Oracle® Cloud
Using the Gmail Adapter
Release 16.3
E69237-04

September 2016
This guide describes how to configure and add the Gmail Adapter to an integration in Oracle Integration Cloud Service.

6  Administering Integrations
Preface

Using the Gmail Adapter describes how to configure the Gmail Adapter as a connection in an integration in Oracle Integration Cloud Service.

Topics:

• Audience
• Related Resources
• Conventions

Audience

Using the Gmail Adapter is intended for developers who want to use the Gmail Adapter in integrations in Oracle Integration Cloud Service.

Related Resources

For more information, see these Oracle resources:

• Oracle Cloud

</tr>
<tr>
<td>------------</td>
<td>-------------------------------------------------------------------------</td>
</tr>
<tr>
<td><em>italic</em></td>
<td>Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.</td>
</tr>
<tr>
<td><code>monospace</code></td>
<td>Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.</td>
</tr>
</tbody>
</table>
Getting Started with the Gmail Adapter

Review the following conceptual topics to learn about the Gmail Adapter and how to use it as a connection in integrations in Oracle Integration Cloud Service. A typical workflow of adapter and integration tasks is also provided.

Topics
- About the Gmail Adapter
- What Application Version Does the Gmail Adapter Support?
- About Oracle Integration Cloud Service
- About Oracle Integration Cloud Service Connections
- About Oracle Integration Cloud Service Integrations
- Typical Workflow for Creating and Including an Adapter Connection in an Integration

About the Gmail Adapter
The Gmail Adapter enables you to create an integration with a Gmail application.

Gmail is a free email service provided by Google. Users can access Gmail as secure web mail and also through the Post Office Protocol version 3 (POP3) or Internet Message Access Protocol version 4 (IMAP4) protocols.

The Gmail Adapter is one of many predefined adapters included with Oracle Integration Cloud Service. You can configure the Gmail Adapter as a connection in an integration in Oracle Integration Cloud Service. For information about Oracle Integration Cloud Service, connections, and integrations, see the following sections:
- About Oracle Integration Cloud Service
- About Oracle Integration Cloud Service Connections
- About Oracle Integration Cloud Service Integrations

What Application Version Does the Gmail Adapter Support?
The Gmail Adapter is compatible with version 1.0 of the Gmail REST API.

About Oracle Integration Cloud Service
Oracle Integration Cloud Service is a complete, secure, but lightweight integration solution that enables you to connect your applications in the cloud. It simplifies connectivity between your applications and connects both your applications that live in the cloud and your applications that still live on premises. Oracle Integration Cloud
Service provides secure, enterprise-grade connectivity regardless of the applications you are connecting or where they reside.

Oracle Integration Cloud Service provides native connectivity to Oracle Software as a Service (SaaS) applications, such as Oracle Sales Cloud, Oracle RightNow Cloud, and so on. Oracle Integration Cloud Service *adapters* simplify connectivity by handling the underlying complexities of connecting to applications using industry-wide best practices. You only need to create a *connection* that provides minimal connectivity information for each system. Oracle Integration Cloud Service *lookups* map the different codes or terms used by the applications you are integrating to describe similar items (such as country or gender codes). Finally, the visual data mapper enables you to quickly create direct mappings between the trigger and invoke data structures. From the mapper, you can also access lookup tables and use standard XPath functions to map data between your applications.

Once you integrate your applications and activate the integrations to the runtime environment, the dashboard displays information about the running integrations so you can monitor the status and processing statistics for each integration. The dashboard measures and tracks the performance of your transactions by capturing and reporting key information, such as throughput, the number of messages processed successfully, and the number of messages that failed processing. You can also manage business identifiers that track fields in messages and manage errors by integrations, connections, or specific integration instances.

### About Oracle Integration Cloud Service Connections

Connections define information about the instances of each predefined configuration you are integrating. Oracle Integration Cloud Service includes a set of predefined *adapters*, which are the types of applications on which you can base your connections, such as Oracle Sales Cloud, Oracle Eloqua Cloud, Oracle RightNow Cloud, and others. A connection is based on an adapter. A connection includes the additional information required by the adapter to communicate with a specific instance of an application (this can be referred to as metadata or as connection details). For example, to create a connection to a specific RightNow Cloud application instance, you must select the Oracle RightNow adapter and then specify the WSDL URL, security policy, and security credentials to connect to it.

[Video](#)

### About Oracle Integration Cloud Service Integrations

Integrations are the main ingredient of Oracle Integration Cloud Service. An integration includes at the least a trigger (source) connection (for requests sent to Oracle Integration Cloud Service) and invoke (target) connection (for requests sent from Oracle Integration Cloud Service to the target) and the field mapping between those two connections.

