mandatory (Yes or No)	Description
Key 2	Yes	Used to specify the string that you want to display in the **Key2** tag of the final billing statement XML file.
Date Format	Yes	Used to specify the date format for fields with the **Date** data type. The data is displayed in the specified format in the final billing statement XML file.
File Name Time Stamp Format	No	Used to specify the date and time format that you want to append to the file name to differentiate each file. For example, MMddyyyy, MMddyyyyHHmmss.
Extract Mapping BO	Yes	Used to specify the extendable lookup business object. The system uses the extendable lookup value created using the specified business object to determine the format in which the data should be extracted in the final billing statement XML file. The valid value is **C1-ExtractMapping**.
Billing Statement Lookup Value	Yes	Used to specify the extendable lookup value using which you want to extract the data in the final billing statement XML file. The valid value is **BILLING_STATEMENT**. **Note:** You can also specify a custom value created using the **C1-ExtractMapping** extendable lookup business object.
Membership Characteristic Type	Yes	Used to specify the characteristic type which stores the membership ID. The system uses this characteristic type to determine the membership for which the billable charge is created. If the specified characteristic type is defined on the corresponding billable charge, the system displays the membership information in the final billing statement XML file. **Note:** You must specify a foreign key characteristic type where the characteristic entity is set to **Billable Charge**.
Amount Category Characteristic Type	Yes	Used to specify the characteristic type which stores the amount category of the billable charge line. The system uses this characteristic type to determine whether the amount category characteristic is stamped on any charge lines within the bill (i.e., on the lines of the corresponding billable charges). If so, the system calculates the sum of charge line amounts with the same amount category and displays information in the **taxDetails** tag of the final billing statement XML file.

Copyright © 2026, Oracle and/or its affiliates.

Parameter Name	Mandatory (Yes or No)	Description
		Note: You must specify a predefined characteristic type where the characteristic entity is set to **Billable Charge Line** and the predefined values are set to VAT Sales (VS), VAT Exempt (VE), Zero Rated (ZR), Non-VAT (NV), and VAT (VA).
Attachment Column Characteristic Type	Yes	Used to specify the characteristic type that indicates the type of amount on the pass-through charge line. **Note:** You must specify an adhoc characteristic type where the characteristic entity is set to **Billable Charge Line**. If the characteristic type is set to **PREMIUM**, **PHILHEALTH**, or **VAT AMOUNT**, the system displays the charge line amount in the **premiumAmt**, **philhealthAmt**, or **vatAmount** tag, respectively, of the draft billing statement XML file.
CWT Percentage Contract Characteristic Type	Yes	Used to specify the characteristic type which stores the Creditable Withholding Tax (CWT) percentage. The system uses this characteristic type to determine whether the CWT percentage is specified on the contract type of any charge within the bill. If so, the system accordingly calculates computation summary for the bill. However, if the CWT percentage is not specified on the contract type of any charge within the bill, the system uses the default CWT percentage specified in the **CWT Percentage** parameter for calculating the computation summary. **Note:** If the CWT percentage is derived from two or more contract types for a bill, the system considers the highest CWT percentage for calculating the computation summary. You must specify an adhoc characteristic type where the characteristic entity is set to **Contract Type**.
Default Broker Name	No	Used to specify the default broker name. The system displays this broker name in the **brokerName** tag when the customer is not associated with any broker.
CWT Percentage	Yes	Used to specify the default Creditable Withholding Tax (CWT) percentage. The system

Copyright © 2026, Oracle and/or its affiliates.

Parameter Name	Mandatory (Yes or No)	Description
		uses the specified percentage when the CWT percentage is not defined on the contract type of any charge within the bill. **Note:** You must specify a positive value for this parameter.
VAT Percentage	Yes	Used to specify the Value Added Tax (VAT) percentage. The system calculates the VAT using the specified percentage on the total taxable amount of the bill.
VAT Sales Predefined Value	Yes	Used to specify the predefined characteristic value of the **Amount Category** characteristic type that indicates the billable charge line represents the VAT sales amount. **Note:** You must specify a predefined characteristic value of a characteristic type that is specified in the **Amount Category Characteristic Type** parameter.
Computation Summary BS	Yes	Used to indicate the business service using which you want to calculate the computation summary of the bill. The valid value is **C1-ComputationSummary**.
Attachment Details BS	Yes	Used to indicate the business service using which you want to retrieve billable charge details, including sub-movement type, membership ID, and adjusted bill (stored as characteristics on the billable charge). The valid value is **C1-AttachmentDetails**.
Billing Group Relationship Type	Yes	Used to specify the person relationship type. The system determines the parent customer of the bill group based on the specified person relationship type. **Note:** You must specify a person relationship type which is already defined in the system.
Extract Feature Configuration	No	Used when you want to specify more than one email address in the **toEmailAddress** tag of the final billing statement XML file. The valid value is **C1_EXTRAINFO**.

Copyright © 2026, Oracle and/or its affiliates.

Parameter Name	Mandatory (Yes or No)	Description
		Note: If you do not specify any value, by default, the email address of the main customer of the account (for which the bill is created) is displayed in the **toEmailAddress** tag of the final billing statement XML file. The **C1_EXTRAINFO** feature configuration enables you to specify one or more person relationship types. The system derives the child persons who are associated with the main customer of the account (for which the bill is created) using the specified relationship type. Once the child persons are identified, the system derives the email address of each child person and concatenates the same along with the main customer's email address using the Semicolon (;) symbol. The concatenated email address string is then displayed in the **toEmailAddress** tag of the final billing statement XML file.
Eligible Person Relationship Type Option Type	No	Used to indicate the option type using which the system should derive the child persons associated with the account's main customer. **Note:** This parameter is applicable only when the **Extract Feature Configuration** parameter is set to **C1_EXTRAINFO**.
Thread Pool Name	No	Used to specify the thread pool on which you want to execute the batch. **Note:** If you do not specify any value, by default, it is set to **DEFAULT**.
Email Mode	No	Used to indicate whether you want to send the email notification on the batch job completion depending on the batch job run status. The valid values are: • **ERROR** – Used when you want to send the email notification on the batch job completion only when the batch job run is in the **Error** status. • **SUCCESS** - Used when you want to send the email notification on the batch job completion only when the batch job run is in the **Complete** status. • **ALL** - Used when you want to send the email notification on the batch job completion irrespective of the batch job run status.

Copyright © 2026, Oracle and/or its affiliates.

Parameter Name	Mandatory (Yes or No)	Description
		Note: If you do not specify any value, by default, it is set to **ALL**. This parameter is applicable only when the email address is specified in the batch job.
Override maximum errors	No	Used to override the maximum number of errors allowed before the batch run is terminated. **Note:** You must specify a value greater than or equal to zero.

On successful completion of this batch, the system creates a final billing statement XML file for each customer. It includes charges grouped by movement type, and billable charge line amounts grouped by amount category. It also includes computation summary including total debit charges, total credit charges, total bill amount, total bill amount before withholding tax, total bill amount after withholding tax, and the total due amount.

Final Billing Statement XML Format

The following code snippet illustrates how the tags are nested in the xml format of the final billing statement:

```

Draft or Final Billing Statement XML Tags

Before calling the **C1DRBLEX** batch, you need to ensure that the draft billing statement contains the following XML tags:

Tag Name	Tag Description	Mandatory (Yes or No)
docrequest	Displays the type of document that should be generated or processed for each draft or final bill. **Note:** The **docrequest** tag helps in understanding what type of additional information is required to either generate or process the draft or final billing statement.	Yes
root	Displays the elements and the overall data structure for the draft or final billing statement.	Yes
Key1	Displays the system or the application name for the draft or final billing statement.	Yes
Key2	Displays the document processing category for the draft or final billing statement.	Yes
emailInfo	Displays the information required for generating the automated email communication.	Yes
billingType	Displays the status or type of bill generation.	Yes
billingStatementNumber	Displays the unique billing statement reference number	Yes
statementDate	Displays the date when the statement got generated.	Yes
toEmailAddress	Displays the recipient email address.	Yes
totalPremiumPayDueDate	Displays the due date for paying the total premium.	Yes
customerCode	Displays the unique customer code.	Yes
clientName	Displays the customer or company name.	Yes
bill	Displays the information related to a bill.	Yes(Conditional) **Note:** This information is required while generating either a draft or final billing statement.
billId	Displays the unique primary tracking ID of the bill.	Yes
altBillId	Displays the secondary or alternative billing identifier.	No
billDate	Displays the date when the bill got generated.	Yes
paymentReferenceNbr	Displays the reference number used during the payment.	Yes
dueDate	Displays the due date by when the current bill should be paid.	Yes
billPeriodStartDate	Displays the date when the billing cycle started.	Yes
billPeriodEndDate	Displays the date when the billing cycle ended.	Yes
coveragePeriodStartDate	Displays the date when the insurance coverage period started.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
coveragePeriodEndDate	Displays the date when the insurance coverage period ended.	Yes
status	Displays the processing state of the bill.	Yes
totalPremiumPayDueDate	Displays the date by when the premium should be paid.	Yes
customerInfo	Displays the customer details.	Yes
accountId	Displays the account identifier of the customer	Yes
customerCode	Displays the customer code.	Yes
clientName	Displays the customer name.	Yes
emailAddress	Displays the email address of the customer.	Yes
tinNumber	Displays the taxpayer identification number.	Yes
businessStyle	Displays the registered business or trade number.	Yes
brokerName	Displays the name of the insurance broker or agent managing the account.	Yes
billingContactName	Displays the designated person who handles the billing inquires.	Yes(Conditional) **Note:** This information is required while generating either a draft or final billing statement.
billingContactDesignation	Displays the job title of the person who the billing inquires.	Yes(Conditional) **Note:** This information is required while generating either a draft or final billing statement.
modeOfPayment	Displays the payment frequency.	Yes
addressline1	Displays the primary address line.	Yes
addressline2	Displays the secondary address line.	Yes
addressline3	Displays the additional address details.	No
addressline4	Displays the additional address extension.	No
city	Displays the city.	Yes
state	Displays the state.	Yes
zip	Displays the zip code.	Yes
billLinesGroup	Displays the financial charge and tax details	Yes
debitCharges	Displays the charge entry section.	Yes
transactionType	Displays the type of financial transaction.	Yes
amount	Displays the charge amount.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
taxDetails	Displays the section related to tax breakdown of Value Added Tax (VAT) categories.	Yes
vatSalesAmt	Displays the vat-applicable sales amount.	Yes
vatExemptAmt	Displays the amount that is legally exempt from tax.	Yes
zeroRatedAmt	Displays the zero-rated vat amount.	Yes
nonVatAmt	Displays the non-vat amount.	Yes
vatAmt	Displays the total calculated vat currency value.	Yes
totals	Displays the summarized financial values.	Yes
totalDebitCharges	Displays the total debit charges.	Yes
totalCreditCharges	Displays the total discounts or deductions that are applied.	Yes
totalBillAmt	Displays the gross bill amount before tax adjustments.	Yes
totalWithholdingTax	Displays the deducted withholding tax.	Yes
totalAfterWithholdingTax	Displays the net amount after withholding tax.	Yes
totalDueAmt	Displays the final payable amount.	Yes
membersList	Displays the list of insured members or dependents.	Yes
memberDetails	Displays the individual member details.	Yes
chargeType	Displays the classification of the member charges.	Yes
branch	Displays the assigned office or branch location.	Yes
memberType	Displays the classification of a member.	Yes
billLineItem	Displays the bill line identifier.	Yes
personIdentifierType1	Displays the identifier type of a member.	Yes
personIdentifier1	Displays the value of the identifier type.	Yes
lastName	Displays the last name of a member.	Yes
firstName	Displays the first name of a member.	Yes
middleName	Displays the middle name of a member.	Yes
extension	Displays the suffix of a member.	Yes
birthDate	Displays the birthdate of a member.	Yes
age	Displays the age of a member.	Yes
effectiveDate	Displays the date from when the coverage is effective.	Yes
expiryDate	Displays the date till when the coverage is effective.	Yes
relationship	Displays the relationship with the policyholder.	Yes
membershipIdentifier	Displays the unique membership or policy ID.	Yes
planNbr	Displays the plan code or number.	Yes
planDescr	Displays the description of a plan.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
rank	Displays the category or rank of a member.	Yes
serviceType	Displays the provided coverage or service type.	Yes
months	Displays the coverage duration in months.	Yes
vatStatus	Displays the classification of the VAT.	Yes
invoiceNbr	Displays the invoice number.	Yes
invoiceDate	Displays the date when the invoice got generated.	Yes
grossAmt	Displays the gross chargeable amount.	Yes
movementType	Displays the event which caused the movement in the patient's confinement.	Yes
submovementType	Displays the additional information that caused the movement type.	Yes
adjustedBill	Displays the original invoice or billing number against which adjustments are made.	Yes
premiumAmt	Displays the amount which the member pays either for a plan or membership.	Yes
vatAmount	Displays the amount (tax charged) on the member's premium.	Yes
filler1	Displays the custom or generic field reserved for future or configurable usage.	Yes
filler2	Displays the second configurable field.	Yes
filler3	Displays the third configurable field.	Yes

Sample Final Billing Statement XML File

Using the below example, you can create a final billing statement for each customer.

Billing Statement Number	Statement Date	Customer Code	Client Name	Total Charges	Bill Status
BS1000082782	2025–05–31	MC0000050	XAVIOR SANTOS	1000.00	Complete

```
<docrequest>
    <root>

Draft Billing Statement Extraction in CSV Format

The **C1-DBCSV** batch is used to extract pending bill information in CSV format. Before executing the **C1-DBCSV** batch, you need to extract pending bill information in XML format using the **C1DRBLEX** batch. The **C1-DBCSV** batch considers those bills which meet the following conditions:

- A draft billing extract batch number is stamped on the bill and corresponds to the latest or specified run of the **C1DRBLEX** batch control.

It extracts information only for those bill segments whose corresponding billable charges have the specified membership characteristic type. If no such bill segments exist on the pending bill, the system does not extract pending bill information in CSV format. This batch refers to the extendable lookup value created using the **C1-ExtractDataSource** business object to determine the format in which the data should be extracted into the CSV file. A separate CSV file is generated for each pending bill.

Note:

At present, information is extracted only in the detail record, not in the header or trailer records. Therefore, only the fields for the **Detail** section should be listed in the **Extract Data Source Details** section of the extendable lookup value.

You do not need to include any business service in the extendable lookup value, as the data is already retrieved by the **C1DRBLEX** batch in XML format.

An out-of-the-box extendable lookup value named **C1-BSCSV** is shipped with the product. It helps the system determine the format for extracting data in the draft billing statement CSV file.

For more information about the extendable lookup, see C1-ExtractDataSource Extendable Lookup on page 202.

Draft Billing Statement in CSV Format

Before generating the draft billing statement, you need to ensure that the CSV file contains the following data:

Data	Description	Mandatory (Yes or No)
CHARGE TYPE	Used to specify the type of charge imposed for acquiring the medical services.	Yes
CUSTOMER NAME	Used to specify name of the customer.	Yes
COVERAGE START DATE	Used to specify the date from where the coverage starts.	Yes
COVERAGE END DATE	Used to specify the date till where the coverage ends.	Yes
MODE OF PAYMENT	Used to specify the mode through which the payment is made.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Data	Description	Mandatory (Yes or No)
BRANCH	Used to specify the branch with whom the transaction is associated.	Yes
BILL LINE ITEM	Used to specify an individual item or entry in a bill.	Yes
PERSON IDENTIFIER TYPE 1	Used to specify the ID through which a person is identified.	Yes
EMPLOYEE NO	Used to specify the unique identification number of the member.	No
LAST NAME	Used to specify the last name of the member.	Yes
FIRST NAME	Used to specify the first name of the member.	Yes
MIDDLE NAME	Used to specify the middle name of the member.	No
EXTENSION	Used to specify the name suffix of the member.	No
BIRTH DATE	Used to specify the birth date of the member.	Yes
AGE	Used to specify the age of the member.	Yes
EFFECTIVITY	Used to specify the period or condition when something is applicable.	Yes
EXPIRY	Used to specify when the membership expires.	Yes
RELATION	Used to specify the relationship or role of the member.	Yes
MEMBER TYPE	Used to specify the classification of the member.	Yes
ID NUMBER	Used to specify the unique identification number assigned to the member.	Yes
PLAN NUMBER	Used to specify the unique number of a plan to which the member is associated.	Yes
PLAN	Used to specify the name of a plan to which the member is associated.	Yes
RANK CLASSIFICATION	Used to specify the position, grade, or ranking category of the member.	Yes
MONTHS	Used to specify the tenure (in months) of the membership.	Yes
PREMIUM	Used to specify the amount which the member pays either for a plan or membership.	Yes
VAT TAGGING	Used to specify whether VAT (Value Added Tax) is tagged or applied for a transaction.	Yes
PHILHEALTH	Used to specify whether government health insurance deductions are provided for a member or not.	No
VAT AMOUNT	Used to specify the VAT amount which is charged to a member.	Yes
TOTAL GROSS AMOUNT	Used to specify the full amount before deductions or taxes are removed.	Yes
SERVICE TYPE	Used to specify the type of service included in the plan.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Data	Description	Mandatory (Yes or No)
	Note: This tag ensures the system deducts the cost from the correct part of your plan.	
MOVEMENT TYPE	Used to specify the event which caused the movement in the patient's confinement.	Yes
SUBMOVEMENT TYPE	Used to specify additional information that caused the movement type.	No
INVOICE NUMBER	Used to specify a unique number which assists in submitting electronic claims.	Yes
INVOICE DATE	Used to specify the date when the invoice got generated.	Yes
BILL BEING ADJUSTED	Used to specify the original invoice or billing number against which adjustments are made.	No

Sample Draft Billing Statement CSV File

Sample CSV

```

Final Billing Statement Extraction in CSV Format

The **C1-BSCSV** batch is used to extract complete bill information in CSV format. Before executing the **C1-BSCSV** batch, you need to extract complete bill information in XML format using the **C1BLSTEX** batch. The **C1-BSCSV** batch considers those bills which meet the following conditions:

- The batch control on the bill routing is set to **C1BLSTEX** and batch run number is set to the latest or specified batch run number.

It extracts information only for those bill segments whose corresponding billable charges have the specified membership characteristic type. If no such bill segments exist on the complete bill, the system does not extract complete bill information in CSV format. This batch refers to the extendable lookup value created using the **C1-ExtractDataSource** business object to determine the format in which the data should be extracted into the CSV file. A separate CSV file is generated for each complete bill.

Note:

At present, information is extracted only in the detail record, not in the header or trailer records. Therefore, only the fields for the **Detail** section should be listed in the **Extract Data Source Details** section of the extendable lookup value.

You do not need to include any business service in the extendable lookup value, as the data is already retrieved by the **C1BLSTEX** batch in XML format.

An out-of-the-box extendable lookup value named **C1-BSCSV** is shipped with the product. It helps the system determine the format for extracting data in the final billing statement CSV file.

For more information about the extendable lookup, see C1-ExtractDataSource Extendable Lookup on page 202.

Final Billing Statement CSV Format

Before generating the final billing statement, you need to ensure that the CSV file contains the following data:

Copyright © 2026, Oracle and/or its affiliates.

Data	Description	Mandatory (Yes or No)
CHARGE TYPE	Used to specify the type of charge imposed for acquiring the medical services.	Yes
CUSTOMER NAME	Used to specify name of the customer.	Yes
COVERAGE START DATE	Used to specify the date from where the coverage starts.	Yes
COVERAGE END DATE	Used to specify the date till where the coverage ends.	Yes
MODE OF PAYMENT	Used to specify the mode through which the payment is made.	Yes
BRANCH	Used to specify the branch with whom the transaction is associated.	Yes
BILL LINE ITEM	Used to specify an individual item or entry in a bill.	Yes

C1-ExtractMapping Extendable Lookup

The **C1-ExtractMapping** extendable lookup allows you to specify the data to extract and the XML tags in which it should be placed. An out-of-the-box extendable lookup value named **BILLING_STATEMENT** is shipped with the product.

While creating an extendable lookup value for the **C1-ExtractMapping** business object, you need to specify the following:

- **Lookup Value** – Used to specify the extendable lookup value.
- **Description** – Used to specify description for the extendable lookup value.
- **Override Description** - Used when you want to override the description of the extendable lookup value.
- **Detailed Description** - Used to specify additional information about the extendable lookup value.
- **Status** - Used to indicate the status of the extendable lookup value. The valid values are:
  - Active
  - Inactive

Note: By default, the value is set to **Active**.

Copyright © 2026, Oracle and/or its affiliates.

- **Extract Mapping** – Used to map fields or characteristics to the XML tags. The system then extracts the data from the field or characteristic and displays it in the respective XML tag of the file. This section contains the following columns:
  - **Type** – Used to specify the field name or characteristic type whose value you want to extract. You can also specify a string or constant value.
  - **Mapping Element** – Used to specify the XML tag in which you want to display the respective field or characteristic value.

Generic Letter Extract

Oracle Revenue Management and Billing provides a flexible mechanism to generate overdue letters for customer contacts created as a part of the overdue process. To achieve this functionality, you need to create a new algorithm using the **C1-GENLETEXT** algorithm type. You need to configure the newly created algorithm in the **Extract Algorithm** field and the **C1-GENLE** batch in the **Batch Control** field of the **Letter Template** screen.

Note: The **C1-GENLE** batch and **C1-GENLETEXT** algorithm type is shipped with the product.

The newly created algorithm must contain the following parameters:

- **XML Data Area** – Used to specify the customer contact data area field where the generated XML data is stamped.
- **Query Business Service** – Used to specify a business service that leverages a zone-based query where the zone handles the query logic, while the business service ensures the data is correctly mapped to the **XML Data Area** format required for the extract.
- **Format Extendable Lookup BO** – Used to specify the extendable lookup business object which maps the fields from the business service to the XML data area, so the system knows which fields from the business service plus the query would be used to populate the XML data area.
- **Format Name** – Used to specify the type of format used to populate the XML data area.

  Note: The **Format Extendable Lookup BO** and the **Format Name** parameters together define a template that maps the fields from the business service to the corresponding XML data area.
- **Root Element** – Used to specify the main outermost tag that wraps the entire XML document.

A new batch named **C1-GENLE** is shipped with the product. This batch generates letter extracts for those customer contacts where:

- The batch code of the customer contact must be equal to the batch control code.
- The batch number must be equal to the next batch run number.
- The letter print date time should be set as **Null**.
- The print letter switch is set to **Y**.
- The letter template code must have a matching batch code with the current batch code.

Note: The **Letter Template** field in the **Letter Template** screen must be associated with the customer contact type.

This batch contains the following parameters:

Parameter Name	Mandatory (Yes or No)	Description
File Path	Yes	Used to specify the object storage and shared directory where you want to store the generic letter extracts. As the application environment is a Cloud Service, Premium Edition environment, you must specify the following information in the file-storage://<OS-FileExtract/Shared_Dir Value>/<Object Storage Bucket> format.

Copyright © 2026, Oracle and/or its affiliates.

Parameter Name	Mandatory (Yes or No)	Description
File Name	Yes	Used to specify the name for the generic letter extract file. **Note:** If you do not specify the file name, by default, it is set to **LetterExtract**.
File Extension	Yes	Used to specify the file extension. The valid value is: • xml
Root Element	Yes	Used to specify the outermost tag which encapsulates the XML document.
Thread Pool Name	No	Used to specify the thread pool on which you want to execute the batch. **Note:** If you do not specify any value, by default, it is set to **DEFAULT**.

Note: This feature is tested and certified only for the health insurance business.

Generic Letter Extract in XML Format

The following code snippet illustrates how the tags are nested in the generic letter extract xml format.

```
<docrequest>
    <root>
        <Key1></Key1>
        <Key2></Key2>
        <Key3></Key3>
        <overDueNoticeLetter>
            <accountName></accountName>
            <billAmount></billAmount>
            <billDate></billDate>
            <billingStatementNumber></billingStatementNumber>
            <contactType></contactType>
            <dueDate></dueDate>
            <emailAddress></emailAddress>
            <emailSubject></emailSubject>
            <prn></prn>
        </overDueNoticeLetter>
    </root>
</docrequest>
```

Generic Letter Extract XML Tags

Before calling the **C1-GENLE** batch, you need to ensure that the generic letter extract contains the following XML tags:

Tag Name	Tag Description	Mandatory (Yes or No)
docrequest	Displays the type of document that should be generated or processed for each overdue payment. **Note:** The **docrequest** tag helps in understanding what type of additional information is required to either generate or process the overdue notice letters.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
root	Displays the elements and the overall data structure for the generic letter extract.	Yes
Key1	Displays the system or the application name for the generic letter extract.	Yes
Key2	Displays the document processing category for the generic letter extract.	Yes
Key3	Displays the specific department or region for the generic letter extract.	No
overDueNoticeLetter	Displays the actual correspondence data related to the overdue notice letter.	Yes
accountName	Displays the customer who receives the overdue notice letter.	Yes
billAmount	Displays the total outstanding amount that is currently overdue.	Yes
billDate	Displays the original date when the bill was issued. **Note:** You must specify the date in the **YYYY-MM-DD** format.	Yes
billingStatementNumber	Displays the unique statement or invoice reference number for the specific billing cycle.	Yes
contactType	Displays the communication or contact classification code.	Yes
dueDate	Displays the deadline by which the payment from customer was expected. **Note:** You must specify the date in the **YYYY-MM-DD** format.	Yes
emailAddress	Displays the email address where the overdue notice letter is delivered.	Yes
emailSubject	Displays the subject line text for an automated email.	Yes
prn	Displays the payment reference number.	Yes

Sample Generic Letter Extract

Using the below example, you can generate the overdue letters for customer contacts created as a part of the overdue process.

```
<docrequest>
    <root>
        <Key1>CAREMAX</Key1>
        <Key2>CORRESPONDENCE</Key2>
        <Key3></Key3>
        <overDueNoticeLetter>
            <accountName>MCSNRC_ACC_250905003</accountName>
            <billAmount>500</billAmount>
            <billDate>2025-05-01</billDate>
            <billingStatementNumber>BSTN1000000165</billingStatementNumber>
            <contactType>STDCORPP-CMSSLREM</contactType>
            <dueDate>2025-06-01</dueDate>
            <emailAddress>mcsnrc@mysnrcemail.com</emailAddress>
            <emailSubject>SECOND_REMINDER</emailSubject>
            <prn>10000001650</prn>
        </overDueNoticeLetter>
    </root>
```

Copyright © 2026, Oracle and/or its affiliates.

</docrequest>
```

Overdue Extract

Oracle Revenue Management and Billing enables you to setup a schedule that prompts the customers about their respective billing due date if their billing due date has elapsed due to some reason. This functionality is achieved through an overdue process. So, whenever an overdue process is created, the respective overdue events are also created based on the overdue process templates.

When the overdue events are created their first overdue event type should be set to **Event Trigger Dates Alignment** and the following event types will have their respective event type configuration. It is the **Event Trigger Dates Alignment** overdue event type that has control over the date calculation process in the system.

Note: The **C1-OVDEVTDTALN** extendable lookup is shipped with the product.

The **C1-OVDEVTDTALN** extendable lookup contains the rules for adjusting the overdue event dates based on the number of days, calendar, or workdays, and whether the adjustment is before or after a reference date. If an overdue event type configured in the **Overdue Process Template** screen matches with the overdue event type in the **C1-OVDEVTDTALN** extendable lookup, the system then allows to change the configuration for that specific overdue event type, for instance, if an overdue event type named **Send Bill Notification** is matched, the system displays the following configuration for the matched event type:

Overdue Event Type	Sequence	Number of Days Override	Calendar or Work Days	Before/After Reference Days	Reference Date
Send Billing Notification	10	7	Calendar	After	Bill Completion

The above example indicates that you want to override 7 days for the **Send Billing Notification** overdue event type. Now, these overridden 7 days could either be calendar or workdays, and they can be added either before or after the reference days where the reference date is either bill completion or due date.

Note: To calculate the workdays, refer to the **Work Calendar** screen.

To generate the overdue process for the available bills, execute the **C1-ADMOV** batch which is shipped with the product. You also must execute the **C1-ODET** batch to activate the overdue process. Once both the batches are successfully executed, the system triggers the algorithm which is created using the **C1-EVTDTA** algorithm type. It is an event activation algorithm particularly used to modify the trigger dates of the succeeding overdue events. The system then triggers the algorithm created using the **C1-SNDBILNTF** algorithm type.

C1-SNDBILNTF Algorithm Type

The algorithm created using the **C1-SNDBILNTF** algorithm type is an event activation algorithm responsible to create customer contacts based on the provided parameters. The **C1-SNDBILNTF** algorithm type contains the following parameters:

- **Customer Contact Class** – Used to specify the customer contact class which controls customer contact records that are eligible to receive the billing notification.
- **Customer Contact Type** – Used to specify which specific contact mechanisms should be used to send the billing notification.
- **Message Category** – Used to specify the category to which the message belongs.
- **Message Number** – Used to specify the unique number that is associated with the message when the customer contact is created.
- **Overdue Process Characteristic Type** – Used to specify the characteristic type which is stamped on the customer contact that helps to find the respective overdue process which created the customer contact.

Copyright © 2026, Oracle and/or its affiliates.

- **Customer Contact Characteristic Type** – Used to specify the characteristic type which denotes the customer contact ID associated with the overdue process.

Note:

All the above parameters are mandatory.

The **C1-EVTDTA** and **C1-SNDBILNTF** algorithm types are shipped with the product.

C1-CNCLPDBIL Algorithm Type

Before you execute the **C1-ODET** batch, you must create an algorithm using the **C1-CNCLPDBIL** algorithm type and configure it on the **Cancel Criteria** system event in the **Overdue Process Template** screen. Now, when you execute the **C1-ODET** batch the system activates the cancel criteria algorithm to perform the automatic cancelation of the overdue process based on payment and tax conditions. The **C1-CNCLPDBIL** algorithm type has the following parameters:

- **Vat Amount Characteristic Type** – Used to specify the amount category for the VAT amount.
- **Vat Amount Characteristic Value** – Used to specify whether the billable charge line amount will be considered for overdue calculations if the value matches the **Vat Amount Characteristic Value** parameter.
- **Unpaid Amount Threshold** – Used to specify the minimum unpaid (outstanding) amount required to initiate the notification.
- **CWT Percentage Characteristic Type** – Used to specify the percentage value, when present in the contract type, overrides the default unpaid amount threshold.

Note: The **C1-CNCLPDBIL** algorithm type is shipped with the product.

C1-COPAICP Algorithm Type

Before you execute the **C1-ODET** batch, you must create an algorithm using the **C1-COPAICP** algorithm type and configure it on the **Cancel Logic** system event in the **Overdue Process Template** screen. It is the cancel criteria which provides a criterion that activates the algorithm configured on the **Cancel Logic** system event, and the cancel logic cancels the overdue process for those bills that are in an unpaid state.

Note: The **C1-COPAICP** algorithm type is shipped with the product.

C1-GENMEMTRM Algorithm Type

The algorithm created using the **C1-GENMEMTRM** algorithm type is an algorithm created for generating an outbound message for integration purposes with other systems when a membership is terminated. This algorithm type contains the following parameters:

- **Content Default Date Time Format** – Used to specify the default date/time format while converting date/time values into text within the generated message content. This parameter is mandatory.
- **Extract Data Source Business Object** – Used to specify the business object used as a source of data for generating the membership termination outbound message. This parameter is mandatory.
- **Extract Data Source Lookup Value** - Used to specify the lookup value using which you want to format the data of the membership termination outbound message. This parameter is mandatory.
- **Unpaid Amount Threshold** - Used to specify the minimum unpaid (outstanding) amount required to initiate the membership termination outbound message. This parameter is mandatory.
- **VAT Characteristic Type** - Used to specify the amount category for the VAT amount. This parameter is mandatory.
- **VAT Characteristic Value** - Used to specify whether the billable charge line amount will be considered for overdue calculations if the value matches the **Vat Characteristic Value** parameter. This parameter is mandatory.
- **First Bill Unpaid Action** – Used to specify the flag which should be mapped with the action tag in the membership termination outbound message when the first bill is unpaid. This parameter is mandatory.

Copyright © 2026, Oracle and/or its affiliates.

- **Non First Bill Unpaid Action** – Used to specify the flag which should be mapped with the action tag in the membership termination outbound message when there are unpaid bills other than the first bill. This parameter is mandatory.
- **Partially Paid Bill Action** – Used to specify the flag which should be mapped with the action tag in the membership termination outbound message if a bill is partially paid. This parameter is mandatory.
- **Query Delimiter** – Used to specify the character to separate multiple values in a query or list.
- **Root Element Name** – Used to specify the top-level tag name of the XML structure.
- **CWT Percentage Characteristic Type** – Used to specify the percentage value, when present in the contract type, overrides the default unpaid amount threshold. This parameter is mandatory.
- **Outbound Message Type** – Used to specify what kind of outbound message should be generated and sent. This parameter is mandatory.
- **External System** – Used to specify the external system to which the outbound message should be sent. This parameter is mandatory.
- **First Child Element** – Used specify the main repeating child element within the root XML structure. This parameter is mandatory.

Note: The **C1-GENMEMTRM** algorithm type is shipped with the product.

C1-GENREINST Algorithm Type

When the system sends the membership termination outbound message, the external system performs the action of either canceling the membership or account if the bill happens to reside in an unpaid state for a certain period.

Now, let us assume that an overdue process is not fully completed due to pending events where the final event is still in the pending state and the cancel criteria happens to get triggered. Coincidently during this time if a customer happens to make a bill payment, the cancel logic besides canceling or stopping the event, or the overdue process, executes the membership termination outbound message.

So, to reverse the effects of the cancel logic, the system triggers an algorithm created using the **C1-GENREINST** algorithm type plugged on the **Overdue Process Template – Cancel Logic** algorithm entity which generates the member reinstatement outbound message and sends it to the external system to reinstate the canceled membership or account.

The **C1-GENREINST** algorithm type has the following parameters:

- **Content Default Date and Time Format** – Used to specify the default date/time format while converting date/time values into text within the generated message content. This parameter is mandatory.
- **Query Delimiter** – Used to specify the character to separate multiple values in a query or list.
- **Root Element Name** – Used to specify the top-level tag name of the XML structure.
- **Extract Data Source Business Object** – Used to specify the business object used as a source of data for generating the membership reinstatement outbound message. This parameter is mandatory.
- **Account Cancellation Extendable Lookup Value** – Used to specify the lookup value using which you want to format the data of the account cancellation outbound message. This parameter is mandatory.
- **Member Termination Extendable Lookup Value** – Used to specify the lookup value using which you want to format the data of the member termination outbound message. This parameter is mandatory.
- **Member Termination Action** – Used to specify how the system should handle the member's termination record when the member is reinstated. This parameter is mandatory.
- **Account Cancellation Action** – Used to specify how the system should handle the account cancellation during reinstatement. This parameter is mandatory.
- **Send Reinstate Members or Account Event Type** – Used to specify the event type which the system should send and to whom when reinstatement takes place. This parameter is mandatory.
- **Send Member Termination Event Type** – Used to specify the event type which the system should send if member termination is processed as a part of reinstatement. This parameter is mandatory.
- **Send Member Term Work Event Type** – Used to specify the event type which the system should send when member termination related work is created or handled. This parameter is mandatory.
- **Account Cancellation Event Type** – Used to specify the event type which the system should send when the account cancellation is handled (reversed/updated) during reinstatement.

Copyright © 2026, Oracle and/or its affiliates.

- **Outbound Message Type** – Used to specify what kind of outbound message should be generated and sent. This parameter is mandatory.
- **External System** – Used to specify the external system to which the outbound message should be sent. This parameter is mandatory.
- **First Child Element Name** – Used specify the main repeating child element within the root XML structure. This parameter is mandatory.

Note: The **C1-GENREINST** algorithm type is shipped with the product.

Member Termination Outbound Message XML Format

The following code snippet illustrates how the tags are nested in the member termination outbound message schema:

```
<docrequest>
    <root>
        <C1-SNDMEMTRM>
            <header>
                <recordIdentifier></recordIdentifier>
                <sourceSystem></sourceSystem>
                <fileCreationDateTime></fileCreationDateTime>
            </header>
            <details>
                <detail>
                    <recordIdentifier></recordIdentifier>
                    <groupClientCode></groupClientCode>
                    <groupAccountId></groupAccountId>
                    <policyCode></policyCode>
                    <personCode></personCode>
                    <billingAccount></billingAccount>
                    <date></date>
                    <action></action>
                </detail>
            </details>
            <trailer>
                <recordIdentifier></recordIdentifier>
                <recordCount></recordCount>
            </trailer>
        </C1-SNDMEMTRM>
    </root>
</docrequest>
```

Member Termination Outbound Message XML Tags

Before creating an algorithm using the **C1-SNDMEMTRM** algorithm type, you need to ensure that the member termination outbound message contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
docrequest	Displays the type of message that must be generated or processed. **Note:** The **docrequest** tag helps in understanding what type of additional information is required to either generate or process the message.	Yes
root	Displays the elements and the overall data structure for the member termination outbound message.	Yes
C1-SNDMEMTRM	Displays the algorithm type using which an algorithm is created to send the termination or suspension message.	Yes
header	Displays metadata information about the message.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
recordIdentifier	You can use this tag within the following tags: • **header** – Displays the value which identifies the block as a header record. • **detail** – Displays the value which identifies the block as the record details. • **trailer** – Displays the value which identifies the block as a trailer record.	Yes (Conditional) **Note:** This data is required while sending a member termination outbound message
sourceSystem	Displays the application through which the file is generated.	Yes
fileCreationDateTime	Displays the date and time when the file is created.	Yes
details	Displays one or more business transaction records.	Yes
detail	Displays a single business transaction.	Yes
groupClientCode	Displays the customer group that is processed.	Yes
groupAccountId	Displays the account ID of the group.	Yes
policyCode	Displays the unique identifier for a policy.	Yes
personCode	Displays the unique identifier for a person, individual, or member.	Yes
billingAccount	Displays the billing account associated with the group.	Yes
date	Displays the business effective date of the transaction.	Yes
action	Displays the action or operation which is performed on the member termination outbound message. The valid values are: • T • R **Note:** Select the **T** option.	Yes
trailer	Displays the summary information of the member termination outbound message.	Yes (Conditional) **Note:** This data is required while sending a member termination outbound message
recordCount	Displays the total number of records in the member termination outbound message.	Yes (Conditional) **Note:** This data is required while sending a member termination outbound message

Sample Member Termination Outbound Message

Using the below example, you can generate the member termination outbound message.

```
<docrequest>
    <root>
```

Copyright © 2026, Oracle and/or its affiliates.

```
        <C1-SNDMEMTRM>
            <header>
                <recordIdentifier>HDR</recordIdentifier>
                <sourceSystem>BMRO</sourceSystem>
                <fileCreationDateTime>20251231154708</fileCreationDateTime>
            </header>
            <details>
                <detail>
                    <recordIdentifier>DAT</recordIdentifier>
                    <groupClientCode>JBA20260122001-BG1</groupClientCode>
                    <groupAccountId></groupAccountId>
                    <policyCode>POLC_MEM_OUT_MSG</policyCode>
                    <personCode>PER_CODE_OUT_MSG</personCode>
                    <billingAccount>0011883422</billingAccount>
                    <date>2025-06-30</date>
                    <action>S</action>
                </detail>
            </details>
            <trailer>
                <recordIdentifier>TRL</recordIdentifier>
                <recordCount>1</recordCount>
            </trailer>
        </C1-SNDMEMTRM>
    </root>
</docrequest>
```

Member Reinstatement Outbound Message XML Format

The following code snippet illustrates how the tags are nested in the member reinstatement outbound message schema:

```
<docrequest>
    <root>
        <C1-SNDMEMTRM>
            <header>
                <recordIdentifier></recordIdentifier>
                <sourceSystem></sourceSystem>
                <fileCreationDateTime></fileCreationDateTime>
            </header>
            <details>
                <detail>
                    <recordIdentifier></recordIdentifier>
                    <groupClientCode></groupClientCode>
                    <groupAccountId></groupAccountId>
                    <policyCode></policyCode>
                    <personCode></personCode>
                    <billingAccount></billingAccount>
                    <date></date>
                    <action></action>
                </detail>
            </details>
            <trailer>
                <recordIdentifier></recordIdentifier>
                <recordCount></recordCount>
            </trailer>
        </C1-SNDMEMTRM>
    </root>
</docrequest>
```

Member Reinstatement Outbound Message XML Tags

Before creating an algorithm using the **C1-SNDMEMTRM** algorithm type, you need to ensure that the member reinstatement outbound message contains the following tags:

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
docrequest	Displays the type of message that must be generated or processed. **Note:** The **docrequest** tag helps in understanding what type of additional information is required to either generate or process the message.	Yes
root	Displays the elements and the overall data structure for the member reinstatment outbound message.	Yes
C1-SNDMEMTRM	Displays the algorithm type using which an algorithm is created to send the reinstatment message.	Yes
header	Displays metadata information about the message.	Yes
recordIdentifier	You can use this tag within the following tags: • **header** – Displays the value which identifies the block as a header record. • **detail** – Displays the value which identifies the block as the record details. • **trailer** – Displays the value which identifies the block as a trailer record.	Yes (Conditional) **Note:** This data is required while sending a member reinstatement outbound message.
sourceSystem	Displays the application through which the file is generated.	Yes
fileCreationDateTime	Displays the date and time when the file is created.	Yes
details	Displays one or more business transaction records.	Yes
detail	Displays a single business transaction.	Yes
groupClientCode	Displays the customer group that is processed.	Yes
groupAccountId	Displays the account ID of the group.	Yes
policyCode	Displays the unique identifier for a policy.	Yes
personCode	Displays the unique identifier for a person, individual, or member.	Yes
billingAccount	Displays the billing account associated with the group.	Yes
date	Displays the business effective date of the transaction.	Yes
action	Displays the action or operation which is performed on the member reinstatement outbound message. The valid values are: • T • R **Note:** Select the **R** option.	Yes
trailer	Displays the summary information of the member reinstatement outbound message.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
		Note: This data is required while sending a member reinstatement outbound message.
recordCount	Displays the total number of records in the member reinstatement outbound message.	Yes (Conditional) **Note:** This data is required while sending a member reinstatement outbound message.

Sample Member Reinstatement Outbound Message

Using the below example, you can generate member reinstatement outbound message.

```
<docrequest>
    <root>
        <C1-SNDMEMTRM>
            <header>
                <recordIdentifier>HDR</recordIdentifier>
                <sourceSystem>BMRO</sourceSystem>
                <fileCreationDateTime>20251231154707</fileCreationDateTime>
            </header>
            <details>
                <detail>
                    <recordIdentifier>DAT</recordIdentifier>
                    <groupClientCode>JBA20260122001-BG2</groupClientCode>
                    <groupAccountId></groupAccountId>
                    <policyCode>POL_MEMOUT_MSG</policyCode>
                    <personCode>PER_CODEOUT_MSG</personCode>
                    <billingAccount>0041783421</billingAccount>
                    <date>2025-07-07</date>
                    <action>R</action>
                </detail>
            </details>
            <trailer>
                <recordIdentifier>TRL</recordIdentifier>
                <recordCount>1</recordCount>
            </trailer>
        </C1-SNDMEMTRM>
    </root>
</docrequest>
```

Generic Outbound File

Oracle Revenue Management and Billing provides a configuration driven mechanism where a business service and extendable lookups are linked to create the outbound files that can be edited spontaneously. The system creates a generic outbound file through a business service by executing the **C1-GOFBS** batch. For more information on the batch, see the *Oracle Revenue Management and Billing Batch Guide*.

C1-MRKEXTBPP Algorithm Type

An algorithm is created using the **C1-MRKEXTBPP** algorithm type which is shipped with the product. You need to attach the newly created algorithm to the **Post-Processing** system event of the **C1-GOFBS** batch.

Copyright © 2026, Oracle and/or its affiliates.

This algorithm is mainly used to mark those entities that are already extracted to avoid re-extraction of data. Hence, this algorithm cleverly stamps a characteristic to the extracted entities and assists in distinguishing the data that should be extracted against the data that should be skipped.

Note: As the **C1-MRKEXTBPP** algorithm type is optional, you can create an algorithm using this algorithm type based on your business requirements.

The **C1-MRKEXTBPP** algorithm type contains the following parameters:

- **Data To Process Business Service Batch Parameter Name** – Used to specify the business service which invokes the eligible letter requests and prepares or marks them for extract processing. This parameter is mandatory.
- **Table Name** – Used to specify the table where the records to be processed reside. This parameter is mandatory.
- **Table Entity ID Column Name** – Used to specify the primary key (or unique identifier) column in the target table that depict each record to be processed. This parameter is mandatory.
- **Extract Characteristic Type** – Used to specify the characteristic type that will be used to store extract-related information on the target records. This parameter is mandatory.
- **Characteristic Value Delimiter** – Used to specify the separator when multiple values are stored in a single characteristic value. This parameter is non-mandatory.

Note: This feature is tested and certified only for the health insurance business.

GL FT (General Ledger File Transfer) Extract Delay

Oracle Revenue Management and Billing enables you to prevent or delay the financial transaction process records by executing the following three batches in the given sequence:

1. **C1-GLASN** – Used when you want to populate the GL accounts of the FT GL records.
2. **GLS** – Used when you want to retrieve all the eligible FT GL records.
3. **C1-GLERP** – Used when you want to extract the matching **Batch Number (BATCH_NBR)** and **Batch Code (BATCH_CD)** from the **C1_DT_PROC** table.

A new batch named **C1-IFTPN** is shipped with the product. To know more about this batch, see the *Oracle Revenue Management and Billing Batch Guide*.

Balloon Funding

Oracle Revenue Management and Billing allows you to leverage upon a payment structure which shifts most of the liability towards the start of the term, where a flat fee is created with level funding and is billed at the time when an off-process request is created. Therefore, balloon funding acts as an assurance where an amount is billed to a customer considering complete surety that the customer will make the payment for the billed amount.

C1-CROPREQPR Algorithm Type

To avail the balloon funding payment structure, a new algorithm type named **C1-CROPREQPR** is shipped with the product. You need to create a new algorithm using the **C1-CROPREQPR** algorithm type and attach it under the **Business Object – Post Processing** algorithm entity.

This algorithm generates an **Off-Process** request to adjust the level funded accumulation in accordance with the **Flat Fee** pricing rule characteristic that has been already configured. This algorithm contains the following parameters:

- **Off-Process Request Business Object** – Used to specify the off-process business object which the system should instantiate to create and process an off-process request.
- **Off-Process Level Fund Fixed Amount Characteristic Type** – Used to specify a characteristic type that denotes the usage of a flat fixed amount for balloon funding purposes. The system then creates an off-process request for the value specified in this characteristic type.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** You must specify the characteristic value of an adhoc type for an **Off-Process Level Fund Fixed Amount Characteristic Type** parameter.

- **Off-Process Level Fund Based On Month Characteristic Type** - Used to specify a characteristic type that denotes the usage of a multiplier for balloon funding purposes. The system then creates an off-process request for the value which is multiplied to the flat fee amount in this characteristic type.

> **Note:** You must specify the characteristic value of an adhoc type for an **Off-Process Level Fund Based On Month Characteristic Type** parameter.

- **Off Process Request Type** – Used to specify the off-process request type created for balloon funding purposes.
- **Off-Process Applicable Field Flag** – Used to specify the field whose value you want to amend through the off-process request.
- **Off Process Charge Type** – Used to specify the charge type using which the charge should be created.
- **Pricing Rule ID Characteristic Type** – Used to specify a characteristic type that stores the pricing rule ID. The system then uses this pricing rule ID to determine which pricing rule should be applied.
- **Balloon Funding Eligibility Characteristic Type** – Used to specify a characteristic type which denotes that the customer is eligible for balloon funding purposes.
- **Balloon Funding Eligible Characteristic Value** – Used to specify a characteristic value which signifies that the customer is approved for balloon funding purposes.

> **Note:** You must specify the characteristic value of an adhoc type for a **Balloon Funding Eligibility Characteristic Type** parameter.

- **Level Funded Pricing Rule Type** – Used to specify the pricing rule category that should be applied when pricing is driven by a level-funded structure.

> **Note:**
>
> All the above parameters are mandatory.
>
> This feature is tested and certified only for the health insurance business.

Account and Price Item Derivation using Account Identifier Type and Value

Oracle Revenue Management and Billing provides a process named Account and Price Item Derivation that allows the system to:

- Identify which account to use (which entity gets billed/credited)
- Determine which price item to apply (what charge or fee to use)

The derivation happens through:

- Account Identifier Type
- Account Identifier Value

To achieve the above, two new algorithm types named **C1-PRITDRACD** and **C1-PIDADSLLF** are shipped with the product. The algorithm created using the **C1-PRITDRACD** algorithm type is configured on various pricing rule types, such as Claim, Claim Based Admin Fees, and Enrolment Based Admin Fees.

You can also define the newly created algorithm in the **Algorithms**section of the **Pricing Rule Type** screen by creating the **Account and Price Item Derivation** system event. Additionally, you also need to create an algorithm using the **C1-PIDADSLLF**algorithm type configured on various pricing rules, such as, Specific Stop Loss, Aggregate Stop Loss, Level Funded, and Minimum Premium Program that are used for accumulation purposes.

Copyright © 2026, Oracle and/or its affiliates.

Note:

The system refers to the **ACCT_NBR** and **ACCT_NBR_TYPE_CD** fields from the **CI_TXN_DETAILS** and **CI_TXN_DTL_STG** tables to derive the account ID for each submitted transaction. This process is applicable for both the algorithms that are created using the **C1-PRITDRACD** and **C1-PIDADSLLF** algorithm type.

This feature is tested and certified only for the health insurance business.

Chapter 5

Fully-Insured Group Policy

Topics:

- Pre-requisites
- Fully-Insured Group Policy Creation
- Fully-Insured Group Policy Status Transition
- Membership Status Transition
- Types of Policy Plan
- Types of Group Membership
- Algorithms Used in C1-POLICY
- Algorithms Used in C1-PolicyPlan
- Algorithms Used in C1-Membership
- Late Setup Notification
- To Do Creation for Manual Refund/Write Off on Direct Billed Group Membership Cancellation
- Policy (Used for Searching)
- Policy (Used for Viewing)
- Policy Plan (Used for Viewing)
- Membership (Used for Searching)
- Membership (Used for Viewing)
- Late Payment Charges

Group insurance health plans provide coverage to a group of members, usually comprised of company employees or members of an organization. Among all types of group insurance health plans, the fully-insured plan is one of the traditional way to structure an employer-sponsored health plan. It is also commonly known as fully-insured employee health insurance.

In the fully-insured group health plan, the employer contracts an insurance company to cover the employees and their dependents. The employer pays a premium to the insurance carrier. The premium rates are fixed for a year based on the number of employees which are enrolled in the plan. The monthly premium changes during the year when the number of enrolled employees change in the plan. The insurance carrier collects the premium from the employer and pays the health insurance claims to the employees based on the coverage benefits outlined in the policy. The covered persons (i.e. employees and dependents) are responsible to pay any deductible amounts or co-payments required for covered services under the policy.

Oracle Revenue Management and Billing (ORMB) provides specialized methodologies for calculating premium for the employees and their dependents and then bill the total premium to the employer (known as the parent customer in ORMB) or to its logical designed billing entities (known as the bill groups in ORMB). The system enables you to offer different rates for a covered service depending on the following:

- Age of the employee or dependent
- How dependent person is related to the main subscriber
- Membership subscription tier
- Geographic rating area
- Membership or member person attributes

Oracle Revenue Management and Billing (ORMB) enables you to use the pricing methodologies and the billing engine for the fully-insured group health insurance business. To design the pricing and billing models for the fully-insured group health insurance business, you need to create the following entities in ORMB:

- Parent Customer
- Bill Groups
- Bill Group's Account
- Fully-Insured Group Policy
- Policy Plans
- Price Items (for each covered service in the policy)
- Pricing Rule Types
- Pricing Rules

Pre-requisites

To set the billing system for a fully-insured group customer, you need to do the following:

- Define the required policy types in the system.
- Define the required policy person roles in the system.
- Define the values for the **C1-SourceSystemLookup** extendable lookup.
- Define the required characteristic types where the characteristic entity is set to **Policy Type**.
- Define the required characteristic types where the characteristic entity is set to **Policy**.
- Define the status reasons for the **Terminated** status of the **C1-POLICY** business object in the **Status Reason** screen.
- Define the status reasons for the **Reinstated** status of the **C1-POLICY** business object in the **Status Reason** screen.
- Define the required price items in the system.
- Define the required age based, tier based, pass-through billable charge, additional fee, and/or benefit pricing rule types.
- Define the required characteristic types where the characteristic entity is set to **Policy Plan**.
- Define the required contract relationship types in the system.
- Define the required characteristic types where the characteristic entity is set to **Membership**.
- Define the required characteristic types where the characteristic entity is set to **Membership Person**.
- Define the required characteristic types where the characteristic entity is set to **Benefits**.
- Define the required contracts (which you want to associate with a membership) in the system.
- Define the values for the **BILL_TO_TYPE_FLG**, **BENEFIT_TYPE_FLG**, **BENEFIT_SUB_TYPE_FLG**, and **BENEFIT_SRC_FLG** lookup fields
- Define the required parameter values in the following algorithm which is attached to the **C1-POLICY** business object:
  - C1-POLBOVAL
- Define the required parameter values in the following algorithms which are used in the lifecycle of the **C1-POLICY** business object:
  - C1-EVCSTSTAT
  - C1-PLCYTRMRQ
  - C1-POLCYTERM
  - C1-DELTRMLTR
  - C1-PLCYREIRQ
  - C1-POLCYREIN
  - C1-CCPOLRE1
- Define a predefined characteristic type named **Active Employee Coverage Billing Arrangement** with the following characteristic values:

Characteristic Value	Description
DRT	Direct Billing
GRP	Group Billing

  You must set the characteristic entity of the **Active Employee Coverage Billing Arrangement** characteristic type to **Person**.
- Define a predefined characteristic type named **Benefit Billing Arrangement** with the following characteristic values:

Characteristic Value	Description
DRT	Direct Billing

Copyright © 2026, Oracle and/or its affiliates.

Characteristic Value	Description
GRP	Group Billing

You must set the characteristic entity of the **Benefit Billing Arrangement** characteristic type to **Person**, **Policy**, and **Policy Plan**.

- Define a predefined characteristic type named **COBRA Billing Arrangement** with the following characteristic values:

Characteristic Value	Description
DRT	Direct Billing
GRP	Group Billing
TPA	TPA Billing

You must set the characteristic entity of the **COBRA Billing Arrangement** characteristic type to **Person**, **Policy**, and **Policy Plan**.

- Define the required person relationship types and account relationship types in the system.
- Define the required geographic rating areas in the system.
- Define the required member relationship/subscription tier structures in the system.
- Define the required geographic rating area preference and member relationship and subscription tier preference through the **Field Mapping** screen.
- Define the required Medicare plan benefit packages in the system.
- Set the values for the following option types in the **C1-PERSTYPE** feature configuration:
  - Bill Group Person Type
  - Parent Person Type
  - TPA Person Type
- Set the values for the following option types in the **C1-ASOBLLNG** feature configuration:
  - Membership ID Characteristic for Billable Charge
  - Parent Customer Policy Person Role
  - Bill Group Policy Person Role
  - Membership Inactive Status
  - Membership Person Inactive Status
  - Rating Area Field Mapping for Group
  - Relation Structure Code Field Mapping
  - Billing Arrangement
  - Benefit Billing Arrangement
  - Cobra Billing Arrangement
  - TPA Person Relationship Type
  - TPA Account Relationship Type
  - TPA Policy Person Role

Fully-Insured Group Policy Creation

You can create a fully-insured group policy using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**. The policy type indicates the business object using which the fully-insured group policy should be created in the system.

Note: At present, the **Fully-Insured Individual** policy category is not yet supported in the system.

As per the fully-insured group health insurance business, the system enables you to create a fully-insured group policy for the following:

- A parent customer (where a bill group is not associated)
- A bill group (where the parent customer is the policy holder)

You can create or edit a fully-insured group policy from the **Policy** screen. In addition, you can create or edit a fully-insured group policy through a customer registration object or a health care inbound message. If the fully-insured group policy information is given for a bill group in a health care inbound message, the system does the following:

- Associates the bill group with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration
- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration

However, if the fully-insured group policy information is given for a parent customer in a health care inbound message, the system does the following:

- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration

A fully-insured group policy encapsulates the following information:

- **Policy Persons** - While creating a fully-insured group policy, you need to associate the person who is the main customer of the policy. While associating a person with a fully-insured group policy, you need to specify the policy person role which indicates the role of the person in the policy. For example, whether the person associated with the policy is the policy holder, broker, or underwriter. You can associate multiple persons with a fully-insured group policy using the same or different policy person role. However, at a time, only one person can be the main customer of the policy.
- **Policy Plans** - You can define different types of plans in a fully-insured group policy. For more information, refer to Types of Policy Plan on page 278.
- **Memberships** - You can define different types of memberships for a fully-insured group policy plan. For more information, refer to Types of Group Membership on page 280.
- **Member Persons** - While adding a person to a membership, you need to specify whether the person is the main subscriber of the membership, whether the person is financially responsible for the membership, and how the person is related to the main subscriber. At a time, only one person can be the main subscriber of the membership. You cannot remove a member person, who is the main subscriber, from the membership. You can inactivate a member

Copyright © 2026, Oracle and/or its affiliates.

person whenever required. If you inactivate a member person who is the main subscriber, the system automatically inactivates the membership and all other member persons which are included in the membership.

- **Membership Contracts** - You can associate one or more contracts with a membership. At present, the system uses the contract created for a policy plan on the accounts of the parent customer or bill group for billing the respective membership premium. The system does not use the membership contracts for billing the membership premium.
- **Policy Plan Contracts** - The system creates or updates contracts of a policy plan when you do either of the following:
  - Create or Edit a Policy Plan from the User Interface or through an Inbound Message
  - Create or Edit an Account from the User Interface or through an Inbound Message

  The system uses the contract created for a policy plan on the accounts of the parent customer or bill group for billing the respective membership premium. For more information, refer to Single Contract Creation Across Fully-Insured Group Policies and Plans on page 255 and Policy Plan Specific Contract Creation on page 265.

On defining a fully-insured group policy, the status of the policy is set to **Pending**. You can then edit, delete or activate a policy. Once a fully-insured group policy is activated, you can terminate, reinstate, or renew the policy whenever required.

Fully-Insured Group Policy Activation

You can activate a fully-insured group policy by clicking the **Activate** button in the **Policy** screen. On activating a fully-insured group policy, the status of the policy is set to **In Force/Active**.

Note: If a fully-insured group policy is created through a customer registration object or a health care inbound message, the status of the policy is directly set to **In Force/Active**

Once a fully-insured group policy is activated, you can terminate, reinstate, or renew the policy whenever required.

Fully-Insured Group Policy Termination

The system enables you to terminate a fully-insured group policy whenever required. There are two ways in which you can terminate a fully-insured group policy:

- **Initiate Policy Termination Process** - In this method, you can initiate the policy termination process from the user interface. To initiate the termination process, you need to specify the termination date and termination reason. On initiating the termination process, the status of the policy is changed to **Pending Termination**. In addition, the system creates an outbound message which request for confirmation whether the policy should be terminated. This outbound message can be sent to the policy processing system via custom mechanism. On receiving confirmation from the policy processing system through a health care inbound message, the system changes the status of the policy to **Terminated**.
- **Terminate Policy** - In this method, you can directly terminate a fully-insured group policy. To terminate a fully-insured group policy, you need to specify the termination reason. You can directly terminate the policy from the user interface or through a health care inbound message. On clicking the **Terminate** button, the system will terminate the fully-insured group policy on the system date. However, when you terminate a fully-insured group policy through a health care inbound message, the policy is terminated when the health care inbound message is processed in the system. On terminating a fully-insured group policy, the status of the policy is changed to **Terminated**.

Once the status of the policy is changed to **Terminated**, the system sets the end date of the following entities to the termination date when the respective condition is met:

- Policy (when the termination date is not earlier than the policy start date or later than the policy end date)
- Policy Person (when the termination date falls within the date range in which the person is associated with the policy)

  Note: The system does not consider those persons associated with policy whose start date is later than the termination date or whose end date is earlier than the termination date.
- Policy Plan (when the termination date falls within the date range of the policy plan)

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** The system does not consider those policy plans whose start date is later than the termination date or whose end date is earlier than the termination date.

- Membership (when the termination date falls within the date range of the membership)

> **Note:** The system does not consider those memberships whose start date is later than the termination date or whose end date is earlier than the termination date.

- Member Person (when the termination date falls within the date range in which the person is associated with the membership)

> **Note:** The system does not consider those member persons whose start date is later than the termination date or whose end date is earlier than the termination date.

- Contracts Associated with the Membership (when the termination date falls within the date range of the contract)

> **Note:** The system does not consider those contracts whose start date is later than the termination date or whose end date is earlier than the termination date.

The system also changes the status of all memberships to **Terminated** irrespective of whether it is effective on the termination date or not. On terminating a membership, the system creates an audit event for the membership. For each audit event, the system identifies the policy plan to which the membership belongs and the active pricing rules defined on the policy plan. It then identifies the pricing rule types using which these active pricing rules are created in the system. An entry for each membership, pricing rule type, and effective date combination is created in the **Pending (P)** status in the **CI_REPRC_ENTITY_DTL** table. For more information, see Audit Framework for Fully-Insured Billing on page 3616.

Fully-Insured Group Policy Reinstatement

The system enables you to reinstate the terminated policy whenever required. There are two ways in which you can reinstate a fully-insured group policy:

- **Initiate Policy Reinstatement Process** - In this method, you can initiate the policy reinstatement process from the user interface. To initiate the reinstatement process, you need to specify the reinstatement reason. On initiating the reinstatement process, the status of the policy is changed to **Pending Reinstatement**. In addition, the system creates an outbound message which request for confirmation whether the policy should be reinstated. This outbound message can be sent to the policy processing system via custom mechanism. On receiving confirmation from the policy processing system through a health care inbound message, the system changes the status of the policy to **Reinstated**.
- **Reinstate Policy** - In this method, you can directly reinstate a fully-insured group policy. To reinstate a fully-insured group policy, you need to specify the reinstatement reason. You can directly reinstate the policy from the user interface or through a health care inbound message. On clicking the **Reinstate** button, the system will reinstate the fully-insured group policy on the system date. However, when you reinstate a fully-insured group policy through a health care inbound message, the policy is reinstated when the health care inbound message is processed in the system. On reinstating a fully-insured group policy, the status of the policy is changed to **Reinstated**.

Once the status of the policy is changed to **Reinstated**, the system updates the end date of the following entities to the respective original end date:

- Policy
- Policy Person
- Policy Plan
- Membership
- Member Person
- Contracts Associated with the Membership

Copyright © 2026, Oracle and/or its affiliates.

Note:

The system stores the original end date of the above listed entities when you define or edit a policy, policy plan, or membership.

Here, the assumption is that the pass-through billable charges information for the membership will be sent again through an inbound message along with the reinstatement reason. And, therefore the exiting billable charges will not be extended.

Finally, the system automatically transitions the fully-insured group policy from **Reinstated** to **In Force/Active**.

Fully-Insured Group Policy Renewal

You can renew a fully-insured group policy only through a health care inbound message and not from the user interface. If you want to renew a fully-insured group policy, you must sent the renewal date along with the new policy end date through a health care inbound message. On processing the health care inbound message, the fully-insured group policy is renewed. The renewal date is stamped on the fully-insured group policy. The policy end date is extended as mentioned in the health care inbound message. The policy plan and membership information for the renewed period must be sent in the subsequent health care inbound messages.

Note: You can renew a fully-insured group policy when it is in the **In Force/Active** status.

Single Contract Creation Across Fully-Insured Group Policies and Plans

The system automatically creates a contract for a fully-insured group policy plan on the parent customer and/or bill group accounts. The system creates or updates contracts of a policy plan when you do either of the following:

- **Create or Edit a Policy Plan from the User Interface or through an Inbound Message** - The system creates a contract in either of the following ways:
  - If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
  - If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates one contract using each contract type which may be associated with one or more price items. Let us assume that a pricing rule type named PRT1 is associated with the policy plan and it contains three price items - PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

    If a policy has two or more plans, multiple pricing rule types are associated with each policy plan and each pricing rule type contains multiple price items, it creates one contract using each contract type which may be associated with one or more price items. Let us assume that P1 has two plans - PP1 and PP2, PRT1 is associated with PP1, PRT2 is associated with PP2, PRT1 contains three price items - PI1, PI2, and PI3, and PRT2 contains three price items - PI1, PI4, and PI5. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 is associated with the CT4 contract type, and PI5 is associated with the CT5 contract type, the system will create five contracts - C1 using CT1, C2 using CT2, C3 using CT3, C4 using CT4, and C5 using CT5. However, if PI1, PI2, and PI5 are associated with the CT1 contract type and PI3 and PI4 are associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

  The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. If the same contract type is associated with different price items, and if these price items are added on different pricing rule types, and if these pricing rule types are associated with different plans, the contract start date is set to the start date of the earliest plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

Example 1 - Contract Creation for a Parent Customer

If a policy plan belongs to a policy of the parent customer (where a bill group is not associated), the system will create one contract using each contract type on each account of the parent customer and bill groups. Let us assume that…

- PC1 has two bill groups - BG1 and BG2
- PC1 has A1 account, BG1 has A2 account, and BG2 has A3 and A4 accounts
- A policy named P1 with two plans - PP1 and PP2 - is created for PC1 (where none of the bill groups are associated)
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 03-01-2019) is associated with PRT2 and PRT3
- PRT1 contains two price items - PI1 and PI2
- PRT2 contains three price items - PI1, PI3, and PI4
- PRT3 contains three price items - PI4, PI5, and PI6
- PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 and PI5 are associated with the CT4 contract type, and PI6 is associated with the CT6 contract type

The following table indicates the distinct contracts that would be created across policy plans on the A1, A2, A3, and A4 accounts in the above stated scenario:

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created…	Contract Start Date (i.e. Earliest Plan Date)
A1	PP1	PRTI	PI1	CT1	A1C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI2	CT2	A1C2	PP1 (01-01-2019)	01-01-2019
		PRT2	PI1	CT1	A1C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI3	CT3	A1C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI4	CT4	A1C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
	PP2	PRT2	PI1	CT1	A1C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI3	CT3	A1C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI4	CT4	A1C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
		PRT3	PI4	CT4	A1C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI5	CT4	A1C4	PP2 (03-01-2019)	01-01-2019 (because PI4 and PI5 are associated with the same contract type (i.e. CT4)
			PI6	CT6	A1C6	PP2 (03-01-2019)	03-01-2019
A2	PP1	PRTI	PI1	CT1	A2C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI2	CT2	A2C2	PP1 (01-01-2019)	01-01-2019
		PRT2	PI1	CT1	A2C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019

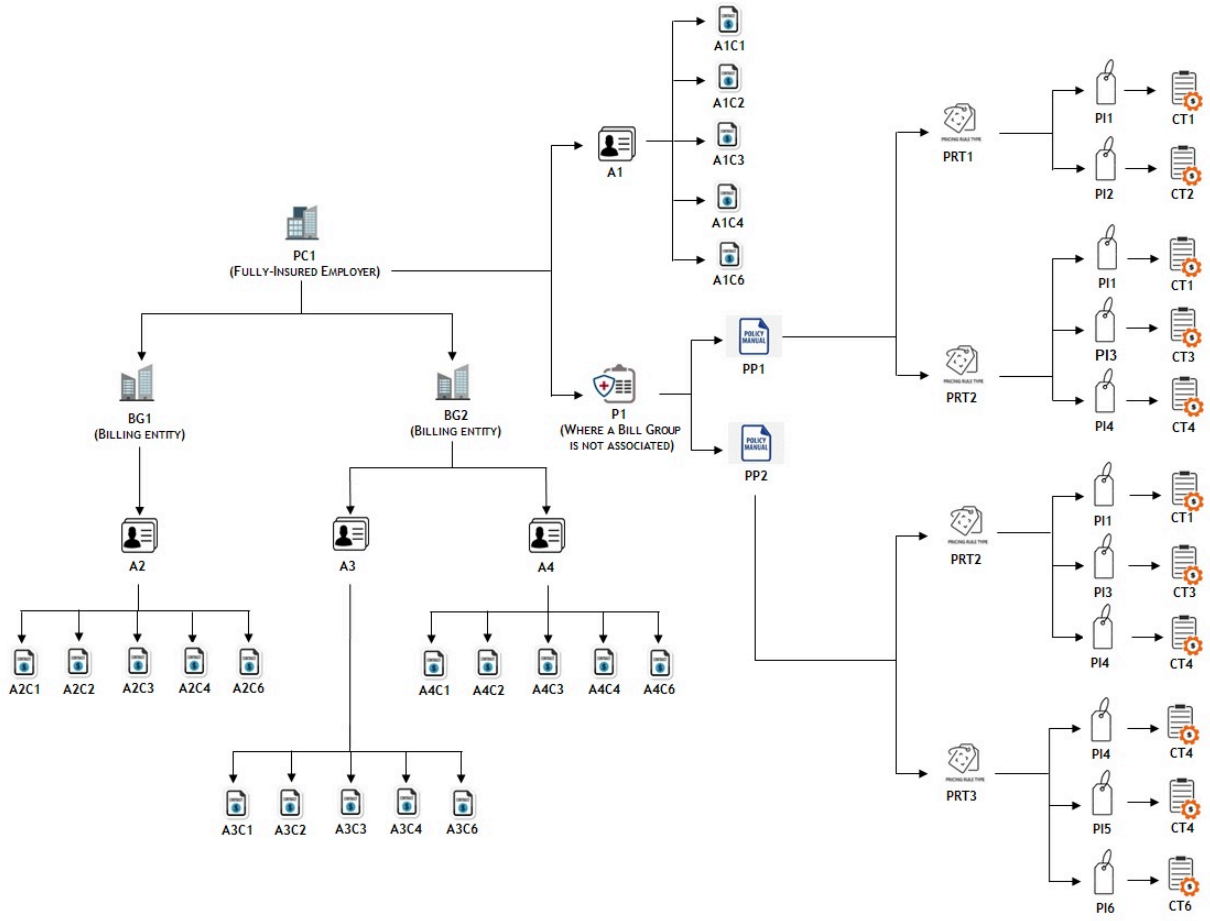
The following figure graphically illustrates the example 1:



Example 2 - Contract Creation for a Bill Group

If a policy plan belongs to a policy of a bill group (where the parent customer is the policy holder), the system will create one contract using each contract type on each account of the parent customer and the bill group. Let us assume that…

- PC1 has two bill groups - BG1 and BG2
- PC1 has A1 account, BG1 has A2 account, and BG2 has A3 and A4 accounts
- A policy named P1 with three plans - PP1, PP2, and PP3 - is created for BG1 (where PC1 is the policy holder)
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 03-01-2019) is associated with PRT2 and PRT3
- PP3 (with the start date as 06-01-2019) is associated with PRT1
- PRT1 contains two price items - PI1 and PI2
- PRT2 contains three price items - PI1, PI3, and PI4
- PRT3 contains three price items - PI4, PI5, and PI6
- PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 and PI5 are associated with the CT4 contract type, and PI6 is associated with the CT6 contract type

The following table indicates the distinct contracts that would be created across policy plans on the A1 and A2 accounts in the above stated scenario:

Copyright © 2026, Oracle and/or its affiliates.

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created…	Contract Start Date (i.e. Earliest Plan Date)
A1	PP1	PRT1	PI1	CT1	A1C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019
			PI2	CT2	A1C2	PP1 (01-01-2019) and PP3 (06-01-2019)	01-01-2019
		PRT2	PI1	CT1	A1C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019
			PI3	CT3	A1C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI4	CT4	A1C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
	PP2	PRT2	PI1	CT1	A1C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019
			PI3	CT3	A1C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI4	CT4	A1C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
		PRT3	PI4	CT4	A1C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI5	CT4	A1C4	PP2 (03-01-2019)	01-01-2019 (because PI4 and PI5 are associated with the same contract type (i.e. CT4)
			PI6	CT6	A1C6	PP2 (03-01-2019)	03-01-2019
	PP3	PRT1	PI1	CT1	A1C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019
			PI2	CT2	A1C2	PP1 (01-01-2019) and PP3 (06-01-2019)	01-01-2019
A2	PP1	PRT1	PI1	CT1	A2C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019
			PI2	CT2	A2C2	PP1 (01-01-2019) and PP3 (06-01-2019)	01-01-2019
		PRT2	PI1	CT1	A2C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019
			PI3	CT3	A2C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI4	CT4	A2C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
	PP2	PRT2	PI1	CT1	A2C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019
			PI3	CT3	A2C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI4	CT4	A2C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
		PRT3	PI4	CT4	A2C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI5	CT4	A2C4	PP2 (03-01-2019)	01-01-2019 (because PI4 and PI5 are associated with the same contract type (i.e. CT4)

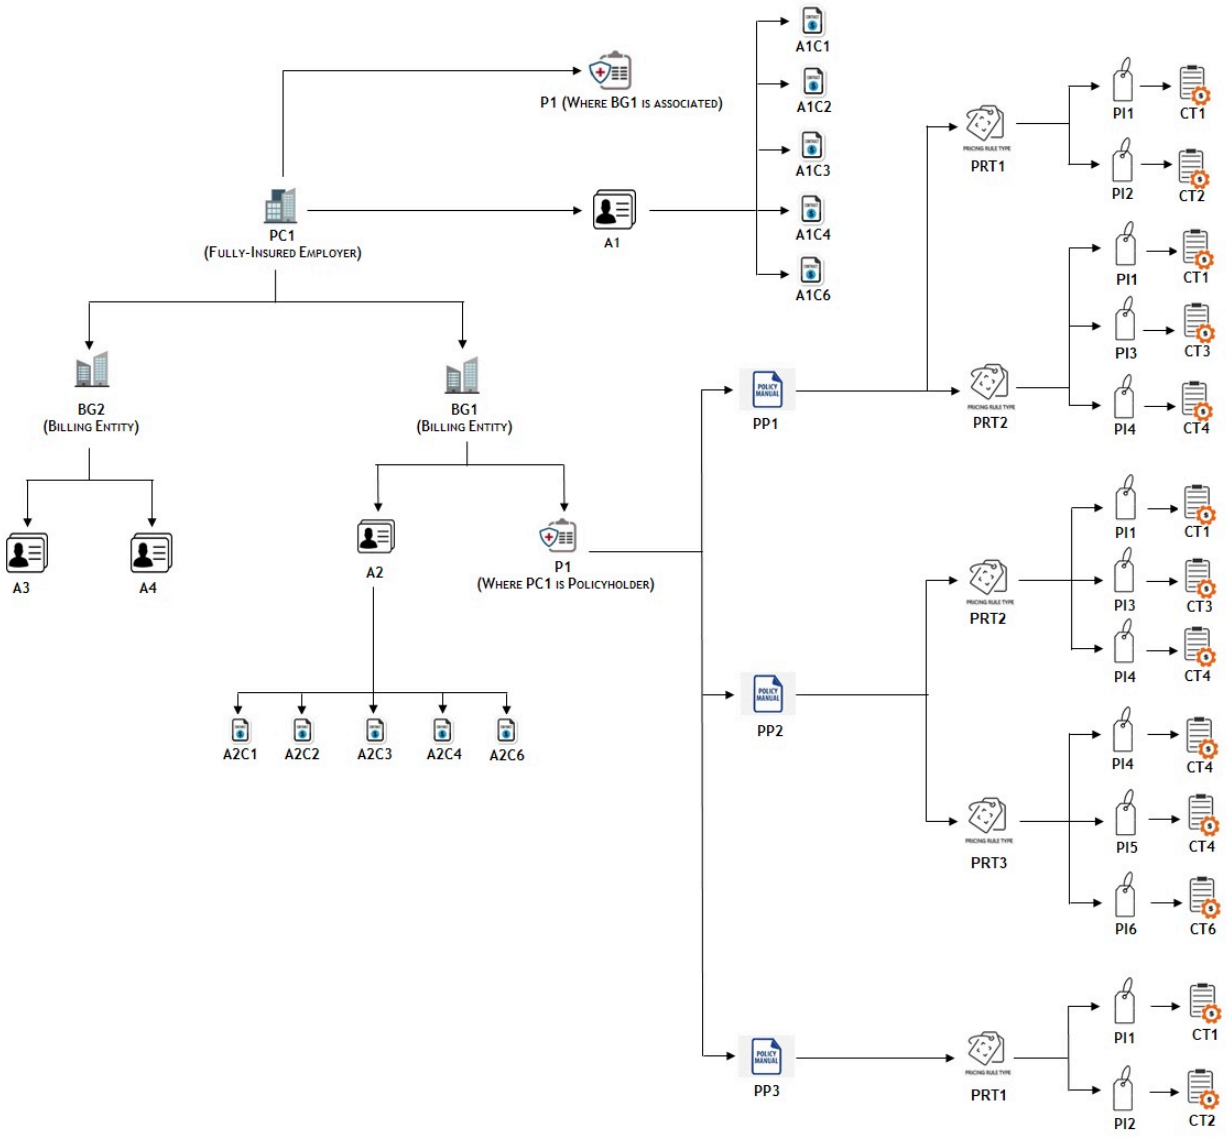
Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created…	Contract Start Date (i.e. Earliest Plan Date)
			PI6	CT6	A2C6	PP2 (03-01-2019)	03-01-2019
	PP3	PRT1	PI1	CT1	A2C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019
			PI2	CT2	A2C2	PP1 (01-01-2019) and PP3 (06-01-2019)	01-01-2019

The following figure graphically illustrates the example 2:



Note:

The system creates a contract using a contract type for an account only when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

Copyright © 2026, Oracle and/or its affiliates.

- **Create or Edit an Account from the User Interface or through an Inbound Message** - The system creates a contract when either of the following condition is met:
  - The main customer of the account is a parent customer and holds a policy (where a bill group is not associated) which is created using the policy type where the policy category is set to **Fully-Insured Group**.
  - The main customer of the account is a parent customer and holds a policy (where a bill group is associated) which is created using the policy type where the policy category is set to **Fully-Insured Group**.
  - The main customer of the account is a bill group and holds a policy (where the parent customer is the policy holder) which is created using the policy type where the policy category is set to **Fully-Insured Group**.

  The system creates a contract in either of the following ways:

  - If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
  - If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates one contract using each contract type which may be associated with one or more price items. Let us assume that a pricing rule type named PRT1 is associated with the policy plan and it contains three price items - PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

    If a policy has two or more plans, multiple pricing rule types are associated with each policy plan and each pricing rule type contains multiple price items, it creates one contract using each contract type which may be associated with one or more price items. Let us assume that P1 has two plans - PP1 and PP2, PRT1 is associated with PP1, PRT2 is associated with PP2, PRT1 contains three price items - PI1, PI2, and PI3, and PRT2 contains three price items - PI1, PI4, and PI5. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 is associated with the CT4 contract type, and PI5 is associated with the CT5 contract type, the system will create five contracts - C1 using CT1, C2 using CT2, C3 using CT3, C4 using CT4, and C5 using CT5. However, if PI1, PI2, and PI5 are associated with the CT1 contract type and PI3 and PI4 are associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

  The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. If the same contract type is associated with different price items, and if these price items are added on different pricing rule types, and if these pricing rule types are associated with different plans, the contract start date is set to the start date of the earliest plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

Example 3 - Contract Creation for an Account of a Parent Customer

If you create an account for a parent customer who holds polices (where a bill group may or may not be associated), the system will create one contract using each contract type for all parent customer's policies on the account. Let us assume…

- PC1 has two bill groups - BG1 and BG2
- PC1 has two policies - a policy named P1 (where a bill group is not associated) and a policy named P2 (where BG1 is associated)
- BG1 has one policy named P2 where PC1 is the policy holder
- An account named A1 is added for PC1
- P1 has two plans - PP1 and PP2
- P2 has two plans - PP11 and PP12
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 06-01-2019) is associated with PRT2, PRT3, and PRT4
- PP11 (with the start date as 05-01-2019) is associated with PRT111 and PRT112
- PP12 (with the start date as 09-01-2019) is associated with PRT113 and PRT114
- PRT1 contains two price items - PI1 and PI2
- PRT2 contains two price items - PI3 and PI4

Copyright © 2026, Oracle and/or its affiliates.

- PRT3 contains two price items - PI1 and PI5
- PRT4 contains two price items - PI6 and PI7
- PRT111 contains two price items - PI11 and PI12
- PRT112 contains two price items - PI1 and PI5
- PRT113 contains two price items - PI13 and PI14
- PRT114 contains two price items - PI7 and PI15
- PI1 is associated with the CT1 contract type, PI2 and PI3 are associated with the CT2 contract type, PI4 is associated with the CT4 contract type, PI5 is associated with the CT5 contract type, PI6 is associated with the CT6 contract type, PI7 is associated with the CT7 contract type, PI11 is associated with the CT11 contract type, PI12 is associated with the CT12 contract type, PI13 is associated with the CT13 contract type, PI14 is associated with the CT14 contract type, and PI15 is associated with the CT15 contract type

The following table indicates the distinct contracts that would be created across policy plans on the A1 account in the above stated scenario:

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created…	Contract Start Date (i.e. Earliest Plan Date)
A1	P1	PP1	PRT1	PI1	CT1	A1C1	PP1 (01-01-2019), PP2 (06-01-2019), and PP11 (05-01-2019)	01-01-2019
				PI2	CT2	A1C2	PP1 (01-01-2019)	01-01-2019
			PRT2	PI3	CT2	A1C2	PP1 (01-01-2019) and PP2 (06-01-2019)	01-01-2019
				PI4	CT4	A1C4	PP1 (01-01-2019) and PP2 (06-01-2019)	01-01-2019
		PP2	PRT2	PI3	CT2	A1C2	PP1 (01-01-2019) and PP2 (06-01-2019)	01-01-2019

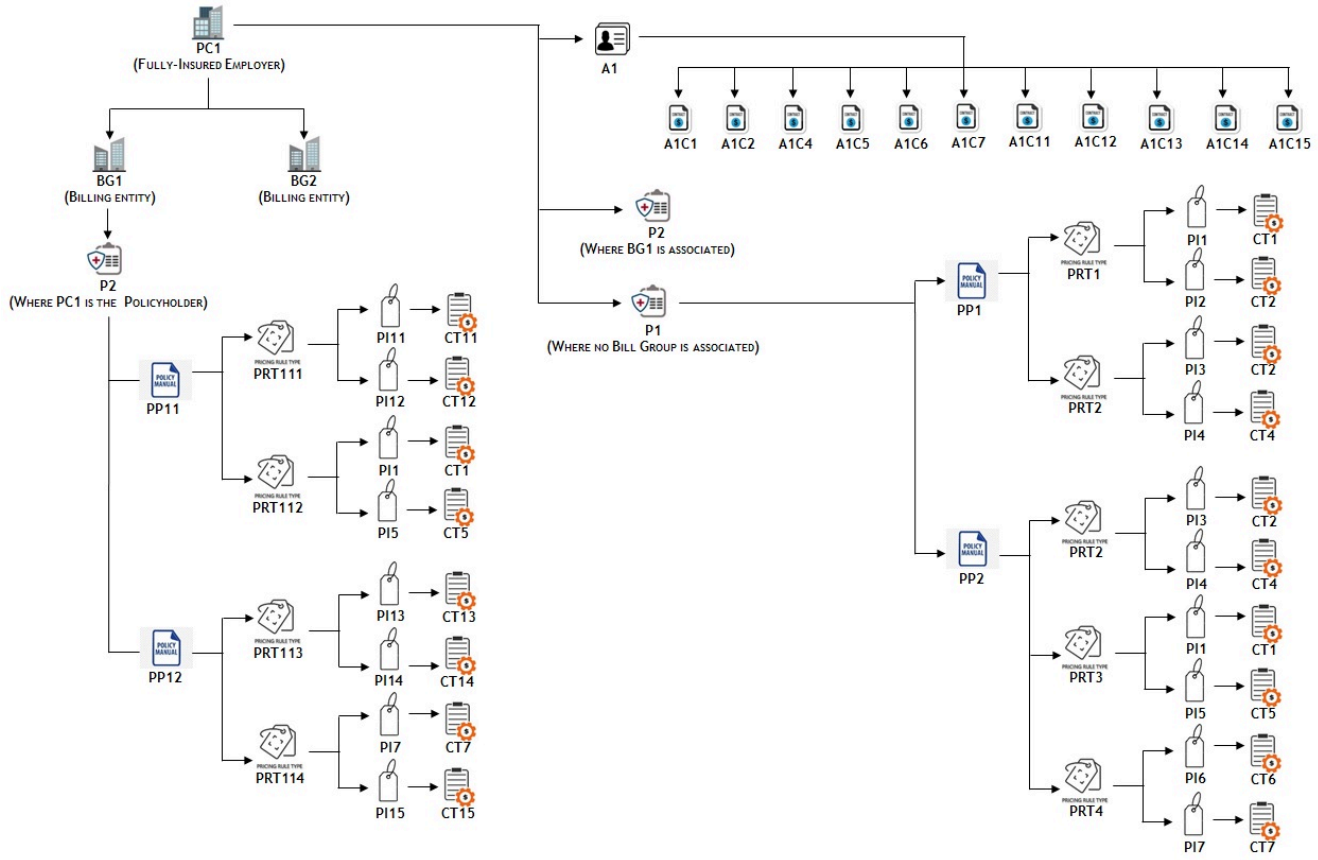
Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created…	Contract Start Date (i.e. Earliest Plan Date)
				PI15	CT15	A1C15	PP12 (09-01-2019)	09-01-2019

The following figure graphically illustrates the example 3:



Example 4 - Contract Creation for an Account of a Bill Group

If you create an account for a bill group who holds policies and its parent customer holds policies (where a bill group may or may not be associated), the system will create one contract using each contract type for the bill group's polices and parent customer's polices (where a bill group is not associated) on the account. Let us assume…

- PC1 has two bill groups - BG1 and BG2
- PC1 has two policies - a policy named P2 (where a bill group is not associated) and a policy named P1 (where BG2 is associated)
- BG2 has one policy named P1 where PC1 is the policy holder
- An account named A1 is added for BG2
- P1 has two plans - PP11 and PP12
- P2 has two plans - PP1 and PP2
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 04-01-2019) is associated with PRT3 and PRT4
- PP11 (with the start date as 07-01-2019) is associated with PRT11 and PRT12
- PP12 (with the start date as 11-01-2019) is associated with PRT13 and PRT14
- PRT1 contains two price items - PI1 and PI2
- PRT2 contains two price items - PI3 and PI2
- PRT3 contains two price items - PI3 and PI4
- PRT4 contains two price items - PI5 and PI6

Copyright © 2026, Oracle and/or its affiliates.

