Share Your Feedback

We welcome your feedback about Oracle Applications user assistance. If you need clarification, find an error, or just want to tell us what you found helpful, we'd like to hear from you.

You can email your feedback to oracle_fusion_applications_help_ww_grp@oracle.com.

Thanks for helping us improve our user assistance!

1 General Ledger

Reporting

General Ledger and Subledger Accounting Reports

Oracle General Ledger and Oracle Subledger Accounting provides a variety of reports to support your reporting requirements for trial balances, detail journals and account analysis.

These reports also support the needs of your organization for internal reporting, reconciliation, and communication with third parties like customers and suppliers.

The general ledger and subledger reports are categorized into:

- **Account Analysis Reports:** These reports support fiscal verification processes in countries like Europe and South America. They inform shareholders on the financial situation of the company in countries like the United States.

The account analysis reports:

- Provide a legal account ledger
 - Reconcile subledger balances with the general ledger balances
 - Maintain an audit trail
 - Allow a periodic internal verification
- **Journal Reports:** These reports verify that your journals, accounting entries, and source documents are in compliance with legal requirements.
 - **Third-Party Detail and Balances Reports:** These reports provide balances per third-party control account, third party, and third-party site. These reports verify that the third-party subledgers are consistent with the general ledger.

Use the third-party detail and balances reports to:

- Review the accounting process details by third party and third-party site.
- Audit third-party accounts in detail.

During the accounting process, run the reports to ensure that subledger and general ledger balances reconcile, and to identify discrepancies.

- **General Ledger Journal and Balance Reports:** These reports list general ledger journals and account balances for all periods in a selected period range. For each account, the reports provide beginning balance, general ledger posted journal lines, and ending balance.
- **General Ledger Trial Balance Report:** This report checks your account balances and reviews your accounting activity. You can run the report using zero beginning balances at the start of the fiscal year.

The following table lists the reports provided for each category.

Report Category	List of Reports
Account Analysis Reports	<ul style="list-style-type: none"> General Ledger and Subledger Account Analysis Report General Ledger and Subledger Accounting by Journal Lines Report Account Analysis by Legal Entity Report

General Ledger Journal and Balances Reports

This topic includes details about the General Ledger Journal and Balances reports.

Overview

General ledger journal and balance reports provide details on journal entries and account balances. The reports list posted accounting activity for account balances for all periods in a selected period range. For each account, the reports provide beginning balance, general ledger posted journal lines, and ending balance. Journal entry reports print all details of general ledger journals.

General Ledger Journal and Balance reports include the following reports:

- General Ledger Journal Entry Report: Provides general ledger journal activity for a given period or date range, and optionally other criteria including journal source, entered currency, and journal batch. Flexible grouping and sorting options are provided at report submission. To improve the performance of the report:
 - If you have entries in multiple currencies, run the report for one currency at a time. Only the accounting lines of the selected currency display, instead of all accounting lines of a multicurrency journal.
 - Enter values for the company or balancing segment when running the report. With this method, you can't see all the accounting lines of your intercompany journal.

The following figure shows an example of the General Ledger Journal Entry Report. The report has columns for the line, account, account description, line description, posting status, and entered and accounted amounts.

Key Insights

Before submitting the reports, you must transfer subledger journals to the general ledger.

Report Parameters

The following table lists the common parameters applicable to all the General Ledger Journal and Balance Reports.

Parameter	Description
Data Access Set	Enter the data access set that you can access based on the defined security structure. Data access set is required for all general ledger reports.
Ledger	Specify the ledgers for the selected data access set. Ledger is required for all general ledger reports.
From Period and To Period	Indicate the period range for the report data.
Filter Conditions	Enter the filtering conditions on the accounting flexfield. You can select all segments for the selected ledger, and define conditions including account value ranges.

The following table lists selected parameters for the General Ledger Journal Entry.

Parameter	Description
Posting Status	Select the applicable posting status. Valid values are Error Status, Posted Journals, and Unposted Journals.
Journal Source	Enter the source of journal entries such as, payables, receivables, or manual.

Parameter	Description

The following table lists selected parameters for the General Ledger Journal and Balance Report.

Parameter	Description
Currency Type	Specify the currency type, such as entered, statistical or total. The default value is Total.
Balance Type	Specify whether the balance type is actual or encumbrance. The default is Actual (A).

Frequently Asked Questions

The following table lists frequently asked questions about the General Ledger Journal and Balance Reports.

FAQ	Answer
How do I find this report?	Schedule and run this report from the Scheduled Processes work area on the Navigator menu.
Who uses this report?	<ul style="list-style-type: none"> Financial Manager Financial Accountant
When do I use this report?	Use these reports to declare withholding and payments on account of income from employment, economic activities, prizes, certain capital gains and income allocations.
What type of reports are these?	Oracle Analytics Publisher

General Ledger Trial Balance Report

This topic includes details about the General Ledger Trial Balance Report.

Overview

The General Ledger Trial Balance Report lists actual account balances and activity by ledger, balancing segment, and account segment. The report prints the account number, description, and debit or credit balance for the beginning and ending period. This also includes the debits and credits for the period. The report can print income statement, balance sheet, or all balances for a selected range of accounting combinations.

The following figure shows an example of the General Ledger Trial Balance Report. The report has columns for the account, account description, year beginning balances, net beginning balances, prior periods, period activity, ending balances, and net ending balances.

Key Insights

Before submitting the report, you must complete these tasks:

- Ensure that balances are available for printing in the selected period and account range.
- Define the account hierarchy.

You can use the report to print account balances and activity by legal entity. The report enables you to print reporting and accounting sequences.

Report Parameters

The following table lists selected report parameters.

Parameter	Description
Data Access Set	Enter the data access set that you can access based on the defined security structure. Data access set is required for all general ledger reports.
Ledger	Specify the ledger for the selected data access set. Ledger is required for all general ledger reports.
From Period and To Period	Indicate the period range for the report data.

Parameter	Description
Filter Conditions	Enter the filtering conditions on the accounting flexfield. You can select all segments for the selected ledger, and define conditions including account value ranges.
Currency Type	Specify the currency type, such as entered, statistical, or total. The default value is Total.
Account Level	Enter the number of hierarchy levels you want to use for reporting. The valid values are: <ul style="list-style-type: none"> Blank for printing only detail rows. 1 through 10 for printing relevant number of parent total rows. For example, consider you entered 3 and your account hierarchy for the natural account has 3 levels. You see balances at 2 parent levels and for the natural account segment. For the same structure, if you enter 2 then you see balances at only the 2 parent levels.
Top-Level Parent Account	Indicate the highest level, top-level parent account that you want to work with. This parameter works with the account level parameter.
Account Class	Select a specific account class or accept the default value of All .
Account Delimiter	Specify the character that must be used as a separator between accounting flexfield segments.
Zero Beginning of Year Balance	Select: <ul style="list-style-type: none"> Yes for zero balances for debit and credit. No for the year beginning balance.
Trial Balance Type	Specify the type of account balance to determine the level of detail and results as of the beginning or end of the year. You can select one of the following types: Begin Year , Detail , End Year , Results . The default value is Detail . Use the default value to print all accounts in your selected range. The Begin Year , End Year , and Results trial balance types are provided for compliance with specific country requirements.
Page Number Format	Select the applicable page number format. The valid values are Page: n and Page: n of m. The default value is Page: n of m.

Key Insights

The account analysis reports enable you to do these tasks:

- Provide a legal account ledger
- Reconcile subledger balances with the general ledger balances
- Maintain an audit trail
- Allow a periodic internal verification

You can view these information for each account:

- Account identification
- Account beginning balances for the reporting period
- Period transactions with subledger and general ledger information
- Resulting account ending balances

In addition, you can use the General Ledger and Subledger Accounting by Journal Lines Report to get these information:

- Details of subledger accounting entry lines, regardless of the general ledger journals summarization.
- Audit trail information about the original business documents or transactions to support each accounting entry line. This information varies across countries.

Report Parameters

Let's look at the common parameters for the account analysis reports.

Parameter	Description
Ledger	Specify the ledgers for the selected data access set. Ledger is required for all general ledger reports.
Legal Entity	Specify the legal entity. You can control the report output through this parameter only if you have associated balancing segment values to your legal entities.
From Period and To Period	Indicate the period range for the report data.
Flexfield Filter Conditions	Enter the filtering conditions on the accounting flexfield. You can select all segments for the selected ledger and define conditions including account value ranges.

Here are some selected General Ledger and Subledger Accounting account analysis report parameters.

Parameter	Description
Include Legal Entity Information	Select Yes to print the legal entity on the report.
Balance Type	Specify whether the balance type is budget, encumbrance, or actual amounts.
Display Tax Rate Code	Select Yes to include the tax rate code details.
Document Sequence Name	Enter the name of the document sequence used to generate unique number for the journal.

Here are some selected parameters of the General Ledger and Subledger Accounting journal lines report.

Parameter	Description
Accounting Sequence Name	Indicate the name of the sequence used to generate a unique number for the subledger journal.
Posting Status	Indicate whether the posting status is transferred but not posted, not transferred, or posted.
Journal Entry Status	Indicate whether the journal entries are in draft, final or invalid status.
Third-Party Type	Select the party type as customer or supplier. Optional parameter. May be blank.
Journal Source	Enter the source of journal entries, such as payables, receivables, or manual.

Parameter	Description
Journal Category	Select journal category when you want to report on a specific subledger journal category. Leave it blank when you want to include all the journal categories.

Let's look at some account analysis by legal entity report parameters.

Parameter	Description
Balance Type	Specify whether the balance type is budget, encumbrance, or actual amounts.
Include Zero Amount Lines	Indicate whether the report should include accounts with no activity in the selected period or zero amount lines.
Report Heading	Accept the default value or modify the report page heading by selecting one of the available values. The default value is the legal entity name.

Frequently Asked Questions

These are some frequently asked questions about account analysis reports.

FAQ	Answer
How do I find these reports?	Schedule and run this report from the Scheduled Processes work area on the Navigator menu.
Who uses these reports?	<ul style="list-style-type: none"> Financial Accountant Financial Manager Financial Specialist
When do I use these reports?	<p>Use the account analysis reports to:</p> <ul style="list-style-type: none"> Collect and report information about all posted journal transactions in the general ledger for a selected period and range of accounts. Verify that transactions are recorded systematically, and ensure an audit trail from general ledger to the subledger. Perform validation for each accounting period once it's closed. Verify the accounting entry lines before their approval.
What type of reports are these?	Oracle Analytics Publisher

Journal Reports

This topic includes details about the journal reports.

Overview

Use Journal reports to verify that your journals, accounting entries, and source documents are in compliance with the legal requirements.

Journal reports include the following reports:

- **Daily Journals Report:** Lists subledger journal activity for a given period or date range, journal source, entered currency, and journal batch. Report prints detailed subledger journal lines prior to general ledger summarization. Third party and transaction details are also listed for the journal lines.

The following figure shows an example of the Daily Journals Report. The report has columns for the journal line, account, account description, line description, transaction date or number, tax code, third-party name and number, entered currency, and entered and accounted amounts.

Key Insights

The Daily Journals Report provides:

- Subledger accounting entry lines regardless of the general ledger journals summarization.
- Audit trail information about the original business documents or transactions to support each accounting entry line.
- Verification details that all journals are recorded in chronological order with no gaps. It uses legal sequencing rules for both journal or accounting entries and source documents.
- Flexible sorting options to help you with reconciliation. Report data is sorted by period end document sequence name and number, accounting sequence, accounting date, and journal name.

The Journal Ledger Report provides an audit trail between the general ledger and subledgers to satisfy legal and business requirements. This report lists the accounting entries in general ledger with subledger details.

Use the Journal Ledger Report to:

- Maintain an audit trial.
- Perform periodic internal verification.
- Reconcile subledger accounting activity with general ledger journals.
- Sort data to audit and reconcile subledger data. You can sort data by period end document sequence name and number, accounting sequence, accounting date, and journal name.

Report Parameters

The following table lists selected parameters for the Daily Journals Report.

Parameter	Description
Posting Status	Select the applicable posting status. Valid values are Error Status, Posted Journals, and Unposted Journals.
Journal Entry Status	Indicate whether the journal entries are in draft, final or invalid status.
Third-Party Name	Select the name of the third party for whom you want to generate the report.
Summarization Level	Select: <ul style="list-style-type: none"> • Detail: Displays details of each transaction line. • Summary: Summarizes the transaction lines by specific accounting flexfield segments.
Show Account Recapitulation	Select Yes to print the report summary at the accounting flexfield level.

The following table lists selected parameters for the Subledger Detail Journal Report.

Parameter	Description
Journal Entry Status	Indicate whether the journal entries are in draft, final or invalid status.
Accounting Sequence Name	Specify the accounting sequence name for which you want to run the journals.

The following table lists selected parameters for the Journal Ledger Report.

Parameter	Description
Accounting Period Type	Indicate whether to submit the report for all, standard, or adjustment accounting period types.
Show Running Totals	Select Yes to print running totals in the report.
Summarize by Account	Select Yes to print summarized debit and credit lines per account for a single journal. The default value is No .

Frequently Asked Questions

Third-Party Detail and Balances Reports

This topic includes details about third-party detail and balances reports.

Overview

The third-party detail and balances reports include:

- **Third-Party Balances Summary Report:** Displays information for each account of the third party and third-party site, and account identification. This report is a tool for auditing third-party accounts.

The following figure is an example of the report.

Third Party Balances Summary Report							Report Date: 7/17/14 8:06 PM

- **Journals and Third-Party Report:** Prints all the journals posted to the general ledger for an accounting period. It provides detailed subledger accounting entry lines regardless of the general ledger journals summarization. Transaction line description, third-party name and number, and transaction amounts in entered and ledger currency. The report uses legal sequencing rules for both accounting entries and source documents to verify

if all journals are recorded in a chronological order without gaps. The report lets you create various views of reported information based on seven flexible sorting rules that help with reconciliation and auditing.

The following figure is an example of the report.

Line	Account	Account Description	Line Description	Third Party Number	Third Party Name	Entered Currency	Entered Debit	Entered Credit	Accounted Debit	Accounted Credit	
1	40 470000 000 00 0	Spain Property (input VAT) Job Cost Center Job Product		2272	Bulk Foods S.A.	EUR		60.00		60.00

Total For 2014									60.00	60.00	
Total For Mar-12									60.00	60.00	

Key Insights

Before submitting the reports, complete the following tasks:

- Ensure that the third-party control account balances are available for printing for the selected date and account range.
- Manually run the Update Subledger Account Balances process for your ledger and application, if you accounted your third-party transactions online.

Note: You must set up a third-party control account. You can set it up as supplier control account, customer control account, or both.

During the accounting process, run the reports to ensure that subledger and general ledger balances reconcile, and to identify discrepancies such as:

- Transaction amounts are assigned to incorrect accounts. For example, an invoice distribution amount is assigned to a liability account.
- Transactions aren't posted to the general ledger.
- Journal batches aren't posted in the general ledger.

For each account, the report displays beginning balance, period activity, and period end balance.

Report Parameters

The following table lists selected parameters for the Third-Party Balances Summary Report:

Parameter	Description
Report Heading	Print report headings, select one of the following options: Ledger, Legal Entity, and Statutory Header for Italy.
Journal Entry Source	Enter the source of journal entries, such as payables, receivables, or manual.
Third-Party Type	Indicate the party type, such as supplier or customer.
Third-Party Name	Submit the report for a specific third party, or leave this field blank for all third parties.

The following table lists selected parameters for the Third-Party Detail and Balances Report:

Parameter	Description
Journal Entry Source	Enter the source of journal entries, such as payables, receivables, or manual.
Third-Party Type	Indicate the party type, such as supplier or customer.
Third-Party Name	Submit the report for a specific third party, or leave this field blank for all third parties.

The following table lists selected parameters for the Third-Party Account Balance Report:

Parameter	Description
Report Heading	Print report headings, select one of the following options: Ledger, Legal Entity, and Statutory Header for Italy.
Journal Entry Source	Enter the source of journal entries, such as payables, receivables, or manual.
Third-Party Type	Indicate the party type, such as supplier or customer.

The following table lists selected parameters for the Journals and Third-Party Report:

Parameter	Description
Journal Entry Source	Enter the source of journal entries, such as payables, receivables, or manual.
Event Class	Indicate the event class, such as credit memos and debit memos.
Group by Period	Indicate whether to group the journal entries by period.

Frequently Asked Questions

The following table lists frequently asked questions about third-party detail and balances reports.

FAQ	Answer
How do I find this report?	Schedule and run this report from the Scheduled Processes work area on the Navigator menu.
Who uses this report?	<ul style="list-style-type: none"> • Financial Accountant • Financial Manager • Financial Specialist
When do I use this report?	Use the third-party detail and balances reports to: <ul style="list-style-type: none"> • Review the accounting process details by third party and third-party site. • Audit third-party accounts in detail. • Reconcile transactions accounted by an audited company with transactions accounted by the third parties.

Reporting

How Automatic Receipts Are Reversed

Use the Automatic Receipts Reversal process to identify the rejected settlements in a settlement batch and reverse the corresponding receipts. The process only reverses automatic receipts, not manual receipts.

Settings That Affect Reversal of Automatic Receipts

Before you can reverse automatic receipts in a settlement batch, you must map the ISO rejection codes to a reversal category. This mapping is used to derive the reversal category for reversing the receipt.

Use the Manage Reversal Reason to Category Mappings setup task to map the ISO rejection codes with corresponding reversal categories.

How Receipts are Reversed

When a bank can't process an automatic remittance of a record, the record is sent back for reversal. The returned record consists of two bank files:

- Reversal file - pain message 002.001.03. This message provides technical details of the reversals that are needed to reverse a receipt.
- Bank statement files CAMT-053.

The following steps outline the reversal process:

1. The Retrieve Funds Capture Acknowledgments process in Payments processes the pain message and sends information on the rejected receipts to Receivables.
2. The Automatic Receipts Reversal process receives the information on the rejected receipts and looks for the mapping between the rejection code and reversal category.
3. If a mapping exists for the rejection code, the corresponding receipt is reversed. If a mapping doesn't exist, the status of the corresponding receipt is set to Confirmed.
4. To reverse receipts that are set to Confirmed, you must define the mapping and run the Automatic Receipts Reversal process to reverse the corresponding receipts.

Note: Reconciled receipts aren't reversed by the Automatic Receipts Reversal process. You must manually unreconcile the receipts before reversing them.

5. After the Automatic Receipts Reversal process completes, the Reversal Status Report is generated. Use the report to review the automatic receipt reversals processed in a settlement batch. The report displays details of the:
 - Receipts that are reversed along with the reversal reason
 - Receipts that aren't reversed and the reason they weren't reversed

- The report is automatically run after the Automatic Receipts Reversal process. However, you can also run the report manually.

Key Insights

This report is generated automatically after a run of the Automatic Receipts Reversal process. You can also run the report manually. The report groups receipts by settlement batch and includes receipt date, receipt number, receipt amount, reversal reason code, and a description of automatic receipt reversals that were unsuccessful.

Report Parameters

The following table lists selected report parameters:

Parameter	Description
Settlement Batch Reference	Specify the identifier of the settlement batch for which you want to run the report.

Parameter	Description
From Settlement Batch Creation Date and To Settlement Batch Creation Date	Indicate the settlement batch creation date range for reporting data.
Receipt Status	Indicate the receipt status for reporting data.

Frequently Asked Questions

The following table lists frequently asked questions about the Reversal Status Report.

FAQ	Answer
How do I find this report?	Scheduled Processes - Reversal Status Report
Who uses this report?	Financial Manager or Financial Specialist when analyzing automatic receipt activity.
When do I use this report?	To analyze the automatic receipt reversals and failed receipt reversals in a settlement batch.
What can I do with this report?	Schedule as needed.
What type of reports are these?	Oracle Analytics Publisher

Netting

Overview of Netting Agreements

Use netting agreement to control how a group of trading partners net Payables and Receivables transactions.

You can create a netting agreement for each group of trading partners that agrees to net transactions. Netting agreements include the business rules. These business rules define the transaction types that may be selected for netting, and which suppliers and customers can be netted.

You can access the **Manage Netting Agreement** page from either the **Payments** work area in Payables, or the **Accounts Receivable** work area in Receivables. The **Manage Netting Agreements** link is in the **Customer and Supplier Balance Netting** section of the **Task List**.

