6 Administering Integrations
Preface

Using the Adobe eSign Adapter describes how to configure the Adobe eSign Adapter as a connection in an integration in Oracle Integration Cloud Service.

Topics:

• Audience
• Related Resources
• Conventions

Audience

Using the Adobe eSign Adapter is intended for developers who want to use the Adobe eSign Adapter adapter in integrations in Oracle Integration Cloud Service.

Related Resources

Getting Started with the Adobe eSign Adapter

Review the following conceptual topics to learn about the Adobe eSign Adapter and how to use it as a connection in Oracle Integration Cloud Service integrations. A workflow of adapter and integration tasks is also provided.

Topics

• About the Adobe eSign Adapter
• What Application Version Does the Adobe eSign Adapter Support?
• About Oracle Integration Cloud Service
• About Oracle Integration Cloud Service Connections
• About Oracle Integration Cloud Service Integrations
• About Adobe eSign Adapter Use Cases
• Typical Workflow for Creating and Including an Adapter Connection in an Integration

About the Adobe eSign Adapter

Use the Adobe eSign Adapter to prepare and send documents to Adobe eSign for review and approval.

The Adobe eSign Adapter integrates your applications with Adobe Document Cloud. You can replace your paper and ink signature processes with fully automated electronic signature workflows. Use a browser or mobile device to send, sign, track, and manage the review and signature process.

The Adobe eSign Adapter is one of many predefined adapters included with Oracle Integration Cloud Service. You can configure the Adobe eSign Adapter adapter as a connection in an integration in Oracle Integration Cloud Service. For information about Oracle Integration Cloud Service, connections, and integrations, see the following sections:

• About Oracle Integration Cloud Service
• About Oracle Integration Cloud Service Connections
• About Oracle Integration Cloud Service Integrations

What Application Version Does the Adobe eSign Adapter Support?

The Adobe eSign Adapter is compatible with version 5 of the Adobe eSign REST API.
About Oracle Integration Cloud Service

Oracle Integration Cloud Service is a complete, secure, but lightweight integration solution that enables you to connect your applications in the cloud. It simplifies connectivity between your applications and connects both your applications that live in the cloud and your applications that still live on premises. Oracle Integration Cloud Service provides secure, enterprise-grade connectivity regardless of the applications you are connecting or where they reside.

Oracle Integration Cloud Service provides native connectivity to Oracle Software as a Service (SaaS) applications, such as Oracle Sales Cloud, Oracle RightNow Cloud, and so on. Oracle Integration Cloud Service adapters simplify connectivity by handling the underlying complexities of connecting to applications using industry-wide best practices. You only need to create a connection that provides minimal connectivity information for each system. Oracle Integration Cloud Service lookups map the different codes or terms used by the applications you are integrating to describe similar items (such as country or gender codes). Finally, the visual data mapper enables you to quickly create direct mappings between the trigger and invoke data structures. From the mapper, you can also access lookup tables and use standard XPath functions to map data between your applications.

Once you integrate your applications and activate the integrations to the runtime environment, the dashboard displays information about the running integrations so you can monitor the status and processing statistics for each integration. The dashboard measures and tracks the performance of your transactions by capturing and reporting key information, such as throughput, the number of messages processed successfully, and the number of messages that failed processing. You can also manage business identifiers that track fields in messages and manage errors by integrations, connections, or specific integration instances.

About Oracle Integration Cloud Service Connections

Connections define information about the instances of each predefined configuration you are integrating. Oracle Integration Cloud Service includes a set of predefined adapters, which are the types of applications on which you can base your connections, such as Oracle Sales Cloud, Oracle Eloqua Cloud, Oracle RightNow Cloud, and others. A connection is based on an adapter. A connection includes the additional information required by the adapter to communicate with a specific instance of an application (this can be referred to as metadata or as connection details). For example, to create a connection to a specific RightNow Cloud application instance, you must select the Oracle RightNow adapter and then specify the WSDL URL, security policy, and security credentials to connect to it.

Video

About Oracle Integration Cloud Service Integrations

Integrations are the main ingredient of Oracle Integration Cloud Service. An integration includes at least a trigger (source) connection (for requests sent to Oracle Integration Cloud Service) and invoke (target) connection (for requests sent from Oracle Integration Cloud Service to the target) and the field mapping between those two connections.

