## Creating Mappings and Lookups in Integrations

## Administering Integrations
Preface

*Using the Concur Adapter* describes how to configure the Concur Adapter as a connection in an integration in Oracle Integration Cloud Service.

**Topics**

- **Audience**
- **Documentation Accessibility**
- **Related Resources**
- **Conventions**

**Audience**

*Using the Concur Adapter* is intended for developers who want to use the Concur Adapter in integrations in Oracle Integration Cloud Service.

**Documentation Accessibility**

**Access to Oracle Support**

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit [http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info](http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info) or visit [http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs](http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs) if you are hearing impaired.

**Related Resources**

See these Oracle resources:

- **Oracle Cloud**
  [http://cloud.oracle.com](http://cloud.oracle.com)
- **Using Oracle Integration Cloud Service**
- **Using the Oracle Mapper**

**Conventions**

The following text conventions are used in this document:
<table>
<thead>
<tr>
<th>Convention</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>boldface</strong></td>
<td>Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.</td>
</tr>
<tr>
<td><em>italic</em></td>
<td>Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.</td>
</tr>
<tr>
<td><strong>monospace</strong></td>
<td>Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.</td>
</tr>
</tbody>
</table>
Getting Started with the Concur Adapter

Review the following conceptual topics to learn about the Concur Adapter and how to use it as a connection in integrations in Oracle Integration Cloud Service. A typical workflow of adapter and integration tasks is also provided.

Topics

- Concur Adapter Capabilities
- What Application Version Is Supported?
- About Oracle Integration Cloud Service
- About Oracle Integration Cloud Service Connections
- About Oracle Integration Cloud Service Integrations
- Concur Adapter Use Case
- Typical Workflow for Creating and Including an Adapter Connection in an Integration

Concur Adapter Capabilities

Use the Concur Adapter with Swagger API versions 3.0 and 3.1 to perform travel and expense operations.

The Concur Adapter requires no custom coding and the integration can be completed quickly without the need to hire a team of Concur application programming specialists. The Concur Adapter allows you to quickly import expense categories, employee data, customers, classes, and jobs. Use the Concur Adapter to eliminate duplicate manual data entry and achieve faster data synchronization.

The Concur Adapter is one of many predefined adapters included with Oracle Integration Cloud Service. You can configure the Concur Adapter as a target in Oracle Integration Cloud Service. For information about Oracle Integration Cloud Service, connections, and integrations, see the following sections:

- About Oracle Integration Cloud Service
- About Oracle Integration Cloud Service Connections
- About Oracle Integration Cloud Service Integrations

What Application Version Is Supported?

For information about which application version is supported by this adapter, see the adapter certification matrix:

Oracle Integration Adapters Certification
About Oracle Integration Cloud Service

Oracle Integration Cloud Service is a complete, secure, but lightweight integration solution that enables you to connect your applications in the cloud. It simplifies connectivity between your applications and connects both your applications that live in the cloud and your applications that still live on premises. Oracle Integration Cloud Service provides secure, enterprise-grade connectivity regardless of the applications you are connecting or where they reside.

Oracle Integration Cloud Service provides native connectivity to Oracle Software as a Service (SaaS) applications, such as Oracle Sales Cloud, Oracle RightNow Cloud, and so on. Oracle Integration Cloud Service adapters simplify connectivity by handling the underlying complexities of connecting to applications using industry-wide best practices. You only need to create a connection that provides minimal connectivity information for each system. Oracle Integration Cloud Service lookups map the different codes or terms used by the applications you are integrating to describe similar items (such as country or gender codes). Finally, the visual data mapper enables you to quickly create direct mappings between the trigger and invoke data structures. From the mapper, you can also access lookup tables and use standard XPath functions to map data between your applications.

Once you integrate your applications and activate the integrations to the runtime environment, the dashboard displays information about the running integrations so you can monitor the status and processing statistics for each integration. The dashboard measures and tracks the performance of your transactions by capturing and reporting key information, such as throughput, the number of messages processed successfully, and the number of messages that failed processing. You can also manage business identifiers that track fields in messages and manage errors by integrations, connections, or specific integration instances.

About Oracle Integration Cloud Service Connections

Connections define information about the instances of each configuration you are integrating. Oracle Integration Cloud Service includes a set of predefined adapters, which are the types of applications on which you can base your connections, such as Oracle Sales Cloud, Oracle Eloqua Cloud, Oracle RightNow Cloud, and others. A connection is based on an adapter. For example, to create a connection to a specific RightNow Cloud application instance, you must select the Oracle RightNow adapter and then specify the WSDL URL, security policy, and security credentials to connect to it.

