Chapter 1: About this Help Text

Overview

The Audit Viewer Tool is part of the Management Application Toolbox Configuration Library. It is an application that monitors the activities of logged-in users and displays records of those activities. Only users with roles nspAdmin and nspManager have access to this application.

Scope and Audience

This manual provides information about the Audit Viewer's graphic interface (GUI) and is designed around performing common tasks to efficiently and effectively monitor application and user's activities as well as alarm status. Take a few minutes to browse through these tasks and become acquainted with the layout of this guide to become familiar with the headings and subheadings that allow you to find the information you need.

General Information

You can find general information about Oracle® Communications Performance Intelligence Center, such as product overview, list of other guides, workstation requirements, login and logout procedures, user preference settings, in the Quick Start Guide. This document is available from the Portal menu or can be downloaded from Oracle Help Center (OHC).

Chapter 2: Introducing Audit Viewer

About Audit Viewer - Overview

Audit Viewer is a specific-purpose application which is part of the Management Application Toolbox. This system allows the nspAdmin and nspManager to view logged user activities. The tool stores user-audit data for the previous four months.

Audit Viewer Functionality

Audit Viewer supports the following functions:

- Listing audit records - The records contain date and time, user login, Management application, problem severity and message information.
- Exporting audit records - Displayed audit logs are exportable in CSV and other formats.

Chapter 3: Getting Started With Audit Viewer

Accessing and logging into Management Application

To access and log into Management Application, follow these steps:

1. Open your Web browser.
2. In the Address bar, type the following **Uniform Resource Locator (URL)** for Management Application: http://management_server_IP/nsp , where the management_server_IP is the IP address of Management server.

Note: Management Application only supports versions of IE 7.0 or later and Firefox 3.6 or later. Before using Management Application, turn off the browser pop up blocker for the Management Application site.

The Management Application login screen opens.

Note: Before you can start Management Application, you must first have a user id and password assigned to you by your system administrator.

3. Type your **username** assigned to you in the *Username* field.
4. Type your **password** in the *Password* field.
5. Click **OK**. The Application portal opens.
6. Click on the Audit Viewer icon to open the application.

Opening Audit Viewer

Click on the **Audit Viewer icon**. The Audit Viewer home page opens with a list of audit records shown below.

Time stamp	User Id	Severity	Application Id	Message	Machine Name
02/07/2015 22:40:56	<service>	INFO	Audit Viewer	Activate application auditviewer	nsp-10
02/07/2015 22:40:21	<service>	INFO	NSP	Logged into nsp from 10.26.13.48	nsp-10
02/07/2015 22:37:28	<service>	INFO	Troubleshooting	1 xdrBrowsers were freed from system (due to <service> logout) (0 / 196 currently in use).	nsp-10
02/07/2015 22:37:28	<service>	INFO	NSP	Session terminated: token released	nsp-10

Figure 1: Audit Viewer Home Page

The *Audit Viewer* home page shown in figure below consists of two parts, a table of logged user activities and a tool bar. The tool bar contains icons for managing the display of groups of records in the table. The Auditviewer table contains the logged records of last 24 hours of user activity. User can view older records by [Using the Execute Query Dialog to filter Audit Viewer Records](#).

Note: Do not use the Function Keys (F1 through F12) when using the Management Application. Function keys work in unexpected ways. For example, the F1 key will not open Management Application help but

will open help for the browser in use. The F5 key will not refresh a specific screen, but will refresh the entire session and will result in a loss of any entered information.

User Activity Table

The table consists of eight headings:

- Log Time stamp - The time and date the log record was generated by the Management Application system.
- User Id - Name of user defined in Management Application database
- Log Severity - Relative importance of the log record: Fatal, Error, Warn, Info and Debug.
- Application ID - Performance Intelligence Center system component for example Management Application
- Message - Log record information line.
- Machine Name - Network ID of the affected server.

The default display order for records is based on *Log Time stamps* from most-recent-to-oldest. Clicking the column heading reverses the sort order. Selecting the column heading again toggles back to the default order. Other columns also can be used as sort criteria. Clicking on a column heading the first time puts the records in alphabetical order. Clicking again toggles to the reverse alphabetical order. In all cases an arrowhead symbol in one of the column headings defines the column which controls the sort and whether the sort is first-to-last or last-to-first.