Related Topics

- [Create Netting Agreements](#)

Create Netting Agreements

Create a netting agreement for each group of trading partners that agrees to net Payables or Receivables transactions.

You can create Netting Agreements from the Manage Netting Agreements page or you can import them from a spreadsheet. Here are the main components that model a Netting agreement:

- Business Rules and Preferences
- Pay Groups
- Payables Invoice Types
- Receivables Transaction Types
- Trading Partners
- Letters

Business Rules and Preferences

The netting agreement business rules and preferences indicate the high level details and preferences that apply to the agreement between you and a trading partner. Set up these requirements to create a netting agreement:

Business Rules Region

1. Select **Legal Entity** for the agreement. Netting is performed for the legal entity. If you have multiple business units assigned to a legal entity, they will all be assessed for netting.

Note: The Netting manager can only net invoices that he or she has access to from the business unit security.

2. Enter an **Agreement Name**.
3. You can also enter a **Trading Partner Reference** from your third party.
4. Enter a **Start Date** for the agreement. The start date should reflect the contractual start date with the third party.
5. You can also enter an **End Date** for the agreement.

Note: Settlements can only be created for agreements if the date of the settlement is within the start date and end date range. If the agreement has ended between you and the third party, you must provide the end date for the agreement. This prevents further netting settlements from taking place for the agreement, and the agreement can no longer be used to process netting.

Netting Preferences Region

The netting preferences dictate how you want to manage the transactions in an agreement.

1. Select the **Netting Bank Account Name**.

Note: Only active bank accounts with the Netting account selected is available for selection.

2. Select the Netting Order Rule. The rule indicates the priority in which transactions are selected for netting. You can change the ordering of netting transactions once a settlement has been selected in the ADFdi spreadsheet download. The Netting Order Rule consists of these rules:
 - o Due Date from oldest to most recent: Select this rule if you want to clear transactions that are past or near the due date first.
 - o Ascending Amount: Select this rule if you want to clear a large number of small transactions first.
 - o Descending Amount: Select this rule if you want to clear the transactions with the larger amounts first.
 - o Transaction date from oldest to most recent.
3. Select the **Netting Balance Rule**. The rule determines the conditions for netting. To restrict the netting to only when the balance of payables invoices is greater than the balance of receivables transactions, select **Net when Payables is greater than Receivables**. You can also select **Net Always**.
4. You can assign a **Netting Group** to your agreement.
5. Select the Allow early settlement discount check box if you want to ensure that eligible discounts are applied to the amounts.
6. Select the **Netting Currency Rule**.

You can set the netting currency rule to Use Single Currency if you want to select invoices and transactions for a single currency. If you have invoices in transactions for multiple currencies, you can select Net within each currency. For example, if you have GBP and EUR invoices or transactions that you want to net, a settlement will be created for each currency. Both settlements can then be treated independently of one another.
7. Ensure that the **Multicurrency** check box is selected for the Netting Bank Account.

Pay Groups

Select these options as required:

- To allow all Payables invoices to be available for a settlement, regardless of which pay group is assigned to the invoice, you must select **All**.
- To net invoices that belong to a set of pay groups, you must select **Only Include** and then enter the pay groups that you want to include. The settlement process then selects the invoices that belong to the pay groups assigned to the agreement.
- To exclude invoices that belong to a set of pay groups, select **Only Exclude** and then enter the pay groups that you want to exclude. The settlement process then excludes the invoices that belong to the pay groups you enter.

Payables Invoice Types

You can restrict the types of Payables invoices that are eligible for netting by indicating the types of Payables invoices you want to consider. You can assign any of these invoice types to the agreement:

- Standard: This is the default value.
- Credit Memo
- Debit Memo

If you only want to net the standard invoices and debit memos, select the options from the list of values. The settlement process does not pull the Credit Memos in Payables.

Note: Payables Invoice types are predefined by Oracle, and cannot be changed.

Receivables Transaction Types

Select these options as required:

- To allow all Receivables transactions to be available for a settlement, regardless of which transaction type is assigned to the invoice, you must select **All**.
- To net transactions that belong to a set of transaction types, select **Only Include** and then enter the transaction types that you want to include. The settlement process then selects the transactions that belong to the transaction types that are assigned to the agreement.
- To exclude transactions that belong to a set of transaction types, you must select **Only Exclude** and then enter the transaction types you want to exclude. The settlement process then excludes the transactions that belong to the transaction types you enter.

Trading Partners

The Trading Partners tab enables you to define the suppliers and customers that you want to net transactions. Complete the setup as part of creating a netting agreement:

Select Supplier Region

- Select one or more **Supplier Names** that represents the suppliers you want to net invoices. The **Supplier Number** and **Supplier Tax Registration Number** from the supplier profile is displayed for the purpose of validation.
- You can also select one or more **Supplier Sites** for the **Supplier Name**. To include all supplier sites for netting, leave the **Supplier Site** field blank. The **Site Tax Registration Number** is displayed for the purpose of validation when you select a **Supplier Site**.
- The netting process ranks the invoices from the suppliers based on the Priority for the Suppliers. You can change the invoices you selected even after selecting a settlement.

Select Customer Region

- Select one or more **Customer Names** that represents the customers you want to net transactions. The **Customer Number** and **Customer Tax Registration Number** from the customer profile is displayed for the purpose of validation.
- You can also select one or more **Customer Sites** for the **Customer Name**. To include all customer sites for netting, leave the **Customer Site** field blank. The **Site Tax Registration Number** is displayed for the purpose of validation when you select a **Customer Site**.
- The netting process ranks the transactions from the customers based on the **Priority** for the **Customers**. If you select only one **Customer Site**, the priority does not apply. However, for more complex relationships, you must order the priority of the customer and customer sites to ensure that you net transactions from certain customer representations first.

Letters

The **Letters** tab enables you to configure how you want the Netting Letter to be distributed to your third party. The letter is a confirmation to the third party that the invoices have been netted, and lists all the invoices and transactions that were included in the netting amount.

Letter Preferences

- When you first create an agreement, the Generate Netting Letter is selected by default. If you do not want letters to be generated to send to your third party, then you can disable this by deselecting the Generate Netting Letter check box. The Agreement setup is complete when you click **Save**.
- If you want to email the netting letters to the third party, enable the **Send Letters by E-Mail** check box.

Netting Letter Contacts

- If you enable the **Generate Netting Letter**, the letter is sent to the **Recipient Address**. The address is automatically collected from the **Supplier Address** of the highest priority supplier site that is **Primary Pay**, and entered on the **Trading Partner** tab. You can override this address to any other address for the supplier or customer combination that you define in the trading partner tab. The address you select appears on the Netting Letter.
- Select the **Language** in which you want the letter to be presented to the customer. The value will default from the **Site Language** of the supplier site that is selected in the **Recipient Address**.
- If you have enabled the **Send Letters by E-Mail** option, you must also enter these values:
 - To Email: Enter the email address or addresses to which the letter will be sent. Follow the standard email syntax, for example, "name@companyname.com" and separate multiple emails using a comma (.). You can send letters to multiple sites by entering multiple email recipients. The Primary contact of the supplier site is set as default in the Recipient Address. You can overwrite this with a different email address if required.
Note: To Email field input limit is 240 characters.
 - From Email: Enter the email address that will appear on the recipients **From E-Mail**. This should be the person or department email that created the settlement. The value will default from the **Statement Delivery Using E-Mail: From E-Mail** from the **Receivables System Options** if it exists. You can overwrite this with a different email address if required.
 - From Name: Enter the From Name that will appear on the netting letter. This should be the person or department email that created the settlement. The value will default from the Statement Delivery Using E-Mail: From Name on the Receivables System Options if it exists. You can overwrite this to a different value if required
 - Reply-to E-Mail: This is optional. The **Reply-to E-Mail** address appears on the recipients Reply to E-Mail. This should be the person or department email address that will deal with any queries from the third party relating to the netting settlement. The value will default from the **Statement Delivery Using E-Mail: Reply-to E-Mail** from the **Receivables System Options** if it exists. You can overwrite this with a different email address if required.

Saving a Netting Agreement

After all section details are entered, you can either select Save and Create Another agreement, or Save and Close. When you save the agreement, the validation runs on the third party entities and sites that have been entered. If the application detects different Tax Registration numbers on the third party records, a warning is displayed, asking for verification that you have selected the correct combination. This is intended to ensure that you validate the correct combination of suppliers, supplier sites, customers, and customer sites have been selected for netting.

Once an agreement is saved, you can edit it at a later date. However, you cannot change these attributes:

- Legal Entity
- Agreement Name

You can create a Netting Settlement based on the Netting Agreement that you have set up.

Importing Netting Agreements

You can also import Netting Agreements from the Import Netting Agreements FBDI spreadsheet. We recommend you review the demonstration that is available in the training material.

Summary guidance for importing netting agreements:

1. Download the Import Netting Agreements FBDI spreadsheet.
2. Enter the agreements in the spreadsheet based on the guidance in the notes.
3. Create a .zip file.
4. Use File Import to import the .zip file. Select fin/payables/import account.
5. Run the Load Interface File for Import process, select the Import Netting Agreements for the Import process. When the process is complete, the netting agreements from the spreadsheet will be uploaded into the netting interface tables
6. Run the Import Netting Agreements process. You can optionally select a range of legal entities or a range for the Netting Agreement name.

- [Overview of Netting Agreements](#)

Import Netting Agreements Data

You can create netting agreements by using an FBDI spreadsheet instead of using the Create Netting Agreements page. This enables you to speed up the process of creating large volumes of agreements.

You can download the Netting Agreements Import template to prepare your netting agreements data. The template contains guidelines and tooltips to help guide you through the process of entering information.

To access the template, complete these steps:

1. Navigate to the File-Based Data Import for Oracle Financials Cloud guide.
2. In the Table of Contents, click **File-Based Data Imports**.
3. Click **Netting Agreements Import**.
4. In the File Links section, click the link to the Excel template.

Follow these guidelines when preparing your data in the worksheet:

- Enter the required information for each column. Refer to the tool tips on each column header for detailed instructions.
- Don't change the order of the columns in the template.
- You can hide or skip the columns you don't use, but don't delete them.

Settings That Affect the Netting Agreements Import Process

The Netting Agreements Import template contains an instructions tab and a tab that represent the table where the data is loaded:

Spreadsheet Tab	Description
Instructions and CSV Generation	Contains information about using the template and generating CSV files.
Net Agreements Interface (JE_NET_AGREEMENTS_INT)	Enter information about the netting agreements you're importing into the interface table.

How Netting Agreements Import Data Is Processed

Create the Spreadsheet

In the Netting Agreements Import template, each row is recognized as a record type. You can have these record types for an agreement:

- AGREEMENT
- PAY_GROUP
- PAYABLES_INV_TYPE
- RECEIVABLES_TRX_TYPE
- SUPPLIER
- CUSTOMER

For each agreement, you must at least enter the details of the AGREEMENT, PAYABLES_INV_TYPE, SUPPLIER, and CUSTOMER record types. The PAY_GROUP and RECEIVABLES_TRX_TYPE record types are optional and you use them to filter invoices and transactions for your agreements.

Refer to the tool tips on each column header for detailed instructions. While the sequence in which you enter records in the spreadsheet doesn't matter with respect to the import process, it's advisable to group all the record types of a particular agreement together.

Importing the Spreadsheet

After you finish preparing the spreadsheet, you must import it. Follow these steps to import the spreadsheet:

1. On the Instructions and CSV Generation tab of the template, click the **Generate CSV File** button to generate a compressed file containing one or more CSV files.
2. From the Navigator, select **File Import and Export**.
3. Click **Add**.
4. Browse and select the compressed file you created earlier.
5. Select the **fin/payables/import** account and click **Save and Close**.

Load File for Import

After you import the spreadsheet, you must run the Load Interface File for Import process. Follow these steps to run the Load Interface File for Import process.

1. Navigate to **Tools > Scheduled Processes**.
2. Click **Schedule New Process**.
3. Select the **Load Interface File for Import** process and then click **OK**.
4. In the Process Details dialog box, select **Import Netting Agreements** for import process.
5. Select the compressed file that you imported and click **Submit**.

The agreement details are imported to the Netting interface tables.

Import Agreements

Finally, you run the Import Netting Agreements process. Follow these steps to run the Import Netting Agreements process:

1. Navigate to **Tools > Scheduled Processes**.
2. Click **Schedule New Process**.
3. Select the **Import Netting Agreements** process and then click **OK**.
4. You can optionally select a range of legal entities or a range for the netting agreement names. To import all agreements in the interface tables, you can leave the parameters.
5. Click **Submit**.

After the Import Netting Agreements process is completed, you can view the agreements on the Manager Netting Agreements page.

Correct Import Errors

If you define an agreement that has missing information, the agreement is rejected when you import the spreadsheet. You must update the spreadsheet with the correct information and upload it again.

Netting Settlements

You can do various netting settlement actions including:

- Deleting a settlement
- Submitting a settlement to create the netting
- Reversing a settlement that has already been completed
- Downloading a settlement in a spreadsheet to review and modify
- Downloading settlements in either the Selected or Selected, no transaction status to a spreadsheet for mass processing

Netting Settlement Process

Here's the typical flow of the netting settlement process:

Searching Settlements

Use the search functionality to find any settlement that has already been created. Use the filtering criteria of **Legal Entity, Settlement Name, Settlement Number, Status** or **Agreement Name**. The results are ordered by the most recently updated settlement.

Click **Download Settlements** to download settlements to a spreadsheet. But, you can download only the settlements that are in the Selected or Selected, not transactions status to the spreadsheet for processing.

- [Delete a Netting Settlement](#)

Create a Netting Settlement

The topic describes these processes:

- Creating a Settlement
- Reviewing a Settlement
- Modifying a Settlement
- Submitting a Settlement

Creating a Settlement

You can create a netting settlement between a legal entity and your trading partners. Create a settlement either for a single agreement or a group of agreements. After you run the settlement process, the application lets you review the settlement in a spreadsheet. You can select any of these options to create a settlement:

- Create settlements for all agreements that belong to the legal entity.
- Create settlements for specific netting groups that you define
- Create a single agreement

To create a new settlement, perform these steps:

1. Select the **Legal Entity** for the first party. Only legal entities with active agreements are available for selection.
2. For multiple agreements: Select **All Agreements** to perform netting on all agreements that belong to the legal entity.
3. For specific netting groups: Select **All Agreements**, and select the **Netting Group** to perform netting for a specific group of agreements assigned to your legal entity.
4. For a single agreement: Select **Specific Agreement**, and select the **Netting Agreement** that you want to use to perform netting.
5. Select the **Settlement Date**. The settlement date signifies the date when you want the netting to occur. It cannot be a prior date, and the default value is the current date.
6. Enter a **Settlement Name**. The predefined values for the settlement name are legal entity, agreement option, and today's date. You can override the default values.
7. Select **Yes** in the **Settle Without Review** field to settle a settlement without reviewing the content. However, you should use the default value of **No** so that you can internally verify and modify the settlement details before creating the settlement.
8. Enter the **Transaction Due Date**. All transactions are selected in the netting process if their due dates are before or equal to the transaction due date. Entering the transaction due date helps you to avoid late payment charges, and plan your settlement better.
9. Enter the **Accounting Date**. All the payments and receipts that are created have the accounting date stamped on the documents.

10. Select the **Conversion Rate Type**. This is the exchange rate that is used when you calculate any foreign currency transaction gains and losses. For example, GBP may be your ledger currency but the transactions may be in EUR. The default value of the conversion rate type comes from the AR_DEFAULT_EXCHANGE_RATE_TYPE profile option in Manage Receivables Profile Options. The default value is taken from the user level. If that has not been set up, then it is taken from the site level value. If neither option is set, the default value is set to the corporate rate.

You can either **Save and Create Another** settlement, or **Save and Close**. Once you save the record, you will receive a confirmation that the netting process has started. The netting process then selects all eligible invoices and transactions that meet the criteria on the netting settlement and the agreements to which they relate. The netting process may create multiple settlement numbers depending on these reasons:

- Number of agreements you have selected for running the netting settlement.
- Number of different currencies in the settlement: A settlement is created for every currency of transactions.

For example, if you have 5 agreements and 2 of the agreements contain two different currencies of invoices or transactions, the application creates 7 different settlement numbers for the settlement name. Each settlement is then processed independently.

Generating Settlement

Generating Settlements

You can generate and schedule netting settlements between a legal entity or business unit, and your trading partners. Settlements can be for a single agreement, a group of agreements, or all agreements. To generate netting settlements, select these parameters and run the Generate Netting Settlements process.

- **Legal Entity or Business Unit:** Legal entity or business unit for which you want the netting to be generated for.
- **Netting Group:** Group of agreements for which the netting is generated for.
- **Agreement Name:** Agreement name for which the netting is generated. To generate netting for all agreements, leave this blank.
- **Settlement Date:** Date when the netting occurs. It cannot be a prior date and the default value is the current date.
- **Settlement Name:** Name for the settlement you're generating. The predefined name combination is legal entity, agreement option, and today's date. You can override this and have any name. For multiple settlements, the same settlement name is applied, but different settlement numbers are associated for each agreement within the settlement.
- **Settle Without Review:** To generate settlements without reviewing the content, select Yes. However, we recommend you use the default value No so that you can internally verify and modify the settlement details before generating the settlement.
- **Transaction Due Date:** Due date to select transactions that must be processed. Transactions having their due dates are before or equal to the transaction due date are processed for netting.
- **Accounting Date:** All the payments and receipts that are created have the accounting date published on the documents.
- **Conversion Rate Type:** Exchange rate that is used to calculate any foreign currency transaction gains and losses. For example, GBP may be your ledger currency but the transactions may be in EUR.

After you run the settlement job, the application lets you review the settlements in spreadsheets.

The netting process may create multiple settlement numbers depending on these reasons:

- Number of agreements you have selected.
- Number of different currencies in the settlement. A separate settlement is created for each currency of transactions.

Reviewing a Settlement

If you have opted to review the settlement before the creation of payments and receipts, you can review the proposed settlement in a spreadsheet. You must review the content to confirm that you have selected the correct set of invoices and transactions for netting.

Note: You cannot alter the settlement after this point until the netting process creates the payments and receipts.

To review a settlement perform these steps:

1. Select **Download Settlement to Spreadsheet**. You can also download the settlement in a spreadsheet from the **Download** option in the settlement search results table against your settlement number.
2. Open the downloaded ADFdi excel spreadsheet, and review the details of the settlement.

Note: Ensure that you have installed the Oracle ADF Desktop Integration Add-In for Excel before reviewing a settlement.

3. Netting Toolbar: Open the spreadsheet, and connect to the instance. The **Netting Settlement** menu appears in the excel ribbon. You must click the **Upload Settlement** icon if you make changes to the settlement through the ADFdi spreadsheet before submitting the final settlement.
4. Netting Summary: The summary information appears on both Payables and Receivables tabs. These fields comprise the netting summary:
 - **Status** of the settlement when you download the spreadsheet. The values are **Selected, Reversed, and Settled**.
 - **Payables Amount** that sums up the total amount of Payables invoices for your suppliers.
 - **Receivables Amount** that sums up the total amount of Receivables transactions for your customers.
 - **Proposed Netting Amount** that represents the amount that can be netted.
5. Payables Invoice Details: The **Payables** tab lists the invoices that were selected for netting in the spreadsheet. These fields comprises the key columns:
 - **Changed, Exclude, Row Status:** These are indicators that track which rows have been removed or changed.
 - **Rank:** Indicates the order in which the final netting process will net the invoices. You can change the ranking if you want to include or exclude other Payables invoices in the netting settlement.
 - **Invoice Number:** Indicates the invoice that is selected by the process as a candidate for netting.
 - **Invoice Type:** Represents the Payables invoice type. Only the invoice types that you selected in the agreement setup is selected.
 - **Supplier Name, Number, and Site:** The supplier details indicate the trading partner in Payables to which the invoice is related.
 - **Invoice Date:** Indicates the date that is stamped on the invoices in Payables.
 - **Invoice Amount:** Indicates the total invoice amount in Payables.
 - **Open Amount:** The amount that will be netted.