- PRT11 contains two price items - PI111 and PI112
- PRT12 contains two price items - PI1 and PI6
- PRT13 contains two price items - PI113 and PI114
- PRT14 contains two price items - PI115 and PI5
- PI1 is associated with the CT1 contract type, PI2 and PI3 are associated with the CT2 contract type, PI4 is associated with the CT4 contract type, PI5 is associated with the CT5 contract type, PI6 is associated with the CT6 contract type, PI111 is associated with the CT111 contract type, PI112 is associated with the CT112 contract type, PI113 is associated with the CT113 contract type, and PI114 and PI115 is associated with the CT114 contract type

The following table indicates the distinct contracts that would be created across policy plans on the A1 account in the above stated scenario:

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created…	Contract Start Date (i.e. Earliest Plan Date)
A1	P1	PP11	PRT11	PI111	CT111	A1C111	PP11 (07-01-2019)	07-01-2019
				PI112	CT112	A1C112	PP11 (07-01-2019)	07-01-2019
			PRT12	PI1	CT1	A1C1	PP1 (01-01-2019) and PP11 (07-01-2019)	01-01-2019
				PI6	CT6	A1C6	PP2 (04-01-2019) and PP11 (07-01-2019)	04-01-2019
		PP12	PRT13	PI113	CT113	A1C113	PP12 (11-01-2019)	11-01-2019
				PI114	CT114	A1C114	PP12 (11-01-2019)	11-01-2019
			PRT14	PI115	CT114	A1C114	PP12 (11-01-2019)	11-01-2019

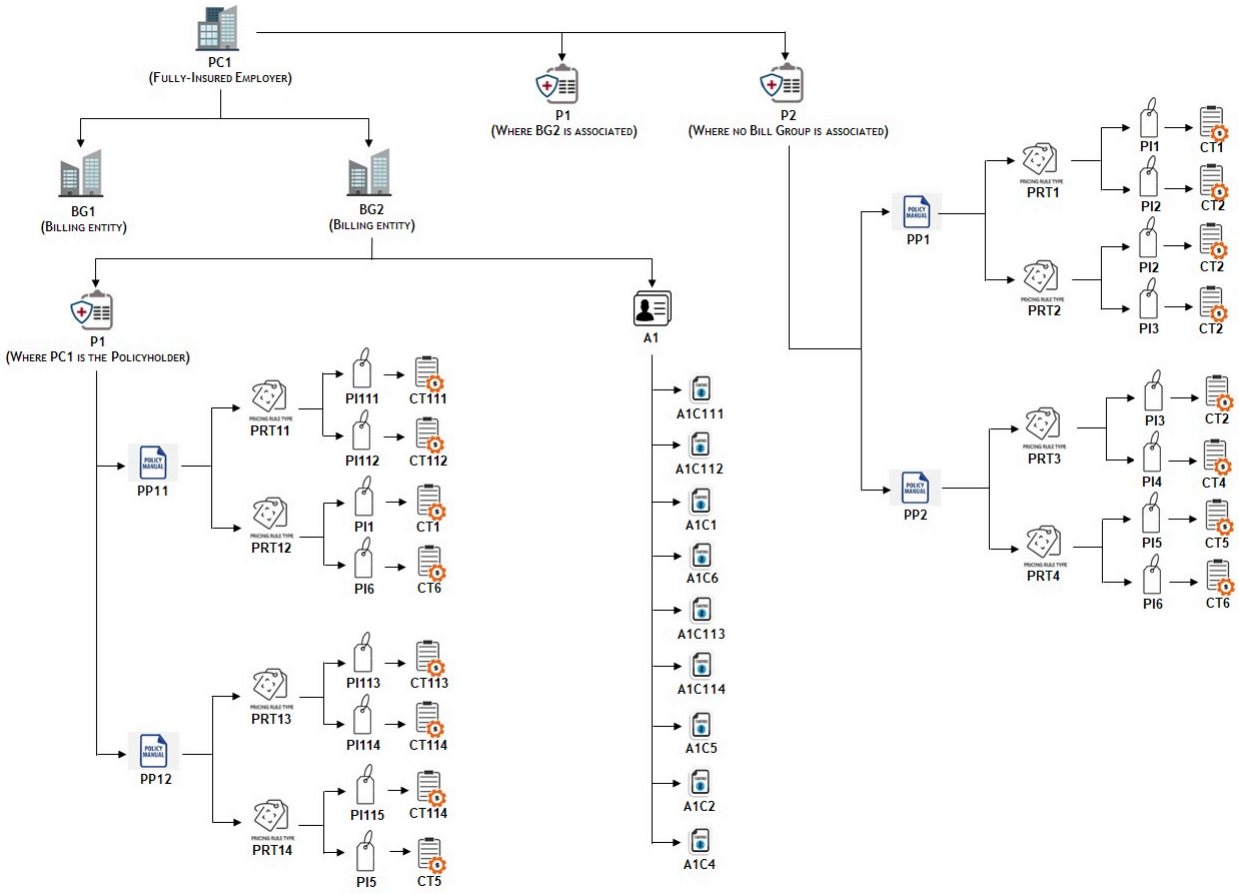
	P2	PP1	PRT1	PI1	CT1	A1C1	PP1 (01-01-2019) and PP11 (07-01-2019)	01-01-2019
				PI2	CT2	A1C2	PP1 (01-01-2019)	01-01-2019
			PRT2	PI2	CT2	A1C2	PP1 (01-01-2019)	01-01-2019
				PI3	CT2	A1C2	PP1 (01-01-2019) and PP2 (04-01-2019)	01-01-2019
		PP2	PRT3	PI3	CT2	A1C2	PP1 (01-01-2019) and PP2 (04-01-2019)	01-01-2019
				PI4	CT4	A1C4	PP2 (04-01-2019)	04-01-2019
			PRT4	PI5	CT5	A1C5	PP2 (04-01-2019) and PP12 (11-01-2019)	04-01-2019
				PI6	CT6	A1C6	PP2 (04-01-2019) and PP11 (07-01-2019)	04-01-2019

The following figure graphically illustrates the example 4:

Copyright © 2026, Oracle and/or its affiliates.



Note:

The system creates a contract using a contract type for an account only when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

Policy Plan Specific Contract Creation

In the Single Contract Creation Across Fully-Insured Group Policies and Plans on page 255 section, we have seen how the system creates one contract across fully-insured group policies and plans on the parent customer and/or bill group accounts. Alternatively, the system enables you to create a plan-specific contract (i.e. a contract using a contract type for each plan) on the parent customer and/or bill group accounts. You can opt for the plan-specific contract creation feature when you want to implement plan-specific business rules. For example, different payment priorities for your medical and dental plans. Under such conditions, you can create different contract types for different plans, say Medical and Dental and enable creation of different contracts using these contract types for billing different plans.

You can configure the plan-specific contract creation feature for the fully-insured group health insurance business by setting the following option types in the **C1-ASOBLLNG** feature configuration:

- **Plan ID Characteristic Type** - Used to specify the characteristic type where you want to store the plan for which the contract is created. During the plan-specific contract creation, this characteristic is defined on the contract. Here, you must specify a characteristic type where the characteristic entity is set to **Contract**.

Copyright © 2026, Oracle and/or its affiliates.

- **Plan Based Contract Creation Eligibility** - Used to indicate whether the system should create plan-specific contract on the account. The valid value is **Yes**.

Alternatively, you can also configure the plan-specific contract creation feature for specific persons (i.e. main customers of the policy) based on the business requirement. This is possible by setting the following option types in the **C1-ASOBLLNG** feature configuration:

- **Plan Based Contract Characteristic Type** - Used to specify the characteristic type which helps the system to determine whether plan-specific contracts should be created on the account. This characteristic must be defined on the person for whom you want to create plan-specific contracts on the accounts. Here, you must specify a characteristic type where the characteristic entity is set to **Person**.
- **Plan Based Contract Characteristic Value** - Used to specify the characteristic value which indicates that the system should create plan-specific contracts on the accounts.
- **Plan ID Characteristic Type** - Used to specify the characteristic type where you want to store the plan for which the contract is created. During the plan-specific contract creation, this characteristic is defined on the contract. Here, you must specify a characteristic type where the characteristic entity is set to **Contract**.

Here, the system creates or updates contracts of a policy plan when you do either of the following:

- **Create or Edit a Policy Plan from the User Interface or through an Inbound Message** - The system creates a contract in either of the following ways:
  - If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
  - If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates one plan-specific contract using each contract type which may be associated with one or more price items. Let us assume that a pricing rule type named PRT1 is associated with the policy plan and it contains three price items - PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

    If a policy has two or more plans, multiple pricing rule types are associated with each policy plan and each pricing rule type contains multiple price items, it creates one plan-specific contract using each contract type which may be associated with one or more price items. Let us assume that P1 has two plans - PP1 and PP2, PRT1 is associated with PP1, PRT2 is associated with PP2, PRT1 contains three price items - PI1, PI2, and PI3, and PRT2 contains three price items - PI1, PI4, and PI5. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 is associated with the CT4 contract type, and PI5 is associated with the CT5 contract type, the system will create six contracts - C1PP1 using CT1 for PP1, C1PP2 using CT1 for PP2, C2PP1 using CT2 for PP1, C3PP1 using CT3 for PP1, C4PP2 using CT4 for PP2, and C5PP2 using CT5 for PP2. However, if PI1, PI2, and PI5 are associated with the CT1 contract type and PI3 and PI4 are associated with the CT2 contract type, the system will create four contracts - C1PP1 using CT1 for PP1, C1PP2 using CT1 for PP2, C2PP1 using CT2 for PP1, and C2PP2 using CT2 for PP2.

  The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date. The characteristic type, which is specified in the **Plan ID Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration, is defined for each contract. It stores the plan ID which indicates the plan for which the contract is created.

  Example 1 - Plan-Specific Contract Creation for a Parent Customer

  If a policy plan belongs to a policy of the parent customer (where a bill group is not associated), the system will create one plan-specific contract using each contract type on each account of the parent customer and bill groups. Let us assume that…

  - PC1 has two bill groups - BG1 and BG2
  - PC1 has A1 account, BG1 has A2 account, and BG2 has A3 and A4 accounts
  - A policy named P1 with two plans - PP1 and PP2 - is created for PC1 (where none of the bill groups are associated)

Copyright © 2026, Oracle and/or its affiliates.

- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 03-01-2019) is associated with PRT2 and PRT3
- PRT1 contains two price items - PI1 and PI2
- PRT2 contains three price items - PI1, PI3, and PI4
- PRT3 contains three price items - PI4, PI5, and PI6
- PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 and PI5 are associated with the CT4 contract type, and PI6 is associated with the CT6 contract type

The following table indicates the distinct plan-specific contracts that would be created on the A1, A2, A3, and A4 accounts in the above stated scenario:

Account	**Plan**	**Pricing Rule Type**	**Price Item**	**Contract Type**	**Contract**	**Contract Start Date**
A1	PP1	PRTI	PI1	CT1	A1C1PP1	01-01-2019
			PI2	CT2	A1C2PP1	01-01-2019
		PRT2	PI1	CT1	A1C1PP1	01-01-2019

Example 2 - Plan-Specific Contract Creation for a Bill Group

If the policy plan belongs to a policy of a bill group (where the parent customer is the policy holder), the system will create one plan-specific contract using each contract type on each account of the parent customer and the bill group. Let us assume that…

- PC1 has two bill groups - BG1 and BG2
- PC1 has A1 account, BG1 has A2 account, and BG2 has A3 and A4 accounts
- A policy named P1 with three plans - PP1, PP2, and PP3 - is created for BG1 (where PC1 is the policy holder)
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 03-01-2019) is associated with PRT2 and PRT3
- PP3 (with the start date as 06-01-2019) is associated with PRT1
- PRT1 contains two price items - PI1 and PI2
- PRT2 contains three price items - PI1, PI3, and PI4
- PRT3 contains three price items - PI4, PI5, and PI6

Copyright © 2026, Oracle and/or its affiliates.

- PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 and PI5 are associated with the CT4 contract type, and PI6 is associated with the CT6 contract type

The following table indicates the distinct plan-specific contracts that would be created on the A1 and A2 accounts in the above stated scenario:

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date
A1	PP1	PRT1	PI1	CT1	A1C1PP1	01-01-2019
			PI2	CT2	A1C2PP1	01-01-2019
		PRT2	PI1	CT1	A1C1PP1	01-01-2019
			PI3	CT3	A1C3PP1	01-01-2019
			PI4	CT4	A1C4PP1	01-01-2019
	PP2	PRT2	PI1	CT1	A1C1PP2	03-01-2019
			PI3	CT3	A1C3PP2	03-01-2019
			PI4	CT4	A1C4PP2	03-01-2019
		PRT3	PI4	CT4	A1C4PP2	03-01-2019
			PI5	CT4	A1C4PP2	03-01-2019
			PI6	CT6	A1C6PP2	03-01-2019

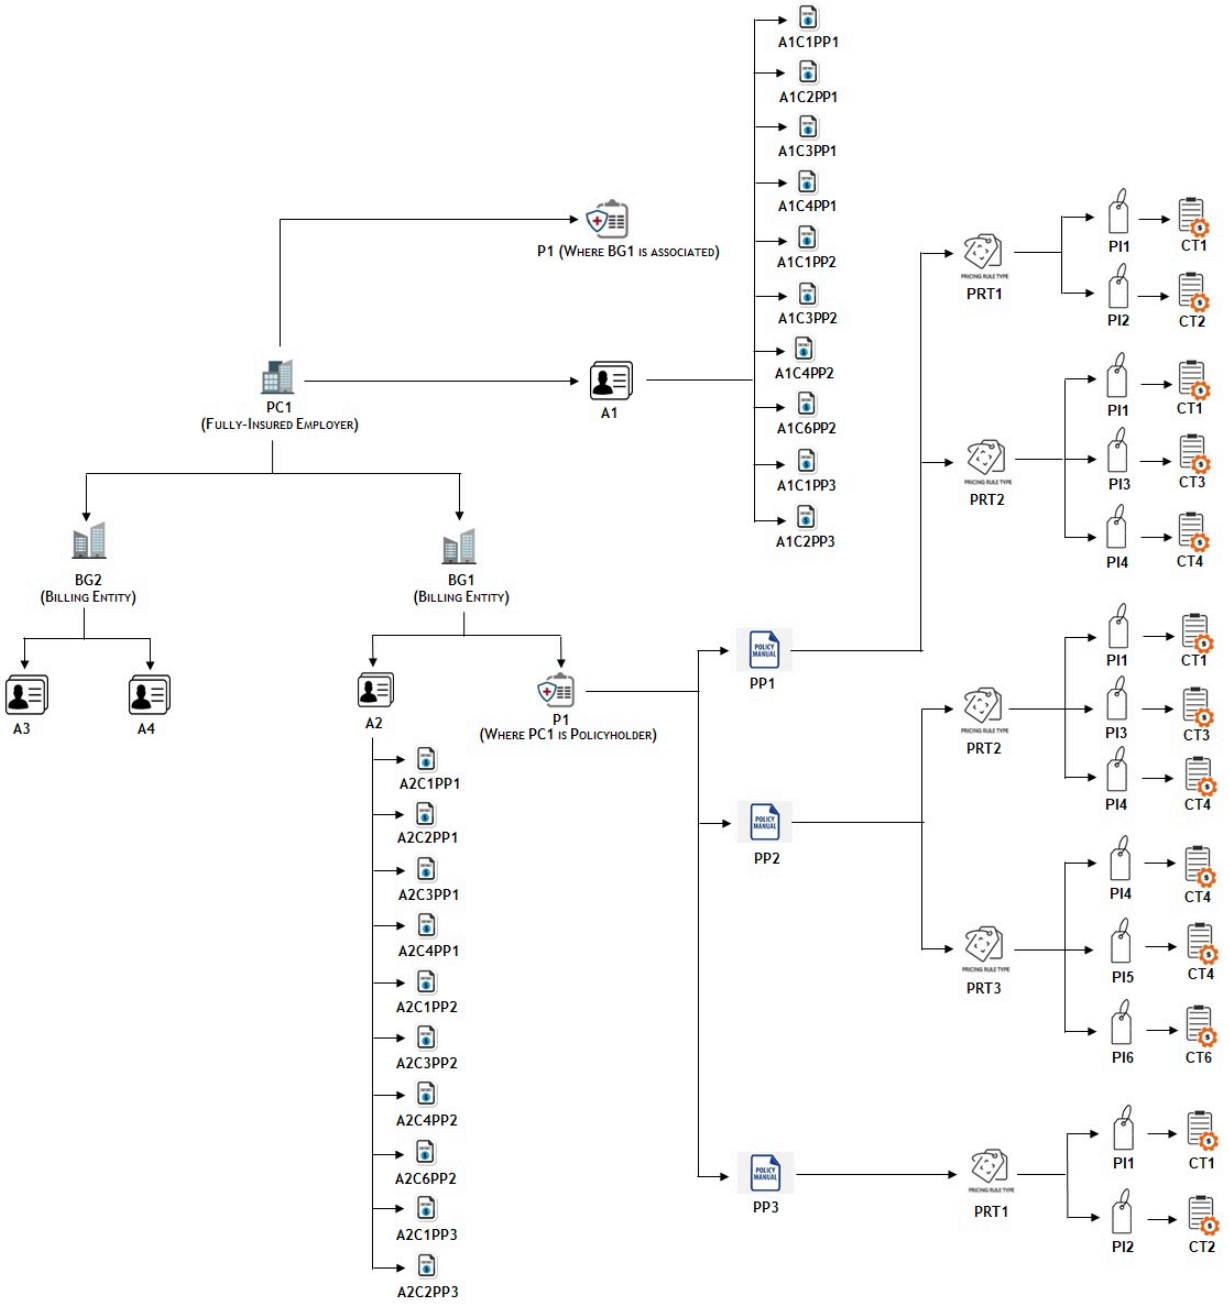
		PRT3	PI4	CT4	A2C4PP2	03-01-2019
			PI5	CT4	A2C4PP2	03-01-2019
			PI6	CT6	A2C6PP2	03-01-2019
	PP3	PRT1	PI1	CT1	A2C1PP3	06-01-2019
			PI2	CT2	A2C2PP3	06-01-2019

The following figure graphically illustrates the example 2:

Copyright © 2026, Oracle and/or its affiliates.



Note: The system creates a contract using a contract type for an account when the division to which the account and contract type belongs is same.

- **Create or Edit an Account from the User Interface or through an Inbound Message** - The system creates a contract when either of the following condition is met:
  - The main customer of the account is a parent customer and holds a policy (where a bill group is not associated) which is created using the policy type where the policy category is set to **Fully-Insured Group**.
  - The main customer of the account is a parent customer and holds a policy (where a bill group is associated) which is created using the policy type where the policy category is set to **Fully-Insured Group**.
  - The main customer of the account is a bill group and holds a policy (where the parent customer is the policy holder) which is created using the policy type where the policy category is set to **Fully-Insured Group**.

  The system creates a contract in either of the following ways:

Copyright © 2026, Oracle and/or its affiliates.

- If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
- If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates one plan-specific contract using each contract type which may be associated with one or more price items. Let us assume that a pricing rule type named PRT1 is associated with the policy plan and it contains three price items - PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

  If a policy has two or more plans, multiple pricing rule types are associated with each policy plan and each pricing rule type contains multiple price items, it creates one plan-specific contract using each contract type which may be associated with one or more price items. Let us assume that P1 has two plans - PP1 and PP2, PRT1 is associated with PP1, PRT2 is associated with PP2, PRT1 contains three price items - PI1, PI2, and PI3, and PRT2 contains three price items - PI1, PI4, and PI5. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 is associated with the CT4 contract type, and PI5 is associated with the CT5 contract type, the system will create six contracts - C1PP1 using CT1 for PP1, C1PP2 using CT1 for PP2, C2PP1 using CT2 for PP1, C3PP1 using CT3 for PP1, C4PP2 using CT4 for PP2, and C5PP2 using CT5 for PP2. However, if PI1, PI2, and PI5 are associated with the CT1 contract type and PI3 and PI4 are associated with the CT2 contract type, the system will create four contracts - C1PP1 using CT1 for PP1, C1PP2 using CT1 for PP2, C2PP1 using CT2 for PP1, and C2PP2 using CT2 for PP2.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date. The characteristic type, which is specified in the **Plan ID Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration, is defined for each contract. It stores the plan ID which indicates the plan for which the contract is created.

Example 3 - Plan-Specific Contract Creation for an Account of a Parent Customer

If you create an account for a parent customer who holds polices (where a bill group may or may not be associated), the system will create one plan-specific contract using each contract type for all parent customer's policies on the account. Let us assume…

- PC1 has two bill groups - BG1 and BG2
- PC1 has two policies - a policy named P1 (where a bill group is not associated) and a policy named P2 (where BG1 is associated)
- BG1 has one policy named P2 where PC1 is the policy holder
- An account named A1 is added for PC1
- P1 has two plans - PP1 and PP2
- P2 has two plans - PP11 and PP12
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 06-01-2019) is associated with PRT2, PRT3, and PRT4
- PP11 (with the start date as 05-01-2019) is associated with PRT111 and PRT112
- PP12 (with the start date as 09-01-2019) is associated with PRT113 and PRT114
- PRT1 contains two price items - PI1 and PI2
- PRT2 contains two price items - PI3 and PI4
- PRT3 contains two price items - PI1 and PI5
- PRT4 contains two price items - PI6 and PI7
- PRT111 contains two price items - PI11 and PI12
- PRT112 contains two price items - PI1 and PI5
- PRT113 contains two price items - PI13 and PI14
- PRT114 contains two price items - PI7 and PI15
- PI1 is associated with the CT1 contract type, PI2 and PI3 are associated with the CT2 contract type, PI4 is associated with the CT4 contract type, PI5 is associated with the CT5 contract type, PI6 is associated with the

Copyright © 2026, Oracle and/or its affiliates.

CT6 contract type, PI7 is associated with the CT7 contract type, PI11 is associated with the CT11 contract type, PI12 is associated with the CT12 contract type, PI13 is associated with the CT13 contract type, PI14 is associated with the CT14 contract type, and PI15 is associated with the CT15 contract type

The following table indicates the distinct plan-specific contracts that would be created on the A1 account in the above stated scenario:

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date
A1	P1	PP1	PRT1	PI1	CT1	A1C1PP1	01-01-2019
				PI2	CT2	A1C2PP1	01-01-2019
			PRT2	PI3	CT2	A1C2PP1	01-01-2019
				PI4	CT4	A1C4PP1	01-01-2019
		PP2	PRT2	PI3	CT2	A1C2PP2	06-01-2019
				PI4	CT4	A1C4PP2	06-01-2019
			PRT3	PI1	CT1	A1C1PP2	06-01-2019
				PI5	CT5	A1C5PP2	06-01-2019

Example 4 - Plan-Specific Contract Creation for an Account of a Bill Group

If you create an account for a bill group who holds policies and its parent customer holds policies (where a bill group may or may not be associated), the system will create one plan-specific contract using each contract type for the bill group's polices and parent customer's polices (where a bill group is not associated) on the account. Let us assume…

- PC1 has two bill groups - BG1 and BG2
- PC1 has two policies - a policy named P2 (where a bill group is not associated) and a policy named P1 (where BG2 is associated)
- BG2 has one policy named P1 where PC1 is the policy holder
- An account named A1 is added for BG2
- P1 has two plans - PP11 and PP12
- P2 has two plans - PP1 and PP2
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 04-01-2019) is associated with PRT3 and PRT4
- PP11 (with the start date as 07-01-2019) is associated with PRT11 and PRT12
- PP12 (with the start date as 11-01-2019) is associated with PRT13 and PRT14
- PRT1 contains two price items - PI1 and PI2

Copyright © 2026, Oracle and/or its affiliates.

- PRT2 contains two price items - PI3 and PI2
- PRT3 contains two price items - PI3 and PI4
- PRT4 contains two price items - PI5 and PI6
- PRT11 contains two price items - PI111 and PI112
- PRT12 contains two price items - PI1 and PI6
- PRT13 contains two price items - PI113 and PI114
- PRT14 contains two price items - PI115 and PI5
- PI1 is associated with the CT1 contract type, PI2 and PI3 are associated with the CT2 contract type, PI4 is associated with the CT4 contract type, PI5 is associated with the CT5 contract type, PI6 is associated with the CT6 contract type, PI111 is associated with the CT111 contract type, PI112 is associated with the CT112 contract type, PI113 is associated with the CT113 contract type, and PI114 and PI115 is associated with the CT114 contract type

The following table indicates the distinct plan-specific contracts that would be created on the A1 account in the above stated scenario:

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date
A1	P1	PP11	PRT11	PI111	CT111	A1C111PP11	07-01-2019
				PI112	CT112	A1C112PP11	07-01-2019

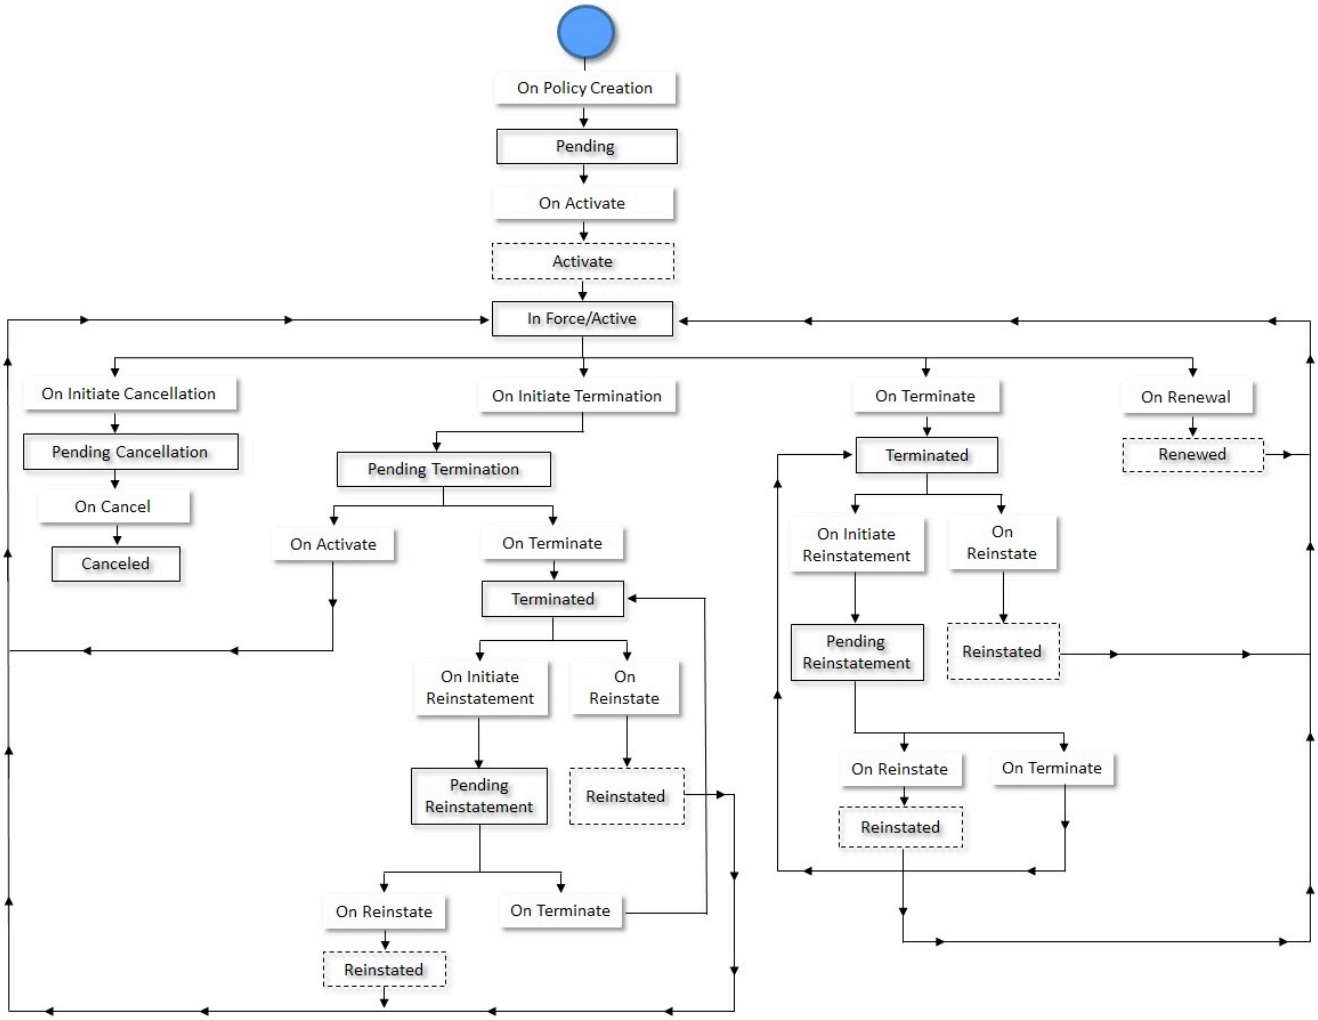
Note: The system creates a contract using a contract type for an account only when the division to which the account and contract type belongs is same.

Fully-Insured Group Policy Status Transition

The following figure graphically indicates how a fully-insured group policy moves from one status to another in its lifecycle:

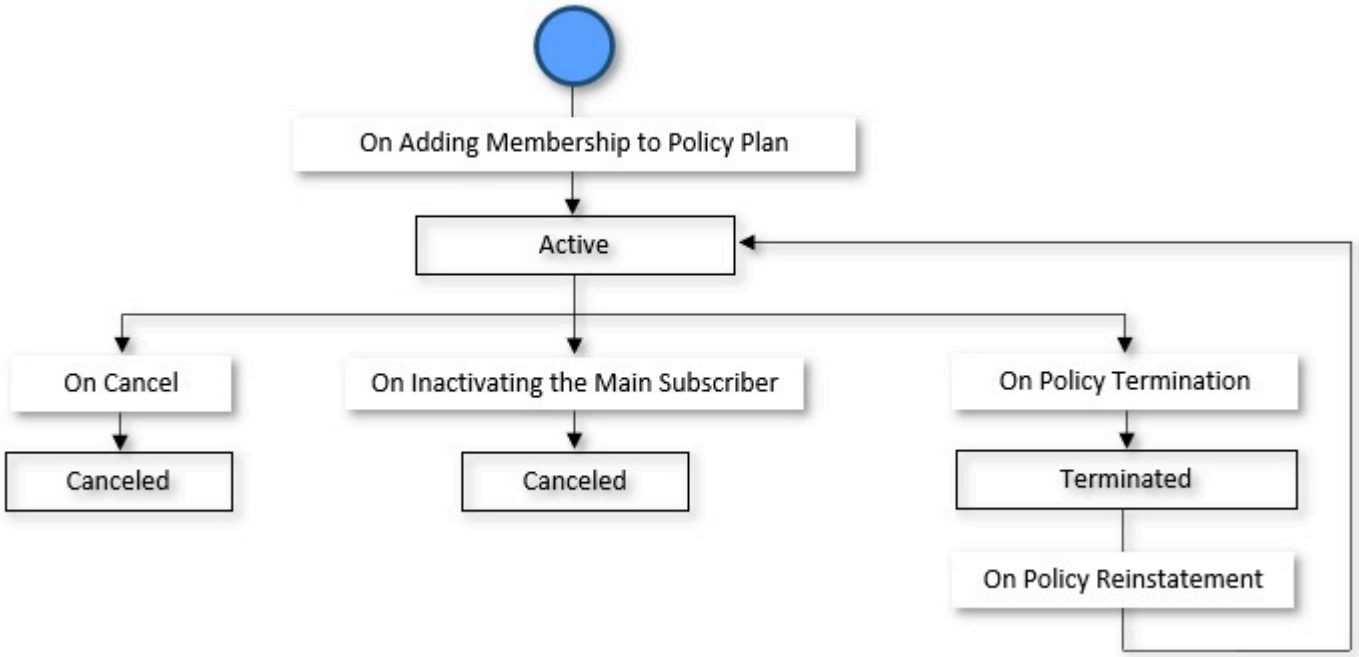
Copyright © 2026, Oracle and/or its affiliates.



Membership Status Transition

The following figure graphically indicates how a membership moves from one status to another in its lifecycle:

Copyright © 2026, Oracle and/or its affiliates.



Types of Policy Plan

Oracle Revenue Management and Billing enables you to create different types of plan for a fully-insured group policy:

- Commercial Plans on page 278
- Medicare Affiliated Plans on page 279

Commercial Plans

A commercial plan is a health insurance plan which is offered and administered by non-governmental entities (i.e. insurance companies). It can cover medical or dental expenses and disability income for the insured. Two of the most popular types of commercial health insurance plans are:

- **Preferred Provider Organization (PPO)** - A Preferred Provider Organization (PPO) is a medical care arrangement in which medical professionals and facilities provide services to subscribed clients at reduced rates.
- **Health Maintenance Organization (HMO)** - A Health Maintenance Organization (HMO) is an insurance structure that provides coverage through a network of physicians at a fixed annual fee.

A commercial health insurance plan can be offered to the individual or group customers. Usually, the insurance companies design special commercial health plans for fully-insured group customers and provide cost-effective health coverage for the employees and their family members (at an additional cost).

The system enables you to create and edit a policy plan from the user interface or through a health care inbound message. While creating a Commercial policy plan, you must set the benefit type to **Commercial**. While defining a Commercial policy plan, you need to specify either a price item or at least one pricing rule type. The price item given in the policy plan is used to create a pass-through billable charge for pre-calculated premium amount which is received through a health care inbound message.

Alternatively, you can associate a pricing rule type with a policy plan. You can associate the age based, tier based, pass-through billable charge, and/or additional fee pricing rule types with a Commercial policy plan. If you associate an age based pricing rule type with the policy plan, the system calculates the active employee coverage or COBRA membership premium for eligible members using the age based pricing rule type. If you associate a tier based pricing rule type with

Copyright © 2026, Oracle and/or its affiliates.

the policy plan, the system calculates the active employee coverage or COBRA membership premium using the tier based pricing rule type. The active employee coverage and COBRA membership premium are then charged through the SQI based billable charges. In case of an active employee coverage membership, the charge is billed to the bill group of the fully-insured group customer. However, in case of a COBRA membership, the charge is billed to either of the following depending on the billing arrangement which is defined for the COBRA membership:

- Bill Group of the Fully-Insured Group Customer
- TPA Person
- Financially Responsible Member Person

If you associate an additional fee pricing rule type (which is a related pricing rule type) with the policy plan, the system derives the flat or percentage based additional fee for the COBRA membership using the additional fee pricing rule type. This additional fee is charged along with the COBRA membership premium through an SQI based billable charge

If you associate a pass-through billable charge pricing rule type with the policy plan, the system creates an SQI based billable charge using the pass-through billable charge pricing rule type whenever the price item information is given, but the account information is not given in a health care inbound message. Note that if both the price item and account details are given in the billable charge information of a health care inbound message, the system directly creates the SQI based billable charge for the pre-calculated premium and does not refer to the pass-through billable charge pricing rule type which is associated with the policy plan.

The system enables you to prorate the membership premium using the proration rules defined for the fully-insured group policy plan. A proration rule indicates how you want to prorate the membership premium on various events, such as enrollment, termination, etc. For more information, refer to Premium Proration Rules on page 3630.

Medicare Affiliated Plans

A Group Medicare Advantage plan, also known as Employer Group Waiver Plan (EGWP), is a type of Medicare Advantage plan offered by some employers to their retired or retiring employees. It may offer more benefits than traditional Medicare Advantage plans. EGWP are provided by private insurance companies who manage fully-insured large group customer's retiree Membership benefits. The different parts of Medicare that EGWPs cover are:

- **Part A** - Medicare Part A insurance is the portion that pays for hospital costs, such as inpatient hospital care or rehabilitation facility care related to illness or injury.
- **Part B** - Medicare Part B is the Medicare portion that pays for doctor visits and related medical costs, including emergency care when you are not admitted.
- **Part D** - Medicare Part D is the prescription drug coverage portion of Medicare. Most prescription drug coverage plans involve different "tiers" of medications where you may pay little to no costs for generic medications and a greater portion of costs for name-brand medicines.

The system enables you to create and edit a policy plan from the user interface or through a health care inbound message. While creating a Medicare Affiliated policy plan, you must set the benefit type to **Medicare Affiliated**. While defining a Medicare Affiliated policy plan, you need to specify either a price item or at least one pricing rule type. The price item given in the policy plan is used to create a pass-through billable charge for pre-calculated premium amount which is received through a health care inbound message.

Alternatively, you can associate a pricing rule type with a policy plan. You can associate the age based, tier based, pass-through billable charge, and/or benefit pricing rule types with a Medicare Affiliated policy plan. If you associate an age based pricing rule type with the policy plan, the system calculates the Medicare premium for Part A, Part B, and/or Part D for eligible members using the age based pricing rule type. If you associate a tier based pricing rule type with the policy plan, the system calculates the Medicare membership premium for Part A, Part B, and Part D using the tier based pricing rule type. This membership premium is then charged through the SQI based billable charge. The charge is billed to either of the following depending on the billing arrangement which is defined for the Medicare membership:

- Bill Group of the Fully-Insured Group Customer
- Financially Responsible Member Person

Copyright © 2026, Oracle and/or its affiliates.

The system considers the low income subsidy (LIS) and late enrollment penalty (LEP) while calculating the Medicare Part D premium. If you associate a benefit pricing rule type with the policy plan, the system determines the price items through which LIS and LEP should be charged.

If you associate a pass-through billable charge pricing rule type with the policy plan, the system creates an SQI based billable charge using the pass-through billable charge pricing rule type whenever the price item information is given, but the account information is not given in a health care inbound message. Note that if both the price item and account details are given in the billable charge information of a health care inbound message, the system directly creates the SQI based billable charge for the pre-calculated premium and does not refer to the pass-through billable charge pricing rule type which is associated with the policy plan.

The system enables you to prorate the Medicare premium using the proration rules defined for the fully-insured group policy plan. A proration rule indicates how you want to prorate the membership premium on various events, such as enrollment, termination, etc. For more information, refer to Premium Proration Rules on page 3630.

Types of Group Membership

Oracle Revenue Management and Billing enables you to create different types of group membership:

- Active Employee Coverage Membership on page 280
- Medicare Membership on page 282
- COBRA Membership on page 284
- Retiree Membership on page 286

Active Employee Coverage Membership

Oracle Revenue Management and Billing enables you to maintain an active employee coverage membership for the group insurance health plans and charge age based or tier based premium for the active employee coverage membership. An active employee coverage membership includes the employee or member of the organization who is covered under the group health insurance plan. Here, the covered employee or member is known as the main subscriber of the membership.

If the health insurance coverage is extended to the immediate family and/or other dependents of group members for an extra cost, the active employee coverage membership may include dependents who are related to the main subscriber. The system enables you to define various relationship types using which you can relate main subscriber and other dependent persons in a membership. You can define and edit relationship types through the **Contract Relationship Type** screen. The dependents can be members or non-members in an active employee coverage membership. The system calculates age based premium for both eligible members and non-members in an active employee coverage membership. If you select the **Skip Non-Members** option in the age based pricing rule type, the system will only consider the eligible members and not non-members of the active employee coverage membership during age based premium calculation.

The system enables you to create and edit an active employee coverage membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. While creating an active employee coverage membership, you must not set the membership type of the membership (i.e. leave the **Membership Type** field blank). Ideally, you must define an active employee coverage membership on a Commercial policy plan. However, at present, the system does not validate whether an active employee coverage membership is defined only on a Commercial policy plan and not on a Medicare Affiliated policy plan.

You can create an active employee coverage membership when you specify the main subscriber of the membership. Ideally, the main subscriber and dependent persons should exist as persons in the system before creating the active employee coverage membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. The system enables you to create the main subscriber, dependent persons, and active employee coverage membership through the same health care inbound message or through the same membership repricing request. In such case, the system will first create the person records for the main subscriber and dependent persons and then create the active employee coverage membership.

Copyright © 2026, Oracle and/or its affiliates.

On creating an active employee coverage membership, the status of the membership and main subscriber is set to **Active**. On adding a dependent person to a membership, the status of the dependent person is set to **Active**. You can inactivate an active employee coverage membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. There are two ways in which you can inactivate the membership from the user interface:

- On clicking the **Inactivate** button
- On inactivating the main subscriber of the membership

However, through a health care inbound message or through the membership repricing inbound web service, you can inactivate the membership only by inactivating the main subscriber of the membership. On inactivating the main subscriber of an active employee coverage membership, the system automatically inactivates the membership and all other member persons which are included in the membership. The status of the active employee coverage membership, main subscriber, and other member persons (if any) is set to **Inactive**. In addition, the system does the following:

- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO_STATUS_CD** column corresponding to the record in the **C1_AUDIT_EVENT**, **C1_AUDIT_EVENT_LOG**, and **CI_PRCE_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_ENTITY_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_REQ_DTL** table is set to **COMPLETE**.

You can also inactivate a member person, who is not the main subscriber of an active employee coverage membership, from the user interface, through a health care inbound message, or through the membership repricing inbound web service. On inactivating the member person, the status of the member person is set to **Inactive**.

On terminating a fully-insured group policy, the status of all active employee coverage memberships on the respective policy plans is set to **Terminated**. Similarly, on reinstating a fully-insured group policy, the status of all active employee coverage memberships on the respective policy plans is set to **Active**.

The system requires the following information to create charges for an active employee coverage membership:

- Whom to bill the active employee coverage membership charges
- Age based or tier based pricing rules using which the premium should be calculated for the active employee coverage membership
- Respective age based or tier based pricing rule type associated with the respective policy plan

The system supports the following billing arrangements for an active employee coverage membership:

- **Group Billing** - Here, an active employee coverage membership is billed to a bill group which is derived for the active employee coverage membership.
- **Direct Billing** - Here, an active employee coverage membership is billed to the member who is financially responsible for the active employee coverage membership.

You can indicate the billing arrangement for the active employee coverage memberships by defining a characteristic on the bill group or parent customer. The system searches for the characteristic which is specified in the **Billing Arrangement** option type of the **C1-ASOBLLNG** feature configuration on the following entities in the specified sequence:

1. Bill Group
2. Parent Customer

Note: If the billing arrangement characteristic is not defined for any of the above listed entities, the system, by default, charges the active employee coverage membership premium to the bill group.

The system requires the bill group and its account to bill the active employee coverage memberships when the billing arrangement is set to **Group Billing**. You can create a bill group and its account from the user interface or through a health care inbound message. On creating an account for a bill group, the system automatically creates a contract on the account using distinct contract types for all policy plans of the parent customer and bill group policies. While creating

Copyright © 2026, Oracle and/or its affiliates.

a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the policy plans of the parent customer and bill group policies.

The system requires the member person's account to bill the active employee coverage membership when the billing arrangement is set to **Direct Billing**. You can create an account for a member person who is financially responsible for the active employee coverage membership through a health care inbound message. On creating an account for a member person, the system automatically creates a contract on the account using distinct contract types for the respective policy plan. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the respective policy plan.

Medicare Membership

Oracle Revenue Management and Billing enables you to maintain an employer sponsored group medicare membership (800 series plans) for a fully-insured large group customer and create age based or tier based premium charges for the Medicare Part A, Part B, and Part D. A Medicare beneficiary may qualify for a low income subsidy (LIS) for Medicare Part D or may incur late enrollment penalty (LEP) for Medicare Part D. In such case, the system enables you to consider the low income subsidy (LIS) and late enrollment penalty (LEP) while calculating the Medicare Part D premium.

The system enables you to create and edit a Medicare membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. While creating a Medicare membership, you must set the membership type to **Medicare**. Ideally, you must define a Medicare membership on a Medicare Affiliated policy plan. However, at present, the system does not validate whether a Medicare membership is defined only on a Medicare Affiliated policy plan and not on a Commercial policy plan.

You can create a Medicare membership when you specify the main subscriber of the membership. A Medicare membership should have only one member person who is covered for Medicare and who is financially responsible for the membership. Ideally, the main subscriber should exists as a person in the system before creating the Medicare membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. The system enables you to create the main subscriber and Medicare membership through the same health care inbound message or through the same membership repricing request. In such case, the system will first create the person record for the main subscriber and then create the Medicare membership.

On creating a Medicare membership, the status of the membership and main subscriber is set to **Active**. You can inactivate a Medicare membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. There are two ways in which you can inactivate the membership from the user interface:

- On clicking the **Inactivate** button
- On inactivating the main subscriber of the membership

However, through a health care inbound message or through the membership repricing inbound web service, you can inactivate the membership only by inactivating the main subscriber of the membership. On inactivating a Medicare membership, the system does the following:

- Set the status of the membership and main subscriber to **Inactive**
- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO_STATUS_CD** column corresponding to the record in the **C1_AUDIT_EVENT**, **C1_AUDIT_EVENT_LOG**, and **CI_PRCE_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_ENTITY_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_REQ_DTL** table is set to **COMPLETE**.

On terminating a fully-insured group policy, the status of all Medicare memberships on the respective policy plans is set to **Terminated**. Similarly, on reinstating a fully-insured group policy, the status of all Medicare memberships on the respective policy plans is set to **Active**.

Copyright © 2026, Oracle and/or its affiliates.

The system enables you to maintain the Membership benefits (such as, Part A, Part B, Part D, Part D LIS, and Part D LEP) of a member person through the **Benefit** screen. The system enables you to define and edit the Membership benefits from the user interface, through a health care inbound message, or through the membership repricing inbound web service. While defining a Membership benefit of a member person for Part A, Part B, and Part D, you need to specify a Medicare plan benefit package (i.e. 800 series plan) which is applicable for the Membership benefit. The system enables you to define and edit a Medicare plan benefit package through the **Field Mapping** screen. You can use the Medicare plan benefit package as a pricing parameter in the age based or tier based pricing rules using which the Medicare premium is calculated. While defining a Membership benefit of a member person for Part D LIS and Part D LEP, you need to specify the benefit amount (i.e. subsidy or penalty amount).

While editing a Membership benefit of a member person from the user interface, you can only edit the characteristics of the Membership benefit. However, while editing a Membership benefit of a member person through a health care inbound message or through the membership repricing inbound web service, you can edit the end date, benefit amount, and characteristics of the Membership benefit. On editing a Membership benefit, the system inactivates the old record and creates a new record in the system. The status of the old benefit record is set to **Inactive** and the status of the new benefit record is set to **Active**.

The system enables you to discard an active or inactive Membership benefit from the user interface by clicking the **Discard** button. You can also discard an active or inactive Membership benefit through a health care inbound message or through the membership repricing inbound web service by changing its status to **Discarded**.

The system requires the following information to create charges for a Medicare membership:

- Whom to bill the Medicare membership (i.e. billing arrangement details)
- Age based or tier based pricing rules using which the premium should be calculated for the Medicare Part A, Part B, and Part D.
- Respective age based, tier based, and benefit pricing rule types associated with the respective policy plan

The system supports the following billing arrangements for a Medicare membership:

- **Group Billing** - Here, a Membership benefit is billed to a bill group which is derived for the Medicare membership.
- **Direct Billing** - Here, a Membership benefit is billed to a member person who is financially responsible for the Medicare membership.

You can indicate the billing arrangement for the Medicare memberships by defining a characteristic on the policy plan, policy, or parent customer. The system searches for the characteristic which is specified in the **Benefit Billing Arrangement** option type of the **C1-ASOBLLNG** feature configuration on the following entities in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

Note: If the benefit billing arrangement characteristic is not defined for any of the above listed entities, the system, by default, charges the Medicare membership premium to the bill group.

The system requires the bill group and its account to bill the Medicare memberships when the benefit billing arrangement is set to **Group Billing**. You can create a bill group and its account from the user interface or through a health care inbound message. On creating an account for a bill group, the system automatically creates a contract on the account using distinct contract types for all policy plans of the parent customer and bill group policies. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the policy plans of the parent customer and bill group policies.

The system requires the member person's account to bill the Medicare membership when the benefit billing arrangement is set to **Direct Billing**. You can create an account for a member person who is financially responsible for the Medicare membership through a health care inbound message. On creating an account for a member person, the system automatically creates a contract on the account using distinct contract types for the respective policy plan. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the respective policy plan.

Copyright © 2026, Oracle and/or its affiliates.

COBRA Membership

Oracle Revenue Management and Billing enables you to maintain a COBRA membership and charge age based or tier based premium and administration fee for the COBRA membership. In COBRA membership, an employer provides temporary continuation of group health coverage in certain situations where it would otherwise be terminated. This may be include situations, such as:

- Death of the covered employee
- Reduction in the hours or termination of the covered employee's employment
- Covered employee becoming entitled for Medicare
- Divorce or legal separation from the covered employee
- A dependent child ceasing to be a dependent in an active employee coverage membership

The system enables you to create and edit a COBRA membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. While creating a COBRA membership, you must set the membership type to **COBRA**. Ideally, you must define a COBRA membership on a Commercial policy plan. However, at present, the system does not validate whether a COBRA membership is defined only on a Commercial policy plan and not on a Medicare Affiliated policy plan.

Through a health care inbound message, the system must receive the end date of the active employee coverage membership along with the details of the COBRA membership. You can create a COBRA membership when you specify the main subscriber of the membership. Here, the main subscriber can be an employee or member of the organization or a family member who is covered through the COBRA membership. In a COBRA membership, you need to specify the member person who is financially responsible for the COBRA membership. Note that, at a time, only one member person can be financially responsible for the COBRA membership.

On creating a COBRA membership, the status of the membership and main subscriber is set to **Active**. On adding a dependent person to a membership, the status of the dependent person is set to **Active**. You can inactivate a COBRA membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. There are two ways in which you can inactivate the membership from the user interface:

- On clicking the **Inactivate** button
- On inactivating the main subscriber of the membership

However, through a health care inbound message or through the membership repricing inbound web service, you can inactivate the membership only by inactivating the main subscriber of the membership. On inactivating the main subscriber of a COBRA membership, the system automatically inactivates the membership and all other member persons which are included in the membership. The status of the COBRA membership, main subscriber, and other member persons (if any) is set to **Inactive**. In addition, the system does the following:

- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO_STATUS_CD** column corresponding to the record in the **C1_AUDIT_EVENT**, **C1_AUDIT_EVENT_LOG**, and **CI_PRCE_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_ENTITY_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_REQ_DTL** table is set to **COMPLETE**.

You can also inactivate a member person, who is not the main subscriber of a COBRA membership, from the user interface, through a health care inbound message, or through the membership repricing inbound web service. On inactivating a member person, the status of the member person is set to **Inactive**.

On terminating a fully-insured group policy, the status of all COBRA memberships on the respective policy plans is set to **Terminated**. Similarly, on reinstating a fully-insured group policy, the status of all COBRA memberships on the respective policy plans is set to **Active**.

The system requires the following information to create charges for a COBRA membership:

Copyright © 2026, Oracle and/or its affiliates.

- Whom to bill the COBRA membership (i.e. billing arrangement details)
- Age based or tier based pricing rules using which the premium should be calculated for the COBRA membership
- Respective age based or tier based pricing rule type associated with the respective policy plan
- Additional fee pricing rule using which the administration fee should be calculated for the COBRA membership
- Respective additional fee pricing rule type associated with the respective policy plan

The system supports the following billing arrangements for a COBRA membership:

- **Group Billing** - Here, a COBRA membership is billed to a bill group which is derived for the COBRA membership.
- **TPA Billing** - Here, a COBRA membership is billed to the third party administrator (i.e. TPA person).
- **Direct Billing** - Here, a COBRA membership is billed to the member who is financially responsible for the COBRA membership.

You can indicate the billing arrangement for the COBRA memberships by defining a characteristic on the policy plan, policy, or parent customer. The system searches for the characteristic which is specified in the **Cobra Billing Arrangement** option type of the **C1-ASOBLLNG** feature configuration on the following entities in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

Note: If the Cobra billing arrangement characteristic is not defined for any of the above listed entities, the system, by default, charges the COBRA membership premium to the bill group.

The system requires the bill group and its account to bill the COBRA memberships when the COBRA billing arrangement is set to **Group Billing**. You can create a bill group and its account from the user interface or through a health care inbound message. On creating an account for a bill group, the system automatically creates a contract on the account using distinct contract types for all policy plans of the parent customer and bill group policies. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the policy plans of the parent customer and bill group policies.

The system requires the third party administrator (i.e. TPA person) and its account to bill the COBRA memberships when the COBRA billing arrangement is set to **TPA Billing**. You can create a third party administrator (i.e. TPA person) and its accounts through a health care inbound message. While sending the details of a TPA person through an inbound message, you must specify the parent of the TPA person and its account details. The system associates the parent customer with the TPA person using the relationship type which is specified in the **TPA Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. If the person type specified in the health care inbound message matches the person type specified in the **TPA Person Type** option type of the **C1-PERSTYPE** feature configuration, the system creates or updates the TPA person and its account through a customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the **TPA Person Type** option type of the **C1-PERSTYPE** feature configuration, the system creates or updates the TPA person and its accounts directly and not through a customer registration object.

The system associates the TPA person with the TPA account using the relationship type which is specified in the **TPA Account Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. On creating an account for a TPA person, the system automatically creates a contract on the account using distinct contract types for all policy plans of the parent customer and bill group policies. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the policy plans of the parent customer and bill group policies.

The system requires the member person's account to bill the COBRA membership when the COBRA billing arrangement is set to **Direct Billing**. You can create an account for a member person who is financially responsible for the COBRA membership through a health care inbound message. On creating an account for a member person, the system automatically creates a contract on the account using distinct contract types for the respective policy plan. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the respective policy plan.

Copyright © 2026, Oracle and/or its affiliates.

Retiree Membership

An employer may offer a retirement health plan coverage to its retired employees through a fully-insured group policy or an individual can independently opt for a government sponsored retirement health plan coverage. Oracle Revenue Management and Billing enables you to maintain a retiree membership for both the fully-insured group and individual business. The system enables you to maintain a flat or percentage based contribution of employer or sponsor for a retiree membership.

The system enables you to create and edit a retiree membership through a health care inbound message or through membership repricing inbound web service. While creating a retiree membership, the membership type must be set to **Retiree**. The system requires the following information to create charges for a retiree membership:

- Whom to bill the premium for the retiree membership (i.e. retiree billing arrangement details)
- Whom to bill the employer or sponsor contribution (i.e. sponsor billing arrangement details)
- Age based or tier based pricing rule using which the premium should be calculated for the retiree membership
- Discount charge pricing rule using which the employer or sponsor contribution should be calculated for the retiree membership

In case of the fully-insured individual business, the premium for a retiree membership is billed to the member who is financially responsible for the retiree membership. However, in case of the fully-insured group business, the system supports the following billing arrangements for the retiree membership:

- **Group Billing** - Here, the premium is billed to a bill group which is derived for the retiree membership.
- **TPA Billing** - Here, the premium is billed to the third party administrator (i.e. TPA person).
- **Direct Billing** - Here, the premium is billed to the member who is financially responsible for the retiree membership.

You can indicate the billing arrangement for a retiree membership in the fully-insured group business by defining a characteristic on the policy plan, policy, or parent customer. The system searches for the characteristic which is specified in the **Retiree Billing Arrangement** option type of the **C1-ASOBLLNG** feature configuration on the following entities in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

The system enables you to maintain a flat or percentage based contribution of employer or sponsor through a discount charge pricing rule. A field named **Sponsored** is available in the **Price Items** section while defining or editing a discount charge pricing rule type. If the **Sponsored** option is selected for a price item, the system creates and bills the charge for the price item as per the sponsor billing arrangement. The system searches for the characteristic which is specified in the **Sponsors Billing Arrangement** option type of the **C1-ASOBLLNG** feature configuration on the following entities in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

In the fully-insured group and individual business, the system supports the following sponsor billing arrangements for the retiree membership:

- **Group Billing** - Here, the system creates a negative charge for the employer or sponsor contribution against the beneficiary account and a positive charge for the employer or sponsor contribution against the sponsor account.
- **TPA Billing** - Here, the system creates a negative charge for the employer or sponsor contribution against the beneficiary account and a positive charge for the employer or sponsor contribution against the sponsor account.
- **Direct Billing** - Here, the system creates a memo only charge for the employer or sponsor contribution against the beneficiary account. A bill message code is derived from the **Retiree Bill Message Code** option type of the **C1-ASOBLLNG** feature configuration and stamped against the beneficiary account.

In case of the group and TPA billing, the system derives the characteristic types which are specified in the **Sponsor Account Identifier Type Char Type** and **Sponsor Account Identifier Value Char Type** option types of the **C1-**

Copyright © 2026, Oracle and/or its affiliates.

ASOBLLNG feature configuration. The system then checks whether these characteristics are defined on any of the following entity in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

If these characteristics are defined on any of the above entity, the system derives the sponsor account for the bill group. The system then bills the employer or sponsor contribution charges to the sponsor account.

However, if the **Sponsored** option is not selected for a price item in a discount charge pricing rule type, the system creates and bills the charge for the price item as per the retiree billing arrangement.

Algorithms Used in C1-POLICY

The following table lists the algorithms which are attached to the **C1-POLICY** business object:

System Event	Algorithm	Algorithm Type	Description
Audit	C1-REAUDEVNT	C1-REAUDEVNT	Refer to C1-REAUDEVNT on page 288.
Validation	C1-POLBOVAL	C1-POLBOVAL	Refer to C1-POLBOVAL on page 289.

The following table lists the algorithms which are used in the lifecycle of the **C1-POLICY** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	C1-TRNDFLSYS	C1-TRNDFLSYS	Refer to C1-TRNDFLSYS on page 289.
Activate	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 289.
In Force/Active	Enter	C1-EVCSTSTAT	C1-EVCSTSTAT	Refer to C1-EVCSTSTAT on page 289.
Pending Termination	Enter	C1-PLCYTRMRQ	C1-PLCYTRMRQ	Refer to C1-PLCYTRMRQ on page 290.
Terminated	Enter	C1-POLCYTERM	C1-POLCYTERM	Refer to C1-POLCYTERM on page 290.
	Enter	C1-DELTRMLTR	C1-CRTCUSCNT	Refer to C1-DELTRMLTR on page 290.
	Enter	C1-EVCSTSTAT	C1-EVCSTSTAT	Refer to C1-EVCSTSTAT on page 289.
Pending Reinstatement	Enter	C1-PLCYREIRQ	C1-PLCYREIRQ	Refer to C1-PLCYREIRQ on page 291.
Reinstated	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 289.
	Enter	C1-POLCYREIN	C1-POLCYREIN	Refer to C1-POLCYREIN on page 292.
	Enter	C1-CCPOLRE1	C1-CRTCUSCNT	Refer to C1-CCPOLRE1 on page 292.

Copyright © 2026, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
Renewed	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 289.
Pending Cancellation	-	-	-	-
Canceled	-	-	-	-

C1-REAUDEVNT

If this algorithm is attached to the **Audit** system event of a business object, it is invoked whenever you define, edit, or delete the respective entity. It checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event while:

- Defining an entity when the **Add Action** option is selected in the audit event type.
- Editing an entity when the **Update All** option is selected in the audit event type or when the updated element is listed in the **Audit Elements for Entity Update** section.
- Deleting an entity when the **Delete Action** option is selected in the audit event type.

The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1_AUDIT_EVENT** table. In addition, the effective date is stamped corresponding to the audit event in the **C1_AUDIT_EVENT** table. Note that if the entity has a start date, then the effective date is set to the entity's start date. But, if the entity does not have a start date, then the effective date is set to the system date.

Note: Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event

At present, this algorithm is designed to work with the business objects of the following maintenance objects:

- C1-POLICY
- C1-ASOPolicy
- C1-Membership
- C1-PolicyPlan
- C1_PERSON_BO
- C1-PricingRuleTierBased
- C1-PricingRuleAgeBased

In case, you want to create audit event for any other maintenance objects, you need to create a custom algorithm type.

It contains the following parameters:

- **Audit Event Business Object** - Used to specify the business object using which you want to create the audit event.
- **Audit Event Pending Status** - Used to specify the status in which you want to create the audit event. This parameter is also used for determining whether an audit event for the entity ID already exists in the system.
- **Audit Event Error Status** - Used to specify the status in which an audit event is transitioned when an error occurs while processing the audit event. This parameter is used for determining whether an audit event for the entity ID already exists in the system.

All the above parameters are mandatory.

Copyright © 2026, Oracle and/or its affiliates.

C1-POLBOVAL

This algorithm validates a fully-insured group policy throughout its lifecycle. It checks the following:

- Whether the policy end date is not earlier than the policy start date.
- Whether the policy person end date is not earlier than the policy person start date.
- Whether the policy person start date is not earlier than the policy start date or later than policy end date.
- Whether the policy person end date is not earlier than the policy start date or later than policy end date.

> **Note:** The above validation is done when the policy is transition to the status which is not specified in the **Skip Status for Policy Person End Date Validation** parameter. For example, if you set the **Skip Status for Policy Person End Date Validation** parameter to **TERMINATED**, the system will not perform the above validation when the status of the policy is changed to **Terminated**.

- Whether the person who is the main customer is associated with the policy.
- Whether the policy person role is specified while associating a person with the policy.

It contains the following parameter:

- **Skip Status for Policy Person End Date Validation** - Used to specify the policy status in which you do not want to validate the policy person end date. You can specify comma-separated values for this parameter.

C1-TRNDFLSYS

This algorithm checks whether the fully-insured group policy is created from the user interface or through an inbound message. If a fully-insured group policy is created through an inbound message, the system will automatically transition the fully-insured group policy to the default next status specified in its lifecycle.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-EVCSTSTAT

This algorithm updates the **Customer Status** characteristic of the main customer of the policy. This characteristic indicates whether the customer is active or inactive. If the customer owns at least one active policy, the customer status is set to **Active**. However, if the customer does not own any active policy, the customer status is set to **Inactive**.

It is invoked while activating or terminating a fully-insured group policy. It contains the following parameters:

- **Customer Status Characteristic Type** - Used to specify the characteristic type whose value should be updated whenever the policy is activated or terminated. You must specify a characteristic type where the characteristic entity is set to **Person**.
- **Active Customer Status Characteristic Value** - Used to specify the characteristic value which should be used when the main customer owns at least one active policy.

Copyright © 2026, Oracle and/or its affiliates.

- **Inactive Customer Status Characteristic Value** - Used to specify the characteristic value which should be used when the main customer does not own any active policy (in other words, when all policies of the main customer are terminated).
- **Policy Active Status** - Used to specify the status in which at least one policy should exist to indicate that the main customer is active.

All the above parameters are mandatory.

C1-PLCYTRMRQ

This algorithm creates an outbound message using the outbound message type whenever you initiate the policy termination process from the user interface. While creating the outbound message, the system identifies the account using the characteristic type specified in the **Main Customer Characteristic Type** parameter. The system checks whether this characteristic type is set to the main customer's ID on any account. If so, the system considers the account and then fetches the value of the account identifier type specified in the **Account Identifier Type** parameter.

In addition, it stores the details of the outbound message (which is created) in the log of the policy. It contains the following parameters:

- **Outbound Message Type** - Used to specify the outbound message type using which you want to create the outbound message. You must specify an outbound message type which is already defined in the system.
- **Source System** - Used to specify the source system that you want to use in the outbound message. You must specify a source system which is already defined in the **C1-SourceSystemLookup** extendable lookup.
- **Account Identifier Type** - Used to specify the account identifier type whose value you want to use in the outbound message. You must specify an account identifier type which is already defined in the system.
- **Main Customer Characteristic Type** - Used to specify the characteristic type using which you want to identify the account of the main customer. You must specify a characteristic type where the characteristic entity is set to **Person**.

All the above parameters are mandatory.

C1-POLCYTERM

This algorithm sets the end date of the following entities to the termination date when the respective condition is met:

- Policy (when the termination date is not earlier than the policy start date or later than the policy end date)
- Policy Person (when the termination date falls within the date range in which the person is associated with the policy)
- Policy Plan (when the termination date falls within the date range of the policy plan)
- Membership (when the termination date falls within the date range of the membership)
- Member Person (when the termination date falls within the date range in which the person is added to the membership)
- Contracts Associated with the Membership (when the termination date falls within the date range of the contract)

It contains the following parameters:

- **Membership Old Status** - Used to specify the status from which you want to transition the membership when the policy is terminated.
- **Membership New Status** - Used to specify the status to which you want to transition the membership when the policy is terminated.

C1-DELTRMLTR

This algorithm creates a customer contact whenever the policy is transition to the status where it is attached. For example, if this algorithm is attached to the **TERMINATED** status, it creates a customer contact whenever the policy is terminated.

Copyright © 2026, Oracle and/or its affiliates.

You can create a customer contact while terminating a policy. Optionally, you can configure the algorithm such that a customer contact is created when a particular status reason is specified while terminating a policy.

Once a customer contact is created, the policy for which the customer contact is created is stored as a characteristic on the customer contact. In addition, the customer contact which is created for the policy is stored as a characteristic in the log of the policy.

It contains the following parameters:

- **Check Policy Status Reason** - Used when you want to create a customer contact when the policy is terminated for a particular reason. The valid values are:
  - **Y** - Used to indicate that the system should create a customer contact when a particular status reason is specified while terminating a policy.
  - **N** - Used to indicate that the system should create a customer contact while terminating a policy irrespective of the status reason.
- **Policy Status Reason Codes** - Used to specify the status reason defined for the **TERMINATED** status. You can specify comma-separated values for this parameter.
- **Customer Contact Class** - Used to specify the customer contact class using which you want to create the customer contact. This field is mandatory.
- **Customer Contact Type** - Used to specify the customer contact type using which you want to create the customer contact. This field is mandatory.
- **Consolidate Customer Contact** - Used to indicate whether the system should update the existing customer contact or create a new customer contact for the main customer of the policy. The valid values are:
  - **Y** - If this parameter is set to **Y**, the system checks whether a customer contact is already created for the main customer of the policy on the system date. If so, the system does not create a new customer contact. Instead, it updates the existing customer contact of the main customer of the policy. However, if the customer contact is not already created on the system date, the system creates a new customer contact for the main customer of the policy.
  - **N** - If this parameter is set to **N**, the system creates a new customer contact for the main customer of the policy and does not update the existing customer contact, if any.

  Note: If you do not specify the value for this parameter, by default, it is set to **N**.
- **Policy ID Characteristic Type** - Used to specify the characteristic type which you want to define for the customer contact. This characteristic indicates the policy for which the customer contact is created. You must specify a characteristic type where the characteristic entity is set to **Customer Contact**. This field is mandatory.
- **Customer Contact Characteristic Type** - Used to specify the characteristic type which you want to use in the log of the policy. This characteristic indicates the customer contact which is created for the policy. You must specify a characteristic type where the characteristic entity is set to **Policy**. This field is mandatory.
- **Status To Skip Process** - Used when you do not want to create the customer contact when the policy is transition to a particular status. You can specify comma-separated values for this parameter.

C1-PLCYREIRQ

This algorithm creates an outbound message using the outbound message type whenever you initiate the policy reinstatement process from the user interface. In addition, it stores the details of the outbound message (which is created) in the log of the policy.

It contains the following parameters:

- **Outbound Message Type** - Used to specify the outbound message type using which you want to create the outbound message. You must specify an outbound message type which is already defined in the system.
- **Source System** - Used to specify the source system that you want to use in the outbound message. You must specify a source system which is already defined in the **C1-SourceSystemLookup** extendable lookup.

All the above parameters are mandatory.

Copyright © 2026, Oracle and/or its affiliates.

C1-POLCYREIN

This algorithm updates the end date of the following entities to the respective original end date:

- Policy
- Policy Person
- Policy Plan
- Membership
- Member Person
- Contracts Associated with the Membership

Note: The system stores the original end date of the above listed entities when you define or edit a policy, policy plan, or membership.

Here, the assumption is that the pass-through billable charges information for the membership will be sent again through an inbound message along with the reinstatement reason. And, therefore the exiting billable charges will not be extended.

It contains the following parameters:

- **Membership Old Status** - Used to specify the status from which you want to transition the membership when the policy is reinstated.
- **Membership New Status** - Used to specify the status to which you want to transition the membership when the policy is reinstated. This field is mandatory.

C1-CCPOLRE1

This algorithm creates a customer contact whenever the policy is transition to the status where it is attached. For example, if this algorithm is attached to the **REINSTATE** status, it creates a customer contact whenever the policy is reinstated. You can create a customer contact while reinstating a policy. Optionally, you can configure the algorithm such that a customer contact is created when a particular status reason is specified while reinstating a policy.

Once a customer contact is created, the policy for which the customer contact is created is stored as a characteristic on the customer contact. In addition, the customer contact which is created for the policy is stored as a characteristic in the log of the policy.

It contains the following parameters:

- **Check Policy Status Reason** - Used when you want to create a customer contact when the policy is reinstated for a particular reason. The valid values are:
  - **Y** - Used to indicate that the system should create a customer contact when a particular status reason is specified while reinstating a policy.
  - **N** - Used to indicate that the system should create a customer contact while reinstating a policy irrespective of the status reason.
- **Policy Status Reason Codes** - Used to specify the status reason defined for the **REINSTATE** status. You can specify comma-separated values for this parameter.
- **Customer Contact Class** - Used to specify the customer contact class using which you want to create the customer contact. This field is mandatory.
- **Customer Contact Type** - Used to specify the customer contact type using which you want to create the customer contact. This field is mandatory.
- **Consolidate Customer Contact** - Used to indicate whether the system should update the existing customer contact or create a new customer contact for the main customer of the policy. The valid values are:
  - **Y** - If this parameter is set to **Y**, the system checks whether a customer contact is already created for the main customer of the policy on the system date. If so, the system does not create a new customer contact. Instead, it

Copyright © 2026, Oracle and/or its affiliates.

updates the existing customer contact of the main customer of the policy. However, if the customer contact is not already created on the system date, the system creates a new customer contact for the main customer of the policy.

- **N** - If this parameter is set to **N**, the system creates a new customer contact for the main customer of the policy and does not update the existing customer contact, if any.

Note: If you do not specify the value for this parameter, by default, it is set to **N**.

- **Policy ID Characteristic Type** - Used to specify the characteristic type which you want to define for the customer contact. This characteristic indicates the policy for which the customer contact is created. You must specify a characteristic type where the characteristic entity is set to **Customer Contact**. This field is mandatory.
- **Customer Contact Characteristic Type** - Used to specify the characteristic type which you want to use in the log of the policy. This characteristic indicates the customer contact which is created for the policy. You must specify a characteristic type where the characteristic entity is set to **Policy**. This field is mandatory.
- **Status To Skip Process** - Used when you do not want to create the customer contact when the policy is transition to a particular status. You can specify comma-separated values for this parameter.

Algorithms Used in C1-PolicyPlan

The following table lists the algorithms which are attached to the **C1-PolicyPlan** business object:

System Event	Algorithm	Algorithm Type	Description
Audit	C1-PPCONCRE	C1-PPCONCRE	Refer to C1-PPCONCRE on page 293.
Validation	C1-VALPPBO	C1-VALPPBO	Refer to C1-VALPPBO on page 294.

C1-PPCONCRE

This algorithm is invoked when you create or edit a policy plan from the user interface or through an inbound message. It creates a contract in either of the following ways:

- If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
- If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates a contract using a distinct contract type which is associated with each price item.

  Let us assume that PRT1 is associated with the policy plan and it contains three price items - P1, P2, and P3. Now, if the P1 is associated with the CT1 contract type, P2 is associated with the CT2 contract type, and P3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the P1 and P3 are associated with the CT1 contract type and P2 is associated with the CT2 contract type, the system will create two distinct contracts - C1 using CT1 and C2 using CT2.

  If multiple pricing rule types are associated with the policy plan and each pricing rule type contains multiple price items, it creates a contract using a distinct contract type which is associated with each price item on each pricing rule type.

If a policy plan belongs to a policy of the parent customer (where a bill group is not associated), the system will create one contract using each contract type on each account of the parent customer and bill groups. If a policy plan belongs to a policy of a bill group (where the parent customer is the policy holder), the system will create one contract using each contract type on each account of the parent customer and the bill group.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. If the same contract type is associated with the same or different price items on the same or different pricing rule types of different plans, the contract start date is set to the start date of the earliest plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

Copyright © 2026, Oracle and/or its affiliates.

Note:

The system creates a contract using a contract type for an account when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

If the same contract type is associated with the same or different price items on the same or different pricing rule types of different plans on different policies, the contract start date is set to the start date of the earliest plan across policies.

C1-VALPPBO

This algorithm validates a policy plan. It checks the following:

- Whether the policy plan end date is not earlier than the policy plan start date.
- Whether the policy plan start date is not earlier than the policy start date or later than policy end date.
- Whether the policy plan end date is not earlier than the policy start date or later than policy end date.
- Whether the price item or at least one pricing rule type is associated with the policy plan.

Algorithms Used in C1-Membership

The following table lists the algorithms which are attached to the **C1-Membership** business object:

System Event	Algorithm	Algorithm Type	Description
Audit	C1-FIAUDEV	C1-FIAUDEV	Refer to C1-FIAUDEV on page 93.
Post-Processing	C1-RTAREAMEM	C1-RTAREAMEM	Refer to C1-RTAREAMEM on page 296
Post-Processing	C1-MEMRLSUBT	C1-MEMRLSUBT	Refer to C1-MEMRLSUBT on page 296
Post-Processing	C1-MPCONCREA	C1-MPCONCREA	Refer to C1-MPCONCREA on page 297
Pre-Processing	C1-MEMSTPRE	C1-MEMSTPRE	Refer to C1-MEMSTPRE on page 298.
Validation	C1-VALMEMBO	C1-VALMEMBO	Refer to C1-VALMEMBO on page 298.

The following table lists the algorithms which are used in the lifecycle of the **C1-Membership** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Active	-	-	-	-
Inactive	Enter	C1-MEMINACT	C1-MEMINACT	Refer to C1-MEMINACT on page 298.
Terminated	-	-	-	-

C1-FIAUDEV

If this algorithm is attached to the **Audit** system event of the **Group Membership** (**C1-Membership**), **Individual Membership** (**C1-IndMembership**), **Benefit** (**C1-Benefits**), and **Person** (**C1_PERSON_BO**) business objects, it is invoked whenever you define, edit, or delete the respective entity. It checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event whenever a group membership is added to a policy plan, an individual

Copyright © 2026, Oracle and/or its affiliates.

membership is added to a health plan, member person is added to a group or individual membership, and a membership benefit is added for a group or individual membership. It also creates the audit event whenever the group or individual membership, member person, and membership benefit details are updated. However, note that the audit events are created in the update scenario when the element listed for auditing in the age-based, tier-based, or benefit pricing rule type is updated. The system considers only those pricing rule types whose pricing rules are effective during the respective entity (i.e. group or individual membership, member person, or membership benefit whichever is updated) date range.

It creates one or more audit events in the **Pending** status. The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1_AUDIT_EVENT** table. In addition, the effective date is stamped corresponding to the audit event in the **C1_AUDIT_EVENT** table.

Note:

The system creates an audit event whenever the group or individual membership start and end dates and member person's start and end dates are changed in the system irrespective of whether these fields are listed for auditing or not in the age-based or tier-based pricing rule types.

Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event.

For each audit event, this algorithm derives the group or individual memberships on the policy or health plan, respectively, which is impacted and the pricing rule types whose pricing rules are defined on the respective policy or health plan. A repricing entity detail record is then created for each membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of the repricing entity detail record is set to **Pending**. Once the repricing entity detail records are created successfully, the status of the audit event is changed to **Complete**.

It contains the following parameters:

- **Audit Event Business Object** - Used to specify the business object using which you want to create the audit event.
- **Audit Event Pending Status** - Used to specify the status in which you want to create the audit event. This parameter is also used for determining whether an audit event for the entity ID already exists in the system.
- **Audit Event Error Status** - Used to specify the status in which an audit event is transitioned when an error occurs while processing the audit event. This parameter is used for determining whether an audit event for the entity ID already exists in the system.

All the above parameters are mandatory.

C1-RTAREAMEM

This algorithm derives the geographic rating area for a membership using the **Address Source** and **Address Type** characteristic types. It supports two address sources named **Policy Holder** and **Main Subscriber** and three address types named **Person Mailing**, **Person Seasonal**, and **Account Override**.

On adding a membership to a policy plan, this algorithm derives the characteristic types from the **Address Source Characteristic Type** and **Address Type Characteristic Type** attributes of a geographic rating area preference. This algorithm considers the geographic rating area preference which is specified in the **Rating Area Field Mapping for Group** option type of the **C1-ASOBLLNG** feature configuration. Then, it searches for these characteristics on the following entities in the specified sequence:

1. Policy Plan
2. State where the Policy Plan is Issued
3. Policy
4. State where the Policy is Issued

If these characteristics are not defined for any of the above listed entities, this algorithm derives the default address source and address type from the geographic rating area preference. If the address source is set to **Policy Holder**, this algorithm fetches the value from the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration. It then derives the person who is associated with the policy using the parent customer policy person role. Once the address source and address type are derived, this algorithm fetches the state and zip code from the address type of the address source. For example, if the address source is set to **Policy Holder** and address type is set to **Person Mailing**, this algorithm fetches the state and zip code from the policy holder's mailing address. Once the state and zip code are fetched from the address, this algorithm checks whether the zip code is a 9-digit code. If not, it appends zeros to make it a 9-digit zip code. It then derives the value of the **Use Plan Details** attribute from the geographic rating area preference. If the attribute is set to**Y**, this algorithm derives a geographic rating area for the state, zip code, policy number, plan number, and source system combination. However, if the attribute is set to**N**, this algorithm derives a geographic rating area for the state and zip code combination. If the geographic rating area is not derived for the specified combination, this algorithm derives the default geographic rating area from the geographic rating area preference. Once the geographic rating area is derived, this algorithm stores the geographic rating area for the membership. The characteristic type specified in the **Geographic Rating Area Characteristic Type** attribute of the geographic rating area preference is used to store geographic rating area for the membership. The effective date of the characteristic is set to effective date of the address.

C1-MEMRLSUBT

While adding a membership to a policy plan or while adding or inactivating a member person in a membership, this algorithm derives the member relationship for each member person of the membership from a member relationship structure. It considers the member relationship structure which is defined as a characteristic for the policy plan. While deriving the member relationship structure of the policy plan, it considers the characteristic which is defined using a characteristic type specified in the **Member Relationship Structure Characteristic Type** attribute of a member relationship and subscription tier preference. It considers the member relationship and subscription tier preference which is specified in the **Relation Structure Code Field Mapping** option type of the **C1-ASOBLLNG** feature configuration.

The member relationship structure helps to determine how each member person is related to the main subscriber of the membership. A member relationship is derived for a member person depending on the following:

- Whether the member person is a self, spouse, or dependent
- Number of spouses, dependents, and young adults in the membership

While determining the member relationship for a member person, this algorithm derives the following characteristic types from the respective attributes of the member relationship and subscription tier preference:

- Age Calculation Date Basis
- Max Age Limit for Max Dependent Count

Copyright © 2026, Oracle and/or its affiliates.

- Max Number of Dependents Order Priority
- Maximum Number of Dependents
- Member Relationship Derivation Date
- New Born Gift Days
- New Born Gift Days Applicability
- Young Adult Max Age Limit
- Young Adult Max Age Limit Applicability

It then derives these characteristics from the policy plan. Based on these characteristics defined for the policy plan, it derives the member relationship for each member person from the member relationship structure. If the **Member Relationship Derivation Date** characteristic type is set to **Enrollment Date**, this algorithm derives the member relationship for each member person of the membership in order of the member start date. However, if the **Member Relationship Derivation Date** characteristic type is set to **Date of Birth**, this algorithm derives the member relationship for each member person of the membership in order of the date of birth.

Once the member relationship is derived for a member person, this algorithm stores the member relationship for the member person. The characteristic type specified in the **Member Relationship Characteristic Type** attribute of the member relationship and subscription tier preference is used to store member relationship for the member person. On adding a membership to a policy plan or on adding a member person to a membership, the effective date of the member relationship characteristic is set to the member person's start date. If a new born is added to the membership, the effective date of the new born's member relationship characteristic is calculated considering the gift days if applicable.

If a member person is end dated, this algorithm derives the member relationship of all other member persons once again. If the member relationship for a member person is different, it creates a new characteristic to store the member relationship for the member person. The effective date of the new characteristic is set to the member person's end date + 1. For example, if the end date of a member person is set to 06-30-2021, then the effective date of the new characteristic for the remaining member persons is set to 07-01-2021. Similarly, if a member person is inactivated, this algorithm derives the member relationship of all other member persons once again. In this case, if the member relationship for a member person is different, it updates the existing member relationship characteristic of the member person and does not create a new member relationship characteristic for the member person.

C1-MPCONCREA

This algorithm is invoked when the following conditions are met:

- A member person who is financially responsible for the membership is added to the membership
- One or more accounts already exist for the member person in the system

If the above conditions are met, this algorithm derives the membership in which the member person is added. It then derives the policy plan to which the membership belongs. It creates contracts for each account of the member person in either of the following ways:

- If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
- If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates a contract using a distinct contract type which is associated with each price item.

  Let us assume that PRT1 is associated with the policy plan and it contains three price items - PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, this algorithm will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, this algorithm will create two distinct contracts - C1 using CT1 and C2 using CT2.

  If multiple pricing rule types are associated with the policy plan and each pricing rule type contains multiple price items, it creates a contract using a distinct contract type which is associated with each price item on each pricing rule type.

Copyright © 2026, Oracle and/or its affiliates.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

Note:

The system creates a contract using a contract type for an account when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

C1-MEMSTPRE

Once the status of the main subscriber is changed to **Inactive**, this algorithm changes the status of the membership to the value specified in the **Membership Inactive Status** option type of the **C1-ASOBLLNG** feature configuration. In addition, it does not allow you to add a member person in the **Inactive** status to a membership.

C1-VALMEMBO

This algorithm validates a membership. It checks the following:

- Whether the membership end date is not earlier than the membership start date.
- Whether the membership start date is not earlier than the policy plan start date or later than policy plan end date.
- Whether the membership end date is not earlier than the policy plan start date or later than policy plan end date.
- Whether the policy plan for which you want to define the membership is specified.
- Whether the person who is the main subscriber is added to the membership.
- Whether the relationship type is specified while adding a person to the membership.

C1-MEMINACT

This algorithm changes the status of the member person to the value specified in the **Membership Person Inactive Status** option type of the **C1-ASOBLLNG** feature configuration. It also does the following:

- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO_STATUS_CD** column corresponding to the record in the **C1_AUDIT_EVENT**, **C1_AUDIT_EVENT_LOG**, and **CI_PRCE_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_ENTITY_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_REQ_DTL** table is set to **COMPLETE**.

Late Setup Notification

Oracle Revenue Management and Billing enables you to create a To Do notification when the details to include a member person in a group or individual membership is received in ORMB beyond the late setup threshold days from the member person start date. This notification can help the billing analyst to take appropriate actions, such as giving premium waiver to the member person if required.

To enable this feature, you need to set the following option types in the **C1-ASOBLLNG** feature configuration:

Copyright © 2026, Oracle and/or its affiliates.

- **Monitor Late Setup** - Used to indicate whether you want to enable the late setup notification feature. The valid values are - **Y** and **N**. By default, the value is set to **N**.
- **Late Setup Threshold in Days** - Used to indicate the number of threshold days for late setup notification. This option type is required when the **Monitor Late Setup** option type is set to **Y**. The value must be greater than zero.