Video

About Oracle Integration Cloud Service Integrations

Integrations are the main ingredient of Oracle Integration Cloud Service. An integration includes at least a trigger (source) connection (for requests sent to Oracle Integration Cloud Service) and invoke (target) connection (for requests sent from Oracle Integration Cloud Service to the target) and the field mapping between those two connections.

When you create your integrations, you build on the connections you already created by defining how to process the data for the trigger (source) and invoke (target)
connections. This can include defining the type of operations to perform on the data, the business objects and fields against which to perform those operations, required schemas, and so on. To make this easier, the most complex configuration tasks are handled by Oracle Integration Cloud Service. Once your trigger (source) and invoke (target) connections are configured, the mappers between the two are enabled so you can define how the information is transferred between the trigger (source) and invoke (target) data structures for both the request and response messages.

Video

Concur Adapter Use Case

This use case describes how the Concur Adapter is used to synchronize campaign cost data between Salesforce.com and Concur in real-time.

- A new campaign is created in Salesforce.com.
- Campaign data is sent from Salesforce.com to the Concur Adapter.
- The Concur Adapter sends the campaign data to Concur.
- Campaign data from Salesforce.com is used to populate the campaign name and campaign cost fields in a Concur expense report.
- When the campaign costs change in Salesforce.com, the updated data is sent to the Concur Adapter and then Concur where the expense report is updated.

Typical Workflow for Creating and Including an Adapter Connection in an Integration

You follow a very simple workflow to create a connection with an adapter and include the connection in an integration in Oracle Integration Cloud Service.

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
<th>More Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Create the adapter connections for the applications you want to integrate. The connections can be reused in multiple integrations and are typically created by the administrator.</td>
<td>Creating a Concur Adapter Connection</td>
</tr>
<tr>

Creating a Concur Adapter Connection

A connection is based on an adapter. You define connections to the specific cloud applications that you want to integrate. The following topics describe how to define connections.

Topics

• Prerequisites for Creating a Connection
• Uploading an SSL Certificate
• Creating a Connection
• Editing a Connection
• Cloning a Connection
• Deleting a Connection

Prerequisites for Creating a Connection

You must satisfy the following prerequisites to create a connection with the Concur Adapter:

• Enable the APIs that you will use to complete operations. To enable and add APIs, see the Concur documentation.

Uploading an SSL Certificate

Certificates are used to validate outbound SSL connections. If you make an SSL connection in which the root certificate does not exist in Oracle Integration Cloud Service, an exception is thrown. In that case, you must upload the appropriate certificate. A certificate enables Oracle Integration Cloud Service to connect with external services. If the external endpoint requires a specific certificate, request the certificate and then upload it into Oracle Integration Cloud Service.

To upload an SSL certificate:

1. From the Oracle Integration Cloud Service home page, click the menu in the upper left corner.

2. Click Settings > Certificates.

   All certificates currently uploaded to the trust store are displayed in the Certificates dialog. The Filter By > Type list displays the following details:

   • Preinstalled: Displays the certificates automatically installed in Oracle Integration Cloud Service. These certificates cannot be deleted.
• **Uploaded**: Displays the certificates uploaded by individual users. These certificates can be deleted and updated.

You can also search for certificates in the **Search** field. The search results are limited to a maximum of ten records sorted by name for performance and usability reasons. To ensure that your search results are more granular, enter as much of the certificate name as possible.

3. Click **Upload** at the top of the page.

4. In the Upload Certificate dialog box, select the certificate type. Each certificate type enables Oracle Integration Cloud Service to connect with external services.
   - **Trust Certificate**: Use this option to upload a trust certificate.
     a. Click **Browse**, then select the trust file (for example, `.cer` or `.crt`) to upload.
   - **Message Protection Certificate**: Use this option to upload a keystore certificate with SAML token support. Create, read, update, and delete (CRUD) operations are supported on this type of certificate.
     a. Enter a unique alias for the certificate.
     b. Click **Browse**, then select the certificate file (`.cer` or `.crt`) to upload.
   - **Identity Certificate**: Use this option to upload a certificate for two-way SSL communication.
     a. Click **Browse**, then select the keystore file (`.jks`) to upload.
     b. Enter the password of the keystore being imported.
     c. Enter the comma-separated list of aliases from the keystore being imported.
     d. Enter the comma-separated list of passwords corresponding to key aliases.
     e. If you want to display the passwords in clear text, select **Show Key Password(s)**. This enables you to ensure that you are correctly entering a list of keystore passwords.

5. Click **Upload**.

6. Click the certificate name to view details such as the subject of the certificate, the issuer of the certificate, the date the certificate was issued, and the date the certificate expires.