- **Invoice Currency:** The invoice currency on the Payables invoice.
 - **Settlement Currency:** The currency in which the invoice will be settled.
6. Receivables Transaction Details: The Receivables tab lists the transactions that were selected for netting. These fields comprises the key columns:
- **Changed, Exclude, Row Status:** These are indicators that track which rows have been removed or changed.
 - **Rank:** Indicates the order in which the final netting process will net the invoices. You can change the ranking if you want to include or exclude other Receivables transactions in the netting settlement.
 - **Transaction Number:** Indicates the transaction that is selected by the process as a candidate for netting.
 - **Transaction Type:** Represents the Receivables transaction type. Only the transaction types that you selected in the agreement setup is selected.
 - **Customer Name, Number, and Site:** The customer details indicate the trading partner in Receivables to which the transaction is related.
 - **Transaction Date:** Indicates the date that is stamped on the invoices in Receivables.
 - **Transaction Amount:** Indicates the total invoice amount in Receivables.
 - **Open Amount:** The amount that will be netted.
 - **Transaction Currency:** The invoice currency on the Receivables invoice.
 - **Settlement Currency:** The currency in which the invoice will be settled.

Modifying a Settlement

After reviewing the proposed settlement, perform these actions:

- Exclude or remove invoices or transactions
- Include or add invoices or transactions
- Reorder the settlement

To remove some invoices or transactions from the proposed settlement, perform these steps:

1. Double click the **Exclude** cell for the invoice or transaction number.
2. Save your changes, and click **Upload Settlement**.
3. The Payables or Receivables amount decreases in the spreadsheet after the invoice or transaction is removed.

To add other invoices or transactions into the settlement that were not originally selected as part of the process since they did not adhere to the settlement criteria, perform these steps:

1. Add a new row in the spreadsheet.
2. Double click the **Invoice Number** to add a Payables invoice or the **Transaction Number** to add a Receivables transaction.
3. Search for the **Invoice Number** or the **Transaction Number**. Once you have selected your invoice or transaction, the application adds it to the spreadsheet.
4. The **Row Status** changes, indicating that you have new data.
5. **Save** your changes, and click the **Upload Settlement**. The row status indicates that the row has been successfully inserted.
6. The Payables or Receivables amount increases in the spreadsheet after the invoice or transaction is added.

You can reorder some invoices or transactions to force them to be netted. For example, you notice that you have a very important invoice that you want to be netted. However, since the AP total amount is substantially more than the AR total

amount, there is not enough AR balance to net with AP. You can then increase the ranking of the AP invoice to 1 to force the invoice to be netted. To reorder an invoice or transaction, perform these steps:

1. Increase the **Rank** according to your requirements.
2. A confirmation is displayed in the **Changed** column. Review to confirm the reordering.
3. **Save** your changes, and click **Upload Settlement**.

Submitting a Settlement

Submitting a settlement in the **Selected** status runs the settlement process to create payments and receipts. Depending on the Netting Letters setup, the netting letter may automatically be submitted from the netting routine. To submit a settlement, perform these steps:

1. **Search** for the settlement in the Manage Netting Settlements page.
2. Select the row that lists the settlement.
3. Click **Submit Settlement**.
4. A confirmation message is displayed, indicating that the process has been submitted.
5. **Refresh** the date in the settlement table.
6. The status of the settlement changes from **Selected** to **Clearing**. This indicates that the payments and receipts are being created in Payables and Receivables.
7. When the settlement is complete, the status of the settlement changes to **Settled**. Click **Status** to confirm.

These reports are also run during the settlement process:

- Netting Report: Lists all the invoices and transactions with details about the amounts netted.
- Netting Letter: If you have enabled the **Generate Netting Letter** option, a netting letter is generated for your third party. If you have enabled the **Send Letter by E-Mail** option, the letter is automatically sent to the third party. For more information, see the **Letter** section in Netting Agreements: Explained.

You can review the settlement details before the final submission. Settlement details include:

- Payment Numbers
- Receipt Numbers
- Invoice Netted
- Transactions Netted
- Invoice Not Netted: Indicates that the Payables balance is greater than the Receivables balance.

To review the settlement details, the netting manager should perform these steps:

1. **Search** for the settlement in the Manage Netting Settlements page.
2. Click the **Download** link to download the spreadsheet.
3. Open the spreadsheet to review the details. You must connect to the instance when you are prompted.

Results

The Payables tab displays these columns:

- Payment Number: Indicates the payment number that was stamped on the invoice in Payables.
- Netting Amount: Indicates the sum of the Payables invoices that were successfully netted.
- Netted Amount: Indicates the netted amount for each Payables invoice.
- Payables and Receivables: If Payables is greater than Receivables, some invoices will not be netted. An invoice can also be partially netted. The netting manager can review the details in the spreadsheet so that the Netted Amount is zero or less than the Invoice Amount.

- **Payment Numbers:** Indicates that the invoice was not netted if the column is blank. The invoice is made available for the next netting settlement. You can also make the payment in Payables.
- **Netted Amount:** Indicates that the netted amount of invoices that were not netted will have zero in the **Netted Amount** column.
- **Partially Netted Invoices:** Indicates invoices where the **Invoice Amount** greater than the **Netted Amount**, and the netted amount is not zero. In cases like this, the invoices has been partially paid. You can use the partial payments in future settlements or mark as paid in the traditional business process outside the Netting functionality.

The Receivables tab displays these columns:

- **Receipt Number:** Indicates the receipt number that was stamped on the transaction in Receivables.
- **Netting Amount:** Indicates the sum of the Receivables transactions that were successfully netted.
- **Netted Amount:** Indicates the netted amount for each Receivables transaction.

Related Topics

- [Netting Settlements](#)
- [Delete a Netting Settlement](#)

Delete a Netting Settlement

You can delete a netting settlement.

Deleting a Settlement

You can delete a settlement that's in the **Selected** or **Selected no transactions** status if you decide that the settlement is no longer required.

To delete a settlement, follow these steps:

1. In the **Manage Netting Settlements** page, **Search** for the settlement.
2. Select the row.
3. From **Actions**, click **Delete Settlements**.

A warning is displayed that deleting a settlement releases the transactions from the settlement to be available for future netting settlements.

4. Click **Yes** to confirm.

You can no longer see the settlement in the **Manage Settlements** page.

Note: You can't delete settlements that are already reversed or settled.

Reversing a Settlement

You can reverse a settlement that you have created erroneously and is in the **Settled** status. Settled indicates that the payments and receipts that you have already created.

To reverse a statement, follow these steps:

1. In the **Manage Netting Settlements** page, **Search** for the settlement.
2. Select the row.
3. From **Actions**, click **Reverse Settlements**.

A warning is displayed that reversing a settlement voids the payments and reverses the receipts. The invoices and transactions from the settlement is then available for future netting settlements.

4. Click **Yes** to confirm.

A confirmation appears indicating that the process to reverse is submitted.

5. In the settlement table, **Refresh** the data.

The status of the settlement changes from **Settled** to **Reversed**. This status change indicates that the payments are voided, and receipts are now reversed. A netting reversal letter is then automatically created. You can email this letter or send it to the third party, indicating that the payments and receipts are reversed.

Note: You can reverse only the settlements that are settled.

Netting Settlement Report

This topic describes about the Netting Settlement report.

Overview

The Netting Settlement report is an internal report for the netting manager to review. The report automatically runs when the netting manager submits a settlement, or creates a settlement without review. You can access this report from the Financial Reporting Center.

The netting settlement report lists these netting information:

- Netting Agreement and Netting Settlement options that were valid at the point of settlement.
- Payables invoices that were netted.
- Receivables transactions that were netted.

This figure lists the parameters of a netting settlement report:

Frequently Asked Questions

Here are few frequently asked questions about the Netting Settlement Report.

FAQ	Answer
How do I find this report?	The Netting Settlement report runs automatically when a settlement is settled. You can also schedule and run this report from the Scheduled Processes work area.
Who uses this report?	Netting Manager.
When do I use this report?	Use this report when a netting settlement is settled.
What can I do with this report?	Run the report for a settlement for your legal entity. You can then review the invoices and transactions that were netted in the settlement.
What type of report is this?	Oracle Analytics Publisher.

Netting Settlement Listing

This topic contains summary information about the Netting Settlement Listing.

Overview

The netting settlement listing is an internal report in the spreadsheet format, that netting managers can review. The listing automatically runs when the netting manager submits a settlement or creates a settlement without review. You can access the report from the Financial Reporting Center.

The netting settlement listing consists of the following four sections:

- Title tab: Provides the title of the listing. The following image displays the title tab of a Netting Settlement Listing:

- Header tab: Lists Netting Agreement and Netting Settlement options that were valid at the point of settlement, as displayed in the following image:

The screenshot displays a 'Netting Settlement Listing' window. The main content is a table with two columns: a label column and a value column. Below the table, there is a section titled 'Pay Groups' with a sub-section 'All Pay Groups Selected'.

Netting Settlement Letter

This topic contains summary information about the Netting Settlement Letter.

Overview

Select the **Generate Netting Letter** option for an agreement to receive a netting settlement letter for yourself and your third party every time a settlement takes place. The netting letter generation process automatically runs when the netting manager submits a settlement, or creates a settlement without review. You can access the report from the Financial Reporting Center.

The netting settlement letter lists the following invoices and transactions:

- The Payables invoices that were netted, which includes the following parameters:
 - Invoice Number
 - Invoice Type
 - Invoice Date
 - Invoice Amount
 - Netted Amount
 - Invoice Currency
 - Invoice Total
 - Netted Total

- The Receivables transactions that were netted, which includes the following parameters:
 - Transaction Number
 - Transaction Type
 - Transaction Date
 - Transaction Amount
 - Netted Amount
 - Transaction Currency
 - Transaction Total
 - Netted Total

Key Insights

The Asset Register Report generates two layouts:

- **Asset Register:** Displays detailed information about active assets within a particular period range. Active assets are assets that aren't fully retired during previous fiscal years.

Asset Register includes:

- Account details and description of each asset.
 - Financial data, such as initial values, increases, decreases, and final values. It includes asset cost information, revaluation, depreciation, depreciation reserve, and net book value.
 - Transaction information about asset transactions during the relevant fiscal year, ordered by the transaction number.
- **Asset Register - Retirements:** Displays the assets that are retired during a given period. It includes retirement date, asset cost at the time of retirement, retired depreciation reserve amounts, and retired net book value. This is an optional layout.

The report doesn't include expensed assets or construction in process (CIP) assets.

Report Parameters

The following table lists selected parameters of the report:

Parameter	Description
Major Category	Enter the major category segment value on which you want to report. Leave this parameter blank to include all major categories.
Minor Category	Enter a minor category only if you enter a major category. Leave this parameter blank to include all minor categories.
Asset Cost Account	Enter the assigned asset account. Select this parameter to list all the asset categories that are associated with a particular cost account segment.
Legal Entity	Specify the legal entity to print the statutory heading on the report.

5 Tax

Reporting

Overview of Transaction Tax Reports

The Prepare Transaction Tax Reports activity helps you complete tax return processing, tax auditing and reconciliation. It provides you with operational, business, and reconciliation reports for tax activities associated with buying and selling of goods and services.

Tax reports support the following business functions:

- Tax reporting
- Tax auditing
- Tax reconciliation
- Tax planning

You can generate reports with comprehensive transaction information to create tax reports required by tax authorities and meet the internal reporting needs of the organization.

The following tax reports are provided:

- Tax Register
- Financial Tax Register
- Tax Reconciliation Report
- Tax Reconciliation by Taxable Account Report
- Tax Audit Trail Report
- Interim Tax Register
- Tax Allocations Listing Report
- Tax Allocation Exception Report
- Tax Box Return Preparation Report
- Sales Tax Report

Tax reporting is integrated with Oracle Fusion Tax. The main components of tax reporting solution are:

- Centralized transaction tax reporting through the Tax Reporting Ledger
- Common data models on which user-defined and specialized tax reports are prepared

Transaction Tax Report Features

Tax reporting is integrated with Oracle Fusion Tax and supports reporting of tax activities associated with buying and selling of goods and services. You can use various formats to satisfy the internal and external reporting needs of tax authorities, auditors, and corporate stakeholders.

Tax reports include the following features:

- Flexible reporting levels
- Reporting currency
- Flexible reporting date range
- Tax reporting types and tax reporting codes
- Tax registers

Flexible Reporting Levels

Tax reporting supports three levels of reporting:

- Ledger
- Legal entity
- Tax registration number

You can generate reports at any of these levels to meet the specific requirement of your audience. For example, create a tax report at the ledger level for reconciliation of tax accounts with the ledger postings.

For reporting to tax authorities, generate reports at the legal entity or tax registration number level. Your legal entities and their associated tax registration numbers are aligned with how your businesses are legally recognized by government authorities. Preparing reports by tax registration number lets you view all activities which you can report for a given legal entity, regardless of how internal business units are organized.

Reporting Currency

Multinational companies with complex setup of primary, secondary, and reporting ledgers must report in currencies other than the primary currency of a ledger. Use reporting currencies for handling reporting in currencies other than the primary currency of the ledger.

Flexible Reporting Date Range

You can report transaction tax details based on the following date ranges:

- Tax point dates, for example, to report your tax liability to the tax authorities.
- Accounting dates, for example, to reconcile with the general ledger.
- Transaction dates, for example, to reconcile with the subledgers.

Tax Reporting Type and Tax Reporting Codes

You can use tax reporting types and tax reporting codes to group transaction tax details on the reports to meet legal or internal requirements.

Create reports based on a subset of transactions if you have implemented and assigned tax reporting types and tax reporting codes to your tax transactions. For example, you can create reports that list only self-billing invoices.

Tax Registers

Group transaction tax data based on the tax registers. The following tax register types are available for reporting:

- Tax Register
- Nonrecoverable Tax Register

Oracle Fusion Tax Predefined Reports

Oracle Fusion Tax provides operational, business, and reconciliation reports for tax activity associated with buying and selling goods and services through Oracle Fusion Payables and Oracle Fusion Receivables. Manual and imported tax transaction details also provide the source for the predefined tax reports.

Oracle Fusion Tax reporting also provides reporting data models on which you can prepare user-defined and specialized tax reports.

Before running the reports, ensure that you:

- Set up the following entities:
 - Data Security
 - Geographies
 - Enterprise Structure
 - Tax Regime to Rate setup

- Tax Party Profiles
 - Tax Rules
 - Suppliers
 - Procurement Business Function
 - Common Options for Payables
- Set up a different tax account for each of your tax rates, based on your requirements. This task is optional. Different tax rates may share the same tax account.

You can schedule and run reports from the **Scheduled Processes** work area found on the **Navigator**.

For some tax reports, when you submit the job to run, the report logic calls the Tax Reporting Ledger. The Tax Reporting Ledger uses data extracted from the tax repository and other sources, where needed.

Tax Reports Based on the Tax Reporting Ledger

The following reports are based on the tax reporting ledger.

Display Name	Description
Tax Register	Identifies total tax amounts by tax type, tax class, and company based on transactions created in Oracle Fusion Receivables, and manual and imported tax transactions from Oracle Fusion Tax. Includes deferred tax accounting information and all transactions for which tax accounting is defined. Groups data by tax registers: tax register and nonrecoverable tax register. Orders data by transaction number, customer name, or customer account number, and prints in summary or detail format.
Financial Tax Register	Prints tax and accounting information created from transactions entered in Oracle Fusion Receivables, Oracle Fusion Payables, and Oracle Fusion Tax (Tax Repository). Lists input tax data, output tax data, or both. Groups data into registers: tax register and nonrecoverable tax register.
Tax Reconciliation Report	Lists taxable and tax amounts by tax account for all Oracle Fusion Receivables transactions, and manual and imported output tax transactions from Oracle Fusion Tax for a given period. Generates subtotals by document class and tax account. Includes a flexfield filter parameter based on the account. Prints data in summary or detail format.
Tax Reconciliation by Taxable Account Report	Lists taxable transaction information created in Oracle Fusion Payables, Oracle Fusion Receivables, and Oracle Fusion Tax (Tax Repository). Generates subtotals by tax account and tax rate code. Includes a flexfield filter parameter based on the account.
Tax Audit Trail Report	Identifies detail tax and invoice information created and posted in Oracle Fusion Payables, and manual and imported input tax transactions from Oracle Fusion Tax. The total amounts for each tax rate code are listed in entered currency and ledger currency. Two report layouts are available: Invoice and Tax Code.
Interim Tax Register	Prints detail and summary information about interim (deferred) tax on transactions entered in Oracle Fusion Receivables and Oracle Fusion Payables. For example, the report provides supplemental information for the Output VAT Journal and Input VAT Journal for declaration preparation in Spain.
Tax Allocations Listing Report	Lists transactions within a tax period and the tax boxes to which they're allocated. Provides transactions within a specific document number range, and lists tax-related information and tax boxes assigned to recoverable and nonrecoverable amounts.

Display Name	Description
	Before running this report, run the Tax Reporting Selection Process which is based on the Tax Reporting Ledger and Tax Allocation Process.
Tax Allocation Exception Report	Lists the transactions that aren't allocated to any tax box in the most recent run of the Tax Allocation Process. Provides tax-related information for each transaction line. Before running this report, run the Tax Reporting Selection Process which is based on the Tax Reporting Ledger and Tax Allocation Process.
Tax Box Return Preparation Report	Lists taxable transactions by tax boxes. Groups taxable amounts and tax amounts by tax box numbers, and provides a basis for the preparation of tax returns. Before running this report, run the Tax Reporting Selection Process which is based on the Tax Reporting Ledger.
Sales Tax Report	Identifies taxable, exempt, and tax amounts for invoices entered in Oracle Fusion Receivables, and manual and imported tax transactions from Oracle Fusion Tax. Data is printed and grouped by tax jurisdiction.

Running the Predefined Reports

To run predefined reports, use the following steps the Scheduled Processes work area in the Navigator menu:

1. Click the **Schedule New Process** button.
2. Search on the Process Name.
3. Enter the appropriate parameters.
4. Enter the appropriate process options and schedule.
5. Click Submit.

Tax Reporting Ledger

The Tax Reporting Ledger is a single solution for complex global tax reporting requirements on sales and purchases.

When you submit a job to run a tax report, the Tax Reporting Ledger extracts tax related transactions and accounting details from the following sources based on the parameters you specify:

- Oracle Fusion Receivables
- Oracle Fusion Payables
- Oracle Fusion Tax Repository

Each time you run a tax report, the tax report uses the Tax Reporting Ledger to find and retrieve transactions and their tax information.

For example, when you submit the Tax Register report, it calls the Tax Reporting Ledger. The Tax Reporting Ledger extracts tax related details based on the parameter values you specify.

The reporting process consists of two components:

- Data preparation
- Data presentation

Tip: Use the report templates to present report data. For more information, see Oracle Analytics Publisher documentation.

Data Preparation

The Tax Reporting Ledger extracts tax information from the relevant application tables. Data preparation includes the following:

- Tax data extracts created as XML data files that contain data for a specific run of a report.
- Data models that describe the source and structure of reported data and can be shared by many reports.

The Tax Reporting Ledger program extracts tax transaction data from these sources:

For Input Tax	For Output Tax
Payables invoices and credit memos	Receivables invoices, credit memos, and debit memos
Payables prepayments	Receivables line, tax, and invoice adjustments
Tax transactions imported to the tax repository	Receivables payment application for deferred tax
	Receivables earned and unearned discounts
	Receivables finance charges
	Receivables miscellaneous receipts and payments
	Tax transactions imported to the tax repository

Tax Register and Financial Tax Register

This topic includes details about the Tax Register and Financial Tax Register.

Overview

Tax registers include:

- Tax Register: Identifies total tax amounts by tax type, tax class, and company from transactions created in Oracle Fusion Receivables. The report includes deferred tax accounting information and all transactions for which tax accounting is defined.

The following figure is an example of the report.

ORACLE Vision Operations		Tax Register				Report Date: 7/8/14 3:14 PM				
Currency: USD Tax: VAT20		Page: 1 of 2

All amounts are printed in transaction entered currency.