When you create your integrations, you build on the *connections* you already created by defining how to process the data for the trigger (source) and invoke (target) connections. This can include defining the type of operations to perform on the data, the business objects and fields against which to perform those operations, required schemas, and so on. To make this easier, the most complex configuration tasks are handled by Oracle Integration Cloud Service. Once your trigger (source) and invoke (target) connections are configured, the mappers between the two are enabled so you can define how the information is transferred between the trigger (source) and invoke (target) data structures for both the request and response messages.

[Video](#)
Typical Workflow for Creating and Including an Adapter Connection in an Integration

You follow a very simple workflow to create a connection with an adapter and include the connection in an integration in Oracle Integration Cloud Service.

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
<th>More Information</th>
</tr>
</thead>
<tbody>
<tr>

Creating a Gmail Adapter Connection

A connection is based on an adapter. You define connections to the specific cloud applications that you want to integrate. The following topics describe how to define connections:

Topics
- Prerequisites for Creating a Connection
- Uploading an SSL Certificate
- Creating a Connection
- Editing a Connection
- Cloning a Connection
- Deleting a Connection

Prerequisites for Creating a Connection
To use the Gmail Adapter, you must first have access to the Gmail API for your integration. To access the Gmail API, you must create a Google project.

To create a Google project:
2. Expand the Select a project list in the top right corner.
3. Select an existing project to use or create a new project.
4. Click Use Google APIs.
5. Search for and select the Gmail API.
6. Click Enable API.
7. On the left side, click the Credentials tab.
8. From the New credentials list, select OAuth client ID.

To create an OAuth client ID, you must first set a product name on the consent screen.

a. Click Configure consent screen.

b. In the Product name shown to users field, enter a product name, then click Save.
9. Under Application Type, select Web Application.

The page is refreshed to display additional fields for updating.

10. In the Name field, specify a name for the OAuth2.0 client ID credential.

11. In the Authorized Redirect URI field, enter the following URL:

https://{ICS_HOST}:{ICS_SSL_PORT}/icsapis/agent/oauth/callback

12. Click Create. This provides you with the client ID and client secret.

13. Copy and paste this information to a safe location because it is required for creating a Gmail Adapter connection, then click OK.

**Note:** Before creating a Gmail connection, you must upload the trusted Gmail public certificate to Integration Cloud Service. The trusted Gmail public certificate can be downloaded from https://gmail.com. Rename the GoogleCertificate.txt file extension to .cer. To upload the certificate, see Uploading an SSL Certificate.

---

### Uploading an SSL Certificate

Certificates are used to validate outbound SSL connections. If you make an SSL connection in which the root certificate does not exist in Oracle Integration Cloud Service, an exception is thrown. In that case, you must upload the appropriate certificate. A certificate enables Oracle Integration Cloud Service to connect with external services. If the external endpoint requires a specific certificate, request the certificate and then upload it into Oracle Integration Cloud Service.

To upload a certificate:

1. From the Oracle Integration Cloud Service home page, click the Administration tab in the upper right corner.

   All certificates currently uploaded to the trust store are displayed in the Certificates dialog. The Filter By > Type list displays the following details:

   - **Preinstalled:** Displays the certificates automatically installed in Oracle Integration Cloud Service. These certificates cannot be deleted.

   - **Uploaded:** Displays the certificates uploaded by individual users. These certificates can be deleted and updated.

   You can also search for certificates in the Search field. The search results are limited to a maximum of ten records sorted by name for performance and usability reasons. To ensure that your search results are more granular, enter as much of the certificate name as possible.

2. Click Upload at the top of the page.

3. In the Upload Certificate dialog box, enter a unique identifier for the certificate.

   This is a name you can use to identify the certificate.

4. Click Browse to locate the certificate file (.cer).

5. Click Upload.
6. Click the certificate name to view details such as the subject of the certificate, the issuer of the certificate, the date the certificate was issued, and the date the certificate expires.

Creating a Connection

The first step in creating an integration is to create the connections to the applications with which you want to share data.

1. In the Integration Cloud Service toolbar, click Designer.

2. On the Designer Portal, click Connections.

3. Click New Connection.

The Create Connection — Select Adapter dialog is displayed.

4. Select an adapter from the dialog. You can also search for the type of adapter to use by entering a partial or full name in the Search field, and clicking Search.

The New Connection — Information dialog is displayed.

5. Enter the information to describe the connection.

- Enter a meaningful name to help others find your connection when they begin to create their own integrations. The name you enter is automatically added in capital letters to the Identifier field.