For example, if the system receives the information to add a member person with the start date as **01-15-2021** to an individual membership on **02-15-2021** and the late setup threshold days in the **C1-ASOBLLNG** feature configuration is set to **15**. In this case, the number of days between the member person start date and member person creation date is greater than late setup threshold days, and therefore a To Do is created using the To Do type which is specified in the **C1-LATESET** algorithm attached to the group or individual membership business object, respectively.

To implement this business requirement, the system stores the member person creation date (which was not done in the previous releases) while adding a member person to a group or individual membership. A new batch named **C1-LSUB** is introduced in this release. It derives the creation date for all member persons in the existing group and individual memberships and stamps it against the corresponding record in the **CRE_DTTM** column of the **CI_MEMBERSHIP_PER** table. This batch must be executed only once after upgrading to Oracle Revenue Management and Billing Version 3.1.0.0.0. For more information, refer to *Oracle Revenue Management and Billing Version 3.1.0.0.0 Upgrade Guide.*

To Do Creation for Manual Refund/Write Off on Direct Billed Group Membership Cancellation

Oracle Revenue Management and Billing facilitates you with the following on cancelling a direct billed group membership:

- Automatically cancel any refund and/or write off requests which are systematically created through refund/write off instruction via the **Automatic Refund/Write Off** feature.
- Create a To Do for refund and/or write off requests which are manually created for the account via the **Refund/ Write Off Request** feature.

To implement this feature, the following changes are made to the system:

- A new algorithm type named **C1-WOCANMCN** is introduced in this release. An algorithm created using the **C1-WOCANMCN** algorithm type is attached to the **Canceled** status in the lifecycle of the **C1-Membership** business object.
- The **C1-RFRQC** and **C1-WORQC** To Do types are newly introduced in this release.

On cancelling a group membership, the system checks whether the billing arrangement characteristic is defined on the group membership. The system considers the characteristic type which is specified in the **Billing Arrangement** option type of the **C1-ASOBLLNG** feature configuration. If the billing arrangement characteristic is defined on the group membership, the system checks whether the characteristic value is set to **DRCT** (i.e., Direct Billing). If so, the system derives the financially responsible person's account from the system. However, if the billing arrangement characteristic is not defined on the group membership or if its characteristic value is not set to **DRCT** (i.e., Direct Billing), the system will skip the group membership and will take no actions against it.

Once the account is derived for a direct billed group membership, the system checks whether there is any refund/write off request created for the account. If so, the system checks whether the refund/write off request is systematically created through refund/write off instruction via the **Automatic Refund/Write Off** feature. If so, the system automatically cancels the refund/write off request of the account. However, if the refund/write off request is not systematically created through refund/write off instruction, the system creates a To Do using the respective To Do type specified in the **C1-WOCANMCN** algorithm. You can then refer this To Do and manually cancel such refund/write off request of the account.

Copyright © 2026, Oracle and/or its affiliates.

Policy (Used for Searching)

The **Policy** screen allows you to search for a policy using various search criteria. It also allows you to define a policy. It contains the following zone:

- Search Policy on page 300

Through this screen, you can navigate to the following screen:

- Policy (Used for Viewing) on page 311

Search Policy

The **Search Policy** zone allows you to search for a policy using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a policy using the policy or person details. The valid values are: • Policy Date/Policy Type/Status • Source System/Policy Number/Description • Person Name/Person Identifier • Policy Characteristics **Note:** By default, the **Policy Date/Policy Type/Status** option is selected.	Yes
Policy Type	Used to search policies which are created using a particular policy type. **Note:** This field appears when the **Policy Date/Policy Type/Status** option is selected from the **Search By** list.	No
Start Date	Used to search policies which are effective from a particular date. **Note:** This field appears when the **Policy Date/Policy Type/Status** option is selected from the **Search By** list.	No
Status	Used to search policies with a particular status. The valid values are: • In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Post Runout • Reinstated • Runout • Terminated	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Policy Date/Policy Type/Status** option is selected from the **Search By** list.	
End Date	Used to search policies which are effective till a particular date.	No
	Note: This field appears when the **Policy Date/Policy Type/Status** option is selected from the **Search By** list.	
Source System	Used to search policies which originated from a particular external system.	No
	Note: This field appears when the **Source System/Policy Number/ Description** option is selected from the **Search By** list.	
Policy Number	Used to search a policy with a particular policy number.	No
	Note: This field appears when the **Source System/Policy Number/ Description** option is selected from the **Search By** list.	
Description	Used to search policies with a particular description.	No
	Note: This field appears when the **Source System/Policy Number/ Description** option is selected from the **Search By** list.	
Person Name	Used to search policies to which a particular person is associated.	No
	Note: This field appears when the **Person Name/Person Identifier** option is selected from the **Search By** list.	
Person Identifier Type	Used to indicate the person identifier type.	Yes (Conditional)
	Note: This field appears when the **Person Name/Person Identifier** option is selected from the **Search By** list.	**Note:** If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to search policies to which a person is associated.	Yes (Conditional)
	Note: This field appears when the **Person Name/Person Identifier** option is selected from the **Search By** list.	**Note:** If you specify the person identifier type as a search criteria, you have to specify the person identifier.
Characteristic Type	Used to search policies for which a particular characteristic type is defined.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Policy Characteristics** option is selected from the **Search By** list. The list includes only those characteristic types where the characteristic entity is set to **Policy**.	**Note:** This field is required when you are searching for a policy using a characteristic.
Characteristic Value	Used to search policies with a particular characteristic value.	Yes (Conditional)
	Note: This field appears when the characteristic type is selected. If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are searching for a policy using a characteristic.

Note: You must specify at least one search criterion while searching for a policy.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Policy Number	Displays the policy number.
Policy Information	Displays additional information about the policy. **Note:** It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the respective policy.
Source System	Indicates the external system from where the policy is originated.
Description	Displays the description of the policy.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.
Status	Indicates the status of the policy. If the policy is created using the **C1-POLICY** business object, the valid values are: • Pending • In Force/Active • Pending Cancellation • Canceled • Pending Reinstatement • Reinstated • Pending Termination • Terminated

Searching for a Policy

Prerequisites

To search for a policy, you should have:

- Policy types and person identifier types defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup
- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To search for a policy:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Policy**.
   A sub-menu appears.
3. Click the **Search** option from the **Policy** sub-menu.
   The **Policy** screen appears.
4. Enter the search criteria in the **Search Policy** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
5. Click **Search**.
   A list of policies that meet the search criteria appears in the **Search Results** section.

Viewing the Policy Details

Procedure

To view the details of a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy *w*hose details you want to view.
   The **Policy** screen appears.
3. Ensure that the **Main** tab is selected.

Copyright © 2026, Oracle and/or its affiliates.

4. View the details of the policy in the **Policy** zone.

Defining a Policy

Oracle Revenue Management and Billing enables you to define a policy for the fully-insured and self-funded health insurance business. You can define a fully-insured group policy using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**. However, you can define a self-funded policy using a policy type where the policy category is set to **Self-Funded**.

Note: At present, the **Fully-Insured Individual** policy category is not supported in the system.

Prerequisites

To define a policy, you should have:

- Policy types defined in the application.
- Values defined for the **C1-SourceSystemLookup** extendable lookup.

  Note: This prerequisite is applicable only when you want to define a fully-insured group policy.
- Values defined for the **RUNOUT_ADM_OPT_FLG** lookup field.

  Note: This prerequisite is applicable when you want to define a self-funded policy.

Procedure

To define a policy:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Policy**.
   A sub-menu appears.
3. Click the **Add** option from the **Policy** sub-menu.

   The **Select Policy Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Used to indicate the policy type using which you want to create a policy. **Note:** If you want to create a fully-insured group policy, you must select a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**. However, if you want to create a self-funded policy, you must select a policy type where the policy category is set to **Self-Funded**.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Policy** screen.

Copyright © 2026, Oracle and/or its affiliates.

4. Select the required policy type from the respective field.
5. Click **OK**.

The **Policy** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the policy.
- **Persons** - Used to associate persons with the policy.
- **Characteristics** - Used to define the characteristics for the policy.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Indicates the policy type using which you are defining the policy.	Not applicable
Policy Number	Used to specify the policy number.	Yes
Description	Used to specify the description for the policy.	Yes
Source System	Used to indicate the external system from where the policy is originated. **Note:** This field appears when you are defining a policy using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**.	Yes
Start Date	Used to specify the date from when the policy is effective. **Note:** The policy start date cannot be later than the policy end date.	Yes
End Date	Used to specify the date till when the policy is effective. **Note:** The policy end date cannot be earlier than the policy start date.	Yes
Runout End Date	Used to specify the date when the runout period of the self-funded policy ends. **Note:** The runout end date cannot be earlier than or equal to the policy end date. This field appears when you are defining a policy using a policy type where the policy category is set to **Self-Funded**.	No
Runout Administration Fees	Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are: • None • Percentage of Claim	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: At present, this field is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy. This field appears when you are defining a policy using a policy type where the policy category is set to **Self-Funded**.	
Advance Level Funding Eligibility	Indicates whether the self-funded policy is eligible for the advance billing feature of level funding. **Note:** This is a read-only field. By default, the value is set to **No**. You can edit the advance level funding eligibility only through a health care inbound message. This field appears when you are defining a policy using a policy type where the policy category is set to **Self-Funded**.	Not applicable
Advance Deposit Applicability	Used to indicate whether the advance deposit is applicable for the policy. **Note:** This field is required only when the advance deposit level of the respective policy holder (i.e., parent customer) is set to **POLI**. However, this field is not mandatory. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**.	No
Advance Deposit Amount	Used to specify the advance deposit amount that will be parked at the policy level. **Note:** You must specify a positive value in this field. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**.	Yes (Conditional) **Note:** This field is required when the **Advance Deposit Applicability** option is selected.
Advance Deposit Grace Days	Used to specify the grace days. The system then uses the grace days to derive the grace period within which the advance deposit should be received from the group	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	customer for the policy. While calculating the grace period, the system considers the policy start date as the grace start date. Once the grace start date is derived, the system calculates the grace end date (i.e., grace start date + grace days). For example, if a parent customer is the policy holder of the P1 policy (01-Jan-2022 to 31-Dec-2022) and advance deposit grace days is set to 6 days, then the system considers 01-Jan-2022 as the grace start date and sets the grace end date to 07-Jan-2022. **Note:** You must specify an integer value in this field. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**.	**Note:** This field is required when the **Advance Deposit Applicability** option is selected.
Advance Deposit Account	Used to indicate the account of the parent customer where the advance deposit is parked for the policy. **Note:** This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**. You must specify an account with the account relationship type that is specified in the **Advance Deposit Account Relationship Type** attribute of the delinquency process preference. The system considers the delinquency process preference which is specified in the **Delinquency Process Field Mapping** option type of the **DELINPROC** feature configuration. For more information about the feature configuration, see Setting the DELINPROC Feature Configuration on page 4663. The **Search** (🔍) icon appears corresponding to the **Advance Deposit Account** field. On clicking the **Search** icon, the **Account Search** window appears.	Yes (Conditional) **Note:** This field is required when the **Advance Deposit Applicability** option is selected.

6. Enter the required details in the **Main** section.
7. Associate the required persons with the policy.

Note: While defining a policy, you must associate a person who is the main customer of the policy.

8. Define the characteristics for the policy, if required.
9. Click **Save**.
   The policy is defined and its status is set to **Pending**.

Associating a Person with a Policy

Prerequisites

To associate a person with a policy, you should have:

- Required persons defined in the application
- Required policy person roles defined in the application

Procedure

To associate a person with a policy:

1. Ensure that the **Persons** section is expanded when you are defining or editing a policy.

   The **Persons** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Person	Used to indicate the person that you want to associate with the policy. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Person Search** window appears. On specifying the person ID, the person name appears corresponding to the **Person** field.	Yes
Sequence	Used to specify the sequence number for the associated person.	Yes
Policy Person Role	Used to indicate the role of a person in the policy.	Yes
Main Customer	Used to indicate whether the person is the main customer of the policy. **Note:** At a time, only one person can be the main customer of the policy.	Yes (Conditional) **Note:** You must select this option while associating a person who is the main customer of the policy.
Start Date	Used to specify the date from when the person is associated with the policy.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The start date cannot be later than the end date. The start date cannot be earlier than the policy start date and later than the policy end date.	
End Date	Used to specify the date till when the person is associated with the policy. **Note:** The end date cannot be earlier than the start date. The end date cannot be earlier than the policy start date and later than the policy end date. This validation is done when the policy is transition to the status which is not specified in the **Skip Status for Policy Person End Date Validation** parameter of the **C1-POLBOVAL** algorithm. For example, if you set the **Skip Status for Policy Person End Date Validation** parameter of the **C1-POLBOVAL** algorithm to **TERMINATED**, the system will not perform this validation when the status of the policy is changed to **Terminated**.	No

2. Enter the required details in the **Persons** section.

> **Note:** While associating the persons with a policy, you must always ensure that one person is the main customer of the policy.

3. If you want to associate more than one person with the policy, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to dissociate a person from the policy, click the **Delete** (🗑) icon corresponding to the person.

4. Click **Save**.
   The persons are associated with the policy.

Defining a Characteristic for a Policy

Prerequisites

To define a characteristic for a policy, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To define a characteristic for a policy:

Copyright © 2026, Oracle and/or its affiliates.

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a policy.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the policy. **Note:** The effective date cannot be earlier than the policy start date and later than the policy end date.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the policy.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Policy**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the policy.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the policy.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the policy, click the **Add** (+) icon and then *r*epeat step 2.

   Note: However, if you want to remove a characteristic from the policy, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the policy.

Policy (Used for Viewing)

The **Policy** screen allows you to:

- View the details of a fully-insured group or self-funded policy
- Edit the details of a fully-insured group or self-funded policy
- Activate a fully-insured group or self-funded policy
- Add or edit plans in a fully-insured group policy

Copyright © 2026, Oracle and/or its affiliates.

- Add memberships to a fully-insured group policy plan
- Initiate the termination process for a fully-insured group policy
- Terminate a fully-insured group policy
- Initiate the cancellation process for a fully-insured group policy
- Cancel a fully-insured group policy
- Initiate the reinstatement process for a fully-insured group policy
- Reinstate a fully-insured group policy
- View the log of a fully-insured group or self-funded policy
- Add a log entry for a fully-insured group or self-funded policy

It consists of the following tabs:

- Policy - Main on page 312
- Policy - Plan on page 319
- Policy - Log on page 321

Policy - Main

The **Main** tab displays information about the policy. It contains the following zones:

- Policy on page 312
- Policy Characteristics on page 318

Policy

The **Policy** zone displays the details of the fully-insured group or self-funded policy. It contains the following sections:

- **Main** - Displays basic information about the policy. It contains the following fields:

Field Name	Field Description
Base Policy Information	Displays information about the base policy. **Note:** This field appears when you are viewing the details of a renewed policy which is created using a policy type where the policy category is set to **Self-Funded**.
Policy Information	Displays information about the policy.
Policy Type	Indicates the policy type using which the policy is created. **Note:** It has a link. On clicking the link, the **Policy Type** screen appears where you can view the details of the respective policy type.
Status	Indicates the status of the policy. If the policy is created using the **C1-POLICY** business object, the valid values are: • Pending • Activate • In Force/Active • Pending Termination • Terminated • Pending Reinstatement • Reinstated • Renewed • Pending Cancellation • Canceled

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Advance Deposit Applicability	Indicates whether the advance deposit is applicable for the policy.
	Note: This field appears only when the policy is created using a policy type where the policy category is set to **Fully-Insured Group**.
Advance Deposit Amount	Displays the advance deposit amount.
	Note: This field appears only when the **Advance Deposit Applicability** option is selected.
Advance Deposit Grace Days	Displays the grace days used for calculating the advance deposit grace period.
	Note: This field appears only when the **Advance Deposit Applicability** option is selected.
Advance Deposit Account	Indicates the account of the parent customer where the advance deposit is parked for the policy. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: This field appears only when the **Advance Deposit Applicability** option is selected. It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.

- **Persons** - Lists the persons which are associated with the policy. It contains the following columns:

Column Name	Column Description
Person Information	Indicates the person who is associated with the policy. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person.
Sequence	Displays the sequence number of the associated person.
Policy Person Role	Indicates the role of the person in the policy.
Main Customer	Indicates whether the person is the main customer of the policy.
Start Date	Displays the date from when the person is associated with the policy.
End Date	Displays the date till when the person is associated with the policy.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the fully-insured group or self-funded policy.

Copyright © 2026, Oracle and/or its affiliates.

<table>
<tr><th>Button Name</th><th>Button Description</th></tr>
<tr><td></td><td>Note:
The Edit button appears only when a policy of the respective category is in either of the following status:
<table><tr><th>Policy Category</th><th>Status</th></tr><tr><td>Fully-Insured Group</td><td>• In Force/Active
• Canceled
• Pending Cancellation
• Pending
• Pending Reinstatement
• Pending Termination
• Terminated</td></tr><tr><td>Self-Funded</td><td>• In Force/Active

Note: The Cancel button appears when the fully-insured group policy is in the Pending Cancellation status.</td></tr>
<tr><td>Initiate Termination</td><td>Used to initiate the termination process for the fully-insured group policy.
Note: The Initiate Termination button appears when the fully-insured group policy is in the In Force/Active status.</td></tr>
<tr><td>Terminate</td><td>Used to terminate the fully-insured group policy.</td></tr>
</table>

Copyright © 2026, Oracle and/or its affiliates.

Button Name	Button Description
	Note: The **Terminate** button appears when the fully-insured group policy is in the **In Force/Active**, **Pending Reinstatement**, or **Pending Termination** status.
Initiate Reinstatement	Used to initiate the reinstatement process for the terminated policy.
	Note: The **Initiate Reinstatement** button appears when the fully-insured group policy is in the **Terminated** status.
Reinstate	Used to reinstate the terminated policy.
	Note: The **Reinstate** button appears when the fully-insured group policy is in the **Pending Reinstatement** or **Terminated** status.
Runout	Used to transition the self-funded policy to the **Runout** status.
	Note: The **Runout** button appears when the self-funded policy is in the **In Force/Active** status. You cannot transition a self-funded policy to the **Runout** status when: • The self-funded policy is renewed. • The runout end date is not specified. • The policy end date is earlier than the system date.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the policy is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the policy status is updated.
Create Date/Time	Displays the date and time when the policy is created.

- **Termination Information** - Displays the termination details of the fully-insured group policy. It appears when the policy is in the **Pending Termination** status. It contains the following fields:

Field Name	Field Description
Terminate Date	Displays the date when you want to terminate the policy.
Terminate Reason	Indicates the reason why the termination process is initiated for the policy.
	Note: It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the respective termination reason.

- **Reinstate Information** - Displays the reinstatement details of the terminated policy. It appears when the policy is in the **Pending Reinstatement** status. It contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Reinstate Reason	Indicates the reason why you want to reinstate the fully-insured group policy.
	Note: It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the respective reinstatement reason.

Policy Characteristics

The **Policy Characteristics** zone lists the characteristics of the fully-insured group or self-funded policy. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the policy.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.
	Note: The data appears in this column when the type of characteristic value is set to **Predefined Value**.

You can filter the list using the **Effective Date** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Copyright © 2026, Oracle and/or its affiliates.

Policy - Plan

The **Plan** tab lists the plans defined for the policy and memberships defined for each policy plan. It contains the following zones:

- Plans on page 319
- Memberships on page 320

Plans

The **Plans** zone lists the plans which are defined in the policy. It contains the following columns:

Column Name	Column Description
Plan Information	Displays information about the policy plan. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Policy Plan** screen appears where you can view the details of the respective policy plan.
Price Item Information	Indicates the price item to which the policy plan is directly associated. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the respective price item.
Plan Number	Displays the plan number.
Plan Name	Displays the description of the policy plan.
Benefit Type	Indicates the type of health insurance plan. The valid values are: • Commercial • Medicare Affiliated
Start Date	Displays the date from when the policy plan is effective.
End Date	Displays the date till when the policy plan is effective.
Edit	On clicking the **Edit** (✎) icon, the **Plan** screen appears where you can edit the details of the policy plan.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can define a new policy plan by clicking the **Add** link in the upper-right corner of this zone. On clicking the **Broadcast** (📡) icon corresponding to a policy plan, the **Memberships** zone appears.

Note: Ideally, you define plans in a policy which is created using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**.

You can filter the list using various search criteria (such as, **Price Item**, **Plan Number**, and **Effective From**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper-right corner of this zone.

Memberships

The **Memberships** zone lists the memberships which are defined for the policy plan. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the membership is effective.
End Date	Displays the date till when the membership is effective.
Membership Information	Displays information about the membership. **Note:** It has a link. On clicking the link, the **Membership** screen appears where you can view the details of the respective membership.
Enrolled Members	Displays the number of members who have enrolled in the policy plan.
Status	Indicates the status of the membership. The valid values are: • Active • Inactive • Terminated
Membership Type	Indicates the type of membership. The valid values are: • COBRA • Medicare • Retiree
Benefits	On clicking the **Benefits** (🔗) icon, the **Benefit** screen appears where you can view the Membership benefits of the member persons who belong to the membership. **Note:** The **Benefits** icon appears when a Membership benefit is defined for a member person who belongs to the membership.
Membership ID	Displays the membership ID.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can define a new membership by clicking the **Add** link in the upper right corner of this zone.

Copyright © 2026, Oracle and/or its affiliates.

By default, the **Memberships** zone does not appear in the **Plan** tab. It appears when you click the **Broadcast** (📡) icon corresponding to the policy plan in the **Plans** zone.

You can filter the list using various search criteria (such as, **External Membership ID**, **Effective From**, **Person Name**, **Effective Till**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4632

Policy - Log

The **Log** tab contains the following zone:

- Policy Log on page 321

Policy Log

The **Policy Log** zone lists the complete trail of actions performed on the policy. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the policy.
Details	Displays the details about the action performed on the policy.
User	Indicates the user who has performed the action on the policy.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the policy. **Note:** It contains a link. On clicking the link, the screen appears where you can view the details of the respective related object.
Status Reason	Indicates the reason why the status of the policy is changed.

Note: You can manually add a log entry for the policy by clicking the **Add Log Entry** link in the upper right corner of the **Policy Log** zone.

Activating a Policy

Copyright © 2026, Oracle and/or its affiliates.

Procedure

To activate a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy that you want to activate.
   The **Policy** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Activate** button in the **Policy** zone.
   The status of the policy is changed to **In Force/Active**.

Note:

The **Activate** button appears only when a policy of the respective category is in either of the following status:

Policy Category	Status
Fully-Insured Group or Fully-Insured Individual	• Pending • Pending Termination
Self-Funded	• Pending

Editing a Policy

Prerequisites

To edit a policy, you should have:

- Values defined for the **C1-SourceSystemLookup** extendable lookup

  Note: This prerequisite is applicable only when you want to define a fully-insured group policy.
- Values defined for the **RUNOUT_ADM_OPT_FLG** lookup field

  Note: This prerequisite is applicable when you want to define a self-funded policy.

Procedure

To edit a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy whose details you want to edit.
   The **Policy** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Policy** zone.

Copyright © 2026, Oracle and/or its affiliates.

The **Policy** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the policy.
- **Persons** - Used to associate persons with the policy.
- **Characteristics** - Used to define the characteristics for the policy.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Information	Displays information about the policy.	Not applicable
Policy Type	Indicates the policy type using which the policy is defined.	Not applicable
Status	Indicates the status of the policy. The valid values are: • Pending • In Force/Active • Runout • Post Runout **Note:** This field appears when you are editing a policy which is created using a policy type where the policy category is set to **Self-Funded**.	Not applicable
Policy Number	Used to specify the policy number.	Yes
Description	Used to specify the description for the policy.	Yes
Source System	Used to indicate the external system from where the policy is originated. **Note:** This field appears when you are editing a policy which is created using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**.	Yes
Start Date	Used to specify the date from when the policy is effective. **Note:** The policy start date cannot be later than the policy end date. You cannot change the start date of a self-funded policy when it is in the **In Force/Active**, **Runout**, or **Post Runout** status.	Yes
End Date	Used to specify the date till when the policy is effective.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The policy end date cannot be earlier than the policy start date. You cannot change the end date when the self-funded policy is in the **Runout** status. You cannot set the end date of a self-funded policy to a date which is later than or equal to the start date of a pricing rule which is defined for the **Runout** status. You cannot change the end date when the policy is renewed.	
Runout End Date	Used to specify the date when the runout period of the self-funded policy ends. **Note:** This field appears when you are editing a policy which is created using a policy type where the policy category is set to **Self-Funded**. The runout end date cannot be earlier than or equal to the policy end date. The runout end date cannot be earlier than or equal to the system date when the policy is in the **Runout** status. You cannot remove the runout end date when the policy is in the **Runout** or **Post Runout** status. You cannot set the runout end date to a date which is later than or equal to the start date of a pricing rule which is defined for the **Post Runout** status. You cannot set the runout end date to a date which is earlier than the end date of a pricing rule which is defined for the **Runout** status.	No
Runout Administration Fees	Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are: • None • Percentage of Claim **Note:** At present, this field is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy. This field appears when you are editing a policy which is created using a policy type where the policy category is set to **Self-Funded**.	No
Advance Level Funding Eligibility	Indicates whether the self-funded policy is eligible for the advance billing feature of level funding.	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This is a read-only field. By default, the value is set to **No**. You can edit the advance level funding eligibility only through a health care inbound message. This field appears when you are defining a policy using a policy type where the policy category is set to **Self-Funded**.	
Advance Deposit Applicability	Used to indicate whether the advance deposit is applicable for the policy. **Note:** This field is required only when the advance deposit level of the respective policy holder (i.e., parent customer) is set to **POLI**. However, this field is not mandatory. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**.	No
Advance Deposit Amount	Used to specify the advance deposit amount. **Note:** You must specify a positive value in this field. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group** .	Yes (Conditional) **Note:** This field is required when the **Advance Deposit Applicability** option is selected.
Advance Deposit Grace Days	Used to specify the grace days. The system then uses the grace days to derive the grace period within which the advance deposit should be received from the group customer for the policy. While calculating the grace period, the system considers the policy start date as the grace start date. Once the grace start date is derived, the system calculates the grace end date (i.e., grace start date + grace days). For example, if a parent customer is the policy holder of the P1 policy (01-Jan-2022 to 31-Dec-2022) and advance deposit grace days is set to 6 days, then the system considers 01-Jan-2022 as the grace start date and sets the grace end date to 07-Jan-2022. **Note:** You must specify an integer value in this field. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**.	Yes (Conditional) **Note:** This field is required when the **Advance Deposit Applicability** option is selected.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Advance Deposit Account	Used to indicate the account of the parent customer where the advance deposit is parked for the policy. **Note:** This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**. You must specify an account with the account relationship type that is specified in the **Advance Deposit Account Relationship Type** attribute of the delinquency process preference. The system considers the delinquency process preference which is specified in the **Delinquency Process Field Mapping** option type of the **DELINPROC** feature configuration. For more information about the feature configuration, see Setting the DELINPROC Feature Configuration on page 4663. The **Search** (🔍) icon appears corresponding to the **Advance Deposit Account** field. On clicking the **Search** icon, the **Account Search** window appears.	Yes (Conditional) **Note:** This field is required when the **Advance Deposit Applicability** option is selected.

Note:

The **Edit** button appears when a policy of the respective category is in either of the following status:

Policy Category	Status
Fully-Insured Group or Fully-Insured Individual	• In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Terminated
Self-Funded	• In Force/Active • Pending • Runout

5. Modify the required details in the **Main** section.
6. Associate the persons with the policy, if required.

Note: While editing a policy, you must ensure that one person is associated as the main customer of the policy.

7. Define, edit, or remove characteristics of the policy, if required.
8. Click **Save**.
   The changes made to the policy are saved.

Initiating the Termination Process for a Fully-Insured Group Policy

Prerequisites

To initiate the termination process for a fully-insured group policy, you should have:

- Reasons defined for the **Terminated** status of the **C1-POLICY** business object in the **Status Reason** screen

Procedure

To initiate the termination process for a fully-insured group policy:

1. Search for the fully-insured group policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy for *w*hich you want to initiate the termination process.
   The **Policy** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Initiate Termination** button in the **Policy** zone.

   The **Termination Information** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Terminate Reason	Used to indicate the reason why you want to initiate the termination process for the fully-insured group policy.	Yes
Terminate Date	Used to specify the date when you want to terminate the policy. **Note:** The terminate date cannot be earlier than the policy start date or later than the policy end date.	Yes

Note: The **Initiate Termination** button appears when the fully-insured group policy is in the **In Force/Active** status.

5. Enter the required details in the **Termination Information** window.
6. Click **Save**.
   The status of the fully-insured group policy is changed to **Pending Termination**.

Terminating a Fully-Insured Group Policy

Prerequisites

To terminate a fully-insured group policy, you should have:

- Reasons defined for the **Terminated** status of the **C1-POLICY** business object in the **Status Reason** screen

Procedure

To terminate a fully-insured group policy:

1. Search for the fully-insured group policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy that you want to terminate.
   The **Policy** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Terminate** button in the **Policy** zone.

   The **Status Reason** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Terminate Reason	Used to indicate the reason why you want to terminate the fully-insured group policy.	No
Terminate Date	Used to specify the date to terminate the fully-insured group policy.	No

Note: The **Terminate** button appears when the fully-insured group policy is in the **In Force/Active**, **Pending Reinstatement**, or **Pending Termination** status.

5. Select the terminate reason from the respective field.
6. Click **Save**.
   The status of the policy is changed to **Terminated**.

Note: You cannot terminate a fully-insured group policy which is in the **Pending Termination** status when the terminate date is earlier than the system date.

Defining a Plan for a Fully-Insured Group Policy

Prerequisites

To define a plan for a fully-insured group policy, you should have:

- Policy plan business objects defined in the application
- Price items defined in the application

Procedure

To define a plan for a fully-insured group policy:

1. Search for the fully-insured group policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy for *w*hich you want to define a plan.
   The **Policy** screen appears.
3. Click the **Plan** tab.
   The **Plan** tab appears.
4. Click the **Add** link in the upper right corner of the **Plans** zone.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Plan Business Object	Used to indicate the business object using which you want to create a plan for a fully-insured group policy.	Yes

> **Tip:** Alternatively, you can access this screen by clicking the **Add** link in the upper right corner of the **Policy Plan** zone in the **Policy Plan** screen.

> **Note:** The **Select Business Object** screen appears when there are multiple policy plan business objects defined in the application. If there is only one policy plan business object defined in the application, the **Plan** screen appears.

5. Select the required policy plan business object from the respective field.
6. Click **OK**.

   The **Policy Plan** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details about the policy plan.
   - **Pricing Rule Types** - Used to associate the pricing rule types with the policy plan.
   - **Proration Rules** - Used to define the proration rules for the policy plan.
   - **Characteristics** - Used to define the characteristics for the policy plan.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Information	Indicates the fully-insured group policy for which you want to create the policy plan.	Not applicable
Price Item	Used to indicate the price item which you want to directly associate with the policy plan.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Price Item Search** window appears. On specifying the price item, the description of the price item appears corresponding to the **Price Item** field.	**Note:** You must either specify the price item or associate at least one pricing rule type with the policy plan.
Plan Number	Used to specify the plan number.	Yes
Plan Name	Used to specify the description for the policy plan.	No
Benefit Type	Used to indicate the type of health insurance plan. The valid values are: • Commercial • Medicare Affiliated	No
Start Date	Used to specify the date from when the policy plan is effective. **Note:** The policy plan start date cannot be earlier than the policy start date and later than the policy end date. The policy plan start date cannot be later than the policy plan end date.	Yes
End Date	Used to specify the date till when the policy plan is effective. **Note:** The policy plan end date cannot be earlier than the policy start date and later than the policy end date. The policy plan end date cannot be earlier than the policy plan start date.	No

7. Enter the required details in the **Main** section.
8. Associate the pricing rule types with the fully-insured group policy plan, if required.

> **Note:** You must associate at least one pricing rule type with the policy plan when the price item is not specified in the fully-insured group policy plan.

9. Define the proration rules for the fully-insured group policy plan, if required.
10. Define the characteristics for the fully-insured group policy plan, if required.
11. Click **Save**.
    The plan is defined for the fully-insured group policy.

Defining a Proration Rule for a Fully-Insured Group Policy Plan

Procedure

To define a proration rule for a fully-insured group policy plan:

1. Ensure that the **Proration Rules** section is expanded when you are defining or editing a fully-insured group policy plan.

   The **Proration Rules** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the proration rule is effective for the policy plan. **Note:** The system considers the latest proration rule and not the effective proration rule while prorating the membership premium. The effective date cannot be earlier than the plan start date and later than the plan end date.	Yes (Conditional) **Note:** This field is required when you are defining a proration rule for the policy plan.
Proration Event Type	Used to indicate the event when you want to prorate the membership premium. The valid values are: • **Enrollment** - Used when you want to prorate the membership premium on enrolling a member person. • **Termination** - Used when you want to prorate the membership premium on terminating a member person. • **New Born** - Used when you want to prorate the membership premium on enrolling a new born. • **Same Month Enrollment and Termination** - Used when you want to prorate the membership premium on enrolling and terminating a member person in the same month.	Yes (Conditional) **Note:** This field is required when you are defining a proration rule for the policy plan.
Proration Type	Used to indicate how you want to prorate the membership premium. The valid values are:	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Daily** - Used when you want to prorate the membership premium from the day the proration event has occurred. • **Mid-Month** - Used when you want to prorate the membership premium based on the proration date. The system calculates the proration date using the following formula: `Bill Period Start Date + Specified ' Number of Days` For example, if the bill period start date is 1st of every month and number of days is 15, then the proration date would be 15th of every month. If a member person is enrolled to the membership on or before the proration date, the system will charge the premium for the member person. However, if a member person is enrolled to the membership after the proration date, the system will not charge the premium for the member person. And, if a member person is terminated from the membership on or after the proration date, the system will charge the premium for the member person. However, if a member person is terminated from the membership before the proration date, the system will not charge the premium for the member person. • **Full Month** - Used when the premium for a member person should be charged when the member person is enrolled or terminated on the coverage start date or coverage end date, respectively. If a member person is enrolled or terminated within the coverage period, the system will not charge the premium for the member person.	**Note:** This field is required when you are defining a proration rule for the policy plan.
	• **Waiver** - Used when the premium for a member person should be waived off completely for the month when the member person is enrolled or terminated from the membership. • **Coverage Days** - Used when you want to prorate the premium for a member person based on the coverage days. If a member person is covered in the membership for a period less than the specified number of days, the system will not charge the premium for the member person. However, if a member person is covered in the membership for a period equal to or more than the specified number of days, the system will charge the premium for the member person. **Note:** You can use this proration type when the proration event is set to **Same Month Enrollment and Termination**.	
	• **Enrollment** - Used when you want to prorate the premium for a member person using the proration type of the enrollment event. **Note:** You can use this proration type when the proration event is set to **Same Month Enrollment and Termination**.	

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Termination** - Used when you want to prorate the premium for a member person using the proration type of the termination event. **Note:** You can use this proration type only when the proration event is set to **Same Month Enrollment and Termination**.	
Number of Days	Used to specify the number of days to determine the cutoff date.	Yes (Conditional) **Note:** This field is required when the proration type is set to **Mid-Month** or **Coverage Days**.

2. Enter the required details in the **Proration Rules** section.
3. If you want to define more than one proration rule for the fully-insured group policy plan, click the **Add** (+) icon and then *r*epeat step 2.

Note: However, if you want to remove a proration rule of the fully-insured group policy plan, click the **Delete** ( ) icon corresponding to the proration rule.

4. Click **Save**.
   The proration rules are defined for the fully-insured group policy plan.

Associating a Pricing Rule Type with a Fully-Insured Group Policy Plan

You can define a pricing rule using a pricing rule type for a fully-insured group policy plan when the pricing rule type is associated with the fully-insured group policy plan. You can associate a pricing rule type with a fully-insured group policy plan either from the user interface or through a health care inbound message.

Prerequisites

To associate a pricing rule type with a fully-insured group policy plan, you should have:

- Pricing rule types defined in the application (where the pricing rule type category is set to **Age Based**, **Tier Based**, or **Pass-Through Billable Charge**)

Procedure

To associate a pricing rule type with a fully-insured group policy plan:

1. Ensure that the **Pricing Rule Types** section is expanded when you are defining or editing a fully-insured group policy *p*lan.

   The **Pricing Rule Types** section contains the following field in a grid:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type that you want to associate with the fully-insured group policy plan. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Pricing Rule Type Search** window appears. On specifying the pricing rule type, the description of the pricing rule type appears corresponding to the **Pricing Rule Type** field. Here, you can only specify a pricing rule type where the pricing rule type category is set to **Age Based**, **Tier Based**, or **Pass-Through Billable Charge**.	Yes (Conditional) **Note:** You must either specify the price item or associate at least one pricing rule type with the policy plan.

2. Enter the required details in the **Pricing Rule Types** section.
3. If you want to associate more than one pricing rule type with the fully-insured group policy plan, click the **Add** (+) *i*con and then repeat step 2.

Note: However, if you want to dissociate a pricing rule type from the fully-insured group policy plan, click the **Delete** (🗑) icon corresponding to the pricing rule type.

4. Click **Save**.
   The pricing rule types are associated with the fully-insured group policy plan.

Defining a Characteristic for a Fully-Insured Group Policy Plan

Prerequisites

To define a characteristic for a fully-insured group policy plan, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Policy Plan**).

Procedure

To define a characteristic for a fully-insured group policy plan:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a fully-insured group policy *p*lan.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the fully-insured group policy plan.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The effective date cannot be earlier than the policy plan start date and later than the policy plan end date.	**Note:** This field is required when you are defining a characteristic for the fully-insured group policy plan.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Policy Plan**.	**Note:** This field is required when you are defining a characteristic for the fully-insured group policy plan.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the fully-insured group policy plan.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the fully-insured group policy plan, click the **Add** (+) icon and *t*hen repeat step 2.

Note: However, if you want to remove a characteristic from the fully-insured group policy plan, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the fully-insured group policy plan.

Editing a Plan of a Fully-Insured Group Policy

Prerequisites

To edit a plan of a fully-insured group policy, you should have:

- Price items defined in the application

Procedure

Copyright © 2026, Oracle and/or its affiliates.

To edit a plan of a fully-insured group policy:

1. Search for the fully-insured group policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy *w*hose details you want to edit.
   The **Policy** screen appears.
3. Click the **Plan** tab.
   The **Plan** tab appears.
4. In the **Plans** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the policy plan whose details *y*ou want to edit.

   The **Policy Plan** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details about the fully-insured group policy plan.
   - **Pricing Rule Types** - Used to associate the pricing rule types with the fully-insured group policy plan.
   - **Proration Rules** - Used to define the proration rules for the fully-insured group policy plan.
   - **Characteristics** - Used to define the characteristics for the fully-insured group policy plan.

   The **Main** section contains the following fields:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Plan Information	Displays information about the fully-insured group policy plan.	Not applicable
Policy Information	Indicates the fully-insured group policy for which the policy plan is created.	Not applicable
Price Item	Used to indicate the price item which you want to directly associate with the fully-insured group policy plan. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Price Item Search** window appears. On specifying the price item, the description of the price item appears corresponding to the **Price Item** field.	Yes (Conditional) **Note:** You must either specify the price item or associate at least one pricing rule type with the policy plan.
Plan Number	Used to specify the plan number.	Yes
Plan Name	Used to specify the description for the fully-insured group policy plan.	No
Benefit Type	Used to indicate the type of health insurance plan. The valid values are: • Commercial • Medicare Affiliated	No
Start Date	Used to specify the date from when the fully-insured group policy plan is effective.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The fully-insured group policy plan start date cannot be earlier than the policy start date and later than the policy end date. The fully-insured group policy plan start date cannot be later than the policy plan end date.	
End Date	Used to specify the date till when the fully-insured group policy plan is effective.	No
	Note: The fully-insured group policy plan end date cannot be earlier than the policy start date and later than the policy end date. The fully-insured group policy plan end date cannot be earlier than the policy plan start date.	

Tip: Alternatively, you can edit the details of a fully-insured group policy plan by clicking the **Edit** button in the **Policy Plan** zone of the **Policy Plan** screen.

5. Modify the required details in the **Main** section.
6. Associate the pricing rule types with the fully-insured group policy plan, if required.

Note: You must associate at least one pricing rule type with the policy plan when the price item is not specified in the fully-insured group policy plan.

7. Define, edit, or remove the proration rules of the fully-insured group policy plan, if required.
8. Define, edit, or remove characteristics of the fully-insured group policy plan, if required.
9. Click **Save**.
   The changes made to the fully-insured group policy plan are saved.

Policy Plan (Used for Viewing)

The **Policy Plan** screen allows you to:

- View the details of a fully-insured group policy plan
- View the characteristics of a fully-insured group policy plan
- Add and edit a fully-insured group policy plan
- Add a membership to a fully-insured group policy plan

It contains the following zones:

- Policy Plan on page 343
- Plan Characteristics on page 345
- Memberships on page 320

Policy Plan

The **Policy Plan** zone displays the details of the policy plan. It contains the following sections:

- **Main** - Displays the basic information about the policy plan. It contains the following fields:

Field Name	Field Description
Plan Information	Displays information about the policy plan.
Policy Information	Displays information about the policy. **Note:** It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the respective policy.
Price Item Information	Indicates the price item to which the policy plan is directly associated. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the respective price item.
Plan Number	Displays the plan number.
Plan Name	Displays the description of the policy plan.
Benefit Type	Indicates the type of health insurance plan. The valid values are: • Commercial • Medicare Affiliated

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the benefit type is set to **COBRA** or **Medicare Affiliated**.
Start Date	Displays the date from when the policy plan is effective.
End Date	Displays the date till when the policy plan is effective.

- **Pricing Rule Types** - Lists the pricing rule types which are associated with the policy plan. It contains the following column:

Column Name	Column Description
Pricing Rule Type	Indicates the pricing rule type which is associated with the policy plan.
	Note: It has a link. On clicking the link, the **Pricing Rule Type** screen appears where you can view the details of the respective pricing rule type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the policy plan.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the policy plan is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

- **Proration Rules** - Lists the proration rules defined for the policy plan. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the proration rule is effective for the policy plan.
Proration Event Type	Indicates the event when the membership premium should be prorated. The valid values are: • Enrollment • Termination • New Born • Same Month Enrollment and Termination
Proration Type	Indicates how the membership premium should be prorated. The valid values are: • Daily • Mid-Month • Full Month • Waiver • Coverage Days • Enrollment • Termination

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Number of Days	Displays the number of days using which the cutoff date is calculated. **Note:** The data appears in this column when the proration type is set to **Mid-Month** or **Coverage Days**.
Membership Type	Indicates the type of membership. The valid values are: • COBRA • Medicare • Retiree

You can define a new policy plan by clicking the **Add** link in the upper right corner of this zone.

Plan Characteristics

The **Plan Characteristics** zone lists the characteristics of the fully-insured group policy plan. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the policy plan.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value. **Note:** The data appears in this column when the type of characteristic value is set to **Predefined Value**.

You can filter the list using the **Effective Date** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Memberships

The **Memberships** zone lists the memberships which are defined for the policy plan. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the membership is effective.
End Date	Displays the date till when the membership is effective.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Membership Information	Displays information about the membership. **Note:** It has a link. On clicking the link, the **Membership** screen appears where you can view the details of the respective membership.
Enrolled Members	Displays the number of members who have enrolled in the policy plan.
Status	Indicates the status of the membership. The valid values are: • Active • Inactive • Terminated
Membership Type	Indicates the type of membership. The valid values are: • COBRA • Medicare • Retiree
Benefits	On clicking the **Benefits** (🔗) icon, the **Benefit** screen appears where you can view the Membership benefits of the member persons who belong to the membership. **Note:** The **Benefits** icon appears when a Membership benefit is defined for a member person who belongs to the membership.
Membership ID	Displays the membership ID.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can define a new membership by clicking the **Add** link in the upper right corner of this zone.

By default, the **Memberships** zone does not appear in the **Plan** tab. It appears when you click the **Broadcast** (📡) icon corresponding to the policy plan in the **Plans** zone.

You can filter the list using various search criteria (such as, **External Membership ID**, **Effective From**, **Person Name**, **Effective Till**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4632

Membership (Used for Searching)

The **Membership** screen allows you to search for an individual or group membership using various search criteria. It also allows you to define an individual or group membership. It contains the following zone:

- Search Membership on page 350

Through this screen, you can navigate to the following screen:

- Membership (Used for Viewing) on page 362

Search Membership

The **Search Membership** zone allows you to search for a fully-insured individual or group membership using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Search By	Used to indicate whether you want to search for a membership using the membership, policy plan, member person, or health plan details. The valid values are: • Membership Details • Policy Plan Details • Person Details • Health Plan Details **Note:** By default, **Membership Details** option is selected.	No
Membership ID	Used to search a particular membership. **Note:** This field appears when the **Membership Details** option is selected from the **Search By** list.	No
External Membership ID	Used to search a membership with a particular external membership ID. **Note:** This field appears when the **Membership Details** option is selected from the **Search By** list.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to search memberships which are effective from a particular date onwards. **Note:** This field appears when the **Membership Details** option is selected from the **Search By** list.	No
End Date	Used to search memberships which are effective till a particular date. **Note:** This field appears when the **Membership Details** option is selected from the **Search By** list.	No
Status	Used to search memberships with a particular status. The valid values are: • Active • Canceled • Draft • Pending Effectuation • Terminated **Note:** This field appears when the **Membership Details** option is selected from the **Search By** list.	No
Membership Type	Used to search memberships of a particular type. The valid values are: • COBRA • Medicare • Retiree **Note:** If you want to search for an active employee coverage membership, you must leave this field blank. This field appears when the **Membership Details** or **Policy Plan Details** or **Person Details**, or **Health Plan Details** option is selected from the **Search By** list.	No
Benefit Type	Used to search memberships where a member person has availed for a particular type of benefit. The valid values are: • Commercial • Medicare Affiliated **Note:** This field appears when the **Membership Details** or **Person Details** option is selected from the **Search By** list.	No
Benefit Sub Type	Used to search memberships where a member person has availed for a particular membership benefit.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Membership Details** or **Person Details** option is selected from the **Search By** list. The list includes only those benefit types which are defined through the **Benefit Sub Type** screen.	
Membership Identifier Type	Used to search memberships which are associated with a membership identifier type. **Note:** This field appears when the **Membership Details** option is selected from the **Search By** list. You can only search individual memberships, if you are specifying the membership identifier type.	Yes (Conditional) **Note:** This field is required when you are searching for a membership using a membership identifier type.
Membership Identifier	Used to search memberships with a particular identifier. **Note:** This field appears when the **Membership Details** option is selected from the **Search By** list. You can only search individual memberships, if you are specifying the membership identifier.	Yes (Conditional) **Note:** This field is required when you are searching for a membership using a membership identifier.
Rate Guarantee Start Date	Used to specify the date from when the rate guarantee is available for the individual membership. **Note:** This field appears when the **Membership Details** or **Health Plan Details** option is selected from the **Search By** list.	Yes
Rate Guarantee End Date	Used to specify the date till when the rate guarantee is available for the individual membership. **Note:** This field appears when the **Membership Details** or **Health Plan Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This data is required if you have specified the rate guarantee start date while defining the individual membership.
Late Setup	Used to indicate whether the member person details should be included in an individual or group membership once the membership is created. **Note:** This field appears when the **Membership Details** or **Policy Plan Details** or **Health Plan Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This field is required to provide premium waiver to the member person if required.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to search memberships for which a particular characteristic type is defined. **Note:** This field appears when the **Membership Details** or **Person Details** option is selected from the **Search By** list. The list includes only those characteristic types where the characteristic entity is set to **Membership**.	Yes (Conditional) **Note:** This field is required when you are searching for a membership using a characteristic.
Characteristic Value	Used to search memberships with a particular characteristic value. **Note:** This field appears when the characteristic type is selected. If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are searching for a membership using a characteristic.
Policy ID	Used to search memberships which belong to the plans of a particular policy. **Note:** The **Search**(🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Policy Search** window appears. This field appears when the **Policy Plan Details** option is selected from the **Search By** list.	No
Price Item	Used to search memberships of a particular plan which is directly associated with price item. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Price Item Search** window appears. This field appears when the **Policy Plan Details** option is selected from the **Search By** list.	No
Plan ID	Used to search memberships of a particular plan.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Policy Plan Search** window appears. This field appears when the **Policy Plan Details** option is selected from the **Search By** list.	
Person Name	Used to search memberships with a particular member person. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	No
Relationship Type	Used to search memberships where the member person is related to the main subscriber. **Note:** This field appears only when the **Person Details** option is selected from the **Search By** list. The list includes only those contract relationship types which are already defined in the system.	No
Person Identifier Type	Used to search memberships which are associated with a person identifier type. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	No
Person Identifier	Used to search memberships with a particular person identifier. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	No
Health Plan	Used to search memberships associated with a particular health plan. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Health Plan Search** window appears. This field appears when the **Health Plan Details** option is selected from the **Search By** list. You can only search the individual memberships, if you are specifying a health plan.	No

Note: You must specify at least one search criteria while searching for a membership.

Searching for a Membership

Prerequisites

To search for a membership, you should have:

- Membership types, membership identifier, and membership identifier types defined in the application
- Health plan defined in the application

> **Note:** You must define a health plan only when you want to search individual memberships.

- Benefit types and benefit sub types defined in the application
- Person, person identifier, and person identifier types defined in the application
- Price item, policy, and policy plan defined in the application
- Contract relationship types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Membership**)

Procedure

To search for a membership:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Membership**.
   A sub-menu appears.
3. Click the **Search** option from the **Membership** sub-menu
   The **Membership** screen appears.
4. Enter the search criteria in the **Search Membership** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of memberships that meet the search criteria appears in the **Search Results** section.

Defining a Membership for a Fully-Insured Group Policy Plan

Prerequisites

To define a membership for a fully-insured group policy plan, you should have:

- Policy and policy plan defined in the application.
- Person, person identifier, and person identifier types defined in the application.
- Characteristic types where the characteristic entity is set to **Policy Plan** and **Membership Person**.
- Membership and membership identifier types defined in the application.
- Values defined for the **MEMBERSHIP_TYPE_FLG** lookup field.
- Contract relationship types defined in the application.

Procedure

To define a membership for a fully-insured group policy plan:

1. Do either of the following:

If you want to...	**Then...**
Define a membership for a fully-insured group policy plan from the Policy screen	**a.** Search for the fully-insured group policy in the **Policy** screen. **b.** In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy *w*hose details you want to edit. The **Policy** screen appears. **c.** Click the **Plan** tab. The **Plan** tab appears. **d.** In the **Plans** zone, click the **Broadcast** (ᯤ) icon corresponding to the policy plan for which you want to define a membership. The **Memberships** zone appears. **e.** Click the **Add** link in the upper right corner of the **Memberships** zone.
Define a membership for a fully-insured group policy plan from the Membership screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Customer Management** and then click **Membership**. A sub menu appears. **c.** Click the **Add** option from the **Membership** sub-menu.

Copyright © 2026, Oracle and/or its affiliates.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Membership Business Object	Used to indicate the business object using which you want to create a fully-insured individual membership or fully-insured group membership.	Yes

Note: The **Select Business Object** screen appears when there are multiple membership business objects defined in the application. If there is only one membership business object defined in the application, the **Membership** screen appears.

The **Membership** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the membership.
- **Membership Identifiers** - Used to define the identifiers for the membership.
- **Characteristics** - Used to define the characteristics for the membership.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Plan Information	Used to indicate the fully-insured group policy plan for which you want to create the membership. **Note:** The **Search**(🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Policy Plan Search** window appears. On specifying the policy plan, the description of the policy plan appears corresponding to the **Plan Information** field. If you are defining a membership for a fully-insured group policy plan through the **Plan** tab, then the respective plan ID associated with the fully-insured group policy appears in the **Plan Information** field.	Yes
Start Date	Used to specify the date from when the membership is effective for a fully-insured group policy plan. **Note:** The membership start date cannot be later than the membership end date. The membership start date cannot be earlier than the policy plan start date or later than policy plan end date.	Yes
End Date	Used to specify the date till when the membership is effective for a fully-insured group policy plan.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The membership end date cannot be earlier than the membership start date. The membership end date cannot be earlier than the policy plan start date or later than policy plan end date.	
Membership Type	Used to indicate the type of membership. The valid values are: • COBRA • Medicare • Retiree **Note:** If you want to define an active employee coverage membership, you must leave this field blank.	No
Main Subscriber	Used to indicate the person who is the main subscriber of the membership. **Note:** The **Search**(🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Person Search** window appears. On specifying the person, the description of the person appears corresponding to the **Main Subscriber** field.	Yes
Relationship Type	Used to indicate how the main subscriber is related to the membership.	No
External Membership ID	Used to specify the external membership ID. **Note:** Here, you need to specify a membership ID which is maintained in the external source system.	No

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Membership** screen.

2. Enter the required details in the **Main** section.
3. Define characteristics for the membership, if required.
4. Click the **Save**.
   The membership is defined for the fully-insured group policy plan. The status of the membership and the main subscriber is set to **Active**.

Defining a Characteristic for a Membership

Prerequisites

To define a characteristic for a membership, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Membership**)

Procedure

To define a characteristic for a membership:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a membership.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the membership. **Note:** The effective date cannot be earlier than the membership start date and later than the membership end date.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the membership.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Membership**	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the membership.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the membership.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the membership, click the **Add** (+) icon and then *r*epeat step 2.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** However, if you want to remove a characteristic from the membership, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the membership.

Membership (Used for Viewing)

The **Membership** screen allows you to:

- View the details of a membership
- Edit the details of a membership
- Inactivate a membership
- Inactivate a member person
- Add or remove a person from a membership
- View the other plans of the main subscriber
- Associate or disassociate a contract from a membership
- View the billable charges created for a membership
- View the bill segments generated for a membership billable charge
- View the timeline details of a membership billable charge
- Viewing the pricing calculation details of a timeline
- View the log of a membership
- Add a log entry for a membership

It consists of the following tabs:

- Membership - Main on page 362
- Membership - Charges on page 369
- Membership - Log on page 380

Membership - Main

The **Main** tab displays information about the membership. It also lists the persons which are included in the membership and other plans (within or across policies) where the main subscriber is associated. It contains the following zones:

- Membership on page 363
- Membership Characteristics on page 367
- Member Persons on page 367
- Member Person Characteristics on page 368
- Other Plans of Main Subscriber on page 369

Copyright © 2026, Oracle and/or its affiliates.

Membership

The **Membership** zone displays the details of the membership. It contains the following sections:

- **Main** - Displays basic information about the membership. It contains the following fields:

Field Name	Field Description
Membership	Displays information about the membership.
Health Plan	Displays the health plan for which the main subscriber has enrolled.
	Note: It has a link. On clicking the link, the **Health Plan 360° Information** screen appears where you can view the details of the respective health plan. This field appears only when a membership is created using the **Individual Membership (C1-IndividualMembership)** business object.
Policy Information	Displays information about the policy.
	Note: It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the respective policy.
Plan Information	Displays the policy plan for which the membership is defined.
	Note: It has a link. On clicking the link, the **Policy Plan** screen appears where you can view the details of the respective policy plan.
Status	Indicates the status of the membership. The valid values are: • Active • Canceled • Draft • Pending Effectuation • Terminated
Start Date	Displays the date from when the membership is effective.
End Date	Displays the date till when the membership is effective.
Membership Type	Indicates the type of membership. The valid values are: • COBRA • Medicare • Retiree
External Membership ID	Displays the corresponding membership ID which is maintained in the external source system.
Paid Through Date	Indicates the term end date of the last fully or partially paid term. The system considers the term to be fully paid when the threshold limit is met.

Copyright © 2026, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th></tr>
<tr><td></td><td>
Note:
This field appears when the paid through date is calculated at the membership level.
The paid through date is calculated while freezing or canceling a payment or adjustment depending on whether the required algorithm is attached to the respective system event:
<table>
<tr><th>Entity</th><th>System Event</th><th>Algorithm</th></tr>
<tr><td>Customer Class</td><td>Payment Freeze</td><td>C1-PSPTDCAL</td></tr>
<tr><td>Customer Class</td><td>Payment Cancellation</td><td>C1-PXPTDCAL</td></tr>
<tr><td>Adjustment Type</td><td>Adjustment Freeze</td><td>C1-ADPTDCAL</td></tr>
<tr><td>Adjustment Type</td><td>Adjustment Cancellation</td><td>C1-AXPTDCAL</td></tr>
</table>
The following table indicates when the paid through date is calculated at the policy and/or membership level:
<table>
<tr><th>If the Paid Through Date Calculation Level parameter is set to…</th><th>If the following characteristics are defined for the bill charge or adjustment…</th><th>Then…</th></tr>
<tr><td>P</td><td>C1-POLID</td><td>Paid through date is calculated at the policy level</td></tr>
<tr><td>P</td><td>C1-MPID</td><td>Paid through date is calculated at the policy level</td></tr>
<tr><td>P</td><td>C1-POLID and C1-MPID</td><td>Paid through date is calculated at the policy level</td></tr>
<tr><td>M</td><td>C1-POLID</td><td>Paid through date is not calculated at the membership level</td></tr>
<tr><td>M</td><td>C1-MPID</td><td>Paid through date is calculated at the membership level</td></tr>
<tr><td>M</td><td>C1-POLID and C1-MPID</td><td>Paid through date is calculated at the membership level</td></tr>
<tr><td>P, M</td><td>C1-POLID</td><td>Paid through date is calculated at the policy level</td></tr>
<tr><td>P, M</td><td>C1-MPID</td><td>Paid through date is calculated at both the policy and membership levels</td></tr>
<tr><td>P, M</td><td>C1-POLID and C1-MPID</td><td>Paid through date is calculated at both the policy and membership levels</td></tr>
</table>
</td></tr>
</table>

Field Name	Field Description
Automatic Renewal	Indicates whether the individual membership should be automatically renewed or not. **Note:** This field appears only when a membership is created using the **Individual Membership (C1-IndividualMembership)** business object.
Exchange	Indicates whether the individual membership is purchased from the exchange. The valid values are • On • Off **Note:** This field appears only when a membership is created using the **Individual Membership (C1-IndividualMembership)** business object.
Exchange ID	Displays the identification number of the exchange from where the individual membership is purchased. **Note:** This field appears only when a membership is created using the **Individual Membership (C1-IndividualMembership)** business object.
Renewal Period	Displays the period (i.e. number of months) for which you want to automatically renew the individual membership. **Note:** This field appears only when a membership is created using the **Individual Membership (C1-IndividualMembership)** business object.
Reprice After Date	Displays the date after which repricing must take place for the individual membership. **Note:** This field appears only when a membership is created using the **Individual Membership (C1-IndividualMembership)** business object.
Status Reason	Indicates the reason why the status of the individual membership is changed. **Note:** This field appears only when a membership is created using the **Individual Membership (C1-IndividualMembership)** business object.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the membership. **Note:** The **Edit** button appears when the membership is in the **Active**, **Canceled**, or **Terminated** status.
Inactivate	Used to inactivate the membership.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the membership is created. In addition, this column has a context menu which helps in navigating to other screens in the application.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the membership status is updated
Create Date/Time	Displays the date and time when the membership is created.

- **Associated Membership** - This section displays the another individual membership that is associated with the individual membership for the add-on health insurance plan. This section contains the following fields:

Field Name	Field Description
Membership Identifier Type	Displays the membership identifier type of the associated individual membership.
Membership Identifier	Displays the membership identifier value of the associated individual membership.

Note: This section appears when you are viewing the details of an individual membership.

- **Binder Payment Details** - This section displays the binder payment details for an individual membership. This section contains the following fields:

Field Name	Field Description
Binder Payment Applicability	Indicates whether the binder payment is received or not before activating the individual membership.
Grace Days	Displays the grace date that is calculated for the individual membership.
Threshold Percentage	Displays the threshold percentage using which the threshold amount is calculated.
Binder Liability Amount	Displays the binder liability amount.
Threshold Amount	Displays the amount which is calculated for the binder payment using the binder liability amount and threshold percentage.
Hold Billing	Indicates whether you want to hold the bill generation process for the individual membership until the binder payment is received.

Note: This section appears when you are viewing the details of an individual membership.

- **Membership Identifiers** - This section contains the following fields:

Column Name	Column Description
Membership Identifier Type	Displays the membership identifier type.
Membership Identifier	Displays the value of the membership identifier.

Membership Characteristics

The **Membership Characteristics** zone lists the characteristics of the membership. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the membership.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value. **Note:** The data appears in this column when the type of characteristic value is set to **Predefined Value**.

You can filter the list using the **Effective Date** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Member Persons

The **Member Persons** zone lists the persons who are added to the membership. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the person is added to the membership.
End Date	Displays the date till when the person is added to the membership.
Person	Indicates the person who is added to the membership. In addition, it has the context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person.
Relationship Type	Indicates how the person is related to the main subscriber.
Main Subscriber	Indicates whether the person is the main subscriber of the membership. The valid values are: • Yes • No
Financially Responsible	Indicates whether the person is financially responsible for the membership. The valid values are: • Yes • No
Status	Indicates the status of the person in the membership. The valid values are: • Active • Inactive • Canceled • Pending Effectuation
Status Reason	Indicates the reason why the status of the member person is changed.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: This field appears only when a membership is created using the **Individual Membership** (i.e.,**C1-IndividualMembership**) business object.
Member	Indicates the identity of the person in the membership. The valid values are: • Yes • No
External Medicare Beneficiary ID	Displays the medicare beneficiary identifier of the person who has availed the membership benefit.
Date of Birth	Displays the date when the person was born.
Edit	On clicking the **Edit** (✎) icon, the **Member Person** screen appears where you can edit the membership details of the respective person.

Note:

By default, the **Member Persons** zone displays those member persons which are in **Active** status.

You can add a person to the membership by clicking the **Add Person** link in the upper right corner of this zone.

On clicking the **Broadcast** (📡) icon corresponding to a member person, the **Member Person Characteristics** zone appears where you can view the characteristics of the respective member person.

You can filter the list using various search criteria (such as, **Status** and **Status Reason**) available in the Filter area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4632.

Membership - Charges

The **Charges** tab lists the following:

Copyright © 2026, Oracle and/or its affiliates.

- Contracts associated with the membership
- Billable charges created for the membership
- Bill segments generated for each billable charge
- Timeline generated for each billable charge
- Premium calculated for each eligible member person when an age based pricing is used during the membership premium calculation
- Premium calculated for the membership when a tier based pricing is used during the membership premium calculation
- Sponsor Billable Charges created for the membership
- Sponsor Bill Segment Details generated for each sponsor billable charge
- Timeline Details generated for each Sponsor Billable Charge
- Premium calculated for each member based on sponsor pricing details

It contains the following zones:

- Membership Contracts on page 370
- Billable Charges on page 371
- Bill Segment Details on page 372
- Billable Charge Timeline Details on page 373
- Pricing Calculation Details on page 374

Membership Contracts

The **Membership Contracts** zone lists the contracts which are associated with the membership. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the contract is associated with the membership.
End Date	Displays the date till when the contract is associated with the membership.
Bill To	Indicates the entity against whom the corresponding charges are billed. The valid values are: • Federal • State • Group • Individual
Contract ID	Displays the contract ID. **Note:** It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.
Account Information	Indicates the account for which the contract is created. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Delete	On clicking the **Delete** (🗑) icon, you can disassociate the contract from the membership.
Edit	On clicking the **Edit** (✎) icon, the **Associate Contract with Membership** screen appears where you can edit the contract association details of the membership.

Copyright © 2026, Oracle and/or its affiliates.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can associate a contract with the membership by clicking the **Add Contract** link in the upper-right corner of this zone.

You can filter the list using the **Bill To** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper-right corner of this zone.

Pricing Calculation Details

The **Pricing Calculation Details** zone indicates how the amount is calculated for the timeline. If the age based pricing is used during the membership premium calculation, this zone lists the premium calculated for each eligible member of the membership. It also displays the base fee and modifier fee which are applicable for each eligible member. However, if the tier based pricing is used during the membership premium calculation, this zone lists the premium calculated at the membership level. It contains the following columns:

Column Name	Column Description
Entity Information	If the age based pricing is used during the membership premium calculation, this column indicates the eligible member for whom the premium amount is calculated. However, if the tier based pricing is used during the membership premium calculation, this column indicates the main subscriber of the membership.
Description on Bill	Displays the description of the rate component for which the price component is created in the age based or tier based pricing.
Pricing Parameter	Indicates the pricing eligibility criteria which is satisfied while deriving the base fee.
Amount	Displays the base fee or applicable modifier fee.
Proration Factor	Indicates the proration factor which is derived using the proration rules defined for the fully-insured group policy plan. **Note:** The data appears in this column when the proration rule for the respective event is defined for the fully-insured group policy plan.
Distributed Amount	Displays the premium amount which is calculated for the non-skip billing periods.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: The data appears in this column when the **9/10 Billing (Skip Months)** feature is enabled for the account. If the age based pricing is used during the membership premium calculation, this column displays the distributed amount for the eligible member. However, if the tier based pricing is used during the membership premium calculation, this column displays the distributed amount for the membership.
No. of Billing Periods	Indicates the number of the non-skip billing periods of the account.
	Note: The data appears in this column when the **9/10 Billing (Skip Months)** feature is enabled for the account.
Total Contract Period Amount	Displays the premium which should be paid for the entire contract period (in other words, total premium for the skip and non-skip billing periods).
	Note: The data appears in this column when the **9/10 Billing (Skip Months)** feature is enabled for the account. If the age based pricing is used during the membership premium calculation, this column displays the total contract period amount for the eligible member. However, if the tier based pricing is used during the membership premium calculation, this column displays the total contract period amount for the membership.
Comments	Displays additional information about the premium calculation for an eligible member.
Total Amount	If the age based pricing is used during the membership premium calculation, this column displays the sum total of the base fee and modifier fee (if any) for the eligible member. However, if the tier based pricing is used during the membership premium calculation, this column displays the base fee applicable for the membership.

By default, the **Pricing Calculation Details** zone does not appear in the **Charges** tab of the **Membership** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a timeline in the **Billable Charge Timeline Details** zone.

Editing a Membership of a Fully-Insured Group Policy Plan

Procedure

To edit a membership of a fully-insured group policy plan:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the *m*embership whose details you want to edit.
   The **Membership** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Membership** zone.

   The **Membership** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details about the membership.
   - **Characteristics** - Used to define the characteristics for the membership.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Membership Information	Displays information about the membership.	Not applicable
Policy Information	Displays information about the policy.	Not applicable
Plan Information	Indicates the policy plan for which the membership is defined.	Not applicable
Start Date	Used to specify the date from when the membership is effective for a fully-insured group policy plan. **Note:** The membership start date cannot be later than the membership end date. The membership start date cannot be earlier than the policy plan start date or later than policy plan end date.	Yes
End Date	Used to specify the date till when the membership is effective for a fully-insured group policy plan. **Note:** The membership end date cannot be earlier than the membership start date. The membership end date cannot be earlier than the policy plan start date or later than policy plan end date.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Membership Type	Used to indicate the type of membership. The valid values are: • COBRA • Medicare • Retiree	No
External Membership ID	Used to specify the external membership ID. **Note:** Here, you need to specify a membership ID which is maintained in the external source system.	No

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the membership, if required.
7. Click **Save**.
   The changes made to the membership are saved.

Adding a Person to a Membership

The system enables you to add a member person to a membership when the membership is in the **Active** status. However, you can only add a member person in the **Active** status and not in the **Inactive** status.

Prerequisites

To add a person to a membership, you should have:

- Required persons defined in the application
- Contract relationship types defined in the application

Procedure

To add a person to a membership:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the *m*embership to which you want to add a person.
   The **Membership** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Add Person** link in the upper right corner of the **Member Persons** zone.

   The **Member Person** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic membership details of the person.
   - **Characteristics** - Used to define the characteristics for the member person.

Copyright © 2026, Oracle and/or its affiliates.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Membership Information	Indicates the membership to which you want to add a person.	Not applicable
Person ID	Used to indicate the person whom you want to add to the membership. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Person Search** window appears.	Yes
Relationship Type	Used to indicate how the person is related to the main subscriber. **Note:** The list includes only those contract relationship types which are already defined in the system.	Yes
Financially Responsible	Used to indicate whether the person is financially responsible for the membership.	No
Main Subscriber	Used to indicate whether the person is the main subscriber of the membership.	No
Member	Used to indicate whether the person is a member or a non-member in the membership.	No
Start Date	Used to specify the date from when you want to add the person to the membership. **Note:** The member person start date cannot be later than the member person end date. The member person start date cannot be earlier than the membership start date or later than the membership end date.	Yes
End Date	Used to specify the date till when you want to add the person to the membership. **Note:** The member person end date cannot be earlier than the member person start date. The member person end date cannot be earlier than the membership start date or later than the membership end date.	No
External Medicare Beneficiary ID	Used to specify the medicare beneficiary identifier of the person who has availed the medicare benefit.	No
Member Person Status	Used to indicate the status of the person in the membership. The valid values are: • Active • Inactive • Canceled	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Pending Effectuation **Note:** By default, the **Active** option is selected.	

5. Enter the required details in the **Main** section.
6. Define the characteristics for the member person, if required.
7. Click **Save**.
   The person is added to the membership.

Defining a Characteristic for a Member Person

Prerequisites

To define a characteristic for a member person, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Membership Person**)

Procedure

To define a characteristic for a member person:

1. Ensure that the **Characteristics** section is expanded when you are adding a person to a membership or editing *t*he membership details of a person.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to indicate the date from when the characteristic is effective for the member person.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the member person.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Membership Person**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the member person.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the member person.
Description	Used to specify the description for the characteristic value.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the member person.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the member person, click the **Add** (+) icon and then *r*epeat step *2*.

Note: However, if you want to remove a characteristic from the member person, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the member person.

Inactivating a Member Person

The system enables you to inactivate a member person of a membership. If the member person is the main subscriber, the system automatically inactivates the membership and all other member persons which are included in the membership. It also does the following:

- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO_STATUS_CD** column corresponding to the record in the **C1_AUDIT_EVENT**, **C1_AUDIT_EVENT_LOG**, and **CI_PRCE_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_ENTITY_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_REQ_DTL** table is set to **COMPLETE**.

Procedure

Copyright © 2026, Oracle and/or its affiliates.

To inactivate a member person of a membership:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the *m*embership whose details you want to edit.
   The **Membership** screen appears.
3. Ensure that the **Main** tab is selected.
4. In the **Member Persons** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the member *p*erson whom you want to inactivate.
   The **Add/Edit Member Person** screen appears.
5. Select the **Inactive** option from the **Membership Person Status** list.
   The status of the member person is changed to **Inactive**.

Associating a Contract with a Membership

Prerequisites

To associate a contract with a membership, you should have:

- Contracts defined in the application
- Values defined for the **BILL_TO_TYPE_FLG** lookup field

Procedure

To associate a contract with a membership:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the *m*embership to which you want to associate a contract.
   The **Membership** screen appears.
3. Click the **Contracts and Charges** tab.
   The **Contracts and Charges** tab appears.
4. Click the **Add Contract** link in the upper right corner of the **Membership Contracts** zone.

   The **Associate Contract with Membership** screen appears. It contains the following section:

   - **Main** - Used to associate a contract with the membership. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Membership Information	Indicates the membership to which you want to associate a contract.	Not applicable
Contract ID	Used to indicate the contract that you want to associate with the membership. **Note:** The **Search** (🔍) icon appears corresponding to the **Contract ID** field. On clicking the **Search** icon, the **Contract Search** window appears.	Yes
Bill To	Used to indicate the entity against whom the corresponding charges should be billed. The valid values are: • Federal • State • Group • Individual **Note:** You cannot associate multiple contracts with the membership using the same bill to option. For example, you cannot associate C1 and C2 with M1 by selecting the **Group** option from the **Bill To** field.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when you want to associate the contract with the membership. **Note:** The start date cannot be later than end date. The start date cannot be earlier than the membership start date or later than the membership end date.	Yes
End Date	Used to specify the date till when you want to associate the contract with the membership. **Note:** The end date cannot be earlier than the start date. The end date cannot be earlier than the membership start date or later than the membership end date.	No

5. Enter the required details in the **Main** section.
6. Click **Save**.
   The contract is associated with the membership.

Late Payment Charges

In Oracle Revenue Management and Billing, the **Late Payment Charges (LPC)** are calculated and applied to the eligible accounts based on the customer class configuration and/or policy settings. The ORMB system offers the following mechanisms:

- Identification and calculation of the overdue or delinquent bills.
- Deployment of the correct late payment charge rate based on the configuration.
- Billable charge generation for late payment charges.

The system introduces an account-level characteristics to define the eligibility of the late payment charges. Additionally, the system also provides enough flexibility to conduct daily prorated late payment charge calculation which can be aggregated monthly or can retain the existing functionality of calculating the unpaid amount for the entire month regardless of the unpaid days. Note that subsequent bills can also include previously billed late payment charge fees.

The following features are introduced in this release:

- Account exclusion feature from the late payment charge calculation.
- Overriding of grace days at algorithm and account level.
- Overriding of late payment charge calculation method at account level.

Copyright © 2026, Oracle and/or its affiliates.

- The late payment charge is calculated on daily basis using a global default annual rate of 12% which is bound to vary; therefore, the daily rate is calculated using the following formula:
  - Daily Rate = 12% Annual Late Payment Charge / Number of Days in a Year
- Provision for a customer specific late payment charge rate (either higher or lower than the default) is aligned with the specific contractual agreements.
- Daily accumulation of interest on the unpaid balance, starting the day, following the due date, and continuing until the complete payment takes place.
- Late payment charge calculations are based on specific late payment charge calculation date, using the effective late payment charge rates, which are either set at the global or policy level.
- In a scenario where the late payment charge is imposed, subsequent payment analysis showed that payment date came before the bill due date, making it evident that a manual adjustment is essential to reverse the late payment charge.
- When an unpaid bill subjected to the late payment charge is canceled, then the previously applied late payment charge must be reversed through manual adjustments.

Note: The **Late Payment Charges (LPC)** functionality must be enabled at the customer class level.

To implement this feature, following changes are made to the system:

- A new business object named **C1-LatePaymentCharge** is introduced in this release.
- A new batch named **C1-CRELP** is introduced in this release.
- A new feature configuration named **C1-LPCCALC** is introduced in this release.
- A new lookup named **LPCC_OPT_TYP_FLG** is introduced in this release.
- A new characteristic named **C1-LPCCM** is introduced in this release.
- The following algorithms are introduced in this release:
  - C1-LPIODB
  - C1-LPCALC
  - C1-LPCC
  - C1-BCLPC
  - C1-BLPCD

The system also provides the ability to setup the configuration of late payment charge even at the account level. The following new characteristic types are introduced in this release:

- **C1-LPCGD** – Used when you want to define the LPC grace days at the account level. If you define this characteristic type for an account, the system will consider the given LPC grace days while calculating the late payment charge date for the bills of the respective account. Note that this characteristic type is considered for late payment charge date calculation only when the **Late Payment Charge** option is selected for the customer class.
- **C1-LPCEX** – Used when you want to exclude the account for the LPC calculation. The valid value is **Y**. If you set this characteristic type for an account to **Y**, the system will not calculate late payment charge for any of its bill segments which are eligible for LPC calculation.

Note that if the **C1-LPCGD** characteristic type is not defined for an account, the system will consider the LPC grace days of the respective customer class when the customer class is eligible for late payment charge. The **POSTPROC** batch is enhanced to consider the account level LPC grace days, if configured, while calculating the late payment charge date for the bill.

Requirements for Late Payment Charges

Oracle Revenue Management and Billing provides the following two requirements for late payment charges:

- Account Level Bill Factor Override on page 400
- Late Payment Charge Generation Aligned with Bill Cycle on page 400

Copyright © 2026, Oracle and/or its affiliates.

Account Level Bill Factor Override

Currently, late payment charges for all eligible accounts are calculated using the **Global Bill Factor** value. This specific requirement grants support to configure the bill factor at account level for calculating the late payment charges.

During late payment charge processing, system determines the applicable bill factor by evaluating the account-level configuration. If the bill factor is not configured, system uses the existing bill factor resolution logic to proceed further.

A new characteristic type named **Account Level LPC Bill Factor (C1-LPCBF)** is defined where the characteristic entity is set to **Account**. This newly defined characteristic is of **Ad hoc** type where the valid value should be greater than zero.

An existing algorithm named **Calculate Late Payment Details (C1-LPCALC)** is modified to override the value of **Global Bill Factor** with the **Account Level LPC Bill Factor** characteristic value. This algorithm is configured on the **GENERATE** status of the **Late Payment Charge (C1-LatePaymentCharge)** business object.

Following are some important pointers for this functionality:

- The **Account Level LPC Bill Factor (C1-LPCBF)** characteristic type is shipped with the product.
- The **Account Level Bill Factor** configuration is optional. When an **Account Level Bill Factor** is configured, the system overrides the existing **Global Bill Factor**, where the numeric fields are constrained to a maximum precision of 36 with scale value of 18. On the other hand, if an **Account Level Bill Factor** is not configured, the system uses the existing bill factor logic without any change.
- To validate an **Account Level Bill Factor**, an existing algorithm type named **ADHV-NR** can be attached on the **C1-LPCBF** characteristic type, when the type of characteristic value is **Ad hoc**.
- The **Account Level Bill Factor** overrides the bill factor passed as the LPC batch parameter for **Policy Level LPC Calculations** where the **Late Payment Arrangement** is set as **DEFAULT**.
- The **Account Level Bill Factor** overrides the **Policy Level Bill Factor** for **Policy Level LPC Calculations** where the **Late Payment Arrangement** is set as **FLAT**.
- In a scenario where **Customer Class LPC Calculations** are performed, the system uses **Account Level Bill Factor** instead of **Global Bill Factor**.

Late Payment Charge Generation Aligned with Bill Cycle

This enhancement optionally aligns **Late Payment Billable Charge Generation** with the applicable bill cycle. When configured, the **Billable Charge Start Date** is set to **Bill Cycle Schedule Window Start Date** and **Billable Charge End Date** is set to **Bill Cycle Schedule Window End Date**. This enhancement provides the required flexibility and does not change the existing late payment charge calculation functionality.

Note: The system follows the existing behavior of late payment charge generation, if this enhancement is not configured.

To implement this business requirement, the following changes are made to the system:

- The existing **Late Payment Charge (LPC)** setup is configured for the relevant Customer Class and/or Policy Level LPC calculation.
- An existing and a valid billable charge configuration is made available while creating the LPC billable charge.
- The bill cycle is configured for those accounts where LPC billable charges are aligned with the bill cycle. Further on, the bill cycle aligned LPC billable charge generation is controlled through optional configuration.
- A soft parameter named **Bill Cycle Code** is defined in the **Late Payment Charge Creation (C1-CRELP) Batch**, and the **C1-CRELP** batch driver query is updated to extract only those accounts that have **Bill Cycle Code** value configured in the soft parameter.

  Note: A valid **Bill Cycle Code** must be provided as a soft parameter which the batch validates to ensure that the **Bill Cycle Code** is a valid one; in case the soft parameter is kept blank, the batch extracts all the accounts for calculating the late payment charges.
- An inclusion of a new option type named **Billable Charge Bill Cycle Alignment** is made in the **LPC Calculation Related Configurations (C1-LPCCALC)** feature configuration. If this option type is enabled, the LPC process generates billable charges for each bill cycle using that bill cycle's start and end dates.

Copyright © 2026, Oracle and/or its affiliates.

Note:

The **C1-CRELP** batch can be scheduled to execute on daily basis, as there is no specific restriction on the execution frequency of the batch.

The system supports existing LPC configurations such as **Exclusions**, **Grace Period Override**, **LPC Arrangement Override**, **Customer Class Level Calculation**, **Policy Level Calculation**, **Flat/Per Day Switch**, **Payment Cancellation**, **Partial Payment**, **Full Payment**, and **Overlapping Period Handling**.

Chapter 6

Self-Funded Group Policy

Topics:

- Pre-requisites
- Self-Funded Policy Creation
- Self-Funded Policy Status Transition
- Algorithms Used in C1-ASOPolicy
- Policy (Used for Searching)
- Policy (Used for Viewing)

Self-funded group health insurance, also known as Administrative Services Only (ASO), is a self insurance arrangement whereby an employer provides health or disability benefits to employees using the company's own funds. A self-insured employer will set up a special trust fund to earmark money (corporate and employee contributions) to pay incurred claims. It is also commonly known as self-funded employee health insurance.

In the self-funded group health plan, employers operate their own health plan. However, in the fully-insured group health plan, the employer contracts an insurance company to cover the employees and dependents. Employers choose to self-insure because it allows them to save the profit margin that an insurance company adds to its premium for a fully-insured group health plan. However, self-insuring exposes the company to much larger risk when more claims than expected must be paid.

Oracle Revenue Management and Billing (ORMB) supports the following types of self-funding approach:

- **Fully Self-Funded** - In the fully self-funded approach, the employer retains all the risk and bears the claim costs irrespective of any limit.
- **Partially Self-Funded** - In the partially self-funded approach, the employer purchases reinsurance or stop loss coverage to pass the risk to insurance company.

Oracle Revenue Management and Billing (ORMB) provides specialized methodologies for calculating claim amount with or without markups, enrollment fees, claim fees, specific stop-loss credits, aggregate stop-loss credits, non-recurring or recurring flat fees for covered services, network discounts, and fixed or enrollment based premium funds. Once the charges are calculated, the system bills the amount to the employer (known as the parent customer in ORMB) or to its logical designed billing entities (known as the bill groups in ORMB).

Oracle Revenue Management and Billing (ORMB) enables you to use the pricing methodologies and the billing engine for the self-funded group health insurance business. To design the pricing and billing models for the self-funded group health insurance business, you need to create the following entities in ORMB:

- Parent Customer
- Bill Groups
- Bill Group's Account
- Self-Funded Policy
- Price Items (for each covered service in the policy)
- Pricing Rule Types
- Pricing Rules

Pre-requisites

To set the billing system for a self-funded group customer, you need to do the following:

- Define the required policy types in the system.
- Define the required policy person roles in the system.
- Define the values for the **RUNOUT_ADM_OPT_FLG** lookup field.
- Define the required characteristic types where the characteristic entity is set to **Policy Type**.
- Define the required characteristic types where the characteristic entity is set to **Policy**.
- Define the required parameter values in the following algorithm which is attached to the **C1-ASOPolicy** business object:
  - C1-ASOBOPOSP
- Define the required parameter values in the following algorithm which is used in the lifecycle of the **C1-ASOPolicy** business object:
  - C1-ASOPOLMOA
- Set the values for the following option types in the **C1-ASOBLLNG** feature configuration:
  - Parent Customer Policy Person Role
  - Bill Group Policy Person Role
- Set the values for the following option types in the **C1-PERSTYPE** feature configuration:
  - Bill Group Person Type
  - Parent Person Type
- Set the batch control type of the **Policy Periodic Monitor (C1-POLPR)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

Related Topics

How to setup the **C1-ASOBLLNG** feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4639

Self-Funded Policy Creation

You can create a self-funded policy using a policy type where the policy category is set to **Self-Funded**. The policy type indicates the business object using which the self-funded policy should be created in the system.

As per the self-funded health insurance business, the system enables you to create a self-funded policy for a bill group where the parent customer is the policy holder. You can create or edit a self-funded policy from the **Policy** screen. In addition, you can create or edit a self-funded policy through a customer registration object or a health care inbound message. If the self-funded policy information is given for a bill group in a health care inbound message, the system does the following:

- Associates the bill group with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration

Copyright © 2026, Oracle and/or its affiliates.

- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration

A self-funded policy encapsulates the following information:

- **Policy Persons** - While creating a self-funded policy, you need to associate the person who is the main customer of the policy. While associating a person with a self-funded policy, you need to specify the policy person role which indicates the role of the person in the policy. For example, whether the person associated with the policy is the policy holder, broker, or underwriter. You can associate multiple persons with a self-funded policy using the same or different policy person role. However, at a time, only one person can be the main customer of the policy.
- **Policy Contracts** - The system creates a contract for a self-funded policy when the policy is created either from the user interface or through an inbound message. For more information, refer to Self-Funded Policy Contract Creation on page 408.

On defining a self-funded policy, the status of the policy is set to **Pending**. You can then edit, delete or activate a policy. Once a self-funded policy is activated, you can renew the policy whenever required.

Note: If a self-funded policy is created through a customer registration object or a health care inbound message, the status of the policy is set to **Pending**.

In a self-funded policy, you can specify the policy period as well as the runout period. Here, the policy period means the period between the policy start and end dates when the policy is active. And, the runout period means the period between the runout start and end dates when the policy is no more active. Note that the system sets the runout start date to the policy end date + 1 Day when you specify the runout end date.