When you create your integrations, you build on the connections you already created by defining how to process the data for the trigger (source) and invoke (target) connections. This can include defining the type of operations to perform on the data, the business objects and fields against which to perform those operations, required
schemas, and so on. To make this easier, the most complex configuration tasks are handled by Oracle Integration Cloud Service. Once your trigger (source) and invoke (target) connections are configured, the mappers between the two are enabled so you can define how the information is transferred between the trigger (source) and invoke (target) data structures for both the request and response messages.

Video

About Adobe eSign Adapter Use Cases
The Adobe eSign Adapter can be used in scenarios such as the following.

- Select the Send Agreement for Signature operation in one integration to send an agreement for review and signing. Select and configure the REST Adapter as the trigger. Appropriate data mapping between the REST Adapter and Adobe eSign Adapter is performed in the mapper. Invoke the integration endpoint with a REST client to send a POST request to the REST Adapter. Appropriate data mapping between the REST Adapter and Adobe eSign Adapter is performed in the mapper. The Adobe eSign Adapter sends the data as a payload while invoking the configured operation in Adobe eSign.

- Select the Get Agreement Form Data operation in the other integration to retrieve the data entered by a user when they completed the interactive agreement form fields and signed the agreement. Appropriate data mapping between the REST Adapter and Adobe eSign Adapter is performed in the mapper. The REST Adapter sends a GET request to the Adobe eSign Adapter, which returns the form data and the signed agreement.

Typical Workflow for Creating and Including an Adapter Connection in an Integration
Follow a workflow to create a connection with an adapter and include the connection in an integration in Oracle Integration Cloud Service.

<table>
<thead>
<tr>
<th>Step</th>

Creating an Adobe eSign Adapter Connection

A connection is based on an adapter. You define connections to the specific cloud applications that you want to integrate. The following topics describe how to define connections:

Topics

• Prerequisites for Creating a Connection
• Uploading an SSL Certificate
• Creating a Connection
• Editing a Connection
• Cloning a Connection
• Deleting a Connection

Prerequisites for Creating a Connection

These are the prerequisites for creating a connection with the Adobe eSign Adapter.

---

Note:

To create a connection, a trusted public certificate is required. Typically, the certificate is included with Oracle Integration Cloud Service. If you cannot locate the public certificate, contact your administrator. If you download a public certificate, rename the file extension to .crt. To upload the certificate, see Uploading an SSL Certificate.

---

2. Log in to your Adobe Document Cloud Account.

3. Click your user name in the upper right corner and select My Profile.

4. Expand Adobe DC eSign API in the left pane and select API Applications.

5. Create a new application:

   • Click the Create icon in the upper right corner.
Enter a name and a display name for your application.

Select PARTNER.

Click Save.

6. Select the application you created in step 5.

7. Click Configure OAuth for Application.

8. Enter https://{ICS_HOST}:{ICS_SSL_PORT}/icsapis/agent/oauth/callback in the Redirect URI field.

9. Enable the user_login, agreement_read, agreement_write, agreement_send, and library_read scopes.

10. Select the account modifier for the user_login, agreement_read, agreement_write, agreement_send, and library_read scopes.

11. Copy or record the values in the Client ID and Client Secret fields. These values are required to create the connection in Oracle Integration Cloud Service.

12. Click Save.

**Uploading an SSL Certificate**

Certificates are used to validate outbound SSL connections. If you make an SSL connection in which the root certificate does not exist in Oracle Integration Cloud Service, an exception is thrown. In that case, you must upload the appropriate certificate. A certificate enables Oracle Integration Cloud Service to connect with external services. If the external endpoint requires a specific certificate, request the certificate and then upload it into Oracle Integration Cloud Service.

To upload a certificate:

1. From the Oracle Integration Cloud Service home page, click the Administration tab in the upper right corner.

   All certificates currently uploaded to the trust store are displayed in the Certificates dialog. The Filter By > Type list displays the following details:

   - **Preinstalled**: Displays the certificates automatically installed in Oracle Integration Cloud Service. These certificates cannot be deleted.
   - **Uploaded**: Displays the certificates uploaded by individual users. These certificates can be deleted and updated.