- Select the role (direction) in which to use this connection (trigger, invoke, or both). Only the roles supported by this adapter are displayed for selection. When you select a role, only the connection properties and security policies appropriate to that role are displayed on the Connections page. If you select an adapter that supports both invoke and trigger, but select only one of those roles, then try to drag the adapter into the section you did not select, you receive an error (for example, configure an Oracle RightNow Cloud Adapter as only an invoke, but drag the adapter to the trigger section).

- Enter an optional description of the connection.
6. Click **Create**.

   Your connection is created and you are now ready to configure connection details, such as email contact, connection properties, security policies, and connection login credentials.

### Adding a Contact Email

From the Connection Administrator section of the connection, you can add a contact email address for notifications.

1. In the **Email Address** field, enter an email address to receive email notifications when problems occur.

2. In the upper right corner, click **Save**.

### Configuring Connection Security

Configure security for your Gmail connection by selecting the security policy and specifying the client ID and client secret. The security policy grants you authorization access to the resources of the Gmail application. When your Oracle Gmail connection requests access to the resources stored on the resource server, your connection is authenticated by sending the client ID and the client secret to the authorization server.

1. Click **Configure Credentials**.

2. In the **Security Policy** field, note that the **Google OAuth Authorization Code Credentials** security policy is displayed by default, and cannot be deselected.

3. In the **Client ID** field, enter the client ID created after completing the steps in **Prerequisites for Creating a Connection**.

4. In the **Client Secret** field, enter the client secret created after completing the steps in **Prerequisites for Creating a Connection**.

5. In the **Scope** field, click to display a list of available scopes.

6. Copy and paste the scopes to use, separated by blank spaces.

7. Click **Provide Consent** to allow consent.

   A dialog is displayed indicating that an OAuth request is being initiated from Oracle Integration Cloud Service to Gmail. If the redirect URL in the project in the developer console is correct, the consent screen is displayed. Otherwise, an error occurs indicating that there is a redirect URI mismatch. Once consent is given, a successful consent page is displayed.

8. Click **OK**.

   You are now ready to test your connection.

### Testing the Connection

Test your connection to ensure that it is successfully configured.

1. In the upper right corner of the page, click **Test**.
If successful, the following message is displayed and the progress indicator shows 100%.

The connection test was successful!

2. If your connection was unsuccessful, an error message is displayed with details. Verify that the configuration details you entered are correct.

3. When complete, click Save.

Editing a Connection

You can edit connection settings after creating a new connection.

1. In the Oracle Integration Cloud Service toolbar, click Designer.

2. On the Designer Portal, click Connections.

3. On the Connections page, search for the connection name.

4. Select Edit from the connection Actions menu or click the connection name.

The Connection page is displayed.

5. To edit the notification email contact, change the email address in the Email Address field.

6. To edit the connection properties, click Configure Connectivity. Note that some connections do not include this button. If your connector does not include a Configure Connectivity button, then click the Configure Credentials button.

Cloning a Connection

You can clone a copy of an existing connection. It is a quick way to create a new connection.

1. In the Oracle Integration Cloud Service toolbar, click Designer.

2. On the Designer Portal, click Connections.

3. On the Connections page, search for the connection name.

4. Select Clone from the connection Actions menu.

The Clone Connection dialog is displayed.
5. Enter the connection information.

6. Click **Clone**.

7. Click **Edit** to configure the credentials of your cloned connection. Cloning a connection does not copy the credentials.

See **Editing a Connection** for instructions.

**Deleting a Connection**

You can delete a connection from the connection menu.

1. In the Oracle Integration Cloud Service toolbar, click **Designer**.

2. On the Designer Portal, click **Connections**.

3. On the Connections page, search for the connection name.

4. Click **Delete** from the connection **Actions** menu.

The Delete Connection dialog is displayed if the connection is not used in an integration.

5. Click **Yes** to confirm deletion.
integrations use the adapter connections you created to your applications, and define how information is shared between those applications. you can create, import, modify, or delete integrations; create integrations to publish or subscribe to messages; add and remove request and response enrichment triggers; and create routing paths for different invoke endpoints in integrations. click the following topic for more information.

**topic**

- creating integrations (in *using oracle integration cloud service*)
When you drag the Gmail Adapter into the invoke area of an integration, the Adapter Endpoint Configuration Wizard is invoked. This wizard guides you through configuration of Gmail Adapter endpoint properties.

The following sections describe the wizard pages that guide you through configuration of the Gmail Adapter as an invoke in an integration. The Gmail Adapter cannot be used as a trigger in an integration.

Topics

• Configuring Basic Information Properties
• Configuring Gmail Adapter Invoke Operation Selection Properties
• Reviewing Configuration Values on the Summary Page

For more information about the Gmail Adapter, see About the Gmail Adapter.