Tool Bar

The tool bar contains icons used to scroll up and down through lists of records larger than the display can accommodate in a single page, to sort or filter records in the table according to various criteria, and to count records on demand.

The toolbar has the following function buttons:

Execute Query - enables you to create and execute queries on the data records.

Export - enables you to export sessions using a variety of formats.

Refresh -enables you to refresh the current screen to see all recent changes.

First Page- clicking this button opens the first page of logs.

Previous Page – clicking this button opens the previous page of logs.

Next Page - clicking this button opens the next page of logs.

Last Page - clicking this button opens the last page of logs.

Set Size — use this button to set the session list size from 10-500 per page.

Message Details – use this button to see the whole message after selecting the row whose message needs to be displayed to user

Chapter 4: Filtering Audit Viewer Records and Viewing Message Details

Overview

This chapter covers:

- The method for selecting subsets of *Audit Viewer* records using *Quick filters* in the tool bar.
- The method for selecting subsets of *Audit Viewer* records using *Filter* in the tool bar.

Using Quick filters to select Audit Viewer Records

The fastest way to locate and display records is to use the *Quick filters* option in the toolbar. The figure below shows, there are three criteria: User Id, Severity, Application Id. Any criterion or combination of criteria can be used for the search.

Time stamp	User Id	Severity	Application Id	Message	Machine Name
* All	* All	* All	* All	* All	* All

Figure 2: Quick Filters Tool Bar Option

1. Select the **application** criterion.

The *Application* window in the tool bar is a pulldown menu for selecting the Management application whose user activities you want to view. The figure below shows the application choices.

Time stamp	User Id	Severity	Application Id	Message
* All	* All	* All	* All	* All
02/07/2015 02:25:56	<service>	INFO	* All	Activate application auditviewer

Figure 3: Application Window

2. Select **severity** criterion.

The *Severity* window's pulldown menu identifies the priority to use for the search. The figure below shows the options.

Time stamp ▲	User Id	Severity	Application Id	Message
* All ▼	* All ▼	* All ▼	* All ▼	* All
02/07/2015 02:25:56	<service>	* All ▲	Audit Viewer	Activate application auditviewer
02/07/2015 02:25:44	<service>	DEBUG	NSP	Logged into nsp from 10.26.13.36
02/07/2015 02:25:34	Gajendra	ERROR	Centralized Configuration	Type=Subsystem [xp1001], Action=MODIFY, Item=xpBuild, ID=DFP_UMTS
02/07/2015 02:25:34	<anonymous>	FATAL	NSP	Access from 10.26.13.36 denied : authentication failed
02/07/2015 02:25:33	Gajendra	WARN	Centralized Configuration	Type=Subsystem [xp1001], Action=MODIFY, Item=xpBuild, ID=DFP_BSSAP
02/07/2015 02:25:21	Gajendra	INFO	Centralized Configuration	Type=Subsystem [xp1001], Action=MODIFY, Item=xpBuild, ID=DFP1_S1AP
02/07/2015 02:25:02	Gajendra	INFO	Centralized Configuration	Type=Subsystem [xp1001], Action=MODIFY, Item=Building, ID=gsm_Diam_2

Figure 4: Severity Window

The hierarchy of severity is in the following order - top to bottom as follows:

- Fatal
- Error
- Warning
- Info
- Debug

3. Select user criterion.

The User window pull down menu lists the users eligible to be filtering criteria. The figure below shows an example of user criterion.

Time stamp ▲	User Id	Severity	Application Id	Message

Figure 6: Filtered List Using All Three Criteria

Using the Execute Query Dialog to filter Audit Viewer Records

You can also filter records based on key criteria of timestamp using the execute query functionality. To filter records, perform the following steps:

1. Click the **execute query** button, the query setting dialog opens in Figure below

The 'Query Settings' dialog box has a title bar with a close button. Below the title bar is a blue bar with the text 'Please specify the parameters.' and a question mark icon. The main area contains a 'Predefined' checkbox which is checked, followed by a dropdown menu currently showing 'Last 24 hours'. Below this are 'Begin Date' and 'End Date' fields, each with a date and time picker. The 'Begin Date' is set to 30/06/2015 23:53:37 and the 'End Date' is set to 01/07/2015 23:53:37. Below these fields, it says 'Requested period: 24 h'. There are two radio buttons: 'Use preferences timezone (GMT -07:00) America/Los_Angeles' which is selected, and 'Use local timezone'. At the bottom is an 'Execute' button.

