Preface

Using the Twitter Adapter describes how to configure the Twitter Adapter as a connection in an integration in Oracle Integration Cloud Service.

Topics:
• Audience
• Related Resources
• Conventions

Audience

Using the Twitter Adapter is intended for developers who want to use the Twitter Adapter in integrations in Oracle Integration Cloud Service.

Related Resources

For more information, see these Oracle resources:
• Oracle Cloud
  http://cloud.oracle.com
• Using Oracle Integration Cloud Service
• Using the Oracle Mapper

Conventions

The following text conventions are used in this document:

<table>
<thead>
<tr>
<th>Convention</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>boldface</td>
<td>Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.</td>
</tr>
<tr>
<td>Convention</td>
<td>Meaning</td>
</tr>
<tr>
<td>------------</td>
<td>-------------------------------------------------------------------------</td>
</tr>
<tr>
<td><em>italic</em></td>
<td>Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.</td>
</tr>
<tr>
<td>monospace</td>
<td>Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.</td>
</tr>
</tbody>
</table>
Getting Started with the Twitter Adapter

Review the following conceptual topics to learn about the Twitter Adapter and how to use it as a connection in integrations in Oracle Integration Cloud Service. A typical workflow of adapter and integration tasks is also provided.

Topics

- About the Twitter Adapter
- What Application Version Does the Twitter Adapter Support?
- About Oracle Integration Cloud Service
- About Oracle Integration Cloud Service Connections
- About Oracle Integration Cloud Service Integrations
- Typical Workflow for Creating and Including an Adapter Connection in an Integration

About the Twitter Adapter

The Twitter Adapter enables you to create an integration with a Twitter application. Twitter is an online social networking service that enables you to send and read short messages called tweets. If you register with Twitter, you can read and post tweets. If you do not log in, you can only read tweets.

The Twitter Adapter is one of many predefined adapters included with Oracle Integration Cloud Service. You can configure the Twitter Adapter as a connection in an integration in Oracle Integration Cloud Service. For information about Oracle Integration Cloud Service, connections, and integrations, see the following sections:

- About Oracle Integration Cloud Service
- About Oracle Integration Cloud Service Connections
- About Oracle Integration Cloud Service Integrations

What Application Version Does the Twitter Adapter Support?

The Twitter Adapter is compatible with version 1.1 of the Twitter REST API.

About Oracle Integration Cloud Service

Oracle Integration Cloud Service is a complete, secure, but lightweight integration solution that enables you to connect your applications in the cloud. It simplifies connectivity between your applications and connects both your applications that live in the cloud and your applications that still live on premises. Oracle Integration Cloud
Service provides secure, enterprise-grade connectivity regardless of the applications you are connecting or where they reside.

Oracle Integration Cloud Service provides native connectivity to Oracle Software as a Service (SaaS) applications, such as Oracle Sales Cloud, Oracle RightNow Cloud, and so on. Oracle Integration Cloud Service adapters simplify connectivity by handling the underlying complexities of connecting to applications using industry-wide best practices. You only need to create a connection that provides minimal connectivity information for each system. Oracle Integration Cloud Service lookups map the different codes or terms used by the applications you are integrating to describe similar items (such as country or gender codes). Finally, the visual data mapper enables you to quickly create direct mappings between the trigger and invoke data structures. From the mapper, you can also access lookup tables and use standard XPath functions to map data between your applications.

Once you integrate your applications and activate the integrations to the runtime environment, the dashboard displays information about the running integrations so you can monitor the status and processing statistics for each integration. The dashboard measures and tracks the performance of your transactions by capturing and reporting key information, such as throughput, the number of messages processed successfully, and the number of messages that failed processing. You can also manage business identifiers that track fields in messages and manage errors by integrations, connections, or specific integration instances.

### About Oracle Integration Cloud Service Connections

Connections define information about the instances of each predefined configuration you are integrating. Oracle Integration Cloud Service includes a set of predefined adapters, which are the types of applications on which you can base your connections, such as Oracle Sales Cloud, Oracle Eloqua Cloud, Oracle RightNow Cloud, and others. A connection is based on an adapter. A connection includes the additional information required by the adapter to communicate with a specific instance of an application (this can be referred to as metadata or as connection details). For example, to create a connection to a specific RightNow Cloud application instance, you must select the Oracle RightNow adapter and then specify the WSDL URL, security policy, and security credentials to connect to it.