Configuring Basic Information Properties

You can enter a name and description on the Basic Info page of each adapter in your integration.

Topics

• What You Can Do from the Basic Info Page
• What You See on the Basic Info Page

What You Can Do from the Basic Info Page

You can specify the following values on the Basic Info page. The Basic Info page is the initial wizard page that is displayed whenever you drag an adapter to the section of the integration canvas supported by your adapter.

• Specify a meaningful name.
• Specify a description of the responsibilities.

What You See on the Basic Info Page

The following table describes the key information on the Basic Info page.
<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
</table>
| What do you want to call your endpoint?      | Provide a meaningful name so that others can understand the responsibilities of this connection. You can include English alphabetic characters, numbers, underscores, and dashes in the name. You cannot include the following:  
  - Blank spaces (for example, My Inbound Connection)  
  - Special characters (for example, #;836 or righ(t)now4)  
  - Multibyte characters |
| What does this endpoint do?                  | Enter an optional description of the connection’s responsibilities. For example:  
  This connection receives an inbound request to synchronize account information with the cloud application. |

If you are configuring the SOAP Adapter, there is an additional property.
**Preview updated SOAP adapter runtime**

You can uptake the new 16.3.3 functionality exposed by the SOAP Adapter.

- **Yes**: Provides 16.3.3 functionality (TLSv1.2 support, the ability to suppress timestamps for requests and ignore timestamps upon response, and the ability to disable validation of the SOAP action in the WSDL). The underlying transport mechanism used is the cloud SDK-based JCA transport.

- **No**: Uses 16.2.5 functionality. The underlying transport mechanism used is the Oracle Service Bus-based HTTP transport.

**Note**: If you import a pre-16.3.3 integration into Oracle Integration Cloud Service 16.3.3 that includes the SOAP Adapter, you must open the adapter in edit mode and explicitly select **Yes** to uptake the new 16.3.3 functionality.

---

**Configuring Gmail Adapter Invoke Operation Selection Properties**

Enter the Gmail Adapter invoke operation selection parameters.

**Topics**

- What You Can Do from the Gmail Adapter Operation Selection Page
- What You See on the Gmail Adapter Operation Selection Page

**What You Can Do from the Gmail Adapter Operation Selection Page**

You can configure the following parameter on the Gmail Adapter invoke Operation Selection page.

- Select the Gmail API operation to perform.
What You See on the Gmail Adapter Operation Selection Page

The following table describes the key information on the Gmail Adapter Operation Selection page.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Select Operation</td>
<td>Select the Gmail API operation to perform.</td>
</tr>
<tr>
<td></td>
<td>• Notification Watch</td>

</tr>
</tbody>
</table>

The Gmail resource URI and template parameter associated with your selected operation are displayed on the Summary page of this wizard. For information about the Gmail API, visit the following URL:

https://developers.google.com/gmail/api/v1/reference

Reviewing Configuration Values on the Summary Page

You can review the specified adapter configuration values on the Summary page.

Topics

- What You Can Do from the Summary Page
- What You See on the Summary Page

What You Can Do from the Summary Page

You can review configuration details from the Summary page. The Summary page is the final wizard page for each adapter after you have completed your configuration.

- View the configuration details you defined for the adapter. For example, if you have defined an inbound trigger (source) adapter with a request business object and immediate response business object, specific details about this configuration are displayed on the Summary page.

- Click Done if you want to save your configuration details.
- Click a specific tab in the left panel or click **Back** to access a specific page to update your configuration definitions.
- Click **Cancel** to cancel your configuration details.

### What You See on the Summary Page

The following table describes the key information on the Summary page.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Summary</td>
<td>Displays a summary of the configuration values you defined on previous pages of the wizard. The information that is displayed can vary by adapter. For some adapters, the selected business objects and operation name are displayed. For adapters for which a generated XSD file is provided, click the XSD link to view a read-only version of the file. To return to a previous page to update any values, click the appropriate tab in the left panel or click <strong>Back</strong>.</td>
</tr>
</tbody>
</table>
Creating Mappings and Lookups in Integrations

You must map data between trigger connections and invoke connections in integrations. You can also optionally create lookups in integrations.

**Topics**

- Mapping Integration Cloud Service Data (in *Using Oracle Integration Cloud Service*)
- Creating Lookups (in *Using Oracle Integration Cloud Service*)
Administering Integrations

Oracle Integration Cloud Service provides you with the information and tools required to activate, monitor, and manage your integrations in the runtime environment.

**Topic**
- Administering Integration Cloud Service (in *Using Oracle Integration Cloud Service*)
