Preface

Using the Microsoft Email Adapter describes how to configure the Microsoft Email Adapter as a connection in an integration in Oracle Integration Cloud Service.

Topics:

• Audience
• Related Resources
• Conventions

Audience

Using the Microsoft Email Adapter is intended for developers who want to use the Microsoft Email Adapter in integrations in Oracle Integration Cloud Service.

Related Resources

Getting Started with the Microsoft Email Adapter

Review the following conceptual topics to learn about the Microsoft Email Adapter and how to use it as a connection in integrations in Integration Cloud Service. A typical workflow of adapter and integration tasks is also provided.

**Topics**

- About the Microsoft Email Adapter
- What Application Version Does the Microsoft Email Adapter Support?
- About Oracle Integration Cloud Service
- About Oracle Integration Cloud Service Connections
- About Oracle Integration Cloud Service Integrations
- About Microsoft Email Adapter Use Cases
- Typical Workflow for Creating and Including an Adapter Connection in an Integration

**About the Microsoft Email Adapter**

The Microsoft Email Adapter enables you to create an integration with a Microsoft Email application.

Use the Microsoft Email Adapter in an Oracle Integration Cloud Service integration to retrieve messages in Office 365 and Outlook.com. The Microsoft Email Adapter enables you to manage messages, manage folders, and so on.

The Microsoft Email Adapter is one of many predefined adapters included with Oracle Integration Cloud Service. You can configure the Microsoft Email Adapter as a connection in an integration in Oracle Integration Cloud Service. For information about Oracle Integration Cloud Service, connections, and integrations, see the following sections:

- About Oracle Integration Cloud Service
- About Oracle Integration Cloud Service Connections
- About Oracle Integration Cloud Service Integrations

**What Application Version Does the Microsoft Email Adapter Support?**

The Microsoft Email Adapter is compatible with version 2.0 of the Mail REST API.
About Oracle Integration Cloud Service

Oracle Integration Cloud Service is a complete, secure, but lightweight integration solution that enables you to connect your applications in the cloud. It simplifies connectivity between your applications and connects both your applications that live in the cloud and your applications that still live on premises. Oracle Integration Cloud Service provides secure, enterprise-grade connectivity regardless of the applications you are connecting or where they reside.

Oracle Integration Cloud Service provides native connectivity to Oracle Software as a Service (SaaS) applications, such as Oracle Sales Cloud, Oracle RightNow Cloud, and so on. Oracle Integration Cloud Service adapters simplify connectivity by handling the underlying complexities of connecting to applications using industry-wide best practices. You only need to create a connection that provides minimal connectivity information for each system. Oracle Integration Cloud Service lookups map the different codes or terms used by the applications you are integrating to describe similar items (such as country or gender codes). Finally, the visual data mapper enables you to quickly create direct mappings between the trigger and invoke data structures. From the mapper, you can also access lookup tables and use standard XPath functions to map data between your applications.

Once you integrate your applications and activate the integrations to the runtime environment, the dashboard displays information about the running integrations so you can monitor the status and processing statistics for each integration. The dashboard measures and tracks the performance of your transactions by capturing and reporting key information, such as throughput, the number of messages processed successfully, and the number of messages that failed processing. You can also manage business identifiers that track fields in messages and manage errors by integrations, connections, or specific integration instances.

About Oracle Integration Cloud Service Connections

Connections define information about the instances of each predefined configuration you are integrating. Oracle Integration Cloud Service includes a set of predefined adapters, which are the types of applications on which you can base your connections, such as Oracle Sales Cloud, Oracle Eloqua Cloud, Oracle RightNow Cloud, and others. A connection is based on an adapter. A connection includes the additional information required by the adapter to communicate with a specific instance of an application (this can be referred to as metadata or as connection details). For example, to create a connection to a specific RightNow Cloud application instance, you must select the Oracle RightNow adapter and then specify the WSDL URL, security policy, and security credentials to connect to it.

Video

About Oracle Integration Cloud Service Integrations

Integrations are the main ingredient of Oracle Integration Cloud Service. An integration includes at least a trigger (source) connection (for requests sent to Oracle Integration Cloud Service) and invoke (target) connection (for requests sent from Oracle Integration Cloud Service to the target) and the field mapping between those two connections.

When you create your integrations, you build on the connections you already created by defining how to process the data for the trigger (source) and invoke (target) connections. This can include defining the type of operations to perform on the data, the business objects and fields against which to perform those operations, required
schemas, and so on. To make this easier, the most complex configuration tasks are handled by Oracle Integration Cloud Service. Once your trigger (source) and invoke (target) connections are configured, the mappers between the two are enabled so you can define how the information is transferred between the trigger (source) and invoke (target) data structures for both the request and response messages.