### Creating a Connection

The first step in creating an integration is to create the connections to the applications with which you want to share data.

1. In the Oracle Integration Cloud Service home page, click **Connections**.
2. Click **Create**.
   
   The Create Connection — Select Adapter dialog is displayed.

3. Select an adapter from the dialog. You can also search for the type of adapter to use by entering a partial or full name in the Search field, and clicking **Search**.
The Create New Connection dialog is displayed.

4. Enter the information to describe the connection.
   - Enter a meaningful name to help others find your connection when they begin to create their own integrations. The name you enter is automatically added in capital letters to the Identifier field. If you modify the identifier name, do not include a blank space (for example, Sales Opportunity).
   - Select the role (direction) in which to use this connection (trigger, invoke, or both). Only the roles supported by this adapter are displayed for selection. When you select a role, only the connection properties and security policies appropriate to that role are displayed on the Connections page. If you select an adapter that supports both invoke and trigger, but select only one of those roles, then try to drag the adapter into the section you did not select, you receive an error (for example, configure an Oracle RightNow Cloud Adapter as only an invoke, but drag the adapter to the trigger section).
   - Enter an optional description of the connection.

5. Click Create.
   
   Your connection is created and you are now ready to configure connection details, such as email contact, connection properties, security policies, connection login credentials, and (for certain connections) agent group.

Adding a Contact Email

From the Connection Administrator section of the connection, you can add a contact email address for notifications.

1. In the Email Address field, enter an email address to receive email notifications when problems occur.

2. In the upper right corner, click Save.
Configuring Connection Properties

Enter connection information so your application can process requests.

1. Click **Configure Connectivity**.
2. In the **Concur Instance URL** field, enter the URL for the Concur application host location.
3. Click **OK**.
4. Configure connection security. See **Configuring Connection Security**.

Configuring Connection Security

Use this procedure to configure security for your Concur Adapter connection.

1. Create a connection. See **Creating a Connection**.
2. Click **Configure Security**.

   The Credentials dialog is displayed. The **Security Policy** field displays **Concur Resource Owner Password Credentials Policy**. This value cannot be changed.

3. Complete these fields:
   a. In the **Client Id** field, enter the consumer key for the Concur account.
   b. In the **Client Secret** field, enter the consumer secret associated with the Concur client ID.
   c. In the **Username** field, enter the user name for the Concur account.
   d. In the **Password** field, enter the password for the Concur account.
   e. In the **Confirm Password** field, enter the password for the Concur account.
4. Click **OK**.

Testing the Connection

Test your connection to ensure that it is successfully configured.

1. In the upper right corner of the page, click **Test**.
2. Select the type of connection testing to perform:
   - **Validate and Test**: Performs a full validation of the WSDL, including processing of the imported schemas and WSDLs. Complete validation can take several minutes depending on the number of imported schemas and WSDLs. No requests are sent to the operations exposed in the WSDL.
   - **Test**: Connects to the WSDL URL and performs a syntax check on the WSDL. No requests are sent to the operations exposed in the WSDL.

   If successful, the following message is displayed and the progress indicator shows 100%.
   
   Connection *connection_name* was tested successfully.

3. If your connection was unsuccessful, an error message is displayed with details. Verify that the configuration details you entered are correct.
4. When complete, click **Save**, then click **Close**.
Editing a Connection

You can edit connection settings after creating a new connection.

1. On the Oracle Integration Cloud Service home page, click **Connections**.
2. On the Connections page, search for the connection name.
3. Select **Edit** from the connection **Actions** menu or click the connection name.

The Connection page is displayed.

4. Make any necessary edits.

   If you edit a connection currently used by an active integration, a dialog is displayed indicating that you must re-activate the integration for the connection updates to take effect.

Cloning a Connection

You can clone a copy of an existing connection, even if the connection is locked. This provides a quick way to create a new connection.

1. On the Oracle Integration Cloud Service home page, click **Connections**.
2. On the Connections page, search for the connection name.
3. Select **Clone** from the connection **Actions** menu.
The Clone Connection dialog is displayed.

4. Enter the connection information.
5. Click **Clone**.
6. Click **Edit** to configure the credentials of your cloned connection. Cloning a connection does not copy the credentials.

See [Editing a Connection](#) for instructions.

### Deleting a Connection

You can delete a connection from the connection menu.

1. On the Oracle Integration Cloud Service home page, click **Connections**.
2. On the Connections page, search for the connection name.
3. Click **Delete** from the connection **Actions** menu.

The Delete Connection dialog is displayed if the connection is not used in an integration.

