Oracle® Enterprise Manager Ops Center

Creating System Catalog Reports

12*c* Release 3 (12.3.0.0.0)

E60018-01

June 2015

This guide provides an end-to-end example for how to use Oracle Enterprise Manager Ops Center.

Introduction

A System Catalog Report provides information about the current state of the selected operating system. A System Catalog Report lists the current catalog of one or more systems. A system catalog contains a list of operating system software components that are installed on a managed system. Catalogs provide the capability to directly manipulate the installed software components on a single operating system or a group of operating systems.

After an operating system is available and selected, you can view and modify the catalogs, and create historical catalogs. Historical catalogs are snapshots of the system. The software automatically takes a snapshot of the operating system after running a job on the operating system, including when you discover and manage the operating system. A snapshot is stored as a catalog with the time stamp and job details after every update job that you run on a system.

You can create a new catalog at any time and use it to record the state of a system. Catalogs enables us to rollback our system to any previous configuration or to create a profile. With this profile you can apply a consistent configuration throughout our datacenter.

The System Catalog reports on the installed patch state of operating system instances. Unlike the other report types, these are not run from the Reports drawer of the Navigation pane. They are generated and run from the Assets drawer of Navigation pane. The System Catalog Report shows all the patches, packages or RPMs that are installed on an operating system.

See Related Articles and Resources for links to report information and other examples.

This example shows you how to create a System Catalog Report on an Oracle Solaris operating system. You can view the report in an interactive view and the report result in PDF format.

What You Will Need

You need the following before you can create a System Catalog Report:

- A discovered and agent-managed Oracle Solaris 10 operating system.
- Report administrator to create and complete the procedure for System Catalog Report.

ORACLE

Create a System Catalog Report

The following steps define the procedure to successfully create a System Catalog Report on Oracle Solaris 10.

- 1. Navigate to the **Assets** drawer of **Navigation pane** and select an asset.
- 2. Click the System Catalog Report link from the Update section of the Actions pane.

| ≫ A | ctions | |
|------------|--------------------------------|---|
| ⇒ ≣ | Switch Management Access | ^ |
| | Add Assets | |
| d | Find Assets | |
| ~ | Deploy | |
| | Create Oracle Solaris Zones | |
| ~ | Update | |
| ⇒≣ | New Update OS Job | |
| 2 | Deploy/Update Software | |
| 8 | Create Catalog Snapshot | |
| | View/Modify Catalog | |
| T | Compare Catalog Report | |
| Ê | System Catalog Report | |
| Ê | Profile Report | |
| | | Y |

The **System Catalog Report wizard** is displayed.

- **3.** Define the following report parameters, then click **Next**.
 - Report Name: The name of the report.
 - Description: A description of the report.
 - Schedule: Select **Create Schedule** to schedule the report.
 - Output Format: Select PDF as the output format of the report result.
 - Select Targets: The selected asset is displayed in the Add to Target List.

| Define Report F | Parameters | | | * Indicates Required Field | |
|--------------------------|---------------------------|----------------------------|-------------|----------------------------|---|
| This report list the sys | stem's current catalog on | one or more targets. Selec | t the targe | ets to be compared with. | ^ |

| Report Result | Report Parameters | | | | | |
| The following parameter | s are used to generate the report | | | | Save As Template | |
| Name: Ap | ril24 | | Schedule: | Now | | |
| Description: | | | Output Format: | PDF | | |
| Selected Targets | | | | | | |
| | | | | | | |
| Target Name | Product Name | Description | | | | |

What's Next?

After the report is generated, the Report Results pane lets you do the following:

- Save the report result as a template: you can save the report as a template for future use.
- Rerun the report: you can rerun the report to view the changes.
- Extract a profile for the target: you can create an OS Update profile with the available patches/packages.

You can view the report from the Report Results section of the center pane. You can select a report and click PDF or CSV to view and export the report result. The figure below displays the PDF output of the report result.

You can view the report interactively. The View Interactive option enables you to view the generated report in detail. Report result displays the Report name, Report type, Run Date, Status, Targets of the Report, OS updates applicable to selected targets. Report parameters show the target name, product name, description. You can save the report as a template and also rerun the report.

Double-click the report in the Report Results section of the center pane to display the details of the generated System Catalog Report. It details out the summary of the report result and the detailed report result displaying the OS updates applicable to the selected targets.
