Oracle Enterprise Performance Management System 11.2.0 Installation and Configuration Readme

Related Topics

Purpose

This document includes important, late-breaking information about this release of Oracle Enterprise Performance Management System. Review this Readme thoroughly before installing EPM System.

Scope of this Release

Oracle Enterprise Performance Management System Release 11.2 offers these benefits:

- Delivers updated technology, including Fusion Middleware (FMW) 12g.

- Includes updated platform certifications.

- Streamlines and simplifies the architecture, updating the underlying technology stack. Future enhancements are delivered through Patch Set Updates (PSUs), so you can easily get new features by simply adding a patch onto your installation rather than reinstalling from scratch. This more nimble delivery mechanism enables smaller releases for easier adoption of new features.

- Provides a simplified repository configuration to streamline infrastructure and architecture for the future.

- Premier Support is provided through at least 2030.

Release 11.2 doesn't support the following features and products:

- Oracle Hyperion EPM Architect isn't available in EPM System Release 11.2.0. If you're migrating to EPM System Release 11.2.0 and have Oracle Essbase, Oracle Hyperion Planning, Oracle Hyperion Profitability and Cost Management, or Oracle Hyperion Financial Management metadata in Performance Management Architect Release 11.1.2.4, you can migrate the metadata out of Performance Management Architect Release 11.1.2.4 into Oracle Data Relationship Management Release 11.2.0. See *Oracle Data Relationship Management Enterprise Performance Management Integration Guide*.

- Simplified Interface

> **✎ Note:**
>
> Smart Push isn't supported in this release. If you used Smart Push in Release 11.1.2.4, when you upgrade to 11.2.0, you can no longer use Smart Push.

- Oracle Hyperion Strategic Finance

- Oracle Crystal Ball (replaced by Predictive Planning)

- Oracle Enterprise Performance Management Mobile

- Offline Planning

- Oracle Hyperion Workforce Planning

- Oracle Hyperion Capital Asset Planning

- Oracle Project Financial Planning

- Oracle Hyperion Public Sector Planning and Budgeting

- Financial Management Analytics

- Quantitative Management and Reporting for Solvency

- Disclosure Management

- Oracle Hyperion Performance Scorecard

- Hyperion BI Plus. You can't migrate Release 11.1.2.4 reports that used Essbase as a data source to Release 11.2. In Release 11.2, Oracle Hyperion Financial Reporting, which is now a component of Hyperion Financial Applications, continues to support connections to a Planning data source using an Essbase connection, as well as Profitability and Cost Management.

- Oracle Hyperion Financial Close Management Release 11.2.0 doesn't support the following features.

  – The ability to configure a content management system for Financial Close Management

  – Financial Management integrations

  – Event monitoring, automated integrations, and end-user integrations requiring integrated parameters

> **✎ Note:**
>
> EPM System Release 11.2 uses Essbase Release 11.1.2.4. When deployed with EPM System Release 11.2, Essbase Release 11.1.2.4 follows EPM System Release 11.2 certifications.

Installation Information

Late-breaking information about the installation of EPM System products is provided in this readme. Review this information thoroughly before installing EPM System products.

Complete instructions for installing this release are in the *Oracle Enterprise Performance Management System Installation and Configuration Guide*.

Supported Platforms

Related Topics

- About Supported Platforms
- Browser Support

About Supported Platforms

Information about system requirements and supported platforms for Oracle Enterprise Performance Management System products is available in spreadsheet format in the *Oracle Enterprise Performance Management System Certification Matrix*. This matrix is posted on the Supported Platforms Matrices page on Oracle Technology Network (OTN):

https://www.oracle.com/middleware/technologies/bi-foundation/hyperion-supported-platforms.html

Browser Support

EPM System does not have a browser version dependency; however, it is possible that the products that EPM System works with do have dependencies.

Check the *Oracle Enterprise Performance Management System Certification Matrix* and specific product readmes for any additional browser support requirements.

The matrix is posted on the Supported Platforms Matrices page on OTN:

https://www.oracle.com/middleware/technologies/bi-foundation/hyperion-supported-platforms.html

Supported Languages

Information about supported languages for Oracle Enterprise Performance Management System products is available in spreadsheet format on the Translation Support tab in the *Oracle Enterprise Performance Management System Certification Matrix*. This is posted on the Supported System Configurations page on OTN:

https://www.oracle.com/middleware/technologies/bi-foundation/hyperion-supported-platforms.html

Supported Paths to this Release

You can upgrade Oracle Enterprise Performance Management System products to Release 11.2.0 from Release 11.1.2.4.xxx. To update your existing applications, you deploy EPM System Release 11.2.0 software in a new location and then migrate EPM System Release 11.1.2.4.xxx applications, data, and security to the new deployment. See "Upgrading EPM System" in the *Oracle® Enterprise Performance Management System Installation and Configuration Guide*.

Compatibility

EPM System supports the Oracle Enterprise Performance Management System product versions listed in the Release Compatibility tab in the *Oracle Enterprise Performance Management System Certification Matrix*. This matrix is posted on the Supported Platforms Matrices page on OTN:

https://www.oracle.com/middleware/technologies/bi-foundation/hyperion-supported-platforms.html

Known Issues

About Known Issues

The topics in this section contain the noteworthy known issues of this release.

Starting Essbase Studio Console

Issue:

When you try to start Oracle Essbase Studio Console, you get an error message: "A Java Runtime Environment (JRE) or Java Development Kit (JDK) must be available in order to run Essbase Studio. No Java Virtual Machine was found after searching the following locations: C:\Oracle\Middleware\EPMSystem11R1\products\Essbase\EssbaseStudio\Console\jre\bin\javaw.exe javaw.exe in your Current PATH"

Solution:

Before starting Essbase Studio Console, edit `startStudio.bat` (in `/products/Essbase/ EssbaseStudio/Console`) and change the *JAVA_HOME* value to `JDK 1.8`. (The default location for JDK 1.8 installed with Oracle Enterprise Performance Management System is `C:\Oracle\Middleware\jdk1.8.0_181`.)

Tips and Troubleshooting

Tips and troubleshooting topics are listed in the Installation and Configuration Troubleshooting Guide.

All Oracle Enterprise Performance Management System 11.2.0 guides are available in the library on the Oracle Help Center: https://docs.oracle.com/en/applications/?tab=8.