About Microsoft Email Adapter Use Cases

The Microsoft Email Adapter can be used in the following scenarios.

- You can integrate a Microsoft email account with the Microsoft Email Adapter to return information such as emails, attachments, and folders
- You can integrate a Microsoft email account with the Microsoft Email Adapter to complete tasks such as sending email, creating new folders, deleting email and attachments, and creating new file attachments.

Typical Workflow for Creating and Including an Adapter Connection in an Integration

Follow a workflow to create a connection with an adapter and include the connection in an integration in Oracle Integration Cloud Service.

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
<th>More Information</th>
</tr>
</thead>
<tbody>

Creating a Microsoft Email Adapter Connection

A connection is based on an adapter. You define connections to the specific cloud applications that you want to integrate. The following topics describe how to define connections:

Topics

• Prerequisites for Creating a Connection
• Uploading an SSL Certificate
• Creating a Connection
• Editing a Connection
• Cloning a Connection
• Deleting a Connection

Prerequisites for Creating a Connection

These are the prerequisites for creating a connection with the Microsoft Email Adapter.

Note:

Before creating an Microsoft Email Adapter connection, you must upload the trusted Microsoft Email public certificate to Oracle Integration Cloud Service. The Microsoft Email public certificate is created when you create the private key. Rename the public certificate file extension to .crt. To upload the certificate, see Uploading an SSL Certificate.

1. Create a Microsoft Outlook account.

2. Submit a request to outlookdev@microsoft.com to enable REST API functionality on the Microsoft Outlook account. You can also create a developer preview account by submitting a request to the same email address.

3. Follow the instructions provided in the email response sent by Microsoft.

4. Open a web browser and navigate to https://apps.dev.microsoft.com/.

5. Click Sign in with a Microsoft account and enter your email address and password.
6. Click **Sign in**.

7. Click **Add an app**.

8. Enter a name for the application and click **Create application**.

9. Click **Generate New Key Pair** to generate a private key.

10. Enter a password for the key and click **Ok**.

11. Select a location for the certificate and click **OK**.

12. Copy or record the values in the **Application Id** and **Private Key** values. These values are required to create the connection in Oracle Integration Cloud Service.

13. Click **Add Platform**.

14. Click **Web**.

15. Enter `https://your_server/icsapis/agent/oauth/callback` in the **Enter a url** field.

16. Scroll to the bottom of the page and click **Save**.

---

### Uploading an SSL Certificate

Certificates are used to validate outbound SSL connections. If you make an SSL connection in which the root certificate does not exist in Oracle Integration Cloud Service, an exception is thrown. In that case, you must upload the appropriate certificate. A certificate enables Oracle Integration Cloud Service to connect with external services. If the external endpoint requires a specific certificate, request the certificate and then upload it into Oracle Integration Cloud Service.

To upload a certificate:

1. From the Oracle Integration Cloud Service home page, click the **Administration** tab in the upper right corner.

   All certificates currently uploaded to the trust store are displayed in the Certificates dialog. The **Filter By > Type** list displays the following details:

   - **Preinstalled**: Displays the certificates automatically installed in Oracle Integration Cloud Service. These certificates cannot be deleted.
   - **Uploaded**: Displays the certificates uploaded by individual users. These certificates can be deleted and updated.

   You can also search for certificates in the **Search** field. The search results are limited to a maximum of ten records sorted by name for performance and usability reasons. To ensure that your search results are more granular, enter as much of the certificate name as possible.

2. Click **Upload** at the top of the page.

3. In the Upload Certificate dialog box, enter a unique identifier for the certificate.

   This is a name you can use to identify the certificate.

4. Click **Browse** to locate the certificate file (.cer).
5. Click **Upload**.

6. Click the certificate name to view details such as the subject of the certificate, the issuer of the certificate, the date the certificate was issued, and the date the certificate expires.

**Creating a Connection**

The first step in creating an integration is to create the connections to the applications with which you want to share data.

1. In the Integration Cloud Service toolbar, click **Designer**.

2. On the Designer Portal, click **Connections**.

3. Click **New Connection**.

   The Create Connection — Select Adapter dialog is displayed.

4. Select an adapter from the dialog. You can also search for the type of adapter to use by entering a partial or full name in the Search field, and clicking **Search**.

   The New Connection — Information dialog is displayed.

5. Enter the information to describe the connection.

   - Enter a meaningful name to help others find your connection when they begin to create their own integrations. The name you enter is automatically added in capital letters to the **Identifier** field.