![Video](1)

### About Oracle Integration Cloud Service Integrations

Integrations are the main ingredient of Oracle Integration Cloud Service. An integration includes at least a trigger (source) connection (for requests sent to Oracle Integration Cloud Service) and invoke (target) connection (for requests sent from Oracle Integration Cloud Service to the target) and the field mapping between those two connections.

When you create your integrations, you build on the connections you already created by defining how to process the data for the trigger (source) and invoke (target) connections. This can include defining the type of operations to perform on the data, the business objects and fields against which to perform those operations, required schemas, and so on. To make this easier, the most complex configuration tasks are handled by Oracle Integration Cloud Service. Once your trigger (source) and invoke (target) connections are configured, the mappers between the two are enabled so you can define how the information is transferred between the trigger (source) and invoke (target) data structures for both the request and response messages.

![Video](1)
Typical Workflow for Creating and Including an Adapter Connection in an Integration

You follow a very simple workflow to create a connection with an adapter and include the connection in an integration in Oracle Integration Cloud Service.

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
<th>More Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Create the adapter connections for the applications you want to integrate. The connections can be reused in multiple integrations and are typically created by the administrator.</td>
<td>Creating a Twitter Adapter Connection</td>
</tr>
<tr>
<td>2</td>
<td>Create the integration. When you do this, you add trigger and invoke connections to the integration.</td>
<td>Creating an Integration and Adding the Twitter Adapter Connection to an Integration</td>
</tr>
<tr>
<td>3</td>
<td>Map data between the trigger connection data structure and the invoke connection data structure.</td>
<td>Mapping Integration Cloud Service Data of Using Oracle Integration Cloud Service</td>
</tr>
<tr>
<td>4</td>
<td>(Optional) Create lookups that map the different values used by those applications to identify the same type of object (such as gender codes or country codes).</td>
<td>Creating Lookups of Using Oracle Integration Cloud Service</td>
</tr>
<tr>
<td>5</td>
<td>Activate the integration.</td>
<td>Managing Integrations of Using Oracle Integration Cloud Service</td>
</tr>
<tr>

Creating a Twitter Adapter Connection

A connection is based on an adapter. You define connections to the specific cloud applications that you want to integrate. The following topics describe how to define connections:

**Topics**

- Prerequisites for Creating a Connection
- Uploading an SSL Certificate
- Creating a Connection
- Editing a Connection
- Cloning a Connection
- Deleting a Connection

**Prerequisites for Creating a Connection**

To use the Twitter Adapter, you must first have access to the Twitter API for your integration. To access the Twitter API, you must create an application.

To create an application:

2. Create a new account or log in using an existing account if you already have one.
3. Click Manage Your Apps in the footer of the Twitter developer page.
4. Create a new application or select an existing one if already created.
5. Authorize your application to use your Twitter account by clicking Create my access token.
6. On the Permissions tab, ensure that the application has Read and Write permissions.
7. Copy and paste the OAuth settings to a safe location, as displayed in the Keys and Access Tokens tab.
You need the following information. These keys contain sensitive data, and must be kept secret. If anyone gets this information, they can access your Twitter account.

- Consumer key
- Consumer secret
- Access token
- Access token secret

You specify this information when creating a connection in Configuring Connection Security.

**Note:** Before creating a Twitter connection, you must upload the trusted Twitter public certificate to Oracle Integration Cloud Service. The Twitter public certificate can be downloaded from https://twitter.com. Rename the public certificate file extension to \*.cer. To upload the certificate, see Uploading an SSL Certificate.

## Uploading an SSL Certificate

Certificates are used to validate outbound SSL connections. If you make an SSL connection in which the root certificate does not exist in Oracle Integration Cloud Service, an exception is thrown. In that case, you must upload the appropriate certificate. A certificate enables Oracle Integration Cloud Service to connect with external services. If the external endpoint requires a specific certificate, request the certificate and then upload it into Oracle Integration Cloud Service.

To upload a certificate:

1. From the Oracle Integration Cloud Service home page, click the **Administration** tab in the upper right corner.

   All certificates currently uploaded to the trust store are displayed in the Certificates dialog. The **Filter By > Type** list displays the following details:

   - **Preinstalled:** Displays the certificates automatically installed in Oracle Integration Cloud Service. These certificates cannot be deleted.