The system enables you to create a self-funded policy for the following contract types which are used in the self-funded health insurance business:

Contract Type	**Policy (Example)**	**Policy Period (i.e. Period when Policy will be in the Active Status)**	**Runout Period (i.e. Period when Policy will be in the Runout Status)**	**Comments**
12/12 (Claims Incurred and Paid During the Policy Period)	P1	01-01-2019 to 12-31-2019	-	Here, you will not specify the runout end date for the self-funded policy (i.e. P1).
12/15 (Claims Incurred During the Policy Period and Paid During the Policy and Runout Periods)	P2	01-01-2019 to 12-31-2019	01-01-2020 to 03-31-2020	Here, the runout period is derived when you set the runout end date of the self-funded policy (i.e. P2) to 03-31-2020.
12/18 (Claims Incurred During the Policy Period and Paid During the Policy and Runout Periods)	P3	01-01-2019 to 12-31-2019	01-01-2020 to 06-30-2020	Here, the runout period is derived when you set the runout end date of the self-funded policy (i.e. P3) to 06-30-2020.
15/12 (Claims Incurred Three Months Prior to the Policy Start Date and During	P4	01-01-2019 to 12-31-2019	-	Here, you will not specify the runout end date for the self-

Copyright © 2026, Oracle and/or its affiliates.

Contract Type	Policy (Example)	Policy Period (i.e. Period when Policy will be in the Active Status)	Runout Period (i.e. Period when Policy will be in the Runout Status)	Comments
the Policy Period and Paid During the Policy Period)				funded policy (i.e. P4).

The system enables you to offer different pricing for different policy periods, such as active, runout, and post runout.

Self-Funded Policy Activation

A self-funded policy can be activated manually from the user interface or through the **Policy Periodic Monitor (C1-POLPR)** batch. You can activate a self-funded policy by clicking the **Activate** button in the **Policy** screen. On clicking the **Activate** button, the system checks whether the To Do created for the **Pending** status is completed. If the To Do created for the **Pending** status is not completed, it completes the To Do and then changes the status of the self-funded policy from **Pending** to **In Force/Active**.

Note: The status of the policy is not changed from **Pending** to **In Force/Active** until the system date is later than or equal to the policy start date.

On executing the **Policy Periodic Monitor (C1-POLPR)** batch, the system does the following:

- If the self-funded policy is in the **Pending** status and the policy start date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Pending Status** parameter (of an algorithm created using the **C1-ASOPOLMOA** algorithm type).
- If the start date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Pending Status** parameter is completed, it changes the status of the self-funded policy from **Pending** to **In Force/Active**.

You can define pricing rules using the pricing rule types of the following categories for a self-funded policy of a bill group which is in the **Active** status:

- Claim
- Specific Stop-Loss
- Aggregate Stop-Loss
- Retention Type Claim Based
- Retention Type Enrollment Based
- Ancillary
- Flat Fees
- Level Funded

Transition of Self-Funded Policy to Runout Status

A self-funded policy can be transitioned to the **Runout** status from the user interface or through the **Policy Periodic Monitor (C1-POLPR)** batch. You can transition a self-funded policy to the **Runout** status by clicking the **Runout** button in the **Policy** screen. On clicking the **Runout** button, the system checks whether the To Do created for the **In Force/Active** status is completed. If the To Do created for the **In Force/Active** status is not completed, it completes the To Do and then changes the status of the self-funded policy from **In Force/Active** to **Runout**.

Copyright © 2026, Oracle and/or its affiliates.

Note: The status of the policy is not changed from **In Force/Active** to **Runout** when either of the following condition is met:

- The runout end date is not specified.
- The system date is earlier than or equal to the policy end date.
- The policy is renewed.

On executing the **Policy Periodic Monitor (C1-POLPR)** batch, the system does the following:

- If the self-funded policy is in the **In Force/Active** status and the policy end date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Active Status** parameter (of an algorithm created using the **C1-ASOPOLMOA** algorithm type).
- If the end date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Active Status** parameter is completed, it changes the status of the self-funded policy from **In Force/Active** to **Runout**.

You can define pricing rules using the pricing rule types of the following categories for a self-funded policy of a bill group which is in the **Runout** status:

- Claim
- Specific Stop-Loss
- Aggregate Stop-Loss
- Retention Type Claim Based
- Ancillary
- Flat Fees
- Level Funded

Transition of Self-Funded Policy to Post Runout Status

A self-funded policy can be transitioned to the **Post Runout** status only through the **Policy Periodic Monitor (C1-POLPR)** batch. On executing the **Policy Periodic Monitor (C1-POLPR)** batch, the system does the following:

- If the self-funded policy is in the **Runout** status and the runout end date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Runout Status** parameter (of an algorithm created using the **C1-ASOPOLMOA** algorithm type).
- If the runout end date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Runout Status** parameter is completed, it changes the status of the self-funded policy from **Runout** to **Post Runout**.

You can define pricing rules using the pricing rule types of the following categories for a self-funded policy of a bill group which is in the **Post Runout** status:

- Claim
- Specific Stop-Loss
- Aggregate Stop-Loss
- Retention Type Claim Based
- Ancillary

Self-Funded Policy Renewal

You can renew a self-funded policy which is associated with a bill group. However, note that you can renew a self-funded policy only when it is in the **In Force/Active** status and which is not yet renewed. You can renew a self-funded policy only from the user interface and not through a health care inbound message.

Copyright © 2026, Oracle and/or its affiliates.

On renewing a self-funded policy, a new policy is created in the **Pending** status. The renewal date is stamped in the base policy. The information from the base policy is copied to the renewed policy. The start date of the renewed policy is set to the base policy's end date plus one day. For example, if the base policy's end date is 12-31-2018, then by default, the renewed policy's start date is set to 01-01-2019.

While renewing a self-funded policy, you cannot disassociate persons (from the renewed policy) who are associated with the base policy using a policy person role which is specified in the **Bill Group Policy Person Role** or **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration.

While renewing a self-funded policy, the system enables you to copy the following pricing rules of the base policy and thereby create new pricing rules for the renewed policy:

- Claim
- Retention Type Claim Based
- Retention Type Enrollment Based
- Recurring Flat Fees
- Ancillary

While copying a pricing rule, the start and end dates of the new pricing rule are set to the renewed policy's start and end dates, respectively. If there are multiple pricing rules which are created using the same pricing rule type and are effective for the different date range, the system copies only one pricing rule from the base policy with the latest date range.

Once a policy is renewed, you cannot edit the base policy's end date or manually change the status of the base policy to **Runout**. The system automatically changes the status of the base policy to **Runout** when the status of the latest renewed policy is changed to **Runout**.

Self-Funded Policy Contract Creation

The system automatically creates contracts when a self-funded policy is created either from the user interface or through a health care inbound message. It creates a contract for a self-funded policy on each account of the bill group. It creates a contract using the contract type which is specified in the **Contract Type** parameter of an algorithm which is created using the **C1-ASOBOPOSP** algorithm type. Let us assume that the **Contract Type** parameter in the **C1-ASOBOPOSP** algorithm is set to `CT1`. Now, when you create the self-funded policies named P1 and P2 for BG1 and P11, P12, and P13 for BG2 through a health care inbound message, the system will create a set of contracts on the respective accounts as mentioned below.

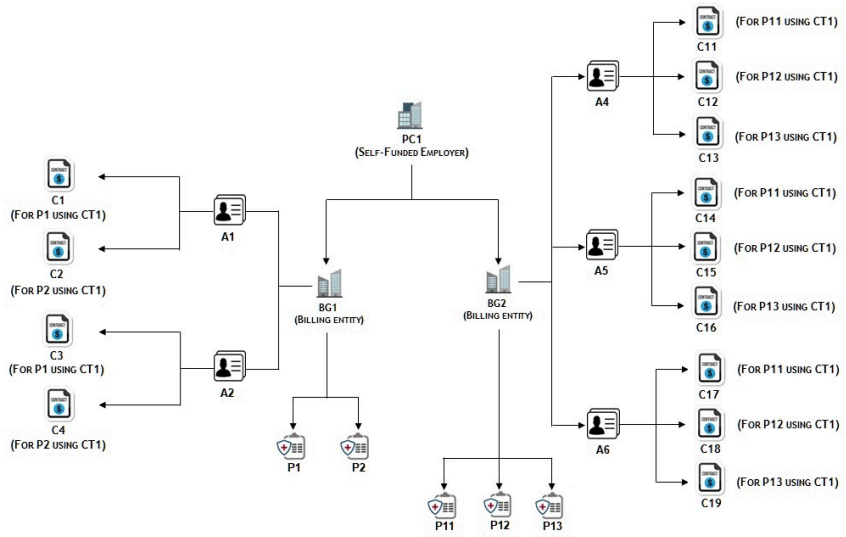
The following table indicates the number of contracts that are created for a self-funded policy on each account of a bill group:

Bill Group	**Account**	**Contract**
BG1	A1	C1 (for P1 using the CT1 contract type)
		C2 (for P2 using the CT1 contract type)
	A2	C3 (for P1 using the CT1 contract type)
		C4 (for P2 using the CT1 contract type)
BG2	A4	C11 (for P11 using the CT1 contract type)
		C12 (for P12 using the CT1 contract type)
		C13 (for P13 using the CT1 contract type)
	A5	C14 (for P11 using the CT1 contract type)
		C15 (for P12 using the CT1 contract type)
		C16 (for P13 using the CT1 contract type)
	A6	C17 (for P11 using the CT1 contract type)

Copyright © 2026, Oracle and/or its affiliates.

Bill Group	Account	Contract
		C18 (for P12 using the CT1 contract type)
		C19 (for P13 using the CT1 contract type)

The following figure graphically represents the above example:



You can also specify comma-separated values for the **Contract Type** parameter. The system will then create a contract using each contract type for each self-funded policy on each account of the bill group. Let us assume that the **Contract Type** parameter in the **C1-ASOBOPOSP** algorithm is set to `CT1, CT2`. Now, when you create the self-funded policies named P1 and P2 for BG1 and P11 and P12 for BG2 through a health care inbound message, the system will create a set of contracts on the respective accounts as mentioned below.

The following table indicates the number of contracts that are created for a self-funded policy on each account of a bill group:

Bill Group	Account	Contract
BG1	A1	C1 (for P1 using the CT1 contract type)
		C2 (for P1 using the CT2 contract type)
		C3 (for P2 using the CT1 contract type)
		C4 (for P2 using the CT2 contract type)
	A2	C5 (for P1 using the CT1 contract type)
		C6 (for P1 using the CT2 contract type)
		C7 (for P2 using the CT1 contract type)
		C8 (for P2 using the CT2 contract type)
BG2	A11	C11 (for P11 using the CT1 contract type)
		C12 (for P11 using the CT2 contract type)
		C13 (for P12 using the CT1 contract type)
		C14 (for P12 using the CT2 contract type)
	A12	C15 (for P11 using the CT1 contract type)

Post Runout	-	-	-	-

C1-ASOPOLVAL

This algorithm validates a self-funded policy throughout its lifecycle. It checks the following:

- The policy end date is not earlier than the policy start date.
- The runout end date is later than the policy end date.
- The runout end date is later than the system date while editing the policy which is in the **Runout** status.
- The runout end date is not removed when the policy is in the **Runout** or **Post Runout** status.
- The policy end date is not modified when the policy is in the **Runout** status.
- The policy end date is not set to a date which is later than or equal to the start date of a pricing rule which is defined for the **Runout** status.
- The runout end date is not set to a date which is later than or equal to the start date of a pricing rule which is defined for the **Post Runout** status.
- The runout end date is not set to a date which is earlier than the end date of a pricing rule which is defined for the **Runout** status.
- The policy is not edited when it is in the **Post Runout** status.
- The policy start date is not modified when the policy is in the **In Force/Active**, **Runout**, or **Post Runout** status.
- The policy person end date is not earlier than the policy person start date.
- The policy person role is specified while associating a person with the policy.
- One of the policy persons is set as the main customer of the policy.
- The policy end date is not changed when the policy is renewed.

C1-ASOBOPOSP

This algorithm is invoked when you create a self-funded policy either from the user interface or through an inbound message. It creates a contract of the specified contract type for the self-funded policy on each account of the bill group. For example, if you create a self-funded policy named P1 for a bill group who has two accounts - A1 and A2, the system will create two contracts for P1 - one on the A1 account and another on the A2 account.

It contains the following parameter:

Copyright © 2026, Oracle and/or its affiliates.

- **Contract Type** - Used to indicate the contract type whose contract you want to create for the self-funded policy on each account of the bill group. You can also specify comma-separated values for this parameter. It will then create a contract of each contract type for the self-funded policy on each account of the bill group.

C1-ASOPRUCPY

This algorithm is invoked when the **Copy Pricing Rules** option is selected while renewing a self-funded policy. It copies the following pricing rules of the base policy and creates new pricing rules for the renewed policy:

- Claim
- Retention Type Claim Based
- Retention Type Enrollment Based
- Recurring Flat Fees
- Ancillary

While copying a pricing rule, the start and end dates of the new pricing rule are set to the renewed policy's start and end dates, respectively. If there are multiple pricing rules which are created using the same pricing rule type and are effective for the different date range, the system copies only one pricing rule from the base policy with the latest date range.

C1-ASOPOLMOA

This algorithm is invoked when the **Policy Periodic Monitor (C1-POLPR)** batch is executed. It does the following:

- If the self-funded policy is in the **Pending** status and the policy start date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Pending Status** parameter.
- If the start date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Pending Status** parameter is completed, it changes the status of the self-funded policy from **Pending** to **In Force/Active**.
- If the self-funded policy is in the **In Force/Active** status and the policy end date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Active Status** parameter.
- If the end date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Active Status** parameter is completed, it changes the status of the self-funded policy from **In Force/Active** to **Runout**.
- If the self-funded policy is in the **Runout** status and the runout end date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Runout Status** parameter.
- If the runout end date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Runout Status** parameter is completed, it changes the status of the self-funded policy from **Runout** to **Post Runout**.

It contains the following parameters:

- **To Do Type for Pending Status** - Used to indicate the To Do type using which you want to create the To Do, X days prior to the policy start date.
- **To Do Type for Active Status** - Used to indicate the To Do type using which you want to create the To Do, X days prior to the policy end date.
- **To Do Type for Runout Status** - Used to indicate the To Do type using which you want to create the To Do, X days prior to the runout end date.
- **X Days** - Used to specify the number of days prior to which you want to create a To Do for the self-funded policy.

All these parameters are mandatory.

Copyright © 2026, Oracle and/or its affiliates.

C1-ASOPOLREN

This algorithm is invoked when you renew a self-funded policy. Once the new policy is created in the **Pending** status, it stamps the renewal date on the base policy.

C1-ASOPCKTD

This algorithm is invoked when you click the **Activate** and **Runout** buttons in the **Policy** screen. On clicking the **Activate** button, it checks whether the To Do created for the **Pending** status is completed. If the To Do created for the **Pending** status is not completed, it completes the To Do and then changes the status of the self-funded policy from **Pending** to **In Force/Active**.

Similarly, on clicking the **Runout** button, it checks whether the To Do created for the **In Force/Active** status is completed. If the To Do created for the **In Force/Active** status is not completed, it completes the To Do and then changes the status of the self-funded policy from **In Force/Active** to **Runout**.

It also validates the following:

- The status of the policy is not changed from **Pending** to **In Force/Active** until the system date is later than or equal to the policy start date.
- The status of the policy is not changed from **In Force/Active** to **Runout** when the runout end date is not specified.
- The status of the policy is not changed from **In Force/Active** to **Runout** until the system date is later than the policy end date.
- The status of the policy is not changed to **Runout** if it is renewed.

In addition, it also changes the status of the base policies to **Runout** when the status of the latest renewed policy is changed to **Runout**.

Policy (Used for Searching)

The **Policy** screen allows you to search for a policy using various search criteria. It also allows you to define a policy. It contains the following zone:

- Search Policy on page 300

Through this screen, you can navigate to the following screen:

- Policy (Used for Viewing) on page 311

Search Policy

The **Search Policy** zone allows you to search for a policy using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a policy using the policy or person details. The valid values are: • Policy Date/Policy Type/Status • Source System/Policy Number/Description • Person Name/Person Identifier	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Policy Characteristics **Note:** By default, the **Policy Date/Policy Type/Status** option is selected.	
Policy Type	Used to search policies which are created using a particular policy type. **Note:** This field appears when the **Policy Date/Policy Type/Status** option is selected from the **Search By** list.	No
Start Date	Used to search policies which are effective from a particular date. **Note:** This field appears when the **Policy Date/Policy Type/Status** option is selected from the **Search By** list.	No
Status	Used to search policies with a particular status. The valid values are: • In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Post Runout • Reinstated • Runout • Terminated **Note:** This field appears when the **Policy Date/Policy Type/Status** option is selected from the **Search By** list.	No
End Date	Used to search policies which are effective till a particular date. **Note:** This field appears when the **Policy Date/Policy Type/Status** option is selected from the **Search By** list.	No
Source System	Used to search policies which originated from a particular external system. **Note:** This field appears when the **Source System/Policy Number/ Description** option is selected from the **Search By** list.	No
Policy Number	Used to search a policy with a particular policy number. **Note:** This field appears when the **Source System/Policy Number/ Description** option is selected from the **Search By** list.	No
Description	Used to search policies with a particular description. **Note:** This field appears when the **Source System/Policy Number/ Description** option is selected from the **Search By** list.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Used to search policies to which a particular person is associated. **Note:** This field appears when the **Person Name/Person Identifier** option is selected from the **Search By** list.	No
Person Identifier Type	Used to indicate the person identifier type. **Note:** This field appears when the **Person Name/Person Identifier** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to search policies to which a person is associated. **Note:** This field appears when the **Person Name/Person Identifier** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the person identifier type as a search criteria, you have to specify the person identifier.
Characteristic Type	Used to search policies for which a particular characteristic type is defined. **Note:** This field appears when the **Policy Characteristics** option is selected from the **Search By** list. The list includes only those characteristic types where the characteristic entity is set to **Policy**.	Yes (Conditional) **Note:** This field is required when you are searching for a policy using a characteristic.
Characteristic Value	Used to search policies with a particular characteristic value. **Note:** This field appears when the characteristic type is selected. If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are searching for a policy using a characteristic.

Note: You must specify at least one search criterion while searching for a policy.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Copyright © 2026, Oracle and/or its affiliates.

<table>
<tr><th>Column Name</th><th>Column Description</th></tr>
<tr><td>Policy Number</td><td>Displays the policy number.</td></tr>
<tr><td>Policy Information</td><td>Displays additional information about the policy.

Note: It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the respective policy.</td></tr>
<tr><td>Source System</td><td>Indicates the external system from where the policy is originated.</td></tr>
<tr><td>Description</td><td>Displays the description of the policy.</td></tr>
<tr><td>Start Date</td><td>Displays the date from when the policy is effective.</td></tr>
<tr><td>End Date</td><td>Displays the date till when the policy is effective.</td></tr>
<tr><td>Status</td><td>Indicates the status of the policy. If the policy is created using the C1-POLICY business object, the valid values are:
• Pending
• In Force/Active
• Pending Cancellation
• Canceled
• Pending Reinstatement
• Reinstated
• Pending Termination
• Terminated
However, if the policy is created using the C1-ASOPolicy business object, the valid values are:
• Pending
• In Force/Active
• Runout
• Post Runout</td></tr>
<tr><td>Main Customer</td><td>This column displays different data depending on whether you search for a policy using the policy or person details. The following table describes this column:
<table><tr><th>If you search for a policy using...</th><th>Then...</th></tr><tr><td>The Policy Date/Policy Type/ Status, Source System/Policy Number/ Description, or Policy Characteristics option</td><td>The Main Customer column displays the name of the person who is the main customer of the policy. In addition, this column has a context menu which helps in navigating to other screens in the application.

Note: It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person.</td></tr><tr><td>The Person Name/Person Identifier option</td><td>The Main Customer column indicates whether the person is the main customer of the policy. The valid values are:
• Yes</td></tr></table></td></tr>
</table>

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	If you search for a policy using... / **Then...** • No
Person Information	Indicates the person who is associated with the policy. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person. This column appears when the **Person Name/Person Identifier** option is selected from the **Search By** list.
Policy Person Role	Indicates the role using which the person is associated with the policy. **Note:** This column appears when the **Person Name/Person Identifier** option is selected from the **Search By** list.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Policy

Prerequisites

To search for a policy, you should have:

- Policy types and person identifier types defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup
- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To search for a policy:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Policy**.
   A sub-menu appears.
3. Click the **Search** option from the **Policy** sub-menu.
   The **Policy** screen appears.
4. Enter the search criteria in the **Search Policy** zone.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of policies that meet the search criteria appears in the **Search Results** section.

Viewing the Policy Details

Procedure

To view the details of a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy *w*hose details you want to view.
   The **Policy** screen appears.
3. Ensure that the **Main** tab is selected.
4. View the details of the policy in the **Policy** zone.

Defining a Policy

Oracle Revenue Management and Billing enables you to define a policy for the fully-insured and self-funded health insurance business. You can define a fully-insured group policy using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**. However, you can define a self-funded policy using a policy type where the policy category is set to **Self-Funded**.

> **Note:** At present, the **Fully-Insured Individual** policy category is not supported in the system.

Prerequisites

To define a policy, you should have:

- Policy types defined in the application.
- Values defined for the **C1-SourceSystemLookup** extendable lookup.

> **Note:** This prerequisite is applicable only when you want to define a fully-insured group policy.

Copyright © 2026, Oracle and/or its affiliates.

- Values defined for the **RUNOUT_ADM_OPT_FLG** lookup field.

Note: This prerequisite is applicable when you want to define a self-funded policy.

Procedure

To define a policy:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Policy**.
   A sub-menu appears.
3. Click the **Add** option from the **Policy** sub-menu.

   The **Select Policy Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Used to indicate the policy type using which you want to create a policy. **Note:** If you want to create a fully-insured group policy, you must select a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**. However, if you want to create a self-funded policy, you must select a policy type where the policy category is set to **Self-Funded**.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Policy** screen.

4. Select the required policy type from the respective field.
5. Click **OK**.

   The **Policy** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details about the policy.
   - **Persons** - Used to associate persons with the policy.
   - **Characteristics** - Used to define the characteristics for the policy.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Indicates the policy type using which you are defining the policy.	Not applicable
Policy Number	Used to specify the policy number.	Yes
Description	Used to specify the description for the policy.	Yes
Source System	Used to indicate the external system from where the policy is originated. **Note:** This field appears when you are defining a policy using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**.	Yes
Start Date	Used to specify the date from when the policy is effective.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The policy start date cannot be later than the policy end date.	
End Date	Used to specify the date till when the policy is effective. **Note:** The policy end date cannot be earlier than the policy start date.	Yes
Runout End Date	Used to specify the date when the runout period of the self-funded policy ends. **Note:** The runout end date cannot be earlier than or equal to the policy end date. This field appears when you are defining a policy using a policy type where the policy category is set to **Self-Funded**.	No
Runout Administration Fees	Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are: • None • Percentage of Claim **Note:** At present, this field is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy. This field appears when you are defining a policy using a policy type where the policy category is set to **Self-Funded**.	No
Advance Level Funding Eligibility	Indicates whether the self-funded policy is eligible for the advance billing feature of level funding. **Note:** This is a read-only field. By default, the value is set to **No**. You can edit the advance level funding eligibility only through a health care inbound message. This field appears when you are defining a policy using a policy type where the policy category is set to **Self-Funded**.	Not applicable
Advance Deposit Applicability	Used to indicate whether the advance deposit is applicable for the policy.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field is required only when the advance deposit level of the respective policy holder (i.e., parent customer) is set to **POLI**. However, this field is not mandatory. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**.	
Advance Deposit Amount	Used to specify the advance deposit amount that will be parked at the policy level. **Note:** You must specify a positive value in this field. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**.	Yes (Conditional) **Note:** This field is required when the **Advance Deposit Applicability** option is selected.
Advance Deposit Grace Days	Used to specify the grace days. The system then uses the grace days to derive the grace period within which the advance deposit should be received from the group customer for the policy. While calculating the grace period, the system considers the policy start date as the grace start date. Once the grace start date is derived, the system calculates the grace end date (i.e., grace start date + grace days). For example, if a parent customer is the policy holder of the P1 policy (01-Jan-2022 to 31-Dec-2022) and advance deposit grace days is set to 6 days, then the system considers 01-Jan-2022 as the grace start date and sets the grace end date to 07-Jan-2022. **Note:** You must specify an integer value in this field. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**.	Yes (Conditional) **Note:** This field is required when the **Advance Deposit Applicability** option is selected.
Advance Deposit Account	Used to indicate the account of the parent customer where the advance deposit is parked for the policy.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**. You must specify an account with the account relationship type that is specified in the **Advance Deposit Account Relationship Type** attribute of the delinquency process preference. The system considers the delinquency process preference which is specified in the **Delinquency Process Field Mapping** option type of the **DELINPROC** feature configuration. For more information about the feature configuration, see Setting the DELINPROC Feature Configuration on page 4663. The **Search** (🔍) icon appears corresponding to the **Advance Deposit Account** field. On clicking the **Search** icon, the **Account Search** window appears.	**Note:** This field is required when the **Advance Deposit Applicability** option is selected.

6. Enter the required details in the **Main** section.
7. Associate the required persons with the policy.

Note: While defining a policy, you must associate a person who is the main customer of the policy.

8. Define the characteristics for the policy, if required.
9. Click **Save**.
   The policy is defined and its status is set to **Pending**.

How to associate a person with a policy	Associating a Person with a Policy on page 309
How to define a characteristic for a policy	Defining a Characteristic for a Policy on page 310

Associating a Person with a Policy

Prerequisites

To associate a person with a policy, you should have:

- Required persons defined in the application
- Required policy person roles defined in the application

Procedure

To associate a person with a policy:

1. Ensure that the **Persons** section is expanded when you are defining or editing a policy.

   The **Persons** section contains the following fields in a grid:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Person	Used to indicate the person that you want to associate with the policy. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Person Search** window appears. On specifying the person ID, the person name appears corresponding to the **Person** field.	Yes
Sequence	Used to specify the sequence number for the associated person.	Yes
Policy Person Role	Used to indicate the role of a person in the policy.	Yes
Main Customer	Used to indicate whether the person is the main customer of the policy. **Note:** At a time, only one person can be the main customer of the policy.	Yes (Conditional) **Note:** You must select this option while associating a person who is the main customer of the policy.
Start Date	Used to specify the date from when the person is associated with the policy. **Note:** The start date cannot be later than the end date. The start date cannot be earlier than the policy start date and later than the policy end date.	Yes
End Date	Used to specify the date till when the person is associated with the policy. **Note:** The end date cannot be earlier than the start date. The end date cannot be earlier than the policy start date and later than the policy end date. This validation is done when the policy is transition to the status which is not specified in the **Skip Status for Policy Person End Date Validation** parameter of the **C1-POLBOVAL** algorithm. For example, if you set the **Skip Status for Policy Person End Date Validation** parameter of the **C1-POLBOVAL** algorithm to **TERMINATED**, the system will not perform this validation when the status of the policy is changed to **Terminated**.	No

2. Enter the required details in the **Persons** section.

Note: While associating the persons with a policy, you must always ensure that one person is the main customer of the policy.

Copyright © 2026, Oracle and/or its affiliates.

3. If you want to associate more than one person with the policy, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to dissociate a person from the policy, click the **Delete** (🗑) icon corresponding to the person.

4. Click **Save**.
   The persons are associated with the policy.

Defining a Characteristic for a Policy

Prerequisites

To define a characteristic for a policy, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To define a characteristic for a policy:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a policy.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the policy. **Note:** The effective date cannot be earlier than the policy start date and later than the policy end date.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the policy.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Policy**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the policy.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the policy.

Copyright © 2026, Oracle and/or its affiliates.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the policy, click the **Add** (+) icon and then *r*epeat step 2.

> **Note:** However, if you want to remove a characteristic from the policy, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the policy.

Policy (Used for Viewing)

The **Policy** screen allows you to:

- View the details of a fully-insured group or self-funded policy
- Edit the details of a fully-insured group or self-funded policy
- Activate a fully-insured group or self-funded policy
- Add or edit plans in a fully-insured group policy
- Add memberships to a fully-insured group policy plan
- Initiate the termination process for a fully-insured group policy
- Terminate a fully-insured group policy
- Initiate the cancellation process for a fully-insured group policy
- Cancel a fully-insured group policy
- Initiate the reinstatement process for a fully-insured group policy
- Reinstate a fully-insured group policy
- View the log of a fully-insured group or self-funded policy
- Add a log entry for a fully-insured group or self-funded policy

It consists of the following tabs:

- Policy - Main on page 312
- Policy - Plan on page 319
- Policy - Log on page 321

Policy - Main

The **Main** tab displays information about the policy. It contains the following zones:

- Policy on page 312
- Policy Characteristics on page 318

Policy

The **Policy** zone displays the details of the fully-insured group or self-funded policy. It contains the following sections:

- **Main** - Displays basic information about the policy. It contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Base Policy Information	Displays information about the base policy. **Note:** This field appears when you are viewing the details of a renewed policy which is created using a policy type where the policy category is set to **Self-Funded**.
Policy Information	Displays information about the policy.
Policy Type	Indicates the policy type using which the policy is created. **Note:** It has a link. On clicking the link, the **Policy Type** screen appears where you can view the details of the respective policy type.
Status	Indicates the status of the policy. If the policy is created using the **C1-POLICY** business object, the valid values are: • Pending • Activate • In Force/Active • Pending Termination • Terminated • Pending Reinstatement • Reinstated • Renewed • Pending Cancellation • Canceled However, if the policy is created using the **C1-ASOPolicy** business object, the valid values are: • Pending • In Force/Active • Runout • Post Runout
Status Reason	Indicates the reason why the policy is terminated. **Note:** It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the respective termination reason. This field appears when you are viewing the details of a terminated or reinstated policy which is created using a policy type where the policy category is set to **Fully-Insured Group**.
Policy Number	Displays the policy number.
Description	Displays the description of the policy. **Note:** This field appears when you are viewing the details of a policy where the policy category is set to **Self-Funded**.
Source System	Indicates the external system from where the policy is originated.
Start Date	Displays the date from when the policy is effective.

Copyright © 2026, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th></tr>
<tr><td>End Date</td><td>Displays the date till when the policy is effective.</td></tr>
<tr><td>Renewal Date</td><td>Displays the date when the policy is renewed.

Note: This field appears when you are viewing the details of a policy which is renewed.</td></tr>
<tr><td>Paid Through Date</td><td>Indicates the term end date of the last fully or partially paid term. The system considers the term to be fully paid when the threshold limit is met.

Note:
This field appears when the following conditions are met:
• When you are viewing the details of a policy which is created using a policy type where the policy category is set to Fully-Insured Group.
• When the paid through date is calculated at the policy level.

The paid through date is calculated while freezing or canceling a payment or adjustment depending on whether the required algorithm is attached to the respective system event:
<table>
<tr><th>Entity</th><th>System Event</th><th>Algorithm</th></tr>
<tr><td>Customer Class</td><td>Payment Freeze</td><td>C1-PSPTDCAL</td></tr>
<tr><td>Customer Class</td><td>Payment Cancellation</td><td>C1-PXPTDCAL</td></tr>
<tr><td>Adjustment Type</td><td>Adjustment Freeze</td><td>C1-ADPTDCAL</td></tr>
<tr><td>Adjustment Type</td><td>Adjustment Cancellation</td><td>C1-AXPTDCAL</td></tr>
</table>
The following table indicates when the paid through date is calculated at the policy and/or membership level:
<table>
<tr><th>If the Paid Through Date Calculation Level parameter is set to…</th><th>If the following characteristics are defined for the billable charge or adjustment…</th><th>Then…</th></tr>
<tr><td>P</td><td>C1-POLID</td><td>Paid through date is calculated at the policy level</td></tr>
<tr><td>P</td><td>C1-MPID</td><td>Paid through date is calculated at the policy level</td></tr>
<tr><td>P</td><td>C1-POLID and C1-MPID</td><td>Paid through date is calculated at the policy level</td></tr>
<tr><td>M</td><td>C1-POLID</td><td>Paid through date is not calculated at the membership level</td></tr>
<tr><td>M</td><td>C1-MPID</td><td>Paid through date is calculated at the membership level</td></tr>

Field Name	Field Description
	Note: This field appears only when the **Advance Deposit Applicability** option is selected. It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.

- **Persons** - Lists the persons which are associated with the policy. It contains the following columns:

Column Name	Column Description
Person Information	Indicates the person who is associated with the policy. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person.
Sequence	Displays the sequence number of the associated person.
Policy Person Role	Indicates the role of the person in the policy.
Main Customer	Indicates whether the person is the main customer of the policy.
Start Date	Displays the date from when the person is associated with the policy.
End Date	Displays the date till when the person is associated with the policy.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the fully-insured group or self-funded policy. **Note:** The **Edit** button appears only when a policy of the respective category is in either of the following status:

Policy Category	Status
Fully-Insured Group	• In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Terminated
Self-Funded	• In Force/Active • Pending • Runout

Activate	Used to activate the fully-insured group or self-funded policy.

Copyright © 2026, Oracle and/or its affiliates.

<table>

Button Name	Button Description
	Note: The **Runout** button appears when the self-funded policy is in the **In Force/Active** status. You cannot transition a self-funded policy to the **Runout** status when: • The self-funded policy is renewed. • The runout end date is not specified. • The policy end date is earlier than the system date.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the policy is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the policy status is updated.
Create Date/Time	Displays the date and time when the policy is created.

- **Termination Information** - Displays the termination details of the fully-insured group policy. It appears when the policy is in the **Pending Termination** status. It contains the following fields:

Field Name	Field Description
Terminate Date	Displays the date when you want to terminate the policy.
Terminate Reason	Indicates the reason why the termination process is initiated for the policy. **Note:** It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the respective termination reason.

- **Reinstate Information** - Displays the reinstatement details of the terminated policy. It appears when the policy is in the **Pending Reinstatement** status. It contains the following fields:

Field Name	Field Description
Reinstate Reason	Indicates the reason why you want to reinstate the fully-insured group policy. **Note:** It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the respective reinstatement reason.

Policy Characteristics

The **Policy Characteristics** zone lists the characteristics of the fully-insured group or self-funded policy. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the policy.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.
	Note: The data appears in this column when the type of characteristic value is set to **Predefined Value**.

You can filter the list using the **Effective Date** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Policy - Plan

The **Plan** tab lists the plans defined for the policy and memberships defined for each policy plan. It contains the following zones:

- Plans on page 319
- Memberships on page 320

Plans

The **Plans** zone lists the plans which are defined in the policy. It contains the following columns:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Plan Information	Displays information about the policy plan. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Policy Plan** screen appears where you can view the details of the respective policy plan.
Price Item Information	Indicates the price item to which the policy plan is directly associated. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the respective price item.
Plan Number	Displays the plan number.
Plan Name	Displays the description of the policy plan.
Benefit Type	Indicates the type of health insurance plan. The valid values are: • Commercial • Medicare Affiliated
Start Date	Displays the date from when the policy plan is effective.
End Date	Displays the date till when the policy plan is effective.
Edit	On clicking the **Edit** (✎) icon, the **Plan** screen appears where you can edit the details of the policy plan.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can define a new policy plan by clicking the **Add** link in the upper-right corner of this zone. On clicking the **Broadcast** (📡) icon corresponding to a policy plan, the **Memberships** zone appears.

Note: Ideally, you define plans in a policy which is created using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**.

You can filter the list using various search criteria (such as, **Price Item**, **Plan Number**, and **Effective From**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper-right corner of this zone.

Memberships

The **Memberships** zone lists the memberships which are defined for the policy plan. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the membership is effective.
End Date	Displays the date till when the membership is effective.
Membership Information	Displays information about the membership. **Note:** It has a link. On clicking the link, the **Membership** screen appears where you can view the details of the respective membership.
Enrolled Members	Displays the number of members who have enrolled in the policy plan.
Status	Indicates the status of the membership. The valid values are: • Active • Inactive • Terminated
Membership Type	Indicates the type of membership. The valid values are: • COBRA • Medicare • Retiree
Benefits	On clicking the **Benefits** (🔗) icon, the **Benefit** screen appears where you can view the Membership benefits of the member persons who belong to the membership. **Note:** The **Benefits** icon appears when a Membership benefit is defined for a member person who belongs to the membership.
Membership ID	Displays the membership ID.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can define a new membership by clicking the **Add** link in the upper right corner of this zone.

By default, the **Memberships** zone does not appear in the **Plan** tab. It appears when you click the **Broadcast** (📡) icon corresponding to the policy plan in the **Plans** zone.

You can filter the list using various search criteria (such as, **External Membership ID**, **Effective From**, **Person Name**, **Effective Till**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4632

Policy - Log

The **Log** tab contains the following zone:

- Policy Log on page 321

Policy Log

The **Policy Log** zone lists the complete trail of actions performed on the policy. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the policy.
Details	Displays the details about the action performed on the policy.
User	Indicates the user who has performed the action on the policy.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the policy. **Note:** It contains a link. On clicking the link, the screen appears where you can view the details of the respective related object.
Status Reason	Indicates the reason why the status of the policy is changed.

Note: You can manually add a log entry for the policy by clicking the **Add Log Entry** link in the upper right corner of the **Policy Log** zone.

Activating a Policy

Procedure

To activate a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy that you want to activate.
   The **Policy** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Activate** button in the **Policy** zone.
   The status of the policy is changed to **In Force/Active**.

Copyright © 2026, Oracle and/or its affiliates.

Note:

The **Activate** button appears only when a policy of the respective category is in either of the following status:

Policy Category	Status
Fully-Insured Group or Fully-Insured Individual	• Pending • Pending Termination
Self-Funded	• Pending

Editing a Policy

Prerequisites

To edit a policy, you should have:

- Values defined for the **C1-SourceSystemLookup** extendable lookup

  Note: This prerequisite is applicable only when you want to define a fully-insured group policy.

- Values defined for the **RUNOUT_ADM_OPT_FLG** lookup field

  Note: This prerequisite is applicable when you want to define a self-funded policy.

Procedure

To edit a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy *w*hose details you want to edit.
   The **Policy** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Policy** zone.

   The **Policy** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details about the policy.
   - **Persons** - Used to associate persons with the policy.
   - **Characteristics** - Used to define the characteristics for the policy.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Information	Displays information about the policy.	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Indicates the policy type using which the policy is defined.	Not applicable
Status	Indicates the status of the policy. The valid values are: • Pending • In Force/Active • Runout • Post Runout **Note:** This field appears when you are editing a policy which is created using a policy type where the policy category is set to **Self-Funded**.	Not applicable
Policy Number	Used to specify the policy number.	Yes
Description	Used to specify the description for the policy.	Yes
Source System	Used to indicate the external system from where the policy is originated. **Note:** This field appears when you are editing a policy which is created using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**.	Yes
Start Date	Used to specify the date from when the policy is effective. **Note:** The policy start date cannot be later than the policy end date. You cannot change the start date of a self-funded policy when it is in the **In Force/Active**, **Runout**, or **Post Runout** status.	Yes
End Date	Used to specify the date till when the policy is effective. **Note:** The policy end date cannot be earlier than the policy start date. You cannot change the end date when the self-funded policy is in the **Runout** status. You cannot set the end date of a self-funded policy to a date which is later than or equal to the start date of a pricing rule which is defined for the **Runout** status. You cannot change the end date when the policy is renewed.	Yes
Runout End Date	Used to specify the date when the runout period of the self-funded policy ends.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you are editing a policy which is created using a policy type where the policy category is set to **Self-Funded**. The runout end date cannot be earlier than or equal to the policy end date. The runout end date cannot be earlier than or equal to the system date when the policy is in the **Runout** status. You cannot remove the runout end date when the policy is in the **Runout** or **Post Runout** status. You cannot set the runout end date to a date which is later than or equal to the start date of a pricing rule which is defined for the **Post Runout** status. You cannot set the runout end date to a date which is earlier than the end date of a pricing rule which is defined for the **Runout** status.	
Runout Administration Fees	Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are: • None • Percentage of Claim **Note:** At present, this field is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy. This field appears when you are editing a policy which is created using a policy type where the policy category is set to **Self-Funded**.	No
Advance Level Funding Eligibility	Indicates whether the self-funded policy is eligible for the advance billing feature of level funding. **Note:** This is a read-only field. By default, the value is set to **No**. You can edit the advance level funding eligibility only through a health care inbound message. This field appears when you are defining a policy using a policy type where the policy category is set to **Self-Funded**.	Not applicable
Advance Deposit Applicability	Used to indicate whether the advance deposit is applicable for the policy.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field is required only when the advance deposit level of the respective policy holder (i.e., parent customer) is set to **POLI**. However, this field is not mandatory. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**.	
Advance Deposit Amount	Used to specify the advance deposit amount.	Yes (Conditional)
	Note: You must specify a positive value in this field. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group** .	**Note:** This field is required when the **Advance Deposit Applicability** option is selected.
Advance Deposit Grace Days	Used to specify the grace days. The system then uses the grace days to derive the grace period within which the advance deposit should be received from the group customer for the policy. While calculating the grace period, the system considers the policy start date as the grace start date. Once the grace start date is derived, the system calculates the grace end date (i.e., grace start date + grace days). For example, if a parent customer is the policy holder of the P1 policy (01-Jan-2022 to 31-Dec-2022) and advance deposit grace days is set to 6 days, then the system considers 01-Jan-2022 as the grace start date and sets the grace end date to 07-Jan-2022.	Yes (Conditional) **Note:** This field is required when the **Advance Deposit Applicability** option is selected.
	Note: You must specify an integer value in this field. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**.	
Advance Deposit Account	Used to indicate the account of the parent customer where the advance deposit is parked for the policy.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**. You must specify an account with the account relationship type that is specified in the **Advance Deposit Account Relationship Type** attribute of the delinquency process preference. The system considers the delinquency process preference which is specified in the **Delinquency Process Field Mapping** option type of the **DELINPROC** feature configuration. For more information about the feature configuration, see Setting the DELINPROC Feature Configuration on page 4663. The **Search** (🔍) icon appears corresponding to the **Advance Deposit Account** field. On clicking the **Search** icon, the **Account Search** window appears.	**Note:** This field is required when the **Advance Deposit Applicability** option is selected.

Note:

The **Edit** button appears when a policy of the respective category is in either of the following status:

Policy Category	Status
Fully-Insured Group or Fully-Insured Individual	• In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Terminated
Self-Funded	• In Force/Active • Pending • Runout

5. Modify the required details in the **Main** section.
6. Associate the persons with the policy, if required.

Note: While editing a policy, you must ensure that one person is associated as the main customer of the policy.

7. Define, edit, or remove characteristics of the policy, if required.
8. Click **Save**.
   The changes made to the policy are saved.

Manually Changing the Status of a Self-Funded Policy to Runout

Prerequisites

To manually change the status of a self-funded policy to **Runout**, you should have:

- Runout end date specified in the self-funded policy.

Procedure

To manually change the status of a self-funded policy to **Runout**:

1. Search for the self-funded policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the *s*elf-funded policy whose status you want to change.
   The **Policy** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Runout** button in the **Policy** zone.
   The status of the self-funded policy is changed to **Runout**.

> **Note:**
>
> The **Runout** button appears when the self-funded policy is in the **In Force/Active** status.
>
> You cannot transition a self-funded policy to the **Runout** status when:
>
> - The self-funded policy is renewed.
> - The runout end date is not specified.
> - The policy end date is earlier than the system date.

Renewing a Self-Funded Policy of a Bill Group

Oracle Revenue Management and Billing enables you to renew a self-funded policy which is associated with a bill group. However, note that you can renew a self-funded policy when it is in the **In Force/Active** status and is not yet renewed. For more information, see Self-Funded Policy Renewal on page 407.

Procedure

Copyright © 2026, Oracle and/or its affiliates.

To renew a self-funded policy of a bill group:

1. Search for the bill group who is associated with the self-funded policy (which you want to renew) in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the bill group whose details you want *t*o view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing Information** tab.
   The **Pricing Information** tab appears.
4. In the **Bill Group Self-Funded Policy Information** zone, click the **Renew** (📋) icon in the **Renew** column *c*orresponding to the self-funded policy which you want to renew.

   The **Policy** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the renewed policy.
   - **Persons** - Used to associate or disassociate persons from the renewed policy.

     Note: You cannot disassociate persons who are associated with the base policy using a policy person role which is specified in the **Bill Group Policy Person Role** or **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration.
   - **Characteristics** - Used to define the characteristics for the renewed policy.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Base Policy Information	Indicates the policy which you want to renew.	Not applicable
Policy Type	Indicates the policy type using which the base policy is created.	Not applicable
Policy Number	Used to specify the policy number of the renewed policy.	Yes
Description	Used to specify the description for the renewed policy.	Yes
Start Date	Used to specify the date from when the renewed policy is effective. **Note:** By default, the start date is set to the base policy's end date plus one day. For example, if the base policy's end date is 12-31-2018, then by default, the renewed policy's start date is set to 01-01-2019. The start date cannot be later than the end date. The start date cannot be earlier than or equal to the base policy's end date.	Yes
End Date	Used to specify the date till when the renewed policy is effective. **Note:** The end date cannot be earlier than the start date.	Yes
Runout End Date	Used to specify the date when the runout period of the renewed policy ends.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The runout end date cannot be earlier than or equal to the renewed policy's end date.	
Runout Administration Fees	Used to indicate whether the administration fees must be charged when the claim transaction for the policy is processed in the runout period. The valid values are: • None • Percentage of Claim **Note:** At present, this field is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy.	No
Copy Pricing Rules	Used to indicate whether you want to copy the pricing rules of the base policy to the renewed policy. If you select the **Copy Pricing Rules** option, the system copies the following pricing rules of the base policy: • Claim • Retention Type Claim Based • Retention Type Enrollment Based • Recurring Flat Fees • Ancillary **Note:** While copying a pricing rule, the start and end dates of the new pricing rule are set to the renewed policy's start and end dates, respectively. If there are multiple pricing rules which are created using the same pricing rule type and are effective for the different date range, the system copies only one pricing rule from the base policy with the latest date range.	No
Copy Advance Level Funding Eligibility	Used to indicate whether you want to copy the advance level funding eligibility value of the base policy to the renewed policy. **Note:** If the **Copy Advance Level Funding Eligibility** option is set to **Y** in the base policy, the system activates the renewed self-funded policy on the policy renewal even if the renewed policy's start date is later than the system date. This field appears only when you want to renew a self-funded policy.	No

Note: The **Renew** icon appears when the policy is in the **In Force/Active** status and it is not yet renewed.

Copyright © 2026, Oracle and/or its affiliates.

5. Enter the required details in the **Main** section.
6. Associate or disassociate persons from the renewed policy, if required.
7. Define, edit, or remove characteristics of the renewed policy, if required.
8. Click **Save**.
   The renewed policy is created in the **Pending** status. The renewal date is stamped corresponding to the base policy in the **Bill Group Self-Funded Policy Information** zone.

How to setup the **C1-ASOBLLNG** feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4639

Viewing the Log of a Policy

Procedure

To view the log of a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy *w*hose details you want to view.
   The **Policy** screen appears.
3. Click the **Log** tab.
   The **Log** tab appears.
4. View the complete trail of actions performed on the policy in the **Policy Log** zone.

Adding a Log Entry for a Policy

Procedure

To add a log entry for a policy:

Copyright © 2026, Oracle and/or its affiliates.

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy for *w*hich you want to add a log entry.
   The **Policy** screen appears.
3. Click the **Log** tab.
   The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Policy Log** zone.

   The **Add Policy Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Information	Displays information about the policy.	Not applicable
Log Details	Used to specify additional comments for the policy.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.
   The log entry is added in the **Policy Log** zone.

Chapter 7

Individual Health Insurance

Topics:

- Pre-requisites
- Support Open Ended Health Plans, Pricing Rules, and Individual Memberships
- Individual Membership
- Individual Membership Termination
- Individual Membership Renewal
- Automatic Contract Creation for Individual Membership
- Rate Guarantee for Individual Membership
- Late Setup Notification
- Young Adult Coverage in an Individual Membership
- Individual Membership Preference
- Binder Payment for Individual Membership
- Membership Status Reason Preference
- To Do Creation for Manual Refund/Write Off on Individual Membership Cancellation

Individual health insurance is a coverage that an individual purchase on its own, on an individual or family basis, as opposed to obtaining through an employer. An individual can buy a generic, Medicare, Medicaid, or CHIP health insurance plan from a health insurance payer or from an insurance exchange.

A health insurance payer and insurance exchange sells different plans from the health products to an individual. A health product is a discrete package of health insurance coverage benefits that are offered using a particular product network type (such as health maintenance organization, preferred provider organization, exclusive provider organization, point of service, or indemnity) within a service area.

A health product can include multiple health benefit plans which may cover medical expenses, hospitalization, doctor and hospital visits, prescription drugs, wellness care, etc. A health benefit plan can be a primary or add-on plan. A primary health benefit plan is a standalone plan, which is sold directly. For example, Medical Insurance is a primary health insurance plan.

An add-on plan is also known as supplemental plan. An add-on plan can be an ancillary or rider plan. An add-on plan is not a standalone plan and hence it is not sold directly. For example, the Dental, Vision, Accidental Death, Disability, Critical Illness, Long-Term Care, and Life Insurance plans can be sold as add-on health insurance plans.

Oracle Revenue Management and Billing enables you to create and edit the following entities for a fully-insured individual business:

- Health Products
- Health Plans
- Individual Memberships
- Member Persons
- Medicare or Other Benefits
- Accounts
- Contracts
- Price Items (offered as services)
- Pricing Rule Types
- Pricing Rules
- Price Assignments
- Billable Charges

Two new business objects named **C1-HealthcareProduct** and **C1-HealthPlan** are introduced in this release. The **C1-HealthcareProduct** business object enables you to create a health product. You can define and edit a health product through a health product and plan inbound message. While defining a health product, you need to specify the following details - product type, product sub type, product category, product LOB, product LOB category, start date, end

date, status, etc. A health product can be a bundled or non-bundled product. A bundled product means it includes one or more health products. You can define characteristics for a health product. A health product should be associated with a division (i.e. service area). You can associate a health product to one or more divisions and one division can have one or more health products.

The **C1-HealthPlan** business object enables you to create a health plan for a health product. You can define and edit a health plan through a health product and plan inbound message. While defining a health plan, you need to specify the following details - health product, start date, end date, status, etc. In addition, you need to indicate whether the health plan is a charitable plan, standard plan, grandfather plan, qualified from exchange, ancillary plan, rider plan, add-on plan, etc. You can define characteristics for a health plan.

A health product can have one or more health plans. On inactivating a health product, the system will not automatically inactivate the respective health plans. An individual can subscribe for one or more health plans. The system creates an individual membership for each subscribed health plan. An individual membership can have one or more member persons. One member person in an individual membership must be the main subscriber. You can add one or more dependent persons in the individual membership. One member person in an individual membership should be financially responsible for the individual membership. For more information, see the Individual Membership on page 452 section.

If an individual subscribe for an add-on health plan along with a primary health plan, the system enables you to indirectly link a primary health plan with an add-on health plan by associating the primary individual membership with the add-on individual membership. At present, you can associate only one add-on individual membership with the primary individual membership. The system creates the billable charges for both primary and add-on individual memberships independently.

On terminating the primary individual membership, the system provides a facility to automatically terminate the individual membership on the add-on health plan. For more information, see the Individual Membership Termination on page 467 section. However, on canceling, reinstating, or renewing a primary individual membership, the system does not automatically cancel, reinstate, or renew the individual membership on the add-on health plan. To cancel, reinstate, or renew an individual membership on the add-on health plan, the system must receive the required information for the individual membership from the enrollment system.

Copyright © 2026, Oracle and/or its affiliates.

Pre-requisites

Information will be available soon!

Support Open Ended Health Plans, Pricing Rules, and Individual Memberships

Oracle Revenue Management and Billing enables you to maintain open-ended health plans, pricing rules, and individual memberships wherein you can specify far-fetched end dates for them. To support the open-ended individual memberships, the following changes are made to the system:

- All the individual memberships would be auto renewed by the system based on the given renewal period.
- Two new option types are added in the **C1-ASOBLLNG** feature configuration:
  - **Number of months in advance for Open-Ended Renewal** - Used to indicate the number of months in advance you want to automatically renew the individual memberships. You must specify a positive value for this option type.
  - **Renewal period for Open-Ended Membership** – Used to indicate the period (i.e. number of months) for which you want to automatically renew the individual memberships. You must specify a positive value for this option type. The system will then set the end date of the individual memberships to the membership start date + renewal period – number of months in advance for open-ended renewal.
- A new column named **ENRL_END_DT** is introduced in the **CI_MEMBERSHIP**, **CI_MEMBERSHIP_PER**, and **C1_BENEFITS** tables.
- A new column named **OPEN_ENDED_SW** is introduced in the **CI_MEMBERSHIP_PROCESS** table.
- The **enrlEndDate** tag is added for membership and membership person in the **C1-Membership** business object schema.
- The **autoRenew** and **contractPeriod** tags are added for membership in the **C1-Membership** business object schema.
- The **enrlEndDate** tag is added for membership and membership person in the **C1-IndMembership** business object schema.
- The **enrlEndDate** tag is added for benefit in the **C1-Benefits** business object schema.
- A new parameter named **Open Ended Membership** is added in the **C1-MEPRC** batch. It is optional. It is used when you want to process only open-ended memberships and automatically renew them for the given renewal period.

From now onwards, the end date of the individual membership received from the source system through an inbound message will be stored in the **ENRL_END_DT** column. The system will stamp the auto renewal end date in the **END_DT** column and will use it for the membership premium calculation. The system will display the date from the **ENRL_END_DT** column for the membership and membership person in the **Membership** screen.

Now, when an individual membership is created through a health care inbound message, the system checks whether the renewal period for open-ended membership (specified in the **C1-ASOBLLNG** feature configuration) is less than the membership period. If so, the system does the following:

- Sets the end date of the membership and membership person to individual membership start date + renewal period – number of months in advance for open-ended renewal.
- Sets the enrolment end date to the date specified in the **endDate** tag of the inbound message.
- Sets the **AUTO_RENEW_SW** field to **Y** and the **CONTRACT_PERIOD** field to the renewal period.
- Sets the **PROCESS_DT** column of the **CI_MEMBERSHIP_PROCESS** table to the end date of the membership.
- Sets the **OPEN_ENDED_SW** column of the **CI_MEMBERSHIP_PROCESS** table to **Y**.

On executing the **C1-MEPRC** batch, the system considers the membership records whose the **OPEN_ENDED_SW** column is set to **Y** and whose the processing date is earlier than the batch business date. It then recalculates the end date of the membership and membership person and accordingly updates the processing date of the corresponding record in the **CI_MEMBERSHIP_PROCESS** table.

Copyright © 2026, Oracle and/or its affiliates.

However, if the renewal period for open-ended membership (specified in the **C1-ASOBLLNG** feature configuration) is equal to or greater than the membership period, the system sets the end date of the membership and membership person to the enrolment end date.

Individual Membership

Oracle Revenue Management and Billing enables you to create and edit individual memberships from the user interface and through a health care inbound message or membership repricing inbound web service. Note that the user interface for adding and editing individual memberships is not yet well-designed and should only be used by the presales and sales teams for learning and demo purposes and not by the customers.

A new business object for individual membership named **C1-IndMembership** is introduced in this release. While creating an individual membership through a health care inbound message, you need to specify the following details:

- **Health Plan** - Used to indicate the health plan for which the main subscriber has enrolled.
- **Member Person Status** - Used to indicate the main subscriber or dependent person's status.
- **Status Reason** - Used to indicate the reason why you want to change the status of the main subscriber or dependent person.
- **Auto Renew** - Used to indicate whether the individual membership should be automatically renewed.
- **Contract Period** - Used to indicate the period (in months) for which the individual membership should be automatically renewed.
- **Membership Renewal Date** - Used to indicate the date when the individual membership should be renewed. It is required for manual renewal of the individual membership. In case of automatic renewal, the membership renewal date is calculated by the system.
- **Associated Membership Details** - Used to associate the individual membership with another individual membership which is created for the add-on health insurance plan.
- **Member Identifiers** - Used to specify one or more identifiers for the individual membership.
- **Exchange Details** - Used to indicate whether the individual membership is purchased from the exchange. If the individual membership is purchased from the exchange, you need to specify the exchange ID.
- **Binder Payment Details** - Used to indicate whether the binder payment is required for the individual membership. If so, you need to specify the following details:
  - Grace Days
  - Binder Liability Amount (if required)
  - Threshold Percentage (if required)
  - Hold Billing

  For more information about the binder payments, see the Binder Payment for Individual Membership on page 481 section.

Note: On creating an individual membership for a health plan, the membership category is set to **INDV**. However, on creating a group membership for a policy plan, the membership category is set to **GRUP**.

The following table lists the statuses introduced in the lifecycle of the **C1-IndMembership** business object:

Individual Membership Status	**Description**
Draft	An individual membership is created in the **Draft** status and then transitioned to either the **Pending Effectuation** or **Active** status as mentioned in the health care inbound message or membership repricing incoming message.
Pending Effectuation	If the main subscriber status is set to **Pending Effectuation**, the system sets the status of the individual membership to **Pending Effectuation**. The system determines the individual membership status reason using the membership status

Copyright © 2026, Oracle and/or its affiliates.

Individual Membership Status	**Description**
	reason preference which is specified in the **Status Reason Mapping** option type of the **C1-ASOBLLNG** feature configuration. The system monitors whether the binder payments (if required) are received for the individual membership in the **Pending Effectuation** status. If the binder payments are received, the status of the individual membership is not automatically transitioned to **Active**. The status of the individual membership is changed from **Pending Effectuation** to **Active** only when the main subscriber status update information is received through a health care inbound message or membership repricing inbound web service.
Active	If the main subscriber status is set to **Active**, the system sets the status of the individual membership to **Active**. The system determines the individual membership status reason using the membership status reason preference which is specified in the **Status Reason Mapping** option type of the **C1-ASOBLLNG** feature configuration. If the binder payments are not required for the individual membership, you can directly set the status of main subscriber to **Active**. In addition, if you want to reinstate the individual membership, you must set the status of main subscriber to **Active**. The system will then change the status of the individual membership from **Terminated** to **Active**. In case of reinstatement of the individual membership, the status of the dependent persons is not changed automatically from **Inactive** to **Active** unless the dependent person status update information is received through a health care inbound message or membership repricing inbound web service.
Terminated	If the main subscriber status is set to **Inactive**, the system sets the status of the individual membership to **Terminated**. The system determines the individual membership status reason using the membership status reason preference which is specified in the **Status Reason Mapping** option type of the **C1-ASOBLLNG** feature configuration. Once the status of the individual membership is set to **Terminated**, the system automatically changes the status of the dependent persons to **Inactive**. Note that while inactivating the dependent persons, the system only considers the dependent persons who are in the **Active** status. The system determines the dependent person status reason using the membership status reason preference. The system also updates the end date of the individual membership, main subscriber, and dependent persons. For more information, see the Individual Membership Termination on page 467 section.
Canceled	If the main subscriber status is set to **Canceled**, the system sets the status of the individual membership to **Canceled**. The system determines the individual membership status reason using the membership status reason preference which is specified in the **Status Reason Mapping** option type of the **C1-ASOBLLNG** feature configuration. Once the status of the individual membership is set to **Canceled**, the system automatically changes the status of the dependent persons to **Canceled**. The system determines the dependent person status reason using the membership status reason preference. The system will also cancel the billable charges and bill segment (if any) created for the individual membership or financially responsible member person account.

Copyright © 2026, Oracle and/or its affiliates.

The system also enables you to change the status of a dependent person in the individual membership through a health care inbound message or membership repricing inbound web service. On changing the status of a member person to **Pending Effectuated** or **Active**, the system considers the member person during premium calculation.

On changing the status of the individual membership and member person, the system creates an audit event to trigger the repricing feature. The **C1-IndMembership** business object is configured for the entity audit framework. However, the repricing is triggered only when an active audit event type for the **C1-IndMembership** business object is created in the system.

The system creates appropriate log entries during the individual membership and member person status transition. You can view the status transition logs of individual membership in the **Log** tab of the **Membership (Used for Viewing)** screen. A new zone named **Member Person Log** is introduced in the **Main** tab of the **Membership (Used for Viewing)** screen. It enables you to view the log entries generated on the member person status transition.

You can define individual membership status reasons through the **Status Reason** screen. A new lookup field named **MEMB_PERS_STAT_RSN_FLG** is introduced in this release. Here, you can add the status reasons for the member person.

Types of Individual Membership

Oracle Revenue Management and Billing enables you to create different types of individual membership:

- Medicare Membership on page 282
- Retiree Membership on page 286

Medicare Membership

Oracle Revenue Management and Billing enables you to maintain an employer sponsored group medicare membership (800 series plans) for a fully-insured large group customer and create age based or tier based premium charges for the Medicare Part A, Part B, and Part D. A Medicare beneficiary may qualify for a low income subsidy (LIS) for Medicare Part D or may incur late enrollment penalty (LEP) for Medicare Part D. In such case, the system enables you to consider the low income subsidy (LIS) and late enrollment penalty (LEP) while calculating the Medicare Part D premium.

The system enables you to create and edit a Medicare membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. While creating a Medicare membership, you must set the membership type to **Medicare**. Ideally, you must define a Medicare membership on a Medicare Affiliated policy plan. However, at present, the system does not validate whether a Medicare membership is defined only on a Medicare Affiliated policy plan and not on a Commercial policy plan.

You can create a Medicare membership when you specify the main subscriber of the membership. A Medicare membership should have only one member person who is covered for Medicare and who is financially responsible for the membership. Ideally, the main subscriber should exists as a person in the system before creating the Medicare membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. The system enables you to create the main subscriber and Medicare membership through the same health care inbound message or through the same membership repricing request. In such case, the system will first create the person record for the main subscriber and then create the Medicare membership.

On creating a Medicare membership, the status of the membership and main subscriber is set to **Active**. You can inactivate a Medicare membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. There are two ways in which you can inactivate the membership from the user interface:

- On clicking the **Inactivate** button
- On inactivating the main subscriber of the membership

However, through a health care inbound message or through the membership repricing inbound web service, you can inactivate the membership only by inactivating the main subscriber of the membership. On inactivating a Medicare membership, the system does the following:

- Set the status of the membership and main subscriber to **Inactive**

Copyright © 2026, Oracle and/or its affiliates.

- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO_STATUS_CD** column corresponding to the record in the **C1_AUDIT_EVENT**, **C1_AUDIT_EVENT_LOG**, and **CI_PRCE_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_ENTITY_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_REQ_DTL** table is set to **COMPLETE**.

On terminating a fully-insured group policy, the status of all Medicare memberships on the respective policy plans is set to **Terminated**. Similarly, on reinstating a fully-insured group policy, the status of all Medicare memberships on the respective policy plans is set to **Active**.

The system enables you to maintain the Membership benefits (such as, Part A, Part B, Part D, Part D LIS, and Part D LEP) of a member person through the **Benefit** screen. The system enables you to define and edit the Membership benefits from the user interface, through a health care inbound message, or through the membership repricing inbound web service. While defining a Membership benefit of a member person for Part A, Part B, and Part D, you need to specify a Medicare plan benefit package (i.e. 800 series plan) which is applicable for the Membership benefit. The system enables you to define and edit a Medicare plan benefit package through the **Field Mapping** screen. You can use the Medicare plan benefit package as a pricing parameter in the age based or tier based pricing rules using which the Medicare premium is calculated. While defining a Membership benefit of a member person for Part D LIS and Part D LEP, you need to specify the benefit amount (i.e. subsidy or penalty amount).

While editing a Membership benefit of a member person from the user interface, you can only edit the characteristics of the Membership benefit. However, while editing a Membership benefit of a member person through a health care inbound message or through the membership repricing inbound web service, you can edit the end date, benefit amount, and characteristics of the Membership benefit. On editing a Membership benefit, the system inactivates the old record and creates a new record in the system. The status of the old benefit record is set to **Inactive** and the status of the new benefit record is set to **Active**.

The system enables you to discard an active or inactive Membership benefit from the user interface by clicking the **Discard** button. You can also discard an active or inactive Membership benefit through a health care inbound message or through the membership repricing inbound web service by changing its status to **Discarded**.

The system requires the following information to create charges for a Medicare membership:

- Whom to bill the Medicare membership (i.e. billing arrangement details)
- Age based or tier based pricing rules using which the premium should be calculated for the Medicare Part A, Part B, and Part D.
- Respective age based, tier based, and benefit pricing rule types associated with the respective policy plan

The system supports the following billing arrangements for a Medicare membership:

- **Group Billing** - Here, a Membership benefit is billed to a bill group which is derived for the Medicare membership.
- **Direct Billing** - Here, a Membership benefit is billed to a member person who is financially responsible for the Medicare membership.

You can indicate the billing arrangement for the Medicare memberships by defining a characteristic on the policy plan, policy, or parent customer. The system searches for the characteristic which is specified in the **Benefit Billing Arrangement** option type of the **C1-ASOBLLNG** feature configuration on the following entities in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

Note: If the benefit billing arrangement characteristic is not defined for any of the above listed entities, the system, by default, charges the Medicare membership premium to the bill group.

Copyright © 2026, Oracle and/or its affiliates.

The system requires the bill group and its account to bill the Medicare memberships when the benefit billing arrangement is set to **Group Billing**. You can create a bill group and its account from the user interface or through a health care inbound message. On creating an account for a bill group, the system automatically creates a contract on the account using distinct contract types for all policy plans of the parent customer and bill group policies. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the policy plans of the parent customer and bill group policies.

The system requires the member person's account to bill the Medicare membership when the benefit billing arrangement is set to **Direct Billing**. You can create an account for a member person who is financially responsible for the Medicare membership through a health care inbound message. On creating an account for a member person, the system automatically creates a contract on the account using distinct contract types for the respective policy plan. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the respective policy plan.

Retiree Membership

An employer may offer a retirement health plan coverage to its retired employees through a fully-insured group policy or an individual can independently opt for a government sponsored retirement health plan coverage. Oracle Revenue Management and Billing enables you to maintain a retiree membership for both the fully-insured group and individual business. The system enables you to maintain a flat or percentage based contribution of employer or sponsor for a retiree membership.

The system enables you to create and edit a retiree membership through a health care inbound message or through membership repricing inbound web service. While creating a retiree membership, the membership type must be set to **Retiree**. The system requires the following information to create charges for a retiree membership:

- Whom to bill the premium for the retiree membership (i.e. retiree billing arrangement details)
- Whom to bill the employer or sponsor contribution (i.e. sponsor billing arrangement details)
- Age based or tier based pricing rule using which the premium should be calculated for the retiree membership
- Discount charge pricing rule using which the employer or sponsor contribution should be calculated for the retiree membership

In case of the fully-insured individual business, the premium for a retiree membership is billed to the member who is financially responsible for the retiree membership. However, in case of the fully-insured group business, the system supports the following billing arrangements for the retiree membership:

- **Group Billing** - Here, the premium is billed to a bill group which is derived for the retiree membership.
- **TPA Billing** - Here, the premium is billed to the third party administrator (i.e. TPA person).
- **Direct Billing** - Here, the premium is billed to the member who is financially responsible for the retiree membership.

You can indicate the billing arrangement for a retiree membership in the fully-insured group business by defining a characteristic on the policy plan, policy, or parent customer. The system searches for the characteristic which is specified in the **Retiree Billing Arrangement** option type of the **C1-ASOBLLNG** feature configuration on the following entities in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

The system enables you to maintain a flat or percentage based contribution of employer or sponsor through a discount charge pricing rule. A field named **Sponsored** is available in the **Price Items** section while defining or editing a discount charge pricing rule type. If the **Sponsored** option is selected for a price item, the system creates and bills the charge for the price item as per the sponsor billing arrangement. The system searches for the characteristic which is specified in the **Sponsors Billing Arrangement** option type of the **C1-ASOBLLNG** feature configuration on the following entities in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

Copyright © 2026, Oracle and/or its affiliates.

In the fully-insured group and individual business, the system supports the following sponsor billing arrangements for the retiree membership:

- **Group Billing** - Here, the system creates a negative charge for the employer or sponsor contribution against the beneficiary account and a positive charge for the employer or sponsor contribution against the sponsor account.
- **TPA Billing** - Here, the system creates a negative charge for the employer or sponsor contribution against the beneficiary account and a positive charge for the employer or sponsor contribution against the sponsor account.
- **Direct Billing** - Here, the system creates a memo only charge for the employer or sponsor contribution against the beneficiary account. A bill message code is derived from the **Retiree Bill Message Code** option type of the **C1-ASOBLLNG** feature configuration and stamped against the beneficiary account.

In case of the group and TPA billing, the system derives the characteristic types which are specified in the **Sponsor Account Identifier Type Char Type** and **Sponsor Account Identifier Value Char Type** option types of the **C1-ASOBLLNG** feature configuration. The system then checks whether these characteristics are defined on any of the following entity in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

If these characteristics are defined on any of the above entity, the system derives the sponsor account for the bill group. The system then bills the employer or sponsor contribution charges to the sponsor account.

However, if the **Sponsored** option is not selected for a price item in a discount charge pricing rule type, the system creates and bills the charge for the price item as per the retiree billing arrangement.

Individual Membership Status Transition

The following figure graphically indicates how an individual membership goes through various statuses in its lifecycle:

Terminated	Enter	C1-IMTR-INS	C1-IMTR-INS	Refer to C1-IMTR-INS on page 467
		C1-INVRQIMTM	C1-INVRQIMTM	Refer to C1-INVRQIMTM on page 467

Copyright © 2026, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
Canceled	Enter	C1-MEMINACT	C1-MEMINACT	Refer to C1-MEMINACT on page 298
		C1-INVRQIMCN	C1-INVRQIMCN	Refer to C1-INVRQIMCN on page 467

C1-FIAUDEV

If this algorithm is attached to the **Audit** system event of the **Group Membership** (**C1-Membership**), **Individual Membership** (**C1-IndMembership**), **Benefit** (**C1-Benefits**), and **Person** (**C1_PERSON_BO**) business objects, it is invoked whenever you define, edit, or delete the respective entity. It checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event whenever a group membership is added to a policy plan, an individual membership is added to a health plan, member person is added to a group or individual membership, and a membership benefit is added for a group or individual membership. It also creates the audit event whenever the group or individual membership, member person, and membership benefit details are updated. However, note that the audit events are created in the update scenario when the element listed for auditing in the age-based, tier-based, or benefit pricing rule type is updated. The system considers only those pricing rule types whose pricing rules are effective during the respective entity (i.e. group or individual membership, member person, or membership benefit whichever is updated) date range.

It creates one or more audit events in the **Pending** status. The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1_AUDIT_EVENT** table. In addition, the effective date is stamped corresponding to the audit event in the **C1_AUDIT_EVENT** table.

Note:

The system creates an audit event whenever the group or individual membership start and end dates and member person's start and end dates are changed in the system irrespective of whether these fields are listed for auditing or not in the age-based or tier-based pricing rule types.

Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event.

For each audit event, this algorithm derives the group or individual memberships on the policy or health plan, respectively, which is impacted and the pricing rule types whose pricing rules are defined on the respective policy or health plan. A repricing entity detail record is then created for each membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of the repricing entity detail record is set to **Pending**. Once the repricing entity detail records are created successfully, the status of the audit event is changed to **Complete**.

It contains the following parameters:

- **Audit Event Business Object** - Used to specify the business object using which you want to create the audit event.
- **Audit Event Pending Status** - Used to specify the status in which you want to create the audit event. This parameter is also used for determining whether an audit event for the entity ID already exists in the system.
- **Audit Event Error Status** - Used to specify the status in which an audit event is transitioned when an error occurs while processing the audit event. This parameter is used for determining whether an audit event for the entity ID already exists in the system.

All the above parameters are mandatory.

C1-MEMRLAUD

This algorithm defines an eligible member role for each and every member person involved in the membership. It derives the **Member Role Structure** attribute defined in the policy plan in a group membership or from the health plan in an individual membership. This attribute is used to identify the member person details that are to be stamped based on the member person relationship. A member person relationship is derived from the member person depending on whether the member person is:

- Self
- Spouse
- Children
- Dependents

This algorithm derives the member person relationship through the **Member Person Relationship** table, as a common reference. Once the member person relationship is derived, in case of a group membership, the algorithm derives the characteristics, which are mapped on the policy plan, for member role mapping purposes. Whereas in case of an individual membership, the algorithm derives the characteristics, which are defined in the business rules, for member role mapping purposes.

C1-DTCAGEIM

This algorithm would be used for the calculation of a date that is further used for age-based calculations of the members in the fully-insured Individual Membership when the specific conditions are present.

- This algorithm is plugged-in in the system event Audit present in the Algorithms Tab of the BO Individual Membership
- It gets invoked whenever there is an update in the Individual Membership entity to perform date calculation and store the calculated date in the BO_DATA_AREA of this individual membership.

The essential pre-requisite for this algorithm to work as intended is as follows:

- If an individual has continuous coverage on different Medical Health Plans with the same first 5-digit of HIOS (legal entity) within the same plan year window, then age at the time of enrolment into the first plan is used throughout the plan year.
- The business rule category - 'Fully-Insured Pricing Rules' for this individual membership will have the criteria:

```
AGE CALCULATION DATE = Member Enrollment Date
and
AGE RECALCULATION DATE = Membership Renewal Date
```

When the above conditions are configured in the system, the algorithm works as follows:

- It lists out the enrollment start date of all memberships having the same main subscriber person and same account for the identified plan year window.

Copyright © 2026, Oracle and/or its affiliates.

- It then determines the oldest date among the enrollment start date such that there is continuous coverage between the consecutive memberships.
- The calculated date is then stored in the BO_DATA_AREA column in the Membership table in the format:

```
<calculatedDateMemberAgeContCoverage>YYYY-MM-DD</
calculatedDateMemberAgeContCoverage>
```

The corresponding algorithms responsible for member age calculation, that are present in the pricing rule type of the health plan for this membership entity, will fetch the value of the calculated date available in the BO_DATA_AREA column and determine the age for the member-person in the membership.

Parameter:

- **Healthcare Coverage Class** - This parameter is mandatory where the value indicates the valid value for Medical present in lookup Product Healthcare Category.
- **Plan Year Start Month** - This parameter is mandatory where the numeric value represents the month in a calendar year. For example, 1-Jan, 3-March, 6-June, etc.

C1-MPCONCREA

This algorithm is invoked when the following conditions are met:

- A member person who is financially responsible for the membership is added to the membership
- One or more accounts already exist for the member person in the system

If the above conditions are met, this algorithm derives the membership in which the member person is added. It then derives the policy plan to which the membership belongs. It creates contracts for each account of the member person in either of the following ways:

- If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
- If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates a contract using a distinct contract type which is associated with each price item.

  Let us assume that PRT1 is associated with the policy plan and it contains three price items - PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, this algorithm will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, this algorithm will create two distinct contracts - C1 using CT1 and C2 using CT2.

  If multiple pricing rule types are associated with the policy plan and each pricing rule type contains multiple price items, it creates a contract using a distinct contract type which is associated with each price item on each pricing rule type.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

Note:

The system creates a contract using a contract type for an account when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

C1-THRSHDAMT

This algorithm works when the individual Membership Status is Pending Effectuation and status reason is Awaiting Binder Payment (configurable on field mapping).

Copyright © 2026, Oracle and/or its affiliates.

- If Binder Applicability is not available at the membership level, it invokes Business Rule service to fetch Binder Payment Business Rule.
- If Binder Payment Business Rule is not available, then it updates membership status reason as per configured value and creates a TO DO.
- If the Binder Applicability switch is 'Y', it calculates the binder payment threshold amount based on the binder liability amount and the binder payment threshold percentage.
- It also holds / releases the billable charges based on the 'Hold billing' configuration.

C1-RTAREAMEM

This algorithm derives the geographic rating area for a membership using the **Address Source** and **Address Type** characteristic types. It supports two address sources named **Policy Holder** and **Main Subscriber** and three address types named **Person Mailing**, **Person Seasonal**, and **Account Override**.

On adding a membership to a policy plan, this algorithm derives the characteristic types from the **Address Source Characteristic Type** and **Address Type Characteristic Type** attributes of a geographic rating area preference. This algorithm considers the geographic rating area preference which is specified in the **Rating Area Field Mapping for Group** option type of the **C1-ASOBLLNG** feature configuration. Then, it searches for these characteristics on the following entities in the specified sequence:

1. Policy Plan
2. State where the Policy Plan is Issued
3. Policy
4. State where the Policy is Issued

If these characteristics are not defined for any of the above listed entities, this algorithm derives the default address source and address type from the geographic rating area preference. If the address source is set to **Policy Holder**, this algorithm fetches the value from the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration. It then derives the person who is associated with the policy using the parent customer policy person role. Once the address source and address type are derived, this algorithm fetches the state and zip code from the address type of the address source. For example, if the address source is set to **Policy Holder** and address type is set to **Person Mailing**, this algorithm fetches the state and zip code from the policy holder's mailing address. Once the state and zip code are fetched from the address, this algorithm checks whether the zip code is a 9-digit code. If not, it appends zeros to make it a 9-digit zip code. It then derives the value of the **Use Plan Details** attribute from the geographic rating area preference. If the attribute is set to**Y**, this algorithm derives a geographic rating area for the state, zip code, policy number, plan number, and source system combination. However, if the attribute is set to**N**, this algorithm derives a geographic rating area for the state and zip code combination. If the geographic rating area is not derived for the specified combination, this algorithm derives the default geographic rating area from the geographic rating area preference. Once the geographic rating area is derived, this algorithm stores the geographic rating area for the membership. The characteristic type specified in the **Geographic Rating Area Characteristic Type** attribute of the geographic rating area preference is used to store geographic rating area for the membership. The effective date of the characteristic is set to effective date of the address.

C1-MEMSTSUP

This Algorithm cascades the status, status-reason and end-date of the dependent member-person in the membership for any change in status of the main member person.

Logs are created for dependent member person status changes.

When Termination request is sent for a membership, Its associated membership (if it is in Active status) for add-on plan will also get terminated.

Soft Parameter:

- Valid values for Cascade Associate Membership should be Y or N.
- This flag will indicate whether to cascade the changes to associate membership.

Copyright © 2026, Oracle and/or its affiliates.

C1-LATESET

This algorithm is used to send Late Setup Notification when difference between member person start date and creation data is greater than or equal to 'Late Setup Threshold'.

Parameter:

- To Do Type: Notification will be created using this To Do Type
- To Do Role: If It's not blank then this To Do Role will be used in To Do Type Notification otherwise default will be used.

C1-MEMRTGRNT

This algorithm check rate guarantee details are receive at membership level, If not then it invoke Business Rule service by providing Business Rule Category as Rate Guarantee, Membership Id, and Effective date as Membership Start Date to derive rate guarantee from business rule if any rate guarantee business rule applicable.

If data is not available then it will add the Rate guarantee details into CI_ MEMBERSHIP_RATE_GRNT and C1_ENT_BUS_RULE table else it will update existing records.

C1-VALMEMBO

This algorithm validates a membership. It checks the following:

- Whether the membership end date is not earlier than the membership start date.
- Whether the membership start date is not earlier than the policy plan start date or later than policy plan end date.
- Whether the membership end date is not earlier than the policy plan start date or later than policy plan end date.
- Whether the policy plan for which you want to define the membership is specified.
- Whether the person who is the main subscriber is added to the membership.
- Whether the relationship type is specified while adding a person to the membership.

C1-BNDRH

This algorithm is invoked during the membership activation process. It checks whether the binder payment is received for the membership. If the binder payment is received, the membership status is changed from **Pending Effectuation** to **Active**.

Note: At present, this algorithm is invoked only during the membership enrollment and not for membership reinstatement, where the membership status is changed from **Terminated** to **Active**.

This algorithm is invoked using the following scenario:

If...	**Then...**
The membership is in the **Active** status and the binder payment attributes like the **Consider Binder Liability Amount Flag** is configured as **N** along with the **Membership Status Reason when Binder Payment Received** is configured as **Binder Payment Received** in the **Field Mapping** screen	The system checks whether the hold billing switch in the **CI_MEMBERSHIP** table contains any value. If any value exists, the system releases the billable charges which are kept on hold for the membership. In addition, the system performs the following operations: • Retrieves the account (of the financial responsible person) for the membership. • Retrieves the non-binder payment contracts for the accounts from the **CI_SA** table. • Retrieves the billable charges present on the non-binder payment contracts where the membership ID is stamped as a characteristic.

Copyright © 2026, Oracle and/or its affiliates.

If...	Then...
	• Checks whether the bill after date of each billable charge contains a future date. If the bill after date contains a future date then it is changed to the system date minus one.

C1-IMRI-INS

The algorithm will update instruction record for Refund/Write-off Instruction on individual membership reinstatement

C1-INVRQIMEN

This algorithm would be configured on full-insured Individual Membership enrolment process.

It is used to create Automatic Invoice Request on the account details (Account Identifier Type and Account Identifier Type Value) mentioned in the Individual Membership Characteristic section on its enrollment.

If the newly enrolled Individual Membership has the account details for the main subscriber and is financially responsible person of the Individual Membership as well as the Membership Characteristics section has the characteristic 'Eligible For Invoice Request Creation = Yes' , then it will create the invoice request for the specific account for new enrollment. Else, for the events of reinstatement of the individual membership, the system will validate that this membership Id already exists and check if the previous status of the Membership is 'Terminated' to process the invoice request creation on individual Membership reinstatement. Also, if the parameter 'Termination Reason' is provided along with the parameter 'Invoice Request Type for Individual Membership Reinstatement', then the algorithm will evaluate to create the invoice request based on the list of values against the membership status reason provided for previous status ='Terminated'.

Before creating any invoice request, it will check whether any invoice request exists in final status with the specified account and If yes, then it will create new invoice request for the eligible account. The details of the invoice request created and its associated validation is available in the log tab of the Membership screen.

Parameters:

- Invoice Request Type for Individual Membership New Enrollment - This is an mandatory parameter to fetch configurations related to invoice Request creation for event of Individual Membership New Enrollment.
- Invoice Request Type for Individual Membership Reinstatement - This is an optional parameter to fetch configurations related to invoice Request creation for event of Individual Membership Reinstatement
- Termination Reason - This is an optional parameter to determine whether invoice request needs to be created for event of Individual Membership Reinstatement and for the list of the status reasons mapped to the previous status event 'Terminated'. The size of the list is maximum 5 comma-separated values.

C1-INDACCT

This algorithm evaluates the individual membership to determine the account to associate it with. If the membership is already associated with an account, no further action is required. If the membership is not yet associated with an account, new account creation rules are assessed and if met, a new account is created for the main subscriber and linked to the membership. Otherwise, the account linked to the prior membership of the individual for the same health coverage class is used.

A new account is created for an individual's first enrollment to a health coverage class. If the individual subsequently changes plans within a health coverage class, a new account is created if there is a gap in coverage from the prior enrollment or one of the configurable health plan characteristic criteria is met, that is:

1. If a health plan char type is provided as a parameter and the old and new values are also provided, a new account is created if the health plan char value from the prior membership = old value and the health plan char value from the current membership = new value.
2. If a health plan char type is provided as a parameter and the old and new values are not provided, a new account is created if the health plan char value from the prior membership <> health plan char value from the current membership.

Copyright © 2026, Oracle and/or its affiliates.

C1-IMTR-INS

This algorithm is used to initiate the process of automatic refund/write-off creation on individual membership termination. It identifies the account linked to financial responsible person of the individual membership.

It contains the following parameter:

- **Wait Days** - Used to specify the days after which the account balance is retrieved.

> **Note:**
>
> If you do not specify the value, by default, it is set to zero (0).
>
> You must specify a numeric value greater than zero.

C1-INVRQIMTM

This algorithm would be configured on full-insured Individual Membership termination process. It is used to create Automatic Invoice Request on the account details (Account Identifier Type and Account Identifier Type Value) mentioned in the Individual Membership Characteristic section on its termination. If the terminated Individual Membership has the account details for the main subscriber and is financially responsible person of the Individual Membership, then it will create the invoice request for the specific account. Before creating any invoice request, it will check whether any invoice request exists in final status with the specified account and If yes, then it will create new invoice request for the eligible account. The details of the invoice request created and its associated validation is available in the log tab of the Membership screen.

C1-MEMINACT

This algorithm changes the status of the member person to the value specified in the **Membership Person Inactive Status** option type of the **C1-ASOBLLNG** feature configuration. It also does the following:

- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO_STATUS_CD** column corresponding to the record in the **C1_AUDIT_EVENT**, **C1_AUDIT_EVENT_LOG**, and **CI_PRCE_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_ENTITY_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_REQ_DTL** table is set to **COMPLETE**.

C1-INVRQIMCN

This algorithm would be configured on full-insured Individual Membership cancelation process. It is used to create Automatic Invoice Request on the account details (Account Identifier Type and Account Identifier Type Value) mentioned in the Individual Membership Characteristic section on its cancelation. If the canceled Individual Membership has the account details for the main subscriber (and is financially responsible person) present in the Individual Membership Characteristics section, then it will create the invoice request for the specific account. Before creating any invoice request, it will check whether any invoice request exists in final status with the specified account and If yes, then it will create new invoice request for the eligible account. The details of the invoice request created and its associated validation is available in the log tab of the Membership screen.

