This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are “commercial computer software” pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

Network Impact Report

1. INTRODUCTION

1.1 Purpose and Scope

This document highlights the changes in Oracle Communication Policy Management Release 15.1 that may have impact on your network and should be considered during planning for this release implementation.

1.1 Disclaimers

This document summarizes Oracle Communication Policy Management Release 15.1 new, and enhancement features as compared to previous release of 15.0.x and the operations impacts of these features, at a high level.

NOTE: Feature implementations may change slightly during product test.

1.2 Glossary

This section lists terms and acronyms specific to this document.

Table 1: Acronyms

Acronym	Definitions
3GPP	Third-Generation Partnership Project
AAA	Authorize-Authenticate-Answer
AAR	Authorize-Authenticate-Request
ADC	Application Detection and Control
AF	Application Function
AMBR	Aggregate Maximum Bit Rate
ARP	Allocation Retention Priority
AVP	Attribute Value Pair
BSS	Business Support System
CALEA	Communications Assistance for Law Enforcement Act.
CCA	Credit-Control-Answer (CC-Answer)
CCR	Credit-Control-Request (CC-Request)
CMP	Configuration Management Platform
CSCF	Call Session Control Function
DCC	Diameter Credit Control
DPI	Deep Packet Inspection
DRA	Diameter Routing Agent
DSR	Diameter Signaling Router
FRS	Feature Requirements Specification
GBR	Guaranteed Bit Rate
GUI	Graphical User Interface
HA	High Availability
HSS	Home Subscriber Server

Acronym	Definitions
HTTP	Hypertext Transfer Protocol
HW	Hardware
IE	Internet Explorer
IMS	IP Multimedia Subsystem
IP	Internet Protocol
IPv4	Internet Protocol version 4
IPv6	Internet Protocol version 6
JSON	JavaScript Object Notation
KPI	Key Performance Indicator
LAN	Local Area Network
LDAP	Lightweight Directory Access Protocol
LI	Lawful Intercept
LIMF	Lawful Intercept Mediation Function
LVM	Logical Volume Manager
MA	Management Agent
MCD	Media Component Description
MP	Message Processor
MPE	Oracle Multimedia Policy Engine
MPE-R	Oracle Multimedia Policy Engine – Routing Mode
MPE-S	Oracle Multimedia Policy Engine – Serving Mode
MRA	Oracle Multiprotocol Routing Agent
MS	Mediation Server
NFV-MANO	Network Function Virtualization Management and Orchestration
NFVO	Network Functions Virtualization Orchestrator
NOAM	Network OAM
NW-CMP	Network-Level Configuration Management Platform
OAM	Operations Administration Maintenance
OCS	Online Charging Service
OM	Operational Measurement
OSSI	Operation Support System Interface
PCC	Policy and Charging Control
PCD	Policy Connection Director
PCEF	Policy and Charging Enforcement Function (GGSN, PGW, DPI)
PCRF	Policy Control Resource Function (Oracle MPE)
P-CSCF	Proxy CSCF

Network Impact Report

Acronym	Definitions
PDN	Packet Data Network
PGW	Packet Data Network Gateway
PNR	Push-Notification-Request
PUR	Profile-Update-Request
QCI	QoS Class Identifier
QoS	Quality of Service
RAR	Re-Auth-Request (RA-Request) SUPL
REST	Representational State Transfer
ROB	Release of Bearer
S-CMP	Site-Level Configuration Management Platform
S-CSCF	Serving CSCF
SGW	Serving Gateway
Sh	Diameter Sh Interface
SMPP	Short Message Peer-to-Peer
SMS	Short Message Service
SNR	Subscribe-Notification-Request
SPR	Subscriber Profile Repository
STA	Session-Termination-Answer
STR	Session-Termination-Request
SRA	Successful Resource Allocation
TDF	Traffic Detection Function
TPS	Transactions Per Second
UDR	User Data Repository
UE	User Equipment
UMCH	Usage Monitoring Congestion Handling
VIM	Virtual Infrastructure Manager
VM	Virtual Machine
VNF	Virtual Network Function
VO	Verification Office
XML	Extensible Markup Language

2. OVERVIEW OF POLICY MANAGEMENT RELEASE 15.1 FEATURES

The following enhancement is added in Policy Management Release 15.1:

Enh 39868819 - Enhanced High-Availability Role Visibility

OCPM 15.1 introduces hierarchical high-availability role of each CMP, MPE, and MRA server - Hier Role.

This is displayed in Topology Settings, Cluster Information reports, and Upgrade Manager. The displayed role provides a clearer view of each server's position within the HA hierarchy and its relationship to the active and standby sites. This improves operational awareness during day-to-day monitoring and assists operators in validating server roles before and after maintenance, upgrade, promotion/demotion, and failover activities.