Key Insights

The tax register types for the Tax Register and Financial Tax Register are:

Name	Description
All	Use this register to include all tax transactions.
Nonrecoverable Tax Register	Use this register to show your partial and fully nonrecoverable input taxes. It also provides details on nonrecoverable taxes on: <ul style="list-style-type: none"> Earned discounts Unearned discounts Finance charges Adjustments
Tax Register	Use this register to report tax liability. It includes details on: <ul style="list-style-type: none"> Standard and collected output tax Partial and fully recoverable input taxes

Report Parameters

The following table describes selected process parameters:

Parameter	Description
Reporting Level	Choose the level on which you want to run the report. You can choose from three different levels, Ledger , Legal Entity , and Tax Registration Number .
Reporting Context	Specify the context for the report. The list of values for this parameter depends on the reporting level you selected. <ul style="list-style-type: none"> If you select the reporting level of Legal Entity, you select the legal entity on which to report, and optionally select the tax registration number. By entering a tax registration number in the Tax Registration Number parameter, you report only on a subset of transactions that are entered for a specific legal reporting unit associated with the tax registration number. <p>Run the report for a tax registration number to report on the transactions entered for legal entities that share the same tax registration number. This is also known as tax group registration.</p> If you select Ledger as the reporting level, you can report on legal entities associated with ledgers defined in the ledger set or data access set within your security profile. Run tax reports by ledger when you want to review your tax activity as it aligns with your accounting. <p>Run tax reports by ledger when you need to view tax activity in a currency other than the currency of the ledger or the currencies of the transactions.</p>
Tax Registration Number	Enter a tax registration number that is assigned to the legal reporting unit, when the reporting level is Legal Entity .
Tax Point Date	Include the transactions for the date range specified. <p>Tax point date is the date on which the taxpayer becomes liable for paying the tax to the tax authority.</p>
Currency	Select the range of currencies to include in the report. If a transaction is in a currency that is not within the specified range, it isn't included.
Accounting Status	Run the report for accounted transactions, unaccounted transactions, or both transactions.

Frequently Asked Questions

Tax Reconciliation and Audit Reports

This topic includes details about the Tax Reconciliation Report, Tax Reconciliation by Taxable Account Report, and Tax Audit Trail Report.

Overview

Tax reconciliation and audit reports include:

- Tax Reconciliation Report: Lists the taxable and tax amounts, by tax account, for all Oracle Fusion Receivables transactions for a given period. Includes a flexfield filter parameter based on the account.

The following figure is an example of the report:

ORACLE Tax Reconciliation Report										
Vision Operations										Report Date: 7/9/14 3:04 PM

Reconciliation reports are delivered as templates that you can use immediately or modify to satisfy your reporting needs.

Key Insights

Tax Reconciliation Report

Use the Tax Reconciliation Report to prepare the output tax portion of your periodic tax returns. This report lists the taxable and tax amounts of all sales transactions and output tax for a given period to enable you to identify and review your tax liability for various tax rate codes. All the transaction and output tax information is displayed at the detail or summary level.

In the report, you can select to include:

- Only transactions that are posted to the General Ledger
- Only transactions that are not posted to the General Ledger
- Both types of transactions

The report groups information and provides totals by:

- Account
- Transaction class
- Company

Tax Reconciliation by Taxable Account Report

Use the Tax Reconciliation by Taxable Account Report to report on taxable transactions in Oracle Fusion Payables, Oracle Fusion Receivables, and Oracle Fusion Tax Repository. This report lets you reconcile period-end taxable account balances to tax amounts. Only accounted transactions are listed in this report.

The Tax Reconciliation by Taxable Account Report helps you:

- Prepare a tax return from a single source
- Reconcile period-end taxable account balances.

The summarization level options for the report are:

- Taxable account: Displays transactions by taxable account and tax rate code. The report prints totals for each tax rate code within an account and for each account.
- Tax rate code: Displays transactions by tax rate code and taxable account. The report prints totals for each account within a tax rate code and for each tax rate code.

Note: The predefined template provides you with a report that orders transactions by tax rate code and taxable account.

The accounting segment range provides you with the ability to report transactions with taxable lines posted on the account within the segment range. Specify the currency to limit the report to only transactions in that currency.

Tax Audit Trail Report

Use the Tax Audit Trail Report to review tax information for posted or partially posted purchase transactions. All transaction types are included by default, however you can select the type of transactions to report. For example, you can create a report that includes invoices but excludes prepayments and external tax transactions imported from the tax repository.

The Tax Audit Trail Report provides the following details:

- Detail tax and invoice information, and the total amounts in the entered and ledger currencies.
- Distributions of all posted and partially posted invoices.
- Tax amounts and taxable amounts for each invoice.

You can order the information by invoice and tax rate code, and also group data by reporting period, tax code and tax rate.

Report Parameters

The following table lists selected report parameters common to the tax reconciliation and audit reports:

Parameter	Description
Reporting Level	Choose the level on which you want to run the report. You can choose from three different levels, Ledger , Legal Entity , and Tax Registration Number .
Reporting Context	Specify the context for the report. The list of values for this parameter depends on the reporting level you selected. <ul style="list-style-type: none"> • If you select the reporting level of Legal Entity, you select the legal entity on which to report, and optionally select the tax registration number. By entering a tax registration number in the Tax

Parameter	Description
	<p>Registration Number parameter, you report only on a subset of transactions that are entered for a specific legal reporting unit associated with the tax registration number.</p> <p>Run the report for a tax registration number to report on the transactions entered for legal entities that share the same tax registration number. This is also known as tax group registration.</p> <ul style="list-style-type: none"> If you select Ledger as the reporting level, you can report on legal entities associated with ledgers defined in the ledger set or data access set within your security profile. Run tax reports by ledger when you want to review your tax activity as it aligns with your accounting. <p>Run tax reports by ledger when you need to view tax activity in a currency other than the currency of the ledger or the currencies of the transactions.</p>
Tax Registration Number	Enter a tax registration number that is assigned to the legal reporting unit, when the reporting level is Legal Entity .
Tax Point Date	<p>Include the transactions for the date range specified.</p> <p>Tax point date is the date on which the taxpayer becomes liable for paying the tax to the tax authority.</p>

Payables Tax Reconciliation with General Ledger Report

This topic includes details about the Payables Tax Reconciliation with General Ledger Report.

Overview

Reconciliation between subledger taxable transactions and the accounting application is a common business and legal requirement for companies with tax reporting obligations in countries such as Austria, Germany and Switzerland. The Payables Tax Reconciliation with General Ledger Report reconciles tax transaction information for Oracle Fusion Payables with account balances in Oracle Fusion General Ledger.

Key Insights

Before running the report, ensure that you validate, account, and post the Payables invoices to General Ledger.

Parameters

The following table lists the main parameters for the Payables Tax Reconciliation with General Ledger Reports:

Name	Description
Reporting Level	Choose the level on which you want to run the report. You can choose from three different levels, Ledger, Legal Entity, and Tax Registration Number.
Reporting Context	Specify the context for the report. The list of values for this parameter depends on the reporting level you selected. <ul style="list-style-type: none"> If you select the reporting level of Legal Entity, you select the legal entity on which to report, and then select the tax registration number associated with the legal entity. If you select Ledger as the reporting level, you can report on legal entities associated with ledgers defined in the data access set within your security profile. Run tax reports by ledger when you want to review your tax activity as it aligns with your accounting. Run tax reports by ledger when you need to view tax activity in reporting or secondary ledger currency. If you select tax registration number as the reporting level, you can report all the transactions associated with different legal entities sharing the same tax registration number.
Tax Registration Number	Specify the tax registration number of the legal entity or legal reporting unit that is submitting the declaration to the tax authority.
From and To Accounting Period	Select the accounting period range for which you want to reconcile transactions.
Account	Specify different conditions for account code combinations to filter transactions. For example, you can view transactions only for tax account 01-1775-000-000, if the account codes are filtered so that they are equal to the following values: <ul style="list-style-type: none"> Co=01 Acct=1775 Ctr=000 Prod=000

Frequently Asked Questions

The following table lists frequently asked questions about the Payables Tax Reconciliation with General Ledger Reports.

FAQ	Answer
How do I find this report?	Schedule and run this report from the Scheduled Processes work area on the Navigator menu.
Who uses this report?	<ul style="list-style-type: none"> • Tax Manager • Tax Accountant • Tax Specialist • Tax Administrator
When do I use this report?	Use this report to reconcile Payables tax transactions with the tax account balance in General Ledger, as required by the tax reporting legal requirements in your country.
What type of report is this?	Oracle Analytics Publisher

Interim Tax Register

This topic includes details about the Interim Tax Register.

Overview

The Interim Tax Register identifies detailed and summary information of unpaid or partially paid payables and receivables transactions that have a tax liability created on the payment date. The report prints customer details, transaction tax-related details, and the tax totals by tax rate code.

All transactions with tax point basis as payment are reported in the Interim Tax Register until they are fully paid.

The following figure is an example of the report:

ORACLE		Hacienda Pública		Interim Tax Register				Report Date	21-NOV-2014 06:44
				Period	01-Aug-2012 - 30-Sep-2012		Page	1 of 1

Sales Tax Report

This topic includes details about the Sales Tax Report.

Overview

The Sales Tax Report identifies taxable, exempt, and tax amounts for invoices entered in Oracle Fusion Receivables. Data is printed and grouped by tax jurisdiction.

The following figure is an example of the report.

Transaction Number	Type	Adjusted Transaction Number	Transaction Date	Customer Name
1020	Order-to-cash, invoice		7/6/14	A T&T PERCUT BRAND

Line Number	Description	Line Amount	Tax Line Number	Tax Rate	Tax Rate Code	Exempt Reason	Tax Amount
1		10,000.00	1	5	5%BSL_CONS_TAX_RA TE		500.00

Totals for Tax Jurisdiction BSL_JUS

Totals by Transaction Type	Line Amount	Exempt Amount	Taxable Amount	Tax Amount
Order-to-cash, invoice	10,000.00	0.00	10,000.00	500.00
Total	10,000.00	0.00	10,000.00	500.00

Total Exempt Amount by Reason	Exempt Amount
	0.00
Total Exempt Amount	0.00

Total Exception Amount by Reason	Exception Amount
	0.00
Total Exception Amount	0.00

Total Tax Amount for Tax Jurisdiction BSL_JUS **500.00**

End of Report

Key Insights

The Sales Tax Report is used only for the sales tax type and accrual basis reporting.

For adjustments to be reported correctly in the Sales Tax Report, tax jurisdictions must be associated with a corresponding tax rate.

Report Parameters

The following table describes selected process parameters:

Parameter	Description
Reporting Level	Choose the level on which you want to run the report. You can choose from three different levels, Ledger , Legal Entity , and Tax Registration Number .
Reporting Context	Specify the context for the report. The list of values for this parameter depends on the reporting level you selected. <ul style="list-style-type: none"> If you select the reporting level of Legal Entity, you select the legal entity on which to report, and optionally select the tax registration number. By entering a tax registration number in the Tax Registration Number parameter, you report only on a subset of transactions that are entered for a specific legal reporting unit associated with the tax registration number. <p>Run the report for a tax registration number to report on the transactions entered for legal entities that share the same tax registration number. This is also known as tax group registration.</p> If you select Ledger as the reporting level, you can report on legal entities associated with ledgers defined in the ledger set or data access set within your security profile. Run tax reports by ledger when you want to review your tax activity as it aligns with your accounting. <p>Run tax reports by ledger when you need to view tax activity in a currency other than the currency of the ledger or the currencies of the transactions.</p>
Tax Registration Number	Enter a tax registration number that is assigned to the legal reporting unit, when the reporting level is Legal Entity .
Tax Point Date	Include the transactions for the date range specified. Tax point date is the date on which the taxpayer becomes liable for paying the tax to the tax authority.
Transaction Date	Include the transactions for the date range specified. If you specify a transaction date range but no accounting date range, your report will not balance to the General Ledger if the transaction and accounting dates for a transaction fall in different periods.
State	Include the sales tax information for the state you specify.
Exemption Status	List transactions which refer to the exemptions with the given status. For example, you can find all transactions using rejected exemptions by entering Rejected .

Example of Reporting Output Taxes for Tax Setup Options on Receivables Activities in the Tax Register and Nonrecoverable Tax Register

The following scenario illustrates the reporting difference between the Tax Register and the Nonrecoverable Tax Register for an adjustment with nonrecoverable tax.

Receivables Invoice

The following table shows the accounting entries for an Oracle Fusion Receivables invoice that has two transaction lines, each with a different tax rate.

Account	Debit Amount	Credit Amount	Description
Receivable	1140.00		
Revenue		600.00	
Tax		60.00	Tax at 10%
Revenue		400.00	
Tax		80.00	Tax at 20%

Adjustments

An adjustment for -100.00 USD is made against the invoice, reducing the receivable to 1040.00 USD. Assume the following settings for the Receivables activity for this adjustment:

Receivables Activity Option	Setting
GL Account Source	Revenue on Invoice

Receivables Activity Option	Setting
Tax Rate Code Source	Invoice
Recoverable	Yes

This table shows the accounting entries created as a result of this adjustment:

Account	Debit Amount	Credit Amount	Description
Revenue	52.63		Revenue at 10%
Revenue	35.09		Revenue at 20%
Tax	5.26		Tax at 10%
Tax	7.02		Tax at 20%
Receivable		100.00	

A second adjustment is made against the invoice for -200.00 USD. Assume the following settings for the Receivables activity for this adjustment:

Receivables Activity Option	Setting
GL Account Source	Revenue on Invoice
Tax Rate Code Source	Invoice
Recoverable	No

This table shows the accounting entries created as a result of this adjustment:

Account	Debit Amount	Credit Amount	Description
Revenue	105.26		Revenue at 10%
Revenue	70.18		Revenue at 20%
Nonrecoverable Tax	10.52		Tax at 10%

Account	Debit Amount	Credit Amount	Description
Nonrecoverable Tax	14.04		Tax at 20%
Receivable		200.00	

Tax Register

For the 10 percent tax, the Tax Register shows:

Transaction Number	Transaction Class	Taxable Amount	Tax Amount
Inv-Test2	Invoice	600.00	60.00
Adj-1	Adjustment	-52.63	-5.26

For the 20 percent tax, the Tax Register shows:

Transaction Number	Transaction Class	Taxable Amount	Tax Amount
Inv-Test2	Invoice	400.00	80.00
Adj-1	Adjustment	-35.09	-7.02

Both the item lines and the adjustment that was recorded when the Recoverable setting was set to Yes are reported in the Tax Register.

Nonrecoverable Tax Register

For the 10 percent tax, the Nonrecoverable Tax Register shows:

Transaction Number	Transaction Class	Taxable Amount	Tax Amount
Adj-2	Adjustment	-105.26	-10.52

For the 20 percent tax, the Nonrecoverable Tax Register shows:

Transaction Number	Transaction Class	Taxable Amount	Tax Amount
Adj-2	Adjustment	-70.18	-14.04

Only the adjustment that was recorded when the Recoverable setting was set to No is reported in the Nonrecoverable Tax Register.

Example of Reporting Input Taxes in the Nonrecoverable Tax Register and Recoverable Tax Register

The following scenario illustrates the reporting differences between the Nonrecoverable Tax Register and the Recoverable Tax Register for recoverable and nonrecoverable taxes.

Payables Invoices

The following table shows the accounting entries for an Oracle Fusion Payables invoice (AP-Inv-Test3) with a fully recoverable tax and a partially recoverable tax.

Account	Debit Amount	Credit Amount	Description
Expense	600.00		Net expense amount taxed at 10%
Tax	60.00		Tax at 10% is fully recoverable
Expense	400.00		Net expense amount taxed at 20%
Expense	32.00		40% of 80.00 (400.00 * 20%) is nonrecoverable
Tax	48.00		60% of 80.00 (400.00 * 20%) is recoverable
Liability		1140.00	

The following table shows the accounting entries for the Payables invoice AP-Inv-Test4.

Account	Debit Amount	Credit Amount	Description
Expense	600.00		Net expense amount taxed at 10%
Tax	60.00		Tax at 10% is nonrecoverable
Expense	400.00		Net expense amount taxed at 20%

Account	Debit Amount	Credit Amount	Description
Tax	80.00		Tax at 20% is nonrecoverable
Liability		1140.00	

Tax Register

For the 10 percent tax, the Tax Register shows:

Transaction Number	Transaction Class	Taxable Amount	Recoverable Tax Amount	Nonrecoverable Tax Amount
AP-Inv-Test3	Invoice	600.00	60.00	0.00

For the 20 percent tax, the Tax Register shows:

Transaction Number	Transaction Class	Taxable Amount	Recoverable Tax Amount	Nonrecoverable Tax Amount
AP-Inv-Test3	Invoice	400.00	48.00	32.00

AP-Inv-Test 4 does not appear in the tax register because it only contained nonrecoverable taxes.

Nonrecoverable Tax Register

For the 10 percent tax, the Nonrecoverable Tax Register shows:

Transaction Number	Transaction Class	Taxable Amount	Recoverable Tax Amount	Nonrecoverable Tax Amount
AP-Inv-Test4	Invoice	600.00	0.00	60.00

For the 20 percent tax, the Nonrecoverable Tax Register shows:

Transaction Number	Transaction Class	Taxable Amount	Recoverable Tax Amount	Nonrecoverable Tax Amount
AP-Inv-Test3	Invoice	400.00	48.00	32.00
AP-Inv-Test4	Invoice	400.00	0.00	80.00

Example of Reporting Prepayments in the Tax Register

The following scenario illustrates the reporting of prepayments in the Tax Register.

Payables Prepayment Invoice

The following table shows the accounting entries to create a prepayment invoice in Oracle Fusion Payables. The example invoice number is AP-Inv-Test10.

Account	Debit Amount	Credit Amount	Description
Prepaid Asset or Expense	500.00		Asset or expense is half paid
Tax	50.00		Tax at 10% on asset or expense fully paid
Liability		550.00	Prepaid with tax

Upon payment of the prepayment invoice, the following accounting entries are created:

Account	Debit Amount	Credit Amount
Liability	550.00	
Cash		550.00

Tax Register for Prepayment Invoice

For the 10 percent tax, the Tax Register shows:

Transaction Number	Transaction Class	Taxable Amount	Recoverable Tax Amount	Nonrecoverable Tax Amount
AP-Inv-Test10	Invoice (prepayment)	500.00	50.00	0.00

Payables Invoice

Assume invoice number AP-Inv-Test20 is created, and the prepayment is applied to this invoice. The following table shows the resulting accounting entries:

Account	Debit Amount	Credit Amount	Description
Asset or Expense	1000.00		Invoice amount
Tax	50.00		Tax at 10% on balance of invoiced amount
Liability		550.00	Liability for balance of invoiced amount
Prepaid Asset or Expense		500.00	Reverse prepaid asset or expense

Tax Register

Using the accounting entries created in this example, the Tax Register with the tax at 10 percent appears as:

Transaction Number	Transaction Class	Taxable Amount	Recoverable Tax Amount	Nonrecoverable Tax Amount
AP-Inv-Test20	Invoice	500.00	50.00	0.00

Related Topics

Example of Reporting Offset Taxes in the Tax Register

The following scenario illustrates how the Tax Register displays offset taxes in Oracle Fusion Payables.

Oracle Fusion Payables Prepayment Invoice

The following table shows the accounting entries in USD currency for the Payables invoice. The example invoice number is AP-Inv-Test30.

Account	Debit Amount	Credit Amount	Description
Expense	1000.00		Net amount 600.00 taxed at 10%
Output Tax	100.00		Output tax at 10%
Liability		1000.00	
Input Tax		100.00	Input tax at 10%

Tax Registers

Using the accounting entries created in this example, the Output Tax Register with the tax at 10% appears as:

Transaction Number	Transaction Class	Taxable Amount	Recoverable Tax Amount	Nonrecoverable Tax Amount
AP-Inv-Test30	Invoice	1000.00	100.00	0.00

Using the accounting entries created in this example, the Input Tax Register with the tax at 10% appears as:

Transaction Number	Transaction Class	Taxable Amount	Recoverable Tax Amount	Nonrecoverable Tax Amount
AP-Inv-Test30	Invoice	1000.00	-100.00	0.00

Example of Reporting Input Taxes in the Tax Register in Primary and Secondary Ledger Currency

The following scenario illustrates tax reporting in primary and secondary ledger currencies.

The default template generates the Tax Register in the primary ledger currency. To create a report in the secondary or reporting ledger currency, you should modify the template to include secondary ledger or reporting ledger amounts.

Payables Invoice

In this example assume the following setup is in place:

- The primary ledger currency is EUR.
- The secondary ledger currency is USD.
- The corporate currency conversion rate is 1.2.

The following table shows the accounting entries in EUR currency for an Oracle Fusion Payables invoice AP-Inv-Test5. The invoice is posted.

Account	Debit Amount	Credit Amount	Description
Expense	100.00		Net expense amount taxed at 20%
Tax	20.00		Tax at 20%, fully recoverable
Liability		120.00	Interim tax at 20%

The following table shows the accounting entries in EUR currency for the Payables invoice AP-Inv-Test6. The invoice is validated, but not accounted.