Individual Membership Termination

To terminate an individual membership, you need to change the status of the main subscriber to **Inactive** through a health care inbound message or membership repricing inbound web service. Along with the main subscriber status, you need to specify the status reason and end date for the main subscriber. If the end date is earlier than or equal to the inbound

Copyright © 2026, Oracle and/or its affiliates.

processing date, the system updates the status, status reason, and end date of the main subscriber and then changes the status of the individual membership to **Terminated**. The system determines the individual membership status reason using the membership status reason preference which is specified in the **Status Reason Mapping** option type of the **C1-ASOBLLNG** feature configuration.

Once the status of the individual membership is set to **Terminated**, the system automatically changes the status of the dependent persons to **Inactive**. Note that while inactivating the dependent persons, the system only considers the dependent persons who are in the **Active** status. The system determines the dependent person status reason using the membership status reason preference.

If the main subscriber end date is later than the inbound processing date, the system creates a record in the **CI_MEMBERSHIP_PROCESS** table with the **Pending** status. The system stores the following information in the record:

- Membership ID
- Member Person ID
- Whether the member person is a main subscriber
- Processing date (it is set to future dated end date of the member person)
- Required action (is set to **Terminate**)

A new batch named **C1-MEPRC** is introduced in this release. On the **C1-MEPRC** batch execution, the system checks whether there are any records in the **CI_MEMBERSHIP_PROCESS** table with the **Pending** status. If so, the system checks whether the processing date of the record is earlier than or equal to the system date. If so, the system determines the required action to be taken for the individual membership from the record. If the **MEMB_PROCESS_FLG** column of the record is set to **Terminate** and the **MAIN_CUST_SW** column is set to **N**, the system changes the status of the dependent person to Inactive and updates the end date of the dependent person.

However, if the **MEMB_PROCESS_FLG** column of the record is set to **Terminate** and the **MAIN_CUST_SW** column is set to **Y**, the system updates the status and end date of the main subscriber and then changes the status of the individual membership to **Terminated**. Once the status of the individual membership is set to **Terminated**, the system automatically changes the status of the dependent persons to **Inactive**. The system also updates the end date of the individual membership and dependent persons.

The system enables you to configure whether the individual membership on the add-on health insurance plan should be automatically terminated when the primary individual membership is terminated. If the **Cascade Associate Membership** parameter in the **C1-MEMSTSUP** algorithm is set to **Y**, the system changes the status of the associated individual membership to **Terminated**. Once the status of the associated individual membership is set to **Terminated**, the system automatically changes the status of its main subscriber and dependent persons to **Inactive**. The system also updates the end date of the associated individual membership, its main subscriber and its dependent persons.

Once the required action is completed for the record in the **CI_MEMBERSHIP_PROCESS** table, the system changes the status of the record to **Complete**. However, if the system receives a reinstatement request for an individual membership before processing the termination request, the system changes the status of the record in the **CI_MEMBERSHIP_PROCESS** table to **Canceled**.

Individual Membership Renewal

Oracle Revenue Management and Billing enables you to renew an individual membership in the following two ways:

- Manually
- Automatically

While creating or editing an individual membership through a health care inbound message or membership repricing inbound web service, you must set the **Auto Renew** option for the individual membership to either **Y** or **N**.

If the **Auto Renew** option for an individual membership is set to **N**, you need to specify the following details in a health care inbound message or membership repricing incoming message:

- Membership renewal date

Copyright © 2026, Oracle and/or its affiliates.

- Status, status reason, and end date of the main subscriber
- Status, status reason, and end date of the dependent person

The enrollment system can send the renewal information either during the enrollment period or after the enrollment period. Irrespective of when the renewal information is received, the membership renewal date must be set to the membership end date + 1. For example, if the enrollment period is from 01-01-2021 to 12-31-2021, then the system must receive the membership renewal date as 01-01-2022. On renewing an individual membership, the dependent person in the individual membership is not automatically activated unless the activation information is received for the dependent person from the enrollment system. The associated membership for an add-on health insurance plan is not automatically renewed unless the renewal information is received for the respective membership from the enrollment system.

If the **Auto Renew** option for an individual membership is set to **Y**, you need to specify the contract period for which the individual membership should be automatically renewed. The system then creates a record in the **CI_MEMBERSHIP_PROCESS** table with the **Pending** status. The system stores the following information in the record:

- Membership ID
- Main Subscriber ID
- Whether the member person is a main subscriber
- Processing date (it is set to the membership end date)
- Required action (is set to **Renew**)

On the **C1-MEPRC** batch execution, the system checks whether there are any records in the **CI_MEMBERSHIP_PROCESS** table with the **Pending** status. If so, the system checks whether the processing date of the record is earlier than or equal to the system date. If so, the system determines the required action to be taken for the individual membership from the record. If the **MEMB_PROCESS_FLG** column of the record is set to **Renew** and the **MAIN_CUST_SW** column is set to **Y**, the system calculates the renewal date and new end date for the individual membership.

The renewal date for the individual membership is set to membership end date + 1. For example, if the enrollment period is from 01-01-2021 to 12-31-2021, the system sets the renewal date to 01-01-2022 (i.e. 12-31-2021 + 1). The new membership end date is calculated using the renewal date and contract period. For example, if the renewal date is 01-01-2022 and contract period is 12 months, the system sets the end date of membership, main subscriber, and dependent persons to 12-31-2022. The associated membership for an add-on health insurance plan is not automatically renewed during the individual membership renewal.

The automatic renewal request for an individual membership must be received during the enrollment period. If the automatic renewal request for an individual membership is received after the enrollment period, the system will not renew the individual membership automatically.

Once the membership end date is changed, the system will trigger the repricing feature and accordingly create or extend the billable charge for the renewed period.

Automatic Contract Creation for Individual Membership

Oracle Revenue Management and Billing automatically creates contracts for each account of the financially responsible member person when:

- Person is added to an individual membership
- Account is added for a financially responsible member person
- Health plan is added or edited in the system

In the former two scenarios, the system derives the individual membership where the person is financially responsible for the membership. Once the individual membership is derived, the system derives the health plan for which the individual membership is enrolled.

Once the health plan is derived, the system checks whether the pricing rule types are associated with the health plan. If a pricing rule type is associated with the health plan and the pricing rule type contains one or more price items, it creates a contract using a distinct contract type which is associated with each price item. Let us assume that PRT1 is

Copyright © 2026, Oracle and/or its affiliates.

associated with the health plan and it contains three price items - PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, the system will create two distinct contracts - C1 using CT1 and C2 using CT2.

If multiple pricing rule types are associated with the health plan and each pricing rule type contains multiple price items, it creates a contract using a distinct contract type which is associated with each price item of each pricing rule type.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective individual membership. If the same contract type is associated with the same or different price items on the same or different pricing rule types of different health plans, the contract start date is set to the start date of the earliest health plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

Note:

The system creates a contract using a contract type for an account only when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

Rate Guarantee for Individual Membership

At times, the insurance carriers provide rate guarantee health plans to a fully-insured individual wherein the insurance rate does not change for the rate guarantee period (i.e. lock-in period). Oracle Revenue Management and Billing enables you to configure guaranteed rate for one or more health insurance services offered to an individual person. Unless, there are some qualifying life events (QLE), the system will calculate the premium on the same rate for the next coverage period until the rate guarantee period is over.

The system enables you to maintain the rate guarantee details for each individual membership through a health care inbound message or through membership repricing inbound web service. It enables you to capture the following details:

- **Rate Guarantee Start Date** - Used to specify the date from when the rate guarantee is available for the individual membership.
- **Rate Guarantee End Date** - Used to specify the date till when the rate guarantee is available for the individual membership.
- **Rate Guarantee Status** - Used to indicate the status of the rate guarantee period. The valid values are - **Active** and **Inactive**.

You can send the rate guarantee details for an individual membership during enrollment (i.e. on membership creation), during coverage period, or during membership renewal. While sending the rate guarantee details of an individual membership, ensure that the active rate guarantee records do not have overlapping date range.

The system enables you to define the rate guarantee business rules. If the rate guarantee details are not specified for an individual membership during enrollment, the system derives the rate guarantee details for the individual membership through a rate guarantee business rule. The rate guarantee business rule indicates the following:

- **Rate Guarantee Applicability** - Used to indicate whether the rate guarantee is available for the individual membership.
- **Rate Guarantee Period** - Used to derive the rate guarantee start and end dates. The system sets the rate guarantee start date to the membership start date and the rate guarantee end date to the rate guarantee start date + rate guarantee period.

There might be situations wherein the rate guarantee details are received for an individual membership later during the coverage period or during membership renewal through a health care inbound message. In such scenarios, the system will then give precedence to the rate guarantee details which are received through a health care inbound message and

Copyright © 2026, Oracle and/or its affiliates.

will not derive the rate guarantee details from the rate guarantee business rule which is stamped against the individual membership.

A new column named **Rate Guarantee** is available in the **Price Items** section while defining or editing an age based or tier based pricing rule type. While creating a charge for an individual membership, the system checks whether the **Rate Guarantee** option is selected for the price item in the respective pricing rule type and whether the billable charge timeline falls within the rate guarantee period. If so, the system derives the rate guarantee pricing rule for the price items where the **Rate Guarantee** option is selected.

The system stores the pricing rule which is effective for such price items on the rate guarantee start date as the rate guarantee pricing rule. Until the rate guarantee period is over, the system considers the rate guarantee pricing rule for the individual membership during premium calculation. This ensures that the same rate is charged for a health insurance service even when the rate has increased for the health insurance service in the system.

The Entity Audit framework is configured for the Rate Guarantee feature. The system will create audit events when the rate guarantee records are added or updated for an individual membership.

Late Setup Notification

Oracle Revenue Management and Billing enables you to create a To Do notification when the details to include a member person in a group or individual membership is received in ORMB beyond the late setup threshold days from the member person start date. This notification can help the billing analyst to take appropriate actions, such as giving premium waiver to the member person if required.

To enable this feature, you need to set the following option types in the **C1-ASOBLLNG** feature configuration:

- **Monitor Late Setup** - Used to indicate whether you want to enable the late setup notification feature. The valid values are - **Y** and **N**. By default, the value is set to **N**.
- **Late Setup Threshold in Days** - Used to indicate the number of threshold days for late setup notification. This option type is required when the **Monitor Late Setup** option type is set to **Y**. The value must be greater than zero.

For example, if the system receives the information to add a member person with the start date as **01-15-2021** to an individual membership on **02-15-2021** and the late setup threshold days in the **C1-ASOBLLNG** feature configuration is set to **15**. In this case, the number of days between the member person start date and member person creation date is greater than late setup threshold days, and therefore a To Do is created using the To Do type which is specified in the **C1-LATESET** algorithm attached to the group or individual membership business object, respectively.

To implement this business requirement, the system stores the member person creation date (which was not done in the previous releases) while adding a member person to a group or individual membership. A new batch named **C1-LSUB** is introduced in this release. It derives the creation date for all member persons in the existing group and individual memberships and stamps it against the corresponding record in the **CRE_DTTM** column of the **CI_MEMBERSHIP_PER** table. This batch must be executed only once after upgrading to Oracle Revenue Management and Billing Version 3.1.0.0.0. For more information, refer to *Oracle Revenue Management and Billing Version 3.1.0.0.0 Upgrade Guide.*

Young Adult Coverage in an Individual Membership

Oracle Revenue Management and Billing enables you to calculate premium for the young adults who are covered in an individual membership. While creating or editing an individual membership, or while adding, editing, or inactivating a member person in an individual membership through a health care inbound message or through membership repricing inbound web service, the system derives the fully-insured pricing business rule for the individual membership. The system enables you to define the following young adult related output parameters in the fully-insured pricing business rules:

- **Young Adult Applicability** - Used to indicate whether you want to consider the young adults during the premium calculation. The valid values are - **Yes** and **No**.

Copyright © 2026, Oracle and/or its affiliates.

- **Young Adult Max Age Limit** - Used to indicate the maximum age limit for young adults who are eligible for premium calculation. This output parameter is mandatory when the **Young Adult Applicability** parameter is set to **Yes**.

While deriving member relationship for each member person of the individual membership from a member relationship structure, the system considers the following information from the fully-insured pricing business rule of the individual membership:

- Young Adult Applicability
- Young Adult Max Age Limit

Similarly, while deriving subscription tier for the individual membership from a subscription tier structure, the system considers the following information from the fully-insured pricing business rule of the individual membership:

- Young Adult Applicability
- Young Adult Max Age Limit

Thus, while calculating the premium for an individual membership using an age based or tier based pricing rule, the system considers the young adult for the premium calculation based on the above two parameters set in the fully-insured pricing business rule.

Individual Membership Preference

The Individual Membership Preference enables you to set the attributes which are used during the creation of an individual membership. While deriving the details for an individual membership, the system uses the following attributes from the individual membership preference:

- Health Plan Characteristics

You can define, edit, delete, and copy an individual membership preference through the **Field Mapping** screen.

Searching for an Individual Membership Preference

Procedure

To search for an individual membership preference:

1. Click the **Menu** (☰) icon in the **Application** toolbar.
   A list appears.
2. Click the **Admin Menu** option from the list.
   A sub-menu appears.
3. Select **F** and then click **Field Mapping**.
   The **Field Mapping** screen appears.
4. Select the **Individual Membership** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
6. Click **Search**.
   A list of individual membership preferences that meet the search criteria appears in the **Search Results** section.

Copyright © 2026, Oracle and/or its affiliates.

Viewing the Individual Membership Preference Details

Procedure

To view the details of an individual membership preference:

1. Search for the individual membership preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (ᯤ) icon corresponding to the individual membership preference whose details you want to view.
   The **Field Mapping** zone appears.
3. View the details of the individual membership preference in the **Field Mapping** zone.

Defining an Individual Membership Preference

Prerequisites

To define an individual membership preference, you should have:

- Field mapping business objects defined in the application.
- Required characteristic type defined for the health plan in the application.

Procedure

To define an individual membership preference:

1. Click the **Menu** (☰) icon in the **Application** toolbar.
   A list appears.
2. Click the **Admin Menu** option from the list.
   A sub-menu appears.
3. Select **F** and then click the **Add** button corresponding to the **Field Mapping** option from the sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)

Field Mapping Business Object	Used to indicate the business object using which you want to create the individual membership preference. The valid values are:
	• **Bill Route Method - Contact Method Mapping (i.e., C1_BillRouteCntMethMap)** - Enables you to maintain a routing method - contact method mapping preference.
	• **Field Mapping (i.e., C1-FieldMapping)** - Enables you to maintain the following:
	  • Automatic Refund/Write-Off Preference
	  • Billing Preference
	  • Binder Payment Preference
		Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Configuration for Match Type - Handling Overpayment Preference • Delinquency Process Preference • Delinquency Process Type Preference • Geographic Rating Area Preference • Hold Request Preference • Individual Membership Preference • Medicare Preference • Member Reconciliation Preference • Member Relationship and Subscription Tier Preference • Membership Repricing Reasons Preference • MNI Derivation Input Preference • Statement Construct Preference • Transaction Paid Status Count Preference • **Group Membership Status Reason Mapping (i.e., C1-MemStatusReasonMapGroup)** - Enables you to maintain a group membership status reason preference. • **Medicare Plan Benefit Package (i.e., C1-BenefitPackage)** - Enables you to maintain a Medicare plan benefit package. • **Membership Status Reason Mapping (i.e., C1-MemStatusReasonMapping)** - Enables you to maintain an individual membership status reason preference. **Note:** The above business objects are shipped with the product. The list includes those business objects which are created using the **Field Mapping** (i.e., **C1-FIELDMAP**) maintenance object.	

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.
5. Click **OK**.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details for the individual membership preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the individual membership preference.	Yes
Description	Used to specify the description for the individual membership preference.	Yes
Detailed Description	Used to specify additional information about the individual membership preference.	No
Status	Used to indicate the status of the billing preference. The valid values are: • Active	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Inactive	

- **Preference Category** - Used to specify the preference category. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: • Automatic Refund/Write-Off • Billing • Binder Payment • Configuration for Match Type - Handling Overpayment • Delinquency Process • Delinquency Process Type • Geographic Rating Area • Hold Request • Individual Membership • Medicare • Medicare Plan Benefit • Member Reconciliation • Member Relationship and Subscription Tier • Membership Repricing Reasons • Membership Status Reason • MNI Derivation Input • Routing Method - Contact Method Mapping • Statement Construct • Transaction Paid Status Count **Note:** The list includes only those values which are defined in the **FIELD_CAT_FLG** lookup field. You must select the **Individual Membership** option from the list while creating a individual membership preference.	Yes

- **Preference Settings** - Used to set the attributes in the individual membership preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the individual membership preference. The valid values are: • **Active Selection Characteristics** - Used when you want to specify the characteristic that determine or represent an individual's active selection for processing the membership or enrollment in the individual membership preference. • **Health Plan Characteristics** - Used when you want to derive the health plan ID for an individual membership based on the configured health	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	plan characteristics in the individual membership preference. **Note:** The attribute list appears only when the preference category is selected from the respective list.	
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the individual membership. The valid values are: • **Active Selection Characteristics** - The **Value** field is used to specify the configured characteristic for an active selection. • **Health Plan Characteristics** - The **Value** field is used to specify the characteristic type which indicates the plan ID of the health plan. This characteristic type is defined for a health plan. The system uses this plan ID to create a health plan specific contract. The system then uses this characteristic type to determine the account of the financial responsible person for whom the billable charges should be generated. **Note:** The attribute value list appears only when the attribute is selected from the respective list. The list includes only those characteristics which are already defined in the system.	Yes
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account • Adjustment • Billable Charge • Membership • Payment • Policy **Note:** At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the **MAP_ENTITY_FLG** lookup field.	No

Note: While defining an individual membership preference, you must set at least one attribute in the individual membership preference.

6. Select the **Individual Membership** option from the **Preference Category** list.
   The **Preference Category** section disappears and the **Preference Category** field appears in the **Main** section.
7. Enter the required details in the **Main** section.
8. Set the required attributes in the individual membership preference.

Copyright © 2026, Oracle and/or its affiliates.

9. If you want to set more than one attribute in the individual membership preference, click the **Add** (+) icon and then repeat step 8.

   Note: However, if you want to remove an attribute from the individual membership preference, click the **Delete** (🗑) icon corresponding to the attribute.

10. Click **Save**.
    The individual membership preference is defined.

Editing an Individual Membership Preference

Prerequisites

To edit an individual membership preference, you should have:

- Required characteristic type defined for the health plan in the application.

Procedure

To edit an individual membership preference:

1. Search for an individual membership preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column *c*orresponding to the individual membership preference whose details you want to edit.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for an individual membership preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the individual membership preference.	Not applicable
Description	Used to specify the description for the individual membership preference.	Yes
Detailed Description	Used to specify additional information about the individual membership preference.	No
Status	Used to indicate the status of the individual membership preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Individual Membership	Not applicable

   - **Preference Settings** - Used to set the attributes in the individual membership preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the individual membership preference. The valid values are: • **Active Selection Characteristics** - Used when you want to specify the characteristic that determine or represent an individual's active selection for	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	processing the membership or enrollment in the individual membership preference. • **Health Plan Characteristics** - Used when you want to derive the health plan ID for an individual membership based on the configured health plan characteristics in the individual membership preference. **Note:** The attribute list appears only when the preference category is selected from the respective list.	
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the individual membership. The valid values are: • **Active Selection Characteristics** - The **Value** field is used to specify the configured characteristic for an active selection. • **Health Plan Characteristics** - The **Value** field is used to specify the characteristic type which indicates the plan ID of the health plan. This characteristic type is defined for a health plan. The system uses this plan ID to create a health plan specific contract. The system then uses this characteristic type to determine the account of the financial responsible person for whom the billable charges should be generated. **Note:** The attribute value list appears only when the attribute is selected from the respective list. The list includes only those characteristics which are already defined in the system.	Yes
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account • Adjustment • Billable Charge • Membership • Payment • Policy **Note:** At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the **MAP_ENTITY_FLG** lookup field.	No

Note: Alternatively, you can click the **Edit** button in the **Field Mapping** zone to edit the details of an individual membership preference.

Copyright © 2026, Oracle and/or its affiliates.

3. Modify the required details in the **Main** section.
4. Define, edit, or remove the attribute from the individual membership, if required.

> **Note:** You must set at least one attribute in an individual membership preference.

5. Click **Save**.
   The changes made to the individual membership are saved.

How to search for an individual membership preference	Searching for an Individual Membership Preference on page 472

Copying an Individual Membership Preference

Instead of creating an individual membership preference from scratch, you can create a new individual membership preference using an existing individual membership preference. This is possible through copying an individual membership preference. On copying an individual membership preference, the details including the attributes are copied to the new individual membership preference. You can then edit the details, if required.

Prerequisites

To copy an individual membership preference, you should have:

- Individual membership preference (whose copy you want to create) defined in the application
- Required characteristic type defined for the health plan in the application.

Procedure

To copy an individual membership preference:

1. Search for the individual membership preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate** (⎘) icon in the **Duplicate** column corresponding to the individual membership preference whose copy you want to create.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for an individual membership preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the individual membership preference.	Yes
Description	Used to specify the description for the individual membership preference.	Yes
Detailed Description	Used to specify additional information about the individual membership preference.	No
Status	Used to indicate the status of the billing preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Individual Membership	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

- **Preference Settings** - Used to set the attributes in the individual membership preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the individual membership preference. The valid values are: • **Active Selection Characteristics** - Used when you want to specify the characteristic that determine or represent an individual's active selection for processing the membership or enrollment in the individual membership preference. • **Health Plan Characteristics** - Used when you want to derive the health plan ID for an individual membership based on the configured health plan characteristics in the individual membership preference. **Note:** The attribute list appears only when the preference category is selected from the respective list.	Yes
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the individual membership. The valid values are: • **Active Selection Characteristics** - The **Value** field is used to specify the configured characteristic for an active selection. • **Health Plan Characteristics** - The **Value** field is used to specify the characteristic type which indicates the plan ID of the health plan. This characteristic type is defined for a health plan. The system uses this plan ID to create a health plan specific contract. The system then uses this characteristic type to determine the account of the financial responsible person for whom the billable charges should be generated. **Note:** The attribute value list appears only when the attribute is selected from the respective list. The list includes only those characteristics which are already defined in the system.	Yes
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account • Adjustment • Billable Charge • Membership • Payment • Policy	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the **MAP_ENTITY_FLG** lookup field.	

Note: While defining an individual membership preference, you must set at least one attribute in the individual membership preference.

Tip: Alternatively, you can click the **Duplicate** button in the **Field Mapping** zone to create a copy of the individual membership preference.

3. Enter the required details in the **Main** section.
4. Define, edit, or remove the attribute from the individual membership preference, if required.
5. Click **Save**.
   The new individual membership preference is defined.

Binder Payment for Individual Membership

On enrolling for an individual health insurance plan, the financial responsible member person needs to pay first month's premium often called as binder payment to complete the enrollment process. The individual membership enrollment is

Copyright © 2026, Oracle and/or its affiliates.

effectuated when the binder payment is received. The binder payment should be received by the billing system and not by the enrollment system. The binder payment is not required during individual membership renewal and reinstatement.

Few health insurance payers send bills to collect the binder payment, whereas few do not send bills to collect the binder payment. In other words, the bill generation process for individual membership is kept on hold by some health insurance payers until the binder payment is received.

Oracle Revenue Management and Billing enables you to create binder payments for an individual membership. For more information on how to create a binder payment, see the Binder Payment Creation on page 493 section. While creating an individual membership through a health care inbound message or through a membership repricing inbound web service, you must set the **Binder Payment Applicability** option for the individual membership to either **Y** or **N**. You can set the **Binder Payment Applicability** option to **Y** only when the following conditions are met:

- Individual membership status is set to the value specified in the **Membership Status Code for Pending Effectuation** attribute of the binder payment preference.
- Membership status reason is set to the value specified in the **Membership Status Reason when Awaiting Binder Payment** attribute of the binder payment preference.

The system considers the binder payment preference which is specified in the **Binder Payment Field Mapping** option type of the **C1-ASOBLLNG** feature configuration.

If the **Binder Payment Applicability** option is set to **Y** for an individual membership, it means that the system should monitor whether the binder payment is received before activating the individual membership. On receiving the binder payment for the individual membership, the system only changes the membership and its member persons' status reason and not the membership and its member person' status. The membership and its member persons' status is changed only when the system receives the main subscriber's status update information from the enrollment system through a health care inbound message. However, if the **Binder Payment Applicability** option is set to **N** for an individual membership, it means that binder payment is not required for activating the individual membership. For more information about the binder payment monitor process, see the Binder Payment Monitoring on page 493 section.

If the **Binder Payment Applicability** option is set to **Y** for an individual membership, you need to specify the following binder payment details through a health care inbound message:

- **Grace Days** - Used to calculate the grace date for the individual membership.
- **Binder Liability Amount** - Used to specify the binder liability amount. This data is required when the **Consider Binder Liability Amount** attribute is set to **Y** in the binder payment preference.
- **Threshold Percentage** - Used to specify the threshold percentage using which the threshold amount should be calculated.
- **Hold Billing** - Used to indicate whether you want to hold the bill generation process for the individual membership until the binder payment is received.

The system facilitates you to validate binder payment against the threshold amount. If the **Consider Binder Liability Amount** attribute is set to **Y** in the binder payment preference, the system calculates the threshold amount for the binder payment using the binder liability amount and threshold percentage. For example, if the binder liability amount is set to 50 and threshold percentage is set to 20, the system sets the threshold amount to 10 (i.e. (50*20)/100). The system can receive one or more binder payments for an individual membership. If the **Consider Binder Liability Amount** attribute is set to **Y**, the system must receive the binder payments whose sum is equal to or greater than the threshold amount. However, if the **Consider Binder Liability Amount** attribute is set to **N**, the system does not calculate the threshold amount for the binder payment. In such case, the system must receive a binder payment with the amount greater than zero.

On editing the binder liability amount and threshold percentage for an individual membership, the system recalculates the threshold amount for the binder payment. On creating a billable charge for an individual membership where the **Hold Billing** option is set to **Y**, the system will set the bill after date in the billable charge to a far future date (i.e. 12-31-2099).

Prerequisites

To setup the binder payment process, you need to do the following:

- Define the binder payment identification characteristic type for the payment in the system.

Copyright © 2026, Oracle and/or its affiliates.

- Define the required status reason for the membership in the system.
- Define the required configurations for the following binder payment fields in the system.
  - Binder Payment Applicability
  - Hold Billing
  - Threshold Percentage
  - Grace Days
- Define the binder payment field mapping preference in the system.
- Values defined for binder payment in the **FIELD_CAT_FLG** lookup field
- Set the values for the following option types in the **C1-ASOBLLNG** feature configuration:
  - Binder Payment Field Mapping
- Attach an algorithm of the **C1-THRSHDAMT** algorithm type to the **Post-Processing** system event of the **C1-IndMembership** business object.
- Attach an algorithm of the **C1-BNDRH** algorithm type to the **Enter** system event of the **C1-IndMembership** business object where the status is **Active**.
- Attach an algorithm of the **C1-FICRETBC** algorithm type to the **Billable Charge Creation Post Processing** system event of the **Fully Insured Age Based** and **Fully Insured Tier Based** pricing rule type.
- Attach an algorithm of the **C1-BNFTODO** algorithm type and attach it as a soft parameter in the **C1-BPMNT** batch.
- Define the values in the parameter of the **C1-CCPYTSADS** algorithm.
- Lockbox tender types defined in the **C1_LBX_TENDER_TYPE** lookup field.
- Lockbox record type, lockbox reference identification qualifier, and lockbox remittance identification types defined in the **C1_LBX_820_RECORD_TYPE**, **C1_LBX_REF_IDQ_LKP**, and **C1_LBX_RMR_ID_TYPE** lookup fields respectively.

To Do Notification on Binder Payment Cancellation

Oracle Revenue Management and Billing enables you to generate a To Do notification when a binder payment for an individual membership is canceled. To generate the To Do notification when a binder payment is canceled, you need to do the following setup:

- Add the following value in the **MEMB_PERS_STAT_RSN_FLG** lookup field:
  - Binder Payment Canceled
- Add the following status reason for the **Active** status of the **C1-IndMembership** business object:
  - Membership is active but binder payment is canceled
- Add the following the status reason mapping in the preference which is defined using the **Membership Status Reason Mapping** (**C1-MemStatusReasonMapping**) business object:

Member Person Status	**Member Person Status Reason**	**Membership Status Reason**
Active	Binder Payment Canceled	Membership is active but binder payment is canceled

- Define the following attributes in the preference which is defined using the **C1-FieldMapping** (**C1-FieldMapping**) business object and where the preference category is set to **Binder Payment**:

Attribute	**Value**	**Entity Type**
Membership Status Reason when Binder Payment Cancelled	Membership Status Reason Code (of the**Membership is active but binder payment is canceled** status)	Membership
To Do Type for Binder Payment Cancelled	C1-BPCNC	Membership

Copyright © 2026, Oracle and/or its affiliates.

A new To Do type named **C1-BPCNC** and algorithm type named **C1-BNDPYCNCL** are introduced in this release. To generate the To Do notification during binder payment cancelation, you need to attach an algorithm created using the **C1-BNDPYCNCL** algorithm type to the **Payment Cancellation** system event of the required customer class. If the **C1-BNDPYCNCL** algorithm is attached on the customer class, the system checks whether the cancel reason specified while canceling a payment is listed as a value of the **Binder Payment Cancel Reason List** parameter in the algorithm. If so, the system then validates whether the payment is a binder payment using the **Binder Payment Identification Characteristics Type** attribute of the binder payment preference. If the payment is a binder payment, the system then determines the individual membership whose binder payment is canceled.

Note:

If a payment contains a membership identifier value characteristic that is specified in the **Binder Payment Identification Characteristics Type** attribute of the binder payment preference, the system considers the payment as a binder payment.

The system derives the individual membership using the membership identifier value characteristic on the binder payment and the **Binder Payment Identification ID Type** attribute of the binder payment preference.

Once the individual membership is derived, the system fetches the binder payment applicability flag for the individual membership. If the binder payment applicability flag of the individual membership is set to **No**, the system will not generate the To Do notification when the binder payment is canceled.

However, if the binder payment applicability flag of the individual membership is set to **Yes**, the system will derive the binder payment threshold amount for the respective membership. If the binder payment threshold amount is equal to zero, the system will not generate the To Do notification when the binder payment is canceled.

If the binder payment threshold amount is greater than zero, the system will calculate the grace date (Membership Start Date + (Binder Payment Grace Days -1)) and the total binder payment amount until the grace date. If the **Consider Binder Liability Amount** attribute in the binder payment preference is set to **Y**, the system checks whether the total binder payment amount until the grace date is less than the threshold amount. If the total binder payment amount until the grace date is less than the threshold amount, the system does the following:

- Updates the member person status reason to **Binder Payment Canceled** and the membership status reason to **Membership is active but binder payment is canceled**
- A To Do using the **C1-BPCNC** To Do type is created

However, if the total binder payment amount until the grace date is greater than or equal to the threshold amount, the system neither changes the member person and membership status reasons nor creates a To Do notification when the binder payment is canceled.

If the **Consider Binder Liability Amount** attribute in the binder payment preference is set to **N**, the system checks whether the total binder payment amount until the grace date is equal to zero. If the total binder payment amount until the grace date is equal to zero, the system does the following:

- Updates the member person status reason to **Binder Payment Canceled** and the membership status reason to **Membership is active but binder payment is canceled**
- A To Do using the **C1-BPCNC** To Do type is created

However, if the total binder payment amount until the grace date is greater than zero, the system neither changes the member person and membership status reasons nor creates a To Do notification when the binder payment is canceled.

This algorithm contains the following parameters:

- **Membership Business Object** - Used to specify the individual membership business object. The system will then consider only those individual memberships which are created using the specified business object. Here, you must set the value to **C1-IndMembership**.
- **Algorithm for TO DO Creation** - Used to specify the algorithm using which you want to create a To Do notification during binder payment cancellation. Here, you must set the value to an algorithm which is created using the **C1-BNDTODO** algorithm type.
- **Binder Payment Cancel Reason List** - Used to specify a comma-separated list of payment cancel reasons that the system should consider while To Do generation on payment cancelation. You can specify maximum five comma-

Copyright © 2026, Oracle and/or its affiliates.

separated values for this parameter. Here, you must specify a payment cancel reason which is already defined in the system.

All the above parameters are mandatory.

Note that the system will update the membership status to **Pending Effectuation** only when the inbound message is received to change the membership status to **Pending Effectuation**. Until then, the member person and membership statuses will not change even if the respective binder payment is canceled.

Transfer Binder Payment from General Suspense Account to Individual Membership Account

Usually, in a fully insured individual business, the binder payments received before the individual membership enrollment are parked in the general suspense account. Oracle Revenue Management and Billing enables you to transfer the binder payments of an individual membership from the general suspense account to the individual member's account after the individual membership enrollment information is received through an inbound message.

To transfer the binder payment from general suspense account to individual membership account, you need to set the value for the following option type in the **C1_CMO** feature configuration:

- **Suspense Contract Type** - Used to indicate the suspense contract type whose suspense contracts' payments you want to transfer to the individual membership account.

A new batch control named **C1-PYTRS** is introduced in this release. It fetches the suspense contracts of the contract type which is specified in the **Suspense Contract Type** option type of the **C1_CMO** feature configuration. Once all suspense contracts are derived, the batch fetches the unmatched frozen payments which are made against the suspense contracts. The batch then checks whether the characteristic type specified in the **Payment Identifier Characteristic Type** parameter is defined on the payment. If the specified characteristic type is defined on the payment, the system considers the payment as the binder payment. If the specified characteristic type is not defined on the payment, the system does not consider the payment as the binder payment.

The batch then derives the individual membership for which the binder payment is made. While deriving the individual membership, the batch uses the membership identifier value characteristic defined on the binder payment and the value specified in the **Membership Identifier Type** parameter. You can specify a comma-separated list of membership identifier types in the **Membership Identifier Type** parameter. The batch then checks whether an individual membership exists with either of the membership identifier type and value combination in the system. Once the individual membership is derived, the batch fetches the individual member's account using the account identifier type and value characteristics which are defined on the individual membership.

Note:

While deriving the account identifier type and value characteristics, the system considers the characteristic types which are specified in the **Account Identifier Type Char Type** and **Account Identifier Value Char Type** option types of the **C1-ASOBLLNG** feature configuration.

If multiple individual memberships are derived with the membership identifier type and value combination, the system will not consider the binder payment for transfer and will accordingly add an appropriate log entry to such binder payments.

Once the individual member's account is derived, the batch transfers the binder payment from the suspense contract to either the unpaid bills or on account contract of the account depending on the following:

- If the match type is specified in the **Bill Match Type** parameter, the batch will transfer the binder payment from the suspense contract against the unpaid bills of the account. While transferring the binder payment against the unpaid bills of the account, the system will do either of the following:
    - If the **C1-MD-ACCT** manual distribution algorithm is attached to the match type, the system will distribute the binder payment against the unpaid bills of the account in the ascending order of the due date. If there are multiple bills with the same due date, the system will consider the unpaid bill in the ascending order of the unpaid amount. However, if there are multiple bills with the same due date and amount, the system will randomly consider the

Copyright © 2026, Oracle and/or its affiliates.

unpaid bill for payment. If there is any excess credit, the system will apply the excess credit amount on the on account contract of the individual member's account. Note that the on account contract is derived using the match type specified in the **On Account Match Type** parameter.

- If a manual distribution algorithm is not attached to the match type, the system will distribute the binder payment against the unpaid bills of the account in the ascending order of the due date. If there is any excess credit, the system will apply the excess credit amount on the on account contract of the individual member's account. Note that the on account contract is derived using the match type specified in the **On Account Match Type** parameter.

- If the match type is not specified in the **Bill Match Type** parameter, the batch will transfer the binder payment from the suspense contract to the on account contract of the individual member's account. Note that the on account contract is derived using the match type specified in the **On Account Match Type** parameter.

While transferring the binder payment from the suspense contract to either the unpaid bills or on account contract, the system cancels the old payment on the suspense contract and creates a new payment against the unpaid bills or on account contract of the individual member's account. While canceling the old payment, the system uses the cancel reason specified in the **Payment Cancel Reason for Transfer** parameter. While creating a new binder payment, the system copies all characteristics from the old payment before changing its status to **Frozen**.

This batch is a multi-threaded batch. The multi-threading is based on account ID and chunks for multi-threading are created based on numerical distribution of account ID. This batch contains the following parameters:

Parameter Name	**Mandatory (Yes or No)**	**Description**
Payment Identifier Characteristic Type	Yes	Used to specify the characteristic type which stores the membership identifier value. The system then considers a payment as a binder payment if the specified characteristic type is defined on the payment. **Note:** You must specify the characteristic type where the characteristic entity is set to **Payment**.
Membership Identifier Type	Yes	Used to indicate the membership identifier type using which you want to derive the individual membership. If you specify multiple membership identifier types separated by comma, the system will derive the individual membership using either of the membership identifier type and value combinations. **Note:** You must specify a membership identifier type which is already defined in the system. You can specify maximum twenty comma-separated values for this parameter.
Bill Match Type	No	Used to indicate the match type using which you want to transfer the binder payment from the suspense contract to the unpaid bills of the individual member's account. **Note:** You must specify a match type where the entity type is set to **Account**.
On Account Match Type	Yes	Used to indicate the match type using which you want to transfer the binder payment from the suspense contract to the on account contract of the individual member's account.

Copyright © 2026, Oracle and/or its affiliates.

Parameter Name	Mandatory (Yes or No)	Description
Payment Cancel Reason for Transfer	Yes	Used to indicate the payment cancel reason that you want to use while canceling the binder payment on the suspense contract. **Note:** You must specify a payment cancel reason which is already defined in the system.
Thread Pool Name	No	Used to specify the thread pool on which you want to execute the batch.

Once the binder payment is transferred from the suspense contract to either the unpaid bills or on account contract of the individual membership's account, the payor account details on the tender is updated to the individual membership's account. Let us understand this with the help of an example.

The following table lists the details of a binder payment which is made against the general suspense account:

Payment Event ID	Account	Payment Amount	Payment Char Type	Payment Char Value	Payment Date	Account Type
PAY_ID1	SUS ACT 1	300	Payment Reference ID	M001	01-Nov-2023	General Suspense Account

Now, when you execute the **C1-PYTRS** batch after the individual membership inbound is received in ORMB, the system derives the individual membership for which binder payment is made and transfers the binder payment from the general suspense account to the individual membership's account. The following table illustrates two payments - one on the general suspense account and another on the individual membership account.

Payment Event ID	Payment ID	Account	Payment Amount	Payment Char Type	Payment Char Value	Payment Date	Payment Match Entity	Status
PAY_ID1	P1	SUS ACT 1	300	Payment Reference ID	M001	01-Nov-2023	General Suspense Account	CANCELLED
PAY_ID1	P2	ACT 1	300	Payment Reference ID	M001	01-Nov-2023	Member Account	FROZEN

Once the payment is created on the individual membership's account, the system updates the payor account on the tender from SUS ACT 1 to ACT 1.

Algorithms Used in Binder Payment

The following table lists the algorithms which are used in the binder payment:

Algorithm	Algorithm Type	Description
C1-THRSHDAMT	C1-THRSHDAMT	Refer to C1-THRSHDAMT on page 492
C1-BNDRH	C1-BNDRH	Refer to C1-BNDRH on page 465
C1-FICRETBC	C1-FICRETBC	Refer to C1-FICRETBC on page 491
C1-CCPYTSADS	C1-CCPYTSADS	Refer to C1-CCPYTSADS on page 489

Copyright © 2026, Oracle and/or its affiliates.

Algorithm	Algorithm Type	Description
C1-BNFTODO	C1-BNFTODO	Refer to C1-BNFTODO on page 488

C1-BNDRH

This algorithm is invoked during the membership activation process. It checks whether the binder payment is received for the membership. If the binder payment is received, the membership status is changed from **Pending Effectuation** to **Active**.

Note: At present, this algorithm is invoked only during the membership enrollment and not for membership reinstatement, where the membership status is changed from **Terminated** to **Active**.

This algorithm is invoked using the following scenario:

If...	Then...
The membership is in the **Active** status and the binder payment attributes like the **Consider Binder Liability Amount Flag** is configured as **N** along with the **Membership Status Reason when Binder Payment Received** is configured as **Binder Payment Received** in the **Field Mapping** screen	The system checks whether the hold billing switch in the **CI_MEMBERSHIP** table contains any value. If any value exists, the system releases the billable charges which are kept on hold for the membership. In addition, the system performs the following operations: • Retrieves the account (of the financial responsible person) for the membership. • Retrieves the non-binder payment contracts for the accounts from the **CI_SA** table. • Retrieves the billable charges present on the non-binder payment contracts where the membership ID is stamped as a characteristic. • Checks whether the bill after date of each billable charge contains a future date. If the bill after date contains a future date then it is changed to the system date minus one.

C1-BNFTODO

This algorithm is invoked from the **C1-BNDMNTR** binder payment monitoring batch, specifically for creating a To Do. This algorithm considers the following scenarios:

Scenario	System Behavior
The binder payment is received within the grace days	The algorithm creates a To Do and updates either the membership or corresponding member's status reason to **Binder Payment Received**.
The binder payment is not received within the grace days	The algorithm creates a To Do and updates either the membership or corresponding member's status reason to **Binder Payment not Received**.
The **Consider Binder Liability Amount Flag** attribute is set to **Y** and the binder payment amount is received.	The algorithm retrieves the value of the **To Do Type for Binder Payment Received** attribute from the **Field Mapping** screen and creates the To Do with the message, **Binder Payment of Amount [%1] Received for Membership with Binder Payment Identifier [%2] and Health Plan [%3]**
The **Consider Binder Liability Amount Flag** attribute is set to **N** and at least a single binder payment is received.	The algorithm retrieves the value of the **To Do Type for Binder Payment Received** attribute from the **Field Mapping** screen and creates the To Do with the message, **Binder Payment of Amount [%1] Received for Membership with Binder Payment Identifier [%2] and Health Plan [%3]**
The **Consider Binder Liability Amount Flag** attribute is set to	The algorithm retrieves the value of the **To Do Type for Binder Payment Not Received** attribute from the **Field Mapping** screen and creates the To Do with

Copyright © 2026, Oracle and/or its affiliates.

Scenario	System Behavior
Y and the binder payment is not received.	the message, **Binder Payment of expected amount [%1] not received for Membership with Binder Payment Identifier [%2] and Health Plan [%3]**
The **Consider Binder Liability Amount Flag** attribute is set to **N** and not even a single binder payment is received.	The algorithm retrieves the value of the **To Do Type for Binder Payment Not Received** attribute from the **Field Mapping** screen and creates the To Do with the message, **Binder Payment is not received for Membership with Binder Payment Identifier [%1] and Health Plan [%2]**

Note:

- [%1] refers to the total payment amount, comprising of all the payments made till date.
- [%2] refers to the binder payment identifier.
- [%3] refers to the specific health plan.

The **Consider Binder Liability Amount Flag** attribute is configured in the **Field Mapping** screen whereas the **To Do Creation** process happens when the **C1-BNFTODO** algorithm is attached as a soft parameter on the **C1-BNDMNTR** batch.

C1-CCPYTSADS

This algorithm is invoked when it is attached to the **Payment Tender Staging Distribution** system event of the customer class to which the account belongs. In addition, it checks whether the payment received is the first payment for the account. If the payment happens to be the first payment for the account, the payment is applied against the binder contract, which is created using the contract type specified in the payment distribution algorithm of the**Binder Payment** match type.

This algorithm introduces the following new parameters which are used for individual binder payment functionality:

- **Check Binder Payment For Individual** - Used when you want to transfer the payment to the binder contract. The valid values are:
  - **Y**
  - **N**
- **Membership Status Reason** - Used to notify the status reason of the binder payment for the membership. The valid value is:
  - **Awaiting Binder Payment**
- **Exchange Assigned Subscriber Number Characteristic** - Used while creating payment staging characteristic.
- **Exchange Assigned Subscriber Number Id Type** - Used when you want to identify the membership from the membership identifier (**CI_MEMBERSHIP_IDENTIFIER**) table.

This algorithm considers the following scenarios:

If...	Then...
The **Check Promise To Pay** parameter is set to **Y**	The algorithm checks whether there is an active promise to pay for the account. If an active promise to pay exists, the payment is applied against the contract which is created using the contract type specified in the payment distribution algorithm of the **On Account** match type.
The **Check Payment Agreement Request** parameter is set to **Y**	The algorithm checks whether there is an active payment agreement request for the account. If an active payment agreement exists, the payment is applied against the contract which is created using the contract type specified in the payment distribution algorithm of the **On Account** match type.

Copyright © 2026, Oracle and/or its affiliates.

If...	Then...
The **Check Promise To Pay** and **Check Payment Agreement Request** parameters are set to **N**	The payment is applied to the account's unpaid bills in the order of the due date. If the payment amount is greater than the sum total of the account's billed balance plus the overpayment threshold amount, the entire payment amount is applied against the excess credit contract of the account.
The payment amount is greater than the account's billed balance, but less than the sum total of the account's billed balance plus the overpayment threshold amount	The payment is first applied against the unpaid bills of the account and the overpayment amount is then applied against the excess credit contract of the account.
The **Check Binder Payment for Individual** parameter is set to **Y**	The algorithm retrieves the membership by using the binder payment identification value which is received in the payment characteristics from the **EDI 820** file.
The **Membership Status Code for Pending Effectuation** attribute is set to **Pending Effectuation** and the **Membership Status Reason Hold / Awaiting Binder Payment** attribute is set to**Awaiting Binder Payment** in the **Field Mapping** screen	The algorithm performs the following steps: **1.** Retrieves the **Binder Contract Type** attribute and its value from the **Field Mapping** screen. **2.** If the contract information is not found in the **Binder Contract Type** attribute then a new contract Id of the type **Binder Contract** is created on the account. If the contract information is found, the contract Id of the account is retrieved using the **Binder Contract Type** attribute. **3.** Creates a payment staging record using the **Binder Payment Match Type** soft parameter and the value as the binder contract Id of the account, retrieved using the **Binder Contract Type** attribute. **4.** Stores the binder payment identification value as a characteristic on the payment.
If the **Membership Status Code for Pending Effectuation** attribute is not **Pending Effectuation** and the **Membership Status Reason Hold / Awaiting Binder Payment** attribute is not **Awaiting Binder Payment** in the **Field Mapping** screen	The algorithm performs the following steps: **1.** The payment is applied against the bill. **2.** The binder payment identification value is added as a characteristic on the payment when the payment is received from the **EDI 820** file against the bill Id. **3.** The already existing soft parameters related to binder payment are removed and the binder related parameters are retrieved from the **Field Mapping** screen.

It contains the following parameters:

- **Check Binder Payment** - Used when you want to check whether the payment is the first payment for the account and the tender used for the payment is not an automatic payment. The valid values are:
  - **Y**
  - **N**
- **Check Promise To Pay** - Used when you want to check whether there is an active promise to pay for the account. The valid values are:
  - **Y**
  - **N**
- **Check Payment Agreement Request** - Used when you want to check whether there is an active payment agreement request for the account. The valid values are:
  - **Y**

Copyright © 2026, Oracle and/or its affiliates.

  - **N**
- **Overpayment Threshold Amount** - Used to specify the overpayment threshold amount.
- **Bill Match Type** - Used to specify the match type using which you want to apply the payment against the unpaid bills of the account.
- **Binder Payment Match Type** - Used to specify the match type using which you want to apply the first non-automatic payment against the contract of the account.
- **On Account Match Type** - Used to specify the match type using which you want to apply the payment against the contract of the account.
- **Payment Review Reason Characteristic Type** - Used to specify the characteristic type which you want to use to store the payment reason.
- **Payment Review Reason for Active Promise To Pay** - Used to specify the characteristic value that must be specified when there is an active promise to pay for the account.
- **Payment Review Reason for Active Payment Agreement Request** - Used to specify the characteristic value that must be specified when there is an active payment agreement request for the account.
- **Payment Review Reason for Overpayment** - Used to specify the characteristic value that must be specified when the payment amount is greater than the sum total of account's billed balance plus overpayment threshold amount.
- **Excess Credit Contract Type** - Used to specify the contract type using which the excess credit contract should be created if it does not exist for the account.

C1-FICRETBC

Prerequisites

- Define the values for the option types **CTME (Characteristic Type For Membership Id)** and **PRSQ (Proration SQI)** in the **C1-ASOBLLNG** feature configuration.
- Define the price item which is passed (as a billable charge data) through a health care inbound message.
- Define the pass-through billable charge pricing rule type on the policy plan.

This algorithm is invoked to create SQI (Service Quantity Identifier) based billable charges for fully-insured services. This algorithm creates the following set of SQI based billable charges:

- **Pre-calculated Premium Amount** - SQI based billable charges which are created for pre-calculated premium amount received through a healthcare inbound message.
- **Calculated Premium Amount** - Price items for which the SQI based billable charges are created using the pricing rules defined on the policy plan level.

This algorithm also performs the following operations:

- Creation of the new billable charges.
- Cancellation of the existing billable charges.
- End Date modification of the existing billable charges.

This algorithm is invoked in the following scenarios:

If...	**Then...**
A billable charge exists for a specific date range where the **Billable Charge Status** field is set to **Billable** option which is yet to be processed with the same start date, price item, and membership information	The algorithm modifies only the end date information of that specific billable charge.
The membership is in the **Pending Effectuation** status and the status reason is **Awaiting Binder Payment**, where the status reason is mapped with the attribute value of the **Membership Status Reason Hold / Awaiting Binder Payment** attribute field in **Field Mapping** screen	The algorithm retrieves the values of the binder payment applicability and hold billing switch from the **CI_MEMBERSHIP** table. If the binder payment applicability and the hold billing switch is set to **Y**, the algorithm updates the bill after date information on the billable charge to **31-Dec-2099**.

Copyright © 2026, Oracle and/or its affiliates.

If...	Then...
The billable charge for a particular price item and membership appear in the proposed date range and either of them have a different start date or amount	The algorithm cancels the billable charge.

Note:

Billable charges which are created or updated for calculated charges, are updated accordingly in the **PriceCalculationDetail** entity in the **CI_PRCE_CALC** table. Further, those billable charge entries are marked as **Completed**. The Pricing rule type corresponding to the price item (during the processing of the inbound billable charge information) is fetched from the **PricingRuleTypePriceitem** entity in the **C1_PRC_RULE_TYPE_PRICEITEM** table on the first found basis.

The inbound billable charge information is processed as per the latest billable charge data. Once the inbound message is invoked, the algorithm assumes the following conditions:

- The billable charge line characteristics are not available.
- Every billable charge line has the same currency code.

In the case of modification or cancellation of the existing billable charges, its corresponding bill segments go through the following conditions:

- If the billable charge end date is updated, the algorithm checks for all the bill segments where the date range exceeds the billable charge end date. If the date range exceeds the billable charge end date, then only those billable charges are either canceled or deleted based on the status of the bill segment.
- If the billable charge is canceled, then all the bill segments within that billable charge are either canceled or deleted based on the status of the bill segment.

Finally, the billable charges are stamped with the following information:

- Price Item
- SQI (derived from the **C1-ASOBLLNG** feature configuration)
- Pass-through billable charge entries in the **MEMO ONLY** state.
- Aggregated amount is stamped as service quantity.
- Additional information, if any...

It contains the following parameter:

- **Bill To Type Flag** - This flag is used when the **Contract ID** is added in the **MEMBERSHIP_SA** table.

C1-THRSHDAMT

This algorithm is invoked when the membership is in the **Pending Effectuation** status and the status reason is **Awaiting Binder Payment**, as per the binder payment preference configuration done in the **Field Mapping** screen. It monitors or checks the memberships from whom the binder payment is yet to be received.

This algorithm's behavior is shown as follows:

Scenario	System Behavior
If the **BINDER_PAY_APPL_SW** field (also known as the **Binder Payment Applicability** flag) from the **CI_MEMBERSHIP** table is set to **Y**	The algorithm retrieves the **BINDER_LIABILITY_AMT** from the **CI_MEMBERSHIP** table.
If the **Consider Binder Liability Amount Flag** is set to **Y**, and the **Binder Liability Amount** is blank or the **Binder Liability Amount** is less than zero	The algorithm generates an error, **Binder Liability Amount can’t be blank or less than zero if the Consider Liability Amount is Y**.

Copyright © 2026, Oracle and/or its affiliates.

Scenario	System Behavior
If the **BINDER_LIABILITY_AMT** field from the **CI_MEMBERSHIP** table is not blank and greater than zero	The algorithm calculates the threshold amount using the following formula, `CI_MEMBERSHIP.THRESHOLD_AMT = ' CI_MEMBERSHIP.BINDER_LIABILITY_AMT * ' (CI_MEMBERSHIP.BINDER_PAY_THRES %)` For example, Let's assume that the binder liability amount is $100 and binder payment threshold percentage is 90%. The algorithm uses the above formula to derive the threshold amount which is $100 * 90% = 90. The calculated threshold amount is added in the **CI_MEMBERSHIP.THRESHOLD_AMT** field for the membership which is in **Pending Effectuation** status where the status reason is **Awaiting Binder Payment**.

Note: The threshold amount is updated whenever the binder liability amount or binder threshold percentage value changes for the membership which is in the **Pending Effectuation** status.

Binder Payment Creation

Oracle Revenue Management and Billing considers a payment as a binder payment when a characteristic is defined for the payment using the characteristic type specified in the **Binder Payment Identification Characteristics Type** attribute of the binder payment preference. The system considers the binder payment preference which is specified in the **Binder Payment Field Mapping** option type of the **C1-ASOBLLNG** feature configuration. This type of characteristic must be defined when the binder payment is created. It stores the membership identifier to indicate the individual membership for which the binder payment is received.

You can create a binder payment through the following features or interfaces:

- Payment Web Service
- Payment Upload
- Payment Upload Staging
- Payment Request
- Payment Event
- EDI 820 File Upload

While creating a payment through any of the above mechanism except the latter one, you need to ensure that the binder payment identification characteristic is defined for the payment. However, in case of EDI 820 File Upload, the system will extract the data stored in the NM1 tag and store it in the payment characteristics staging table. This is done when the **C1-PUPSG** batch is executed.

You can view the binder payments received for the membership or financial responsible member person's account through the **Payment Event Summary** and **Customer 360° Information** screens.

Binder Payment Monitoring

A new batch named **C1-BPMNT** is introduced to monitor the binder payments for the individual memberships. It checks whether there are any individual memberships where:

- Individual membership status is set to the value specified in the **Membership Status Code for Pending Effectuation** attribute of the binder payment preference.
- Membership status reason is set to the value specified in the **Membership Status Reason when Awaiting Binder Payment** attribute of the binder payment preference.

Copyright © 2026, Oracle and/or its affiliates.

Note: The batch considers the binder payment preference which is specified in the **Binder Payment Field Mapping** option type of the **C1-ASOBLLNG** feature configuration.

If so, the batch checks whether the **Binder Payment Applicability** option is set to **Y** for the individual membership. If so, the system calculates grace date using the membership start date and grace days. If the grace date is equal to or earlier than system date, the batch derives the account for the individual membership. While deriving the account for the individual membership, the system checks whether the characteristic types specified in the **Account Identifier Type Char Type** and **Account Identifier Value Char Type** option types of the **C1-ASOBLLNG** feature configuration are defined for the individual membership. If so, the system derives the account using these characteristics defined for the individual membership. If these characteristics are not defined for the individual membership, the system derives the account of financially responsible member person. The system checks whether a payment with the binder payment identification characteristic exists against any contract of the account. If so, the system derives the value from the **Binder Payment Identification ID Type** attribute of the binder payment preference. The system then checks whether the binder payments are received for the individual membership using the values from the following:

- Binder Payment Identification Characteristic
- Binder Payment Identification ID Type attribute of the binder payment preference

If the binder payments are received for the individual membership, the system does the following:

If the Consider Binder Lability Amount set to…	**Then...**
Y	The system validates whether the sum of binder payments is equal to or greater than the threshold amount. If so, the system does the following: • Creates a To Do using the To Do type which is specified in the **To Do Type for Binder Payment Received** attribute of the binder payment preference. • Updates the membership status reason to the value specified in the **Membership Status Reason when Binder Payment Received** attribute of the binder payment preference. • Updates the member person status reason using the membership status reason preference which is specified in the **Status Reason Mapping** option type of the **C1-ASOBLLNG** feature configuration. • Changes the bill after date of the billable charges when the **Hold Billing** option for the individual membership is set to **Y**.
N	The system does not validate the binder payment against the threshold amount. If the binder payment amount is greater than zero, the system does the following: • Creates a To Do using the To Do type which is specified in the **To Do Type for Binder Payment Received** attribute of the binder payment preference. • Updates the membership status reason to the value specified in the **Membership Status Reason when Binder Payment Received** attribute of the binder payment preference. • Updates the member person status reason using the membership status reason preference which is specified in the **Status Reason Mapping** option type of the **C1-ASOBLLNG** feature configuration.
	Note: In this case, the system does not update the bill after date of the billable charges when the **Hold Billing** option for the individual membership is set to **Y**. The system updates the bill after date of the billable charges when the status of the individual membership is changed to **Active** through a health care inbound message.

Copyright © 2026, Oracle and/or its affiliates.

If the grace date is later than the system date, the batch does the following irrespective of whether the **Consider Binder Lability Amount** attribute is set to **Y** or **N**:

- Creates a To Do using the To Do type which is specified in the **To Do Type for Binder Payment Not Received** attribute of the binder payment preference.
- Updates the membership status reason to the value specified in the **Membership Status Reason when Binder Payment Not Received** attribute of the binder payment preference.
- Updates the member person status reason using the membership status reason preference which is specified in the **Status Reason Mapping** option type of the **C1-ASOBLLNG** feature configuration.

Binder Payment Preference

The Binder Payment Preference enables you to set the attributes which are used during binder payment creation and monitoring. While deriving the binder payment details for a membership, the system uses the following attributes from the binder payment preference:

- Binder Contract Type
- Binder Payment Identification Characteristics Type
- Binder Payment Identification ID Type
- Consider Binder Liability Amount
- Membership Status Code for Active
- Membership Status Code for Pending Effectuation
- Membership Status Reason on Activating Membership
- Membership Status Reason when Awaiting Binder Payment
- Membership Status Reason when Binder Payment Not Received
- Membership Status Reason when Binder Payment Received
- To Do Type for Binder Payment Not Received
- To Do Type for Binder Payment Received

For more information about these attributes, see Defining a Binder Payment Preference on page 496.

The system considers the binder payment preference which is specified in the **Binder Payment Field Mapping** option type of the **C1-ASOBLLNG** feature configuration. You can define, edit, delete, and copy a binder payment preference through the **Field Mapping** screen.

How to setup the **C1-ASOBLLNG** feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4639

Searching for a Binder Payment Preference

Procedure

To search for a binder payment preference:

1. Click the **Menu** (☰) icon in the **Application** toolbar.
   A list appears.
2. Click the **Admin Menu** option from the list.
   A sub-menu appears.
3. Select **F** and then click **Field Mapping**.
   The **Field Mapping** screen appears.
4. Select the **Binder Payment** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.
   A list of binder payment preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Binder Payment Preference Details

Procedure

To view the details of a binder payment preference:

1. Search for the binder payment preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the binder payment preference whose details you want to view.
   The **Field Mapping** zone appears.
3. View the details of the binder payment preference in the **Field Mapping** zone.

Defining a Binder Payment Preference

Prerequisites

To define a binder payment preference, you should have:

- Field mapping business objects defined in the application.

Procedure

To define a binder payment preference:

1. Click the **Menu** (☰) icon in the **Application** toolbar.
   A list appears.
2. Click the **Admin Menu** option from the list.
   A sub-menu appears.
3. Select **F** and then click the **Add** button corresponding to the **Field Mapping** option from the sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Field Mapping Business Object	Used to indicate the business object using which you want to create a binder payment preference. The valid values are: • **Bill Route Method - Contact Method Mapping (i.e., C1_BillRouteCntMethMap)** - Enables you to maintain a routing method - contact method mapping preference. • **Field Mapping (i.e., C1-FieldMapping)** - Enables you to maintain the following: • Automatic Refund/Write-Off Preference	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Billing Preference • Binder Payment Preference • Configuration for Match Type - Handling Overpayment Preference • Delinquency Process Preference • Delinquency Process Type Preference • Geographic Rating Area Preference • Hold Request Preference • Individual Membership Preference • Medicare Preference • Member Reconciliation Preference • Member Relationship and Subscription Tier Preference • Membership Repricing Reasons Preference • MNI Derivation Input Preference • Statement Construct Preference • Transaction Paid Status Count Preference • **Group Membership Status Reason Mapping (i.e., C1-MemStatusReasonMapGroup)** - Enables you to maintain a group membership status reason preference. • **Medicare Plan Benefit Package (i.e., C1-BenefitPackage)** - Enables you to maintain a Medicare plan benefit package. • **Membership Status Reason Mapping (i.e., C1-MemStatusReasonMapping)** - Enables you to maintain an individual membership status reason preference. **Note:** The above business objects are shipped with the product. The list includes those business objects which are created using the **Field Mapping** (i.e., **C1-FIELDMAP**) maintenance object.	

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.
5. Click **OK**.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details for the binder payment preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the binder payment preference.	Yes
Description	Used to specify the description for the binder payment preference.	Yes
Detailed Description	Used to specify additional information about the binder payment preference.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You can resize the text box depending on your requirement by clicking the **Resize Handle** (⇲) icon at the bottom right corner of the text box.	
Status	Used to indicate the status of the binder payment preference. The valid values are: • Active • Inactive	Yes

- **Preference Category** - Used to specify the preference category. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: • Automatic Refund/Write-Off • Billing • Binder Payment • Configuration for Match Type - Handling Overpayment • Delinquency Process • Delinquency Process Type • Geographic Rating Area • Hold Request • Individual Membership • Medicare • Medicare Plan Benefit • Member Reconciliation • Member Relationship and Subscription Tier • Membership Repricing Reasons • Membership Status Reason • MNI Derivation Input • Routing Method - Contact Method Mapping • Statement Construct • Transaction Paid Status Count	Yes
	Note: The list includes only those values which are defined in the **FIELD_CAT_FLG** lookup field. You must select **Binder Payment** option as the preference category while creating a binder payment preference.	

- **Preference Settings** - Used to set the attributes in the binder payment preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the binder payment preference. The valid values are:	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Binder Contract Type** - Used when you want to identify the binder contract in the binder payment preference. • **Bill Period for Hold Billing** - Used when you want to define the bill period when the billing is put on hold for an individual membership until the binder payment is received. • **Consider Binder Liability Amount** - Used when you want to set the consider binder liability amount once the binder payment is received in the binder payment preference. • **Binder Payment Identification Characteristics Type** - Used when you want to identify the membership for whom the payment is received in the binder payment preference. • **Binder Payment Identification ID Type** - Used when you want to identify the membership type in the binder payment preference. • **Membership Status Code for Active** - Used when you want to define the status code when an individual membership is in **Active** status in the binder payment preference. • **Membership Status Reason when Binder Payment Canceled** - Used when you want to define the status reason code as **Binder Payment Canceled** when the binder payment is not received for an individual membership within the specified grace days in the binder payment preference. **Note:** You must specify the status reason code for the Active status of the **C1-IndMembership** business object. • **Membership Status Code for Pending Effectuation** - Used when you want to define the status code when an individual membership is in the **Pending Effectuation** status in the binder payment preference. • **Membership Status Reason on Activating Membership** - Used when you want to define the status reason code once the binder payment is received and the individual membership status is changed to **Active** for the binder payment preference. • **Membership Status Reason Binder Business Rule Config Invalid** - Used when you want to define the status reason code as **Binder Business Rule Config Invalid** when the binder payment business rule configuration details are not available for an individual membership in the binder payment preference. **Note:** The **C1-BusinessRuleService** business service contains the configuration details related to the binder payment business rule.	

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Membership Status Reason when Awaiting Binder Payment** - Used when you want to define the status reason code as **Awaiting Binder Payment** when the binder payment is not yet received for an individual membership in the binder payment preference. • **Membership Status Reason when Binder Payment Not Received** - Used when you want to define the status reason code as **Binder Payment Not Received** when the binder payment is not received for the membership in the binder payment preference. • **Membership Status Reason when Binder Payment Not Expected** - Used when you want to define the status reason code as **Binder Payment Not Expected** when the system should not perform the binder payment validation for an individual membership in the binder payment preference. • **Membership Status Reason when Binder Payment Received** - Used when you want to define the status reason code as **Binder Payment Received** when the binder payment is received for the membership in the binder payment preference. • **To Do Type for Binder configuration not available** - Used when you want to specify a To Do type when the binder configuration is not available. • **To Do Type for Binder Payment not received** - Used when you want to specify a To Do type when the binder payment is not received for an individual membership in the binder payment preference. • **To Do Type for Binder Payment received** - Used when you want to specify a To Do type when the binder payment is received for an individual membership in the binder payment preference. • **To Do Type for Binder Payment Canceled** - Used when you want to specify a To Do type when the binder payment is canceled. • **To Do Type for Binder Payment is not expected** - Used when you want to specify a To Do type when the binder payment is not expected. **Note:** The attribute list appears only when the preference category is selected from the respective list.	
Value	Used to specify the attribute value. The attribute value list varies depending on the attribute that you want to set in the binder payment preference. The valid values are: • **Binder Contract Type** - The **Value** field is used to specify the binder payment contract type. • **Bill Period for Hold Billing** - The **Value** list indicates only those bill periods for hold billing which are already defined in the system. • **Consider Binder Liability Amount** - The **Value** list contains the following values:	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Yes - The system considers the binder liability amount to calculate the threshold amount. • No - The system does not calculate the threshold amount. • **Binder Payment Identification Characteristics Type** - The **Value** field is used to specify the configured characteristic type that identifies the membership for whom the payment is received. • **Binder Payment Identification ID Type** - The **Value** list includes only those identification ID types which are already defined in the system. • **Membership Status Code for Active** - The **Value** field is used to specify the status code for an active membership. • **Membership Status Reason when Binder Payment Canceled** - The **Value** field is used to specify the configured status reason when the binder payment is canceled. • **Membership Status Code for Pending Effectuation** - The **Value** field is used to specify the configured status code when the membership is in the **Pending Effectuation** status. • **Membership Status Reason on Activating Membership** - The **Value** field is used to specify the configured status reason once the binder payment is received and the membership status is changed to **Active** • **Membership Status Reason Binder Business Rule Config Invalid** - The **Value** field is used to specify the configured status reason if the binder-payment business-rule configuration is invalid. • **Membership Status Reason when Awaiting Binder Payment** - The **Value** field is used to specify the configured status reason code when the binder payment is not yet received for the membership. • **Membership Status Reason when Binder Payment Not Received** - The **Value** field is used to specify the configured status reason code when the binder payment is not received for the membership. • **Membership Status Reason when Binder Payment Not Expected** - The **Value** field is used to specify the configured status reason code when the binder payment is not expected. • **Membership Status Reason when Binder Payment Received** - The **Value** field is used to specify the configured status reason code when the binder payment is received for the membership.	

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **To Do Type for Binder configuration not available** - The **Value** field is used to specify the configured To Do type when the binder configuration is not available. • **To Do Type for Binder Payment not received** - The **Value** field is used to specify the configured To Do type when the binder payment is not received. • **To Do Type for Binder Payment received** - The **Value** field is used to specify the configured To Do type when the binder payment is received. • **To Do Type for Binder Payment Canceled** - The **Value** field is used to specify the configured To Do type when the binder payment is canceled. • **To Do Type for Binder Payment is not expected** - The **Value** field is used to specify the configured To Do type when the binder payment is not expected. **Note:** The attribute value list appears only when the attribute is selected from the respective list.	
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account • Adjustment • Billable Charge • Membership • Payment • Policy **Note:** At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the **MAP_ENTITY_FLG** lookup field.	No

Note: While defining a binder payment preference, you must set at least one attribute in the binder payment preference.

6. Select the **Binder Payment** option from the **Preference Category** list.
   The **Preference Category** section disappears and the **Preference Category** field appears in the **Main** section.
7. Enter the required details in the **Main** section.
8. Set the required attributes in the binder payment preference.
9. If you want to set more than one attribute in the binder payment preference, click the **Add** (+) icon and then repeat step 8.

Note: However, if you want to remove an attribute from the binder payment preference, click the **Delete** (🗑) icon corresponding to the attribute.

10. Click **Save**.
    The binder payment preference is defined.

Editing a Binder Payment Preference

Procedure

To edit a binder payment preference:

1. Search for the binder payment preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column *c*orresponding to the binder payment preference whose details you want to edit.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for the binder payment preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the binder payment preference.	Not applicable
Description	Used to specify the description for the binder payment preference.	Yes
Detailed Description	Used to specify additional information about the binder payment preference.	No
Status	Used to indicate the status of the binder payment preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Binder Payment	Not applicable

   - **Preference Settings** - Used to set the attributes in the binder payment preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the binder payment preference. The valid values are: • **Binder Contract Type** - Used when you want to identify the binder contract in the binder payment preference. • **Bill Period for Hold Billing** - Used when you want to define the bill period when the billing is put on hold for an individual membership until the binder payment is received. • **Consider Binder Liability Amount** - Used when you want to set the consider binder liability amount once the binder payment is received in the binder payment preference. • **Binder Payment Identification Characteristics Type** - Used when you want to identify the membership for whom the payment is received in the binder payment preference. • **Binder Payment Identification ID Type** - Used when you want to identify the membership type in the binder payment preference.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Membership Status Code for Active** - Used when you want to define the status code when an individual membership is in **Active** status in the binder payment preference. • **Membership Status Reason when Binder Payment Canceled** - Used when you want to define the status reason code as **Binder Payment Canceled** when the binder payment is not received for an individual membership within the specified grace days in the binder payment preference. **Note:** You must specify the status reason code for the Active status of the **C1-IndMembership** business object. • **Membership Status Code for Pending Effectuation** - Used when you want to define the status code when an individual membership is in the **Pending Effectuation** status in the binder payment preference. • **Membership Status Reason on Activating Membership** - Used when you want to define the status reason code once the binder payment is received and the individual membership status is changed to **Active** for the binder payment preference. • **Membership Status Reason Binder Business Rule Config Invalid** - Used when you want to define the status reason code as **Binder Business Rule Config Invalid** when the binder payment business rule configuration details are not available for an individual membership in the binder payment preference. **Note:** The **C1-BusinessRuleService** business service contains the configuration details related to the binder payment business rule. • **Membership Status Reason when Awaiting Binder Payment** - Used when you want to define the status reason code as **Awaiting Binder Payment** when the binder payment is not yet received for an individual membership in the binder payment preference. • **Membership Status Reason when Binder Payment Not Received** - Used when you want to define the status reason code as **Binder Payment Not Received** when the binder payment is not received for the membership in the binder payment preference. • **Membership Status Reason when Binder Payment Not Expected** - Used when you want to define the status reason code as **Binder Payment Not Expected** when the system should not perform the binder payment validation for an individual membership in the binder payment preference. • **Membership Status Reason when Binder Payment Received** - Used when you want to define the status reason code as **Binder Payment Received** when the

Copying a Binder Payment Preference

Instead of creating a binder payment preference from scratch, you can create a new binder payment preference using an existing binder payment preference. This is possible through copying a binder payment preference. On copying a binder payment preference, the details including the attributes are copied to the new binder payment preference. You can then edit the details, if required.

Prerequisites

To copy a binder payment preference, you should have:

- Binder Payment preference (whose copy you want to create) defined in the application

Procedure

To copy a binder payment preference:

1. Search for the binder payment preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the binder payment preference whose copy yo want to create.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for the binder payment preference. It contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the binder payment preference.	Yes
Description	Used to specify the description for the binder payment preference.	Yes
Detailed Description	Used to specify additional information about the binder payment preference.	No
Status	Used to indicate the status of the binder payment preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Binder Payment	Not applicable

- **Preference Settings** - Used to set the attributes in the binder payment preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the binder payment preference. The valid values are: • **Binder Contract Type** - Used when you want to identify the binder contract in the binder payment preference. • **Bill Period for Hold Billing** - Used when you want to define the bill period when the billing is put on hold for an individual membership until the binder payment is received. • **Consider Binder Liability Amount** - Used when you want to set the consider binder liability amount once the binder payment is received in the binder payment preference. • **Binder Payment Identification Characteristics Type** - Used when you want to identify the membership for whom the payment is received in the binder payment preference. • **Binder Payment Identification ID Type** - Used when you want to identify the membership type in the binder payment preference. • **Membership Status Code for Active** - Used when you want to define the status code when an individual membership is in **Active** status in the binder payment preference. • **Membership Status Reason when Binder Payment Canceled** - Used when you want to define the status reason code as **Binder Payment Canceled** when the binder payment is not received for an individual membership within the specified grace days in the binder payment preference.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You must specify the status reason code for the Active status of the **C1-IndMembership** business object. • **Membership Status Code for Pending Effectuation** - Used when you want to define the status code when an individual membership is in the **Pending Effectuation** status in the binder payment preference. • **Membership Status Reason on Activating Membership** - Used when you want to define the status reason code once the binder payment is received and the individual membership status is changed to **Active** for the binder payment preference. • **Membership Status Reason Binder Business Rule Config Invalid** - Used when you want to define the status reason code as **Binder Business Rule Config Invalid** when the binder payment business rule configuration details are not available for an individual membership in the binder payment preference. **Note:** The **C1-BusinessRuleService** business service contains the configuration details related to the binder payment business rule. • **Membership Status Reason when Awaiting Binder Payment** - Used when you want to define the status reason code as **Awaiting Binder Payment** when the binder payment is not yet received for an individual membership in the binder payment preference. • **Membership Status Reason when Binder Payment Not Received** - Used when you want to define the status reason code as **Binder Payment Not Received** when the binder payment is not received for the membership in the binder payment preference. • **Membership Status Reason when Binder Payment Not Expected** - Used when you want to define the status reason code as **Binder Payment Not Expected** when the system should not perform the binder payment validation for an individual membership in the binder payment preference. • **Membership Status Reason when Binder Payment Received** - Used when you want to define the status reason code as **Binder Payment Received** when the binder payment is received for the membership in the binder payment preference. • **To Do Type for Binder configuration not available** - Used when you want to specify a To Do type when the binder configuration is not available. • **To Do Type for Binder Payment not received** - Used when you want to specify a To Do type when the binder payment is not received for an individual membership in the binder payment preference. • **To Do Type for Binder Payment received** - Used when you want to specify a To Do type when the binder payment

How to search for a binder payment preference	Searching for a Binder Payment Preference on page 495

Deleting a Binder Payment Preference

Procedure

To delete a binder payment preference:

1. Search for the binder payment preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Delete** (🗑) icon in the **Delete** column corresponding to the binder payment preference that you want to delete.
   A message appears confirming whether you want to delete the binder payment preference.

> **Tip:** Alternatively, you can click the **Delete** button in the **Field Mapping** zone to delete the binder payment preference.

3. Click **OK**.
   The binder payment preference is deleted.

Membership Status Reason Preference

The Membership Status Reason preference enables you to map a member person status and status reason with an individual membership status reason. This mapping is used during:

- **Membership Status Transition** - When the member person status and status reason are received through a health care inbound message or membership repricing inbound web service
- **Member Person Status Transition** - When the binder payment is monitored for the individual membership

The system enables you to define, edit, delete, and copy a membership status reason preference through the **Field Mapping** screen. You can derive the member person status and member person status reason mapping attributes from the values specified in the **MEMBER_PER_STATUS_FLG** and **MEMB_PERS_STAT_RSN_FLG** lookup fields, where as the mapping attributes of the membership status reason can be derived from the **Status Reason** screen.

Copyright © 2026, Oracle and/or its affiliates.

The system determines the individual membership status reason using the membership status reason preference which is specified in the **Status Reason Mapping** option type of the **C1-ASOBLLNG** feature configuration.

Searching for a Membership Status Reason Preference

Procedure

To search for a membership status reason preference:

1. Click the **Menu** (☰) icon in the **Application** toolbar.
   A list appears.
2. Click the **Admin Menu** option from the list.
   A sub-menu appears.
3. Select **F** and then click **Field Mapping**.
   The **Field Mapping** screen appears.
4. Select the **Membership Status Reason** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
6. Click **Search**.
   A list of membership status reason preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Membership Status Reason Preference Details

Procedure

To view the details of a membership status reason preference:

1. Search for the membership status reason preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (ᯤ) icon corresponding to the membership status reason preference whose details you want to view.
   The **Field Mapping** zone appears.
3. View the details of the membership status reason preference in the **Field Mapping** zone.

Defining a Membership Status Reason Preference

Prerequisites

To define a membership status reason preference, you should have:

- Field mapping business objects defined in the application.

Copyright © 2026, Oracle and/or its affiliates.

- Membership status reasons defined in the application.

Procedure

To define a membership status reason preference:

1. Click the **Menu** (☰) icon in the **Application** toolbar.
   A list appears.
2. Click the **Admin Menu** option from the list.
   A sub-menu appears.
3. Select **F** and then click the **Add** button corresponding to the **Field Mapping** option from the sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)

Field Mapping Business Object	Used to indicate the business object using which you want to create a membership status reason preference. The valid values are:
	• **Bill Route Method - Contact Method Mapping (i.e., C1_BillRouteCntMethMap)** - Enables you to maintain a routing method - contact method mapping preference.
	• **Field Mapping (i.e., C1-FieldMapping)** - Enables you to maintain the following:
	  • Automatic Refund/Write-Off Preference
	  • Billing Preference
	  • Binder Payment Preference
	  • Configuration for Match Type - Handling Overpayment Preference
	  • Delinquency Process Preference
	  • Delinquency Process Type Preference
	  • Geographic Rating Area Preference
	  • Hold Request Preference
	  • Individual Membership Preference
	  • Medicare Preference
	  • Member Reconciliation Preference
	  • Member Relationship and Subscription Tier Preference
	  • Membership Repricing Reasons Preference
	  • MNI Derivation Input Preference
	  • Statement Construct Preference
	  • Transaction Paid Status Count Preference
	• **Group Membership Status Reason Mapping (i.e., C1-MemStatusReasonMapGroup)** - Enables you to maintain a group membership status reason preference.
	• **Medicare Plan Benefit Package (i.e., C1-BenefitPackage)** - Enables you to maintain a medicare plan benefit package.
	• **Membership Status Reason Mapping (i.e., C1-MemStatusReasonMapping)** - Enables you to maintain an individual membership status reason preference.
		Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The above business objects are shipped with the product. The list includes those business objects which are created using the **Field Mapping** (i.e., **C1-FIELDMAP**) maintenance object.	

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Membership Status Reason Mapping** option from the **Field Mapping Business Object** list.
5. Click **OK**.

   The **Membership Status Reason Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for the membership status reason preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the membership status reason preference.	Yes
Description	Used to specify the description for the membership status reason preference.	Yes

   - **Status Reason Mapping** - Used to specify the status reason mapping. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Member Person Status	Used to indicate the member person status for an individual membership. The valid values are: • Active • Canceled • Inactive • Pending Effectuation **Note:** The list includes only those values which are defined in the **MEMBER_PER_STATUS_FLG** lookup field.	No
Member Person Status Reason	Used to indicate the member person status reason for an individual membership. **Note:** The list includes only those values which are defined in the **MEMB_PERS_STAT_RSN_FLG** lookup field.	Yes (Conditional) **Note:** This field is required when the member person status is specified in the respective field.
Membership Status Reason	Used to indicate the membership status reason for an individual membership. **Note:** The list includes only those values which are defined for **Individual Membership (i.e., C1-IndMembership)** business object in the **Status Reason** screen.	Yes (Conditional) **Note:** This field is required when the member person status is specified in the respective field.

6. Enter the required details in the **Main** section.

Copyright © 2026, Oracle and/or its affiliates.

7. Set the required member person statuses in the membership status reason preference.
8. If you want to set more than one member person status in the membership status reason preference, click the **Add** (+) icon and then repeat step 8.

> **Note:** However, if you want to remove an member person status from the membership status reason preference, click the **Delete** (🗑) icon corresponding to the member person status.

9. Click **Save**.
   The membership status reason preference is defined for an individual membership.

Editing a Membership Status Reason Preference

Prerequisites

To edit a membership status reason preference, you should have:

- Membership status reason defined in the application.

Procedure

To edit a membership status reason preference:

1. Search for the membership status reason preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column *c*orresponding to the membership status reason preference whose details you want to edit.

   The **Membership Status Reason Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for the membership status reason preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the membership status reason preference.	Yes
Description	Used to specify the description for the membership status reason preference.	Yes

   - **Status Reason Mapping** - Used to specify the status reason mapping. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Member Person Status	Used to indicate the member person status for an individual membership. The valid values are: • Active • Canceled • Inactive • Pending Effectuation **Note:** The list includes only those values which are defined in the **MEMBER_PER_STATUS_FLG** lookup field.	No
Member Person Status Reason	Used to indicate the member person status reason for an individual membership.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those values which are defined in the **MEMB_PERS_STAT_RSN_FLG** lookup field.	**Note:** This field is required when the member person status is specified in the respective field.
Membership Status Reason	Used to indicate the membership status reason for an individual membership.	Yes (Conditional)
	Note: The list includes only those values which are defined for **Individual Membership (i.e., C1-IndMembership)** business object in the **Status Reason** screen.	**Note:** This field is required when the member person status is specified in the respective field.

Tip: Alternatively, you can click the **Edit** button in the **Field Mapping** zone to edit the details of the membership status reason preference.

3. Modify the required details in the **Main** section.
4. Define, edit, or remove the member person statuses from the membership status reason preference, if required.
5. Click **Save**.
   The changes made to the membership status reason preference are saved for an individual membership.

Copying a Membership Status Reason Preference

Instead of creating a membership status reason preference from scratch, you can create a new membership status reason preference using an existing membership status reason preference. This is possible through copying a membership status reason preference. On copying a membership status reason preference, the details including the member person statuses are copied to the new membership status reason preference. You can then edit the details, if required.

Prerequisites

To copy a membership status reason preference, you should have:

- Membership status reason preference (whose copy you want to create) defined in the application
- Membership status reasons defined in the application.

Procedure

To copy a membership status reason preference:

1. Search for the membership status reason preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate** (⧉) icon in the **Duplicate** column corresponding to the membership status reason preference whose copy you want to create.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for the membership status reason preference. It contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the membership status reason preference.	Yes
Description	Used to specify the description for the membership status reason preference.	Yes

- **Status Reason Mapping** - Used to specify the status reason mapping. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Member Person Status	Used to indicate the member person status for an individual membership. The valid values are: • Active • Canceled • Inactive • Pending Effectuation **Note:** The list includes only those values which are defined in the **MEMBER_PER_STATUS_FLG** lookup field.	No
Member Person Status Reason	Used to indicate the member person status reason for an individual membership. **Note:** The list includes only those values which are defined in the **MEMB_PERS_STAT_RSN_FLG** lookup field.	Yes (Conditional) **Note:** This field is required when the member person status is specified in the respective field.
Membership Status Reason	Used to indicate the membership status reason for an individual membership. **Note:** The list includes only those values which are defined for **Individual Membership (i.e., C1-IndMembership)** business object in the **Status Reason** screen.	Yes (Conditional) **Note:** This field is required when the member person status is specified in the respective field.

Tip: Alternatively, you can click the **Duplicate** button in the **Field Mapping** zone to create a copy of the membership status reason preference.

3. Enter the required details in the **Main** section.
4. Define, edit, or remove the attribute from the membership status reason preference, if required.
5. Click **Save**.
   The new membership status reason preference is defined for an individual membership.

Deleting a Membership Status Reason Preference

Procedure

To delete a membership status reason preference:

1. Search for the membership status reason preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Delete** ( ) icon in the **Delete** column corresponding to the membership status reason preference that you want to delete.
   A message appears confirming whether you want to delete the membership status reason preference.

> **Tip:** Alternatively, you can click the **Delete** button in the **Field Mapping** zone to delete the membership status reason preference.

3. Click **OK**.
   The membership status reason preference is deleted for an individual membership.

To Do Creation for Manual Refund/Write Off on Individual Membership Cancellation

Oracle Revenue Management and Billing facilitates you with the following on cancelling an individual membership:

- Automatically cancel any refund and/or write off requests which are systematically created through refund/write off instruction via the **Automatic Refund/Write Off** feature.
- Create a To Do for refund and/or write off requests which are manually created for the account via the **Refund/Write Off Request** feature.

To implement this feature, the following changes are made to the system:

- A new algorithm type named **C1-WOCANMCN** is introduced in this release. An algorithm created using the **C1-WOCANMCN** algorithm type is attached to the **Canceled** status in the lifecycle of the **C1-IndMembership** business object.
- The **C1-RFRQC** and **C1-WORQC** To Do types are newly introduced in this release.

On canceling an individual membership, the system determines the account to which the individual membership is billed using the **Account Identifier Type** and **Account Identifier Value** characteristics. While fetching the characteristics, the system considers the characteristic types which are specified in the **Account Identifier Type Char Type** and **Account Identifier Value Char Type** option types of the **C1-ASOBLLNG** feature configuration.