The Hier Role is displayed as two abbreviated role components separated by a slash (`/`).

The first component identifies the **site role**, and the second component identifies the **node role within that site**.

For the CMP configurations covered by this guide, the Hier Role maps to the existing Server Status as follows:

Hier Role	Site Role	Node Role	Server Status
Act/Act	Active	Active	Active
Act/Stb	Active	Standby	Standby
Stb/Act	Standby	Active	Spare
Stb/Stb	Standby	Standby	Spare
OOS/OOS	OOS	OOS	OOS

Enh 39868846 - Site-Level Forced Standby for Georedundant Deployments

OCPM 15.1 enhances existing Forced Standby feature scope to support of site-level Forced standby for geo-redundant deployments. When all configured servers at a site are placed in forced standby, OCPM treats the site as standby for the relevant cluster group.

This supports controlled movement of active service to a viable peer site for planned maintenance, while retaining the servers as members of the cluster.

Network Impact Report

2.1 Policy Management Software Changes

2.1.1 Software Components

Components	Releases
Policy Management	15.1.0.0.0_23.1.0
TPD 64 Bit	8.10.1.13.0_150.36.0
COMCOL	8.1 (COMCOL 8.1.0.39.0-14261)

2.1.2 UDR and SPR Product Compatibility

Products	Releases	Compatibility
Oracle Communication UDR*	12.4 or higher	MPE via Sh interface and CMP via RESTful API. Use of Profile V2, Profile V3, and Profile V4 schemas.

*NOTE: Policy R12.4 does not support Oracle SDM SPR Release 9.3.1.

2.2 Policy Management Software Upgrade/Backout Overview

While performing the Policy software upgrade/backout procedures, it is expected that the CMP clusters, MRA clusters, and MPE clusters are running different software releases.

2.2.1 Supported Software Upgrade/Backout Paths for Release 15.1

Figure 1 shows the supported upgrade Path for Release 15.1

Figure 1 Supportd Upgrade Path

The system must be on release 15.0.x prior to upgrading to this release (15.1). This applies to wireless line.

15.1 Upgrade Paths. Mechanism used is ISO upgrade for all the upgrade paths.

- 15.0.0.0.0 to 15.1.0.0.0
- 15.0.0.1.0 to 15.1.0.0.0
- 15.0.0.2.0 to 15.1.0.0.0
- 15.0.0.3.0 to 15.1.0.0.0
- 15.0.0.4.0 to 15.1.0.0.0
- 15.0.0.5.0 to 15.1.0.0.0
- 15.0.0.6.0 to 15.1.0.0.0
- 15.0.0.7.0 to 15.1.0.0.0
- 15.0.0.8.0 to 15.1.0.0.0

- 15.0.0.9.0 to 15.1.0.0.0
- 15.0.0.10.0 to 15.1.0.0.0

NOTE:

- It is recommended to upgrade from version **15.0.0.7.0 or later** as it requires only minor prerequisite steps to upgrade to 15.1.0.0.0.
- When upgrading from versions 15.0.0.0.0 through 15.0.0.6.0, UB Logic must be disabled before proceeding with the upgrade (Disabling UB logic requires server reboot). For detailed instructions, refer to the OCPM Upgrade Guide.
- If the official upgrade paths mentioned in the release documents of each supported version is not followed, please contact Oracle Support before migrating to 15.1.

2.2.2 Mixed Version Policy Management System Expectations

The system that is running 15.0 /15.1 mixed configuration supports the performance and capacity of 15.0 /15.1 respectively. The mixed version Policy Management configuration supports Release 15.0 /15.1 features respectively.

In the mixed version Policy Management configuration, Release 15.0 /15.1 CMP has these general limitations:

- Policy rules should not be changed while running in a mixed version environment. If it is necessary to make changes to the policy rules while running in a mixed version environment, changes that do not utilize new conditions and actions for the release can be installed. However, these rules should be reviewed by you and Oracle before deployment to verify that the policies do not use new conditions or actions.
- The support for configuration of MPE and MRA servers is limited to parameters that are available in the previous version. Specifically:
 - Network Elements can be added.
 - Advanced Configuration settings that were valid for 12.6.1.x/15.0 may be changed.

NOTE: Replication between CMP and DR-CMP is automatically disabled during migration of CMP and DR-CMP from 15.0 to Release 15.1. The replication is automatically enabled after both active CMP and DR-CMP are upgraded to Release 15.1.

Policy Management Components	CMP Release 15.1	MRA Release 15.1	MPE Release 15.1
MRA release 15.0	Yes	Yes	Yes
MPE release 15.0	Yes	Yes	N/A

2.2.3 Supported Software Releases Backout Support and Limitation

- After the entire Policy Management system is Upgraded to Release 15.1, you may decide that a backout to the previous release is required. In that case, each individual server/cluster must be backed out.