Account	Debit Amount	Credit Amount	Description
Expense	200.00		Net expense amount taxed at 20%
Tax	40.00		Tax at 20%, fully recoverable
Liability		240.00	Interim tax at 20%

Tax Registers

For the primary ledger currency, EUR, the Tax Register shows:

Transaction Number	Transaction Class	Taxable Amount	Tax Amount
AP-Inv-Test5	Invoice	100.00	20.00
AP-Inv-Test6	Invoice	200.00	40.00

For the secondary ledger currency, USD, the Tax Register shows:

Transaction Number	Transaction Class	Taxable Amount	Tax Amount
AP-Inv-Test5	Invoice	120.00	24.00

When you run the Tax Register for the secondary ledger, invoice AP-Inv-Test6 is not reported since it is not posted and does not appear in the subledger accounting tables. These tables are the source for the Tax Register Report.

Related Topics

- [Transaction Tax Report Features](#)

Example of Reporting Transactions Based on Tax Point Basis

The following scenario illustrates how transactions with tax point basis as payment are reported.

Scenario

You have an invoice for 100 EUR on 1-Apr-2014 with a tax rate of 40%. The line amount is 60 EUR, and the tax amount is 40 EUR.

The following payments are made:

- On 1-May-2014, a partial payment of 20 EUR
- On 1-Jun-2014, a final payment of 80 EUR

The following tables show the reporting differences between tax point date and accounting date across reporting periods.

For the reporting period of 01-Apr-2014 to 30-Apr-2014:

Reporting Basis	Tax Point Date	Taxable Amount	Tax Amount	Notes
Tax Point Date				Since no payment is made in April, there is nothing to report.
Accounting Date		60	40	The invoice is created on 1-Apr-2014.

For the reporting period of 01-May-2014 to 31-May-2014:

Reporting Basis	Tax Point Date	Taxable Amount	Tax Amount	Notes
Tax Point Date	01-May-2014	12	8	The partial payment of 20 EUR is prorated across the line and tax.
Accounting Date				The invoice was already accounted in April.

For the reporting period of 01-Jun-2014 to 30-Jun-2014:

Reporting Basis	Tax Point Date	Taxable Amount	Tax Amount	Notes
Tax Point Date	01-Jun-2014	48	32	The balance payment of 80 EUR is prorated across the line and tax.
Accounting Date				The invoice was already accounted in April.

For the reporting period of 01-Apr-2014 to 30-Jun-2014:

Reporting Basis	Tax Point Date	Taxable Amount	Tax Amount	Notes
Tax Point Date	01-May-2014	12	8	

Reporting Basis	Tax Point Date	Taxable Amount	Tax Amount	Notes
Tax Point Date	01-Jun-2014	48	32	
Accounting Date		60	40	

Tax reports allow you to choose different date ranges for reporting, such as accounting dates, transaction dates, or tax point basis. You can use the appropriate date range to compare your tax reports with general ledger, payables, or receivables reports.

When invoices with tax point basis as payment (deferred tax) are reported based on accounting or transaction dates, tax point basis has no relevance and tax point dates do not appear on the reports.

Example of Reporting Account Postings in the Interim Tax Register and Tax Register

The following scenario illustrates the reporting difference between the Interim Tax Register and the Tax Register.

Receivables Invoice

The following table shows the accounting entries for an Oracle Fusion Receivables invoice that has two transaction lines, each with a different tax point basis.

Account	Debit Amount	Credit Amount	Tax Point Basis	Description
Receivable	1140.00			
Revenue		600.00		
Tax		60.00	Accounting	Tax at 10%
Revenue		400.00		
Tax		80.00	Tax	Interim tax at 20%

Partial Payment

A partial payment of 570 USD reduces the open receivable and transfers 50 percent of the deferred tax to a collected tax account, as shown by the following table:

Account	Debit Amount	Credit Amount	Tax Point Basis	Description
Cash	570.00			

Account	Debit Amount	Credit Amount	Tax Point Basis	Description
Tax	40.00		Payment	50% of the deferred tax
Receivable		570.00		
Tax		40.00	Accounting	Tax due to the tax authority

Interim Tax Register

For the 10 percent tax, the Interim Tax Register shows:

Transaction Number	Transaction Class	Taxable Amount	Tax Amount
No data found			

Note: As no data matches the 10 percent tax rate, the reports shows no data found.

For the 20 percent tax, the Interim Tax Register shows:

Transaction Number	Transaction Class	Taxable Amount	Tax Amount
Inv-Test1	Invoice	400.00	80.00
Cr-Test1	Cash Application	-200.00	-40.00

Tax Register

For the 10 percent tax, the Tax Register shows:

Transaction Number	Transaction Class	Taxable Amount	Tax Amount
Inv-Test1	Invoice	600.00	60.00

For the 20 percent tax, the Tax Register shows:

Transaction Number	Transaction Class	Taxable Amount	Tax Amount
Cr-Test1	Cash Application	200.00	40.00

When an invoice is paid (or partially paid), the tax amount that is transferred from the Interim Tax Account to the Tax Account appears as a negative line on the Interim Tax Register and as a positive line on the Tax Register.

As these examples illustrate, the Interim Tax Register shows only account postings for deferred tax, including the invoice and cash application. The Tax Register shows all tax transactions with immediate settlement as well as all cash applications to a deferred tax invoice.

FAQs for Tax Reporting

Can I see adjustments in the Sales Tax Report when no tax rate exists for the tax jurisdiction?

No, you can't see them because such adjustments aren't reported in the Sales Tax Report.

A tax jurisdiction must be associated with a corresponding tax rate defined specifically for it. Adjustments are only reported correctly for these jurisdictions.

Tax Box Allocations

Tax Box Allocations

You are often required to submit tax returns in a format that groups taxable transactions by applying specific grouping rules defined by the tax authorities.

In most cases, the grouping rules for taxation are based on the location where the transaction took place, transaction type, tax rate, product type, and tax recovery.

Tax box allocation supports definition of tax grouping rules and complex tax reporting by providing transactional and accounting information, segregated by tax boxes.

Define two sets of rules to report periodic and annual allocations: periodic and annual.

You can:

- Define tax box allocation rules on two different levels to support specific needs.
- Share the rules across legal entities or define them for a specific legal entity.

In most tax regimes, legal entities that reside within the same tax regime share the same set of tax grouping rules defined by the tax authorities. Tax box allocation provides you the flexibility to define tax box allocation rules once, and share them across legal entities.

For each tax reporting period, transactions are processed and based on the tax determining factors, tax box numbers are assigned to the transaction lines.

Tax box allocations support periodic and annual reporting. It enables you to separate:

- Purchase and sales transactions
- Recoverable and nonrecoverable taxes
- Domestic and foreign transactions
- Goods and services

Tax box allocation comprises of:

- Tax Box Allocation Rules
- Tax Allocation Process
- Tax Box Allocation Reports

Tax Box Allocation Rules

Tax box allocation rules are user-defined rules. They set the correspondence between tax box number and a set of transaction attributes based on which tax or taxable amount is reported in the tax box.

A tax box represents a tax declaration cell in which tax or taxable amount is reported. It may also represent a group of transactions in tax registers or other tax reports.

Tax Allocation Process

The Tax Allocation Process:

- Checks whether the tax box allocation rule condition is met
- Allocates applicable tax box numbers to taxable transactions
- Verifies whether the rules are defined at the legal entity or global level. If more than one rule is applicable to a transaction, all the rules are applied. However, all the applicable rules must be at the same level, either at the legal entity or global level. Rules at the:
 - Legal entity level are given higher precedence than the rules you define at the global level.
 - Global level are processed and applied only when no rules are defined at the legal entity level.

Note: Run the Tax Allocation Process for a period only after the Tax Reporting Selection Process is executed for the period.

Tax Box Allocation Reports

Oracle Tax provides various generic reports that are associated with tax box allocations. These reports provide details on tax computation and tax returns.

The following reports are provided:

- Tax Allocations Listing Report
- Tax Allocation Exceptions Report
- Tax Box Return Preparation Report

Run the Tax Box Return Preparation Report to list taxable and tax amounts grouped by tax declaration box numbers for periodic or annual allocations.

Run the Tax Allocation Listing Report and Tax Allocation Exceptions Report to:

- Verify the tax boxes allocated to the transaction lines
- Check the transaction lines that don't have any tax boxes allocated

Tax Box Allocation Reports

This topic includes details about the tax box allocation reports.

Overview

The tax box allocation reports lists transaction that are allocated to tax boxes and those that are exceptions. You can use these reports as a basis for preparing tax returns.

Tax box allocation reports include:

- Tax Allocations Listing Report: Lists transactions within a tax period and the tax boxes that the transactions are allocated to. It enables you to list transactions within a specific document number range. The report lists tax-related information and tax boxes assigned to recoverable and nonrecoverable amounts.

The following figure is an example of the report:

ORACLE Tax Allocations Listing

End of Report

Key Insights

Before running the tax box allocation reports, run the Tax Reporting Selection Process which is based on the Tax Reporting Ledger.

Report Parameters

The following table lists some selected parameters used while generating these reports.

Parameter	Description
Tax Calendar Period	Specify the tax period to be included for reporting tax.
Source	Indicate whether transactions with input tax, output tax, or both are reported.
Reallocate	Indicate whether to reallocate tax boxes for all matched transactions or for only not allocated or in error tax transactions.

Parameter	Description
Report Periodicity	Indicate the type of tax box allocation rule used to determine whether the tax box rule is applied for periodic tax returns or annual tax returns.
Tax Calendar Year	Select the reporting year for annual allocation amounts. You can also report transactions on an annual basis.
Summarization Level	Use this option to view the report in one of the following formats: Detail, Summary, or Both.

The following table shows the combination of parameter values that are valid:

Reporting Periodicity	Tax Calendar Year	Tax Calendar Period
Periodic	N/A	Period (example May 2017)
Annual	Year (example, 2017)	N/A

Frequently Asked Questions

The following table lists frequently asked questions about the tax allocation reports.

FAQ	Answer
How do I find this report?	Schedule and run this report from the Scheduled Processes work area on the Navigator menu.
Who uses this report?	<ul style="list-style-type: none"> • Tax manager • Tax accountant
When do I use this report?	Use these reports to: <ul style="list-style-type: none"> • Review that your transactions are being accurately allocated to tax boxes • Report your tax liabilities to the tax authorities
What type of report is this?	Oracle Analytics Publisher

Generate Tax Returns Based on Tax Box Allocation Rules

To prepare tax returns that are based on the tax box allocation process, you must generate the Tax Box Return Preparation Report.

You can use the Tax Box Return Preparation Report to:

- Compose tax declaration for periodic or annual allocations
- Submit it to the tax authorities

The following table lists the steps required to generate tax returns based on tax box allocation rules:

Steps	Task	Output
1.	Run the Tax Reporting Selection Process	Extracts the transactions from the tax repository.
2.	Run the Tax Allocation Process	Assigns applicable tax box numbers to the extracted transactions according to the defined tax box allocation rules.
3.	Run the Tax Allocation Exceptions Report and verify that there are no errors.	Generates the Tax Allocation Exceptions Report that lists the transactions that are not applied with tax box allocation rules during the previous step. If there are errors or incorrectly allocated tax box numbers, run the Tax Allocation Process again with the Reallocate parameter set to Yes.
4.	Run the Tax Allocations Listing Report and verify that the tax box numbers assigned to the transactions are correct.	Generates the Tax Allocations Listing Report that lists all the transactions with the corresponding tax box numbers.
5.	Run the Tax Final Reporting Process	Stamps the transactions as finally reported.
6.	Run the Tax Box Return Preparation Report (Optional)	Generates the Tax Box Return Preparation Report that lists taxable and tax amounts grouped by tax declaration box numbers for periodic or annual allocations. You can view detail, summary, or both detail and summary of tax and taxable amounts.

FAQs for Tax Box Allocations

How can I correct transactions when tax box allocation rules aren't applied?

If tax box allocation rules aren't applied to the transactions, here's what you can do to correct them:

- Check the tax reporting determinants. The Payables or Receivables transactions should use all the required determinants.
- Check the tax attributes on the transactions. Ensure that the tax box allocation rule is based on the tax reporting determinants.
- Run the tax allocation process again.

6 Country Specific

Reporting

Oracle Fusion Cloud Financials for EMEA Predefined Reports

Using Oracle Financials for EMEA you can generate predefined reports to meet reporting requirements of specific countries for reconciliation and audit of tax calculated on transactions.

You can also prepare specialized reports based on the reporting data models.

You can schedule and run reports from the **Scheduled Processes** work area found on the **Navigator**. Here's how you can run the predefined reports:

1. Click the **Schedule New Process** button.
2. Search on the Process Name.
3. Enter the appropriate parameters.
4. Enter the appropriate process options and schedule.
5. Click Submit.

You can generate predefined reports for:

- European Union
- France
- Germany
- Israel
- Italy
- Spain
- Turkey
- United Kingdom

Reports for the European Union and United Kingdom

The tax reports for the European Union and United Kingdom are:

Display Name	Description
Sales Listing Report for European Union	Declares the information related to products and services that are rendered within the European Union to VAT registered customers in other European Union member states.
Reverse Charge Sales List Report for UK	Lists the UK sales transactions that are created in Oracle Fusion Receivables. It lists transactions for high value electronic goods that are subjected to the Reverse Tax Charge and reported to HRMC (Her Majesties Revenue and Customs). The reported data is grouped by the customers.

Reports for France

The tax reports for France are:

Display Name	Description
DAS2 Contractor Letters for France	Generates letters to all contractors in France whose income is reported in the DAS2 extract file for the current year. This lists income tax amounts from Oracle Fusion Payables grouped by income tax type for France.
DAS2 Extract File for France	Generates the DAS2 electronic file for France that's submitted to the tax authorities in a predefined format.
DAS2 Type 210 Updates Report for France	Generates a list of all changes to data related to DAS2 reporting for France. This also lists all the changes that are made since the last run of the verification report.
DAS2 Verification Report for France	Generates DAS2 information for contractors in France and related income tax information from data entered in Oracle Fusion Payables. The report extracts information into the DAS2 temporary tables and automatically submits the DAS2 Verification Extract Execution Report for France.
Deductible VAT Declaration Report for France	Lists the deductible VAT amount and totals of invoices for France that are entered in Oracle Fusion Payables. The VAT deductibility rule, tax rate, and account number are used to group the reported data.
Audit Report for France	Creates the electronic audit file that's required to be submitted to tax authorities in France. You can create the electronic file in HTML format, and as an excel spreadsheet for data verification.

Reports for Germany

The subledger and accounting reports for Germany are:

Display Name	Description
Z4 Report for Germany	Lists all incoming and outgoing payments made through a foreign bank for the selected ledger and date range. The report prints only the payments that are more than the legally defined threshold amount.
Z5A Report for Germany	Shows the sum of all outstanding receivables and liabilities of goods and services traded with foreign suppliers or customers. You can select the summarize option to print either the Z5A Reconciliation Report or the Z5A Sheet 2 Report.
Journal Details Report for Germany	Provides posted general ledger journal activity for a given period or date range. You can optionally include other criteria like journal category, ledger currency, and journal batch. You can group and sort the entries at report submission. Using this report you can print balances for actual, encumbrance, or budget balance type.

Reports for Israel

The tax reports for Israel are:

Display Name	Description
Withholding Tax Report for Israel	Prints summary and details of withholding tax and income tax activities.
Withholding Tax Reconciliation Report for Israel	Prints all payments and related withholding tax transactions for suppliers and supplier sites for the selected reporting period.
Withholding Tax File for Tax Authority for Israel	Creates a text file in a predefined format for submission to the tax authorities, using the form 856. The file lists the withheld tax amounts for each supplier, supplier personal details, and the total amounts on the transactions including payments, withholding tax amounts, and liabilities.
Supplier Withholding Annual Certificate for Israel	Prints the annual summary of all supplier transactions with the entity issuing the certificate. It lists the withholding tax amounts and payments made to the supplier.
Receipt Report for Israel	Prints receipt details, taxpayer details, and payer details in a specific format.
Withholding Tax Summary Detail Report for Israel	Prints summary and details of withholding tax and income tax activities.

Reports for Italy

The tax reports for Italy are:

Display Name	Description
Declarable Input VAT Register for Italy	Lists the tax declarable activities including payments of the invoices with deferred tax. The report lists supplier details and recoverable and nonrecoverable taxable and tax amounts grouped by tax rate code.
Declarable Output VAT Register for Italy	Lists the tax declarable activities including receipts of the invoices with deferred tax, adjustments, and bills receivables. The report prints customer details and transaction tax-related details grouped by tax rate code.
Payable Sales VAT Register for Self-Invoices, Inter-EU Invoices, and VAT for Italy	Identifies a sales VAT register for Italy for all invoices received from suppliers within the European Union or all self-billing invoices that have accounting dates within the period range being reported. The report displays recoverable and nonrecoverable elements of both tax and taxable amounts grouped by tax code.
Purchase VAT Register for Italy	Identifies all purchase invoices for Italy with document sequence numbers assigned to the selected VAT register name, and with accounting dates within the period range being reported. The report prints and groups invoices by tax rate code.
Receivables Sales VAT Register for Italy	Identifies all sales invoices for Italy assigned to the document sequence name of the selected VAT register name, and with accounting dates within the period range being reported. The report prints and groups invoices by tax rate code.
VAT Liquidation Report for Italy	Identifies a summary of the VAT amounts by tax code for each VAT type and VAT register for the selected period. It also includes the consumption per exemption limit group and the available limit at the beginning and end of the month. The transactional tax data are grouped by Declarable Output VAT Register and Declarable Input VAT Register.

Display Name	Description
European Purchase Listing of Services for Italy	Lists all Intra-EU payables transactions for services. The report prints invoice details specific to Italy such as service mode, service code, and protocol number.
European Sales Listing of Services for Italy	Lists all Intra-EU receivables transactions for services. The report prints invoice details specific to Italy such as service mode, service code, and protocol number.
Yearly Tax Report	Prints tax and taxable amount information for input and output taxes for all final reported tax periods within the year. The report can be printed in detail or summary format.
Yearly Withholding Tax Report for Italy	Shows annual taxes withheld by first-party legal entities, for the supplier for the year selected. The report data can be printed or grouped by supplier name, supplier taxpayer ID, or supplier tax registration number.
Withholding Tax Letters for Italy	Identifies letters sent to suppliers in Italy confirming tax amounts withheld on partially or fully paid purchase invoices within a calendar year. Letters can be printed for a specific supplier or for all suppliers that have tax withheld.
Exemption Letter Report for Italy	Produces an exemption letter for each exempt supplier in Italy instructing them not to include VAT on invoices that they submit.
Subledger Letter of Intent Register for Italy	Lists all exemption letters issued to suppliers or received by customers in Italy within a given period range.
Letter of Intent Receivables Invoice Register	Lists details about Receivables transactions issued with a Letter of Intent for a given calendar year. Provides letter of intent details like protocol number, allocation type, amount and effective dates.
Supplier Exemption Limit Consumption Report for Italy	Lists the details of suppliers eligible for exemption in Italy and their monthly consumption of assigned exemption limit. Lists consumption details of all the suppliers, or a specific supplier. Details include all invoices exempted during a calendar period.
Letter of Intent Report for Italy	Produces a letter of intent for each exempt supplier in Italy instructing them not to include VAT on invoices that they submit.

Reports for Spain

The tax reports for Spain are:

Display Name	Description
Input VAT Journal for Spain	Identifies detail and summary information about tax on invoices and expense reports for Spain entered in Oracle Fusion Payables. Data is reported by register type: recoverable tax register and nonrecoverable tax register. The transactions can be selected based on tax reporting type and tax reporting code.
Output VAT Journal for Spain	Identifies detail and summary information entered in Oracle Fusion Receivables about tax on transactions created for Spain. Data is reported by register type: tax register and nonrecoverable tax register. The transactions can be selected based on tax reporting type and tax reporting code.