   You can also search for certificates in the Search field. The search results are limited to a maximum of ten records sorted by name for performance and usability reasons. To ensure that your search results are more granular, enter as much of the certificate name as possible.

2. Click Upload at the top of the page.

3. In the Upload Certificate dialog box, enter a unique identifier for the certificate.

   This is a name you can use to identify the certificate.

4. Click Browse to locate the certificate file (.cer).
5. Click **Upload**.

6. Click the certificate name to view details such as the subject of the certificate, the issuer of the certificate, the date the certificate was issued, and the date the certificate expires.

**Creating a Connection**

The first step in creating an integration is to create the connections to the applications with which you want to share data.

1. In the Integration Cloud Service toolbar, click **Designer**.

2. On the Designer Portal, click **Connections**.

3. Click **New Connection**.

   The Create Connection — Select Adapter dialog is displayed.

4. Select an adapter from the dialog. You can also search for the type of adapter to use by entering a partial or full name in the Search field, and clicking **Search**.

   The New Connection — Information dialog is displayed.

5. Enter the information to describe the connection.

   - Enter a meaningful name to help others find your connection when they begin to create their own integrations. The name you enter is automatically added in capital letters to the **Identifier** field.

   - Select the role (direction) in which to use this connection (trigger, invoke, or both). Only the roles supported by this adapter are displayed for selection. When you select a role, only the connection properties and security policies appropriate to that role are displayed on the Connections page. If you select an adapter that supports both invoke and trigger, but select only one of those roles, then try to drag the adapter into the section you did not select, you receive an error (for example, configure an Oracle RightNow Cloud Adapter as only an invoke, but drag the adapter to the trigger section).

   - Enter an optional description of the connection.
6. Click Create.

Your connection is created and you are now ready to configure connection details, such as email contact, connection properties, security policies, and connection login credentials.

**Adding a Contact Email**

From the Connection Administrator section of the connection, you can add a contact email address for notifications.

1. In the **Email Address** field, enter an email address to receive email notifications when problems occur.
2. In the upper right corner, click **Save**.

**Configuring Connection Security**

Enter connection information so your application can process requests.

1. Create a connection. See **Creating a Connection**.
2. Click **Configure Credentials**.

The Credentials dialog is displayed. The **Security Policy** field displays **AdobeESign OAuth Authorization Code Credentials**. This value cannot be changed. This policy supports the OAuth 2.0 framework and three-legged authentication.

3. Enter the client ID and client secret values you recorded when you created your Adobe Document Cloud Account application.

See **Prerequisites for Creating a Connection**.

4. Enter the scope values in the **Scope** field.

A scope is a list of authorization permissions for the target application.
5. Click **Provide Consent**.

6. If required, enter your Adobe Document Cloud Account user name and password.

7. Click **Log In**.

8. Return to Oracle Integration Cloud Service to test and save the security credentials.

**Testing the Connection**

Test your connection to ensure that it is successfully configured.

1. In the upper right corner of the page, click **Test**.

   If successful, the following message is displayed and the progress indicator shows 100%.

   The connection test was successful!

2. If your connection was unsuccessful, an error message is displayed with details. Verify that the configuration details you entered are correct.

3. When complete, click **Save**.

**Editing a Connection**

You can edit connection settings after creating a new connection.

1. In the Oracle Integration Cloud Service toolbar, click **Designer**.

2. On the Designer Portal, click **Connections**.

3. On the Connections page, search for the connection name.

4. Select **Edit** from the connection **Actions** menu or click the connection name.

   The Connection page is displayed.

5. To edit the notification email contact, change the email address in the **Email Address** field.

6. To edit the connection properties, click **Configure Connectivity**. Note that some connections do not include this button. If your connector does not include a **Configure Connectivity** button, then click the **Configure Credentials** button.

**Cloning a Connection**

You can clone a copy of an existing connection. It is a quick way to create a new connection.

1. In the Oracle Integration Cloud Service toolbar, click **Designer**.
2. On the Designer Portal, click **Connections**.

3. On the Connections page, search for the connection name.

4. Select **Clone** from the connection **Actions** menu.

   ![Actions](image)

   The Clone Connection dialog is displayed.