Network Impact Report

- If it is necessary to backout multiple servers, it is required that the systems be backout in the reverse order in which they were migrated. This implies that all the related component servers are backed out first before the active CMP/NW-CMP and DR-CMP/NW-CMP can be backed out to the previous version.
- After all the servers in the system are backed out to the previous release, the servers could be migrated to another supported minor or major release for example, if all the servers in the Policy Management system were backed out from Release 15.1 to 15.0.x, these servers could subsequently be upgraded to Release 15.1.
- Backout may be performed at any time after the migration, with these general limitations:
 - If a new feature has been enabled, it must be disabled prior to any backout.
 - If there is an unexpected problem that requires backout after a feature has been enabled, it is possible that transient subscriber data, which is changed by the new feature, may be impacted by the unexpected problem. In this situation, those sessions cannot be guaranteed to be unaffected for any subsequent actions (this includes any activity after the feature is disabled). This may prevent data restoration by the SSDP feature during the backout. The impact of any unexpected problem must be analyzed when it occurs to determine the best path forward (or backward).

NOTE: Although backout after feature activation is allowed, due to the number of possible permutations under which new features may be activated, the only testing that is performed is based on backout without new feature activation.

 - Backout can only be used to go back one release. This restriction applies to all types of releases including any major, minor, maintenance, or incremental release including minor releases of Release 15.0.

2.2.3.1 Backout Sequence

The Backout of Policy Management system from Release N+1 to Release N is generally performed in this order (reverse of the Migration sequence):

NOTE: See the related migration/backout paths for more detail procedures. These procedures are not documented in this document.

Release 15.1 to Release 15.0.x (Wireless mode only)

1. MRA clusters, including spare server if georedundancy is deployed.
2. MPE clusters, including spare server if georedundancy is deployed.
3. Standalone Primary CMP/S-CMP and Disaster Recovery (DR) CMP/S-CMP clusters.
4. If multi-level OAM is deployed, Primary NW-CMP primary cluster and Disaster Recovery (DR) NW-CMP cluster.

2.3 Migration of Policies and Supporting Policy Data

The existing Policies configuration and Subscriber Session information is conserved during the migration.

3. CHANGES BY FEATURE

No changes.

Network Impact Report

4. PROTOCOL FLOW/PORT CHANGE

No Changes

5. MEAL INSERTS

This section summarizes the changes to Alarms, Measurements, KPIs and MIBs. In the following inserts pertain to Oracle Communications Policy Management Release 15.1.0.0.0_23.1.0 MEAL snapshot and deltas to earlier releases 15.0.x.

The Policy Management GA Release is 15.1.0.0.0_23.1.0.

Note:

The Policy Product Release: 15.1.0.0.0_23.1.0

Base Distro Product: TPD Base Distro Release: 8.10.1.13.0_150.36.0

5.1 MEAL Deltas (Policy-15.0.0.0_20.1.0 to Policy-15.1.0.0.0_23.1.0)

Change Type	MIB Module	Notification Name	Description	OID
Added	PCRF-ALARM-MIB	comcolDbRepPrecRelaxedNotify	Standby Database updates are falling behind. Relaxing the replication barrier to allow non-Stan	1.3.6.1.4.1.323.5.3.29.1.2.31132
Added	PCRF-ALARM-MIB	comcolDbRepSwitchoverNotify	DB Replication Active to Standby switchover exceeded maximum switchover time.	1.3.6.1.4.1.323.5.3.29.1.2.31133
Added	PCRF-ALARM-MIB	comcolDbSiteRepToSlaveFailureNotify	DB Site replication to a slave DB has failed	1.3.6.1.4.1.323.5.3.29.1.2.31134
Added	PCRF-ALARM-MIB	comcolDbSiteRepFromMasterFailureNotify	DB Site replication from a master DB has failed	1.3.6.1.4.1.323.5.3.29.1.2.31135
Added	PCRF-ALARM-MIB	comcolDbSiteRepPrecRelaxedNotify	Standby Site Database updates are falling behind. Relaxing the replication barrier to allow non-	1.3.6.1.4.1.323.5.3.29.1.2.31136
Added	PCRF-ALARM-MIB	comcolDbSiteRepLatencyNotify	DB Site Replication latency has exceeded thresholds	1.3.6.1.4.1.323.5.3.29.1.2.31137
Added	PCRF-ALARM-MIB	comcolDbLateWriteNotify	Application wrote to database while HA role change from active was in progress	1.3.6.1.4.1.323.5.3.29.1.2.31149