Once the account is derived for an individual membership, the system checks whether there is any refund/write off request created for the account. If so, the system checks whether the refund/write off request is systematically created through refund/write off instruction via the **Automatic Refund/Write Off** feature. If so, the system automatically cancels the refund/write off request of the account. However, if the refund/write off request is not systematically created through refund/write off instruction, the system creates a To Do using the respective To Do type specified in the **C1-WOCANMCN** algorithm. You can then refer this To Do and manually cancel such refund/write off request of the account.

Chapter 8

Customer Registration

Topics:

- Customer Registration (Without Approval) Status Transition
- Customer Registration (With Approval) Status Transition
- Customer Registration Template
- Customer Registration Type
- Customer Registration (Used for Searching)
- Customer Registration (Used for Viewing)

Until now, you were able to create person, account, policy, and policy plan from the different screens. Now, ORMB provides the ability to create a person, multiple accounts for the person, multiple policies for the person, and multiple policy plans for the policy from the same user interface. A new object named **Customer Registration** is introduced in this release. Through a customer registration object, you can create person, accounts, policies, and policy plans at the same time from the same interface. Before creating a customer registration object, you need to create the following:

- Customer Registration Template
- Customer Registration Type

While creating a customer registration object, you need to specify the following:

- A customer registration type using which the customer registration object should be created
- A source system from the customer information is received
- A type of person that you want to create through the customer registration object

Once you specify the above details, the **Customer Registration** screen appears with a set of pages and sections which are added in the respective person template. The default values for the fields, characteristic types, identifier types, and phone types are shown as specified in the person template. In addition, the field values, characteristic types, characteristic values, identifier types, identifier values, phone types, and phone numbers are disabled as specified in the person template. On the Accounts page, you can view one row for each account template which is added in the customer registration type. You can then edit the row and thereby create an account for the person. You can create multiple accounts for the person using the same or different template.

Note:

You cannot create sort records and derivation and pricing parameters for the bill group from the **Customer Registration** screen. You can only create these from the **Customer 360° Information** screen or using the health care inbound message.

The system creates effective dated address using the address business object which is specified in the customer registration type. By default, the account override address is effective from the date when the customer registration object is created in the system.

On the **Policies** page, you can view one row for each policy template which is added in the customer registration type. You can then edit the row and thereby create a policy for the person. You can create multiple policies for the person using the same or different template. On clicking the **Add** icon corresponding

to the policy row, you can view one row for each policy plan template which is added in the customer registration type. You can then edit the row and thereby create a policy plan for the policy.

On clicking the **View/Edit** icon or the **Add New Account** button in the **Accounts** page, the **Customer Registration - Add Account** screen appears with a set of pages and sections which are added in the respective account template. The default values for the fields, characteristic types, and identifier types are shown as specified in the account template. In addition, the field values, characteristic types, characteristic values, identifier types, and identifier values are disabled as specified in the account template.

On clicking the **View/Edit** icon or the **Add New Policy** button in the **Policies** page, you need to specify a policy type. The policy type indicates the category to which the policy belongs (i.e. whether it is Self Funded, Fully-Insured Group, or Fully-Insured Individual) and the policy business object using which the policy should be created. Once you specify a policy type, the **Policy** screen appears with a set of sections which are added in the respective policy template. The default values for the fields and characteristic types are shown as specified in the policy template. In addition, the field values, characteristic types, and characteristic values are disabled as specified in the policy template. You can create one or more policies for the person using the same or different policy type.

On clicking the **View/Edit** icon or the **Add New Plan** button corresponding to a policy plan row in the **Policies** page, the **Plan** screen appears with a set of sections which are added in the respective policy plan template. The default values for the fields and characteristic types are shown as specified in the policy plan template. In addition, the field values, characteristic types, and characteristic values are disabled as specified in the policy plan template.

You can save the person, account, policy, and policy plan details as and when you are entering the data by clicking the **Save as Draft** button. On clicking the **Save as Draft** button, the system creates a customer registration object in the Draft status. The status of the policies which are created through the customer registration object is set to Pending. Once the person, account, policy, and policy plan details are specified, you can click the **Validate and Save** button. The system then validates the information. You can edit, delete, or submit a customer registration object when it is in the **Draft** status. On submitting a customer registration object, the person, accounts, policies, and policy plans are created in the system. Finally, the status of the customer registration object is changed to the following depending on the type of person:

Person Type	**Status**
Parent Customer	Parent Customer Approved
Bill Group	Bill Group Approved
Any Other Person Type Other Than Parent Customer and Bill Group	Complete

You can optionally configure the approval process for the customer registration. If the **Approval Required** option is selected in the customer registration type, the status of the customer registration object is changed to **Approval In Progress** on submitting it. A To Do using the approval To Do type is created and assigned to the users with the approval To Do role. The approver can then review the customer registration object and accordingly approve, reject, or request the submitter to resubmit the customer registration object for approval.

Copyright © 2026, Oracle and/or its affiliates.

On approving a customer registration object, the person, accounts, policies, and policy plans are created in the system. Finally, the status of the customer registration object is changed to the following depending on the type of person:

Person Type	**Status**
Parent Customer	Parent Customer Approved
Bill Group	Bill Group Approved
Any Other Person Type Other Than Parent Customer and Bill Group	Complete

If the approver rejects a customer registration object due to some reason, the status of the customer registration object is changed to **Rejected**. However, if the approver requests the submitter to resubmit a customer registration object for approval after making the required changes, the status of the customer registration object is changed to **Draft**. The submitter can then make the required changes and resubmit the customer registration object for approval.

The system provides the following two options while defining a customer registration type:

- **Manual Billing Hierarchy and Pricing**- Used when you want to inform the user to create the billing hierarchy and pricing for the parent customer manually. In other words, you want the user to create the required bill groups for the parent customer, the bill group's accounts, pricing rules, bill group sorting information, and bill group derivation and pricing parameters. If this option is selected, a To Do is created using the **Billing Hierarchy and Pricing** To Do type and assigned to the users with the **Billing Hierarchy and Pricing** To Do role. This feature can be used only for customer registration objects where the person type is set to **Parent Customer**. Once the billing hierarchy and pricing is created for the parent customer, the user must complete the corresponding To Do which is created using the **Billing Hierarchy and Pricing** To Do type. On executing the **Customer Registration Monitor (C1-CUSRG)**batch, the system considers all customer registration objects which are in the **Parent Customer Approved**or **Pending Pricing Correction** status. It checks whether the corresponding To Do (if any) created using the **Billing Hierarchy and Pricing** To Do type is completed. If so, it changes the status of the customer registration object to the following depending on whether the **Final Approval Required** option is selected:

Final Approval Required (Yes or No)	**Status**
Yes	Pending Final Approval
No	Complete

- **Final Approval Required**- Used to indicate whether the final approval is required once the approver at the first level approves the customer registration object. Ideally, the final approval is required when the **Manual Billing Hierarchy and Pricing** option is selected. This ensures that the information related to the following entities is created and verified before the customer registration object moves to the **Complete** status:
  - Bill Group
  - Bill Group's Accounts
  - Bill Group's Sorting Records

Copyright © 2026, Oracle and/or its affiliates.

- Bill Group's Derivation and Pricing Parameters
- Pricing Rules for the Policy Plans

If this option is selected, a To Do is created using the **Final Approval** To Do type and assigned to the users with the **Final Approval** To Do role. This feature can be used only for customer registration objects where the person type is set to **Parent Customer**. Once the user with the **Final Approval** To Do role approves the customer registration object, the status of the customer registration object is changed to **Complete**.

If the approver requests the submitter to resubmit a customer registration object for approval, the status of the customer registration object is changed to **Pending Pricing Correction**.

Note: The system enables you to create maximum 10 accounts and 5 policies for a person and maximum 10 policy plans for a policy through a customer registration object from the user interface.

Once the status of a customer registration object is changed to **Complete** or **Bill Group Approved**, the system changes the status of the policies created through the customer registration object to **In Force/Active**. In addition, the status of the pricing rules which are created for such policies' policy plans is set to **Active**.

You can also create a customer registration object using the **File Upload Interface** utility through an inbound message. On creating an inbound message using the **File Upload Interface** utility, the status of the inbound message is set to **Pending**. Once the inbound message is processed, a customer registration object is created in the following status depending on the person type:

Person Type	**Status**
Parent Customer	Complete
Bill Group	Bill Group Approved
Any Other Person Type Other Than Parent Customer and Bill Group	Complete

Note: The above status transition is mentioned based on the assumption that the data uploaded through the **File Upload Interface** utility will be pre-approved and does not require any approval in the system.

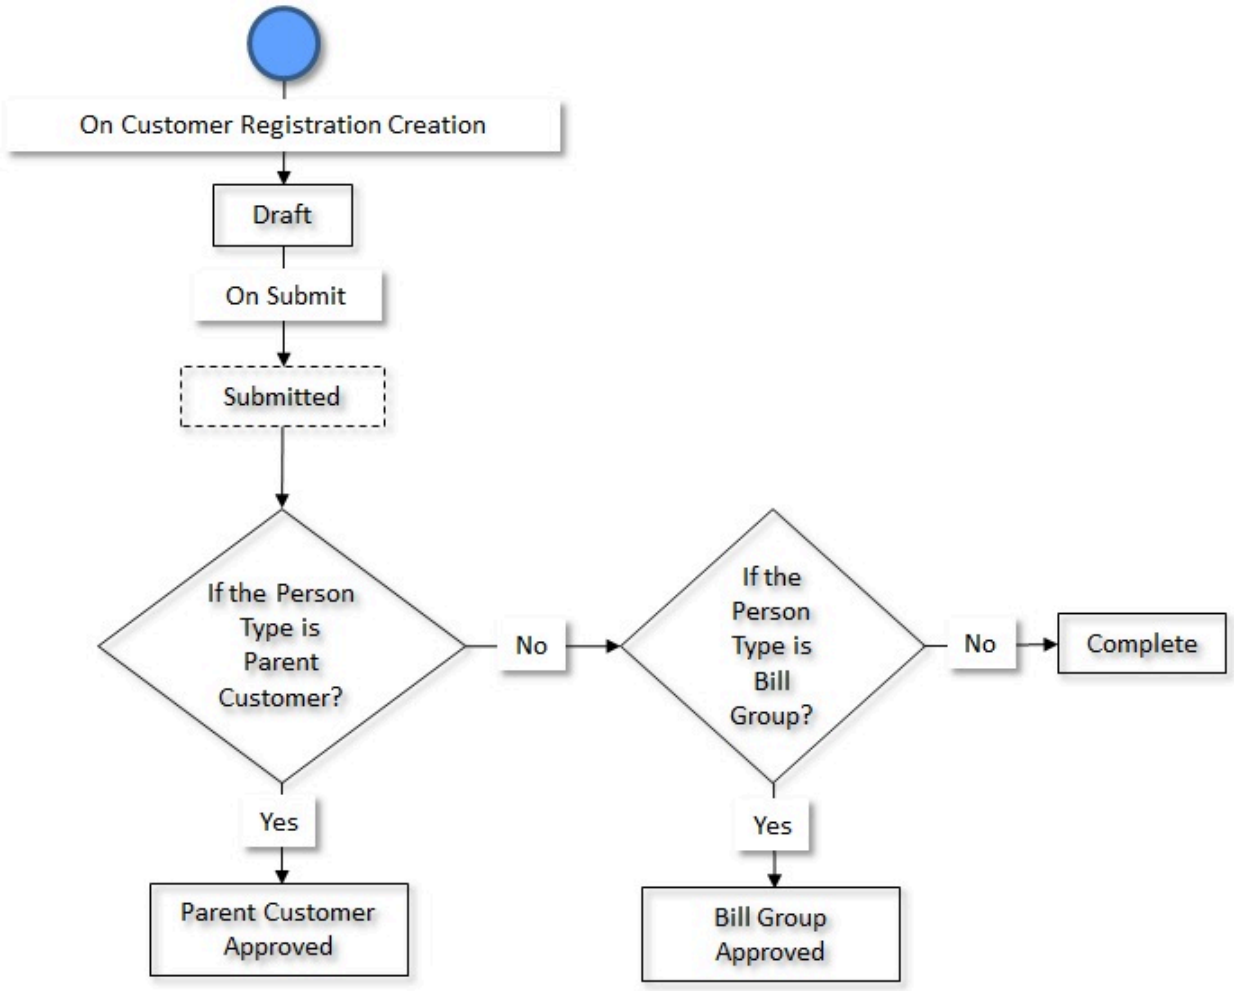
At present, only the XML format is supported for creating a customer registration object using the File Upload Interface utility through an inbound message. To implement the Customer Registration feature, the following new screens are introduced in this release:

- Customer Registration Template
- Customer Registration Type
- Customer Registration

Copyright © 2026, Oracle and/or its affiliates.

Customer Registration (Without Approval) Status Transition

The following figure graphically indicates how a customer registration object moves from one status to another when the approval process is not configured in the customer registration type:



Customer Registration (With Approval) Status Transition

The following figure graphically indicates how a customer registration object moves from one status to another when the approval process is configured in the customer registration type:

Customer Registration Template

A customer registration template encapsulates the following information:

- List of pages that should appear when you create a person, account, policy, or policy plan using the respective customer registration template
- List of sections that should appear in each page
- Field or characteristic attributes, such as:
  - Default value for a field or characteristic type
  - Default value for a person or account identifier type or phone type
  - Primary identifier type for a person or account
  - Mandatory field in each section
  - Enable or disable the field value, identifier type, identifier value, characteristic type, characteristic value, phone type, or phone number

You can create multiple customer registration templates for person, account, policy and policy plan. Depending on whether you are creating a customer registration template for person, account, policy or policy plan, you can include the following pages and define field or characteristic attributes for the following sections:

The following table lists the pages and sections that are available in the respective template category:

Template Category	Template Page	Template Section
Person	Main	Person Main
		Person Names
		Person Identifiers
		Person Phones
	Contact Information	Person Address
		Person Email
	Accounts	-
	Person Hierarchy	Person Hierarchy - Main
		Person Hierarchy - Characteristics
	Person Characteristics	Person Characteristics
	Policies	Policies
		Parent Policies
	Registration Characteristics	Customer Registration Characteristics
Account	Main	Account Information
		Account Identifiers
	Auto Pay	Account Autopay
	Persons	Main
		Account Address Override Information
		Bill Routing

Copyright © 2026, Oracle and/or its affiliates.

Template Category	Template Page	Template Section
	Account Characteristics	Account Characteristics
Policy	Policy - Main	Policy Main
		Policy Persons
		Policy Characteristics
Policy Plan	Plan	Plan - Main
		Plan - Characteristics

Search Customer Registration Template

The **Search Customer Registration Template** zone allows you to search for a customer registration template using various search criteria. It contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for customer registration templates using the banking template or the healthcare template details. The valid values are: • **Banking Template** - Used to indicate whether you want to search for customer registration templates created using the **C1-CustomerRegistrationTmplBK** business object. • **Healthcare Template** - Used to indicate whether you want to search for customer registration templates created using the **C1-CustomerRegistrationTmplHC** business object. **Note:** By default, the **Banking Template** option is selected.	Yes
Template	Used to search for a particular template.	No
Description	Used to search for customer registration templates having a particular description.	No
Template Category	Used to search for customer registration templates which belong to a particular category. The valid values are: • Account • Person • Policy • Policy Plan **Note:** The **Policy** and **Policy Plan** options appear when you select the **Healthcare Template** option from the **Search By** list.	No

Copyright © 2026, Oracle and/or its affiliates.

Note: You must specify at least one search criterion while searching for a customer registration template.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Template	Displays the customer registration template.
Description	Displays the description of the customer registration template.
Template Category	Displays the category to which the customer registration template belongs. The valid values are: • Account • Person • Policy • Policy Plan
Edit	On clicking the **Edit**() icon, the **Customer Registration Template** screen appears where you can edit the details of the customer registration template.
Duplicate	On clicking the **Duplicate**() icon, the **Customer Registration Template** screen appears where you can define a new customer registration template using an existing customer registration template.
Delete	On clicking the **Delete** () icon, you can delete the customer registration template. **Note:** You can delete a customer registration template when a customer registration is not yet defined using the customer registration template.

On clicking the **Broadcast** () icon corresponding to a customer registration template, the **Customer Registration Template** zone appears with the details of the respective customer registration template.

By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Customer Registration Template zone	Customer Registration Template on page 529

Customer Registration Template

The **Customer Registration Template** zone displays the details of the customer registration template. It also allows you to edit, copy, and delete the customer registration template. It contains the following sections

- **Main** - Displays the basic information about the customer registration template. It contains the following fields:

Field Name	Field Description
Template	Displays the customer registration template.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Template Category	Indicates the category for which the customer registration template is created in the system. The valid values are: • Account • Person • Policy • Policy Plan
	Note: The **Policy** and **Policy Plan** template categories appear when the customer registration template is created using the **C1-CustomerRegistrationTmplHC** business object.
Description	Displays the description of the customer registration template.
Detailed Description	Displays additional information about the customer registration template.

- **Template Pages** - The **Template Pages** section lists the template pages, template sections added for a particular template category in a customer registration template. It contains the following columns:

Column Name	Column Description
Template Page	Indicates the template page which is added for the template category.
Template Section	Indicates the template section which is defined for the template page.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the customer registration template.
Delete	Used to delete the customer registration template.
	Note: You can delete a customer registration template when a customer registration is not yet created using the customer registration template.
Duplicate	Used to create a new customer registration template using an existing customer registration template.

- **Record Information** - The **Record Information** section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the customer registration template is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Customer Registration Template** zone does not appear in the **Customer Registration Template** screen. It appears when you click the **Broadcast** ( ) icon corresponding to the customer registration template in the **Search Customer Registration Template** zone.

Searching for a Customer Registration Template

Prerequisites

To search for a customer registration template, you should have:

- Customer registration template business objects defined in the application
- Customer registration templates defined in the application
- Customer registration templates associated with the template categories

Procedure

To search for a customer registration template:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **C** and then click **Customer Registration Template**.
   A sub-menu appears.
3. Click the **Search** option from the **Customer Registration Template** sub-menu.
   The **Customer Registration Template** screen appears.
4. Enter the search criteria in the **Search Customer Registration Template** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of customer registration templates that meet the search criteria appears in the **Search Results** section.

Defining a Customer Registration Template

Prerequisites

To define a customer registration template, you should have:

- Customer registration template business objects defined in the application
- Template categories defined in the application
- Template pages and sections defined in the application

Procedure

To define a customer registration template:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **C** and then click **Customer Registration Template**.
   A sub-menu appears.
3. Click the **Add** option from the **Customer Registration Template** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Template Business Object	Used to indicate the business object using which you want to define the customer registration template. The valid values are: • **Customer Registration Template - Banking** - Used to indicate that you want to define a customer registration template using the **C1-CustomerRegistrationTmplBK** business object. • **Customer Registration Template - Health Care** - Used to indicate that you want to define a customer registration template using the **C1-CustomerRegistrationTmplHC** business object.	Yes

Copyright © 2026, Oracle and/or its affiliates.

> **Tip:** Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Customer Registration Template** screen.

4. Select the required customer registration template business object from the respective field.
5. Click **OK**.

   The **Customer Registration Template for Banking** or the **Customer Registration Template for Healthcare** screen appears depending upon the selected business object. It contains the following sections:

   - **Main** - Used to specify basic details about the customer registration template.
   - **Template Pages** - Used to add template pages and its related sections for the customer registration template.
   - **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to specify the customer registration template.	Yes
Template Category	Used to indicate the category for which you want to define the customer registration template. The valid values are: • Account • Person • Policy • Policy Plan **Note:** The **Policy** and **Policy Plan** options appear when you are defining a customer registration template using the **C1-CustomerRegistrationTmplHC** business object.	Yes
Business Object	Indicates the business object using which you want to define the customer registration template.	Not applicable
Description	Used to specify the description for the customer registration template.	Yes
Detailed Description	Used to specify additional information about the customer registration template.	No

6. Enter the required details in the **Main** section.
7. Add the template pages and template sections for the customer registration template in the **Template Pages** section.
8. Set the field attributes for the template sections in the **Template Pages** section.
9. Click **Save**.
   The customer registration template is defined.

Adding the Pages and Sections in a Customer Registration Template

Prerequisites

To add a page and its related sections in a customer registration template, you should have:

- Template categories defined in the application
- Template pages and sections defined in the application

Procedure

To define a customer registration template:

1. Ensure that the **Template Pages** section is expanded when you are defining, editing, or copying a customer *r*egistration template.

   The **Template Pages** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template Page	Used to indicate the page which you want to add in a customer registration template for a particular template category.	Yes (Conditional) **Note:** This field is required while adding pages and sections in a customer registration template.
Template Section	Used to indicate the section and its field attributes which you want to define for a particular page in a customer registration template. **Note:** On clicking the **Add** (+) icon, the following columns appear: **Column Name** / **Column Description** Template Section: Used to indicate the section for a particular page. Field Attributes: Used to define the field attributes of a section. **Note:** On clicking the **Add** (+) icon, you can define the field attributes for the section.	Yes (Conditional) **Note:** This field is required while adding pages and sections in a customer registration template.

   The following table lists the various pages and sections that you can include in a customer registration template:

Copyright © 2026, Oracle and/or its affiliates.

Template Category	Template Pages		Template Sections	
	Template Page	**Mandatory (Yes or No)**	**Template Section**	**Mandatory (Yes or No)**
Account	Auto Pay	No	Account Autopay	No
	Account Characteristics	No	Account Characteristics	No
	Credit Ratings **Note:** This template page appears when you are defining, editing, or copying a customer registration template which is created using the **C1-Customer Registration TmplBK** business object.	No	Credit Rating	No
	Main	Yes	Account Identifiers	Yes
			Account Information	Yes
	Persons	Yes	Account Address Override Information	No
			Bill Routing	Yes
			Main	Yes
Person	Accounts	No	-	-
	Contact Information	No	Person Address	No
			Person Email	No
	Deal Information **Note:** This template page appears when you are defining, editing, or copying a customer registration template which is created using the **C1-Customer Registration TmplBK** business object.	No	Deal-Main	No

Copyright © 2026, Oracle and/or its affiliates.

Template Category	Template Pages		Template Sections	
	Template Page	**Mandatory (Yes or No)**	**Template Section**	**Mandatory (Yes or No)**
	Main	Yes	Person Identifiers	Yes
			Person Main	Yes
			Person Names	Yes
			Person Phones	No
	Person Characteristics	No	Person Characteristics	No
	Person Hierarchy	No	Person Hierarchy-Characteristics	No
			Person Hierarchy-Main	No
	Policies	No	Parent Policy	No
	Note: This template page appears only when you are defining, editing, or copying a customer registration template which is created using the **C1-CustomerRegistrationTmplHC** business object.		Policies	No
	Registration Characteristics	No	Customer Registration Characteristics	No
Policy	Policy-Main	Yes	Policy Characteristics	No
Note: This template category appears only when you are defining, editing, or copying a customer registration template which is created using the **C1-CustomerRegistrationTmplHC** business object.			Policy-Main	Yes
			Policy Persons	No
Policy Plan	Plan	Yes	Plan-Characteristics	No

Copyright © 2026, Oracle and/or its affiliates.

Template Category	Template Pages		Template Sections	
	Template Page	**Mandatory (Yes or No)**	**Template Section**	**Mandatory (Yes or No)**
Note: This template category appears when you are defining, editing, or copying a customer registration template which is created using the **C1-CustomerRegistration TmplHC** business object.			Plan-Main	Yes

2. Enter the required details in the **Template Pages** section.
3. Set the field attributes for the template section, if required.
4. If you want to add more than one page or section for the customer registration template, click the **Add** (+) icon and *t*hen repeat step *2*.

Note: However, if you want to remove a page or section from the customer registration template, click the **Delete** (🗑) icon corresponding to the page or section.

5. Click **Save**.
The pages and sections are added in the customer registration template.

Note:

You can add all the template pages available for a particular template category by clicking the **Select All** check box in the upper left corner of the **Template Pages** section.

You cannot edit or delete a template page or section if a customer registration is already defined using the customer registration template.

Setting the Field Attributes for a Template Section

Prerequisites

To set the field attributes for a template section, you should have:

- Template pages and sections associated with the template category
- Fields for the sections defined in the application

Procedure

Copyright © 2026, Oracle and/or its affiliates.

To set the field attributes for a template section:

1. Ensure that the **Template Pages** section is expanded when you are defining, editing, or copying a customer *r*egistration template.

   The **Template Pages** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template Page	Used to indicate the page which you want to add in a customer registration template for a particular template category.	Yes (Conditional) **Note:** This field is required while adding pages and sections in a customer registration template.
Template Section	Used to indicate the section and its field attributes which you want to define for a particular page in a customer registration template. **Note:** On clicking the **Add** (+) icon, the following columns appear: **Column Name** / **Column Description** Template Section – Used to indicate the section for a particular page. Field Attributes – Used to define the field attributes of a section. **Note:** On clicking the **Add** (+) icon, you can define the field attributes for the section.	Yes (Conditional) **Note:** This field is required while adding pages and sections in a customer registration template.

2. Select the template page and template section from the respective columns.
3. Click the **Add** (+) icon in the **Field Attributes** column corresponding to the template section whose field *a*ttributes you want to set.

   It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence of the field attribute.	Yes (Conditional) **Note:** This field is required while setting the field attributes for a template section.
Field	Used to indicate the field for which you want to set attributes.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Field Search** window appears. On specifying the field, the description of the field appears corresponding to the field.	**Note:** This field is required while setting the field attributes for a template section.
Default Field Value	Used to indicate the default value for the field in the template section.	Yes (Conditional)
	Note: On specifying a field, the **Search** (🔍) icon appears corresponding to the **Default Field Value** field. On clicking the **Search** icon, a window appears depending on the field that you have selected. On specifying the default field value, the description of the default field value appears corresponding to the default field value.	**Note:** This field is required while setting the field attributes for a template section.
Required	Used to indicate whether the field is mandatory in the template section.	Yes (Conditional)
	Note: By default, the check box in the **Required** column is disabled. It is enabled when you specify the field in the **Field** column.	**Note:** This field is required while setting the field attributes for a template section.
Disable Field Value	Used to indicate whether the field is disabled in the template section.	Yes (Conditional)
	Note: By default, the check box in the **Disable Field Value** column is disabled. It is enabled when you specify the field in the **Field** column.	**Note:** This field is required while setting the field attributes for a template section.
Identifier Type	Used to indicate the type of identifier for which you want to set attributes.	Yes (Conditional)
	Note: On specifying a field, the **Search** (🔍) icon appears corresponding to the **Identifier Type** field. On clicking the **Search** icon, the **Search Zone for Person Identifier** window appears. On specifying the identifier type, the description of the identifier type appears corresponding to the **Identifier Type** field.	**Note:** This field is required while setting the field attributes for a template section.
Identifier Value	Used to specify the value for the identifier type for which you want to set attributes.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: By default, this field is disabled. It is enabled when you specify the identifier type in the **Identifier Type** column.	**Note:** This field is required while setting the field attributes for a template section.
Primary ID	Used to indicate whether the identifier type and identifier value are primary or not. **Note:** By default, the check box in the **Primary ID** field is disabled. It is enabled when you specify the identifier type in the **Identifier Type** column.	Yes (Conditional) **Note:** This field is required while setting the field attributes for a template section.
Disable Identifier Type	Used to indicate whether the identifier type is disabled in the template section. **Note:** By default, the check box in the **Disable Identifier Type** column is disabled. It is enabled when you specify the identifier type in the **Identifier Type** column.	Yes (Conditional) **Note:** This field is required while setting the field attributes for a template section.
Disable Identifier Value	Used to indicate whether the identifier value is disabled in the template section. **Note:** By default, the check box in the **Disable Identifier Value** column is disabled. It is enabled when you specify the identifier value in the **Identifier Value** column.	Yes (Conditional) **Note:** This field is required while setting the field attributes for a template section.
Name Type	Used to indicate the type of name for which you want to set attributes. **Note:** On specifying a field, the **Search** (🔍) icon appears corresponding to the **Name Type** field. On clicking the **Search** icon, the **Search Zone for Person Name Type** window appears. On specifying the name type, the description of the name type appears corresponding to the **Name Type** field.	Yes (Conditional) **Note:** This field is required while setting the field attributes for a template section.
Name	Used to specify the name of the person. **Note:** By default, this field is disabled. It is enabled when you specify the name type in the **Name Type** column.	Yes (Conditional) **Note:** This field is required while setting the field attributes for a template section.
Disable Name Type	Used to indicate whether the name type is disabled in the template section.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: By default, the check box in the **Disable Name Type** column is disabled. It is enabled only when you specify the name type in the **Name Type** column.	**Note:** This field is required while setting the field attributes for a template section.
Disable Name	Used to indicate whether the specified name of the person is disabled in the template section. **Note:** By default, the check box in the **Disable Name** column is disabled. It is enabled when you specify the name in the **Name** column.	Yes (Conditional) **Note:** This field is required while setting the field attributes for a template section.
Phone Type	Used to specify the type of phone for which you want to set attributes. **Note:** On specifying a field, the**Search** (🔍) icon appears corresponding to the **Phone Type** field. On clicking the **Search** icon, the **Search Zone for Phone Type** window appears. On specifying the phone type, the description of the phone type appears corresponding to the **Phone Type** field.	Yes (Conditional) **Note:** This field is required while setting the field attributes for a template section.
Phone Number	Used to specify the phone number. **Note:** By default, this field is disabled. It is enabled when you specify the phone type in the **Phone Type** column.	Yes (Conditional) **Note:** This field is required while setting the field attributes for a template section.
Disable Phone Type	Used to indicate whether the phone type is disabled in the template section. **Note:** By default, the check box in the **Disable Phone Type** column is disabled. It is enabled when you specify the phone type in the **Phone Type** column.	Yes (Conditional) **Note:** This field is required while setting the field attributes for a template section.
Disable Phone Number	Used to indicate whether the specified phone number is disabled in the template section. **Note:** By default, the check box in the **Disable Phone Number** column is disabled. It is enabled when you specify the phone number in the **Phone Number** column.	Yes (Conditional) **Note:** This field is required while setting the field attributes for a template section.
Characteristic Information	Used to indicate the characteristic type and characteristic value for which you want to set attributes.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: On specifying the characteristic type, the characteristic value field appears in the **Characteristic Information** column. On specifying a predefined characteristic type, the**Search** (🔍) icon appears corresponding to the characteristic value field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the characteristic value field..	**Note:** This field is required while setting the field attributes for a template section.
Disable Characteristic Type	Used to indicate whether the characteristic type is disabled in the template section. **Note:** By default, the check box in the **Disable Characteristic Type** column is disabled. It is enabled when you specify the characteristic type in the **Characteristic Type** column.	Yes (Conditional) **Note:** This field is required while setting the field attributes for a template section.
Disable Characteristic Value	Used to indicate whether the characteristic is disabled in the template section. **Note:** By default, the check box in the **Disable Characteristic Value** column is disabled. It is enabled when you specify the characteristic value in the **Characteristic Value** column.	Yes (Conditional) **Note:** This field is required while setting the field attributes for a template section.

4. Enter the required details in the **Template Pages** section.
5. If you want to set more than one field attribute for the template section, click the **Add** (+) icon and then *r*epeat step *2*.

> **Note:** However, if you want to remove a field attribute from the template section, click the **Delete** (🗑) icon corresponding to the field.

6. Click **Save**.
   The field attributes are set for the template section.

Editing a Customer Registration Template

Prerequisites

To edit a customer registration template, you should have:

- Template categories defined in the application
- Template pages and sections defined in the application

Procedure

To edit a customer registration template:

1. Search for the customer registration template in the **Customer Registration Template** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the customer *r*egistration template whose details you want to edit.

   The **Customer Registration Template for Banking** or the **Customer Registration Template for Healthcare** screen appears depending upon the business object using which the customer registration template is defined. It contains the following sections:

   - **Main** - Used to specify basic details about the customer registration template.
   - **Template Pages** - Used to add template pages and its related sections for the customer registration template.
   - **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Displays the customer registration template.	Not applicable
Template Category	Used to indicate the category for which you want to define the customer registration template. The valid values are: • Account • Person • Policy • Policy Plan **Note:** The **Policy** and **Policy Plan** options appear when you are defining a customer registration template using the **C1-CustomerRegistrationTmplHC** business object.	Yes
Business Object	Indicates the business object using which the customer registration template is defined in the system.	Not applicable
Description	Used to specify the description for the customer registration template.	Yes
Detailed Description	Used to specify additional information about the customer registration template.	No

Tip: Alternatively, you can edit the details of a customer registration template by clicking the **Edit** button in the **Customer Registration Template** zone.

3. Modify the details in the **Main** section, if required.

Copyright © 2026, Oracle and/or its affiliates.

4. Add, edit, or remove the template pages and template sections from the customer registration template, if required.
5. Add, edit, or remove the field attributes from the template section, if required.
6. Click **Save**.
   The changes made to the customer registration template are saved.

> **Note:** You can edit a customer registration template only when a customer registration it is not yet defined using the customer registration template.

Copying a Customer Registration Template

Instead of creating a customer registration template from scratch, you can create a new customer registration template using an existing customer registration template. This is possible through copying a customer registration template. On copying a customer registration template, the details including the template pages, template sections, and field attributes for the template sections are copied to the new customer registration template. You can then edit the details, if required.

Prerequisites

To copy a customer registration template, you should have:

- Customer registration template (whose copy you want to create) defined in the application
- Template categories defined in the application
- Template pages and sections defined in the application

Procedure

To copy a customer registration template:

1. Search for the customer registration template in the **Customer Registration Template** screen.
2. In the **Search Results** section, click the **Duplicate** (⧉) icon in the **Duplicate** column corresponding to the *c*ustomer registration template whose copy you want to create.

   The **Customer Registration Template for Banking** or the **Customer Registration Template for Healthcare** screen appears depending upon the business object using which the customer registration template whose copy you want to create is defined. It contains the following sections:

   - **Main** - Used to specify basic details about the customer registration template.
   - **Template Pages** - Used to add template pages and its related sections for the customer registration template.
   - **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to specify the customer registration template.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Template Category	Used to indicate the category for which you want to define the customer registration template. The valid values are: • Account • Person • Policy • Policy Plan **Note:** The **Policy** and **Policy Plan** options appear when you are defining a customer registration template using the **C1-CustomerRegistrationTmplHC** business object.	Yes
Business Object	Indicates the business object using which the customer registration template is defined in the system.	Not applicable
Description	Used to specify the description for the customer registration template.	Yes
Detailed Description	Used to specify additional information about the customer registration template.	No

Tip: Alternatively, you can copy a customer registration template by clicking the **Duplicate** button in the **Customer Registration Template** zone.

3. Enter the required details in the **Main** section.
4. Add, edit, or remove the template pages and template sections from the customer registration template, if required.
5. Add, edit, or remove the field attributes from the template section, if required.
6. Click **Save**.
   The new customer registration template is defined.

Deleting a Customer Registration Template

Procedure

To delete a Customer Registration Template:

1. Search for the customer registration template in the **Customer Registration Template** screen.

Copyright © 2026, Oracle and/or its affiliates.

2. In the **Search Results** section, click the **Delete** (🗑) icon in the **Delete** column corresponding to the customer *r*egistration template that you want to delete.

   A message appears confirming whether you want to delete the customer registration template.
3. Click **OK**.
   The customer registration template is deleted.

> **Note:** You can delete a customer registration template when a customer registration is not yet created using the customer registration template.

> **Tip:** Alternatively, you can delete a customer registration template by clicking the **Delete** button in the **Customer Registration Template** zone.

Customer Registration Type

A customer registration type encapsulates the following information:

- Users with a particular access group can only create a customer registration object using the customer registration type
- Whether the customer registration type can be used to create a customer registration object from the user interface, through the inbound message, or through the **File Upload Interface** utility
- Whether the approval is required when you create, edit, or delete a customer registration object
- Whether the final level approval is required once the approver at the first level approves the customer registration object
- Whether a To Do should be created indicating that the users have to manually create the billing hierarchy and pricing for the parent customer.
- The business objects using which the person, account, policy plan, membership, and address should be created when a customer registration object is created using the customer registration type
- A customer registration template which indicates the pages and sections that should appear when you are creating a customer registration object using the customer registration type. You can specify one customer registration template for person and one or more customer registration templates for account, policy, and policy plan.
- Information, such as person names, person identifiers, person phones, person characteristics, person addresses, person hierarchy, accounts, account identifiers, account characteristics, account auto pay information, account persons, account bill routing information, policies, policy plans, policy characteristics, or policy plan characteristics, which should be copied when you create a copy of a customer registration object which is created using the customer registration type.

Customer Registration Type List

The **Customer Registration Type List** zone lists the customer registration types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Customer Registration Type	Displays the customer registration type.
Description	Displays the description of the customer registration type.
Edit	On clicking the **Edit** (✎) icon, the **Customer Registration Type** screen appears where you can edit the details of the customer registration type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Customer Registration Type** screen appears where you can define a new customer registration type using an existing customer registration type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the customer registration type.
	Note: You can delete a customer registration type when a customer registration is not yet defined using the customer registration type.

You can filter the list using various search criteria (such as, **Customer Registration Type** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

On clicking the **Broadcast** (📡) icon corresponding to a customer registration type, the **Customer Registration Type** zone appears with the details of the respective customer registration type.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Customer Registration Type

The **Customer Registration Type** zone displays the details of the customer registration type. It contains the following sections:

- **Main** - Displays the basic information about the customer registration type. It contains the following fields:

Field Name	Field Description
Customer Registration Type	Displays the customer registration type.
Description	Displays the description of the customer registration type.
Customer Registration Business Object	Indicates the business object using which the customer registration is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. The valid values are: • **Customer Registration - Banking** - Indicates customer registration is created using the **C1-CustomerRegistrationBanking** business object. • **Customer Registration - Health Care** - Indicates customer registration is created using the **C1-CustomerRegistrationHC** business object. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the customer registration type.
Status	Indicates the status of the customer registration type. The valid values are: • Active • Inactive **Note:** You cannot change the status of a customer registration type to **Inactive** when the corresponding customer registration is in a status other than **Processed** or **Rejected**.
Access Group	Displays the user group that can access the customer registration created using the customer registration type. **Note:** It has a link. On clicking the link, the **Access Group** screen appears where you can view the details of the respective access group.
Registration Source	Indicates the source through which the customer registration is created using the customer registration type. The valid values are: • File Upload • Inbound Message • Manual

- **Additional Data** - Displays additional information about the customer registration type. It contains the following fields:

Field Name	Field Description
Approval Required	Indicates whether approval is required while creating the customer registration using the customer registration type.
Approval To Do Type	Indicates that the To Do entry of the specified To Do type is created when you submit the customer registration for approval.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the **Approval Required** check box is selected. It has a link. On clicking the link, the **To Do Type** screen appears with the details of the respective To Do type.
Approval To Do Role	Indicates that users with the specified To Do role can only approve, reject, or resubmit the customer registration for approval.
	Note: This field appears when the **Approval Required** check box is selected. It has a link. On clicking the link, the **To Do Role** screen appears with the details of the respective To Do role.
Submitter To Do Type	Indicates the To Do entry of the specified To Do type is created when the customer registration is resubmitted by the approver.
	Note: It has a link. On clicking the link, the **To Do Type** screen appears where you can view the details of the respective To Do type.
Submitter To Do Role	Indicates the users with the specified To Do role for whom the To Do task is created when the customer registration is resubmitted by the approver.
	Note: It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role.
Final Approval Required	Indicates whether the final approval is required once the approver at the first level approves the customer registration.
	Note: This field appears when the **Customer Registration Type** is created using the **C1-CustRegTypeHealthCare** business object. The final approval is required when the **Manual Billing Hierarchy and Pricing** option check box is selected.
Final Approval To Do Type	Indicates that the To Do entry of the specified To Do type is created when you submit the customer registration for final approval.
	Note: It has a link. On clicking the link, the **To Do Type** screen appears with the details of the respective To Do type. This field appears when the **Final Approval Required** check box is selected.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Final Approval To Do Role	Indicates that users with the specified To Do role can only approve or resubmit the customer registration for final approval.
	Note: It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role. This field appears when the **Final Approval Required** check box is selected.
Manual Billing Hierarchy and Pricing	Indicates whether the required bill groups for the parent customer, the bill group's accounts, pricing rules, bill group sorting information, and bill group derivation and pricing parameters are created manually by the user while defining the customer registration.
	Note: This field appears when the **Customer Registration Type** is created using the **C1-CustRegTypeHealthCare** business object. This feature is used only for customer registration objects where the person type is set to **Parent Customer**.
Billing Hierarchy and Pricing To Do Type	Indicates the To Do entry of the specified To Do type is created for the user to define or edit the billing hierarchy and pricing for the parent customer manually.
	Note: It has a link. On clicking the link, the **To Do Type** screen appears with the details of the respective To Do type. This field appears when the **Manual Billing Hierarchy and Pricing** check box is selected.
Billing Hierarchy and Pricing To Do Role	Indicates users with the specified To Do role can only define or edit the billing hierarchy and pricing for the parent customer manually.
	Note: It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role. This field appears when the **Manual Billing Hierarchy and Pricing** check box is selected.
Person Business Object	Indicates the business object using which the person is created while defining the customer registration.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Account Business Object	Indicates the business object using which the account is created while defining the customer registration.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Policy Plan Business Object	Indicates the business object using which the policy plan is created while defining the customer registration.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object. This field appears when the **Customer Registration Type** is created using the **C1-CustRegTypeHealthCare** business object.
Benefits Business Object	Indicates the business object using which the benefit is created while defining the customer registration.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Membership Business Object	Indicates the business object using which the membership is created while defining the customer registration.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object. This field appears when the **Customer Registration Type** is created using the **C1-CustRegTypeHealthCare** business object.
Address Business Object	Indicates the business object using which the address is created while defining the customer registration.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Statement Construct Business Object	Indicates the business object using which the statement construct is created while defining the customer registration.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

- **Characteristics** - Lists the characteristics defined for the customer registration type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Customer Registration Templates** - Lists the templates that are associated with the customer registration type for creating a customer registration. It contains the following columns:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Sequence	Displays the sequence of the customer registration template.
Template Category	Indicates the category to which the customer registration template belongs. The valid values are: • Person • Account • Policy • Policy Plan **Note:** The **Policy** and **Policy Plan** template categories appear when the **Customer Registration Type** is created using the **C1-CustRegTypeHealthCare** business object.
Template	Displays the customer registration template associated with the customer registration type. **Note:** It has a link. On clicking the link, the **Customer Registration Template** screen appears where you can view the details of the respective customer registration template.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the customer registration type.
Delete	Used to delete the customer registration type. **Note:** You can delete a customer registration type when a customer registration is not yet defined using the customer registration type.
Duplicate	Used to create a new customer registration type using an existing customer registration type.

- **Record Information** - The **Record Information** section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the customer registration type is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

- **Copy Customer Registration Details** - Enables you to specify the type of information you want to copy while defining a customer registration using an existing customer registration. It contains the following fields:

Column Name	Column Description
Person Names	Indicates whether you want to copy the person details while copying a customer registration.
Accounts	Indicates whether you want to copy the account details while copying a customer registration.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Person Identifiers	Indicates whether you want to copy the person identifier details while copying a customer registration.
Account Identifiers	Indicates whether you want to copy the account identifier details while copying a customer registration.
Person Phones	Indicates whether you want to copy the phone details of the person while copying a customer registration.
Account Characteristics	Indicates whether you want to copy the characteristic details of the account while copying a customer registration.
Person Characteristics	Indicates whether you want to copy the characteristic details of the person while copying a customer registration.
Account Auto Pay Information	Indicates whether you want to copy the automatic payment details of the account while copying a customer registration.
Person Addresses	Indicates whether you want to copy the address details of the person while copying a customer registration.
Account Persons	Indicates whether you want to copy the details of the persons related to the account while copying a customer registration.
Person Hierarchy	Indicates whether you want to copy the person hierarchy details while copying a customer registration.
Account Override Address	Indicates whether you want to copy the account override address details while copying a customer registration.
Bill Routing Information	Indicates whether you want to copy the bill routing details of the account while copying a customer registration.
Credit Rating History	Indicates whether you want to copy the credit rating history details while copying a customer registration.
Policies	Indicates whether you want to copy the policy details while copying a customer registration. **Note:** This field appears when the **Customer Registration Type** is created using the **C1-CustRegTypeHealthCare** business object.
Policy Plans	Indicates whether you want to copy the policy plan details while copying a customer registration. **Note:** This field appears only when the **Customer Registration Type** is created using the **C1-CustRegTypeHealthCare** business object.
Policy Characteristics	Indicates whether you want to copy the policy characteristic details while copying a customer registration. **Note:** This field appears when the **Customer Registration Type** is created using the **C1-CustRegTypeHealthCare** business object.
Policy Plan Characteristics	Indicates whether you want to copy the policy plan characteristic details while copying a customer registration.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: This field appears when the **Customer Registration Type** is created using the **C1-CustRegTypeHealthCare** business object.

By default, the **Customer Registration Type** zone does not appear in the **Customer Registration Type** screen. It appears when you click the **Broadcast** (ᯤ) icon corresponding to a customer registration type in the **Customer Registration Type List** zone.

Searching for a Customer Registration Type

Prerequisites

To search for a customer registration type, you should have:

- Customer registration types defined in the application

Procedure

To search for a customer registration type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **C** and then click **Customer Registration Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Customer Registration Type** sub-menu.
   The **Customer Registration Type** screen appears with a list of customer registration types in the **Customer Registration Type List** zone.
4. Click the **Filters** (▽) icon in the title bar of the **Customer Registration Type List** zone.
   It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to search for a particular customer registration type.	No
Description	Used to search for customer registration types having a particular description.	No

5. Enter the search criteria in the **Customer Registration Type List** zone.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.
   A list of customer registration types that meet the search criteria appears in the **Search Results** section.

Defining a Customer Registration Type

Prerequisites

To define a customer registration type, you should have:

- Customer registration type business objects defined in the application
- Customer registration business objects defined in the application
- Access groups defined in the application
- Registration sources defined in the application
- Statement construct business object defined in the application
- Benefit business object defined in the application
- Person, account, policy plan, membership, and address business objects defined in the application

> **Note:** The policy plan and membership business objects are required when you are defining a customer registration type using the **C1-CustRegTypeHealthCare** business object.

- Approval To Do types and To Do roles defined in the application
- Billing hierarchy and pricing To Do types and To Do roles defined in the application

> **Note:** The billing hierarchy and pricing To Do types and To Do roles are required when you are defining a customer registration type using the **C1-CustRegTypeHealthCare** business object.

- Characteristic types defined in the application
- Template categories defined in the application

Procedure

To define a customer registration type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **C** and then click **Customer Registration Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Customer Registration Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type Business Object	Used to indicate the business object using which you want to create the customer registration type. The valid values are: • Customer Registration Type - Banking • Customer Registration Type - Healthcare	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Customer Registration Type** screen.

Note: The **Select Business Object** screen appears when there are multiple customer registration type business objects defined in the application. If there is only one customer registration type business object defined in the application, the **Customer Registration Type** screen appears.

4. Select the required customer registration business object from the respective field.
5. Click **OK**.

The **Customer Registration Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the customer registration type.
- **Additional Data** - Used to define additional information about the customer registration type.
- **Characteristics** - Used to define a list characteristics for the customer registration type.
- **Customer Registration Templates** - Used to associate templates with the customer registration type.
- **Copy Customer Registration Details** - Used to specify the type of information you want to copy while defining a customer registration using an existing customer registration.

- **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to specify the customer registration type.	Yes
Business Object	Indicates the business object using which you want to create the customer registration type.	Not applicable
Description	Used to specify the description for the customer registration type.	Yes
Customer Registration Business Object	Used to indicate the business object using which you want to create the customer registration in the system.	Yes
Detailed Description	Used to specify additional information about the customer registration type.	No
Status	Used to indicate the status of the customer registration type. • Active • Inactive	Yes
Access Group	Used to specify the user group that can access the customer registration created using the customer registration type.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Access Group** field. On clicking the **Search** icon, the **Access Group Search** window appears. On specifying the access group, the description of the access group appears corresponding to the **Access Group** field.	
Registration Source	Used to indicate the source through which you want to create the customer registration in the system. The valid values are: • File Upload • Inbound Message • Manual	Yes

6. Enter the required details in the **Main** section.
7. Define additional information about the customer registration type in the **Additional Data** section.
8. Define a list of characteristics for the customer registration type in the **Characteristics** section.
9. Associate customer registration templates with the customer registration type in the **Customer Registration Templates** section
10. Specify the type of information you want to copy while defining a customer registration using an existing *c*ustomer registration in the **Copy Customer Registration Details** section.
11. Click **Save**.
    The customer registration type is defined.

Defining Additional Data for a Customer Registration Type

Prerequisites

To define additional data for a customer registration type, you should have:

- Person, account, policy plan, membership, and address business objects defined in the application

Copyright © 2026, Oracle and/or its affiliates.

Note: The policy plan and membership business objects are required when you are defining, editing, or copying a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Approval To Do types and To Do roles defined in the application
- Billing hierarchy and pricing To Do types and To Do roles defined in the application

Note: The billing hierarchy and pricing To Do types and To Do roles are required when you are defining, editing, or copying a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

Procedure

To define additional data for a customer registration type:

1. Ensure that the **Additional Data** section is expanded when you are defining, editing, or copying a customer *r*egistration type.

   The **Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Required	Used to indicate whether approval is required while creating the customer registration using the customer registration type.	Yes (Conditional) **Note:** This field is required for approving the customer registration which is created using the customer registration type.
Approval To Do Type	Used to indicate the To Do entry of the specified To Do type is created when you submit the customer registration for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Approval To Do Type** field. This field appears when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required for approving the customer registration which is created using the customer registration type.
Approval To Do Role	Used to indicate the users with the specified To Do role can approve, reject, or resubmit the customer registration for approval. **Note:** This field appears when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required for approving the customer registration which is created using the customer registration type.
Submitter To Do Type	Used to indicate the To Do entry of the specified To Do type is created when the customer registration is resubmitted by the approver.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Submitter To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Submitter To Do Type** field.	**Note:** This field is required for resubmitting the customer registration for approval.
Submitter To Do Role	Used to indicate the users with the specified To Do role for whom the To Do task is created when the customer registration is resubmitted by the approver.	Yes (Conditional) **Note:** This field is required for resubmitting the customer registration for approval.
Final Approval Required	Used to indicate whether final approval is required once the approver at the first level approves the customer registration. **Note:** This field appears when you are defining, editing, or copying a **Customer Registration Type** using the **C1-CustRegTypeHealthCare** business object. The final approval is required when the **Manual Billing Hierarchy and Pricing** option check box is selected.	Yes (Conditional) **Note:** This field is required for approving the customer registration which is created using the customer registration type.
Final Approval To Do Type	Used to indicate the To Do entry of the specified To Do type is created when you submit the customer registration for final approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Final Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Final Approval To Do Type** field. This field appears when the **Final Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required for final approval of the customer registration.
Final Approval To Do Role	Used to indicate the users with the specified To Do role can only approve or resubmit the customer registration for final approval. **Note:** This field appears when the **Final Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required for final approval of the customer registration.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Manual Billing Hierarchy and Pricing	Used to indicate whether the required bill groups for the parent customer, the bill group's accounts, pricing rules, bill group sorting information, and bill group derivation and pricing parameters are created manually by the user while defining the customer registration. **Note:** The **Manual Billing Hierarchy and Pricing** option can be used only for customer registrations where the person type is set to **Parent Customer**. This field appears when you are defining, editing, or copying a **Customer Registration Type** using the **C1-CustRegTypeHealthCare** business object.	Yes (Conditional) **Note:** This field is required for creating the billing hierarchy and pricing for the parent customer manually.
Billing Hierarchy and Pricing To Do Type	Used to indicate the To Do entry of the specified To Do type is created for the user to define or edit the billing hierarchy and pricing for the parent customer manually. **Note:** The **Search** (🔍) icon appears corresponding to the **Billing Hierarchy and Pricing To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Billing Hierarchy and Pricing To Do Type** field. This field appears when the **Manual Billing Hierarchy and Pricing** check box is selected.	Yes (Conditional) **Note:** This field is required for creating the billing hierarchy and pricing for the parent customer manually.
Billing Hierarchy and Pricing To Do Role	Used to indicate the users with the specified To Do role can only define or edit the billing hierarchy and pricing for the parent customer manually. **Note:** This field appears when the **Manual Billing Hierarchy and Pricing** check box is selected.	Yes (Conditional) **Note:** This field is required for creating the billing hierarchy and pricing for the parent customer manually.
Person Business Object	Used to indicate the business object using which the customer registration for a person is created using the customer registration type.	Yes
Account Business Object	Used to indicate the business object using which the customer registration for an account is created using the customer registration type.	Yes
Policy Plan Business Object	Used to indicate the business object using which the customer registration for a policy plan is created using the customer registration type.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you are defining, editing, or copying a **Customer Registration Type** using the **C1-CustRegTypeHealthCare** business object.	
Membership Business Object	Used to indicate the business object using which the customer registration for a membership is created using the customer registration type. **Note:** The **Membership Business Object** is required for creating customer registrations through an **Inbound Message**. This field appears when you are defining, editing, or copying a **Customer Registration Type** using the **C1-CustRegTypeHealthCare** business object.	Yes
Benefits Business Object	Used to indicate the business object using which the customer registration for a benefit is created using the customer registration type.	No
Address Business Object	Used to indicate the business object using which the customer registration for an address is created using the customer registration type.	Yes
Statement Construct Business Object	Used to indicate the business object using which the customer registration for a statement construct is created using the customer registration type.	Yes

2. Enter the required details in the **Additional Data** section.
3. Click **Save**.
   The additional data for the customer registration type is defined.

Defining a Characteristic for a Customer Registration Type

Prerequisites

To define a characteristic for a customer registration type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration Type**)

Procedure

To define a characteristic for a customer registration type:

Copyright © 2026, Oracle and/or its affiliates.

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a customer *r*egistration type.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Customer Registration Type**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the customer registration type.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the customer registration type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the customer registration type, click the **Add** (+) icon *a*nd then repeat step *2*.

   Note: However, if you want to remove a characteristic from the customer registration type, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristic is defined for the customer registration type.

Associating a Customer Registration Template with a Customer Registration Type

Prerequisites

To associate a customer registration template with a customer registration type, you should have:

- Template categories defined in the application

Copyright © 2026, Oracle and/or its affiliates.

- Customer registration templates associated to the template categories

Procedure

To associate a customer registration template with a customer registration type:

1. Ensure that the **Customer Registration Templates** section is expanded when you are defining, editing, or *c*opying a customer registration type.

   The **Customer Registration Templates** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence for the customer registration template.	Yes (Conditional) **Note:** This field is required when you are associating a customer registration template with a customer registration type.
Template Category	Used to indicate the category to which the customer registration template belongs. The valid values are: • Person • Account • Policy • Policy Plan **Note:** The **Policy** and **Policy Plan** template categories appear when you are defining, editing, or copying a **Customer Registration Type** using the **C1-CustRegTypeHealthCare** business object. You can associate only one person template category and multiple account, policy, and policy plan template categories with the customer registration type.	Yes (Conditional) **Note:** This field is required when you are associating a customer registration template with a customer registration type.
Template	Used to specify the customer registration template which you want to associate with the customer registration type. **Note:** The **Search** (🔍) icon appears corresponding to the **Template** field. On clicking the **Search** icon, the **Customer Registration Template Search** window appears. On specifying the template, the description of the template appears corresponding to the **Template** field.	Yes (Conditional) **Note:** This field is required when you are associating a customer registration template with a customer registration type.

2. Enter the required details in the **Customer Registration Templates** section.

Copyright © 2026, Oracle and/or its affiliates.

3. If you want to define more than one template for the customer registration type, click the **Add** (+) icon and *t*hen repeat step *2*.

> **Note:** However, if you want to remove a template from the customer registration type, click the **Delete** (🗑) icon corresponding to the customer registration template.

4. Click **Save**.
   The customer registration template is associated with the customer registration type.

Setting Attributes to Define a Customer Registration Using the Existing Customer Registration

Prerequisites

To set an attribute for defining a customer registration using the existing customer registration, you should have:

- **Person** attributes defined in the application
- **Account** attributes defined in the application
- **Policy** attributes defined in the application

> **Note:** The **Policy** attributes are required when you are defining a customer registration type using the **C1-CustRegTypeHealthCare** business object.

- **Policy Plan** attributes defined in the application

> **Note:** The **Policy Plan** attributes are required when you are defining a customer registration type using the **C1-CustRegTypeHealthCare** business object.

Procedure

To set an attribute for defining a customer registration using the existing customer registration:

1. Ensure that the **Copy Customer Registration Details** section is expanded when you are defining, editing, or *c*opying a customer registration type.

   The **Copy Customer Registration Details** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Names	Used to indicate whether you want to copy the person details while copying a customer registration.	No
Accounts	Used to indicate whether you want to copy the account details while copying a customer registration.	No
Person Identifiers	Used to indicate whether you want to copy the person identifier details while copying a customer registration.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Account Identifiers	Used to indicate whether you want to copy the account identifier details while copying a customer registration. **Note:** The check box of this field is enabled when the **Accounts** check box is selected in the **Copy Customer Registration Details** section.	No
Person Phones	Used to indicate whether you want to copy the phone details of the person while copying a customer registration.	No
Account Characteristics	Used to indicate whether you want to copy the characteristic details of the account while copying a customer registration. **Note:** The check box of this field is enabled when the **Accounts** check box is selected in the **Copy Customer Registration Details** section.	No
Person Characteristics	Used to indicate whether you want to copy the characteristic details of the person while copying a customer registration.	No
Account Auto pay Information	Used to indicate whether you want to copy the automatic payment details of the account while copying a customer registration. **Note:** The check box of this field is enabled when the **Accounts** check box is selected in the **Copy Customer Registration Details** section.	No
Person Addresses	Used to indicate whether you want to copy the address details of the person while copying a customer registration.	No
Account Persons	Used to indicate whether you want to copy the details of the persons related to the account while copying a customer registration. **Note:** The check box of this field is enabled when the **Accounts** check box is selected in the **Copy Customer Registration Details** section.	No
Person Hierarchy	Used to indicate whether you want to copy the person hierarchy details while copying a customer registration.	No
Account Override Address	Used to indicate whether you want to copy the account override address details while copying a customer registration. **Note:** The check box of this field is enabled when the **Accounts** check box is selected in the **Copy Customer Registration Details** section.	No

Editing a Customer Registration Type

Prerequisites

To edit a customer registration type, you should have:

- Customer registration business objects defined in the application
- Access groups defined in the application
- Registration sources defined in the application
- Statement construct business object defined in the application
- Benefit business object defined in the application
- Person, account, policy plan, membership, and address business objects defined in the application

> **Note:** The policy plan and membership business objects are required when you are editing a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Approval To Do types and To Do roles defined in the application
- Billing hierarchy and pricing To Do types and To Do roles defined in the application

> **Note:** The billing hierarchy and pricing To Do types and To Do roles are required when you are editing a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Characteristic types defined in the application
- Template categories defined in the application

Procedure

To edit a customer registration type:

Copyright © 2026, Oracle and/or its affiliates.

1. Search for the customer registration type in the **Customer Registration Type List** zone of the **Customer Registration Type** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the customer *r*egistration type whose details you want to edit.

   The **Customer Registration Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the customer registration type.
   - **Additional Data** - Used to define additional information about the customer registration type.
   - **Characteristics** - Used to define a list characteristics for the customer registration type.
   - **Customer Registration Templates** - Used to associate templates with the customer registration type.
   - **Copy Customer Registration Details** - Used to specify the type of information you want to copy while defining a customer registration using an existing customer registration.

   - **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Displays the customer registration type.	Not applicable
Business Object	Indicates the business object using which the customer registration type is created in the system.	Not applicable
Description	Used to specify the description for the customer registration type.	Yes
Customer Registration Business Object	Used to indicate the business object using which you want to create the customer registration in the system.	Yes
Detailed Description	Used to specify additional information about the customer registration type.	No
Status	Used to indicate the status of the customer registration type. • Active • Inactive	Yes
Access Group	Used to specify the user group that can access the customer registration created using the customer registration type. **Note:** The **Search** (🔍) icon appears corresponding to the **Access Group** field. On clicking the **Search** icon, the **Access Group Search** window appears. On specifying the access group, the description of the access group appears corresponding to the **Access Group** field.	Yes
Registration Source	Used to indicate the source through which you want to create the customer registration in the system. The valid values are: • File Upload • Inbound Message	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Manual	

Tip: Alternatively, you can edit the details of a customer registration type by clicking the **Edit** button in the **Customer Registration Type** zone.

3. Modify the required details in the **Main** section, if required.
4. Modify additional information about the customer registration type in the **Additional Data** section, if required.
5. Define, edit, or remove characteristics of the customer registration type in the **Characteristics** section, if required.
6. Associate or disassociate customer registration templates from the customer registration type in the **Customer Registration Templates** section, if required.
7. Specify the type of information you want to copy while defining a customer registration using an existing *c*ustomer registration in the **Copy Customer Registration Details** section, if required.
8. Click **Save**.
   The changes made to the customer registration type are saved.

Copying a Customer Registration Type

Instead of creating a customer registration type from scratch, you can create a new customer registration type using an existing customer registration type. This is possible through copying a customer registration type. On copying a customer registration type, the details including the additional data, characteristics, customer registration templates, and attributes set to define a customer registration from the existing customer registration are copied to the new customer registration type. You can then edit the details, if required.

Prerequisites

To copy a customer registration type, you should have:

- Customer registration type (whose copy you want to create) defined in the application
- Customer registration business objects defined in the application
- Access groups defined in the application
- Registration sources defined in the application
- Statement construct business object defined in the application

Copyright © 2026, Oracle and/or its affiliates.

- Benefit business object defined in the application
- Person, account, policy plan, membership, and address business objects defined in the application

> **Note:** The policy plan and membership business objects are required when you are copying a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Approval To Do types and To Do roles defined in the application
- Billing hierarchy and pricing To Do types and To Do roles defined in the application

> **Note:** The billing hierarchy and pricing To Do types and To Do roles are required when you are copying a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Characteristic types defined in the application
- Template categories defined in the application

Procedure

To copy a customer registration type:

1. Search for a customer registration type in the **Customer Registration Type List** zone of the **Customer Registration Type** screen.
2. In the **Search Results** section, click the **Duplicate** (⧉) icon in the **Duplicate** column corresponding to the *c*ustomer registration type whose copy you want to create.

   The **Customer Registration Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the customer registration type.
   - **Additional Data** - Used to define additional information about the customer registration type.
   - **Characteristics** - Used to define a list characteristics for the customer registration type.
   - **Customer Registration Templates** - Used to associate templates with the customer registration type.
   - **Copy Customer Registration Details** - Used to specify the type of information you want to copy while defining a customer registration using an existing customer registration.

   - **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to specify the customer registration type.	Yes
Business Object	Indicates the business object using which you want to create the customer registration type.	Not applicable
Description	Used to specify the description for the customer registration type.	Yes
Customer Registration Business Object	Used to indicate the business object using which you want to create the customer registration in the system.	Yes
Detailed Description	Used to specify additional information about the customer registration type.	No
Status	Used to indicate the status of the customer registration type. • Active • Inactive	Yes
Access Group	Used to specify the user group that can access the customer registration created using the customer registration type.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Access Group** field. On clicking the **Search** icon, the **Access Group Search** window appears. On specifying the access group, the description of the access group appears corresponding to the **Access Group** field.	
Registration Source	Used to indicate the source through which you want to create the customer registration in the system. The valid values are: • File Upload • Inbound Message • Manual	Yes

Tip: Alternatively, you can copy a customer registration type by clicking the **Duplicate** button in the **Customer Registration Type** zone.

3. Enter the required details in the **Main** section.
4. Enter additional information about the customer registration type in the **Additional Data** section.
5. Define, edit, or remove characteristics of the customer registration type in the **Characteristics** section.
6. Associate or disassociate customer registration templates from the customer registration type in the **Customer Registration Templates** section.
7. Specify the type of information you want to copy while defining a customer registration using an existing *c*ustomer registration in the **Copy Customer Registration Details** section.
8. Click **Save**.
   The new customer registration type is defined.

Deleting a Customer Registration Type

Procedure

To delete a Customer Registration Type:

1. Search for the customer registration type in the **Customer Registration Type List** zone of the **Customer Registration Type** screen.
2. In the **Customer Registration Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding *t*o the customer registration type that you want to delete.

   A message appears confirming whether you want to delete the customer registration type.
3. Click **OK**.
   The customer registration type is deleted.

> **Note:** You can delete a customer registration type when a customer registration is not yet defined using the customer registration type.

> **Tip:** Alternatively, you can delete a customer registration type by clicking the **Delete** button in the **Customer Registration Type** zone.

Field Name	Field Description	Mandatory (Yes or No)
Person Identifier	Used to specify the value of the person identifier type using which you want to search for customer registrations. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the person identifier type as a search criteria, you have to enter the person identifier. This field is required for searching customer registrations using the person details.
Characteristic Type	Used to search customer registrations of persons with a particular characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Customer Registration**. This field appears when the **Person Details** option is selected from the **Search By** list and the **Advanced Search** link available in the upper right corner of the **Search Customer Registration** zone is clicked.	Yes (Conditional) **Note:** This field is required for searching customer registrations using the person details.
Characteristic Value	Used to specify the value of the characteristic type using which you want to search customer registrations of persons. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field. This field appears when the **Person Details** option is selected from the **Search By** list and the **Advanced Search** link available in the upper right corner of the **Search Customer Registration** zone is clicked.	Yes (Conditional) **Note:** This field is required for searching customer registrations using the person details.
Inbound Message ID	Used to search for a customer registration which was created through a particular inbound message.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears only when the **Inbound Message Details** option is selected from the **Search By** list.	**Note:** This field is required for searching customer registrations using the inbound message details.
Source System	Used to search customer registrations whose information is received from a particular external system. **Note:** This field appears when the **Inbound Message Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This field is required for searching customer registrations using the inbound message details.
External Source ID	Used to search for a customer registrations whose information is received from a particular external source system. **Note:** This field appears when the **Inbound Message Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This field is required for searching customer registrations using the inbound message details.
External Transaction ID	Used to search for a customer registration which is created as a result of a particular transaction in the external source system. **Note:** This field appears when the **Inbound Message Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This field is required for searching customer registrations using the inbound message details.
External Batch ID	Used to search customer registrations which are created through an external batch job. **Note:** This field appears when the **Inbound Message Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This field is required for searching customer registrations using the inbound message details.
Inbound Message Type	Used to search customer registrations which are created using a particular inbound message type. **Note:** This field appears when the **Inbound Message Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This field is required for searching customer registrations using the inbound message details.
Request Id	Used to search customer registrations which are created from a particular file uploaded through the **File Upload Interface** utility. **Note:** This field appears when the **File Upload Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This field is required for searching customer registrations using the file upload details.
File Name	Used to search customer registrations created from uploading a file with a particular name.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **File Upload Details** option is selected from the **Search By** list.	**Note:** This field is required for searching customer registrations using the file upload details.
File Status	Used to search customer registrations created from the uploaded files having a particular status. The valid values are: • Approval Pending • Completed • Error • Pending • Rejected **Note:** This field appears when the **File Upload Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This field is required for searching customer registrations using the file upload details.
File Request Type	Used to search customer registrations which are created from the uploaded files with a particular file request type. **Note:** This field appears when the **File Upload Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This field is required for searching customer registrations using the file upload details.

Note: You must specify at least one search criterion while searching for a customer registration. One more search criterion is required when you are searching for a customer registration using the division and/or person type.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the customer registration is created in the system.
Customer Registration Information	Displays the concatenated string of information about the customer registration. **Note:** It has a link. On clicking the link, the **Customer Registration** screen appears where you can view the details of the respective customer registration.
Status	Indicates the status of the customer registration. The valid values are: • Approval In Progress • Bill Group Approved • Complete • Draft • Draft for Update • Parent Customer Approved • Pending Final Approval • Pending Pricing Correction • Rejected

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: The values listed above appear when the **Registration Details** option is selected from the **Search By** list.
	• Pending • Processed • Rejected • Voided
	Note: These values listed above appear when the **Inbound Message Details** option is selected from the **Search By** list.
	Note: This column appears only when the **Registration Details**, **Person Details**, or **Inbound Message Details** options are selected from the **Search By** list.
Request Id	Displays the request Id generated while uploading a file through the **File Upload Interface** utility for creating the customer registration object.
	Note: This column appears when the **File Upload Details** option is selected from the **Search By** list.
Created By	Displays the user who has created the customer registration.
	Note: This column appears when the **Registration Details**, **Person Details**, or **Inbound Message Details** options are selected from the **Search By** list.
Inbound Message Information	Displays the concatenated string of information about the inbound message.
	Note: It has a link. On clicking the link, the **Inbound Message** screen appears where you can view the details of the respective inbound message. This column appears when the **Inbound Message Details** option is selected from the **Search By** list.
File ID	Displays the file which is uploaded for creating the customer registration through the **File Upload Interface** utility.
	Note: This column appears when the **File Upload Details** option is selected from the **Search By** list.
Copy	On clicking the **Copy** (⧉) icon, the **Customer Registration** screen appears where you can define a new customer registration using an existing customer registration.
	Note: This column appears when the **Registration Details** option is selected from the **Search By** list.
Person Name	Displays the name of the person for whom the customer registration is defined in the system.
	Note: This column appears when the **Person Details** option is selected from the **Search By** list.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Inbound Message Type	Indicates the inbound message type using which the inbound message is created in the system. **Note:** This column appears when the **Inbound Message Details** option is selected from the **Search By** list.
File Name	Displays the name of the file which is uploaded for creating the customer registration through the **File Upload Interface** utility. **Note:** This column appears when the **File Upload Details** option is selected from the **Search By** list.
Primary Person Identifier Type	Indicates the primary identifier type associated with the person. **Note:** This column appears when the **Person Details** option is selected from the **Search By** list.
Source System	Indicates the source system from where the inbound message is received for creating the customer registration. **Note:** This column appears when the **Inbound Message Details** option is selected from the **Search By** list.
Request Type	Indicates the request type using which the file is uploaded through the **File Upload Interface** utility for creating the customer registration. **Note:** This column appears only when the **File Upload Details** option is selected from the **Search By** list.
Primary Person Identifier	Displays the primary person identifier. **Note:** This column appears when the **Person Details** option is selected from the **Search By** list.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Customer Registration

Prerequisites

To search for a customer registration, you should have:

- Customer registration business objects defined in the application
- Customer registration statuses and customer registration types defined in the application

Copyright © 2026, Oracle and/or its affiliates.

- Divisions associated with the access group to which the user belongs
- Person types and person identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration**)
- Inbound message statuses, inbound message types, and source systems defined in the application.
- File statuses and file request types defined in the application.

Procedure

To search for a customer registration:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Customer Registration**.
   A sub-menu appears.
3. Click the **Search** option from the **Customer Registration** sub-menu.
   The **Customer Registration** screen appears.
4. Enter the search criteria in the **Search Customer Registration** zone.

> **Note:**
>
> You must specify at least one search criterion while searching for a customer registration object. One more search criterion is required when you are searching for a customer registration using the division and/or person type.
>
> The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the former group is used for searching. For example, if you enter the person name (in the second criteria group) and person identifier (in the fourth criteria group), the system searches using the person name instead of the person identifier.
>
> You must specify the division when you are searching for a customer registration of a person using the city.
>
> You must specify division and/or any other criteria in the second group when you are searching for a customer registration using the person type.
>
> If you have specified any other search criterion along with the person ID, the system ignores the additional search criterion and searches for the customer registration using the person ID.
>
> ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
>
> The **Advanced Search** link appears in the right side of the **Search Customer Registration** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.
>
> If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.
   A list of customer registrations that meet the search criteria appears in the **Search Results** section.

Defining a Customer Registration

Prerequisites

To define a customer registration, you should have:

- Customer registration types, source systems, and person types defined in the application
- Divisions, customer segments, customer tiers, and access groups defined in the application
- Name types, phone types, and person identifier types defined in the application
- Address type codes and countries defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration**)
- Relationship types defined in the application
- Policy types and policy person roles defined in the application.

> **Note:** These prerequisites are required when you are defining a customer registration using the **C1-CustomerRegistrationHC** business object.

Procedure

To define a customer registration:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Customer Registration**.
   A sub-menu appears.
3. Click the **Add** option from the **Customer Registration** sub-menu.

   The **Add Customer Registration** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to indicate the customer registration type using which you want to define the customer registration.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the external system from where the customer registration information is received.	No
Person Type	Used to indicate the type of person for whom you want to define the customer registration.	Yes

Tip: Alternatively, you can access the **Add Customer Registration** screen by clicking the **Add** button in the **Page Title** area of the **Customer Registration** screen.

4. Select the required **Customer Registration Type** from the respective field.
5. Select the required **Source System** from the respective field, if required.
6. Select the required **Person Type** from the respective field.
7. Click **OK**.

The **Customer Registration** screen appears. It contains the following pages:

- **Main** - Used to specify basic information about the person.
- **Contact** - Used to specify the contact information about the person.
- **Person Characteristics** - Used to define a list of characteristics for the person.
- **Hierarchy** - Used to define the person to person relationship for the person
- **Accounts** - Used to add the account details of the person.
- **Policies** - Used to specify the policy details of the person.

Note: This page appears when you are defining a customer registration using the **C1-CustomerRegistrationHC** business object.

- **Registration Characteristics** - Used to define a list of characteristics for the customer registration.

The **Main** page contains the following sections:

- **Main** - Used to specify basic details about the person.
- **Person Name** - Used to add the person names for customer registration.
- **Person Phones** - Used to add the person phone details for customer registration.
- **Person IDs** - Used to add the person identifiers for customer registration.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Indicates the person type using which you want to define the customer registration for the person.	Not applicable
Date of Birth	Used to specify the date when the person was born.	Yes
Division	Used to indicate the division to which the person belongs. **Note:** You can view only those divisions to which you have access in the **Division** list.	Yes
Person Since Date	Used to specify the date from when the person is the main customer.	Yes
Customer Segment	Used to indicate the market segment to which the person belongs.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.	
Customer Tier	Used to indicate the tier of the customer segment to which the person belongs. **Note:** This field appears when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.	Yes
Access Group	Used to indicate the user group that can access the customer registration. **Note:** The **Search** (🔍) icon appears corresponding to the **Access Group** field. On clicking the **Search** icon, the **Access Group Search** window appears. On specifying the access group, the description of the access group appears corresponding to the **Access Group** field.	Yes
Immediate Refund	Used to indicate whether you want to initiate immediate refund for the person's accounts and its child persons' accounts.	No

8. Enter the required details in the **Main** section.
9. Add the names of the person in the **Person Names** section.
10. Add the phone details for the person in the **Person Phones** section.
11. Add the identifier details for the person in the **Person IDs** section.
12. Define the addresses of the person in the **Contact** page, if required.
13. Define a list of characteristics for the person in the **Person Characteristics** page, if required.
14. Define the person to person relationship for the person in the **Hierarchy** page, if required.
15. Add the account details of the person in the **Accounts** page, if required.
16. Add the policy details of the person in the **Policies** page, if required.

Note: This page appears when you are defining a customer registration using the **C1-CustomerRegistrationHC** business object.

17. Define a list of characteristics for the customer registration in the **Registration Characteristics** page, if *r*equired.
18. Click **Validate and Save**.
    The customer registration is defined.

Adding the Names of a Person

Prerequisites

To add the names of a person, you should have:

- Name types defined in the application.

Procedure

To add the names of a person:

1. Ensure that the **Person Names** section is expanded in the **Main** page when you are defining, editing, or copying *a* customer registration.

   The **Person Names** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Name Type	Used to indicate the type of name which you want to add for the customer registration. **Note:** The list includes only those name types where the name type entity is set to **Customer Registration**.	Yes (Conditional) **Note:** This field is required when you are adding a name for customer registration.
Name	Used to specify the name of the person.	Yes (Conditional) **Note:** This field is required when you are adding a name for customer registration.

2. Enter the required details in the **Person Names** section.
3. If you want to add more than one person name for the customer registration, click the **Add** (+) icon and then *r*epeat step *2*.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** However, if you want to remove a person name from the customer registration, click the **Delete** (🗑) icon corresponding to the person name.

4. Click **Validate and Save**.
   The names are added for the person.

Adding the Contact Details of a Person

Prerequisites

To add the contact details of a person, you should have:

- Address type codes and countries defined in the application.

Procedure

To add the contact details of a person:

1. Ensure that the **Person Addresses** section in the **Contact** page is expanded when you are defining, editing, or *c*opying a customer registration.

   The **Person Addresses** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Address Type Code	Used to indicate the type of address that you want to add for the person. **Note:** The list includes only those address type codes where the address type code entity is set to **Customer Registration**.	Yes
Effective Date	Used to specify the date from when the address is effective for the person.	Yes
Season	Used to specify the season for which the address is effective for the person.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Person Seasonal** option from the Address Type Code field.	**Note:** This field is required while adding the seasonal contact details of a person.
Country	Used to indicate the country where the person is located. **Note:** The list includes only those countries which are already defined in the system. On selecting a country, only those address fields which are set as **Optional** while defining the country appear in the **Person Addresses** section. Also, the labels of the address fields will change depending on the business label which is defined for the respective address field in the **Country** screen.	Yes
Address 1	Used to specify the first line of the address. It may contain details, such as house number and apartment name.	No
Address 2	Used to specify the second line of the address. It may contain details, such as street name.	No
City	Used to specify the city name.	No
Address 3	Used to specify the third line of the address. It may contain the landmark details.	No
County	Used to specify the county name.	No
State	Used to indicate the state where the city or county is located. **Note:** The states listed in this field change depending on the country that you have selected.	No
Province	Used to specify the location within the country where the person is located.	No
Address 4	Used to specify the fourth line of the address.	No
Postal	Used to specify the postal or zip code of the address.	No
House Type	Used to indicate the type of the house. **Note:** The list includes only those values which are defined in the **HOUSE_TYPE** lookup field.	No
In City Limit	Used to indicate whether the address is within the city limit. The valid values are:	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Yes • No	
Geographic Code	Used to specify the geographic code of the address.	No

Note: The above mentioned fields appear in the **Person Addresses** section when the respective data is available for the person.

In addition, the **Person Addresses** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Override Mailing Name - Name1	Used to specify the name using which you want to override the person's mailing name.	Yes (Conditional) **Note:** This field is required while overriding the persons contact name.
Override Mailing Name - Name2	Used to specify the name using which you want to override the person's override mailing name 1.	Yes (Conditional) **Note:** This field is required while overriding the persons **Override Mailing Name - Name1**.
Override Mailing Name - Name3	Used to specify the name using which you want to override the person's override mailing name 2.	Yes (Conditional) **Note:** This field is required while overriding the persons **Override Mailing Name - Name2**.

Adding an Account for a Person

Prerequisites

To add the account for a person, you should have:

- Customer class, divisions, currencies, account categories, access groups, accrual cycles, and bill cycles defined in the application
- Account identifier types defined in the application
- Auto pay source codes, auto pay methods, and auto pay route types defined in the application
- Account relationship types defined in the application
- Address sources, bill formats, and bill route types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Account**)

Procedure

To add an account for a person:

1. Ensure that the **Accounts** section is expanded in the **Accounts** page when you are adding, editing, or removing *a*n account of a person.

   The **Accounts** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No.	Displays the sequence number of the account.	Not applicable
Template	Displays the account template using which the account is added for the person.	Not applicable
Customer Class	Indicates the customer class to which the account belongs.	Not applicable
Division	Indicates the division to which the account belongs.	Not applicable
Primary Identifier Type	Indicates the primary identifier type using which the account is added for the person.	Not applicable
Identifier Value	Displays the value of the primary identifier type.	Not applicable
Account Information	Displays the concatenated string of information about the account that is added for the person.	Not applicable
View / Edit	On clicking the **View / Edit** (✎) icon, you can view or edit the details of the account.	Not applicable

   Note: No information appears in the above columns if an account is not yet added for the person.

2. Click the **Add New Account** button in the **Accounts** section.

   The **Customer Registration - Add Account** screen appears. It contains the following pages:

   - **Main** - Used to specify basic information about the account.
   - **Auto Pay** - Used to add the automatic payment details of the account.
   - **Persons** - Used to associate a person to the account.
   - **Account Characteristics** - Used to define a list of characteristics for the account.

   The **Main** page contains the following sections:

   - **Main** - Used to specify basic details about the account.

Copyright © 2026, Oracle and/or its affiliates.

- **Account Identifiers** - Used to add the identifier details for the account.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Class	Used to indicate the customer class to which the account belongs.	Yes
Division	Used to indicate the division to which the account belongs. **Note:** You can only view those divisions to which you have access in the **Division** list.	Yes
Set Up Date	Used to specify the date when the account was initially set up for the person. **Note:** By default, the current date appears in this field.	Yes
Invoice Currency	Used to indicate the currency in which you want to generate invoice for the account. **Note:** The list includes only those currencies which are defined in the system.	Yes
Account Category	Used to indicate the category to which the account belongs. The valid values are: • **Invoice Account** - Indicates that the account will be used to bill charges of the usage accounts. It will not have charges of its own. • **Settlement Account** - Indicates that the account will be used only for settlement (i.e., for payments). • **Usage Account** - Indicates that the account will have its own charges. If the usage account is linked to any construct, the usage account's charges are billed through an invoice account. Otherwise, the usage account is billed individually. **Note:** The list includes only those values which are present in the **ACCT_USAGE_FLG** lookup field.	Yes
Access Group	Used to indicate the users who have right to view and update the details of the account.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Access Group** field. On clicking the **Search** icon, the **Access Group Search** window appears. On specifying the access group, the description of the access group appears corresponding to the **Access Group** field.	
Exclude Accrual	Used to indicate whether you want to exclude the account during accrual calculation. **Note:** The account is eligible for accrual, by default, when the division to which the account belongs is eligible for accrual. If you want to exclude the account from accrual, you must click the **Exclude Accrual** option. On clicking the **Exclude Accrual** option, the **Accrual Cycle** and **Accrual Type** fields are disabled.	No
Accrual Cycle	Used to indicate the accrual cycle for the account. **Note:** The **Search** (🔍) icon appears corresponding to the **Accrual Cycle** field. On clicking the **Search** icon, the **Accrual Cycle Search for Cust Reg** window appears. On specifying the accrual cycle, the description of the accrual cycle appears corresponding to the **Accrual Cycle** field. This field is disabled when you select the **Exclude Accrual** option.	No
Accrual Type	Used to indicate the accrual type that you want to use for the account during accrual calculation.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You can only specify an account level accrual type that is associated with the division to which the account belongs. The **Search** (🔍) icon appears corresponding to the **Accrual Type** field. On clicking the **Search** icon, the **Accrual Type Search for Cust Reg** window appears. On specifying the accrual type, the description of the accrual type appears corresponding to the **Accrual Type** field. This field is disabled when you select the **Exclude Accrual** option.	
Product	Used to indicate the product for which the account is enrolled. **Note:** The **Search** (🔍) icon appears corresponding to the **Product** field. On clicking the **Search** icon, the **Search Product** window appears.	Yes (Conditional) **Note:** This field is required while enrolling an account for a product.
Eligible for Repricing	Used to indicate whether the account is eligible for repricing when the account attributes (defined as parameters in the system) are changed. **Note:** Only accounts where the person and child person are the main customers are considered for repricing. The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.	No
Bill Cycle	Used to indicate the bill cycle for the account.	No
Bill Lead Days	Used to indicate whether you want to bill the account in advance. You need to specify the number of days that is used to derive the cut-off date for advance billing. **Note:** In case you don't want to bill the account in advance, you must specify **0** in this field.	Yes
Comments	Used to specify additional information about the account.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Immediate Refund	Used to indicate whether you want to initiate immediate refund for the account.	No

3. Enter the required details in the **Main** section.
4. Add, edit, or remove the identifier details of the account in the **Account Identifiers** section.
5. Add, edit, or remove the automatic payment details of the account in the **Auto Pay** page, if required.
6. Associate or disassociate persons from the account in the **Persons** page, if required.
7. Define, edit, or remove characteristics of the account in the **Account Characteristics** page, if required.
8. Add, edit, or remove the credit rating details of the account in the **Credit Ratings** page, if required.
9. Click **Validate and Save**.
   The account is added for the person.

Adding the Credit Rating Details for an Account

Prerequisites

To add the credit rating details for an account, you should have:

- Collection classes defined in the application

Procedure

To add the credit rating details for an account:

1. Ensure that the **Credit Ratings** page is expanded in the **Customer Registration - Add Account** screen when you are adding or editing the account of a person.