Figure 7: Query Setting Dialog Box

2. If user want to see the records for last few minutes or hours then user can select this option by selecting PREDEFINED checkbox then the dropdown associated to it becomes active.
3. The dropdown contains various items like Last 5 minutes, Last 10 minutes etc. When user select any of this item records which are logged for that time are displayed to user. Last 24 hours is default selected in the drop-down.

While selecting the predefined option, the list which appears in the drop down is shown in fig8.

Figure 8: Dropdown present in Query Setting Dialog Box

4. User can himself select the begin date and end date from the dialog box. The records logged between this time-period are shown on the screen.

Figure 10: Selecting Date and Time for Begin

- User can select between the User preferences time zone and local time zone by selecting any of the two radio buttons.
- When user clicks on the Execute Button the query is executed and list is populated with records as desired by the end user.

Viewing Message Details

In message column of the Audit Viewer logs list is the column which depicts the details of the message associated with the log. This message can be very long sometime. Hence long messages are truncated and followed by dots. If user wants to see the details of such messages then he needs to select that row in the table and then click Message Details button.

Time stamp	Message Type	User Id	Severity	Application Id	Message	Exception trace	Machine Name

Chapter 6: Exporting Audit Records

Overview

This chapter provides a procedure for exporting audit records from the Management Application to remote systems in one of five selectable formats: CSV, HTML, XML, TXT, XLS.

How to export audit Records

This procedure gives you a way to export audit records in comma separated variable (CSV) format or in one of four other standard data formats. The result file contains only visible records; active filters are taken into account.

1. Click **Export**.
2. The *Export Tekelec Data* window opens shown below.

Figure 12: Export Tekelec Data Window

3. Select the **Export** type located in the *Choice of data* section of the screen.
You can select:
 - a) Current Page

- b) All results
- c) First *blank* records (the number of records you want to export).

4. Enter **file name**

5. (Optional) Enter any **comments** that are related to the export file.

6. Select the **Export type** from the formats provided. You have the option to select

- a) XML format
- b) CSV format
- c) HTML format
- d) TXT (text) format

7. Click **Export** to start the file transfer.

An export status widget appears at the top of the table on the screen shown below.

Time stamp	User Id	Severity	Application id	Message
07/07/2015 01:55:09	Nitin	INFO	Audit Viewer	Activate application auditviewer
07/07/2015 01:55:01	Nitin	INFO	NSP	Logged into nsp from 10.203.139.215
07/07/2015 01:55:01	Nitin	INFO	NSP	Access from 10.203.139.215(token used)
07/07/2015 01:51:06	tekelec	INFO	Mediation Data Feed	DataFeedServiceController: Loaded 0 feeds.
07/07/2015 01:51:03	tekelec	INFO	Mediation Data Feed	DataFeedServiceController: Loaded 0 feeds.

Figure 13 : Export Status Formatting Page

There is a progress bar showing the percentage of the data exported.

Stopping the Export Process

To stop the export process, click **Cancel** button which appears along in export status widget. The export is stopped.

APPENDIX A: My Oracle Support (MOS)

MOS (<https://support.oracle.com>) is your initial point of contact for all product support and training needs. A representative at Customer Access Support (CAS) can assist you with MOS registration.

Call the CAS main number at 1-800-223-1711 (toll-free in the US), or call the Oracle Support hotline for your local country from the list at <http://www.oracle.com/us/support/contact/index.html>. When calling, make the selections in the sequence shown below on the Support telephone menu:

1. Select 2 for New Service Request
2. Select 3 for Hardware, Networking and Solaris Operating System Support
3. Select 2 for Non-technical issue

You will be connected to a live agent who can assist you with MOS registration and provide Support Identifiers. Simply mention you are a Tekelec Customer new to MOS.

MOS is available 24 hours a day, 7 days a week.