   - Select the role (direction) in which to use this connection (trigger, invoke, or both). Only the roles supported by this adapter are displayed for selection. When you select a role, only the connection properties and security policies appropriate to that role are displayed on the Connections page. If you select an adapter that supports both invoke and trigger, but select only one of those roles, then try to drag the adapter into the section you did not select, you receive an error (for example, configure an Oracle RightNow Cloud Adapter as only an invoke, but drag the adapter to the trigger section).

   - Enter an optional description of the connection.
6. Click Create.

Your connection is created and you are now ready to configure connection details, such as email contact, connection properties, security policies, and connection login credentials.

Adding a Contact Email

From the Connection Administrator section of the connection, you can add a contact email address for notifications.

1. In the **Email Address** field, enter an email address to receive email notifications when problems occur.

2. In the upper right corner, click **Save**.

Configuring Connection Security

Enter connection information so your application can process requests.

1. Click **Configure Credentials**.

The Credentials dialog is displayed.

2. In the **Security Policy** field, note that **Microsoft Mail Authorization Code Credentials** is displayed by default and cannot be deselected. This security policy supports OAuth 2.0 authorization code flow credentials.

3. Enter the client ID (Microsoft application ID) and client secret (Microsoft private key) values you recorded when you added your application to your Microsoft Email account.

   See Prerequisites for Creating a Connection.

4. Enter the scope URLs in the **Scope** field.

   A scope is a list of authorization permissions for the target application.
5. Click **Provide Consent**.

6. Click **OK**.

**Testing the Connection**

Test your connection to ensure that it is successfully configured.

1. In the upper right corner of the page, click **Test**.
   
   If successful, the following message is displayed and the progress indicator shows 100%.
   
   **The connection test was successful!**

2. If your connection was unsuccessful, an error message is displayed with details. Verify that the configuration details you entered are correct.

3. When complete, click **Save**.

**Editing a Connection**

You can edit connection settings after creating a new connection.

1. In the Oracle Integration Cloud Service toolbar, click **Designer**.

2. On the Designer Portal, click **Connections**.

3. On the Connections page, search for the connection name.

4. Select **Edit** from the connection **Actions** menu or click the connection name.

   ![Actions](image)

   The Connection page is displayed.

5. To edit the notification email contact, change the email address in the **Email Address** field.

6. To edit the connection properties, click **Configure Connectivity**. Note that some connections do not include this button. If your connector does not include a **Configure Connectivity** button, then click the **Configure Credentials** button.

**Cloning a Connection**

You can clone a copy of an existing connection. It is a quick way to create a new connection.

1. In the Oracle Integration Cloud Service toolbar, click **Designer**.

2. On the Designer Portal, click **Connections**.

3. On the Connections page, search for the connection name.
4. Select Clone from the connection Actions menu.

The Clone Connection dialog is displayed.

5. Enter the connection information.

6. Click Clone.

7. Click Edit to configure the credentials of your cloned connection. Cloning a connection does not copy the credentials.

See Editing a Connection for instructions.

Deleting a Connection

You can delete a connection from the connection menu.

1. In the Oracle Integration Cloud Service toolbar, click Designer.

2. On the Designer Portal, click Connections.

3. On the Connections page, search for the connection name.

4. Click Delete from the connection Actions menu.

The Delete Connection dialog is displayed if the connection is not used in an integration.

5. Click Yes to confirm deletion.
Creating an Integration

Integrations use the adapter connections you created to your applications, and define how information is shared between those applications. You can create, import, modify, or delete integrations; create integrations to publish or subscribe to messages; add and remove request and response enrichment triggers; and create routing paths for different invoke endpoints in integrations. Click the following topics for more information.

Topic

• Creating Integrations (in Using Oracle Integration Cloud Service)
Adding the Microsoft Email Adapter Connection to an Integration

When you drag the Microsoft Email Adapter into the invoke area of an integration, the Adapter Endpoint Configuration Wizard is invoked. This wizard guides you thorough configuration of Microsoft Email Adapter endpoint properties.

The following sections describe the wizard pages that guide you through configuration of the Microsoft Email Adapter as an invoke in an integration. The Microsoft Email Adapter cannot be used as a trigger in an integration.

Topics

• Configuring Basic Information Properties
• Configuring Microsoft Email Adapter Invoke Operations Properties
• Reviewing Configuration Values on the Summary Page

For more information about the Microsoft Email Adapter, see About the Microsoft Email Adapter.

Configuring Basic Information Properties

You can enter a name and description on the Basic Info page of each adapter in your integration.

Topics

• What You Can Do from the Basic Info Page
• What You See on the Basic Info Page

What You Can Do from the Basic Info Page

You can specify the following values on the Basic Info page. The Basic Info page is the initial wizard page that is displayed whenever you drag an adapter to the section of the integration canvas supported by your adapter.