   The **Credit Ratings** page contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Collection Class	Used to indicate how the account's debt is reviewed by the credit and collections	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	processes (i.e., the account debt monitor and the write-off monitor).	**Note:** This field is required while adding the credit rating details for an account.
Postpone Credit Review Until	Used to specify the date till when you want to postpone the account's debt review by the credit and collections processes (i.e., the account debt monitor and the write-off monitor).	Yes (Conditional) **Note:** This field is required while adding the credit rating details for an account.
Last Credit Review Date	Used to indicate the last review date of the account's debt by the account debt monitor.	Yes (Conditional) **Note:** This field is required while adding the credit rating details for an account.
Current Credit Rating	Displays the current credit rating.	Not applicable
Current Cash Only Score	Displays the current cash only score.	Not applicable
Start Date	Used to specify the date from when the credit rating transaction affects the account's credit rating and cash-only score. **Note:** The start date cannot be later than the end date	Yes (Conditional) **Note:** This field is required while adding the credit rating details for an account.
End Date	Used to specify the date till when the credit rating transaction affects the account's credit rating and cash-only score. **Note:** The end date cannot be earlier than the start date.	No
Affect Credit Rating By	Used to specify the effect of the credit rating transaction on the account's credit score. **Note:** This should be a negative number because the lower the score, the worse the credit rating.	Yes (Conditional) **Note:** This field is required while adding the credit rating details for an account.
Affect Cash Only Score By	Used to specify the effect of the credit rating transaction on the account's cash-only score. **Note:** This should be a positive number because the higher the score, the greater the chance for the account to be marked as cash-only.	Yes (Conditional) **Note:** This field is required while adding the credit rating details for an account.
Comments	Used to specify additional information about the credit rating for the account.	No

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** The **Credit Ratings** page appears in the **Customer Registration - Add Account** screen when you are defining, editing, or copying a customer registration which is created using the **C1-CustomerRegistrationBanking** business object.

2. Enter the required details in the **Credit Ratings** page.
3. If you want to add more than one credit rating details for the account, click the **Add** (+) icon and then repeat *s*tep 2.

> **Note:** However, if you want to remove a credit rating detail from the account, click the **Delete** (🗑) icon.

4. Click **Validate and Save**.
   The credit rating details are added for the account.

Adding the Automatic Payment Details of an Account

Prerequisites

To add the automatic payment details of an account, you should have:

- Auto pay source codes, auto pay methods, and auto pay route types defined in the application

Procedure

To add the automatic payment details of an account:

1. Ensure that the **Auto Pay** page is expanded in the **Customer Registration - Add Account** screen when you *a*re adding or editing the account of a person.

   The **Auto Pay** page contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Defer Auto Pay Date	Used to specify the date after which automatic payments can be created for the account. The system will hold the automatic payment process for the account till the specified duration. It will allow to create automatic payments for the debit bills through a batch process only after the specified date.	No
Rule Based Auto Pay	Used to indicate whether you want to define the rule based auto pay instructions for the account.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Auto Pay Usage	Used to indicate whether the auto pay option is available for automatic credit, automatic debit, or for both automatic credit and debit. The valid values are: • **Credit** - Used to indicate that the auto pay option is only available for automatic refunds. • **Credit and Debit** - Used to indicate that the auto pay option is available for both automatic refunds and automatic payments. • **Debit** - Used to indicate that the auto pay option is only available for automatic payments. **Note:** You can define multiple auto pay options for an account with the same priority but with different auto pay usage. In other words, multiple auto pay options for an account with the same auto pay usage cannot have the same priority.	Yes
Start Date	Used to indicate the date from when the automatic payment option is effective for the account. **Note:** The start date cannot be later than the end date.	Yes (Conditional) **Note:** This field is required while adding the automatic payment details of the account
End Date	Used to indicate the date till when the automatic payment option is effective for the account. **Note:** The end date cannot be earlier than the start date.	No
Percentage	Used to specify the contribution of payment amount in percentage from the auto pay source (i.e., bank account) when the **Split Automatic Payment** feature is used. It is used to split the automatic payment in percentage between two or more automatic payment options.	Yes (Conditional) **Note:** This field is required while adding the automatic payment details of the account
Priority	Used to indicate the order in which the system should consider the automatic payment option when multiple automatic payment options are defined for the same date range.	Yes (Conditional) **Note:** This field is required while adding the automatic payment details of the account
Auto Pay Source Code	Used to indicate the financial institution that receives the automatic payment request.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Auto Pay Source Code** field. On clicking the **Search** icon, the **Auto Pay Source Search** window appears. On specifying the auto pay source code, the description of the auto pay source code appears corresponding to the **Auto Pay Source Code** field.	**Note:** This field is required while adding the automatic payment details of the account
Auto Pay Method	Used to indicate the method using which you want the system to process the automatic payment for the account. The valid values are: • Direct Debit • Payment Advice	Yes (Conditional) **Note:** This field is required while adding the automatic payment details of the account
Auto Pay Route Type	Used to indicate when and how the automatic payment request of the account is routed to the financial institution. **Note:** The **Search** (🔍) icon appears corresponding to the **Auto Pay Route Type** field. On clicking the **Search** icon, the **Auto Pay Route Type Search** window appears. On specifying the auto pay route type, the description of the auto pay route type appears corresponding to the **Auto Pay Route Type** field.	Yes (Conditional) **Note:** This field is required while adding the automatic payment details of the account
Account Number	Used to specify the account number for which you want to add the automatic payment details.	Yes (Conditional) **Note:** This field is required while adding the automatic payment details of the account
Expires On	Used to specify the month and year of expiry for the automatic payment of the account.	Yes (Conditional) **Note:** This field is required while adding the automatic payment details of the account
Name	Used to specify the account name for which you want to add the automatic payment details.	Yes (Conditional) **Note:** This field is required while adding the automatic payment details of the account

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Maximum Withdrawal Amount	Used to specify the maximum amount which can be withdrawn from the account through the automatic payment method.	Yes (Conditional) **Note:** This field is required while adding the automatic payment details of the account
Comments	Used to specify additional information about the automatic payment for the account.	No

2. Enter the required details in the **Auto Pay** page.
3. If you want to add more than one automatic payment details of the account, click the **Add** (+) icon and then *r*epeat step *2*.

Note: However, if you want to remove an automatic payment detail from the account, click the **Delete** (🗑) icon.

4. Click **Validate and Save**.
   The automatic payment details are added for the account.

Adding the Bill Routing Information for an Account

Prerequisites

To add the bill routing information for an account, you should have:

- Bill formats, address sources, and bill route types defined in the application

Copyright © 2026, Oracle and/or its affiliates.

Procedure

To add the bill routing information for an account:

1. Ensure that **Bill Routing Information** section is expanded in the **Persons** page when you are adding or editing *t*he account of a person.

   The **Bill Routing Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Receives Copy of Bill	Used to indicate whether you want the person to receive a copy of the account's bill. **Note:** By default, the **Receives Copy of Bill** check box is selected if the person is the main customer of the account.	Yes (Conditional) **Note:** This field is required while adding the bill routing information for an account.
Bill Format	Used to indicate the format in which you want the person to receive the account's bill. The valid values are: • Detailed • Summary **Note:** By default, this field is disabled. It is enabled only when the **Receives Copy of Bill** check box is selected.	Yes (Conditional) **Note:** This field is required while adding the bill routing information for an account.
Address Source	Used to indicate the address where you want to mail the account's bill. The valid values are: • Account Override • Main • Multiple Account Override • Person **Note:** If you select the **Address Source** as **Account Override**, the **Account Override Address** section appears in the **Persons** page where you can add the account override address of the person.	Yes (Conditional) **Note:** This field is required while adding the bill routing information for an account.
Number of Bill Copies	Used to specify the number of copies of the account's bill you want the person to receive. **Note:** By default, this field is disabled. It is enabled when the **Receives Copy of Bill** check box is selected.	Yes (Conditional) **Note:** This field is required while adding the bill routing information for an account.
Bill Route Type	Used to indicate how the account's bill is sent to the person. **Note:** By default, this field is disabled. It is enabled when the **Receives Copy of Bill** check box is selected.	Yes (Conditional) **Note:** This field is required while adding the bill routing information for an account.
Receives Notification	Used to indicate whether you want the person to receive notifications about the account's bill.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: By default, the **Receives Notification** check box is selected if the person is the main customer of the account.	**Note:** This field is required while adding the bill routing information for an account.

2. Enter the required details in the **Bill Routing Information** section.
3. If you want to add more than one bill routing information for the account, click the **Add** (+) icon and then *r*epeat step *2*.

Note: However, if you want to remove a bill routing information from the account, click the **Delete** (🗑) icon.

4. Click **Validate and Save**.
   The bill routing information is added for the account.

Defining a Policy

Prerequisites

To define a policy, you should have:

- Policy types defined in the application.
- Source systems defined in the application.
- Policy person roles defined in the application.
- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To define a policy:

Copyright © 2026, Oracle and/or its affiliates.

1. Ensure that the **Policies & Plans** section is expanded in the **Policies** page when you are defining, editing, or *r*emoving a policy from the person.

   The **Policies & Plans** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No.	Displays the sequence number of the policy.	Not applicable
Template	Indicates the policy template using which the policy is defined for the person.	Not applicable
Policy Type	Indicates the policy type using which the policy is defined for the person.	Not applicable
Policy Number	Displays the policy number.	Not applicable
View / Edit	On clicking the **View / Edit** (✎) icon, you can view or edit the details of the policy.	Not applicable
Policy Plans	On clicking the **Add** (🗎) icon, you can add policy plans for the policy.	Not applicable

Note: No information appears in the above columns if a policy is not yet defined for the person.

2. Click the **Add New Policy** button in the **Policies & Plans** section.
   The **Select Policy Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Used to indicate the policy type using which you want to define a policy. **Note:** If you want to create a fully-insured group policy, you must select a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**. However, if you want to create a self-funded policy, you must select a policy type where the policy category is set to **Self-Funded**.	Yes

3. Select the required policy type from the **Policy Type** field.
4. Click **OK**.

   The **Policy** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details about the policy.
   - **Persons** - Used to associate persons with the policy.
   - **Characteristics** - Used to define the characteristics for the policy.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Indicates the policy type using which you are defining the policy.	Not applicable
Policy Number	Used to specify the policy number.	Yes
Description	Used to specify the description for the policy.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the external system from where the policy is originated. **Note:** This field is enabled when you are defining a policy using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**.	Yes
Start Date	Used to specify the date from when the policy is effective. **Note:** The policy start date cannot be later than the policy end date.	Yes
End Date	Used to specify the date till when the policy is effective. **Note:** The policy end date cannot be earlier than the policy start date.	Yes
Policy Person Role	Used to indicate the role of the person for whom you are defining the policy.	Yes

Note: The **Policies** page appears when you are defining, editing, or copying a customer registration which is created using the **C1-CustomerRegistrationHC** business object.

5. Enter the required details in the **Main** section.
6. Define characteristics for the policy in the **Characteristics** section, if required.
7. Associate persons to the policy in the **Persons** section, if required.
8. Click **Validate and Save**.
   The policy is defined for the person.

Adding a Plan in a Policy

Prerequisites

To add a plan in a policy, you should have:

- Policy plan templates defined in the application.
- Policy plan business objects defined in the application.
- Pricing rule types defined in the application.
- Characteristic types defined in the application (where the characteristic entity is set to **Policy Plan**)

Procedure

To add a plan in a policy:

Copyright © 2026, Oracle and/or its affiliates.

1. Ensure that the **Policies & Plans** section is expanded in the **Policies** page when you are adding, editing, or *r*emoving a policy plan from a policy.
2. Click the **Add** (+) icon in the **Policy Plans** column corresponding to the policy in which you want to add a *p*olicy plan.

   The following columns appear in the **Policies & Plans** section:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No.	Displays the sequence number of the policy plan.	Not applicable
Template	Indicates the policy plan template using which the policy plan is added in the policy.	Not applicable
Plan Number	Displays the policy plan number.	Not applicable
Price Item	Displays the price item that is associated with the policy plan.	Not applicable
View / Edit	On clicking the **View / Edit** (✎) icon, you can view or edit the details of the policy plan.	Not applicable

Note: No information appears in the above columns if a plan is not yet added in the policy.

3. Click the **Add New Plan** button in the **Policies & Plans** section.
   The **Select Policy Plan Template** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to indicate the template using which you want to define the policy plan for the policy. **Note:** By default, the **Policy Plan - Healthcare** option is selected.	Yes
Business Object	Used to indicate the business object using which you want to define the policy plan for the policy. **Note:** By default, the **Policy Plan** option is selected.	Yes

4. Select the required template and business object from the respective fields.
5. Click **OK**.

   The **Plan** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details about the policy plan.
   - **Pricing Rule Types** - Used to associate the pricing rule types with the policy plan.
   - **Characteristics** - Used to define the characteristics for the policy plan.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item which you want to directly associate with the policy plan.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Price Item** field. On clicking the **Search** icon, the **Price Item Search** window appears. On the specifying the price item, the concatenated string of information about the price item appears corresponding to the **Price Item** field separated by a comma (,).	
Plan Number	Used to specify the policy plan number.	Yes
Plan Name	Used to specify the description for the policy plan.	No
Start Date	Used to specify the date from when the policy plan is effective for the policy. **Note:** The policy plan start date cannot be earlier than the policy start date and later than the policy end date. The policy plan start date cannot be later than the policy plan end date.	Yes
End Date	Used to specify the date till when the policy plan is effective for the policy. **Note:** The policy plan end date cannot be earlier than the policy start date and later than the policy end date. The policy plan end date cannot be earlier than the policy plan start date.	No

6. Enter the required details in the **Main** section.
7. Associate the pricing rule types with the policy plan in the **Pricing Rule Types** section, if required.
8. Define the characteristics for the policy plan in the **Characteristics** section, if required.
9. Click **Validate and Save**.
   The policy plan is added in the policy.

Associating a Pricing Rule Type with a Policy Plan

Prerequisites

To associate a pricing rule type with a policy plan, you should have:

- Pricing rule types defined in the application.

Procedure

To associate a pricing rule type with a policy plan:

1. Ensure that the **Pricing Rule Types** section is expanded in the **Plan** screen when you are adding or editing a *p*olicy plan of a policy.

   The **Pricing Rule Types** section contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type that you want to associate with the policy plan. **Note:** The **Search** (🔍) icon appears corresponding to the **Pricing Rule Type** field. On clicking the **Search** icon, the **Pricing Rule Type Search** window appears. On specifying the pricing rule type, the description of the pricing rule type appears corresponding to the **Pricing Rule Type** field.	Yes (Conditional) **Note:** This field is required while associating a pricing rule type with the policy plan.

2. Enter the required details in the **Pricing Rule Types** section.
3. If you want to associate more than one pricing rule type with the policy plan, click the **Add** (+) icon and then *r*epeat step *2*.

   Note: However, if you want to remove a pricing rule type from the policy plan, click the **Delete** (🗑) icon corresponding to the pricing rule type.

4. Click **Validate and Save**.
   The pricing rule type is associated with the policy plan.

Defining a Characteristic for a Policy Plan

Prerequisites

To define a characteristic for a policy plan, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Policy Plan**)

Procedure

To define a characteristic for a policy plan:

1. Ensure that the **Characteristics** section is expanded in the **Plan** screen when you are adding or editing a policy *p*lan of a policy.

   The **Characteristics** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the policy plan.	Yes (Conditional) **Note:** This field is required while defining a characteristic for the policy plan.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Customer Registration**.	Yes (Conditional) **Note:** This field is required while defining a characteristic for the policy plan.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required while defining a characteristic for the policy plan.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the policy plan, click the **Add** (+) icon and then repeat *s*tep *2*.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** However, if you want to remove a characteristic from the policy plan, click the **Delete** ( ) icon corresponding to the characteristic.

4. Click **Validate and Save**.
   The characteristic is defined for the policy plan.

Editing the Account Details of a Person

Prerequisites

To edit the account details of a person, you should have:

- Customer class, divisions, currencies, access groups, accrual cycles, and bill cycles defined in the application
- Account identifier types defined in the application
- Auto pay source codes, auto pay methods, and auto pay route types defined in the application
- Account relationship types defined in the application
- Address sources, bill formats, and bill route types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Account**)

Procedure

To edit the account details of a person:

1. Search for the customer registration in the **Customer Registration** screen.
2. In the **Search Results** section, click the link in the **Customer Registration Information** column *c*orresponding to the customer registration whose account details you want to edit.
   The **Main** tab appears in the **Customer Registration** screen.
3. Click the **Edit** button in the **Customer Registration** zone.
   The **Main** page appears in the **Customer Registration** screen.

Copyright © 2026, Oracle and/or its affiliates.

4. Ensure that the **Accounts** section is expanded in the **Accounts** page.
5. Click the **Edit**(✎) icon in the **View / Edit** column corresponding to the account whose details you want to edit.

   The **Customer Registration - Add Account** screen appears. It contains the following pages:

   - **Main** - Used to specify basic information about the account.
   - **Auto Pay** - Used to add the automatic payment details of the account.
   - **Persons** - Used to associate a person to the account.
   - **Account Characteristics** - Used to define a list of characteristics for the account.

   The **Main** page contains the following sections:

   - **Main** - Used to specify basic details about the account.
   - **Account Identifiers** - Used to add the identifier details for the account.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Class	Used to indicate the customer class to which the account belongs.	Yes
Division	Used to indicate the division to which the account belongs. **Note:** You can only view those divisions to which you have access in the **Division** list.	Yes
Set Up Date	Displays the date from when the account is configured for the person.	Not applicable
Invoice Currency	Used to indicate the currency which you want to use for generating the invoice of the account. **Note:** The list includes only those currencies which are defined in the system.	Yes
Account Category	Displays the category to which the account belongs. The valid values are: • Invoice Account • Settlement Account • Usage Account **Note:** The list includes only those values which are present in the **ACCT_USAGE_FLG** lookup field.	Not applicable
Access Group	Used to indicate the user group that can access the account for the person.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Access Group** field. On clicking the **Search** icon, the **Access Group Search** window appears. On specifying the access group, the description of the access group appears corresponding to the **Access Group** field.	
Exclude Accrual	Used to indicate whether the account is eligible for accrual. **Note:** By default, the account is eligible for accrual if the division to which the account belongs is eligible for accrual. If you do not want the account to be eligible for accrual, you must select the **Exclude Accrual** check box. On selecting the **Exclude Accrual** check box, the **Accrual Cycle** field is disabled.	No
Accrual Cycle	Used to indicate the accrual cycle of the account in the division. **Note:** The **Search** (🔍) icon appears corresponding to the **Accrual Cycle** field. On clicking the **Search** icon, the **Accrual Cycle Search for Cust Reg** window appears. On specifying the accrual cycle, the description of the accrual cycle appears corresponding to the **Accrual Cycle** field. This field is disabled when you click the **Exclude Accrual** check box.	No
Product	Used to indicate the product for which the account is enrolled. **Note:** The **Search** (🔍) icon appears corresponding to the **Product** field. On clicking the **Search** icon, the **Search Product** window appears.	Yes (Conditional) **Note:** This field is required while enrolling an account for a product.
Eligible for Repricing	Used to indicate whether the account is eligible for repricing when the account attributes (defined as parameters in the system) are changed.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: Only accounts where the person and child person are the main customers are considered for repricing. The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.	
Bill Cycle	Used to indicate the bill cycle for the account.	No
Bill Lead Days	Used to specify the number of days which is used to derive the cut-off date for advance billing. **Note:** In case you don't want to bill the account in advance, you must specify **0** in this field.	Yes
Comments	Used to specify additional information about the account.	No

6. Modify the required details of the account in the **Main** page.
7. Add, edit, or remove the identifier details of the account in the **Account Identifiers** section.
8. Add, edit, or remove the automatic payment details of the account in the **Auto Pay** page, if required.
9. Associate or disassociate persons from the account in the **Persons** page, if required.
10. Define, edit, or remove characteristics of the account in the **Account Characteristics** page, if required.
11. Add, edit, or remove the credit rating details of the account in the **Credit Ratings** page, if required.
12. Click **Validate and Save**.
    The changes made to the account are saved.

Copying a Customer Registration

Instead of creating a customer registration from scratch, you can create a new customer registration using an existing customer registration. This is possible through copying a customer registration. On copying a customer registration, the details including the characteristics are copied to the new customer registration. You can then edit the details, if required.

Prerequisites

To copy a customer registration, you should have:

- Customer registration (whose copy you want to create) defined in the application
- Divisions, customer segments, customer tiers, and access groups defined in the application
- Name types, phone types, and person identifier types defined in the application
- Address type codes and countries defined in the application
- Characteristic Types defined in the application
- Relationship types defined in the application
- Policy types and policy person roles defined in the application.

> **Note:** These prerequisites are required when you are copying a customer registration which is created using the **C1-CustomerRegistrationHC** business object.

Procedure

To copy a customer registration:

1. Search for the customer registration in the **Customer Registration** screen.
2. Click the **Copy** (⎘) icon in the **Copy** column corresponding to the customer registration whose copy you want *t*o create.

   The **Customer Registration** screen appears. It contains the following pages:

   - **Main** - Used to specify basic information about the person.
   - **Contact** - Used to specify the contact information about the person.
   - **Person Characteristics** - Used to define a list of characteristics for the person.
   - **Hierarchy** - Used to define the person to person relationship for the person
   - **Accounts** - Used to add the account details of the person.
   - **Policies** - Used to specify the policy details of the person.

     > **Note:** This page appears when you are defining a customer registration using the **C1-CustomerRegistrationHC** business object.

   - **Registration Characteristics** - Used to define a list of characteristics for the customer registration.

   The **Main** page contains the following sections:

   - **Main** - Used to specify basic details about the person.
   - **Person Name** - Used to add the person names for customer registration.
   - **Person Phones** - Used to add the person phone details for customer registration.
   - **Person IDs** - Used to add the person identifiers for customer registration.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Indicates the person type using which you want to define the customer registration for the person.	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Date of Birth	Used to specify the date when the person was born.	No
Division	Used to indicate the division to which the person belongs.	Not applicable
Person Since Date	Used to specify the date from when the person is the main customer.	No
Customer Segment	Used to indicate the customer segment to which the person belongs. **Note:** This field appears when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.	No
Customer Tier	Used to indicate the customer tier of the customer segment to which the person belongs. **Note:** This field appears when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.	No
Access Group	Used to indicate the user group that can access the customer registration. **Note:** The **Search** (🔍) icon appears corresponding to the **Access Group** field. On clicking the **Search** icon, the **Access Group Search** window appears.	No

3. Enter the required details in the **Main** section.
4. Add or remove the names of the person in the **Person Names** section.
5. Add or remove the phone details for the person in the **Person Phones** section.
6. Add, edit, or remove the identifier details for the person in the **Person IDs** section.
7. Define, edit, or remove the addresses of the person in the **Contact** page, if required.
8. Define, edit, or remove characteristics of the person in the **Person Characteristics** page, if required.
9. Define, edit, or remove the person to person relationship for the person in the **Hierarchy** page, if required.
10. Add, edit, or remove the account details of the person in the **Accounts** page, if required.
11. Add, edit, or remove the policy details of the person in the **Policies** page, if required.

Note: This page appears when you are defining a customer registration using the **C1-CustomerRegistrationHC** business object.

12. Define, edit, or remove characteristics of the customer registration in the **Registration Characteristics** page, *if* required.
13. Click **Validate and Save**.
    The new customer registration is defined.

Editing the Policy Details

Prerequisites

To edit the policy details, you should have:

- Source systems defined in the application.
- Policy person roles defined in the application.
- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To edit the policy details:

1. Search for the customer registration in the **Customer Registration** screen.
2. In the **Search Results** section, click the link in the **Customer Registration Information** column *c*orresponding to the customer registration whose policy details you want to edit.
   The **Main** tab appears in the **Customer Registration** screen.
3. Click the **Edit** button in the **Customer Registration** zone.
   The **Main** page appears in the **Customer Registration** screen.
4. Ensure that the **Policies & Plans** section is expanded in the **Policies** page.
5. Click the **Edit**(✎) icon in the **View / Edit** column corresponding to the policy whose details you want to edit.

   The **Policy** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details about the policy.
   - **Persons** - Used to associate persons with the policy.
   - **Characteristics** - Used to define the characteristics for the policy.

   The **Main** section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Indicates the policy type using which the policy is defined in the system.	Not applicable
Policy Number	Used to specify the policy number.	Yes
Description	Used to specify the description for the policy.	Yes
Source System	Used to indicate the external system from where the policy is originated. **Note:** This field is enabled when you are defining a policy using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**.	Yes
Start Date	Used to specify the date from when the policy is effective. **Note:** The policy start date cannot be later than the policy end date.	Yes
End Date	Used to specify the date till when the policy is effective. **Note:** The policy end date cannot be earlier than the policy start date.	Yes
Policy Person Role	Used to indicate the role of the person for whom you are defining the policy.	Yes

Note: The **Policies** page appears when you are defining, editing, or copying a customer registration which is created using the **C1-CustomerRegistrationHC** business object.

6. Modify the required details in the **Main** section.
7. Define, edit, or remove characteristics of the policy in the **Characteristics** section, if required.
8. Associate or disassociate persons from the policy in the **Persons** section, if required.
9. Click **Validate and Save**.
   The changes made to the policy are saved.

Editing the Policy Plan Details

Prerequisites

To edit the policy plan details, you should have:

- Pricing rule types defined in the application.
- Characteristic types defined in the application (where the characteristic entity is set to **Policy Plan**)

Procedure

To edit the policy plan details:

1. Search for the customer registration in the **Customer Registration** screen.
2. In the **Search Results** section, click the link in the **Customer Registration Information** column *c*orresponding to the customer registration whose policy plan details you want to edit.
   The **Main** page appears in the **Customer Registration** screen.
3. Ensure that the **Policies & Plans** section is expanded in the **Policies** page.
4. Click the **Add** (📄) icon in the **Policy Plans** column corresponding to the policy whose plan details you want *t*o edit.

Copyright © 2026, Oracle and/or its affiliates.

The following columns appear in the **Policies & Plans** section:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No.	Displays the sequence number of the policy plan.	Not applicable
Template	Indicates the policy plan template using which the policy is added in the policy.	Not applicable
Plan Number	Displays the policy plan number.	Not applicable
Price Item	Displays the price item that is associated with the policy plan.	Not applicable
View / Edit	On clicking the **View / Edit** (✎) icon, you can view or edit the details of the policy plan.	Not applicable

Note: No information appears in the above columns if a plan is not yet added in the policy.

5. Click the **Edit** (✎) icon in the **View / Edit** column corresponding to the policy plan whose details you want *t*o edit.

The **Plan** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the policy plan.
- **Pricing Rule Types** - Used to associate the pricing rule types with the policy plan.
- **Characteristics** - Used to define the characteristics for the policy plan.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item which you want to directly associate with the policy plan. **Note:** The **Search** (🔍) icon appears corresponding to the **Price Item** field. On clicking the **Search** icon, the **Price Item Search** window appears. On the specifying the price item, the concatenated string of information about the price item appears corresponding to the **Price Item** field separated by a comma (,).	Yes
Plan Number	Used to specify the policy plan number.	Yes
Plan Name	Used to specify the description for the policy plan.	No
Start Date	Used to specify the date from when the policy plan is effective for the policy.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The policy plan start date cannot be earlier than the policy start date and later than the policy end date. The policy plan start date cannot be later than the policy plan end date.	
End Date	Used to specify the date till when the policy plan is effective for the policy. **Note:** The policy plan end date cannot be earlier than the policy start date and later than the policy end date. The policy plan end date cannot be earlier than the policy plan start date.	No

6. Modify the required details in the **Main** section.
7. Associate or disassociate pricing rule types from the policy plan in the **Pricing Rule Types** section, if required.
8. Define, edit, or remove characteristics of the policy plan in the **Characteristics** section, if required.
9. Click **Validate and Save**.
   The changes made to the policy plan are saved.

- Parent Policies on page 642

Note: This zone appears when the customer registration is created using the **C1-CustomerRegistrationHC** business object.

Customer Registration

The **Customer Registration** zone displays the details of the customer registration. It contains of the following sections:

- **Main** - Displays the basic information about the customer registration. It contains the following fields:

Field Name	Field Description
Customer Registration Information	Displays the concatenated string of information about the customer registration separated by a comma (,).
Customer Registration Type	Indicates the customer registration type using which the customer registration is defined in the system.
Status	Indicates the status of the customer registration. The valid values are: • Approval in Progress • Bill Group Approved **Note:** This status appears when you are viewing the details of a customer registration which is created using the **C1-CustomerRegistrationHC** business object. • Complete • Draft • Draft For Update • Parent Customer Approved **Note:** This status appears only when you are viewing the details of a customer registration which is created using the **C1-CustomerRegistrationHC** business object. • Pending Final Approval **Note:** This status appears when you are viewing the details of a customer registration which is created using the **C1-CustomerRegistrationHC** business object. • Pending Pricing Correction **Note:** This status appears only when you are viewing the details of a customer registration which is created using the **C1-CustomerRegistrationHC** business object. • Rejected
Source System	Indicates the external system from where the customer registration information is received.
Person Information	Displays the concatenated string of information about the main customer for whom the customer registration is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Registration Source	Indicates the source through which the customer registration is created using the customer registration type. The valid values are: • File Upload • Inbound Message • Manual
Registration Source ID	Displays the source ID of the customer registration.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the customer registration.
Delete	Used to delete the customer registration.
Submit	Used to submit the customer registration for validation and processing.
Duplicate	Used to create a new customer registration using an existing customer registration.
Approve	Used to approve the customer registration.
Reject	Used to reject the customer registration.
Return To Submitter	Used to request the submitter to resubmit the customer registration for approval.

- **Record Information** - The **Record Information** section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the customer registration is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the customer registration status is updated.
Create Date/Time	Displays the date and time when the customer registration is created.

- **Person Details** - Displays information about the main customer for whom the customer registration is created in the system. It contains the following fields:

Field Name	Field Description
Person Type	Indicates the person type of the main customer for whom the customer registration is defined in the system.
Date of Birth	Displays the date when the person was born.
Division	Indicates the division to which person belongs.
Person Since Date	Displays specify the date from when the person is the main customer.
Access Group	Indicates the user group that can access the customer registration. **Note:** It has a link. On clicking the link, the **Access Group** screen appears where you can view the details of the respective access group.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Immediate Refund	Indicates whether the person's accounts and its child persons' accounts are eligible for the automatic refund process.

In addition, the **Person Details** section contains the following sub-sections:

- **Person Names** - Lists the primary and non-primary names of the person. It contains the following columns:

Column Name	Column Description
Name Type	Indicates the type of the name.
Name	Displays the name of the person.

- **Person Characteristics** - Lists the characteristics defined for the person. It contains the following columns:

Column Name	Column Description
Effective Date	Indicates the date from when the characteristic is effective for the person.
Characteristic Type	Indicates the characteristic type.
Characteristic value	Displays the value for the characteristic type.

- **Person Phones** - Lists the phone details of the person. It contains the following columns:

Column Name	Column Description
Phone Type	Indicates the type of the phone. The valid values are: • Business • Business Phone • Fax • Home • Mobile
Phone Number	Displays the phone number.
Extension	Displays the extension value of the phone number.
Phone Format	Displays the format in which the phone number is specified for the person.

- **Person IDs** - Lists the identifier details of the person. It contains the following columns:

Column Name	Column Description
Primary ID	Indicates whether the person identifier is primary or not.
Person Identifier Type	Indicates the identifier type of the person.
Person Identifier	Displays the value of the person identifier type.

- **Person Addresses** - Displays the contact information of the person. It contains the following fields:

Field Name	Field Description
Address Type	Indicates the type of the address.
Effective Date	Displays the date from when the address is effective for the person.
Country	Indicates the country where the person is located.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Address 1	Displays the first line of the address. It may contain details, such as house number and apartment name.
Address 2	Displays the second line of the address. It may contain details, such as street name.
City	Displays the city name.
Address 3	Displays the third line of the address. It may contain the landmark details.
County	Displays the county name.
State	Indicates the state where the city or county is located.
Province	Displays the location within the country where the person is located.
Address 4	Displays the fourth line of the address.
Postal	Displays the postal or zip code of the address.
House Type	Indicates the type of the house.
In City Limit	Indicates whether the address is within the city limit. The valid values are: • Yes • No
Geographic Code	Displays the geographic code of the address.

Note:

Field Name	Field Description
Policy Type	Indicates the policy type using which the policy is defined in the system.
End Date	Displays the date till when the policy is effective.
Policy Number	Displays the policy number.
Policy Person Role	Indicates the role of the person for whom the policy is defined in the system.

- **Persons** - Lists the persons associated to the policy. It contains the following columns:

Column Name	Column Description
Person Information	Displays the person who is associated to the policy. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person.
Sequence	Displays the order in which the person is associated to the policy.
Policy Person Role	Indicates the role of the associated person in the policy.
Main Customer	Indicates whether the associated person is the main customer of the policy.
Start Date	Displays the date from when the person is associated to the policy.
End Date	Displays the date till when the person is associated to the policy.

- **Characteristics** - Lists the characteristics defined for the policy. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the policy.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

Plans

The **Plans** zone lists the plans that are added in a policy. It contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence number of the policy plan.
Template	Indicates the policy plan template using which the policy plan is added in the policy.
Policy Plan Number	Displays the policy plan number.
Price Item	Displays the price item that is associated with the policy plan.

On clicking the **View** (🔗) icon corresponding to a policy plan, the **Plan Information** tab appears where you can view the details of the respective policy plan.

Copyright © 2026, Oracle and/or its affiliates.

Note:

No information appears in the **Plans** zone if a plan is not yet added in the policy.

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Editing the Customer Registration Details

Prerequisites

To define a customer registration, you should have:

- Divisions, customer segments, customer tiers, and access groups defined in the application
- Name types, phone types, and person identifier types defined in the application
- Address type codes and countries defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration**)
- Relationship types defined in the application
- Policy types and policy person roles defined in the application.

> **Note:** These prerequisites are required when you are editing a customer registration which is created using the **C1-CustomerRegistrationHC** business object.

Procedure

To edit a customer registration:

1. Search for the customer registration in the **Customer Registration** screen.
2. In the **Search Results** section, click the link in the **Customer Registration Information** column corresponding *t*o the customer registration whose details you want to edit.
   The **Main** tab appears in the **Customer Registration** screen.
3. Click the **Edit** button in the **Customer Registration** zone.

   The **Customer Registration** screen appears. It contains the following pages:

   - **Main** - Used to specify basic information about the person.
   - **Contact** - Used to specify the contact information about the person.
   - **Person Characteristics** - Used to define a list of characteristics for the person.
   - **Hierarchy** - Used to define the person to person relationship for the person
   - **Accounts** - Used to add the account details of the person.
   - **Policies** - Used to specify the policy details of the person.

     > **Note:** This page appears when you are editing a customer registration which is created using the **C1-CustomerRegistrationHC** business object.
   - **Registration Characteristics** - Used to define a list of characteristics for the customer registration.

   The **Main** page contains the following sections:

   - **Main** - Used to specify basic details about the person.
   - **Person Name** - Used to add the person names for customer registration.
   - **Person Phones** - Used to add the person phone details for customer registration.

Copyright © 2026, Oracle and/or its affiliates.

- **Person IDs** - Used to add the person identifiers for customer registration.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Indicates the person type using which you want to define the customer registration for the person.	Not applicable
Date of Birth	Used to specify the date when the person was born.	Yes
Division	Used to indicate the division to which the person belongs. **Note:** You can view only those divisions to which you have access in the **Division** list.	Yes
Person Since Date	Used to specify the date from when the person is the main customer.	Yes
Customer Segment	Used to indicate the market segment to which the person belongs. **Note:** This field appears when you are editing a customer registration which is created using the **C1-CustomerRegistrationBanking** business object.	Yes
Customer Tier	Used to indicate the tier of the customer segment to which the person belongs. **Note:** This field appears when you are editing a customer registration which is created using the **C1-CustomerRegistrationBanking** business object.	Yes
Access Group	Used to indicate the user group that can access the customer registration. **Note:** The **Search** (🔍) icon appears corresponding to the **Access Group** field. On clicking the **Search** icon, the **Access Group Search** window appears. On specifying the access group, the description of the access group appears corresponding to the **Access Group** field.	Yes
Immediate Refund	Used to indicate whether you want to initiate immediate refund for the person's accounts and its child persons' accounts.	No

4. Modify the required details in the **Main** section.
5. Add, edit, or remove the names of the person in the **Person Names** section.
6. Add, edit, or remove the phone details of the person in the **Person Phones** section.

Copyright © 2026, Oracle and/or its affiliates.

7. Add or remove the identifier details of the person in the **Person IDs** section.
8. Define, edit, or remove the address of the person in the **Contact** page, if required.
9. Define, edit, or remove characteristics of the person in the **Person Characteristics** page, if required.
10. Define, edit, or remove the person to person relationship for the person in the **Hierarchy** page, if required.
11. Add, edit, or remove the account details of the person in the **Accounts** page, if required.
12. Add, edit, or remove the policy details of the person in the **Policies** page, if required.

> **Note:** This page appears when you are editing a customer registration which is created using the **C1-CustomerRegistrationHC** business object.

13. Define, edit, or remove characteristics of the customer registration in the **Registration Characteristics** page, *if* required.
14. Click **Validate and Save**.
    The changes made to the customer registration are saved.

Approving a Customer Registration

You can view the number of customer registrations which are pending for an approval in the **Customer Registration** screen. The approver can review, and accordingly approve, reject, or ask the submitter to resubmit the customer registration based on the observations.

> **Note:** The system will not allow you to approve, reject or resubmit a customer registration submitted by you.

Procedure

To approve a customer registration:

1. Do either of the following:

If you want to...	Then...
Approve a customer registration through the Customer Registration screen	**a.** Search for the customer registration in the **Customer Registration** screen. **b.** In the **Search Results** section, click the link in the **Customer Registration ID** column corresponding to the customer registration which you want to review.
Approve a customer registration from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-CustomerRegistration** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. **e.** Click **Search**. The **To Do Type Search** screen appears.

   The **Customer Registration** screen appears.

2. Review the details in the **Customer Registration** screen.
3. If the information in the customer registration is accurate, then click the **Approve** button in the **Customer Registration** zone.

Copyright © 2026, Oracle and/or its affiliates.

Note: The **Approve** button appears when:

- The status of customer registration is in the **Approval In Progress**.
- A user with the approval To Do role is reviewing the customer registration.

Rejecting a Customer Registration

Prerequisites

To reject a customer registration, you should have:

- Reasons defined for the **Rejected** status of the **C1-CustomerRegistration** business object in the **Status Reason** screen

Note: The system will not allow you to approve, reject or resubmit a customer registration submitted by you.

Procedure

To reject a customer registration:

1. Do either of the following:

If you want to...	Then...
Reject a customer registration through the Customer Registration screen	**a.** Search for the customer registration in the **Customer Registration** screen. **b.** In the **Search Results** section, click the link in the **Customer Registration Information** column corresponding to the customer registration which you want to review.
Reject a customer registration from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-CustomerRegistration** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos.

Copyright © 2026, Oracle and/or its affiliates.

If you want to...	Then...
	f. Click the link in the **Message** column corresponding to the To Do of the customer registration that you want to review.

The **Customer Registration** screen appears.

2. Review the details in the **Customer Registration** screen.
3. If the information in the customer registration is incorrect, then click the **Reject** button in the **Customer Registration** zone.

   The **Reject Customer Registration** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the customer registration. **Note:** The list includes only those reasons which are defined for the **Rejected** status of the **C1-CustomerRegistration** business object in the **Status Reason** screen.	Yes
Comments	Used to specify additional information while rejecting the customer registration.	No

Note: The **Reject** button appears when:

- The customer registration is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the customer registration.

4. Select the reason for rejection of the customer registration from the **Status Reason** field.
5. Click **Save**.
   The status of the customer registration is changed to **Rejected**.

Requesting to Resubmit a Customer Registration for Approval

Procedure

To initiate a resubmission request for a customer registration:

1. Do either of the following:

Copyright © 2026, Oracle and/or its affiliates.

If you want to...	Then...
Request the submitter to resubmit a customer registration through the Customer Registration screen	**a.** Search for the customer registration in the **Customer Registration** screen. **b.** In the **Search Results** section, click the link in the **Customer Registration ID** column corresponding to the customer registration which you want to review.
Request the submitter to resubmit a customer registration from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-CustomerRegistration** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the customer registration that you want to review.

The **Customer Registration** screen appears.

2. Review the details in the **Customer Registration** screen.
3. If the information in the customer registration is incomplete and you want the submitter to make the required changes and resubmit the customer registration for approval, then click the **Re Submit** button in the **Customer Registration** zone.

   The **Resubmit Customer Registration** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify the changes which the submitter should make in the customer registration before resubmitting it for approval.	Yes

Note: The **Re Submit** button appears when:

- The customer registration is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the customer registration.

4. Enter the comments in the respective field and then click **Save**.
   A To Do is created using the submitter To Do type and assigned to all users with a submitter To Do role specified in the customer registration type. In addition, the status of the customer registration is changed to **Draft**.

Chapter 9

Customer 360° View

Topics:

- Prerequisites
- Customer 360° View
- Customer 360° Information
- Bill Information
- Pricing Rule (Used for Viewing)

Oracle Revenue Management and Billing provides a new screen named **Customer 360° View** which enables you to quickly view in-depth information about the person. This screen can be used to view the 360° information of a person who is associated with the fully-insured group or self-funded policy. It provides the following information:

- Basic details, characteristics, child persons, person hierarchy, person billing hierarchy, and the customer contacts of the person.
- Customer registration objects through which the bill groups are created for a parent customer.
- List of accounts to which the parent customer and its bill groups are associated.
- Basic details, characteristics, administrative contracts, automatic payment options, billing and adjustment summary, financial and collections summary, and unpaid bills of the person's account.
- Consolidated view of the transactions (such as, billing, payment, payment cancellation, adjustment, adjustment cancellation, automatic payments sent to the auto clearing house for review, refund, write off, excess credit, and reconciliation) which are carried out for the person's account.
- List of policies to which the parent customer or bill group is associated. The system lists those policies where the policy category is set to **Self-Funded** and **Fully Insured Group**.
- Basic details, related persons, and policy plans in the person's policy.
- Basic and in-depth details of the pricing rules which are defined for a parent customer who is associated with the fully-insured group or self-funded policy.
- Basic and in-depth details of the pricing rules which are defined for a self-funded policy of a bill group.
- Basic details of the pricing groups which are defined for a bill group who is associated with the self-funded policy.
- Basic and in-depth details of the pricing rules which are defined for a fully-insured group policy.
- Basic and in-depth details of the pricing rules which are defined for a fully-insured group policy plan.
- Basic and in-depth details of the pricing rules which are defined for the states where the fully-insured group policy and its plans and memberships are issued.
- Basic details of the approval transactions which are created while defining, editing, and deleting the pricing rules for the self-funded or fully-insured group business.
- Basic details of the bill, adjustments which are swept onto the bill, activities (such as, payment, offset, refund, write off, or transfer) through which the bill is settled, high-level summary and details of the bill segments which

are included in the bill, active hold requests due to which the bill is kept on hold, offset requests through which the bill is offset against another bill, and refund and write off requests through which the bill or its bill segment is either refunded or written off.

In other words, this feature allows you to drill-down to see or act on all current and historical revenue management and billing details. This allows you to professionally and efficiently handle customer inquiries and complaints at the first point of contact, raising your customer service from previously unattainable levels and reducing the associated time and cost.

Copyright © 2026, Oracle and/or its affiliates.

Prerequisites

To setup the **Customer 360° View** feature, you need to do the following:

- Define the required divisions, customer classes, person types, person identifier types, account identifier types, policy types, and policy person roles in the system
- Define values for the **C1-SourceSystemLookup** extendable lookup
- Define the required characteristic types where the characteristic entity is set to **Person**
- Define the required characteristic types where the characteristic entity is set to **Account**
- Define the required characteristic types where the characteristic entity is set to **Policy**
- Define values for the **Administrative Contract Type** and **On Account Contract Type** option types in the **C1_CMO** feature configuration

  Note: This prerequisite is not required when you are viewing the 360° information of a person who is associated with the self-funded policy.
- Define values for **Premium Amount SQI** and **Coverage End Date SQI** option types in the **C1-BILLADJSQ** feature configuration

  Note: This prerequisite is not required when you are viewing the 360° information of a person who is associated with the self-funded policy.
- Define value for the **Person Relationship Type** option type in the **C1-ASOBLLNG** feature configuration

Customer 360° View

The **Customer 360° View** screen allows you to search for a person, its accounts, and policies using various search criteria. It contains the following zone:

- 360° Search on page 663

360° Search

The **360° Search** zone allows you to search for a person, account, and policy using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a person, account, or policy. The valid values are:	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Policy • Person • Account **Note:** By default, the **Policy** option is selected.	
Policy Type	Used to search policies which are created using a particular policy type. **Note:** This field appears when the **Policy** option is selected from the **Search By** list.	No
Source System	Used to search policies which were created in a particular external system. **Note:** This field appears when the **Policy** option is selected from the **Search By** list.	No
Policy Number	Used to search a policy with a particular policy number. **Note:** This field appears when the **Policy** option is selected from the **Search By** list.	No
Policy ID	Used to search a particular policy. **Note:** This field appears when the **Policy** option is selected from the **Search By** list.	No
Policy Person Role	Used to search policies where a person is assigned a particular person role. **Note:** This field appears when the **Policy** option is selected from the **Search By** list.	No
Person Name	Used to search a particular person using its primary or secondary name. If you specify the person name while searching for an account, the system searches all accounts where the person is the main customer. However, if you specify the person name while searching for a policy, the system searches all policies where the person is the main customer. **Note:** This field appears when: • The **Policy** or **Person** option is selected from the **Search By** list. • The **Account** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **360° Search** zone is clicked.	Yes (Conditional) **Note:** This field is required when you are searching for a policy using the policy person role.
Status	Used to search policies with a particular status. The valid values are:	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Post Runout • Reinstated • Runout • Terminated **Note:** This field appears when the **Policy** option is selected from the **Search By** list.	
Start Date	Used to search policies which are effective from a particular date. **Note:** This field appears when the **Policy** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **360° Search** zone is clicked.	No
End Date	Used to search policies which are effective till a particular date. **Note:** This field appears when the **Policy** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **360° Search** zone is clicked.	No
Characteristic Type	Used to search persons, accounts, or policies with a particular type of characteristic. **Note:** This field appears when the **Advanced Search** link available in the right side of the **360° Search** zone is clicked.	No
Characteristic Value	Used to search persons, accounts, or policies with a particular characteristic. **Note:** This field appears when you are searching for a person, account, or policy using the characteristic type. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** If you specify the characteristic type as a search criteria, you have to enter the characteristics value.
Division	Used to search persons or accounts which belong to a particular division.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Person** or **Account** option is selected from the **Search By** list.	
Customer Class	Used to search accounts or persons' whose accounts belong to a particular customer class. **Note:** This field appears when the **Person** or **Account** option is selected from the **Search By** list.	No
Person ID	Used to search a particular person. **Note:** This field appears when the **Person** option is selected from the **Search By** list.	No
Person Identifier Type	Used to indicate the person identifier type based on which you want to search for a person. **Note:** This field appears when the **Person** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to search a person with a particular identifier. **Note:** This field appears when the **Person** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the person identifier type as a search criteria, you have to enter the person identifier.
Person Type	Used to search persons of a particular type. The valid values are: • Business • Bill Group • Group • Broker • Person • Parent Customer **Note:** This field appears when the **Person** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **360° Search** zone is clicked.	No
Address	Used to search persons with a particular address or accounts' whose main customer has a particular address. **Note:** This field appears when the **Person** or **Account** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **360° Search** zone is clicked.	No

Field Name	Field Description	Mandatory (Yes or No)
City	Used to search persons who belong to a particular city or accounts' whose main customer belongs to a particular city. **Note:** This field appears when the **Person** or **Account** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **360° Search** zone is clicked.	No
Skip Months	Used to search accounts for which the skip months are defined through a billing preference. **Note:** You can set the billing preference for an account through a characteristic type which is specified in the **Bill Cycle Rule Code** option type of the **C1-ASOBLLNG** feature configuration. The system enables you to define, edit, delete, and copy a billing preference through the **Field Mapping** screen. For more information, see Defining a Billing Preference on page 3773. This field appears when the **Account** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **360° Search** zone is clicked.	No
Phone Number	Used to search a person with a particular phone number or accounts' whose main customer has a particular phone number. **Note:** This field appears when the **Person** or **Account** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **360° Search** zone is clicked.	No
Account ID	Used to search a particular account. **Note:** This field appears when the **Account** option is selected from the **Search By** list.	No
Account Identifier Type	Used to indicate the account identifier type based on which you want to search for an account. **Note:** This field appears when the **Account** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to search an account with a particular identifier.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Account** option is selected from the **Search By** list.	**Note:** If you specify the account identifier type as a search criteria, you have to enter the account identifier.

Note:

You must specify at least one search criterion while searching for a person, account, or policy. One more search criterion is required when you are searching for a person or account using the division and/or customer class. Similarly, one more search criterion is required when you are searching for a policy using the policy type and/or source system.

If you have specified any other search criterion along with the person ID, account ID, or policy ID, the system ignores the additional search criterion and searches using the person ID, account ID, or policy ID, respectively.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Policy Information	Displays information about the policy. **Note:** It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the respective policy. This column appears when the **Policy** option is selected from the **Search By** list.
Main Customer	Indicates the main customer of the policy or account. **Note:** This column appears when the **Policy** or **Account** option is selected from the **Search By** list.
Source System	Displays the name of the external system in which the policy was created. **Note:** This column appears when the **Policy** option is selected from the **Search By** list.
Policy Number	Displays the policy number. **Note:** This column appears when the **Policy** option is selected from the **Search By** list.
Start Date	Displays the date from when the policy is effective. **Note:** This column appears when the **Policy** option is selected from the **Search By** list.
End Date	Displays the date till when the policy is effective. **Note:** This column appears when the **Policy** option is selected from the **Search By** list.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Status	Indicates the status of the policy. The valid values are: • In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Post Runout • Reinstated • Runout • Terminated **Note:** This column appears when the **Policy** option is selected from the **Search By** list.
Person Information	Displays information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person. This column appears when the **Person** option is selected from the **Search By** list.
Person Name	Displays the name of the person. **Note:** This column appears when the **Person** option is selected from the **Search By** list.
Person Type	Indicates the type of the person. The valid values are: • Business • Bill Group • Group • Broker • Person • Parent Customer **Note:** This column appears when the **Person** option is selected from the **Search By** list.
Primary Person Identifier Type	Indicates the primary identifier type associated with the person. **Note:** This column appears when the **Person** option is selected from the **Search By** list.
Primary Person Identifier	Displays the primary person identifier. **Note:** This column appears when the **Person** option is selected from the **Search By** list.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account. This column appears when the **Account** option is selected from the **Search By** list.
Division	Indicates the division to which the account belongs.
	Note: This column appears when the **Account** option is selected from the **Search By** list.
Customer Class	Indicates the customer class to which the account belongs.
	Note: This column appears when the **Account** option is selected from the **Search By** list.
Primary Account Identifier Type	Indicates the primary identifier type associated with the account.
	Note: This column appears when the **Account** option is selected from the **Search By** list.
Primary Account Identifier	Displays the primary account identifier.
	Note: This column appears when the **Account** option is selected from the **Search By** list.
Current Balance	Displays the total amount of funds in the account.
	Note: This column appears when the **Account** option is selected from the **Search By** list.
Also Known As	Displays the non-primary names of the person separated by semi-colon (;).
	Note: This column appears when the **Person** option is selected from the **Search By** list.

Note:

You can view the 360° information of the person, account, or policy by clicking the **View** (🔗) icon corresponding to the record in the **Search Results** section.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Person

Prerequisites

To search for a person, you should have:

- Divisions, customer classes, person types, and person identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Person**)

Procedure

To search for a person:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, click **Customer Management** and then click **Customer 360° View**.
   The **Customer 360° View** screen appears.
3. Select the **Person** option from the **Search By** list to indicate that you want to search for a person.
4. Enter the required search criteria in the **360° Search** zone.

Note:

You must specify at least one search criterion while searching for a person. One more search criterion is required when you are searching for a person using the division and/or customer class.

The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the former group is used for searching. For example, if you enter the person name (in the second criteria group) and person identifier (in the fourth criteria group), the system searches using the person name instead of the person identifier.

You must specify division and/or customer class when you are searching for a person using the city.

You must specify division, customer class, or any other criteria in the second group when you are searching for a person using the person type.

If you have specified any other search criterion along with the person ID, the system ignores the additional search criterion and searches for the person using the person ID.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

Copyright © 2026, Oracle and/or its affiliates.

5. Click **Search**.
   A list of persons that meet the search criteria appears in the **Search Results** section.

Searching for an Account

Prerequisites

To search for an account, you should have:

- Divisions, customer classes, and account identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Account**)

Procedure

To search for an account:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, click **Customer Management** and then click **Customer 360° View**.
   The **Customer 360° View** screen appears.
3. Select the **Account** option from the **Search By** list to indicate that you want to search for an account.
4. Enter the required search criteria in the **360° Search** zone.

> **Note:**
>
> You must specify at least one search criterion while searching for an account. One more search criterion is required when you are searching for an account using the division and/or customer class.
>

Searching for a Policy

Prerequisites

To search for a policy, you should have:

- Policy types and policy person roles defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup
- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To search for a policy:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, click **Customer Management** and then click **Customer 360° View**.
   The **Customer 360° View** screen appears.
3. Select the **Policy** option from the **Search By** list to indicate that you want to search for a policy.
4. Enter the required search criteria in the **360° Search** zone.

   Note:

   You must specify at least one search criterion while searching for a policy. One more search criterion is required when you are searching for a policy using the policy type and/or source system.

   If you have specified any other search criterion along with the policy ID, the system ignores the additional search criterion and searches for the policy using the policy ID.

   You must specify the person name when you are searching for a policy using the policy person role.

   ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

   The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

   If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.
   A list of policies that meet the search criteria appears in the **Search Results** section.

Viewing the 360° Information of a Person

Prerequisites

To view the 360° information of a person, you should have:

- Value defined for the **Person Relationship Type** option type in the **C1-ASOBLLNG** feature configuration

Procedure

To view the 360° information of a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want *t*o view.

   The **Person** tab appears in the **Customer 360° Information** screen. It contains the following zones:

   - Person Information on page 684
   - Additional Attributes on page 686
   - Child Persons on page 687
   - Person Hierarchy on page 687

     Note: The **Person Hierarchy** zone does not appear when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.
   - Person Billing Hierarchy on page 688

     Note: The **Person Billing Hierarchy** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.
   - Bill Group Derivation and Pricing Parameters on page 690

     Note: The **Bill Group Derivation and Pricing Parameters** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.
   - Bill Group Sorting on page 692

     Note: The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.
   - Customer Contacts on page 694
   - Bill Groups Created Via Customer Registration on page 694

     Note: The **Bill Groups Created Via Customer Registration** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.
3. View the basic details of the person in the **Person Information** zone.
4. View the characteristics of the person in the **Person Characteristics** zone.
5. View the child persons included in the person's hierarchy in the **Child Persons** zone.
6. View the accounts and policies where the person is the main customer and memberships where the person is the *m*ain subscriber in the **Person Hierarchy** zone.
7. View the parent customer's accounts and policies and its bill groups' accounts and policies in the **Person Billing Hierarchy** zone.
8. View the derivation and pricing parameters defined for the bill group and sort ID combinations in the **Bill Group Derivation and Pricing Parameters** zone.
9. View the sort IDs defined for the bill groups in the **Bill Group Sorting** zone.
10. View how and when the person was contacted in the **Customer Contacts** zone.
11. View the customer registration objects through which the bill groups are created for the parent customer in the **Bill Groups Created Via Customer Registration** zone.

Copyright © 2026, Oracle and/or its affiliates.

12. If required, you can view the details of the account to which the person is associated in the **Account** tab.

> **Note:**
>
> If you are viewing the 360° information of a parent customer, the following zones appears in the **Account** tab when you click the **Broadcast** (ᯤ) icon corresponding to the account in the Account List on page 696 zone:
>
> - Account Information on page 697
> - Auto Pay Details on page 700
> - Account Characteristics on page 699
> - Account Financial and Collections Summary on page 700
> - Open Bills on page 702
> - Billed Vs Paid on page 703
> - Timeline on page 706
> - Trial Bills on page 708

13. If required, you can view the details of the policy to which the person is associated in the **Policy** tab.
14. If required, you can view the pricing information of the parent customer or its bill groups in the **Pricing Information** tab.

Viewing the 360° Information of an Account

Prerequisites

To view the 360° information of an account, you should have:

- Value defined for the **Person Relationship Type** option type in the **C1-ASOBLLNG** feature configuration
- Values defined for the **Administrative Contract Type** and **On Account Contract Type** option types in the **C1_CMO** feature configuration
- Values defined for the **Premium Amount SQI** and **Coverage End Date SQI** option types in the **C1-BILLADJSQ** feature configuration

Copyright © 2026, Oracle and/or its affiliates.

Note: The latter two prerequisites are not required when you are viewing the 360° information of a person who is associated with the self-funded policy.

Procedure

To view the 360° information of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account whose details you want *t*o view.

   The **Account** tab appears in the **Customer 360° Information** screen. It contains the following zones:

   - Account List on page 696

     Note: The **Account List** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.
   - Account Information on page 697
   - Auto Pay Details on page 700
   - Account Characteristics on page 699
   - Administrative Contracts on page 699

     Note: The **Administrative Contracts** zone appears when you are viewing the 360° information of a person whose person type is neither **Parent Customer** nor **Bill Group**.
   - Account Financial and Collections Summary on page 700
   - Billing and Adjustment Summary on page 701

     Note: The **Billing and Adjustment Summary** zone appears when you are viewing the 360° information of a person whose person type is neither **Parent Customer** nor **Bill Group**.
   - Open Bills on page 702
   - Billed Vs Paid on page 703
   - Timeline on page 706
   - Trial Bills on page 708
3. View the accounts of the parent customer and its bill groups in the **Account List** zone.
4. View the basic details of the account in the **Account Information** zone.
5. View the automatic payment options defined for the account in the **Auto Pay Details** zone.
6. View the characteristics of the account in the **Account Characteristics** zone.
7. View the account's contracts which should be monitored closely for various administrative reasons in the **Administrative Contracts** zone.
8. View the financial and collection details of the account in the **Account Financial and Collections Summary** zone.
9. View the billing and adjustment summary of the account in the **Billing and Adjustment Summary** zone.
10. View the unpaid bills of the account in the **Open Bills** zone.
11. View various transactions of the account, such as bills, payments, adjustments, reconciliations, and so on, in the **Billed Vs Paid** zone.
12. View the number of customer contacts, bills, and payments created for the account in a particular month in the **Timeline** zone.
13. View the trial bills which are created for the account in the **Trial Bills** zone.

Viewing the Pricing Information of a Parent Customer

Prerequisites

To view the pricing information of a parent customer, you should have:

- Value defined for the **Person Relationship Type** option type in the **C1-ASOBLLNG** feature configuration

Procedure

To view the pricing information of a parent customer:

Copyright © 2026, Oracle and/or its affiliates.

1. Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want *t*o view. The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing Information** tab.

   The **Pricing Information** tab appears. It contains the following zones:

   - Parent Customer Pricing Rules on page 717

     Note: The **Parent Customer Pricing Rules** zone appears when you are viewing 360° information of a parent customer or bill group who is associated with the self-funded policy.

   - Bill Group Self-Funded Policy Pricing Rule Summary on page 720

     Note: The **Bill Group Self-Funded Policy Pricing Rule Summary** zone appears when you are viewing 360° information of a parent customer who is associated with the self-funded policy.

   - Bill Group Self-Funded Policy Information on page 722

     Note: The **Bill Group Self-Funded Policy Information** zone appears when you are viewing 360° information of a parent customer or bill group who is associated with the self-funded policy.

   - Bill Group Self-Funded Policy Pricing Rules on page 723

     Note: The **Bill Group Self-Funded Policy Pricing Rules** zone appears when you are viewing 360° information of a parent customer or bill group who is associated with the self-funded policy.

   - Fully-Insured Pricing Rules on page 729

     Note: The **Fully-Insured Pricing Rules** zone appears when you are viewing 360° information of a parent customer or bill group who is associated with the fully-insured group policy.

   - Pricing Rule Summary on page 730

     Note: The **Pricing Rule Summary** zone appears when you are viewing 360° information of a parent customer who is associated with the fully-insured group policy.

   - Pricing Rule Approval Transactions on page 730

     Note: The **Pricing Rule Approval Transactions** zone appears when you are viewing 360° information of a parent customer or bill group who is associated with the fully-insured group or self-funded policy.

4. Do either of the following:

If you are viewing 360° information of...	**Then...**
A parent customer who is associated with a self-funded policy	**a.** View the pricing rules which are defined for the parent customer in the **Parent Customer Pricing Rules** zone. **b.** View the list of pricing rules which are defined for the self-funded policies of the bill groups in a tree structure in the **Bill Group Self-Funded Policy Pricing Rule Summary** zone. **c.** View the details of the policies to which a bill group is associated in the **Bill Group Self-Funded Policy Information** zone. **d.** View the details of the pricing rules which are defined for a policy of a bill group in the **Bill Group Self-Funded Policy Pricing Rules** zone. **e.** View the details of the pricing groups which are defined for a bill group in the **Bill Group Pricing Groups** zone. **f.** View the approval transactions which are created while defining, editing, or deleting a pricing rule of the parent customer and its bill groups in the **Pricing Rule Approval Transactions** zone.

Copyright © 2026, Oracle and/or its affiliates.

If you are viewing 360° information of...	Then...
A parent customer who is associated with a fully-insured group policy	**a.** View the pricing rules which are defined for different entities (such as parent customer, fully-insured group policy, policy plan, and state of issue) in the **Fully-Insured Pricing Rules** zone. **b.** View the list of pricing rules which are defined for the parent customer, fully-insured group policies, and policy plans in a tree structure in the **Pricing Rule Summary** zone. **c.** View the approval transactions which are created while defining, editing, or deleting a pricing rule for different entities in the **Pricing Rule Approval Transactions** zone.

Viewing the Pricing Information of a Bill Group

Prerequisites

To view the pricing information of a bill group, you should have:

- Value defined for the **Person Relationship Type** option type in the **C1-ASOBLLNG** feature configuration

Procedure

To view the pricing information of a bill group:

1. Search for a person whose person type is set to **Bill Group** in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want *t*o view. The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing Information** tab.

   The **Pricing Information** tab appears. It contains the following zones:

   - Parent Customer Pricing Rules on page 717

     Note: The **Parent Customer Pricing Rules** zone appears when you are viewing 360° information of a parent customer or bill group who is associated with the self-funded policy.

   - Parent Customer Pricing Rule Summary on page 721

     Note: The **Parent Customer Pricing Rule Summary** zone appears when you are viewing 360° information of a bill group who is associated with the self-funded policy.

   - Bill Group Self-Funded Policy Information on page 722

     Note: The **Bill Group Self-Funded Policy Information** zone appears when you are viewing 360° information of a parent customer or bill group who is associated with the self-funded policy.

   - Bill Group Self-Funded Policy Pricing Rules on page 723

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** The **Bill Group Self-Funded Policy Pricing Rules** zone appears when you are viewing 360° information of a parent customer or bill group who is associated with the self-funded policy.

- Bill Group Pricing Groups on page 728

> **Note:** The **Bill Group Pricing Groups** zone appears when you are viewing 360° information of a bill group who is associated with the self-funded policy.

- Fully-Insured Pricing Rules on page 729

> **Note:** The **Fully-Insured Pricing Rules** zone appears when you are viewing 360° information of a parent customer or bill group who is associated with the fully-insured group policy.

- Pricing Rule Approval Transactions on page 730

> **Note:** The **Pricing Rule Approval Transactions** zone appears when you are viewing 360° information of a parent customer or bill group who is associated with the fully-insured group or self-funded policy.

4. Do either of the following:

If you are viewing 360° information of...	Then...
A bill group who is associated with a self-funded policy	**a.** View the pricing rules which are defined for the parent customer in the **Parent Customer Pricing Rules** zone. **b.** View the information about the parent customer and its pricing rules in a tree structure in the **Parent Customer Pricing Rule Summary** zone. **c.** View the details of the policies to which the bill group is associated in the **Bill Group Self-Funded Policy Information** zone. **d.** View the details of the pricing rules which are defined for a policy of the bill group in the **Bill Group Self-Funded Policy Pricing Rules** zone. **e.** View the details of the pricing groups which are defined for the bill group in the **Bill Group Pricing Groups** zone. **f.** View the approval transactions which are created while defining, editing, or deleting the pricing rules of the bill group in the **Pricing Rule Approval Transactions** zone.
A bill group who is associated with a fully-insured group policy	**a.** View the pricing rules which are defined for different entities (such as parent customer, fully-insured group policy, policy plan, and state of issue) in the **Fully-Insured Pricing Rules** zone. **b.** View the approval transactions which are created while defining, editing, or deleting a pricing rule for different entities in the **Pricing Rule Approval Transactions** zone.

Customer 360° Information

The following table provides information about the **Customer 360° Information** screen:

If you are viewing the 360° information of...	Then
A parent customer who is associated with the self-funded policy	The **Customer 360° Information** screen allows you to view: • Basic details, characteristics, child persons, billing hierarchy, and customer contacts of the parent customer. • Sort IDs of all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. • Derivation and pricing parameters defined for the bill group and sort ID combinations. • Customer registration objects through which the bill groups are created for the parent customer. • Accounts of all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. • Basic details, characteristics, automatic payment options, financial and collections summary, and unpaid bills of a particular bill group's account. • List of self-funded policies to which the parent customer's bill groups are associated. • Basic details and policy persons of a self-funded policy where the parent customer is the policy holder. • Basic details of the pricing rules which are defined for the parent customer. • Summarized tree view listing each bill group of the parent customer and the bill groups' self-funded policies and pricing rules. • Basic details of the self-funded policies which are associated with each bill group of the parent customer. • Basic details of the pricing rules which are defined for the self-funded policies of each bill group. • Basic details of the active pricing groups which are defined for each bill group. • Basic information about the approval transactions which are created while defining, editing, and deleting the parent customer's and bill groups' pricing rules.
A bill group who is associated with the self-funded policy	The **Customer 360° Information** screen allows you to view: • Basic details, characteristics, child persons, billing hierarchy, and customer contacts of the bill group. • Basic details, characteristics, automatic payment options, financial and collections summary, and unpaid bills of the bill group's account. • List of self-funded policies to which the bill group is associated. • Basic details and policy persons of a self-funded policy. • Summarized tree view listing the parent customer and pricing rules which are defined for the parent customer.

If you are viewing the 360° information of...	Then
	• Basic details of the self-funded policies which are associated with the bill group. • Basic details of the pricing rules which are defined for the self-funded policies of the bill group. • Basic details of the active pricing groups which are defined for the bill group. • Basic information about the approval transactions which are created while defining, editing, and deleting the pricing rules of the bill group.
A parent customer who is associated with the fully-insured group policy	The **Customer 360° Information** screen allows you to view: • Basic details, characteristics, child persons, billing hierarchy, and customer contacts of the parent customer. • Sort IDs of all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. • Derivation and pricing parameters defined for the bill group and sort ID combinations. • Customer registration objects through which the bill groups are created for the parent customer. • List of the parent customer's and bill groups' accounts. Note that the system lists the accounts of all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. • Basic details, characteristics, automatic payment options, financial and collections summary, and unpaid bills of the parent customer's or bill group's account. • List of fully-insured group policies to which the parent customer or its bill groups are associated. • Basic details, policy persons, and policy plans of a fully-insured group policy to which the parent customer or its bill group is associated. • Basic details of the pricing rules which are defined for different entities (such as parent customer, fully-insured group policy, policy plan, and state of issue). • Summarized tree view listing the pricing rules which are defined for the parent customer, fully-insured group policies, and policy plans. • Basic information about the approval transactions which are created while defining, editing, and deleting the pricing rules for different entities.
A bill group who is associated with the fully-insured group policy	The **Customer 360° Information** screen allows you to view: • Basic details, characteristics, child persons, billing hierarchy, and customer contacts of the bill group. • Basic details, characteristics, automatic payment options, financial and collections summary, and unpaid bills of the bill group's account. • List of fully-insured group policies to which the bill group is associated. • Basic details, policy persons, and policy plans of the fully-insured group policy.

Copyright © 2026, Oracle and/or its affiliates.

If you are viewing the 360° information of...	Then
	• Basic details of the pricing rules which are defined for different entities (such as parent customer, fully-insured group policy, policy plan, and state of issue). • Basic information about the approval transactions which are created while defining, editing, and deleting the pricing rules for different entities.
A person whose person type is neither **Parent Customer** nor **Bill Group**	The **Customer 360° Information** screen allows you to view: • Basic details, characteristics, child persons, billing hierarchy, and customer contacts of the person. • Basic details, characteristics, automatic payment options, administrative contracts, financial and collections summary, billing and adjustment summary, and unpaid bills of the person's account. • List of policies to which the person is associated. • Basic details, policy persons, and policy plans of a policy.

This screen consists of the following tabs:

- Customer 360° Information - Person on page 683
- Customer 360° Information - Account on page 695
- Customer 360° Information - Policy on page 709
- Customer 360° Information - Pricing Information on page 715

Note: If a person does not have an account or policy, the data does not appear in the **Account** or **Policy** tab, respectively. And, if the pricing rules are not defined for the parent customer, fully-insured group or self-funded policy, fully-insured group policy plan, or state of issue, the data does not appear in the **Pricing Information** tab.

Customer 360° Information - Person

The following table provides information about the **Person** tab:

If you are viewing the 360° information of...	Then...
A parent customer who is associated with the self-funded or fully-insured group policy	The **Person** tab displays the following: • Basic details, characteristics, child persons, billing hierarchy, and customer contacts of the parent customer. • Sort IDs of all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. • Derivation and pricing parameters defined for the bill group and sort ID combinations. • Customer registration objects through which the bill groups are created for the parent customer.
A bill group who is associated with the fully-insured group or self-funded policy	The **Person** tab displays the basic details, characteristics, child persons, billing hierarchy, and customer contacts of the bill group.
A person whose person type is neither **Parent Customer** nor **Bill Group**	The **Person** tab displays the basic details, characteristics, child persons, billing hierarchy, and customer contacts of the person.

Person Information

The **Person Information** zone displays the details of the person. It contains the following sections:

- **Main** - Displays the basic information about the person. It contains the following fields:

Field Name	Field Description
Person Information	Displays information about the person. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the person.
Person Type	Indicates the type of the person. The valid values are: • Business • Bill Group • Group • Broker

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	• Person • Parent Customer
Date of Birth	Displays the date when the person was born. **Note:** This field appears when the respective data is available for the person.

- **Person Names** - Lists the primary and non-primary names of the person. It contains the following columns:

Column Name	Column Description
Name Type	Indicates the type of the name.
Person Name	Displays the name of the person.

- **Person Identifiers** - Lists various types of identification associated with the person. It contains the following columns:

Column Name	Column Description
Person Identifier Type	Indicates the person identifier type.
Person Identifier	Displays the value of the person identifier type.

- **Contact Information** - Displays the contact details of the person. It contains the following fields:

Field Name	Field Description
Country	Indicates the country where the person is located.
Address 1	Displays the first line of the person's address. It may contain details, such as house number and apartment name.
Address 2	Displays the second line of the person's address. It may contain details, such as street name.
Address 3	Displays the third line of the person's address. It may contain the landmark details.
Address 4	Displays the fourth line of the person's address.
House Type	Indicates the type of the house.
Number 1	Displays the numeric information, if any, related to the address.
Number 2	Displays the numeric information, if any, related to the address.
In City Limit	Indicates whether the person resides within the city limit or not. The valid values are: • Yes • No
City	Displays the city where the person is located.
Geographic Code	Displays the geographic code of the address.
County	Displays the county where the person is located.
State	Indicates the state where the city or county is located.
Postal	Displays the postal or zip code of the address.
Email ID	Displays the e-mail ID of the person.

Copyright © 2026, Oracle and/or its affiliates.

Note: The above mentioned fields appear in the **Contact Information** section when the respective data is available for the person.

- **Phone Details** - Lists the phone details of the person. It contains the following columns:

Column Name	Column Description
Phone Type	Indicates the type of the phone number.
Phone Number	Displays the phone number of the person.
Extension	Displays the telephone extension number (if any).

- **Person Collection** - Lists the person's collection and advance deposit details. It contains the following fields:

Field Name	Field Description
Collection Class	Displays the separate delinquency process created for the accounts belonging to the collection class.
Last Credit Review Date	Indicates the date when the account's debt was last reviewed.
Drag Days	Displays the additional grace days offered at the account level.
Advance Deposit Amount	Displays the advance deposit amount. **Note:** This field appears only when the advance deposit level of a person is set to **Parent Customer**.
Advance Deposit Grace Days	Displays the grace days used for calculating the advance deposit grace period. **Note:** This field appears only when the advance deposit level of a person is set to **Parent Customer**.
Advance Deposit Level	Indicates whether the advance deposit received from the group customer is parked at the parent customer or policy level. The valid values are: • Parent Customer • Policy **Note:** This field appears only when you are viewing the details of a person whose person type is set to **Parent Customer**.

Note: The fields appear in the **Person Collection** section only when the respective data is available for the person.

Additional Attributes

The **Additional Attributes** zone lists the characteristics of the person. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the person.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: The data appears in this column when the type of characteristic value is set to **Predefined Value** or **Foreign Key Value**.

You can filter the list using the **Characteristic Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Child Persons

The **Child Persons** zone lists the child persons included in the person's hierarchy. It contains the following columns:

Column Name	Column Description
Child Person Information	Displays information about the child person.
	Note: It has a link. On clicking the link, the **Person** screen appears where you can view the details of the child person.
Relationship Type	Indicates how the child person is related to the parent person.
Start Date	Displays the date from when the child person is related to the parent person.
End Date	Displays the date till when the child person is related to the parent person.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can view the 360° information of a child person by clicking the **View** (🔗) icon corresponding to the child person in this zone.

You can create a new child person through the **Customer Registration** feature by clicking the **Add** link in the upper right corner of this zone. While adding a child person to a parent person, the child person is related to the parent person using the relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.

You can filter the list using the **Person Relationship Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Bill Group Derivation and Pricing Parameters

An employer may have different bill groups. Each bill group will handle the claim and enrollment transactions of employees based on the employee attributes, such as location, employment status, employment department, and so on.

Oracle Revenue Management and Billing allows you to define the derivation and pricing parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4 for the bill group and sort ID combination. These parameters are used to derive the bill group against which the claim and enrollment transactions should be billed in the system. For example, if you want bill group 1 to handle claim and enrollment transactions of employees who reside in the western location of city and belong to grade A and whose transactions are received from the X system, you need to define the derivation and pricing parameters for bill group 1 where the source system is set to X, parameter 1 is set to Western, and parameter 2 is set to Grade A. Similarly, if you want bill group 2 to handle claim and enrollment transactions of employees who reside in the eastern location of city and belong to grade A and whose transactions are received from the X system, you need to define the derivation and pricing parameters for bill group 2 where the source system is set to X, parameter 1 is set to Eastern, and parameter 2 is set to Grade A.

Note: In the above examples, the bill group is derived based on the specified attributes when the source system, parameter 1, and parameter 2 are mapped to the appropriate transaction fields in the pricing rule type using which the pricing rules are defined for the bill group.

You can also define criteria for a rule in a pricing group using the parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4. If a pricing rule is defined for a bill group using a pricing group, you can define more than one price in the pricing rule which is offered based on the attributes of the employees.

The derivation and pricing parameters for the bill group and sort ID combination are effective from a particular date. However, the effective date must fall within the date range defined for the sort ID of the bill group.

The **Bill Group Derivation and Pricing Parameters** zone lists the derivation and pricing parameters defined for all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. It appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

You can define and edit the derivation and pricing parameters for a bill group (who is effective child person of the parent customer) and sort ID combination through this zone. You can also upload the derivation and pricing parameters for one or more bill group and sort ID combinations at the same time using the **Upload Request** feature. You can upload the derivation and pricing parameters for a bill group and sort ID combination either from this zone or from the **Upload Request** screen. While creating an upload request for the derivation and pricing parameters, you need to specify the parent customer whose bill groups' derivation and pricing parameters you want to upload. Once the upload request is processed, the derivation and pricing parameters are defined for the bill group and sort ID combination in the system.

This zone contains the following columns:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Bill Group Information	Indicates the parent customer's bill group for whom the derivation and pricing parameters are defined. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective bill group (i.e. person).
Bill Group ID	Displays the bill group ID (i.e. person ID).
Source System	Indicates the source system from where the claim and enrollment transactions are received.
Parameter 1	Indicates the employee attribute based on which you want to derive the bill group.
Parameter 2	Indicates the employee attribute based on which you want to derive the bill group.
Parameter 3	Indicates the employee attribute based on which you want to derive the bill group.
Parameter 4	Indicates the employee attribute based on which you want to derive the bill group.
Sort ID	Indicates the sort ID of the bill group.
Effective Date	Displays the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination.
Status	Indicates the status of the derivation and pricing parameters defined for the bill group and sort ID combination. The valid values are: • Active • Inactive

In addition, it contains the following buttons:

Button Name	Button Description
Edit	Used to edit the derivation and pricing parameters of a bill group and sort ID combination.

If you want to edit the derivation and pricing parameters of all bill group and sort ID combinations, you need to select the check box corresponding to the column header in this zone, and then click the **Edit** button. However, if you want to edit the derivation and pricing parameters of one or more bill group and sort ID combination, you need to select the check box corresponding to the bill group and sort ID combination, and then click the **Edit** button.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

If you select the check box corresponding to the column header in this zone, the system considers only those records which are present on the respective page for editing.

You can define the derivation and pricing parameters for a bill group (who is effective child person of the parent customer) and sort ID combination by clicking the **Add** link in the upper right corner of this zone. You can also upload the derivation and pricing parameters for one or more bill group (who is effective child person of the parent customer) and sort ID combinations by clicking the **Upload** link in the upper right corner of this zone.

You can filter the list using various search criteria (such as, **Parameter 1**, **Parameter 2**, **Parameter 3**, **Parameter 4**, **Bill Group ID**, **Sort ID**, **Status**, and **Bill Group Name**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4632.

How to setup the **C1-ASOBLLNG** feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4639

Add or Edit Bill Level Characteristics from User Interface

Currently, a customer setup in ORMB is performed through the customized **File Request Type** object where the bill levels with characteristic types are uploaded through an existing **Bill Level Upload** feature; however, the **Health Care Inbound Message (C1-HCInboundMessage)** business object did not carry the bill-level characteristic. Hence, to overcome this concern, a new feature is introduced where the **Health Care Inbound Message (C1-HCInboundMessage)** business object is enriched with an ability where you can add or update the bill level characteristic using the **Health Care Inbound Message (C1-HCInboundMessage)** business object. You can also add, edit, and delete the characteristic types at bill level through the ORMB's user-interface by accessing the **Bill Group Derivation and Pricing Parameters** zone in the **Person** tab of the **Customer 360° Information** screen.

While adding the characteristic types, the system behaves in the following manner:

If...	Then...
You want to delete an existing characteristic and replace it with a new characteristic	The system simply replaces the old characteristic type and value with the new characteristic type and value.
You want to create a new characteristic with the same characteristic type and value as the existing characteristic, but with a different sequence number	The system creates a new characteristic with the same characteristic type and value for a different sequence number.
You want to create a new characteristic with the same sequence number, but with a different characteristic type and value	The system creates a new characteristic with the same sequence number for a different characteristic type and value.
You want to create a new characteristic with the same sequence number and characteristic type, but with a different characteristic value	The system simply does not create a characteristic for the given scenario.

Note: The system allows you to add more than one characteristic type at bill level.

Now, for each bill level, the system retrieves the bill level ID from the **C1_BILL_LVL** table, stores the sequence number, characteristic type, and characteristic value in **C1_Bill_LVL_CHAR**, and displays them in the **Bill Level Characteristics** zone.

Bill Group Sorting

Oracle Revenue Management and Billing allows you to define unique sort IDs for a bill group in a given date range. In future, the sort ID will be used to club transactions based on certain parameters and present them in the bill in the ascending or descending order. It may also be used to sort data while generating various reports.

Copyright © 2026, Oracle and/or its affiliates.

The **Bill Group Sorting** zone lists the sort IDs defined for all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. It appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

You can define, edit, and delete a sort ID of a bill group (who is effective child person of the parent customer) through this zone. You can also upload a set of sort IDs for one or more bill groups (who are effective child persons of the parent customer) at the same time using the **Upload Request** feature. You can upload the sort IDs for bill groups either from this zone or from the **Upload Request** screen. While creating an upload request for bill group sort IDs, you need to specify the parent customer whose bill groups' sort IDs you want to upload. Once the upload request is processed, the sort ID is defined for the respective bill group in the system.

This zone contains the following columns:

Column Name	Column Description
Bill Group Information	Indicates the parent customer's bill group for whom the sort ID is defined. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective bill group (i.e. person).
Bill Group ID	Displays the bill group ID (i.e. person ID).
Sort ID	Displays the sort ID.
Description	Displays the description of the sort ID.
Start Date	Displays the date from when the sort ID is effective for the bill group.
End Date	Displays the date till when the sort ID is effective for the bill group.

In addition, it contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of a bill group's sort ID.
Delete	Used to delete a bill group's sort ID.
	Note: You can delete a bill group's sort ID when the derivation and pricing parameters are not yet defined for the bill group and sort ID combination.

If you want to edit or delete all sort IDs of effective bill groups, you need to select the check box corresponding to the column header in this zone, and then accordingly click the **Edit** or **Delete** button. However, if you want to edit or delete one or more sort IDs of effective bill groups, you need to select the check box corresponding to the bill group and sort ID combination, and then accordingly click the **Edit** or **Delete** button.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

If you select the check box corresponding to the column header in this zone, the system considers only those records which are present on the respective page for editing or deleting.

You can define a sort ID for a bill group (who is effective child person of the parent customer) by clicking the **Add** link in the upper right corner of this zone. You can also upload a set of sort IDs for one or more bill groups (who are effective child persons of the parent customer) by clicking the **Upload** link in the upper right corner of this zone.

Copyright © 2026, Oracle and/or its affiliates.

You can filter the list using the **Bill Group Name** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4632.

Customer Contacts

The **Customer Contacts** zone displays information about how and when the person was contacted. It contains the following columns:

Column Name	Column Description
Contact Date	Displays the date when the person was contacted.
Customer Contact Information	Displays information about the customer contact. **Note:** It has a link. On clicking the link, the **Customer Contact** screen appears where you can view the details of the customer contact.
Contact Type	Indicates how the person was contacted.
Comments	Displays additional information about the customer contact.

You can filter the list using various search criteria (such as, **On or Before Contact Date**, **Contact Class**, **Contact Type**, and **Show Open Contacts Only**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Bill Groups Created Via Customer Registration

The **Bill Groups Created Via Customer Registration** zone lists the customer registration objects through which the parent customer's bill groups are created in the system. It appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**. It contains the following columns:

Column Name	Column Description
Customer Registration Information	Indicates the customer registration object through which the bill group is created. **Note:** It has a link. On clicking the link, the **Customer Registration** screen appears where you can view the details of the respective customer registration object.
Person Name	Displays the name of the bill group.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Person Relationship Type	Indicates how the bill group is related to the parent customer.
Status	Indicates the status of the customer registration object. The valid value is: • Bill Group Approved

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using the **Person Relationship Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Customer 360° Information - Account

The following table provides information about the **Account** tab:

If you are viewing the 360° information of...	Then...
A parent customer who is associated with the self-funded or fully-insured group policy	The **Account** tab displays the following: • List of the parent customer's and bill groups' accounts. Note that the system lists the accounts of all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. • Basic details, characteristics, automatic payment options, financial and collections summary, and unpaid bills of the parent customer's or bill group's account.
A bill group who is associated with the fully-insured group or self-funded policy	The **Account** tab displays the basic details, characteristics, automatic payment options, financial and collections summary, and unpaid bills of the bill group's account. **Note:** If the bill group has multiple accounts, the system, by default, picks and displays the details of any one of its account.
A person whose person type is neither **Parent Customer** nor **Bill Group**	The **Account** tab displays the basic details, characteristics, automatic payment options, administrative contracts, financial and collections summary, billing and adjustment summary, and unpaid bills of the person's account. **Note:** If the person has multiple accounts, the system, by default, picks and displays the details of any one of its account.

It contains the following zones:

- Account List on page 696

  Note: The **Account List** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.
- Account Information on page 697
- Auto Pay Details on page 700
- Account Characteristics on page 699

Copyright © 2026, Oracle and/or its affiliates.

- Administrative Contracts on page 699

> **Note:** The **Administrative Contracts** zone appears when you are viewing the 360° information of a person whose person type is neither **Parent Customer** nor **Bill Group**.

- Account Financial and Collections Summary on page 700
- Billing and Adjustment Summary on page 701

> **Note:** The **Billing and Adjustment Summary** zone appears when you are viewing the 360° information of a person whose person type is neither **Parent Customer** nor **Bill Group**.