   - **Uploaded:** Displays the certificates uploaded by individual users. These certificates can be deleted and updated.

   You can also search for certificates in the **Search** field. The search results are limited to a maximum of ten records sorted by name for performance and usability reasons. To ensure that your search results are more granular, enter as much of the certificate name as possible.

2. Click **Upload** at the top of the page.

3. In the Upload Certificate dialog box, enter a unique identifier for the certificate.

   This is a name you can use to identify the certificate.

4. Click **Browse** to locate the certificate file (\*.cer).

5. Click **Upload**.
6. Click the certificate name to view details such as the subject of the certificate, the issuer of the certificate, the date the certificate was issued, and the date the certificate expires.

**Creating a Connection**

The first step in creating an integration is to create the connections to the applications with which you want to share data.

1. In the Integration Cloud Service toolbar, click **Designer**.
2. On the Designer Portal, click **Connections**.
3. Click **New Connection**.

   The Create Connection — Select Adapter dialog is displayed.

4. Select an adapter from the dialog. You can also search for the type of adapter to use by entering a partial or full name in the Search field, and clicking **Search**.

   The New Connection — Information dialog is displayed.

5. Enter the information to describe the connection.

   - Enter a meaningful name to help others find your connection when they begin to create their own integrations. The name you enter is automatically added in capital letters to the **Identifier** field.

   - Select the role (direction) in which to use this connection (trigger, invoke, or both). Only the roles supported by this adapter are displayed for selection. When you select a role, only the connection properties and security policies appropriate to that role are displayed on the Connections page. If you select an adapter that supports both invoke and trigger, but select only one of those roles, then try to drag the adapter into the section you did not select, you receive an error (for example, configure an Oracle RightNow Cloud Adapter as only an invoke, but drag the adapter to the trigger section).

   - Enter an optional description of the connection.
6. Click **Create**.

   Your connection is created and you are now ready to configure connection details, such as email contact, connection properties, security policies, and connection login credentials.

**Adding a Contact Email**

From the Connection Administrator section of the connection, you can add a contact email address for notifications.

1. In the **Email Address** field, enter an email address to receive email notifications when problems occur.

2. In the upper right corner, click **Save**.

**Configuring Connection Security**

Configure security for your Twitter connection by selecting the security policy and specifying the consumer key, consumer secret, access token, and access secret. The security policy grants you authorization access to the resources of the Twitter application.

1. Click **Configure Credentials**.

2. In the **Security Policy** field, note that the **Custom Security Policy** security policy is displayed by default, and cannot be deselected.

3. Complete the following fields with information created after completing the steps in **Prerequisites for Creating a Connection**.

   a. In the **Consumer Key** field, enter the consumer key.

   b. In the **Consumer Secret** field, enter the consumer secret.

   c. In the **Access Token** field, enter the access token.

   d. In the **Access Secret** field, enter the access token secret.

4. Click **OK**.

   You are now ready to test your connection.

**Testing the Connection**

Test your connection to ensure that it is successfully configured.

1. In the upper right corner of the page, click **Test**.

   If successful, the following message is displayed and the progress indicator shows 100%.

   The connection test was successful!

2. If your connection was unsuccessful, an error message is displayed with details. Verify that the configuration details you entered are correct.
3. When complete, click **Save**.

**Editing a Connection**

You can edit connection settings after creating a new connection.

1. In the Oracle Integration Cloud Service toolbar, click **Designer**.
2. On the Designer Portal, click **Connections**.
3. On the Connections page, search for the connection name.
4. Select **Edit** from the connection **Actions** menu or click the connection name.

   ![Actions](image)

   The Connection page is displayed.

5. To edit the notification email contact, change the email address in the **Email Address** field.

6. To edit the connection properties, click **Configure Connectivity**. Note that some connections do not include this button. If your connector does not include a **Configure Connectivity** button, then click the **Configure Credentials** button.

**Cloning a Connection**

You can clone a copy of an existing connection. It is a quick way to create a new connection.

1. In the Oracle Integration Cloud Service toolbar, click **Designer**.
2. On the Designer Portal, click **Connections**.
3. On the Connections page, search for the connection name.
4. Select **Clone** from the connection **Actions** menu.

   ![Actions](image)

   The Clone Connection dialog is displayed.