Display Name	Description
VAT Inter-EU Invoice Journal for Spain	Identifies detail and summary information about invoices received in Spain from suppliers located in any European Union member state. Invoices are entered and posted in Oracle Fusion Payables, and have offset or self-assessed tax distributions. The transactions can be selected based on tax reporting type and tax reporting code.
VAT Inter-EU Invoice Format for Spain	Lists details of the same invoices that appear on the Spanish VAT Inter-EU Invoices Journal report. The transactions can be selected based on tax reporting type and tax reporting code.
Modelo Electronic File Generation for Spain	Prepares electronic file for Modelo 340, 347, 349, or 415 declarations in a legally predefined format.
Modelo Verification Report for Spain	Lists all payables invoices and receivables transactions that are reported in the Modelo 340, 347, 349, or 415 declarations. The report prints data based on the selected legal entity, period range, source, and Modelo name. For receivables cash receipts, only receipts that are of a greater value than the entered minimum cash amount are reported.
Withholding Tax Report for Spain	Identifies summary or detail withholding tax information for Spain by invoice and withholding tax code. The report prints information for a selected legal entity, and optionally for specific supplier.
Withholding Tax Magnetic Format for Spain	Lists withholding tax transactions for the selected legal entity and tax year in a flat file format in the predefined layout.
Withholding Tax Extract Report for Spain	Extracts withholding tax transactions for Spain and stores them in an interface table to be used to report withholding tax transactions. The report selects information for a specific legal entity, and optionally for a specific supplier.

Report for Turkey

The tax report for Turkey is:

Display Name	Description
Process Exchange Rate Difference Report for Turkey	Summarizes the conversion rate differences for invoice, credit memo and journal. It also provides the complete details including tax components in the ledger currency. It prints the eligible gain/loss lines that are processed by the Process conversion rate Differences job for each trading partner and site.

General Ledger and Subledger Accounting Reports for EMEA

Oracle Fusion Financials for EMEA provides predefined reports that are used to meet reporting requirements for specific countries and for reconciliation and audit of tax calculated on transactions.

Use the General Ledger and Subledger Accounting reports for reporting in countries in Europe and South America. These reports provide reporting data models on which you can prepare specialized reports. You can also use them to

inform shareholders on the financial results in other countries as well. Configure these reports to report the clearing account reconciliation information available in the report extract.

You can schedule and run reports from the **Scheduled Processes** work area found on the **Navigator**. To run predefined reports:

1. Click the **Schedule New Process** button.
2. Search on the Process Name.
3. Enter the desired parameters.
4. Enter the desired process options and schedule.
5. Click Submit.

General Ledger Reports

The following table lists the General Ledger reports:

Display Name	Description
General Ledger Trial Balance Report	Lists actual account balances and activity by ledger, balancing segment, and account segment. The report prints the value, description, and debit or credit balance for the beginning and ending period, along with the debits and credits for the period. The report can print income statement, balance sheet, or all balances for a selected range of accounting code combinations. You can run this report for a legal entity.
General Ledger Journal Entry Report	Provides general ledger journal activity for a given period or date range, and optionally other criteria including journal source, entered currency, and journal batch. Flexible grouping and sorting options are provided at report submission.
General Ledger Journal and Balance Report	Retrieves all information for the reports that require journal entries and account balances. The account balances can be printed for selected levels of the hierarchy for actual, encumbrance, or budget balance types.

Subledger Accounting Reports

The following table lists the Subledger Accounting reports:

Display Name	Description
Third-Party Detail and Balances Report	Provides third-party account balances and accounting activity details for a period. You can review the accounting process details by third party and audit third-party accounts in detail.
Third-Party Account Balance Report	Prints account and original third-party transactions impacting the account during a particular period. The report is run to ensure that subledger and general ledger balances reconcile, and to identify possible reasons for any discrepancies.
Third-Party Balances Summary Report	Displays information for each account of the third party and third-party site, and account identification. This report is a tool for auditing third-party accounts.
Journals and Third-Party Report	Prints all journals posted in Oracle Fusion General Ledger for the accounting period. The report provides accounting and reporting sequence details, detailed subledger accounting entry lines reporting level regardless of the ledger journals summarization. It helps in verifying that all journals

Display Name	Description
	are accurately recorded in chronological order with no gaps using legal sequencing rules for both accounting entries and source documents.
General Ledger and Subledger Accounting by Journal Lines Report	Lists account balances or selected segment balances with subledger journal details including entered amounts, third-party name, journal source, journal category, and reporting and accounting sequences. Total number of debit and credit documents is also listed.
Account Analysis by Legal Entity Report	Prints account balances by accounting code combination and selected segments with subledger journal details, including third-party information and sequences. Flexible grouping and sorting options are provided at submission.
General Ledger and Subledger Account Analysis Report	Prints account balances by account with subledger journal details. The report displays entered amounts, third-party information, sequences, and total number of debit and credit documents.
Daily Journals Report	Lists subledger journal activity for a given period or date range, journal source, entered currency, and journal batch. Report prints detailed subledger journal lines prior to general ledger summarization. Third party and transaction details are also listed for the journal lines.
Subledger Detail Journal Report	Displays information about the posted general ledger journal batches that originate from Oracle Fusion Receivables and Oracle Fusion Payables subledgers. The report prints subledger details like transaction number, transaction date, transaction amount in entered and ledger currency.
Journal Ledger Report	Lists the accounting entries with subledger details like transaction number, transaction date, and line description, using flexible sorting options that are provided at report submission. This report provides a real audit trail between general ledger and subledgers to satisfy legal and business requirements.

Tax Reporting Processes

Tax reporting processes provide a single solution to meet global and country-specific tax reporting requirements.

You can create tax reports in preliminary or final mode, and mark transactions as finally reported. Tax reporting processes help you when the tax reporting calendar is different from the ledger calendar.

Tax reporting is based on these parameters:

- Tax registration number
- Tax reporting entity, which is uniquely defined by the tax registration number, tax regime, and tax calendar
- Tax reporting level can be one of these values:
 - Ledger
 - Legal entity
 - Tax registration number

When you prepare your tax returns, run the tax reporting processes by legal entity and tax registration number. Legal entities and the associated tax registration numbers are aligned with how your businesses are legally recognized by government authorities. Preparing reports by tax registration number enables you to view all activities that can be reported for a given legal entity in your business.

The tax reporting processes include:

- Tax Reporting Selection Process
- Tax Final Reporting Process

Tax Reporting Selection Process

Use the Tax Reporting Selection Process to:

- Select and mark the transactions you want to report.
- Run tax reports in a preliminary mode.
- Review transactions selected for reporting.
- Make corrections before submitting the reports to the tax authority.

The tax reporting selection process marks transactions selected for tax reporting with an application generated tax reporting identifier. The tax reporting identifier consists of the parameter values you provide when running the Tax Reporting Selection Process. For example tax reporting context, such as ledger name or legal entity name.

Tax Final Reporting Process

Use the Tax Final Reporting Process to:

- Control transactions that can't be changed once the reports are filed with the tax authorities.
- Verify and correct tax details before finalizing the reports.

Once you generate the final reports, the tax period is closed to prevent updates or double reporting. Report updates as corrections in the subsequent periods.

- [Overview of Transaction Tax Reports](#)

How Tax Reporting is Processed

Generate tax reports in summary or detail mode.

To generate tax reports, you must complete these prerequisites:

1. Set up your tax reporting configuration.
2. Create country-specific templates used for tax reporting.

Note: For Italy and Spain, a set of ready-to-use templates are available for tax reporting.

Tax reporting steps:

1. Select the tax transactions using the Tax Reporting Selection Process.
2. Generate preliminary reports.
3. Submit the Tax Final Reporting Process.
4. Generate the final reports.
5. Reprint final reports if needed.

Settings That Affect Tax Reporting

Run the Tax Reporting Selection Process to mark the tax transactions within a tax period.

This table describes selected process parameters:

Name	Description
Reporting Level	Enter the reporting level for which you want to select transactions. It can be ledger, legal entity, or tax registration number.
Ledger	Enter the name of the ledger. If you have selected ledger as the reporting level, then you must enter the ledger name.
Tax Registration Number	Select the appropriate tax registration number. When the reporting level is: <ul style="list-style-type: none"> • Legal entity, filter transactions based on the tax registration number, tax regime, and legal entity. • Ledger, you must select the tax registration number to determine the tax calendar for your reporting entity.
Source	Specify input tax, output tax, or both.

How Tax Is Reported

To generate reports, execute these steps:

1. Select the tax transactions

The Tax Reporting Selection Process marks all the transactions eligible for reporting.

You can run this process repeatedly provided you haven't completed final reporting for the selected tax period. Only accounted transactions can be marked by the selection process.

Note: The Tax Reporting Selection Process considers corrections or backdated transactions only when the previous period is finally reported.

2. Generate preliminary reports

After selecting the transactions, run the tax reports. Tax reports that are run for an open tax period are considered preliminary reports.

You can run preliminary reports more than once. Use these reports to verify and correct data before reporting to the tax authorities.

3. Generate final reports

Run the Tax Final Reporting Process to mark all the tax transactions as finally reported. If you make changes to the transactions before running the final process, you must run the Tax Reporting Selection Process to generate preliminary reports. Once the report data is correct, run the Tax Final Reporting Process.

The Tax Final Reporting Process marks transactions as finally reported to avoid double reporting, and closes the tax reporting period. Once the tax reporting period is closed, you can't run the Tax Reporting Selection Process for that period. All transaction tax changes made in the finally reported period are reported as corrections in the subsequent periods.

4. Print final reports

After completing the final process, print the final reports.

Note: You can print final reports more than once.

To reprint final reports, search by:

- Reporting identifier
- Tax calendar period
- Report name

Print the report from the Finalized Transaction Tax Reports page in the Financial Reporting Center.

Related Topics

- [Tax Reporting Processes](#)
- [Yearly Tax Report](#)

Yearly Tax Report

This topic includes details about the Yearly Tax Report.

Overview

Use the Yearly Tax Report to display detailed or summarized information about tax and taxable amounts within a year. You can view information on both input and output tax for all finally reported tax periods within a year. All tax amounts are reported in the ledger currency.

The Yearly Tax Report provides countries using the Tax Reporting Selection Process the capability to analyze the annual subledgers and manual tax entry information.

Only finalized transactions in closed periods are included in the report. Use the Tax Final Reporting Process to mark transactions as final and close the tax calendar period.

You can print the report in the following levels:

- Detail: Prints detailed tax amounts and summarized tax amounts by month and year. Includes the following sections:
 - Detailed Tax Calendar Period

- o Detailed Tax Calendar Year
- o Summarized Tax Calendar Period
- o Summarized Tax Calendar Year
- Summary: Prints summarized tax amounts by tax calendar period and tax calendar year.

The following figure is an example of the report.

Key Insights

The following table displays the tax categories used to group the report:

Tax Category	Grouping Criteria
Declarable Output Tax	Transaction type name.
Declarable Input Tax	Document category name, recoverable taxable and tax amounts, and nonrecoverable taxable and tax amounts.
Manual Tax Entries	Manually entered transactions and transactions imported from external sources into the tax repository. Includes the batch name, tax and taxable amounts. Debit tax amounts represent input tax, and credit tax amounts represent output tax.

Within each tax category, you can also group according to other criteria, such as:

- Tax rate code
- Tax rate

- Tax type

Report Parameters

The following table lists selected parameters:

Parameter	Description
Reporting Identifier	System generated reporting entity identifier assigned when the process Select Transactions for Tax Reporting is run. The reporting entity identifier is built as a concatenation of the Reporting Level, Legal Entity, Tax Regime, TRN and the Reporting Identifier ID (for example: LE:Vision Italy-1017:IT VAT:IT12345670017:300100066356392).
Tax Calendar Year	Indicate the tax year for tax reporting and settlements.
Summarization Level	Specify the level of detail for reporting. You can print summary data or detailed data.
Report Heading	Specify the report header that must be printed on the report as a legal requirement.

Frequently Asked Questions

The following table lists frequently asked questions about the Yearly Tax Report.

FAQ	Answer
How do I find this report?	Schedule and run this report from the Scheduled Processes work area on the Navigator menu.
Who uses this report?	<ul style="list-style-type: none"> • Tax manager • Tax accountant
When do I use this report?	Use this report to analyze: <ul style="list-style-type: none"> • Subledger tax information • Manual tax entry information

Turnover Reporting

In many countries, companies must report tax transactions on a monthly, quarterly, or annual basis. Turnover reporting is based on transaction dates or accounting dates, rather than tax point dates. It doesn't report manual tax transactions entered into the tax repository.

Some of the reports that are based on turnover reporting are:

- European Sales Listing of Services for Italy
- European Purchase Listing of Services for Italy
- Modelo reporting for Spain

Turnover reporting includes two processes:

- Select Transactions for Turnover Reporting
- Finalize Transactions for Turnover Reporting

Select Transactions for Turnover Reporting

The Select Transactions for Turnover Reporting prepares data for turnover reporting by extracting your payables and receivables transactions and selects transactions by accounting date or transaction date.

The Select Transactions for Turnover Reporting extracts all invoices, including correction transactions within the specified dates for a given legal entity. Correction transactions include credit memos and debit memos.

To accurately report data, follow these steps:

1. Run the Turnover Reporting Selection Process in the preliminary mode.
2. Verify the transactions to be reported, run the turnover extract and ensure the transactions listed in the log file are valid and complete.

Note: Run the European Purchase Listing of Services for Italy or European Sales Listing of Services for Italy reports to verify if the transactions are reported correctly.

3. Run the Turnover Reporting Selection Process again in the final mode.

This table describes selected parameters:

Parameter	Description
Reporting Group	Specify the type of turnover reporting: <ul style="list-style-type: none"> • Other to extract transactions for the European Sales Listing of Services for Italy and European Purchase Listing of Services for Italy reports. • Modelo reporting for Spain when you want to select transactions for Modelo reporting.
Selection Mode	Indicate preliminary or final. When you run the process in final mode, it marks the transactions as finally reported. Finally reported transactions aren't included in the next run of the Turnover Reporting Selection Process.

Parameter	Description
	<p>Note: Finally reported transactions can be extracted again for Italy if:</p> <ul style="list-style-type: none"> • A credit memo is applied to an invoice. • The global descriptive flexfield details on the invoice or transaction are changed.
Calendar	Select the calendar for reporting. Once you select the calendar, you must use the same calendar in later runs of the process.
Source	<p>Select the source to extract transactions. You can select:</p> <ul style="list-style-type: none"> • Payables • Receivables • Payables and Receivables <p>Note: This process doesn't select manual tax entries entered in Oracle Fusion Tax.</p>

Finalize Transactions for Turnover Reporting

The Finalize Transactions for Turnover Reporting records the details of a finalized declaration to the tax authority. It's used only in Italy to record the declaration details and mark the reported transactions with the declaration number received from the tax authority.

This table describes selected parameters:

Parameter	Description
Tax Registration Number	Specify the registration number assigned to a party or party site by the tax authority when it's registered.
Declaration Year	Specify the year in which transactions are reported to the tax authority.
Declaration Authority	Specify the name of the tax authority responsible for receiving and processing all company declaration transaction tax reports.
Declaration Number	Specify the unique identifier assigned by the tax authority to a declaration.

European Union

Sales Listing Report for European Union

This topic includes details about the Sales Listing Report for European Union.

Overview

Use the Sales Listing Report for European Union to declare goods and services that are rendered within the European Union (EU) to VAT-registered customers in the other EU member states.

Let's take a look at the sample report in a summary format.

European Sales Listing - Summary		
Customer UNITED PARCEL SERVICE, INC		
Country Code DE		
Tax Registration Number 12345678901		
Line Number	Tax Reporting Code	Total Amount(EUR)
1	Goods	-10,400.00
Total		UNITED PARCEL SERVICE, INC(12345678901) -10,400.00
Customer Computer Service and Consulting		
Country Code DE		
Tax Registration Number 12399787		
Line Number	Tax Reporting Code	Total Amount(EUR)
1	Goods	8,956.00
Customer		
Country Code		
Tax Registration Number		
Line Number	Tax Reporting Code	Total Amount(EUR)
1	Services	11,583.00
Total		Computer Service and Consulting(12399787) 20,539.00

Key Insights

This report only includes transactions with the tax reporting code as Intra-EU transactions for goods or services tax.

Invoices, credit memos, and adjustments are reported based on the invoice tax date, the date on which goods and services are rendered.

Report Parameters

This table describes the selected report parameters:

Parameter Name	Description
Trader VAT Number	Select the tax registration number of the first-party legal reporting unit.
Country of the Tax Registration Number	Select the site whose country code is displayed on the report when the tax registration number doesn't contain the first two characters as the country code.
Include Prior Period Adjustments and Credit Memos	Select Yes to display adjustments and credit memos that are related to transactions from a different reporting period. Select No for adjustments and credit memos to be included in the regular totals.
Rounding Rule	Select the rounding method for the calculated taxes to the minimum accountable unit. The available options are Up , Down , and Nearest .
Minimum Reportable Amount	Enter the smallest unit used for the ledger currency amounts.
Tax Reporting Type Code	Select the appropriate Intra-EU transaction tax reporting type code.
Tax Reporting Code for Intra-EU Goods	Specify the tax reporting code created for goods. If you don't want to include goods in the report, select the value as null.
Tax Reporting Code for Intra-EU Services	Select a tax reporting code associated with the tax reporting type that you have previously selected.
Additional Tax Reporting Code 1	Select a tax reporting code associated with the tax reporting type that you have previously selected. If required, specify the tax reporting code created for triangulation of goods or goods and services.
Additional Tax Reporting Code 2	Select a tax reporting code associated with the tax reporting type that you have previously selected. If required, specify the tax reporting code created for triangulation of goods or goods and services.

Frequently Asked Questions

This table lists frequently asked questions about the Sales Listing Report for European Union.

FAQ	Answer
How do I find this report?	Schedule and run this report from the Scheduled Processes work area on the Navigator menu.

FAQ	Answer
Who uses this report?	<ul style="list-style-type: none"> • Tax Manager • Tax Accountant
When do I use this report?	Use this report to declare goods and services that are rendered within the European Union (EU) to VAT-registered customers in the other EU member states.

France

Reporting Features for France

Oracle Fusion Applications provide standard financial and tax reports to meet the legal and business reporting requirements of tax authorities. For countries like France, a set of country-specific reports is provided to meet local requirements, such as DAS2 reporting and VAT reporting.

DAS2 Reports

Companies in France that do business with independent consultants must declare all payments to consultants to the tax authorities. These third-party payments include fees, commissions, and rebates. These companies must also inform the independent consultants of the amounts reported in the DAS2 file for the current year. This table lists the DAS2 reports that support these requirements:

Report Name	Description
DAS2 Verification Report for France	Generates DAS2 information for contractors in France and related income tax information. Extracts information into the DAS2 temporary tables and automatically submits the DAS2 Verification Extract Execution Report for France.
DAS2 Verification Extract Execution Report for France	Generates output file for information extracted by the DAS2 Verification Extract process for France. Automatically submitted by the DAS2 Verification Report for France, but it can also be submitted as a standalone report.
DAS2 Type 210 Updates Report for France	Generates a list of all changes to data related to DAS2 reporting for France since the last run of the verification report.
DAS2 Contractor Letters Report for France	Generates letters to all contractors in France whose income is reported in the DAS2 extract file for the current year. Lists income tax amounts grouped by income tax type.

Report Name	Description
DAS2 Extract File Report for France	Generates the DAS2 electronic file for France that is submitted to the tax authorities in a predefined format.

VAT Reports

In France, companies must report input deductible VAT at invoice creation time and payment time. This table lists the VAT report that meets this requirement:

Report Name	Description
Deductible VAT Declaration Report for France	Lists the deductible VAT amounts and totals of invoices for France, grouped by deductible VAT rule, tax rate, and account number.

DAS2 Reports for France

This topic includes details about the DAS2 reports for France.

Overview

In France, companies that do business with independent contractors declare to tax authorities all payments to contractors each year for each supplier. These third-party payments include fees, commissions, and rebates. The DAS2 report declares all payments made to the contractors.

The DAS2 reporting includes:

- DAS2 Contractor Letters for France: Generates letters to all contractors in France whose income is reported in the DAS2 extract file for the current year. Lists income tax amounts from Oracle Fusion Payables grouped by income tax type for France.

The following figure is an example of the DAS2 Contractor Letters for France.

Key Insights

You can generate an XML file with information on payments made to contractors and send it to the tax authorities.

If your company has more than one location that makes payments to independent contractors, you can submit:

- Separate formatted XML files for each location that is a part of a different tax district

- One XML file if all locations are from the same tax district

All invoices, advanced payments or prepayments, and credit memos that have DAS2 income tax codes associated with transaction lines are reported.