Account List

The **Account List** zone lists the accounts of the parent customer and its bill groups. Note that the system lists the accounts of all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. It appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**. It contains the following columns:

Column Name	Column Description
Person Name	Indicates the person who is linked to the account.
Account Information	Displays information about the account. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Person Type	Indicates the type of the person. The valid values are: • Business • Bill Group • Group • Broker • Person • Parent Customer
Person's Mailing Address	Displays the mailing address of the person.
Person ID	Displays the person ID.

> **Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Copyright © 2026, Oracle and/or its affiliates.

On clicking the **Broadcast** (📡) icon corresponding to an account, the following zones appear in the **Account** tab:

- Account Information
- Auto Pay Details
- Account Financial and Collections Summary
- Account Characteristics
- Open Bills
- Billed Vs Paid
- Timeline

You can filter the list using various search criteria (such as, **Person Name**, **Account ID**, **Person Type**, and **Include Ended Child Person's Accounts**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Account Information

The **Account Information** zone displays the details of the account. It contains the following sections:

- **Main** - Displays the basic information about the account. It contains the following fields:

Field Name	Field Description
Account Information	Displays information about the account. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Management Group	Indicates the account management group to which the account belongs.
	Note: It has a link. On clicking the link, the **Account Management Group** screen appears where you can view the details of the respective account management group. This field appears when the respective data is available for the account.

- **Contact Information** - Displays the contact details of the account's main customer. It contains the following fields:

Field Name	Field Description
Address Source	Indicates which address should be used to route the account's bills and/or quotes via the postal service.
Country	Indicates the country where the main customer is located.
Address 1	Displays the first line of the main customer's address. It may contain details, such as house number and apartment name.
Address 2	Displays the second line of the main customer's address. It may contain details, such as street name.
Address 3	Displays the third line of the main customer's address. It may contain the landmark details.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Address 4	Displays the fourth line of the main customer's address.
House Type	Indicates the type of the house.
Number 1	Displays the numeric information, if any, related to the address.
Number 2	Displays the numeric information, if any, related to the address.
In City Limit	Indicates whether the main customer resides within the city limit or not. The valid values are: • Yes • No
City	Displays the city where the main customer is located.
Geographic Code	Displays the geographic code of the address.
County	Displays the county where the main customer is located.
State	Indicates the state where the city or county is located.
Postal	Displays the postal or zip code of the address.

Note: The above mentioned fields except **Address Source** appear in the **Contact Information** section when the address source of the main customer is set to **Account Override** and the respective data is available for the account.

- **Account Identifiers** - Lists various types of identification associated with the account. It contains the following columns:

Column Name	Column Description
Account Identifier Type	Indicates the account identifier type.
Account Identifier	Displays the value of the account identifier type.

- **Billing** - Displays the billing information of the account. It contains the following fields:

Field Name	Field Description
Bill Cycle	Indicates the bill cycle of the account. **Note:** It has a link. On clicking the link, the **Bill Cycle** screen appears where you can view the details of the respective bill cycle. This field appears when the respective data is available for the account.
Bill After Date	Displays the date when the billing should be resumed for the account. **Note:** This field appears when the respective data is available for the account.
Skip Months	Indicates the months separated by comma for which billing should be skipped for the account.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: The system derives the skip months for an account using the billing preference. You can set the billing preference for an account through a characteristic type which is specified in the **Bill Cycle Rule Code** option type of the **C1-ASOBLLNG** feature configuration. The system enables you to define, edit, delete, and copy a billing preference through the **Field Mapping** screen. For more information, see Defining a Billing Preference on page 3773.

Account Characteristics

The **Account Characteristics** zone lists the characteristics of the account. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the account.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.
	Note: The data appears in this column when the type of characteristic value is set to **Predefined Value** or **Foreign Key Value**.

You can filter the list using the **Characteristic Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Administrative Contracts

The **Administrative Contracts** zone lists the account's contracts which should be monitored closely for various administrative reasons. It appears when you are viewing the 360° information of a person whose person type is neither **Parent Customer** nor **Bill Group**. It contains the following columns:

Column Name	Column Description
Contract ID	Displays the contract ID.
	Note: It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.
Contract Type	Indicates the type of the contract.
Currency	Indicates the currency in which the contract balance is maintained.
Current Balance	Displays the current balance on the contract.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

The data appears in this zone when you have defined the value for the **Administrative Contract Type** option type in the **C1_CMO** feature configuration.

Auto Pay Details

The **Auto Pay Details** zone lists the automatic payment options defined for the account. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the automatic payment option is effective.
End Date	Displays the date till when the automatic payment option is effective.
Auto Pay Source Code	Indicates the source of funds used to make the automatic payment. For example, debit or credit card.
Last Four Digits of Card	Displays the last four digits of the debit or credit card. **Note:** The data appears in this column when the external type of the auto pay source code's tender type is set to **Credit Card Withdrawal**.
Percentage	Indicates the percentage of automatic payment that must be made through the automatic payment option.
Priority	Indicates the order in which the automatic payment option should be considered for the effective date range.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Account Financial and Collections Summary

The **Account Financial and Collections Summary** zone displays the financial and collection details of the account. It contains the following fields:

Field Name	Field Description
Collection Class	Indicates the collection class to which the account belongs.
Current Credit Rating	Indicates the account's credit rating which is effective on the current date.
Last Credit Review Date	Displays the date when the account's debt was last reviewed.
Last Payment Date	Displays the date when the last payment was made for the account. **Note:** The system considers the last payment which is in the **Frozen** status.
Last Payment Amount	Displays the amount of the last payment. **Note:** The system considers the last payment which is in the **Frozen** status.
Current Balance	Displays the current balance of the account. **Note:** Current Balance = Account Level billed + Payments + Excess Credits + Unbilled Adjustments + Unbilled Corrections
Payoff Balance	Displays the payoff balance of the account.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: Payoff balance = Account Level billed + Payments + Excess Credits + Unbilled Corrections
Actual Account Balance	Displays the actual balance of the account.
	Note: Actual Account Balance = Account Level billed + Payments + Excess Credits
Account on Hold	Indicates whether the account is on hold or not. The valid values are: • Yes • No
Account on Promise to Pay	Indicates whether any promise to pay is scheduled for the account on the current or future date. The valid values are: • Yes • No
Account on Payment Arrangement	Indicates whether any payment arrangement exists for the account. The valid values are: • Yes • No
Account on Payment Agreement	Indicates whether any active payment agreement request exists for the account. The valid values are: • Yes • No

Billing and Adjustment Summary

The **Billing and Adjustment Summary** zone displays the billing and adjustment summary of the account. It appears when you are viewing the 360° information of a person whose person type is neither **Parent Customer** nor **Bill Group**. It contains the following sections:

- **Quote Billed Balance** - Displays information about the account's billed balance. It contains the following fields:

Field Name	Field Description
Past Due Billed Balance	Displays the sum of open financial transactions of the account that are listed on a bill with a past due date.
Future Due Billed Balance	Displays the sum of open financial transactions of the account that are listed on a bill with a future due date.
Quote Billed Balance	Displays the sum of past due billed balance and future due billed balance.

- **Future Adjustments and Retroactivity** - Displays information about the account's future adjustments and retro activities. It contains the following fields:

Field Name	Field Description
Future Adjustments	Displays the sum of adjustment financial transactions of the account which are swept onto the next bill.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Future Retro Terms (Credits)	Displays the sum of canceled bill segment financial transactions of the account which are presented on the next bill.
Future Retro Adds (Debits)	Displays the sum of membership premium billable charges which are not yet billed to the account. **Note:** The data appears in this field when the values are defined for the **Premium Amount SQI** and **Coverage End Date SQI** option types in the **C1-BILLADJSQ** feature configuration.
Future Balance with Adjustments & Debits/Credits	Displays the sum of quote billed balance, future adjustments, future retro terms (credits), and future retro adds (debits).

Open Bills

The **Open Bills** zone lists the unpaid bills of the account. By default, the bills where the unpaid amount is greater than zero are listed in this zone. It contains the following columns:

Column Name	Column Description
Bill Date	Displays the date when the bill was generated. **Note:** The data in this column is presented in a different color depending on the age bucket in which the bill's days past due falls. The following table lists the color used for presentation in various age buckets: **Age Bucket** / **Color** Age 0 to 30 DPD / Black Age 31 to 60 DPD / Green Age 61 to 90 DPD / Orange Age > 90 DPD / Red
Bill ID	Displays the bill ID. **Note:** It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.
Due Date	Displays the date when the bill is due for payment.
Bill Amount	Displays the bill amount.
Bill Status	Indicates the status of the bill. The valid values are: • Pending

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	• Complete
Unpaid Amount	Displays the unpaid amount of the bill.
Age Bucket	Indicates the age bucket in which the bill's days past due falls. The valid values are: • Age 0 to 30 DPD • Age 31 to 60 DPD • Age 61 to 90 DPD • Age > 90 DPD
Days Past Due	Displays the number of days past after the due date.
Overdue Process Information	Indicates the overdue process which is initiated for the bill and is currently in the **Active** status. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Overdue Process** screen appears where you can view the details of the respective overdue process.
Delinquency Process Information	Indicates the information of a delinquency process created for an overdue bill of the account. **Note:** It has a link. On clicking the link, the **Delinquency Process** screen appears where you can view the details of the respective delinquency process.
Payment Agreement Request Information	Indicates the active payment agreement request in which the bill is included. **Note:** It has a link. On clicking the link, the **Payment Agreement Request** screen appears where you can view the details of the respective payment agreement request.

You can view additional information about the bill by clicking the **View** (🔗) icon corresponding to the bill in the **Open Bills** zone.

You can filter the list using various search criteria (such as, **On or Before Bill Date** and **Show All Bills**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Note: If you select the **Show All Bills** option, the system lists all bills where the unpaid amount is greater than or equal to zero.

Billed Vs Paid

The **Billed Vs Paid** zone lists the following transactions of the account:

- Bills which are created for the account

Note: The system lists the bills which are created for the account either manually from the user interface or automatically through the batches. It also lists the bills which are created for the account through a manual or automatic invoice request.

Copyright © 2026, Oracle and/or its affiliates.

- Any excess credit which is made for the account
- Payments which are created or canceled for the account
- Adjustments which are created or canceled for the account
- Refund or Write Off adjustments which are created or canceled for the account
- Payment transfer to the reconciliation contract of the account
- Payment transfer from the reconciliation contract to the payor account's contract
- Reconciliations through which the account's bill segments are reconciled
- Automatic payments sent to the auto clearing house for review before freezing them

Note: The excess credit information for the account appears when you have defined the value for the **On Account Contract Type** option type in the **C1_CMO** feature configuration. Accordingly, the excess credit information (if any) on the respective contracts is listed in this zone.

It contains the following columns:

<table>
<tr><th>Column Name</th><th>Column Description</th></tr>
<tr><td>Due Date</td><td>Displays the date when the bill is due for payment.

Note: The data appears in this column when the transaction type is set to Bill.</td></tr>
<tr><td>Bill ID</td><td>Displays the bill ID.

Note:
It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.
The data appears in this column when the transaction type is set to Bill.</td></tr>
<tr><td>Transaction Date</td><td>The following table indicates the date that appears depending on the type of the transaction:
<table>
<tr><th>If the transaction type is...</th><th>Then...</th></tr>
<tr><td>Bill</td><td>Date when the bill is generated for the account</td></tr>
<tr><td>Payment</td><td>Date when the payment is made for the account</td></tr>
<tr><td>Adjustment</td><td>Date when the adjustment is created for the account</td></tr>
<tr><td>Payment Cancellation</td><td>Date when the payment is canceled for the account</td></tr>
<tr><td>Adjustment Cancellation</td><td>Date when the adjustment is canceled for the account</td></tr>
<tr><td>Excess Credit (overpayment)</td><td>Date when the excess credit is made for the account</td></tr>
<tr><td>Reconciliation Contract</td><td>Date when the payment is transferred to the reconciliation contract of the account</td></tr>
<tr><td>Reconciliation Contract - Returned</td><td>Date when the payment made to the reconciliation contract of the account is canceled</td></tr>
<tr><td>Payment Transfer</td><td>Date when the pay instruction for the account is reconciled</td></tr>
<tr><td>Payment Transfer Cancellation</td><td>Date when the reconciliation is canceled</td></tr>
</table></td></tr>
</table>

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: The data does not appear in this column for automatic payments which are sent to the auto clearing house for review.
Transaction Type	Indicates the type of the transaction. The valid values are: • Bill • Payment • Adjustment • Payment Cancellation • Adjustment Cancellation • Excess Credit (overpayment) • Reconciliation Contract • Reconciliation Contract - Returned • Payment Transfer • Payment Transfer Cancellation
Transaction Description	Displays the description of the transaction.
	Note: The data appears in this column when the transaction type is set to **Adjustment**, **Adjustment Cancellation**, **Reconciliation Contract - Returned**, **Payment Transfer**, and **Payment Transfer Cancellation**. In addition, the data appears in this column when the automatic payments are sent to the auto clearing house for review before freezing them. The transaction description for such payments is set to **Pending Payment**.
Transaction Amount	Displays the transaction amount.
Unpaid Amount	Displays the unpaid amount of the bill.
	Note: The data appears in this column when the transaction type is set to **Bill**.
Payment Date	Displays the date when the payment is created or canceled for the account.
	Note: The data appears in this column when the transaction type is set to **Payment**, **Payment Cancellation**, or **Excess Credit (overpayment)**.
Tender Type	Indicates the type of tender through which the payment was made.
Check Number/External Reference ID	Displays the check number or external reference ID.
Transaction ID	Displays the payment, adjustment, or reconciliation ID.
	Note: It has a link. On clicking the link, the **Payment**, **Adjustment**, or **Reconciliation** screen appears where you can view the details of the respective transaction.

The **View** (🔗) icon appears corresponding to a bill in this zone. On clicking the **View** (🔗) icon corresponding to a bill, the **Bill Information** screen appears where you can view the details of the respective bill.

You can filter the list using the **On or Before Due Date** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4632.

How to setup the **C1_CMO** feature configuration	Setting the C1_CMO Feature Configuration on page 4660

Timeline

The **Timeline** zone displays the following information in a graphical form:

- Number of customer contacts which are created for the account's main customer in a particular month
- Number of bills which are created for the account in a particular month
- Number of payments which are created for the account in a particular month

It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Month	Used to indicate the month till when you want to display the above stated information. **Note:** By default, the current month appears in this field.	Yes
Year	Used to indicate the year till when you want to display the above stated information. **Note:** By default, the current year appears in this field.	Yes

Depending on the month and year specified in the above fields, the data for the respective month and previous 11 months is presented in the grid. For example, if the Month and Year is set to April 2017, then the data for the May 2016, Jun 2016, Jul 2016, Aug 2016, Sep 2016, Oct 2016, Nov 2016, Dec 2016, Jan 2017, Feb 2017, Mar 2017, and Apr 2017 appears in the grid. To view the data for a different period, you must accordingly change the month and year and then click **Search** (⊙) icon.

You can use the **Previous 12 Months** (⏮), **Previous Month** (⏪), **Go To Today** (○), **Next Month** (⏩), and **Next 12 Months** (⏭) icons to change the values specified in the above mentioned fields.

The following table indicates the data and the manner in which the data is presented in the grid:

Row Name	Row Description
Customer Contacts	A small icon appears for each customer contact which is created for the account's main customer in the respective month. For example, if two customer contacts are created for the main customer in the month of Jan 2017 and one customer contact is created in the month of Feb 2017, then two icons appear in the Jan 2017 column and one icon appear in the Feb 2017 column. A text indicating the day of the month when the customer contact was created appears on the icon. The following table indicates the color in which the icon appears depending on the condition which is satisfied: **If the contact action on the customer contact type is...** / **Then the icon appears in...** Set to **Send Letter** / Red Set to **Action Algorithm** / Yellow On clicking the icon, the corresponding customer contact information appears at the bottom of this zone. It has a link. On clicking the link, the **Customer Contact** screen appears where you can view the details of the respective customer contact.

Copyright © 2026, Oracle and/or its affiliates.

<table>
<tr><th>Row Name</th><th>Row Description</th></tr>
<tr><td></td><td>Note: You can change the color in which the text appears on the icon and the color in which the icon appears when the above stated conditions are met through the C1-TL-CC-EVT algorithm.</td></tr>
<tr><td>Bills</td><td>A small icon appears for each bill which is created for the account in the respective month. For example, if three bills are created for the account in the month of Jan 2017, two bills are created in the month of Feb 2017, and one bill is created in the month of Apr 2017, then three icons appear in the Jan 2017 column, two icons appear in the Feb 2017 column, and one icon appears in the Apr 2017 column. A text indicating the day of the month when the bill was due appears on the icon. You can either display the day of the due date or bill date on the icon depending on the requirement. The following table indicates the color in which the icon appears depending on the condition which is satisfied:
<table>
<tr><th>If the bill is...</th><th>Then the icon appears in...</th></tr>
<tr><td>Fully Matched</td><td>Green</td></tr>
<tr><td>Unmatched</td><td>Red</td></tr>
<tr><td>Credit Note</td><td>Blue</td></tr>
<tr><td>Scheduled for billing in the next bill cycle</td><td>Black</td></tr>
</table>
On clicking the icon, the corresponding bill information appears at the bottom of this zone. It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.

Note:
If you want to display the day of the due date on the icon, you must set the Date To Use (D-Due Date, B-Bill Date) parameter in the C1-TL-OI-EVT algorithm to D. However, if you want to display the day of the bill date on the icon, you must set the Date To Use (D-Due Date, B-Bill Date) parameter in the C1-TL-OI-EVT algorithm to B.
You can change the color in which the text appears on the icon and the color in which the icon appears when the above stated conditions are met through the C1-TL-OI-EVT algorithm.</td></tr>
<tr><td>Payments</td><td>A small icon appears for each payment which is created for the account in the respective month. For example, if one payment is created for the account in the month of Aug 2016, three payments are created in the month of Dec 2016, and four payments are created in the month of Mar 2017, then one icon appears in the Aug 2016 column, three icons appear in the Dec 2016 column, and four icons appear in the Mar 2017 column. A text indicating the day of the month when the payment was created appears on the icon. The following table indicates the color in which the icon appears depending on the status of the payment:
<table>
<tr><th>Status</th><th>Color</th></tr>
<tr><td>Frozen</td><td>Green</td></tr>
<tr><td>Canceled</td><td>Red</td></tr>
<tr><td>Freezable</td><td>Blue</td></tr>
<tr><td>Error</td><td>Red</td></tr>
<tr><td>Incomplete</td><td>Yellow</td></tr>
</table></td></tr>
</table>

Row Name	Row Description
	On clicking the icon, the corresponding payment information appears at the bottom of this zone. It has a link. On clicking the link, the **Payment** screen appears where you can view the details of the respective payment.
	Note: You can change the color in which the text appears on the icon and the color in which the icon appears in the different status through the **C1-TL-PY-EVT** algorithm.

Hold Details

The **Hold Details** zone lists the hold requests which are created for the account. Note that only those hold requests are listed in this zone where the respective entity's start date is earlier than or equal to the system date and the entity's end date is later than or equal to the system date. However, note that the system does not list the hold requests which are either in the **Rejected** or **Released** status.

If two or more processes are kept on hold for the account through a hold request, the system will list multiple records for the hold request — one each for the process kept on hold through the hold request. This zone contains the following columns:

Column Name	Column Description
Hold Request Information	Displays information about the hold request.
	Note: It has a link. On clicking the link, the **Hold Request** screen appears where you can view the details of the respective hold request.
Status	Indicates the status of the hold request. The valid value is: • Draft
Entity	Indicates the type of entity for which the hold request is created. The valid value is: • Account
Hold Reason	Indicates the reason why the hold request is created for the entity.
Hold Process	Indicates the process that is kept on hold for the account.
Start Date	Displays the date from when the hold request is effective.
End Date	Displays the date till when the hold request is effective.

Trial Bills

The **Trial Bills** zone lists the trial bills which are created for the account. It contains the following columns:

Column Name	Column Description
Creation Date	Displays the date when the trial bill is created.
Trial Bill Information	Displays information about the trial bill.
	Note: It has a link. On clicking the link, the **Trial Bill** screen appears where you can view the details of the respective trial bill.
Current Charges	Displays the trial bill amount.

Customer 360° Information - Policy

The following table provides information about the **Policy** tab:

If you are viewing the 360° information of...	**Then...**
A parent customer who is associated with the self-funded policy	The **Policy** tab displays the following: • List of self-funded policies to which the parent customer's bill groups are associated. **Note:** The system lists only those policies of the bill groups where the parent customer is associated as a policy holder. • Basic details and policy persons of a self-funded policy where the parent customer is the policy holder.
A parent customer who is associated with the fully-insured group policy	The **Policy** tab displays the following: • List of fully-insured group policies to which the parent customer or its bill groups are associated. **Note:** The system lists only those policies of the bill groups where the parent customer is associated as a policy holder. • Basic details, policy persons, and policy plans of a fully-insured group policy to which the parent customer or its bill group is associated.
A bill group who is associated with the self-funded policy	The **Policy** tab displays the following: • List of self-funded policies to which the bill group is associated. • Basic details and policy persons of a self-funded policy.
A bill group who is associated with the fully-insured group policy	The **Policy** tab displays the following: • List of fully-insured group policies to which the bill group is associated. • Basic details, policy persons, and policy plans of a fully-insured group policy.
A person whose person type is neither **Parent Customer** nor **Bill Group**	The **Policy** tab displays the following: • List of fully-insured group or self-funded policies to which the person is associated. • Basic details, policy persons, and policy plans of a self-funded or fully-insured group policy.

It contains the following zones:

- Policy List on page 710

  Note: The **Policy List** zone appears when there is more than one policy associated with the person.
- Policy Information on page 711
- Policy Persons on page 714
- Policy Plans on page 714

Copyright © 2026, Oracle and/or its affiliates.

Note: The **Policy Plans** zone appears when you are viewing the 360° information of a person who is associated with the fully-insured group policy.

Related Topics

For more information on...	See...
How to view the 360° information of a policy	Viewing the 360° Information of a Policy on page 677

Policy List

If you are viewing 360° information of a parent customer, the **Policy List** zone lists the policies to which the parent customer and its bill groups are associated. Note that the system lists the policies of all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.

Note: The system lists only those policies of the bill groups where the parent customer is associated as a policy holder.

If you are viewing 360° information of a bill group, the **Policy List** zone lists the policies to which the bill group is associated. If you are viewing 360° information of a person who is neither a parent customer nor a bill group, the **Policy List** zone lists the policies to which the person is associated. This zone appears when there is more than one policy associated with the person. It contains the following columns:

Column Name	Column Description
Policy Number	Displays the policy number.
Policy Information	Displays information about the policy.
	Note: It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the respective policy.
Policy Type	Indicates the type of the policy.
Status	Indicates the status of the policy.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a policy, the following zones appear in the **Policy** tab:

- Policy Information
- Policy Persons
- Policy Plans

You can filter the list using various search criteria (such as, **Policy Number**, **Start Date**, **Policy Type**, **End Date**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Policy Information

The **Policy Information** zone displays the details of the policy. It contains the following sections:

- **Main** - Displays the basic information about the policy. It contains the following fields:

Field Name	Field Description
Base Policy Information	Displays information about the base policy. **Note:** This field appears when you are viewing the details of a renewed policy which is created using a policy type where the policy category is set to **Self-Funded**.
Policy Information	Displays information about the policy. **Note:** It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the respective policy.
Policy Type	Indicates the policy type using which the policy is created. **Note:** It has a link. On clicking the link, the **Policy Type** screen appears where you can view the details of the respective policy type.
Source System	Indicates the external system from where the policy is originated.
Policy Number	Displays the policy number.
Status	Indicates the status of the policy. If the policy is created using the **C1-POLICY** business object, the valid values are: • Pending • In Force/Active • Pending Cancellation • Canceled • Pending Reinstatement • Reinstated • Pending Termination • Terminated However, if the policy is created using the **C1-ASOPolicy** business object, the valid values are: • Pending • In Force/Active • Runout • Post Runout
Status Reason	Indicates the reason why the policy is terminated.

<table>
<tr><th>Field Name</th><th>Field Description</th></tr>
<tr><td></td><td>Note:
It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the respective termination reason.
This field appears when you are viewing the details of a terminated or reinstated policy which is created using a policy type where the policy category is set to Fully-Insured Group or Fully-Insured Individual.</td></tr>
<tr><td>Start Date</td><td>Displays the date from when the policy is effective.</td></tr>
<tr><td>End Date</td><td>Displays the date till when the policy is effective.</td></tr>
<tr><td>Renewal Date</td><td>Displays the date when the policy is renewed.
Note: This field appears when you are viewing the details of a policy which is renewed.</td></tr>
<tr><td>Paid Through Date</td><td>Indicates the term end date of the last fully or partially paid term. The system considers the term to be fully paid when the threshold limit is met.
Note:
This field appears when the following conditions are met:
• When you are viewing the details of a policy which is created using a policy type where the policy category is set to Fully-Insured Group or Fully-Insured Individual.
• When the paid through date is calculated at the policy level.
The paid through date is calculated while freezing or canceling a payment or adjustment depending on whether the required algorithm is attached to the respective system event:
<table>
<tr><th>Entity</th><th>System Event</th><th>Algorithm</th></tr>
<tr><td>Customer Class</td><td>Payment Freeze</td><td>C1-PSPTDCAL</td></tr>
<tr><td>Customer Class</td><td>Payment Cancellation</td><td>C1-PXPTDCAL</td></tr>
<tr><td>Adjustment Type</td><td>Adjustment Freeze</td><td>C1-ADPTDCAL</td></tr>
<tr><td>Adjustment Type</td><td>Adjustment Cancellation</td><td>C1-AXPTDCAL</td></tr>
</table>
The following table indicates when the paid through date is calculated at the policy and/or membership level:
<table>
<tr><th>If the Paid Through Date Calculation Level parameter is set to…</th><th>If the following characteristics are defined for the billable charge or adjustment…</th><th>Then…</th></tr>
<tr><td>P</td><td>C1-POLID</td><td>Paid through date is calculated at the policy level</td></tr>
</table></td></tr>
</table>

</td></tr>
<tr><td>Runout End Date</td><td>Displays the date when the runout period of the self-funded policy ends.
Note: This field appears when you are viewing the details of a policy which is created using a policy type where the policy category is set to Self-Funded.</td></tr>
<tr><td>Runout Administration Fees</td><td>Indicates whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are:
• None
• Percentage of Claim
Note: This field appears when you are viewing the details of a policy which is created using a policy type where the policy category is set to Self-Funded.</td></tr>
<tr><td>Advance Level Funding Eligibility</td><td>Indicates whether the self-funded policy is eligible for advance billing feature of level funding.
Note: This field appears when you are viewing the details of a policy which is created using a policy type where the policy category is set to Self-Funded.</td></tr>
<tr><td>Advance Deposit Applicability</td><td>Indicates whether the advance deposit is applicable for the policy.
Note: This field appears only when the policy is created using a policy type where the policy category is set to Fully-Insured Group.</td></tr>
</table>

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Advance Deposit Amount	Displays the advance deposit amount. **Note:** This field appears only when the **Advance Deposit Applicability** option is selected.
Advance Deposit Grace Days	Displays the grace days used for calculating the advance deposit grace period. **Note:** This field appears only when the **Advance Deposit Applicability** option is selected.
Advance Deposit Account	Indicates the account of the parent customer where the advance deposit is parked for the policy. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** This field appears only when the **Advance Deposit Applicability** option is selected. It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.

- **Characteristics** - Lists the characteristics defined for the policy. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the policy.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Policy Persons

The **Policy Persons** zone lists the persons associated with the policy. It contains the following columns:

Column Name	Column Description
Person Name	Indicates the person who is associated with the policy.
Policy Person Role	Indicates the role of the person with respect to the policy.
Start Date	Displays the date from when the person is associated with the policy.
End Date	Displays the date till when the person is associated with the policy.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can view the 360° information of a policy person by clicking the **View** (🔗) icon corresponding to the person in the **Policy Persons** zone.

Policy Plans

The **Policy Plans** zone lists the plans defined in the policy. It appears when you are viewing the 360° information of a person who is associated with the fully-insured group policy. It contains the following columns:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Policy Plan Information	Displays information about the policy plan. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Policy Plan** screen appears where you can view the details of the respective policy plan.
Start Date	Displays the date from when the policy plan is effective.
End Date	Displays the date till when the policy plan is effective.
Plan Name	Indicates the plan to which the policy belongs.
Benefit Type	Indicates the benefit type of the policy plan. The valid values are: • Commercial • Medicare Affiliated
No. of Subscribers	Indicates the number of main subscribers in the policy plan.
No. of Members	Indicates the number of members in the policy plan.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Plan Start Date** and **Plan End Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Customer 360° Information - Pricing Information

The following table provides information about the **Pricing Information** tab:

If you are viewing the 360° information of...	Then...
A parent customer who is associated with the self-funded policy	The **Pricing Information** tab displays the following: • Basic details of the pricing rules which are defined for the parent customer. • Summarized tree view listing each bill group of the parent customer and the bill groups' self-funded policies and pricing rules. • Basic details of the self-funded policies which are associated with each bill group of the parent customer. • Basic details of the pricing rules which are defined for the self-funded policies of each bill group. • Basic details of the active pricing groups which are defined for each bill group. • Basic information about the approval transactions which are created while defining, editing, and deleting the parent customer's and bill groups' pricing rules.
A bill group who is associated with the self-funded policy	The **Pricing Information** tab displays the following: • Summarized tree view listing the parent customer and pricing rules which are defined for the parent customer.

Copyright © 2026, Oracle and/or its affiliates.

If you are viewing the 360° information of...	Then...
	• Basic details of the self-funded policies which are associated with the bill group. • Basic details of the pricing rules which are defined for the self-funded policies of the bill group. • Basic details of the active pricing groups which are defined for the bill group. • Basic information about the approval transactions which are created while defining, editing, and deleting the pricing rules of the bill group.
A parent customer who is associated with the fully-insured group policy	The **Pricing Information** tab displays the following: • Basic details of the pricing rules which are defined for different entities (such as parent customer, fully-insured group policy, policy plan, and state of issue). • Summarized tree view listing the pricing rules which are defined for the parent customer, fully-insured group policies, and policy plans. • Basic information about the approval transactions which are created while defining, editing, and deleting the pricing rules for different entities.
A bill group who is associated with the fully-insured group policy	The **Pricing Information** tab displays the following: • Basic details of the pricing rules which are defined for different entities (such as parent customer, fully-insured group policy, policy plan, and state of issue). • Basic information about the approval transactions which are created while defining, editing, and deleting the pricing rules for different entities.
A person whose person type is neither **Parent Customer** nor **Bill Group**	No data appears in the **Pricing Information** tab.

It contains the following zones:

- Parent Customer Pricing Rules on page 717

  Note: The **Parent Customer Pricing Rules** zone appears when you are viewing 360° information of a parent customer or bill group who is associated with the self-funded policy.

- Bill Group Self-Funded Policy Pricing Rule Summary on page 720

Parent Customer Pricing Rules

The **Parent Customer Pricing Rules** zone lists the pricing rules which are defined for the parent customer. It appears when you are viewing 360° information of a parent customer or bill group who is associated with the self-funded policy. It contains the following columns:

Column Name	Column Description
Pricing Rule Type	Indicates the pricing rule type using which the pricing rule is created.
	Note: It has a link. On clicking the link, the **Pricing Rule Type** screen appears where you can view the details of the respective pricing rule type.
Pricing Rule Information	Displays information about the pricing rule.
	Note: It has a link. On clicking the link, the **Pricing Rule** screen appears where you can view the details of the respective pricing rule.
Price Item Information	Indicates the price item for which the pricing rule is created.
	Note: It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the respective price item.
Start Date	Displays the date from when the pricing rule is effective.

Copyright © 2026, Oracle and/or its affiliates.

<table>
<tr><th>Column Name</th><th>Column Description</th></tr>
<tr><td>End Date</td><td>Displays the date till when the pricing rule is effective.</td></tr>
<tr><td>Status</td><td>Indicates the status of the pricing rule. The valid values are:
Active
Disaggregation Initiated
Inactive
Pending</td></tr>

Bill Group Self-Funded Policy Information

The **Bill Group Self-Funded Policy Information** zone appears when you are viewing 360° information of a parent customer or bill group who is associated with the self-funded policy. If you are viewing the 360° information of a parent customer, the **Bill Group Self-Funded Policy Information** zone lists the policies to which each bill group of the parent customer is associated. However, if you are viewing the 360° information of a bill group, the **Bill Group Self-Funded Policy Information** zone lists the policies to which the bill group is associated. It contains the following columns:

Column Name	Column Description
Bill Group Information	Indicates the bill group to which the policy is associated.
	Note: It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective bill group (i.e. person).
Policy Information	Displays information about the policy.
	Note: It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the respective policy.
Renew	On clicking the **Renew** (⎘) icon, the **Policy** screen appears where you can renew the policy.
	Note: The **Renew** icon appears when the policy is in the **In Force/Active** status and it is not yet renewed.
Policy Number	Displays the policy number.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Status	Indicates the status of the policy. The valid values are: • Pending • In Force/Active • Runout • Post Runout
Runout End Date	Displays the date when the runout period of the policy ends.
Renewal Date	Displays the date when the policy is renewed. **Note:** The data appears in this column when the policy is renewed.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a bill group and policy combination, the **Bill Group Self-Funded Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

You can filter the list using various search criteria (such as, **Bill Group Name**, **Policy Start Date**, and **Policy End Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Bill Group Pricing Groups

The **Bill Group Pricing Groups** zone lists the pricing groups which are defined for the bill group. By default, the active pricing groups are listed in this zone. It appears when you are viewing 360° information of a bill group who is associated with the self-funded policy. It contains the following columns:

Column Name	Column Description
Pricing Group	Indicates the pricing group which is created for the bill group.
Status	Indicates the status of the pricing group. The valid values are: • Active • Inactive
Edit	On clicking the **Edit** (✎) icon, the **Pricing Group** screen appears where you can edit the details of the pricing group.
Delete	On clicking the **Delete** (🗑) icon, you can delete the pricing group. **Note:** You can delete a pricing group when it is not yet used while defining a pricing rule for the bill group.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Pricing Group** screen appears where you can define a new pricing group using an existing pricing group.
Associated Price Items	Indicates the price items whose pricing is defined using the pricing group.
Rules	Indicates the number of rules defined in the respective pricing group.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Bill Group Pricing Groups** zone does not appear in the **Pricing** tab of the **Customer 360° Information** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a bill group in the **Bill Group Self-Funded Policy Information** zone.

You can define a new pricing group for the bill group by clicking the **Add** link in the upper right corner of this zone.

You can filter the list using the **Show All** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Note: If you select the **Yes** option from the **Show All** list, the system lists both the active and inactive pricing groups in the **Bill Group Pricing Groups** zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4632.

Fully-Insured Pricing Rules

The **Fully-Insured Pricing Rules** zone appears when you are viewing 360° information of a parent customer or bill group who is associated with the fully-insured group policy. If you are viewing the 360° information of a parent customer, the **Fully-Insured Pricing Rules** zone lists:

- Age based or tier based pricing rules defined for the parent customer's or its bill groups' fully-insured group policy plans
- Additional fee pricing rules defined for the parent customer
- Additional fee pricing rules defined for the fully-insured group policies and policy plans of the parent customer and its bill groups
- Additional fee pricing rules defined for the states where the fully-insured group policy, its policy plans, and memberships are issued

However, if you are viewing the 360° information of a bill group, the **Fully-Insured Pricing Rules** zone lists:

- Age based or tier based pricing rules defined for the bill group's fully-insured group policy plans
- Additional fee pricing rules defined for the parent customer
- Additional fee pricing rules defined for the fully-insured group policies and policy plans of the parent customer and the bill group
- Additional fee pricing rules defined for the states where the fully-insured group policy, its policy plans, and memberships are issued

It contains the following columns:

Column Name	Column Description
Pricing Rule Type	Indicates the pricing rule type using which the pricing rule is created. **Note:** It has a link. On clicking the link, the **Pricing Rule Type** screen appears where you can view the details of the respective pricing rule type.
Pricing Rule Information	Displays information about the pricing rule. **Note:** It has a link. On clicking the link, the **Pricing Rule** screen appears where you can view the details of the respective pricing rule.
Price Item Information	Indicates the price item for which the pricing rule is created. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the respective price item.
Pricing Level	Indicates the level at which the pricing rule is defined. The valid values are: • Parent Customer • Plan • Policy • State
Entity Information	Indicates the fully-insured group policy, policy plan, parent customer, or state for which the pricing rule is defined.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Start Date	Displays the date from when the pricing rule is effective.
End Date	Displays the date till when the pricing rule is effective.
Price List Information	Indicates the price list that contains the price item pricing which is created through the pricing rule.
	Note: It has a link. On clicking the link, the **Price List** screen appears where you can view the details of the respective price list.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Price Item**, **Start Date**, **Pricing Rule Type**, **End Date**, **Status**, and **Pricing Level**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

A parent customer who is associated with the fully-insured group policy	The **Pricing Rule Approval Transactions** zone lists the approval transactions which are created while defining, editing, and deleting the pricing rules of different entities (such as parent customer, fully-insured group policy, policy plans, and state of issue).
A bill group who is associated with the fully-insured group policy	The **Pricing Rule Approval Transactions** zone lists the approval transactions which are created while defining, editing, and deleting the pricing rules of different entities (such as parent customer, fully-insured group policy, policy plans, and state of issue).

It contains the following columns:

Column Name	Column Description
Submitted On	Displays the date and time when the approval transaction is created by the submitter.
Approval Transaction ID	Displays the approval transaction ID. **Note:** It has a link. On clicking the link, the **Comparison: New versus Existing** screen appears where you can review and accordingly approve, reject, or revert the changes.
Pricing Level	Indicates whether the approval transaction is created for a pricing rule which is defined at the parent customer or bill group level. The valid values are: • Parent Customer • Bill Group
Person Name	Indicates the person for whom the pricing rule is created.
Pricing Rule Type	Indicates the pricing rule type using which the pricing rule is created.
Price Item Information	Indicates the price item for which the pricing rule is created. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the respective price item.
Start Date	Displays the date from when the pricing rule is effective.
End Date	Displays the date till when the pricing rule is effective.
Approval Status	Indicates the status of the approval transaction. The valid values are: • Approved • Cancelled • Deleted • Inprocess • Pending

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	• Rejected
Action	Indicates the type of action performed by the submitter on the pricing rule. The valid values are: • Add • Update • Delete
Submitted By	Indicates the user who has performed the action on the pricing rule.
Assigned To	Indicates the user to whom the approval transaction is manually assigned for review.
Approved/Rejected By	Indicates the user who has approved or rejected the approval transaction.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Status**, **Assigned To**, and **Price Item**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Defining a Sort ID for a Bill Group

Prerequisites

To define a sort ID for a bill group, you should have:

- Effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration

Procedure

To define a sort ID for a bill group:

1. Search for a person whose person type is set to **Parent Customer** in *t*he **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want *t*o view. The **Person** tab appears in the **Customer 360° Information** screen.
3. Expand the **Bill Group Sorting** zone.

   Note: The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.
4. Click the **Add** link in the upper right corner of the **Bill Group Sorting** zone.

   The **Bill Group Sorting** screen appears. It contains the following field:

Field Name	Field Description
Parent Customer	Indicates the parent customer whose bill groups' sort IDs you want to define.

   In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Used to indicate the bill group for whom you want to define the sort ID.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The values appear in this list when there are effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** parameter of the **C1-ASOBLLNG** feature configuration.	
Description	Used to specify the description for the sort ID.	Yes
Sort ID	Used to specify the sort ID.	Yes
Start Date	Used to specify the date from when the sort ID is effective for the bill group. **Note:** The start date cannot be later than the end date.	Yes
End Date	Used to specify the date till when the sort ID is effective for the bill group. **Note:** The end date cannot be earlier than the start date.	No

5. Enter the required details in the grid.
6. If you want to define more than one sort ID for a bill group, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a sort ID of a bill group, click the **Delete** (🗑) icon corresponding to the bill group and sort ID combination.

7. Click **Save**.
   A sort ID is defined for the bill group.

Editing a Sort ID of a Bill Group

Procedure

To edit a sort ID of a bill group:

1. Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Expand the **Bill Group Sorting** zone.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

4. In the **Bill Group Sorting** zone, select the check box corresponding to the bill group and sort ID combination *w*hose details you want to edit.

> **Note:** If you want to edit all sort IDs of effective bill groups, you need to select the check box corresponding to the column header. In such case, the system considers only those records which are present on the respective page for editing.

5. Click **Edit**.

   The **Bill Group Sorting** screen appears. It contains the following field:

Field Name	Field Description
Parent Customer	Indicates the parent customer whose bill groups' sort IDs you want to edit.

   In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Indicates the bill group whose sort ID you want to edit.	Not applicable
Description	Used to specify the description for the sort ID.	Yes
Sort ID	Displays the sort ID.	Not applicable
Start Date	Used to specify the date from when the sort ID is effective for the bill group. **Note:** The start date cannot be later than the end date. The start date cannot be later than the effective date specified in the derivation and pricing parameters which are defined for the bill group and sort ID combination.	Yes
End Date	Used to specify the date till when the sort ID is effective for the bill group. **Note:** The end date cannot be earlier than the start date. The end date cannot be earlier than the effective date specified in the derivation and pricing parameters which are defined for the bill group and sort ID combination.	No

6. Modify the details of a bill group's sort ID, if required.
7. Click **Save**.
   The changes made to the bill group's sort ID are saved.

Deleting a Sort ID of a Bill Group

Procedure

To delete a sort ID of a bill group:

1. Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want to view. The **Person** tab appears in the **Customer 360° Information** screen.
3. Expand the **Bill Group Sorting** zone.

   Note: The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.
4. In the **Bill Group Sorting** zone, select the check box corresponding to the bill group and sort ID combination that you want to delete.

   Note: If you want to delete all sort IDs of effective bill groups, you need to select the check box corresponding to the column header. In such case, the system considers only those records which are present on the respective page for deleting.
5. Click **Delete**.

   A message appears confirming whether you want to delete the bill group's sort ID.

   Note: You can delete a bill group's sort ID when the derivation and pricing parameters are not yet defined for the bill group and sort ID combination.
6. Click **OK**.
   The bill group's sort ID is deleted.

Creating a Bill Group Sorting Upload Request

Procedure

To create a bill group sorting upload request:

1. Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.

Copyright © 2026, Oracle and/or its affiliates.

2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want *t*o view. The **Person** tab appears in the **Customer 360° Information** screen.
3. Expand the **Bill Group Sorting** zone.

> **Note:** The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

4. Click the **Upload** link in the upper right corner of the **Bill Group Sorting** zone.

   The **Select Upload Request Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to create the upload request. **Note:** The list includes only those upload request types where the upload request business object with the **Upload Type** option type set to **BG** is selected.	Yes

> **Note:** The **Select Upload Request Type** screen appears when there are multiple upload request types where the upload request business object with the **Upload Type** option type set to **BG** is selected. If there is only one such upload request type defined in the application, the **Bill Group Sorting Upload Request** screen appears.

5. Select the required upload request type from the respective field.
6. Click **OK**.

   The **Bill Group Sorting Upload Request** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the upload request.
   - **Characteristics** - Used to define the characteristics for the upload request.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type using which the bill group sorting upload request will be created.	Not applicable
Parent Customer	Used to indicate the person for whom you want to create the bill group sorting upload request. **Note:** By default, the parent customer's ID appears in this field. You can change the person, if required. The system allows you to create a bill group sorting upload request for a person whose person type is set to **Parent Customer**. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Person Search** window appears.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
File Name	Used to specify the name and path of the file that you want to upload. **Note:** You can also click the **Browse** button corresponding to this field to browse to the location where the file is available in the system.	Yes
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
Comments	Used to specify additional information about the upload request.	No

7. Click the **Browse** button corresponding to the **File Name** field.
   The **Choose File to Upload** dialog box appears.
8. Browse to the location where the file that you want to upload is available in the system.
9. Click **Open**.
   The file name along with the path appears in the **File Name** field.
10. Select the **Replace Existing File** check box depending on whether you want to upload the same file once *a*gain in the system.
11. Define characteristics for the upload request, if required.
12. Click **Save**.
    A message appears indicating the number of records which are successfully uploaded. Then, a bill group sorting upload request is created in the **Draft** status. If the bill group ID is available in the record, the status of the record is set to **Pending**. However, if the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination when the bill group ID is not specified in the record, the status of the record is set to **Invalid**.

Defining the Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

Prerequisites

To define the derivation and pricing parameters for a bill group and sort ID combination, you should have:

Copyright © 2026, Oracle and/or its affiliates.

- Effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration
- Sort ID defined for the bill group
- Values defined for the **C1-SourceSystemLookup** extendable lookup

Procedure

To define the derivation and pricing parameters for a bill group and sort ID combination:

1. Search for a person whose person type is set to **Parent Customer** in *t*he **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want *t*o view. The **Person** tab appears in the **Customer 360° Information** screen.
3. Expand the **Bill Group Derivation and Pricing Parameters** zone.

   Note: The **Bill Group Derivation and Pricing Parameters** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

4. Click the **Add** link in the upper right corner of the **Bill Group Derivation and Pricing Parameters** zone.

   The **Bill Group Derivation and Pricing Parameters** screen appears. It contains the following field:

Field Name	Field Description
Parent Customer	Indicates the parent customer whose bill groups' derivation and pricing parameters you want to define.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the source system from where the claim and enrollment transactions are received.	Yes
Parameter 1	Used to specify the employee attribute based on which you want to derive the bill group. **Note:** You must not specify the ampersand (&) character in this field.	Yes
Parameter 2	Used to specify the employee attribute based on which you want to derive the bill group. **Note:** You must not specify the ampersand (&) character in this field.	No
Parameter 3	Used to specify the employee attribute based on which you want to derive the bill group. **Note:** You must not specify the ampersand (&) character in this field.	No
Parameter 4	Used to specify the employee attribute based on which you want to derive the bill group. **Note:** You must not specify the ampersand (&) character in this field.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination. **Note:** The effective date must be within the date range of the sort ID defined for the bill group.	Yes
Status	Indicates the status of the derivation and pricing parameters for the bill group and sort ID combination. The valid values are: • Active • Inactive **Note:** By default, the value is set to **Active**.	Not applicable
Bill Group Information	Used to indicate the bill group for whom you want to define the derivation and pricing parameters. **Note:** The values appear in this list when there are effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** parameter of the **C1-ASOBLLNG** feature configuration.	Yes
Sort ID	Used to indicate the sort ID of the bill group for which you want to define the derivation and pricing parameters. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Sort ID Search** window appears.	Yes

5. Enter the required details in the grid.
6. If you want to define the derivation and pricing parameters for more than one bill group and sort ID combination, *c*lick the **Add** (➕) icon and then repeat step 5.

Note: However, if you want to remove the derivation and pricing parameters of a bill group and sort ID combination, click the **Delete** (🗑) icon corresponding to the bill group and sort ID combination.

7. Click **Save**.
   The derivation and pricing parameters are defined for the bill group and sort ID combination.

Editing the Derivation and Pricing Parameters of a Bill Group and Sort ID Combination

Procedure

To edit the derivation and pricing parameters of a bill group and sort ID combination:

1. Search for a person whose person type is set to **Parent Customer** in *t*he **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want *t*o view. The **Person** tab appears in the **Customer 360° Information** screen.
3. Expand the **Bill Group Derivation and Pricing Parameters** zone.

> **Note:** The **Bill Group Derivation and Pricing Parameters** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

4. In the **Bill Group Derivation and Pricing Parameters** zone, select the check box corresponding to the bill group and sort ID combination whose details you want to edit.

> **Note:** If you want to edit the derivation and pricing parameters of all bill group and sort ID combinations, you need to select the check box corresponding to the column header. In such case, the system considers only those records which are present on the respective page for editing.

5. Click **Edit**.

   The **Bill Group Derivation and Pricing Parameters** screen appears. It contains the following field:

Field Name	Field Description
Parent Customer	Indicates the parent customer whose bill groups' derivation and pricing parameters you want to edit.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Indicates the source system from where the claim and enrollment transactions are received.	Not applicable
Parameter 1	Indicates the employee attribute based on which you want to derive the bill group.	Not applicable
Parameter 2	Indicates the employee attribute based on which you want to derive the bill group.	Not applicable
Parameter 3	Indicates the employee attribute based on which you want to derive the bill group.	Not applicable
Parameter 4	Indicates the employee attribute based on which you want to derive the bill group.	Not applicable
Effective Date	Displays the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination.	Not applicable
Status	Used to indicate the status of the derivation and pricing parameters for the bill group and sort ID combination. The valid values are: • Active	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Inactive	
Bill Group Information	Indicates the bill group for whom the derivation and pricing parameters are defined.	Not applicable
Sort ID	Indicates the sort ID of the bill group for which the derivation and pricing parameters are defined.	Not applicable

6. If required, you can inactivate the derivation and pricing parameters of a bill group and sort ID combination.
7. Click **Save**.
   The changes made to the derivation and pricing parameters of a bill group and sort ID combination are saved.

Creating a Bill Group Derivation and Pricing Parameters Upload Request

Procedure

To create a bill group derivation and pricing parameters upload request:

1. Search for a person whose person type is set to **Parent Customer** in *t*he **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want *t*o view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Expand the **Bill Group Derivation and Pricing Parameters** zone.

> **Note:** The **Bill Group Derivation and Pricing Parameters** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

4. Click the **Upload** link in the upper right corner of the **Bill Group Derivation and Pricing Parameters** zone.

   The **Select Upload Request Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to create the upload request. **Note:** The list includes only those upload request types where the upload request business object with the **Upload Type** option type set to **BL** is selected.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Note: The **Select Upload Request Type** screen appears when there are multiple upload request types where the upload request business object with the **Upload Type** option type set to **BL** is selected. If there is only one such upload request type defined in the application, the **Bill Group Derivation and Pricing Parameters Upload Request** screen appears.

5. Select the required upload request type from the respective field.
6. Click **OK**.

   The **Bill Group Derivation and Pricing Parameters Upload Request** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the upload request.
   - **Characteristics** - Used to define the characteristics for the upload request.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type using which the bill group derivation and pricing parameters upload request will be created.	Not applicable
Parent Customer	Used to indicate the person for whom you want to create the bill group derivation and pricing parameters upload request. **Note:** By default, the parent customer's ID appears in this field. You can change the person, if required. The system allows you to create a bill group derivation and pricing parameters upload request for a person whose person type is set to **Parent Customer**. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Person Search** window appears.	Yes
File Name	Used to specify the name and path of the file that you want to upload. **Note:** You can also click the **Browse** button corresponding to this field to browse to the location where the file is available in the system.	Yes
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
Comments	Used to specify additional information about the upload request.	No

7. Click the **Browse** button corresponding to the **File Name** field.
   The **Choose File to Upload** dialog box appears.

Copyright © 2026, Oracle and/or its affiliates.

8. Browse to the location where the file that you want to upload is available in the system.
9. Click **Open**.
   The file name along with the path appears in the **File Name** field.
10. Select the **Replace Existing File** check box depending on whether you want to upload the same file once *a*gain in the system.
11. Define characteristics for the upload request, if required.
12. Click **Save**.
    A message appears indicating the number of records which are successfully uploaded. Then, a bill group derivation and pricing parameters upload request is created in the **Draft** status. If the bill group ID is available in the record, the status of the record is set to **Pending**. However, if the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination when the bill group ID is not specified in the record, the status of the record is set to **Invalid**.

Renewing a Self-Funded Policy of a Bill Group

Oracle Revenue Management and Billing enables you to renew a self-funded policy which is associated with a bill group. However, note that you can renew a self-funded policy when it is in the **In Force/Active** status and is not yet renewed. For more information, see Self-Funded Policy Renewal on page 407.

Procedure

To renew a self-funded policy of a bill group:

1. Search for the bill group who is associated with the self-funded policy (which you want to renew) in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the bill group whose details you want *t*o view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing Information** tab.
   The **Pricing Information** tab appears.
4. In the **Bill Group Self-Funded Policy Information** zone, click the **Renew** (📋) icon in the **Renew** column *c*orresponding to the self-funded policy which you want to renew.

   The **Policy** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the renewed policy.
   - **Persons** - Used to associate or disassociate persons from the renewed policy.

     Note: You cannot disassociate persons who are associated with the base policy using a policy person role which is specified in the **Bill Group Policy Person Role** or **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration.
   - **Characteristics** - Used to define the characteristics for the renewed policy.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Base Policy Information	Indicates the policy which you want to renew.	Not applicable
Policy Type	Indicates the policy type using which the base policy is created.	Not applicable
Policy Number	Used to specify the policy number of the renewed policy.	Yes
Description	Used to specify the description for the renewed policy.	Yes
Start Date	Used to specify the date from when the renewed policy is effective.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: By default, the start date is set to the base policy's end date plus one day. For example, if the base policy's end date is 12-31-2018, then by default, the renewed policy's start date is set to 01-01-2019. The start date cannot be later than the end date. The start date cannot be earlier than or equal to the base policy's end date.	
End Date	Used to specify the date till when the renewed policy is effective. **Note:** The end date cannot be earlier than the start date.	Yes
Runout End Date	Used to specify the date when the runout period of the renewed policy ends. **Note:** The runout end date cannot be earlier than or equal to the renewed policy's end date.	No
Runout Administration Fees	Used to indicate whether the administration fees must be charged when the claim transaction for the policy is processed in the runout period. The valid values are: • None • Percentage of Claim **Note:** At present, this field is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy.	No
Copy Pricing Rules	Used to indicate whether you want to copy the pricing rules of the base policy to the renewed policy. If you select the **Copy Pricing Rules** option, the system copies the following pricing rules of the base policy: • Claim • Retention Type Claim Based • Retention Type Enrollment Based • Recurring Flat Fees • Ancillary	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: While copying a pricing rule, the start and end dates of the new pricing rule are set to the renewed policy's start and end dates, respectively. If there are multiple pricing rules which are created using the same pricing rule type and are effective for the different date range, the system copies only one pricing rule from the base policy with the latest date range.	
Copy Advance Level Funding Eligibility	Used to indicate whether you want to copy the advance level funding eligibility value of the base policy to the renewed policy. **Note:** If the **Copy Advance Level Funding Eligibility** option is set to **Y** in the base policy, the system activates the renewed self-funded policy on the policy renewal even if the renewed policy's start date is later than the system date. This field appears only when you want to renew a self-funded policy.	No

Note: The **Renew** icon appears when the policy is in the **In Force/Active** status and it is not yet renewed.

5. Enter the required details in the **Main** section.
6. Associate or disassociate persons from the renewed policy, if required.
7. Define, edit, or remove characteristics of the renewed policy, if required.
8. Click **Save**.
   The renewed policy is created in the **Pending** status. The renewal date is stamped corresponding to the base policy in the **Bill Group Self-Funded Policy Information** zone.

Viewing the Bill Details

Procedure

To view the details of a bill:

1. Search for the account, whose bill details you want to view, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account whose details you want to view. The **Account** tab appears in the **Customer 360° Information** screen.
3. In the **Open Bills** zone, click the **View** (🔗) icon corresponding to the bill whose details you want to view. The **Bill Information** screen appears.
4. View the basic details of the bill in the **Bill Information** zone.
5. View the adjustments which are swept onto the bill in the **Adjustments** zone.
6. View the activities, such as payment, transfer, offset, refund, or write off through which the bill is settled, in the **Settlement Activities** zone.
7. View the bill segment information, which is summarized based on the date range and price item combination, in the **Bill Segment Summary** zone.
8. View the details of the bill segments in the **Bill Segment Details** zone.
9. View the SQ details of the bill segment in the **SQ Details** zone.
10. View the calculation lines of the bill segment in the **Bill Segment Calculation Lines** zone.
11. View the transactions whose charges are billed through the bill segment in the **Transaction Details** zone.
12. View the calculation lines of all transaction legs (which are rated before billing) in the **Transaction Leg Calculation Lines** zone.
13. View the active hold requests due to which the bill is kept on hold in the **Hold Details** zone.
14. View the offset requests through which the bill is offset against another bill in the **Offset Details** zone.
15. View the refund and write off requests through which the bill or its bill segment is either refunded or written off in the **Refund and Write Off Details** zone.

Viewing the Pricing Rules Defined for a Fully-Insured Group Policy Plan

Procedure

To view the pricing rules defined for a fully-insured group policy plan:

1. Search for the fully-insured group policy in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the policy whose details you want *t*o view.
   The **Policy** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing Information** tab.

   The **Pricing Information** tab appears.

   Note:

   By default, the **Fully-Insured Pricing Rules** zone lists the pricing rules which are defined for the following entities:

   - Parent customer of the fully-insured group policy
   - Fully-insured group policy
   - Fully-insured group policy plans
   - States where the fully-insured group policy and its policy plans and memberships are issued

4. Select the **Plan** option from the **Pricing Level** list in the **Fully-Insured Pricing Rules** zone.
5. Click **Search**.
   The pricing rules (if any) defined for the policy plans of the fully-insured group policy are listed in the **Fully-Insured Pricing Rules** zone.

Bill Information

The **Bill Information** screen allows you to view:

- Basic details of the bill
- Adjustments which are swept onto the bill
- Activities, such as payment, offset, refund, write off, or transfer through which the bill is settled
- High-level summary and details of the bill segments which are included in the bill
- Active hold requests due to which the bill is kept on hold
- Offset requests through which the bill is offset against another bill
- Refund and write off requests through which the bill or its bill segment is either refunded or written off

It contains the following zones:

- Bill Information on page 752
- Adjustments on page 753
- Settlement Activities on page 753
- Bill Segment Summary on page 754
- Bill Segment Details on page 754
- SQ Details on page 756
- Bill Segment Calculation Lines on page 756
- Transaction Details on page 757
- Transaction Leg Calculation Lines on page 758
- Hold Details on page 708
- Offset Details on page 759
- Refund and Write Off Details on page 760

Bill Information

The **Bill Information** zone displays the details of the bill. It contains the following section:

- **Main** - Displays the basic information about the bill. It contains the following fields:

Field Name	Field Description
Bill Information	Displays information about the bill. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.
Alternate Bill ID	Displays the alternate bill ID. **Note:** This field appears only when the respective data is available for the bill.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Account Information	Indicates the account for which the bill is generated. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.

Adjustments

The **Adjustments** zone lists the adjustments which are swept onto the bill. It contains the following columns:

Column Name	Column Description
Adjustment Information	Displays information about the adjustment. **Note:** It has a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the respective adjustment.
Contract Information	Indicates the contract against which the adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.

Settlement Activities

You may settle a bill or its bill segment by making a payment, offsetting, refunding, writing off, or by reconciling against pay instructions. The **Settlement Activities** zone lists the activities related to the bill or its bill segment settlement. It contains the following columns:

Column Name	Column Description
Activity Date	Displays the date when the settlement activity was performed in the system.
Activity Type	Indicates the type of the settlement activity. The valid values are: • Payment • Offset • Refund • Write Off • Transfer
Amount	Indicates the amount settled through the activity.
Related Object Information	Displays additional information about the settlement activity.
Related Object ID	Indicates the payment, offset request, refund request, write off request, or reconciliation adjustment which is created during settlement.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Payment**, **Offset Request**, **Refund Request**, **Write Off Request**, or **Adjustment** screen appears where you can view the details of the respective activity.

Bill Segment Summary

The system groups the bill segments with the same date range and price item combination and then provides the summarized information for each combination in the **Bill Segment Summary** zone. It contains the following columns:

Column Name	Column Description
Start Date	Displays the start date of the bill segments.
End Date	Displays the end date of the bill segments.
Policy Number	Indicates the policy for which the bill segments are generated.
Price Item Description	Indicates the price item for which the bill segments are generated.
Amount	Displays the sum of the bill segment amount.
Unpaid Amount	Displays the sum of the unpaid amount of the bill segments.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Bill Segment Details

The **Bill Segment Details** zone displays the details of the bill segments which are included in the bill. It contains the following columns:

Column Name	Column Description
Start Date	Displays the start date of the bill segment.
End Date	Displays the end date of the bill segment.
Policy Number	Indicates the policy for which the bill segment is generated.
Price Item Description	Displays the description of the price item.
Price Item	Indicates the price item for which the bill segment is generated.
Status	Indicates the status of the bill segment. The valid values are: • Incomplete • Error • Freezable • Pending Cancel • Frozen • Canceled
Amount	Displays the bill segment amount.
Billable Charge ID	Indicates the billable charge for which the bill segment is generated.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Billable Charge** screen appears where you can view the details of the respective billable charge.
Unpaid Amount	Displays the unpaid amount of the bill segment.
Price Item Parameters	Displays the concatenated string consisting of a list of parameters and their values based on which the price item pricing is defined.
External Membership ID	Indicates the membership for which the bill segment is generated.
Member's Primary Identifier	Displays the concatenated string consisting of member's primary identifier type and its value which are separated by a colon (:).
Member Name	Indicates the member for whom the bill segment is generated.
Plan Information	Indicates the plan to which the membership belongs. **Note:** It has a link. On clicking the link, the **Policy Plan** screen appears where you can view the details of the respective policy plan.
Auto Pay ID	Indicates the auto pay instruction through the automatic payment is created for the bill segment. **Note:** It has a link. On clicking the link, the **Auto Pay Instruction** screen appears where you can view the details of the respective auto pay instruction.
Bill Segment ID	Displays the bill segment ID. **Note:** It has a link. On clicking the link, the **Bill Segment** screen appears where you can view the details of the respective bill segment.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **View** (🔗) icon corresponding to a bill segment, the **Bill Segment** screen appears where you can view the additional details of the respective bill segment.

On clicking the **Broadcast** (📡) icon corresponding to a bill segment, the **SQ Details**, **Bill Segment Calculation Lines**, and **Transaction Details** zones appear.

Note:

The **SQ Details** zone appears when the bill segment is generated for an SQI based billable charge.

The **Transaction Details** zone appears only when the bill segment is generated for a billable charge which is created through the transaction aggregation process.

You can filter the list using various search criteria (such as, **Start Date** and **End Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

SQ Details

The **SQ Details** zone lists the service quantity identifiers (SQIs) used in the bill segment calculation. It appears when the bill segment is generated for an SQI based billable charge. It contains the following columns:

Column Name	Column Description
SQI	Indicates the service quantity identifier.
Billed Service Quantity	Displays the service quantity used by the rates engine for calculation. This amount differs from the initial service quantity when the rate's SQ rules manipulate the service quantity.

By default, the **SQ Details** zone does not appear in the **Bill Information** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a bill segment in the **Bill Segment Details** zone.

Bill Segment Calculation Lines

The **Bill Segment Calculation Lines** zone lists the calculation lines of the bill segment. It contains the following columns:

Column Name	Column Description
Header Sequence	Indicates the sequence in which the calculation line is generated.
Sequence	Ideally, the sequence would be 1 unless multiple versions of the rate were effective during the bill period. If there is more than one effective rate version, there will be a separate set of calculation lines for each version applied. The lines that apply to the first part of the bill period would have a Sequence of 1, the lines for the next part of the bill period would have a Sequence of 2 and so on.
Description on Bill	Displays the summarized information about the charge that will be printed on the bill.
Calculated Amount	Displays the calculated charge amount.
Distribution Code	Displays the distribution code which indicates the GL account to which the charge must be posted.
Aggregated Quantity	Displays the total amount which is utilized during a billing cycle.
Billed Quantity	Displays the actual amount based on which the billable charge is created.
Rate	Displays the rate which is used for the calculation.
Pricing Amount	Displays the calculated charge amount. This amount appears in the pricing currency.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Exchange Rate	Indicates the exchange rate which is used when the invoice currency is different from the pricing currency.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Service Quantity	Indicates the service quantity which is used for calculation.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Bill Segment Calculation Lines** zone does not appear in the **Bill Information** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a bill segment in the **Bill Segment Details** zone.

Transaction Details

The **Transaction Details** zone lists the transactions whose charges are billed through the bill segment. It contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID. **Note:** It has a link. On clicking the link, the **Transaction Details** screen appears where you can view the details of the respective transaction.
Transaction Date	Displays the date and time when the transaction was performed.
Transaction Volume	Displays the transaction volume.
Transaction Amount	Displays the transaction amount.
Transaction Currency	Displays the currency in which the transaction was performed.
Transaction Source	Displays the transaction source from where the transaction was received.
Transaction Record Type	Displays the record type of the transaction.
Initial Price Item	Indicates the price item to which the transaction is mapped.
Rule	Indicates the rule which was met while determining initial price item for the transaction. **Note:** It has a link. On clicking the link, the **Rule** screen appears where you can view the details of the respective rule.
Transaction Information	Displays information about the transaction. **Note:** It has a link. On clicking the link, the **Transaction Details** screen appears where you can view the details of the respective transaction.

By default, the **Transaction Details** zone does not appear in the **Bill Information** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a bill segment in the **Bill Segment Details** zone.

On clicking the **Broadcast** (📡) icon corresponding to a transaction, the **Transaction Leg Calculation Lines** zone appears with the details of the respective transaction.

Related Topics

Transaction Leg Calculation Lines

The **Transaction Leg Calculation Lines** zone lists the calculation lines of all legs of the transaction which are rated before billing. It contains the following columns:

Column Name	Column Description
Transaction Calculation ID	Displays the transaction calculation ID.
Sequence	Indicates the sequence in which the calculation line was created. It is the sequence of the rate component which is used in the rate schedule.
Price Component ID	Indicates the price component which is used during calculation.
Rating Information	Indicates the rate which is used for the calculation.
SQI	Indicates the service quantity identifier (SQI) which is used in the calculation.
Billable Service Quantity	Indicates the service quantities used by the rates engine for calculation.
Calculated Amount	Displays the calculated charge amount which is rounded off (i.e. amount in precision). For example, 100. This amount appears in the invoice currency.
Precise Calculated Amount	Displays the calculated charge amount which is not rounded off (i.e. amount with precision and scale). For example, 98.67. This amount appears in the invoice currency.
Exempt Amount	Displays the amount of the calculated charge that the person does not have to pay due to tax exemption.
Base Amount	Displays the total amount derived from the cross-referenced line(s) that the current line then used to calculate the charge amount.
Pricing Amount	Displays the calculated charge amount which is not rounded off (i.e. amount with precision and scale). For example, 98.67. This amount appears in the pricing currency.
Exchange Rate	Indicates the exchange rate which is used when the invoice currency is different from the pricing currency.
Print	Indicates whether information about the calculation line must be printed on the person's bill. The valid values are: • Y • N
Description on Bill	Displays the summarized information about the charge that will be printed on the bill.
Distribution Code	Displays the distribution code which indicates the GL account to which the charge must be posted.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Aggregation Parameter Group ID	Indicates the aggregation parameter group using which the transaction legs are aggregated during calculation.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Transaction Leg Calculation Lines** zone does not appear in the **Bill Information** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a transaction in the **Transaction Details** zone.

Copyright © 2026, Oracle and/or its affiliates.

Hold Details

The **Hold Details** zone lists the hold requests through which the bill is kept on hold or through which the bill generation process of the respective person or account is kept on hold. Note that only those hold requests are listed in this zone where the respective entities' start date is earlier than or equal to the system date and the entities' end date is later than or equal to the system date. It contains the following columns:

Column Name	Column Description
Hold Request Information	Displays information about the hold request. **Note:** It has a link. On clicking the link, the **Hold Request** screen appears where you can view the details of the respective hold request.
Status	Indicates the status of the hold request. The valid values are: • Draft • Active
Entity	Indicates the type of entity for which the hold request is created. The valid value is: • Account • Bill • Person
Entity Information	Indicates the entity for which the hold request is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account**, **Bill**, or **Person** screen appears, respectively, where you can view the details of the respective entity.
Start Date	Displays the date from when the hold request is effective.
End Date	Displays the date till when the hold request is effective.

Offset Details

The **Offset Details** zone lists the offset requests through which the bill is offset against another bill. It contains the following columns:

Column Name	Column Description
Offset Request Information	Displays information about the offset request. **Note:** It has a link. On clicking the link, the **Offset Request** screen appears where you can view the details of the respective offset request.
Offset Amount	Indicates the bill amount which is offset against another bill.
Creation Mode	Indicates the mode in which the offset request is created. The valid values are: • Automatic • Manual

Copyright © 2026, Oracle and/or its affiliates.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Refund and Write Off Details

The **Refund and Write Off Details** zone lists the refund and write off requests through which the bill or its bill segment is either refunded or written off. It contains the following columns:

Column Name	Column Description
Create Date/Time	Displays the date and time when the refund or write off request is created.
Refund/Write Off Request Information	Displays information about the refund or write off request. **Note:** It has a link. On clicking the link, the **Refund Request** or **Write Off Request** screen appears depending on whether the request is created for refund or write off.
Refund/Write Off Amount	Displays the total refund or write off amount.
Status	Indicates the status of the refund or write off request. The valid values are: • Approval In Progress • Cancelled • Deferred Processing • Draft • Processed • Rejected • Voided
Action	Indicates whether the request is created for refund or write off. The valid values are: • Refund • Write Off
Account Information	Indicates the account for which the refund or write off request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Created By	Indicates the user who has created the refund or write off request.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using the **Action** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Viewing the SQ Details of a Bill Segment

Procedure

To view the SQ details of a bill segment:

Copyright © 2026, Oracle and/or its affiliates.

1. Search for the account, whose bill details you want to view, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account whose details you want *t*o view.
   The **Account** tab appears in the **Customer 360° Information** screen.
3. In the **Open Bills** zone, click the **View** (🔗) icon corresponding to the bill whose details you want to view.
   The **Bill Information** screen appears.
4. In the **Bill Segment Details** zone, click the **Broadcast** (📡) icon corresponding *t*o the bill segment whose details you want to view.
   The **SQ Details**, **Bill Segment Calculation Lines**, and **Transaction Details** zones appear.

   Note:

   The **SQ Details** zone appears when the bill segment is generated for an SQI based billable charge.

   The **Transaction Details** zone appears when the bill segment is generated for a billable charge which is created through the transaction aggregation process.
5. View the SQ details of the bill segment in the **SQ Details** zone.

Viewing the Calculation Lines of All Legs of a Transaction

Procedure

To view the calculation lines of all legs of a transaction:

1. Search for the account, whose bill details you want to view, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account whose details you want *t*o view.
   The **Account** tab appears in the **Customer 360° Information** screen.
3. In the **Open Bills** zone, click the **View** (🔗) icon corresponding to the bill whose details you want to view.
   The **Bill Information** screen appears.
4. In the**Bill Segment Details** zone, click the **Broadcast** (📡) icon corresponding *t*o the bill segment whose details you want to view.
   The **SQ Details**, **Bill Segment Calculation Lines**, and **Transaction Details** zones appear.

   Note:

   The **SQ Details** zone appears when the bill segment is generated for an SQI based billable charge.

   The **Transaction Details** zone appears when the bill segment is generated for a billable charge which is created through the transaction aggregation process.
5. In the **Transaction Details** zone, click the **Broadcast** (📡) icon corresponding *t*o the transaction whose calculation lines you want to view.
   The **Transaction Leg Calculation Lines** zone appears.
6. View the calculation lines of all legs which are rated before billing in the **Transaction Leg Calculation Lines** zone.

Pricing Rule (Used for Viewing)

The **Pricing Rule** screen allows you to:

- View the details of a claim pricing rule of a parent customer
- View the details of a claim pricing rule of a bill group
- View the details of an aggregate stop-loss pricing rule of a parent customer
- View the details of an aggregate stop-loss pricing rule of a bill group
- View the details of a specific stop-loss pricing rule of a parent customer

Copyright © 2026, Oracle and/or its affiliates.

- View the details of a specific stop-loss pricing rule of a bill group
- View the details of a retention type claim based pricing rule of a parent customer
- View the details of a retention type claim based pricing rule of a bill group
- View the details of a retention type enrollment based pricing rule of a parent customer
- View the details of a retention type enrollment based pricing rule of a bill group
- View the details of a one-time flat fee pricing rule of a bill group
- View the details of a bill period based recurring flat fee pricing rule of a bill group
- View the details of a frequency based recurring flat fee pricing rule of a bill group
- View the details of an ancillary pricing rule of a parent customer
- View the details of an ancillary pricing rule of a bill group
- View the details of a discount arrangement pricing rule of a parent customer
- View the details of a level funded pricing rule of a parent customer
- View the details of a level funded pricing rule of a bill group
- View the details of an age based pricing rule of a parent customer
- View the details of an age based pricing rule of a bill group
- View the details of a tier based pricing rule of a parent customer
- View the details of a tier based pricing rule of a bill group
- View the details of an additional fee pricing rule of a parent customer
- View the details of an additional fee pricing rule of a bill group
- View the details of a discount charge pricing rule of a parent customer
- View the details of a discount charge pricing rule of a bill group

This screen consists of the following zones:

- Claim on page 764
- Aggregate Stop-Loss on page 767
- Specific Stop-Loss on page 773
- Retention Type Claim Based on page 778
- Retention Type Enrollment Based on page 779
- Flat Fee on page 781
- Ancillary on page 782
- Discount Arrangement on page 784
- Level Funded on page 787
- Age Based Pricing Rule on page 792
- Tier Based Pricing Rule on page 794
- Additional Fee Pricing Rule on page 795
- Discount Charge Pricing Rule on page 796

Claim

The **Claim** zone displays the details of the claim pricing rule for respective parent customer, bill group or a bill group using a pricing group. It contains the following sections:

- **Main** - Displays basic details of the claim pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Person**, **Account** or **Policy** screen appears where you can view the details of the parent customer. This field appears only when the claim pricing rule is viewed for parent customer.
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person**, **Account** or **Policy** screen appears where you can view the details of the bill group. This field appears when the claim pricing rule is viewed for bill group.
Policy Information	Displays the policy information.
	Note: It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the policy.
Pricing Rule Type	Indicates the pricing rule type.
Price Item Information	Indicates the price item information.
	Note: It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the price item.
Pricing Start Date	Displays the claim pricing rule start date.
Pricing End Date	Displays the claim pricing rule end date.
Rate Option	Indicates the rate option of the claim pricing rule for the price item.
Claim Template	Indicates the claim template of the claim pricing rule.
Pricing Group	Displays the pricing group of the claim pricing rule.
	Note: This field appears when the claim pricing rule is viewed for pricing group.

- **Claim Handling Fees** - Lists the claim handling fees for line items in a claim pricing rule. It contains the following columns:

Column Name	Column Description
Fee Type	Indicates the type of charge applicable on the line items.
Fee	Indicates the fee for the line items.
Fee Significance	Indicates the purpose of the imposing the additional fees on the line items.
Fee Applicability	Displays the fee applicability on which the claim handling fees are defined.

</td></tr>
</table>

- **Markup or Markdown Values** - Lists the markup or markdown values for line items in a claim pricing rule. It contains the following columns:

Column Name	Column Description
Pricing Strategy	Indicates the pricing strategy. The valid values are: • Markdown • Markup • None
Markup or Markdown Type	Indicates the markup or markdown value type for claim pricing rule. The valid values are: • Flat Amount • Percentage
Markup or Markdown Amount	Displays the markup or markdown amount.
Rate Type	Displays minimum and maximum markup or markdown defined using the rate type.
Rate	Displays the value for minimum and maximum markup or markdown defined using the rate type.

- **Line Items** - This section contains the following fields:

Field Name	Field Description
Sequence	Displays the sequence number for the line items.
Line Item	Displays the billing line items.
Billing Eligibility	Displays whether the line item is user defined, eligible or not eligible for billing. The valid values are: • Eligible

Aggregate Stop-Loss

The **Aggregate Stop-Loss** zone displays the details of the aggregate stop-loss pricing rule for respective parent customer, bill group or a bill group using a pricing group. It contains the following sections:

Copyright © 2026, Oracle and/or its affiliates.

- **Main** - Displays basic details of the aggregate stop-loss pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person**, **Account** or **Policy** screen appears where you can view the details of the parent customer. This field appears only when the aggregate stop-loss pricing rule is viewed for parent customer.
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person**, **Account** or **Policy** screen appears where you can view the details of the bill group. This field appears when the aggregate stop-loss pricing rule is viewed for bill group.
Policy Information	Displays the policy information. **Note:** It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the policy. This field appears when the aggregate stop-loss pricing rule is viewed for bill group.
Pricing Rule Type	Indicates the pricing rule type.
Price Item Information	Indicates the price item information. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the price item.
Parent Customer's SSL or ASL Pricing Rules	Displays the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule.
Pricing Start Date	Displays the pricing rule start date.
Pricing End Date	Displays the pricing rule end date.
Rate Option	Indicates the rate option of the aggregate stop-loss pricing rule for the price item.
Settlement Frequency	Indicates the settlement frequency that helps to determine the bill after date. The valid values are: • Immediately • Manually (At Required Intervals) • Monthly

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	• Yearly
	Note: This field appears when the aggregate stop-loss pricing rule is viewed for parent customer.
Underwriter Review	Indicates whether the underwriter settlement review flag is on or off. The valid values are: • Yes • No
	Note: This field appears when the aggregate stop-loss pricing rule is viewed for parent customer.
Pricing Group	Displays the pricing group of the aggregate stop-loss pricing rule.
	Note: This field appears when the aggregate stop-loss pricing rule is viewed for pricing group.

- **Accumulation Parameters** - Lists the accumulation parameters in an aggregate stop-loss pricing rule. It contains the following fields:

Field Name	Field Description
Accumulation Group ID	Displays the accumulation group ID generated when accumulation parameters are defined for a specific stop-loss..
ASL Credit Account	Indicates the account in which the aggregate stop-loss amount is credited.

This section also lists the following columns:

Column Name	Column Description
Incurred Start Date	Displays the incurred start date based on the accumulated specific stop-loss.
Incurred End Date	Displays the incurred end date based on the accumulated specific stop-loss.
ASL Payout Limit	Displays the maximum limit for the specific stop-loss at member or main subscriber level.
Paid Start Date	Displays the paid start date based on the accumulated specific stop-loss.
Paid End Date	Displays the paid end date based on the accumulated specific stop-loss.
Settlement Days	Indicates the settlement days used in calculating the settlement date.
ASL Limit (During Policy Period)	Indicates the aggregate stop-loss limit that was set during the policy period. The valid values are: • Policy Based Limit • Enrollment Based Limit • Percentage of Enrollment Based Limit • Enrollment Based or Minimum ASL Limit (Whichever is Greater)
ASL Limit (During Settlement Period)	Indicates the aggregate stop-loss limit that was set during the settlement period. The valid values are: • Policy Based Limit • Enrollment Based Limit

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	• Enrollment Based or Minimum ASL Limit (Whichever is Greater)
Minimum ASL Limit	Displays the minimum ASL limit.
	Note: This field displays value when the **Enrollment Based or Minimum ASL Limit (Whichever is Greater)** option appears for the **ASL Limit (During Policy Period)** or **ASL Limit (During Settlement Period)** field.
Percentage of Enrollment Based Limit	Displays the percentage of enrollment based limit.
	Note: This field displays value when the **Percentage of Enrollment Based Limit** option appears for the**ASL Limit (During Policy Period)** field.
Policy Based Limit	Displays the policy based limit.
	Note: This field displays value when the **Policy Based Limit** option appears for the **ASL Limit (During Policy Period)** or **ASL Limit (During Settlement Period)** field.

Note: This section appears when the aggregate stop loss is created for parent customer.

- **Accumulation Criteria** - This section contains the following columns:

Column Name	Column Description
Accumulation Group ID	Displays the accumulation group ID generated when the accumulation criteria values were defined for a aggregate stop-loss.
Price Item Information	Displays the price item information.
	Note: It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the price item.
Price Item Parameters	This field contains the following columns:

Column Name	Column Description
Price Item Parameter	Displays the multiple parameters based on which you have determined the price item utilization.
	Note: It has a link. On clicking the link, the **Parameter** screen appears where you can view the details of the parameter.
Parameter Value	Displays the value of the parameter.

Note:

This section appears when the aggregate stop-loss is created for a bill group.

Accumulation criteria for each rule appears when the aggregate stop-loss is created for a bill group using a pricing group.

- **Pricing Information** - This section contains the following sub-section:
  - **Claim Pricing Rule** - This sub-section contains the following field:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Effective Claim Pricing Rule	Indicates the claim pricing rule effective for pricing.

This sub-section contains the following sections:

- **Domestic Provider Claims** - Displays the domestic provider claim while calculating aggregate stop-loss. This section contains the following field:

Field Name	Field Description
Exclude ASL (Percentage)	Displays the domestic provider claim billable charge line excluding the aggregate stop-loss in percentage created for domestic provider claim calculation lines.

- **Markup or Markdown Values** - Displays the markup or markdown values for billable charge line. This section contains the following fields:

Field Name	Field Description
Pricing Strategy	Indicates the pricing strategy. The valid values are: • Markdown • Markup • None
Markup or Markdown Type	Indicates the markup or markdown value type for claim line items. The valid values are: • Flat Amount • Percentage
Markup or Markdown Amount	Displays the markup or markdown amount. **Note:** This field displays amount when **Markup or Markdown Type** field is **Flat Amount**.

- **Line Items** - Displays the associated line items eligible for billing. This section contains the following fields:

Field Name	Field Description
Sequence	Displays the sequence number for the line items.
Line Item	Displays the billing line items.
Eligible for Aggregate Stop-Loss	Displays whether the line item is eligible or not eligible for aggregate stop-loss.
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: • Eligible • Not Eligible
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.

Copyright © 2026, Oracle and/or its affiliates.

Note:

This section appears when the aggregate stop-loss is created for a bill group.

Claim line items for each rule appears when the aggregate stop-loss is created for a bill group using a pricing group.

- **Run-In Parameters** - This section contains the following columns:

Column Name	Column Description
Run-In	Displays whether the run-in parameters of the run-in period of policy are to be considered or not in an aggregate stop-loss pricing
Accumulation Group ID	Displays the accumulation group ID that is generated when the accumulation parameter values were defined for an aggregate stop-loss.
Incurred Start Date	Displays the incurred start date based on the run-in period of the policy in the aggregate stop-loss. **Note:** This field displays value when the checkbox for the **Run-In** field is selected.
Incurred End Date	Displays the incurred end date based on the run-in period of the policy in the aggregate stop-loss. **Note:** This field displays value when the checkbox for the **Run-In** field is selected.
Paid Start Date	Displays the paid start date based on the run-in period of the policy in the aggregate stop-loss. **Note:** This field displays value when the checkbox for the **Run-In** field is selected.
Paid End Date	Displays the paid end date based on the run-in period of the policy in the aggregate stop-loss. **Note:** This field displays value when the checkbox for the **Run-In** field is selected.
Run-In Maximum Limit	Displays the maximum limit of the run-in parameters. **Note:** This field displays value when the checkbox for the **Run-In** field is selected.

Note: This section appears when the specific stop loss is created for parent customer.

- **Characteristics** - Lists the characteristics defined for the aggregate stop-loss pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the aggregate stop-loss pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Specific Stop-Loss

The **Specific Stop-Loss** zone displays the details of the specific stop-loss pricing rule for respective parent customer, bill group or a bill group using a pricing group. It contains the following sections:

- **Main** - Displays basic details of the specific stop-loss pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person**, **Account** or **Policy** screen appears where you can view the details of the parent customer. This field appears only when the specific stop-loss pricing rule is viewed for parent customer.
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person**, **Account** or **Policy** screen appears where you can view the details of the bill group. This field appears when the specific stop-loss pricing rule is viewed for bill group.
Policy Information	Displays the policy information.
	Note: It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the policy. This field appears when the specific stop-loss pricing rule is viewed for parent customer.
Pricing Rule Type	Indicates the pricing rule type.
Price Item Information	Indicates the price item information.
	Note: It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the price item.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Parent Customer's SSL Pricing Rule	Displays the pricing date range derived from the parent customer's specific stop-loss pricing rule. **Note:** This field appears when the specific stop-loss pricing rule is viewed for bill group.
Pricing Start Date	Displays the specific stop-loss pricing rule start date.
Pricing End Date	Displays the specific stop-loss pricing rule end date.
Rate Option	Indicates the rate option of the specific stop-loss pricing rule for the price item.
Pricing Rule Usage	Indicates whether the pricing rule is used only for pricing or for pricing and billing. The valid values are: • Pricing • Pricing and Billing **Note:** This field appears when the specific stop-loss pricing rule is viewed for parent customer.
Accumulation Level	Indicate whether the specific stop-loss is accumulated at the member or main subscriber level. The valid values are: • Member • Main Subscriber **Note:** This field appears when the specific stop-loss pricing rule is viewed for parent customer.
Settlement Frequency	Indicates the settlement frequency that helps to determine the bill after date. The valid values are: • Immediately • Manually (At Required Intervals) • Never • Yearly **Note:** This field appears when the specific stop-loss pricing rule is viewed for parent customer.
Underwriter Review	Indicates whether the underwriter settlement review flag is on or off. The valid values are: • Yes • No **Note:** This field appears when the specific stop-loss pricing rule is viewed for parent customer.
Pricing Group	Displays the pricing group of the specific stop-loss pricing rule. **Note:** This field appears when the specific stop-loss pricing rule is viewed for pricing group.

- **Accumulation Parameters** - Lists the accumulation parameters in a specific stop-loss pricing rule. It contains the following field:
