Oracle® Cloud
Using the Oracle Advanced Queuing (AQ) Adapter
Release 16.3
E76448-01

August 2016
This guide describes how to configure and add the Oracle Advanced Queuing (AQ) Adapter to an integration in Oracle Integration Cloud Service.

Using the Oracle Advanced Queuing (AQ) Adapter describes how to configure the Oracle Advanced Queuing (AQ) Adapter as a connection in an integration in Oracle Integration Cloud Service.

Topics:

• Audience
• Related Resources
• Conventions

Audience

Using the Oracle Advanced Queuing (AQ) Adapter is intended for developers who want to use the Oracle Advanced Queuing (AQ) Adapter in integrations in Oracle Integration Cloud Service.

Related Resources

Conventions

The following text conventions are used in this document:

<table>
<thead>
<tr>
<th>Convention</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>boldface</td>
<td>Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.</td>
</tr>
<tr>
<td>Convention</td>
<td>Meaning</td>
</tr>
<tr>
<td>--------------</td>
<td>-------------------------------------------------------------------------</td>
</tr>
<tr>
<td><em>italic</em></td>
<td>Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.</td>
</tr>
<tr>
<td><strong>monospace</strong></td>
<td>Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.</td>
</tr>
</tbody>
</table>
Getting Started with the Oracle Advanced Queuing (AQ) Adapter

Review the following conceptual topics to learn about the Oracle Advanced Queuing (AQ) Adapter and how to use it as a connection in integrations in Oracle Integration Cloud Service. A typical workflow of adapter and integration tasks is also provided.

Topics

• About the Oracle Advanced Queuing (AQ) Adapter
• About Oracle Integration Cloud Service
• About Oracle Integration Cloud Service Connections
• About Oracle Integration Cloud Service Integrations
• Typical Workflow for Creating and Including an Adapter Connection in an Integration

About the Oracle Advanced Queuing (AQ) Adapter

With just a few clicks the Oracle Advanced Queuing (AQ) Adapter allows bidirectional integration with Oracle Advanced Queuing (AQ) servers. With the Oracle Advanced Queuing (AQ) Adapter you can complete the integration quickly without the need to hire a team of Oracle Advanced Queuing (AQ) applications programming specialists.

The Oracle Advanced Queuing (AQ) Adapter provides a flexible mechanism for bidirectional, asynchronous communication between participating applications. The Oracle Advanced Queuing (AQ) Adapter produces Oracle Advanced Queuing (AQ) messages. The dequeue operation is exposed as a JCA inbound interaction. The Oracle Advanced Queuing (AQ) Adapter supports normalized properties for dequeue operations.

The Oracle Advanced Queuing (AQ) Adapter is one of many predefined adapters included with Oracle Integration Cloud Service. You can configure the Oracle Advanced Queuing (AQ) Adapter as a source connection in an integration in Oracle Integration Cloud Service. For information about Oracle Integration Cloud Service, connections, and integrations, see the following sections:

• About Oracle Integration Cloud Service
• About Oracle Integration Cloud Service Connections
• About Oracle Integration Cloud Service Integrations
About Oracle Integration Cloud Service

Oracle Integration Cloud Service is a complete, secure, but lightweight integration solution that enables you to connect your applications in the cloud. It simplifies connectivity between your applications, and can connect both your applications that live in the cloud and your applications that still live on premises. Oracle Integration Cloud Service provides secure, enterprise-grade connectivity regardless of the applications you are connecting or where they reside.

Oracle Integration Cloud Service provides native connectivity to Oracle Software as a Service (SaaS) applications, such as Oracle Sales Cloud, Oracle RightNow Cloud, and so on. Oracle Integration Cloud Service adapters simplify connectivity by handling the underlying complexities of connecting to applications using industry-wide best practices. You only need to create a connection that provides minimal connectivity information for each system. Oracle Integration Cloud Service lookups map the different codes or terms used by the applications you are integrating to describe similar items (such as country or gender codes). Finally, the visual data mapper enables you to quickly create direct mappings between the trigger and invoke data structures. From the mapper, you can also access lookup tables and use standard XPath functions to map data between your applications.

Once you integrate your applications and activate the integrations to the runtime environment, the dashboard displays information about the running integrations so you can monitor the status and processing statistics for each integration. The dashboard measures and tracks the performance of your transactions by capturing and reporting key information, such as throughput, the number of messages processed successfully, and the number of messages that failed processing. You can also manage business identifiers that track fields in messages and manage errors by integrations, connections, or specific integration instances.

About Oracle Integration Cloud Service Connections

Connections define information about the instances of each predefined configuration you are integrating. Oracle Integration Cloud Service includes a set of predefined adapters, which are the types of applications on which you can base your connections, such as Oracle Sales Cloud, Oracle Eloqua Cloud, Oracle RightNow Cloud, and others. A connection is based on an adapter. A connection includes the additional information required by the adapter to communicate with a specific instance of an application (this can be referred to as metadata or as connection details). For example, to create a connection to a specific RightNow Cloud application instance, you must select the Oracle RightNow adapter and then specify the WSDL URL, security policy, and security credentials to connect to it.

About Oracle Integration Cloud Service Integrations

Integrations are the main ingredient of Oracle Integration Cloud Service. An integration includes at least a trigger (source) connection (for requests sent to Oracle Integration Cloud Service) and invoke (target) connection (for requests sent from Oracle Integration Cloud Service to the target) and the field mapping between those two connections.

When you create your integrations, you build on the connections you already created by defining how to process the data for the trigger (source) and invoke (target) connections. This can include defining the type of operations to perform on the data, the business objects and fields against which to perform those operations, required
schemas, and so on. To make this easier, the most complex configuration tasks are handled by Oracle Integration Cloud Service. Once your trigger (source) and invoke (target) connections are configured, the mappers between the two are enabled so you can define how the information is transferred between the trigger (source) and invoke (target) data structures for both the request and response messages.

Video

Typical Workflow for Creating and Including an Adapter Connection in an Integration

You follow a very simple workflow to create a connection with an adapter and include the connection in an integration in Oracle Integration Cloud Service.

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
<th>More Information</th>

Typical Workflow for Creating and Including an Adapter Connection in an Integration

1-4 Using the Oracle Advanced Queuing (AQ) Adapter
Creating an Oracle Advanced Queuing (AQ) Adapter Connection

A connection is based on an adapter. You define connections to the specific cloud applications that you want to integrate. The following topics describe how to define connections.

Topics

• Prerequisites for Creating a Connection
• Uploading an SSL Certificate
• Creating a Connection
• Editing a Connection
• Cloning a Connection
• Deleting a Connection

Prerequisites for Creating a Connection
You must satisfy the following prerequisites to create a connection with the Oracle Advanced Queuing (AQ) Adapter:

• Ensure that you have write permissions on the Oracle Advanced Queuing (AQ) server.
• Know the Oracle System Identifier (SID) for the Oracle Advanced Queueing (AQ) server.
• Know the Oracle Advanced Queueing (AQ) server host name or IP address and the port number.
• Know the user name and password for the Oracle Advanced Queueing (AQ) server.
• Know the agent group to associate with the Oracle Advanced Queueing (AQ) Adapter. You select the agent group during connection configuration in Configuring an Agent Group.

Uploading an SSL Certificate
Certificates are used to validate outbound SSL connections. If you make an SSL connection in which the root certificate does not exist in Oracle Integration Cloud Service, an exception is thrown. In that case, you must upload the appropriate certificate. A certificate enables Oracle Integration Cloud Service to connect with
external services. If the external endpoint requires a specific certificate, request the certificate and then upload it into Oracle Integration Cloud Service.

To upload a certificate:

1. From the Oracle Integration Cloud Service home page, click the **Administration** tab in the upper right corner.

   All certificates currently uploaded to the trust store are displayed in the Certificates dialog. A navigation panel on the left side of the dialog displays the following details:
   - **All**: Displays all certificates in Oracle Integration Cloud Service.
   - **System**: Displays the certificates automatically included in Oracle Integration Cloud Service. These certificates cannot be deleted.
   - **Uploaded**: Displays the certificates uploaded by individual users. These certificates can be deleted and updated.

2. Click **Upload Certificate** at the top of the page.

3. In the Upload Certificate dialog box, enter a unique identifier for the certificate.

   This is a name you can use to identify the certificate.

4. Click **Browse** to locate the certificate file (.cer).

5. Click **Upload**.

6. Click the certificate name to view details such as the subject of the certificate, the issuer of the certificate, the date the certificate was issued, and the date the certificate expires.

---

**Creating a Connection**

The first step in creating an integration is to create the connections to the applications with which you want to share data.

1. In the Integration Cloud Service toolbar, click **Designer**.

2. On the Designer Portal, click **Connections**.
3. Click **Create New Connection**.

The Create Connection — Select Adapter dialog is displayed.

4. Select an adapter from the dialog. You can also search for the type of adapter to use by entering a partial or full name in the Search field, and clicking **Search**.

The New Connection — Information dialog is displayed.

5. Enter the information to describe the connection.

   • Enter a meaningful name to help others find your connection when they begin to create their own integrations. The name you enter is automatically added in capital letters to the **Identifier** field.

   • Select the role (direction) in which to use this connection (trigger, invoke, or both). Only the roles supported by this adapter are displayed for selection. When you select a role, only the connection properties and security policies appropriate to that role are displayed on the Connections page. If you select an adapter that supports both invoke and trigger, but select only one of those roles, then try to drag the adapter into the section you did not select, you receive an error (for example, configure an Oracle RightNow Cloud Adapter as only an invoke, but drag the adapter to the trigger section).

   • Enter an optional description of the connection.

6. Click **Create**.

Your connection is created and you are now ready to configure connection details, such as email contact, connection properties, security policies, and connection login credentials.

**Adding a Contact Email**

From the Connection Administrator section of the connection, you can add a contact email address for notifications.
1. In the **Email Address** field, enter an email address to receive email notifications when problems occur.

2. In the upper right corner, click **Save**.

### Configuring Connection Properties

Use this procedure to configure the connection properties for the Oracle Advanced Queuing (AQ) Adapter.

1. Click **Configure Connectivity**.

2. Complete these fields:
   a. In the **Host** field, enter the host name for the Oracle Advanced Queueing (AQ) server.
   b. In the **Port** field, enter the Oracle Advanced Queueing (AQ) server communications port number.
   c. In the **SID** field, enter the Oracle System Identifier (SID) for the Oracle Advanced Queueing (AQ) server.
   d. In the **Service Name** field, enter the logical representation of a service used for client connections.

3. Click **OK**.

4. Configure connection security. See **Configuring Connection Security**.

### Configuring Connection Security

Use this procedure to configure security for your Oracle Advanced Queuing (AQ) Adapter connection.

1. Create a connection. See **Creating a Connection**.

2. Click **Configure Credentials**.

   The Credentials dialog is displayed. The Security Policy field displays **Username** Password Token. This value cannot be changed.

3. Complete these fields:
   a. In the **Username** field, enter the user name for the Oracle Advanced Queueing (AQ) server account.
   b. In the **Password** field, enter the password for the Oracle Advanced Queueing (AQ) server account.
   c. In the **Confirm Password** field, enter the password for the Oracle Advanced Queueing (AQ) server account.

4. Click **OK**.

5. Add an agent. See **Configuring an Agent Group**.

### Configuring an Agent Group

Configure an agent group for accessing your on-premises application.
1. Click Configure Agents.
   The Select an Agent Group page appears.

2. Click the name of the agent group.

3. Click Use.

4. Test the connection. See Testing the Connection.

   About Agents and Integrations Between On-Premises Applications and Oracle Integration Cloud Service
   Managing Agent Groups and the On-Premises Agent
   Monitoring Agents

Testing the Connection

Test your connection to ensure that it is successfully configured.

1. In the upper right corner of the page, click Test.
   If successful, the following message is displayed and the progress indicator shows 100%.
   The connection test was successful!

2. If your connection was unsuccessful, an error message is displayed with details. Verify that the configuration details you entered are correct.

3. When complete, click Save.

Editing a Connection

You can edit connection settings after creating a new connection.

1. In the Oracle Integration Cloud Service toolbar, click Designer.

2. On the Designer Portal, click Connections.

3. On the Connections page, select Edit from the connection Actions menu or click the connection name.

   The Connection page is displayed.

4. To edit the notification email contact, change the email address in the Email Address field.

5. To edit the connection properties, click Configure Connectivity. Note that some connections do not include this button. If your connector does not include a Configure Connectivity button, then click the Configure Credentials button.
Cloning a Connection
You can clone a copy of an existing connection. It is a quick way to create a new connection.

1. In the Oracle Integration Cloud Service toolbar, click **Designer**.
2. On the Designer Portal, click **Connections**.
3. On the Connections page, select **Clone** from the connection **Actions** menu.

   ![Actions](image)

   The Clone Connection dialog is displayed.

4. Enter the connection information.
5. Click **Clone**.
6. Click **Edit** to configure the credentials of your cloned connection. Cloning a connection does not copy the credentials.

   See [Editing a Connection](#) for instructions.

Deleting a Connection
You can delete a connection from the connection menu.

1. In the Oracle Integration Cloud Service toolbar, click **Designer**.
2. On the Designer Portal, click **Connections**.
3. On the Connections page, click **Delete** from the connection **Actions** menu.

   ![Actions](image)

   The Delete Connection dialog is displayed if the connection is not used in an integration.

4. Click **Yes** to confirm deletion.
Integrations use the adapter connections you created to your applications, and define how information is shared between those applications. You can view, export, create, import, edit, or delete integrations; create integrations to publish or subscribe to messages; add and remove request and response enrichment triggers; and create routing paths for different target endpoints in integrations. Click the following topics for more information.

**Topic**

- Creating Integrations (in Using Oracle Integration Cloud Service)
Using the Oracle Advanced Queuing (AQ) Adapter
Adding the Oracle Advanced Queuing (AQ) Adapter Connection to an Integration

When you drag the Oracle Advanced Queuing (AQ) Adapter onto the integration canvas as a trigger, the Adapter Endpoint Configuration Wizard appears. Use the wizard to configure the Oracle Advanced Queuing (AQ) Adapter endpoint properties.

These topics describe the Cloud Endpoint Configuration wizard pages that assist you with the creation of the Oracle Advanced Queuing (AQ) Adapter integration.

Topics

- Configuring Basic Information Properties
- Configuring Oracle Advanced Queuing (AQ) Adapter Trigger Dequeue Operations Properties
- Reviewing Configuration Values on the Summary Page

For more information about the Oracle Advanced Queuing (AQ) Adapter, see About the Oracle Advanced Queuing (AQ) Adapter.

Configuring Basic Information Properties

You can enter a name and description on the Basic Info page of each trigger and invoke adapter in your integration.

Topics

- What You Can Do from the Basic Info Page
- What You See on the Basic Info Page

What You Can Do from the Basic Info Page

You can specify the following values on the Basic Info page. The Basic Info page is the initial wizard page that is displayed whenever you drag an adapter to the trigger (source) or invoke (target) area supported by your adapter.

- Specify a meaningful name.
- Specify a description of the responsibilities.

What You See on the Basic Info Page

The following table describes the key information on the Basic Info page.
Configuring Oracle Advanced Queuing (AQ) Adapter Trigger Dequeue Operations Properties

Enter the Oracle Advanced Queuing (AQ) Adapter trigger dequeue operation properties for your integration.

Topics

• What You Can Do from the Oracle Advanced Queuing (AQ) Adapter Dequeue Operations Page

• What You See on the Oracle Advanced Queuing (AQ) Adapter Dequeue Operations Page

What You Can Do from the Oracle Advanced Queuing (AQ) Adapter Dequeue Operations Page

You select the database schema and queue name. The database schema must be associated with the business event system queue type.

What You See on the Oracle Advanced Queuing (AQ) Adapter Dequeue Operations Page

The following table describes the key information on the Oracle Advanced Queuing (AQ) Adapter Dequeue Operations page.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Queue Type</td>
<td>Identifies the queue type for the dequeue operation.</td>
</tr>
<tr>
<td>Select Database Schema</td>
<td>Selects the database schema for the dequeue operation.</td>
</tr>
</tbody>
</table>
Reviewing Configuration Values on the Summary Page

You can review the specified adapter configuration values on the Summary page.

Topics

• What You Can Do from the Summary Page

• What You See on the Summary Page

What You Can Do from the Summary Page

You can review trigger (source) or invoke (target) configuration details from the Summary page. The Summary page is the final wizard page for each adapter after you have completed your configuration.

• View the configuration details you defined for the trigger (source) or invoke (target) adapter. For example, if you have defined an inbound trigger (source) adapter with a request business object and immediate response business object, specific details about this configuration are displayed on the Summary page.

• Click Next Steps to view the steps required to complete and activate the integration.

• Click Done to save your configuration details.

• Click a specific tab in the left panel or click Back to access a specific page to update your configuration definitions.

• Click Cancel to cancel your configuration details.

What You See on the Summary Page

The following table describes the key information on the Summary page.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Select Queue Name</td>
<td>Identifies the queue name for the dequeue operation.</td>
</tr>
<tr>
<td>Consumer Name</td>
<td>Identifies the consumer name for the dequeue operation.</td>
</tr>
<tr>
<td>Do you want to define a schema for this endpoint</td>
<td>Indicates if a schema is defined for the endpoint.</td>
</tr>
<tr>
<td>Select Other File</td>
<td>Selects the schema file for the endpoint.</td>
</tr>
<tr>
<td>Selected File Name</td>
<td>Identifies the name of the schema file selected for the endpoint.</td>
</tr>
<tr>
<td>Select the Schema Element</td>
<td>Selects the schema element for the dequeue operation.</td>
</tr>
</tbody>
</table>

Adding the Oracle Advanced Queuing (AQ) Adapter Connection to an Integration 4-3
<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Summary</td>
<td>Displays a summary of the trigger (source) or invoke (target) configuration values you defined on previous pages of the wizard. The information that is displayed can vary by adapter. For some adapters, the selected business objects and operation name are displayed. For adapters for which a generated XSD file is provided, click the XSD link to view a read-only version of the file. To return to a previous page to update any values, click the appropriate tab in the left panel or click Back.</td>
</tr>
</tbody>
</table>
Creating Mappings and Lookups in Integrations

You must map data between trigger connections and invoke connections in integrations. You can also optionally create lookups in integrations.

Topics

- Mapping Integration Cloud Service Data (in Using Oracle Integration Cloud Service)
- Creating Lookups (in Using Oracle Integration Cloud Service)
Oracle Integration Cloud Service provides you with the information and tools required to activate, monitor, and manage your integrations in the runtime environment.

**Topic**

- Administering Integration Cloud Service (in *Using Oracle Integration Cloud Service*)