5. Enter the connection information.

6. Click **Clone**.

7. Click **Edit** to configure the credentials of your cloned connection. Cloning a connection does not copy the credentials.

See **Editing a Connection** for instructions.
Deleting a Connection

You can delete a connection from the connection menu.

1. In the Oracle Integration Cloud Service toolbar, click Designer.
2. On the Designer Portal, click Connections.
3. On the Connections page, search for the connection name.
4. Click Delete from the connection Actions menu.

The Delete Connection dialog is displayed if the connection is not used in an integration.

5. Click Yes to confirm deletion.
Creating an Integration

Integrations use the adapter connections you created to your applications, and define how information is shared between those applications. You can create, import, modify, or delete integrations; create integrations to publish or subscribe to messages; add and remove request and response enrichment triggers; and create routing paths for different invoke endpoints in integrations. Click the following topic for more information.

**Topic**

- Creating Integrations (in *Using Oracle Integration Cloud Service*)
When you drag the Twitter Adapter into the invoke area of an integration, the Adapter Endpoint Configuration Wizard is invoked. This wizard guides you through configuration of Twitter Adapter endpoint properties.

The following sections describe the wizard pages that guide you through configuration of the Twitter Adapter as an invoke in an integration. The Twitter Adapter cannot be used as a trigger in an integration.

Topics

• Configuring Basic Information Properties
• Configuring Twitter Adapter Invoke Operation Properties
• Reviewing Configuration Values on the Summary Page

For more information about the Twitter Adapter, see About the Twitter Adapter.

Configuring Basic Information Properties

You can enter a name and description on the Basic Info page of each adapter in your integration.

Topics

• What You Can Do from the Basic Info Page
• What You See on the Basic Info Page

What You Can Do from the Basic Info Page

You can specify the following values on the Basic Info page. The Basic Info page is the initial wizard page that is displayed whenever you drag an adapter to the section of the integration canvas supported by your adapter.

• Specify a meaningful name.
• Specify a description of the responsibilities.

What You See on the Basic Info Page

The following table describes the key information on the Basic Info page.
<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>What do you want to call your endpoint?</td>
<td>Provide a meaningful name so that others can understand the responsibilities of this connection. You can include English alphabetic characters, numbers, underscores, and dashes in the name. You cannot include the following:</td>
</tr>
<tr>
<td></td>
<td>• Blank spaces (for example, My Inbound Connection)</td>
</tr>
<tr>
<td></td>
<td>• Special characters (for example, #;836 or righ(t)now4)</td>
</tr>
<tr>
<td></td>
<td>• Multibyte characters</td>
</tr>
<tr>
<td>What does this endpoint do?</td>
<td>Enter an optional description of the connection’s responsibilities. For example: This connection receives an inbound request to synchronize account information with the cloud application.</td>
</tr>
<tr>
<td>Element</td>
<td>Description</td>
</tr>
<tr>
<td>---------</td>
<td>-------------</td>
</tr>
</tbody>
</table>
| Preview updated SOAP adapter runtime | You can uptake the new 16.3.3 functionality exposed by the SOAP Adapter.  
- **Yes**: Provides 16.3.3 functionality (TLSv1.2 support, the ability to suppress timestamps for requests and ignore timestamps upon response, and the ability to disable validation of the SOAP action in the WSDL). The underlying transport mechanism used is the cloud SDK-based JCA transport.  
- **No**: Uses 16.2.5 functionality. The underlying transport mechanism used is the Oracle Service Bus-based HTTP transport. |

**Note**: If you import a pre-16.3.3 integration into Oracle Integration Cloud Service 16.3.3 that includes the SOAP Adapter, you must open the adapter in edit mode and explicitly select **Yes** to uptake the new 16.3.3 functionality.

### Configuring Twitter Adapter Invoke Operation Properties
Enter the Twitter Adapter invoke operation selection parameters.

**Topics**
- What You Can Do from the Twitter Adapter Operation Selection Page
- What You See on the Twitter Adapter Operation Selection Page

**What You Can Do from the Twitter Adapter Operation Selection Page**
You can configure the following parameter on the invoke Twitter Adapter Operation page.