4. Click **Yes** to confirm deletion.
Creating an Integration

Integrations use the adapter connections you created to your applications, and define how information is shared between those applications. You can create, import, modify, or delete integrations; create integrations to publish or subscribe to messages; add and remove request and response enrichment triggers; and create routing paths for different invoke endpoints in integrations. Click the following topic for more information:

**Topic**
- Creating Integrations (in *Using Oracle Integration Cloud Service*)
Adding the Concur Adapter Connection to an Integration

When you drag the Concur Adapter onto the integration canvas, the Adapter Endpoint Configuration Wizard appears. Use the wizard to configure the Concur Adapter endpoint properties.

These topics describe the Adapter Endpoint Configuration Wizard pages that assist you with the creation of the Concur Adapter integration.

Topics
• Configuring Basic Information Properties
• Configuring Concur Adapter Invoke Operations Properties
• Reviewing Configuration Values on the Summary Page

For more information about the Concur Adapter, see Concur Adapter Capabilities.

Configuring Basic Information Properties

You can enter a name and description on the Basic Info page of each adapter in your integration.

Topics
• What You Can Do from the Basic Info Page
• What You See on the Basic Info Page

What You Can Do from the Basic Info Page

You can specify the following values on the Basic Info page. The Basic Info page is the initial wizard page that is displayed whenever you drag an adapter to the section of the integration canvas supported by your adapter.

• Specify a meaningful name.
• Specify a description of the responsibilities.
What You See on the Basic Info Page

The following table describes the key information on the Basic Info page.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
</table>
| What do you want to call your endpoint? | Provide a meaningful name so that others can understand the responsibilities of this connection. You can include English alphabetic characters, numbers, underscores, and dashes in the name. You cannot include the following:  
  - Blank spaces (for example, My Inbound Connection)  
  - Special characters (for example, #;83& or righ(t)now4)  
  - Multibyte characters                                                                                                                                 |

| What does this endpoint do?            | Enter an optional description of the connection’s responsibilities. For example:  
  This connection receives an inbound request to synchronize account information with the cloud application. |

Configuring Concur Adapter Invoke Operations Properties

Enter the Concur Adapter invoke operation values for your integration.

Topics

- What You Can Do from the Concur Adapter Invoke Operations Page
- What You See on the Concur Adapter Invoke Operations Page

What You Can Do from the Concur Adapter Invoke Operations Page

You identify the operation type and the operations to perform in the Concur application.

What You See on the Concur Adapter Invoke Operations Page

The following table describes the key information on the Concur Adapter Operations page.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
</table>
| Select Operation Type | Selects the API operation type. These are the available operations:  
  - Create  
  - Update  
  - Get  
  - Delete                                                                                                                                 |

<table>
<thead>
<tr>
<th>Select Operation</th>
<th>Selects the API operation to perform.</th>
</tr>
</thead>
</table>
Reviewing Configuration Values on the Summary Page

You can review the specified adapter configuration values on the Summary page.

Topics

• What You Can Do from the Summary Page
• What You See on the Summary Page

What You Can Do from the Summary Page

You can review configuration details from the Summary page. The Summary page is the final wizard page for each adapter after you have completed your configuration.

• View the configuration details you defined for the adapter. For example, if you have defined an inbound trigger (source) adapter with a request business object and immediate response business object, specific details about this configuration are displayed on the Summary page.

• Click Done if you want to save your configuration details.

• Click a specific tab in the left panel or click Back to access a specific page to update your configuration definitions.

• Click Cancel to cancel your configuration details.

What You See on the Summary Page

The following table describes the key information on the Summary page.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Summary</td>
<td>Displays a summary of the configuration values you defined on previous pages of the wizard.</td>
</tr>
<tr>
<td></td>
<td>The information that is displayed can vary by adapter. For some adapters, the selected business objects and operation name are displayed. For adapters for which a generated XSD file is provided, click the XSD link to view a read-only version of the file.</td>
</tr>
<tr>
<td></td>
<td>To return to a previous page to update any values, click the appropriate tab in the left panel or click Back.</td>
</tr>
</tbody>
</table>
Creating Mappings and Lookups in Integrations

You must map data between trigger (source) connections and invoke (target) connections in integrations. You can also optionally create lookups in integrations.

Topics

• Mapping Data (in Using Oracle Integration Cloud Service)
• Creating Lookups (in Using Oracle Integration Cloud Service)
Administering Integrations

Oracle Integration Cloud Service provides you with the information and tools required to activate, monitor, and manage your integrations in the runtime environment.

Topic
• Administering Oracle Integration Cloud Service (in Using Oracle Integration Cloud Service)