• Specify a meaningful name.
• Specify a description of the responsibilities.

What You See on the Basic Info Page

The following table describes the key information on the Basic Info page.
<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
</table>
| What do you want to call your endpoint? | Provide a meaningful name so that others can understand the responsibilities of this connection. You can include English alphabetic characters, numbers, underscores, and dashes in the name. You cannot include the following:  
  • Blank spaces (for example, My Inbound Connection)  
  • Special characters (for example, #;83& or rightnow4)  
  • Multibyte characters |
| What does this endpoint do? | Enter an optional description of the connection’s responsibilities. For example: This connection receives an inbound request to synchronize account information with the cloud application. |

If you are configuring the SOAP Adapter, there is an additional property.
<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Preview updated SOAP adapter runtime</td>
<td>You can uptake the new 16.3.3 functionality exposed by the SOAP Adapter.</td>
</tr>
<tr>
<td></td>
<td>• <strong>Yes</strong>: Provides 16.3.3 functionality (TLSv1.2 support, the ability to suppress timestamps for requests and ignore timestamps upon response, and the ability to disable validation of the SOAP action in the WSDL). The underlying transport mechanism used is the cloud SDK-based JCA transport.</td>
</tr>
<tr>
<td></td>
<td>• <strong>No</strong>: Uses 16.2.5 functionality. The underlying transport mechanism used is the Oracle Service Bus-based HTTP transport.</td>
</tr>
</tbody>
</table>

**Note:** If you import a pre-16.3.3 integration into Oracle Integration Cloud Service 16.3.3 that includes the SOAP Adapter, you must open the adapter in edit mode and explicitly select **Yes** to uptake the new 16.3.3 functionality.

---

**Configuring Microsoft Email Adapter Invoke Operations Properties**

Enter the Microsoft Email Adapter invoke operations parameters.

**Topics**

- What You Can Do from the Microsoft Email Adapter Operations Page
- What You See on the Microsoft Email Adapter Operations Page

**What You Can Do from the Microsoft Email Adapter Operations Page**

You can configure the following operations on the invoke Microsoft Email Adapter Operations page.
<table>
<thead>
<tr>
<th>Operation</th>
<th>Description</th>
<th>Introduced in Release</th>

</tr>
</tbody>
</table>

**What You See on the Microsoft Email Adapter Operations Page**

The following table describes the key information on the Microsoft Email Adapter Operations page.
Reviewing Configuration Values on the Summary Page

You can review the specified adapter configuration values on the Summary page.

**Topics**

- What You Can Do from the Summary Page
- What You See on the Summary Page

**What You Can Do from the Summary Page**

You can review configuration details from the Summary page. The Summary page is the final wizard page for each adapter after you have completed your configuration.

- View the configuration details you defined for the adapter. For example, if you have defined an inbound trigger (source) adapter with a request business object and immediate response business object, specific details about this configuration are displayed on the Summary page.
- Click **Done** if you want to save your configuration details.
- Click a specific tab in the left panel or click **Back** to access a specific page to update your configuration definitions.
- Click **Cancel** to cancel your configuration details.

**What You See on the Summary Page**

The following table describes the key information on the Summary page.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Summary</strong></td>
<td>Displays a summary of the configuration values you defined on previous pages of the wizard. The information that is displayed can vary by adapter. For some adapters, the selected business objects and operation name are displayed. For adapters for which a generated XSD file is provided, click the XSD link to view a read-only version of the file. To return to a previous page to update any values, click the appropriate tab in the left panel or click <strong>Back</strong>.</td>
</tr>
</tbody>
</table>
You must map data between trigger connections and invoke connections in integrations. You can also optionally create lookups in integrations.

- Creating Lookups (in *Using Oracle Integration Cloud Service* )
Using the Microsoft Email Adapter
Administering Integrations

Oracle Integration Cloud Service provides you with the information and tools required to activate, monitor, and manage your integrations in the runtime environment.

**Topic**

- Administering Integration Cloud Service (in *Using Oracle Integration Cloud Service*)
Review the following topics to learn about troubleshooting issues with Microsoft Email Adapter.

Topics

- Unauthorized Security Setup

Unauthorized Security Setup
This issue occurs when an API request is made without access tokens. When an API request is submitted without access tokens, the error message Unauthorized!! Security setup not done for account is displayed.

Reset the Microsoft email security credentials

Solution: Repeat the procedure for setting the Microsoft email security credentials. See Configuring Connection Security.

If resetting the email security credentials does not resolve the error message, make sure REST API functionality is enabled on the Microsoft Outlook account and the scopes defined for the connection are correct. See Prerequisites for Creating a Connection and Configuring Connection Security.