Report Parameter

The following table describes selected DAS2 report parameters:

Parameter	Description
Legal Entity	Specify the legal entity. You can control the report output through this parameter only if you have associated balancing segment values to your legal entities.
Supplier	Specify the name of the contractor to whom payment is made.
Year	Specify the year in which the payment is made.
Tax for Salaries	Specify whether taxes on salaries and contractor fees are paid to the government.

Frequently Asked Questions

The following table lists frequently asked questions about the DAS2 reports for France.

FAQ	Answer
How do I find this report?	Schedule and run this report from the Scheduled Processes work area on the Navigator menu.
Who uses this report?	<ul style="list-style-type: none"> • Tax Manager • Tax Accountant

How You Generate DAS2 Reports for France

This topic includes details about the DAS2 reports for France.

Overview

Companies in France that do business with independent contractors must declare to tax authorities all payments to contractors each year for each supplier. These third-party payments include fees, commissions, and rebates.

Your company submits this information to tax authorities in a formatted, electronic file. This file contains information about:

- Suppliers and supplier sites
- Invoice details
- Supplier payment totals

If a company has more than one location that makes payments to independent contractors, the company can submit the formatted file as:

- Separate files for each location that falls under a different tax district
- One file if all locations are under the same tax district

You must provide complete and accurate information because the information in the DAS2 file is used to check the contractor supplier's tax declaration and tax payment. Omissions and errors in your DAS2 declaration may result in heavy penalties.

Prerequisites

Before you use DAS2 reporting, ensure that you:

- Define suppliers and supplier sites. Assign the contractor type of Corporation, Foreign corporation, Individual, and Foreign individual to the supplier tax organization type.
- Assign the 14-digit SIRET to the supplier as the Taxpayer ID on the Manage Third-Party Tax Profile page.
- Define legal entity and legal reporting units. A legal reporting unit represents the company for which you prepare your DAS2 files. Assign SIRET and NIC to the legal entity and appropriate balancing segment value to each legal reporting unit.
- Define the tax codes for DAS2 reporting. For example, if you want to report author royalties paid to the contractor, enter DDA/DA in the **Income Tax Type** field on the invoice line.
- Enter invoices with corresponding DAS2 income tax codes in Oracle Fusion Payables.

Generate Reports

Use these steps to generate DAS2 reports:

1. Run the DAS2 Verification Extract for France. It extracts transaction information for legal entities from Payables to temporary tables and submits the DAS2 Verification Extract Execution Report for France.

Note: All invoices, advanced payments or prepayments, and credit memos that have DAS2 income tax codes associated with transaction lines are extracted.

2. Review the extracted data in the DAS2 Verification Extract Execution Report for France. The data is grouped by supplier and income tax code and the invoices are rounded to integer and listed in the reverse chronological order by the payment date.
3. Modify the information using the Manage DAS210 Information for France page, if necessary. Manage DAS210 Information page lets you update the income tax amounts for every supplier displayed. The updates made on this page will be also reflected in the totals displayed on Manage DAS2 Summary page.
4. Run the DAS2 Type 210 Updates Report for France to review the changes made. The report displays the old and new values for the updated amounts. Use the Manage DAS2 Summary for France page to modify the information, if necessary. Manage DAS2 Summary page gives you the total income tax amounts for the legal entity and legal reporting units. You can enter the type of work and NIC information here.
5. Run the DAS2 Extract File Report for France to generate the file to be submitted to the tax authorities. You can run the report for a legal entity or a specific legal reporting unit.
6. Run the DAS2 Contractor Letters Report for France to print letters that are sent to contractors who are reported in the DAS2 file for the current year.

Deductible VAT Declaration Report for France

This topic includes details about the Deductible VAT Declaration Report for France.

Overview

In France, companies must report deductible VAT on purchase of goods and services, by applying the relevant rule to determine if VAT is deductible during invoice creation and payment time. The Deductible VAT Declaration Report for France lists the deductible VAT amounts and totals of invoices for France, grouped by deductible VAT rule, tax rate, and account number.

The following figure is an example of the report.

ORACLE Tax Declaration									
								Report Date: 12-NOV-2014 16:02 Page 1 of 2	
Period: 11/01/2014 - 11/30/2014									
Company: Tax Registration Number: Taxpayer ID: Currency: Ledger:									
Tax Rule: CRE-M Tax Rate: 20 Account Number: 445667									
Supplier Number	Supplier Name	Invoice Number	Status	Invoice Amount	Payment Amount	Taxable Amount	Recoverable Tax Amount	Recovery %	Tax Point Date
1277	Masson Inc	FRVAT001		1,200.00	1,000.00	1,000.00	200.00	100	12-Nov-2014

Total for Tax Rule CRE-M						1,000.00	200.00		
Tax Rule: DEB-M Tax Rate: 20 Account Number: 445510									
Supplier Number	Supplier Name	Invoice Number	Status	Invoice Amount	Payment Amount	Taxable Amount	Recoverable Tax Amount	Recovery %	Tax Point Date
1277	Masson Inc	DAS2001		1,200.00		1,000.00	600.00	100	01-Nov-2014
1277	Masson Inc	DAS2002		1,200.00		1,000.00	600.00	100	05-Nov-2014
Total for Tax Account 445510						2,000.00	1,200.00		
Total for Tax Rate 20						2,000.00	1,200.00		

Key Insights

The VAT processing is based on tax point basis, tax point date, and marked as reportable. Only tax lines with the reportable option set to yes are reported.

The Deductible VAT Declaration Report for France prints deductible VAT amounts and groups transactions by deduction tax rules such as:

- DEB-M tax rule: VAT deductible on received invoices for goods or services.
- CRE-M tax rule: VAT deductible on invoice payments.

For transactions to which the CRE-M rule applies, the tax point basis is set to Payment and are reported when they are either partially or fully paid.

The report displays two separate sections for DEB-M and CRE-M tax rules and lists details of transactions that are not posted to general ledger. Invoices with deferred tax rates are reported as a part of CRE-M only after the invoice is paid. Invoices that have tax rates with tax point basis set to invoice, accounting, or delivery are reported under the DEB-M section.

Report Parameters

The following table lists selected parameters for the Deductible VAT Declaration Report for France:

Parameters	Description
Reporting Level	Choose the level on which you want to run the report. You can choose from three different levels, Ledger, Legal Entity, and Tax Registration Number.

Parameters	Description
Reporting Context	<p>Specify the context for the report. The list of values for this parameter depends on the reporting level you selected.</p> <ul style="list-style-type: none"> If you select the reporting level of Legal Entity, you select the legal entity on which to report, and then select the tax registration number associated with the legal entity. If you select Ledger as the reporting level, you can report on legal entities associated with ledgers defined in the data access set within your security profile. Run tax reports by ledger when you want to review your tax activity as it aligns with your accounting. Run tax reports by ledger when you need to view tax activity in reporting or secondary ledger currency. If you select tax registration number as the reporting level, you can report all the transactions associated with different legal entities sharing the same tax registration number.
Tax Registration Number	Specify the registration number that is assigned to first party or first-party site by the tax authority when it is registered. A party or party site is identified by this registered number.
From Tax Point Date and To Tax Point Date	<p>Print all the transactions based on the selected tax point date range.</p> <p>Note: When CRE-M rule is applicable on transactions, the tax point date is the payment date.</p>

Frequently Asked Questions

The following table lists frequently asked questions about the Deductible VAT Declaration Report for France.

FAQ	Answer
How do I find this report?	Schedule and run this report from the Scheduled Processes work area on the Navigator menu.
Who uses this report?	<ul style="list-style-type: none"> Tax Manager Tax Accountant
When do I use this report?	Use the Deductible VAT Declaration Report for France to produce the VAT declaration at the end of each reporting period, listing the deductible VAT amount for each purchase invoice and also the total VAT amounts for the period.
What type of reports are these?	Oracle Analytics Publisher

Audit Report for France

This topic includes details about the Audit Report for France.

Overview

Use the Audit Report for France process to create an electronic audit file. You can transfer the electronic audit file, which is a data file, to the tax authorities. This electronic audit file along with journals must comply with the Generally Accepted Accounting Principles (GAAP) in France.

This report also includes the clearing account reconciliation information. In Columns 14, *EcritureLet*, and 15, *DateLet*, you can view the reconciliation group and reconciliation date respectively for each of the reconciled clearing account journal lines. For unreconciled lines or a reconciliation feature that's not being used, these columns don't display this information.

From January 1, 2014, all tax paying companies in France that are audited by the tax authorities must create audit documentation in the prescribed format. Auditors use this documentation to verify the coherence between the audit file and the reported accounting.

Key Insights

Before running the report, ensure that you have:

- Set up the following entities:
 - Data security
 - Enterprise structure
 - Document sequences, if applicable
- Completed the implementation project for your organization
- Entered, processed, accounted, and transferred all subledger transactions to General Ledger

Note: All manual journals must be processed for the reporting period. You don't have to enter any specific attributes on the subledger transactions or journals to report them.

Report Parameters

This table describes selected report parameters:

Name	Description
Journal Entry Source	Select a source or leave blank to report on all sources.
Ledger	Enter the ledger name. The available values depend on the data access set assigned to the user.
Legal Entity	Choose from values that are based on the legal entities associated with the ledger. Leave the field blank to report on the complete ledger, regardless of the legal entity.
Show adjustment periods	Indicate whether to create the report by adjustment period.
From and To Accounting Period	Select the reporting period for which you want to display the adjustment period.
Account filter	Optionally, restrict the accounts to include in the data file.

Name	Description
Document Sequence Name	Enter the sequence name to specify the transactions to be included in the electronic file.
Posting status	Select the posting status to view: <ul style="list-style-type: none"> • Only posted journals • Journals that are transferred, but not yet posted

Frequently Asked Questions

This table lists frequently asked questions about the Audit Report for France:

FAQ	Answer
How do I find this report?	Schedule and run this report from the Scheduled Processes work area on the Navigator menu.
Who uses this report?	General Ledger users.
When do I use this report?	Use this report at the end of the reporting period to prepare the file to be submitted to the tax authorities. You can create the file quarterly or even for multiple tax years.
What type of report is this?	Oracle Analytics Publisher.
What role is required to run this report?	ORA_JE_EMEA_FINANCIAL_REPORTING_DUTY Note: Ensure that JE_PREPARE_FINANCIAL_REPORTS_FOR_FRANCE_PRIV and JE_PREPARE_FINANCIAL_REPORTS_FOR_FRANCE_PRIV_OBI privileges are added to the ORA_JE_EMEA_FINANCIAL_REPORTING_DUTY role.
How can I save the output for the audit reports for France?	Choose Save to save the output file for the audit reports for France in text, data, or CSV format.
How can I review the audit reports for France?	You can review the audit reports in an excel sheet.

Germany

Reporting Features for Germany

Oracle Fusion Applications provide standard financial and tax reports to meet the legal and business reporting requirements of tax authorities.

Companies in Germany must comply with the Federal Bank reporting requirements on incoming and outgoing payments when the amount for an individual payment transaction exceeds the statutory limit. The Federal Bank also requires that companies use a specific format when submitting the Z4 and Z5 reports.

The following table lists the reports that support these requirements:

Report Name	Description
Z4 Report for Germany	<p>Reports all incoming and outgoing payments above a threshold amount that are any of the following:</p> <ul style="list-style-type: none"> Received from nonresidents Received from residents for the account of nonresidents Made to nonresidents from residents <p>Includes all payments made through a foreign bank account. This report is used to complete the official declaration.</p>
Z5A Report for Germany	<p>Provides the following reporting options:</p> <ul style="list-style-type: none"> Z5A Sheet 2 Report, which summarizes the receivables and payables of foreign customers and suppliers, respectively, both internal and external. Z5A Reconciliation Report, which reconciles the aggregated amounts included in the Z5A Sheet 2 Report, by providing the transaction details per customer or supplier. <p>Select the Summarize option for the Z5A Reconciliation Report, or leave the option blank for the Z5A Sheet 2 Report.</p>
Journal Details Report for Germany	<p>Provides posted general ledger journal activity for a given period or date range, and optionally other criteria including journal source, entered currency, and journal batch. Provides flexible grouping and sorting options at report submission.</p> <p>Prerequisite: Before you submit the report, you must configure the general ledger accounting sequence to generate the sequence while posting the journal.</p> <p>Use the report to:</p> <ul style="list-style-type: none"> Verify that the journals are sequenced by posted date. Confirm balance sheet and profit and loss statements for a specific accounting period. Verify accounting books during audits.

VAT Reports for Germany

This topic includes details about the reports for Germany.

Overview

The reports for Germany provide the details needed by companies to meet the statistical reporting requirements of the Federal Bank. You can use these reports as a basis for submitting your official declarations to the Federal Bank. These reports also simplify the auditing of general ledger journals, and streamline the reconciliation of outstanding receivables and liabilities of foreign customers and suppliers with subledger records.

The reports for Germany include:

- **Z4 Report for Germany:** Lists all incoming and outgoing payments made through a foreign bank for the selected ledger and date range. Only payments more than the legally defined threshold amount are printed.
- **Z5A Report for Germany:** Provides details of receivables and liabilities of foreign customers and suppliers, both internal and external. Based on the **Summarize** option selected, the Z5A Reconciliation Report or Z5A Sheet 2 Report is printed. The Z5A Reconciliation Report lists single transaction amounts that reconcile with the aggregated amounts in the Z5A Sheet 2 Report. Detailed amounts are provided per customer or supplier for each transaction or invoice number on a given date.
- **Journal Details Report for Germany:** Provides posted general ledger journal activity for a given period or date range for auditing posting sequences. In Germany, general ledger journals must be sequenced by posted date. The report is generated for a range of accounting or posting dates to show all details of the sequenced journals and daily total amounts.

The following figure is an example of the Z4 Report for Germany.

Key Insights

For accurate statistical reporting on the Z4 Report for Germany, enter the following information for transactions:

- For Payables:
 - Record type
 - Payment reason
- For Receivables:
 - Record type
 - Reason

Only transactions that are accounted and posted to the general ledger are selected for reporting.

Before you submit the Journal Details Report for Germany, you must configure the general ledger accounting sequence to generate the sequence while posting the journal.

Report Parameters

The following table lists selected process parameters of the Z4 Report for Germany:

Name	Description
Ledger	Specify the ledger for reporting.
Legal Entity	Specify the legal entity for reporting. If you have set up ledgers with multiple legal entities, this parameter will allow you to generate the Z4 reports for a specific legal entity.

Name	Description
Threshold	Specify the statutory limit used to determine whether an individual payment is reported. The default value is the current statutory limit of 12,500 EUR, and only payments more than this limit are reported.

The following table lists selected process parameters of the Z5A Report for Germany:

Name	Description
Ledger	Specify the ledger for reporting.
Legal Entity	Specify the legal entity for reporting. If you have set up ledgers with multiple legal entities, this parameter will allow you to generate the Z5A reports for a specific legal entity.
Summarize	Select the Summarize option for the Z5A Reconciliation Report, or leave the option blank for the Z5A Sheet 2 Report.
Party Name	Indicate a supplier or customer to reconcile specific payments.
Threshold Amount	Specify the statutory limit used to determine whether an outstanding receivables or payables amount is reported.

The following table lists selected process parameters of the Journal Details Report for Germany.

Name	Description
Ledger	Specify the ledger for reporting.
Filter Conditions Defined	To audit a specific account, specify the segments and values.
Document Sequence Number	Specify the reporting sequence name used to number the posted journal. You can audit journals that have a specific reporting sequence name and number assigned.
From/To Document Number	Enter a specific range to verify that sequence numbers are assigned chronologically.
First Page Number	Specify the starting page number for the report.

Output Options Z4 AND Z5A Reports for Germany

You can now use CSV output options for Z4 and Z5A reports for Germany, as specified by the German Federal Bank. You can submit the output of these reports directly to the tax authorities without editing or reformatting.

You can choose the new layouts from the Output tab before submitting the reports.

The new layouts simplify compliance with German Federal Bank reporting requirements.

- The Z5A reports now consider unapplied receipts, on-account receipts and on-account credit memos.
- The Z5A reports support a descriptive flexfield as an alternative way of classifying suppliers as internal or external, in cases where the Supplier Type field is not available for that purpose.

You must complete the additional setup to use a descriptive flexfield.

Follow these steps:

1. Create a global segment for Z5A supplier classification
2. Navigate to Setup and Maintenance, search for Manage Supplier Descriptive Flexfields. In the Manage Supplier Descriptive Flexfields page, select POZ_SUPPLIERS and click Edit.
3. Choose a Supplier Profile and click Edit.
4. Click the Plus (+) icon to create a new global segment.
5. Click Save and Close.

6. Deploy the flexfield.
7. Navigate to Setup and Maintenance, search for Manage Standard Lookups.
8. Search for the JE_ENABLE_FEATURE lookup type. If it is not defined, create it.
9. In the Lookup Codes section, add and enable the Z5A_22D_OI_AP_CLASSIF_DFF lookup code.
10. In the Meaning field, enter the attribute column name of the supplier descriptive flexfield code POZ_SUPPLIERS you use for storing the supplier type e.g. ATTRIBUTE16.
11. Click Save.

You can now use the descriptive flexfield to store the supplier type.

Israel

Reporting Features for Israel

Use Oracle Fusion Applications to get standard financial and tax reports that meet the legal and business reporting requirements of tax authorities. For countries such as Israel, you can get a set of country-specific reports. These reports meet local reporting requirements for withholding tax.

This table lists the withholding reports for Israel.

Withholding Tax Reports

Report Name	Description
Withholding Tax Report for Israel	Prints summary and details of withholding tax and income tax activities.
Withholding Tax Reconciliation Report for Israel	Prints all payments and related withholding tax transactions for suppliers and supplier sites for the selected reporting period.
Withholding Tax File to Tax Authority for Israel	Creates a text file in a predefined format for submission to the tax authorities, that's, form 856. The file lists the withheld tax amounts for each supplier, supplier personal details, and the total amounts on the transactions including payments, withholding tax amounts, and liabilities.
Withholding Tax Annual Certificate to Suppliers for Israel	Prints the annual summary of all supplier transactions with the entity issuing the certificate. It lists the withholding tax amounts and payments made to the supplier.
Receipt Report for Israel	Prints receipt details, taxpayer details, and payer details in a specific format.

Overview of Withholding Tax Reports for Israel

This topic includes details about the withholding tax reports for Israel.

Overview

All legal entities in Israel must submit their withholding tax reports in compliance with the fiscal authority specifications.

The following reports support withholding tax for Israel:

- **Withholding Tax Report for Israel:** Prints summary and details of withholding tax and income tax activities. It lists all the withholding tax transactions for a given period.
- **Withholding Tax Reconciliation Report for Israel:** Prints all payments and related withholding tax transactions for suppliers and supplier sites for the selected reporting period.
- **Withholding Tax File to Tax Authority for Israel:** Creates a text file in a predefined format, called form 856, for submission to the tax authorities. The file lists the withheld tax amounts for each supplier, supplier personal details, and the total amounts on the transactions including payments, withholding tax amounts, and liabilities.
- **Withholding Tax Annual Certificate to Suppliers for Israel:** Prints the annual summary of all supplier transactions with the entity issuing the certificate. It lists the withholding tax amounts and payments made to the supplier. The report contains the following details:
 - For a receipt in the form of a check: the account, bank, branch and check number information is listed.
 - For an account transfer: bank, branch information is listed.
 - Else, the credit card information is listed.
- **Receipt Report for Israel:** Prints receipt details, taxpayer details, and payer details in the specific format for Israel.

Key Insights

Before running the reports, ensure that you:

- Set up the following entities:
 - Data Security
 - Geographies
 - Enterprise Structure
 - Suppliers
 - Bank accounts
 - Procurement Business Function
 - Common Options for Payables
- Complete the implementation project before entering transactions and using the transaction tax reports.

Report Parameters

The following table lists the main parameters for the withholding tax reports for Israel:

Name	Description
From and To Document Number	Enter a specific range to verify that sequence numbers are assigned chronologically.
Ledger	Specify the ledger for reporting.
Legal Entity	Specify the legal entity that is submitting the declaration to the tax authority.

Name	Description
Reporting Level	Enter the reporting level for which you want to select transactions, such as ledger, legal entity, or tax registration number.

Tax Authority Allocation Numbers in VAT Reports for Israel

VAT reports in Israel must include part of the allocation number issued by the tax authority, as a unique identifier for each invoice.