5. Enter the connection information.

6. Click **Clone**.

7. Click **Edit** to configure the credentials of your cloned connection. Cloning a connection does not copy the credentials.

   See [Editing a Connection](#) for instructions.

### Deleting a Connection

You can delete a connection from the connection menu.

1. In the Oracle Integration Cloud Service toolbar, click **Designer**.

2. On the Designer Portal, click **Connections**.

3. On the Connections page, search for the connection name.

4. Click **Delete** from the connection **Actions** menu.

   ![Actions](image)

   The Delete Connection dialog is displayed if the connection is not used in an integration.

5. Click **Yes** to confirm deletion.
Creating an Integration

Integrations use the adapter connections you created to your applications, and define how information is shared between those applications. You can create, import, modify, or delete integrations; create integrations to publish or subscribe to messages; add and remove request and response enrichment triggers; and create routing paths for different invoke endpoints in integrations. Click the following topics for more information.

Topic

- Creating Integrations (in Using Oracle Integration Cloud Service)
Adding the Adobe eSign Adapter Connection to an Integration

When you drag the Adobe eSign Adapter into the invoke area of an integration, the Cloud Endpoint Configuration Wizard is invoked. This wizard guides you through configuration of Adobe eSign Adapter endpoint properties.

The following sections describe the wizard pages that guide you through configuration of the Adobe eSign Adapter as an invoke in an integration. The Adobe eSign Adapter cannot be used as a trigger in an integration.

Topics

- Configuring Basic Information Properties
- Configuring Adobe eSign Adapter Invoke Operations Properties
- Configuring Adobe eSign Adapter Invoke Query Parameters
- Reviewing Configuration Values on the Summary Page

For more information about the Adobe eSign Adapter, see About the Adobe eSign Adapter.

Configuring Basic Information Properties

You can enter a name and description on the Basic Info page of each trigger and invoke adapter in your integration.

Topics

- What You Can Do from the Basic Info Page
- What You See on the Basic Info Page

What You Can Do from the Basic Info Page

You can specify the following values on the Basic Info page. The Basic Info page is the initial wizard page that is displayed whenever you drag an adapter to the section of the integration canvas supported by your adapter.

- Specify a meaningful name.
- Specify a description of the responsibilities.

What You See on the Basic Info Page

The following table describes the key information on the Basic Info page.
<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
</table>
| What do you want to call your endpoint?     | Provide a meaningful name so that others can understand the responsibilities of this connection. You can include English alphabetic characters, numbers, underscores, and dashes in the name. You cannot include the following:  
  • Blank spaces (for example, My Inbound Connection)  
  • Special characters (for example, #;836 or rightnow4)  
  • Multibyte characters                                                                                 |
| What does this endpoint do?                 | Enter an optional description of the connection’s responsibilities. For example: This connection receives an inbound request to synchronize account information with the cloud application. |

If you are configuring the SOAP Adapter, there is an additional property.
<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
</table>
| Preview updated SOAP adapter runtime | You can uptake the new 16.3.3 functionality exposed by the SOAP Adapter.  
  - **Yes**: Provides 16.3.3 functionality (TLSv1.2 support, the ability to suppress timestamps for requests and ignore timestamps upon response, and the ability to disable validation of the SOAP action in the WSDL). The underlying transport mechanism used is the cloud SDK-based JCA transport.  
  - **No**: Uses 16.2.5 functionality. The underlying transport mechanism used is the Oracle Service Bus-based HTTP transport.  

**Note:** If you import a pre-16.3.3 integration into Oracle Integration Cloud Service 16.3.3 that includes the SOAP Adapter, you must open the adapter in edit mode and explicitly select **Yes** to uptake the new 16.3.3 functionality.

---

**Configuring Adobe eSign Adapter Invoke Operations Properties**

Enter the Adobe eSign Adapter invoke operation values for your integration.

**Topics**

- What You Can Do from the Adobe eSign Adapter Operations Page
- What You See on the Adobe eSign Adapter Operations Page

**What You Can Do from the Adobe eSign Adapter Operations Page**

The table provides definitions for the Adobe eSign API operations that can be performed on the invoke connection. These operations are listed on the Adobe eSign Adapter Operations page.
<table>