- Select the Twitter API operation to perform.
What You See on the Twitter Adapter Operation Selection Page

The following table describes the key information on the Twitter Adapter Operation Selection page.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Select Operation</td>
<td>Select the Twitter API operation to invoke. Place your cursor over each operation to view a description of the operation.</td>
</tr>
<tr>
<td></td>
<td>• Search Tweets</td>
</tr>
<tr>
<td></td>
<td>• Get Followers IDs</td>
</tr>
<tr>
<td></td>
<td>• Get IDs of Retweeters</td>
</tr>
<tr>
<td></td>
<td>• Retweet</td>
</tr>
<tr>
<td></td>
<td>• Tweet</td>
</tr>
<tr>
<td></td>
<td>• Get Friends IDs</td>
</tr>
<tr>
<td></td>
<td>• Get Trends for Place</td>
</tr>
<tr>

</tbody>
</table>

Reviewing Configuration Values on the Summary Page

You can review the specified adapter configuration values on the Summary page.

Topics

- What You Can Do from the Summary Page
- What You See on the Summary Page

What You Can Do from the Summary Page

You can review configuration details from the Summary page. The Summary page is the final wizard page for each adapter after you have completed your configuration.

- View the configuration details you defined for the adapter. For example, if you have defined an inbound trigger (source) adapter with a request business object and immediate response business object, specific details about this configuration are displayed on the Summary page.
- Click **Done** if you want to save your configuration details.
- Click a specific tab in the left panel or click **Back** to access a specific page to update your configuration definitions.
- Click **Cancel** to cancel your configuration details.
What You See on the Summary Page

The following table describes the key information on the Summary page.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Summary</td>
<td>Displays a summary of the configuration values you defined on previous pages of the wizard. The information that is displayed can vary by adapter. For some adapters, the selected business objects and operation name are displayed. For adapters for which a generated XSD file is provided, click the XSD link to view a read-only version of the file. To return to a previous page to update any values, click the appropriate tab in the left panel or click Back.</td>
</tr>
</tbody>
</table>
Creating Mappings and Lookups in Integrations

You must map data between trigger connections and invoke connections in integrations. You can also optionally create lookups in integrations.

Topics

• Mapping Integration Cloud Service Data (in Using Oracle Integration Cloud Service)
• Creating Lookups (in Using Oracle Integration Cloud Service)
Administering Integrations

Oracle Integration Cloud Service provides you with the information and tools required to activate, monitor, and manage your integrations in the runtime environment.

**Topic**

- Administering Integration Cloud Service (in *Using Oracle Integration Cloud Service*)
Troubleshooting the Twitter Adapter

Review the following topics to learn about troubleshooting issues with the Twitter Adapter.

**Topics**
- Changes that Can Invalidate Credentials Required for the Twitter Connection
- Getting an Invalid or Expired Token Error Response

**Changes that Can Invalidate Credentials Required for the Twitter Connection**

The following issues can invalidate the Twitter credentials.

**Regenerating your consumer key and consumer secret (by clicking on 'Regenerate Consumer Key and Secret' button for your app on the Twitter developer site).**

**Solution:** Update the Twitter Adapter connection in Oracle Integration Cloud Service with the new values for consumer key, consumer secret, access token, and access token secret.

**Regenerate the access token and secret for your account (by clicking on 'Regenerate My Access Token and Access Secret' button for your app on the Twitter developer site)**

**Solution:** Update the Twitter Adapter connection in Oracle Integration Cloud Service with the new values for consumer key, consumer secret, access token, and access token secret.

**Revoke access to your app (by clicking on 'Revoke access' and revoking access to this app on the Twitter developer site)**

**Solution:**

1. Log in to the Twitter developer site and go to https://apps.twitter.com. Click the application name, and go to the **Keys and Access Tokens** tab.
2. Click **Create my access token** to authorize this application to access your Twitter account.
3. Update the Twitter Adapter connection in Oracle Integration Cloud Service with the new values of consumer key, consumer secret, access token, and access token secret.
Getting an Invalid or Expired Token Error Response

The following error can occur if you have regenerated tokens or revoked access to your Twitter application.

Error code 89 : message : Invalid or Expired Token

Solution: Check the authorization for your application on the Twitter developer page and update the credentials for the adapter.

2. If you have revoked access to the application, provide access by clicking Generate Access Token.
3. Make a note of the following tokens in the Keys and Access Tokens tab:
   - Consumer key
   - Consumer secret
   - Access token
   - Access token secret
4. Update the Twitter Adapter connection with these credentials.