This feature conforms to the new legal requirement of the Israeli Tax authorities for the introduction of continuous transaction control, with support for the assignment of the allocation number to eligible transactions.

As part of their economic plan for 2023-2024, the Israeli government has decided to introduce a continuous transaction control model to prevent the issuance of falsified invoices and tax fraud. The mandate is applicable to Business-to-Business (B2B) invoices, with the initial limit for each transaction of over 25000 NIS. This limit will be lowered every year based on a given schedule. The request uses an API technology and the tax authority must provide this unique identifier prior to the issue of that invoice. This tax authority approval is a mandatory prerequisite for printing these transactions and claiming VAT.

A Global Descriptive Flexfield Attribute has been reserved to accommodate this unique identifier at the Receivables Invoice level. Using a specific API, the transactions exceeding a specific amount (the limit is defined by a lookup) are extracted and sent to the Tax Authorities for the assignment of an Allocation Number to each transaction. A different process updates the Global descriptive flexfield of the transactions in the system with the Allocation Numbers provided by the Tax Authorities.

You may need to work with a local Service Provider to interact with the Tax Authority portal. The tax authorities provide the allocation numbers that are uploaded to Oracle ERP Cloud to be registered against the corresponding transactions.

SHAAM Interface File Data

Overview of SHAAM Interface File Data for Israel Process

In Israel, tax authorities provide a computerized processing system known as SHAAM to maintain bookkeeping and withholding tax exemption certificates for suppliers that trade goods or services.

As a tax manager, you can submit supplier information electronically and receive back a file with valid certificate details from the Israel tax authority.

Here's how Oracle Fusion Applications enable you to meet the requirements of Israel tax authority:

- Generate a file of supplier or supplier sites that require withholding certification and exemption. You can submit this file to the Israel tax authority.
- Import the file that the Israel tax authority returns by updating the supplier certification and withholding tax exemptions, where applicable.

Generate SHAAM Supplier File for Israel

Generate a file of supplier or supplier sites that require withholding certification and exemption. You can submit this file to the Israel tax authority.

Let's walk through the steps to generate a SHAAM supplier file for Israel:

1. Navigate to the **Scheduled Process** work area.
2. Search for the Create SHAAM Supplier for Israel process.
3. On the **Process Details** dialog box, select the values for these parameters.

Parameter	Description
Legal Reporting Unit	The legal reporting unit for which you want to generate the file.
Certificate Expiration Date	Suppliers or Supplier sites which have an end date of a bookkeeping certificate earlier than this date to be included in the file.
Use Alternate Names	The alternate supplier name to be used instead of the supplier name.
Withholding Tax Regime	The withholding tax regime that you have created for processing withholding tax.
VAT Regime	The VAT regime that you have created for processing transaction taxes.

4. Click **Submit**.

After the process completes, you can see a flat file with supplier or supplier site details. You can submit this flat file to the Israel tax authority.

Import SHAAM Interface File Data for Israel

Import SHAAM bookkeeping certificates and withholding tax exemptions data from a flat file received from the Israel tax authority. You can then load the data to the Withholding Tax Registrations and Tax Exemptions tables.

Let's walk through the steps to access the template:

1. Navigate to the File-Based Data Import for Oracle Financials Cloud guide.
2. In the Table of Contents, click **File-Based Data Imports**.
3. Click **SHAAM Interface File for Israel**.
4. In the File Links section, click the link to the control file.

Here are a few things to keep in mind when preparing your data in a flat file.

- Import flat file data directly from the Israel tax authority SHAAM system. You don't need to manually enter data.
- Create data in the format specified in the control file.

Settings that Affect the Import SHAAM Interface File Data for Israel Process

The SHAAM Interface File for Israel Control File provides the format to load supplier certification and withholding tax exemptions. You can load data to this table:

Table	Description
JG_REPORTING_TRANSACTION_T	Stores supplier SHAAM certificates and withholding tax exemptions for Israel.

How SHAAM Interface File for Israel Data Is Processed

After you import the flat file from the Israel tax authority SHAAM system, you compress the file as a Zip file and then, load the Zip file to the application.

Here's how you load the Zip file to the application:

1. Navigate to the Load Interface File for Import page.
2. Select the Process Received SHAAM Certificates File for Israel process.
3. In the Data File list, select Upload a new file.
4. Select the Zip file to upload
5. Submit the process.
6. Monitor the import process.
7. If the Process Received SHAAM Certificates File for Israel process ends in an error or a warning, review the log file. You can find details about the rows that caused the process failure in the log file.

Process SHAAM Interface File for Israel

Overview of Processing SHAAM Interface File for Israel

You can use the Process SHAAM Certificates for Israel feature to identify the supplier details to send and update the returned certificate and withholding tax certificates for suppliers information.

In Israel, tax authorities provide a computerized processing system known as SHAAM to maintain bookkeeping and withholding tax certificates for suppliers that trade goods or services. As a Tax Manager, you can submit supplier information electronically and receive a file with the valid certificate details.

The SHAAM certificates processing provides an interface between your company and the Israel tax authority to maintain supplier bookkeeping certifications and withholding tax exemptions.

Follow these steps:

1. Complete the setup
2. Create SHAAM Supplier File for Israel
3. Process Received SHAAM Certificates File for Israel

Complete the Setup for Withholding Tax Registration

You must complete the setup of Payables and Receivables applications and the related tax configuration before you identify the supplier details to send and update the returned certificate and withholding tax exemption information.

Follow these steps.

1. Associate tax reporting codes to withholding tax rates.
2. Create SHAAM reporting level tax reporting type code.
3. Assign it to the legal entity.
4. Create a withholding tax registration for suppliers or supplier sites.

Assign Tax Reporting Codes

You must assign tax reporting codes to your withholding tax rates.

Follow these steps:

1. From the Setup and Maintenance work area, navigate to the Manage Tax Rates and Tax Recovery Rates page.
2. Create or search for your withholding tax rates.
3. Edit each tax rate.
4. In the Rate Periods section, select Tax Reporting Codes and click the plus (+) icon to add a new Tax Reporting Code.
5. In the Tax Reporting Codes section, select ORA_JEIL_SHAAM_CATEGORIES from the Tax Reporting Type Code list and select the required category from the Tax Reporting Code list.
6. Save your changes.

Related Topics

- [Appendix](#)

Create SHAAM Reporting Level Tax Reporting Type Code

You can create SHAAM Reporting Level tax reporting type code.

Follow these steps:

1. From the Setup and Maintenance work area, navigate to the Manage Tax Reporting Type page.
2. Create JEIL_SHAAM_REPORT_LEVEL tax reporting type code.
3. Select the Reporting Type Use – Party tax profile check box.

- In the Tax Reporting Codes section, click the plus (+) icon to add a new tax reporting code. This table shows the tax reporting codes.

Tax Reporting Codes

Tax Reporting Code	Description	Effective Start Date
JE_SUPPLIER	Supplier	1/1/00
JE_SUPPLIER_SITE	Supplier Site	1/1/00

- Click Done to save the changes.

Associate the SHAAM Tax Reporting Type Code to Legal Entity

You can edit a legal entity and assign the SHAAM tax reporting type code to that legal entity.

Follow these steps:

- From the Setup and Maintenance work area, navigate to the Manage Party Tax Profile page.
- From the Search For drop-down list, select Legal Entity Tax Profiles.
- In the Search: Legal Entity Tax Profiles, populate the search parameters (for example) Legal Entity and click Search.
- In the Search Results: Legal Entity Tax Profiles, click the Legal Entity (hyperlink) that you want to update.
- Click Edit to update the Legal Entity.
- Navigate to Tax Reporting Code section and click the plus (+) icon to add a new tax reporting type code.
- From the Tax Reporting Type Code drop-down list, select JEIL_SHAAM_REPORT_LEVEL.
- From the Tax Reporting Code drop-down list, select either JE_SUPPLIER or JE_SUPPLIER_SITE.
- Enter the correct Effective Start Date.
- Click Save to save your changes.

Create a Withholding Tax Registration to Include Suppliers or Supplier Sites

You must create a withholding tax registration to include suppliers or supplier sites in the SHAAM file processing.

The withholding tax registration represents the SHAAM bookkeeping certificate for a supplier or supplier site. The start and end dates of the certificate are the validity dates of the bookkeeping certificate issued by the Israel tax authority.

For any supplier or supplier site that you must include in the SHAAM processing, a withholding tax registration must exist.

Create SHAAM Supplier File for Israel

You can create the SHAAM Supplier File for Israel by submitting the Create SHAAM Supplier File for Israel process with the relevant parameters.

- Navigate to the Scheduled Processes work area.
- Search for the Create SHAAM Supplier File for Israel process.
- Select the parameters and submit the process:
 - In the **Legal Entity** field, enter the legal entity to select suppliers.
 - In the **From Date** field, change the defaulted date with a new date if needed.

By default, From date is populated with the date when the users run it last time. Based on the 'from date' parameter value, the program checks whether new suppliers are added to the system after this date (checks are done based on the withholding registration's creation date) or any existing suppliers inactivated after

this date. If found, only those details are included in the Shaam File and sent to the Shaam database for validation.

- c. In the **Use Alternate Names** field, use the supplier alternate name in the file or the supplier name.
- d. In the **Withholding Tax Regime** field, enter the withholding tax regime of the supplier withholding tax registrations.
- e. In the **VAT Regime** field, enter the VAT regime used to record the supplier tax registration number.

A text file and a report are available as output. The text file is in the Kesefet and Mizvak format for uploading to the tax authority website. You check the file content in the report.

What to do next

To obtain the report of the supplier records extracted, republish the output from the Scheduled Processes work area and click the SHAAM Supplier Report for Israel tab.

Process Received SHAAM Certificates File for Israel

You can use Process Received SHAAM Certificates File for Israel process to update the returned certificate and withholding tax exemption information.

The tax authority returns two files for SHAAM processing:

- SHAAM.dat contains the details of validated supplier bookkeeping certificates and withholding tax exemptions.
- SHAAMERROR.dat contains the error messages for records that couldn't be validated.

Follow these steps:

1. Create a Zip file by combining SHAAM.dat and SHAAMERROR.dat files for processing or process them individually.
2. Upload the files to the server using the File Import and Export utility. Select fin/tax/import for the account.
3. Submit the Load Interface File for Import process:
 - Import Process - Process Received SHAAM Certificates File for Israel.
 - Data File – The file name uploaded in the previous step
4. After successful completion of the file import, submit the Process Received SHAAM Certificates File for Israel.
5. Select the Legal Entity used for the initial data extract.

What to do next

Bookkeeping Certificates

The bookkeeping certificates are recorded as Withholding Tax Registrations. The Start Date and the End Date represent the period of validity.

Note: Check for the tax registrations at the correct level - Third Party or Third-Party site.

Withholding Tax Exemptions

Withholding tax exemptions store the withholding tax rate to apply if the supplier has an exemption granted by the tax authority. A new withholding tax exemption with the relevant details is created each time an exemption is renewed during SHAAM file processing.

SHAAM User Setups for Israel

Overview of SHAAM User Setups for Israel

The State of Israel Ministry of Finance has announced changes in the 2023 SHAAM Category Exemption that requires changes in the Withholding tax exemptions for payments .

Here are the changes:

- Agricultural products will be reported as part of Services and Assets sections (Category 10) instead of reporting separately in Category 20.
- Constructions and Transportations payments will be reported separate section Category 20.
- Rent payments will reported in a new section - Category 60.

Update the SHAAM Exemption Category

You must update the tax reporting types using the Manage Tax Reporting Types task to use the new payment category exemptions

1. Click Navigator, Others, Setup and Maintenance, Search, and Manage Tax Reporting Types.
2. Search for the tax reporting type code, ORA_JEIL_SHAAM_CATEGORIES.
3. Add Tax Reporting Code 20 – Agricultural Products effective 31-Dec-2022.
4. Add Tax Reporting Code 20 with Constructions and Transportation description effective 01-Jan-2023
5. Add Tax Reporting Code 60 with Rent description effective 01-Jan-2023.

This image shows the Tax Reporting Codes for the selected tax reporting type.

Tax Reporting Codes

* Tax Reporting Code	* Description	* Effective Start Date	Effective End Date
10	Services or Assets	1/1/00	m/d/yy
60	Rent	1/1/2023	m/d/yy
20	Constructions and Transportation	1/1/23	m/d/yy
20	Agricultural Products	1/1/00	12/31/22
30	Insurance Fees	1/1/00	m/d/yy

6. Click Save.

Update the Withholding Tax Exemption

You must update the tax reporting code associated to the withholding tax rate to update the withholding tax exemption.

1. Click Navigator, Others, Setup and Maintenance, Search, and Manage Tax Rates and Tax Recovery Rates..
2. Search for the Withholding tax and populate the Tax Regime Code and other search parameters.

3. Open the tax rate then click edit butto.
4. Update the Exemption Category Code association in Tax Reporting Codes Tab.

This image shows the Withholding tax rate page.

171-210	Tax Officer Number(2), Supplier Name, New/Old, Code
211-246	Not in Use
247-250	Empty

Generate VAT File

Overview of Generating a VAT File for Israel

This topic includes details about generating a VAT file for Israel.

Overview

This feature helps you to generate a VAT Detailed Statement for uploading to the tax authority website. The setup involves configuring the Payables and Receivables applications, assigning tax reporting codes, and setting the profile option for aggregation amount limit. The Generate VAT Report for Israel process is submitted with specific parameters such as the reporting identifier, tax calendar period, VAT aggregation amount limit, and operation code. The output of the process is a text file in the required format for uploading to the tax authority website.

The solution contains these components:

- Select Transactions for Tax Reporting
- Generate VAT Report for Israel

Complete the Setups and Tax Configuration

Complete the Payables and Receivables application setups and the related tax configuration. Assign tax reporting codes for Israel 835 reporting to your tax rates.

Assign Tax Reporting Codes

To assign tax reporting codes:

1. In Setup and Maintenance, navigate to the Manage Tax Rates and Tax Recovery Rates page.
2. Create or search for your tax rates.
3. Edit each tax rate.
4. In the Rate Period Details, select Tax Reporting Codes and choose the plus (+) icon to add a new Tax Reporting Code.
5. Select the Tax Reporting Type Code.
6. Select the required VAT Line Type from the available list of Tax Reporting Codes.
7. Save your changes.

For sub-categorization of Asset purchases, add a second Tax Reporting Code and select the Tax Reporting Type Code ORA_JEIL_835_SECONDARY.

A complete list of the tax reporting codes available for use can be found in Appendix A.

Set the Profile Option

The amount limit below which transactions should be aggregated is set by the Israeli tax authority. This amount is a parameter to the process that generates the VAT file in 835 format. The default value of the parameter during the process submission is controlled by a profile option. If the Israeli tax authority changes the aggregation amount limit, you can update the profile option setting to reflect the new amount, or you can just override the amount displayed in the parameter value at the time you submit the process.

To change the profile option:

1. In Setup and Maintenance, navigate to the Manage Administrator Profile Values page.
2. Search for the profile option code ORA_JEIL_835_LIMIT.
3. Set the new profile value for the site and/or specific users.
4. Save your changes.

Enter Invoices in Payables

When entering invoices in Payables, provide the additional information required for the 835 file in the header and lines.

Invoice Header

To enter the information required for the 835 file in the invoice header:

1. In the Regional Information drop-down list, select VAT Reporting for Israel.
2. Enter the tax authority reference group.

Invoice Lines

If the invoice is related to imports, you must provide the import information for each line.

1. Open the additional information popup.
2. In the Regional Information drop-down list, select Import Documents for Israel and enter the

Import Document Number and the Import Date.

Enter Transactions in Receivables

When entering transactions in Receivables, provide the additional information required for the 835 file in the header and lines.

Transaction Header

To enter the information required for the 835 file in the transaction header:

1. Navigate to the Regional Information fields on the transaction header.
2. Select VAT Reporting for Israel and enter the tax authority reference group.

Transaction Lines

If the transaction is for export sales, you must provide the export information for each line.

- Open the additional information popup.

In the Regional Information drop-down list, select VAT Reporting for Israel and enter the Export Document Number and the Export Date.

Submit the Generated VAT Report for Israel

Before submitting the process to generate the VAT file in 835 format, you need to run the process. Select Transactions for Tax Reporting for the VAT entity and tax period.

To submit the Generate VAT Report for Israel:

1. Navigate to the Scheduled Processes page and search for the Generate VAT Report for Israel process.
2. Enter the parameter criteria and submit the process.

Parameters

Parameter	Description
Reporting Identifier	The tax reporting identifier from the tax selection process.
Tax Calendar Period	The tax period for which the file should be generated.
VAT Aggregation Amount Limit	The amount under which transactions should be aggregated.
Operation Code	Code required in the header record of the file. The value to be used is specified by the tax authority.

The output from the process is a text file in the format for uploading to the tax authority website.

Check the File Content

To ensure the accuracy of the generated file, it's essential to review the processed data.

To check the data that was processed to generate the file:

1. Navigate to Schedule Processes.
2. Select the Generate VAT Report for Israel process that produced the file.
3. Click the Republish button in the Output section.

4. In the popup window, select the Actions icon and Export->CSV.
5. Open the CSV output in your spreadsheet application.
6. You can now review the raw data that was processed. For example, the column VAT_FILE_LINE_TYPE shows transactions that may not have a VAT file line type associated, and therefore, exclude from the file.

Appendix A - Tax Reporting Codes

This table shows the tax reporting codes which are provided for use with the VAT File in 835 Format for Israel.

Reporting Type Code	Reporting Code	Description
Reporting Type Code	Reporting Code	Description
ORA_JEIL_835_LINETYPE	T	Payables Standard VAT
	C	Payables VAT Self-Invoicing
	K	Payables VAT Petty Cash
	R	Payables VAT Foreign Imports
	P	Payables VAT Palestinian Supplier
	H	Payables Miscellaneous Classifications
	S	Receivables Standard VAT
	L	Receivables VAT Unknown Customer or Missing Tax Registration
	M	Receivables VAT Self-Invoicing
	Y	Receivables VAT Export Invoices
	I	Receivables VAT Palestinian Customer
ORA_JEIL_835_SECONDARY	A	Asset Purchase

Withholding Tax Report

Overview of Withholding Tax Reports for Israel

This topic includes details about the withholding tax reports for Israel.

Overview

All legal entities in Israel must submit their withholding tax reports in compliance with the fiscal authority specifications.

The following reports support withholding tax for Israel:

- Withholding Tax Report for Israel: Prints summary and details of withholding tax and income tax activities. It lists all the withholding tax transactions for a given period.

- **Withholding Tax Reconciliation Report for Israel:** Prints all payments and related withholding tax transactions for suppliers and supplier sites for the selected reporting period.
- **Withholding Tax File to Tax Authority for Israel:** Creates a text file in a predefined format, called form 856, for submission to the tax authorities. The file lists the withheld tax amounts for each supplier, supplier personal details, and the total amounts on the transactions including payments, withholding tax amounts, and liabilities.
- **Withholding Tax Annual Certificate to Suppliers for Israel:** Prints the annual summary of all supplier transactions with the entity issuing the certificate. It lists the withholding tax amounts and payments made to the supplier. The report contains the following details:
 - For a receipt in the form of a check: the account, bank, branch and check number information is listed.
 - For an account transfer: bank, branch information is listed.
 - Else, the credit card information is listed.
- **Receipt Report for Israel:** Prints receipt details, taxpayer details, and payer details in the specific format for Israel.

Key Insights

Before running the reports, ensure that you:

- Set up the following entities:
 - Data Security
 - Geographies
 - Enterprise Structure
 - Suppliers
 - Bank accounts
 - Procurement Business Function
 - Common Options for Payables
- Complete the implementation project before entering transactions and using the transaction tax reports.

Report Parameters

The following table lists the main parameters for the withholding tax reports for Israel:

Name	Description
From and To Document Number	Enter a specific range to verify that sequence numbers are assigned chronologically.
Ledger	Specify the ledger for reporting.
Legal Entity	Specify the legal entity that is submitting the declaration to the tax authority.
Reporting Level	Enter the reporting level for which you want to select transactions, such as ledger, legal entity, or tax registration number.

Frequently Asked Questions

The following table lists frequently asked questions about the withholding tax reports for Israel.

FAQ	Answer
How do I find these reports?	Schedule and run these reports from the Scheduled Processes work area on the Navigator menu.
Who uses these reports?	<ul style="list-style-type: none"> • Tax Manager • Tax Accountant
What type of reports are these?	Oracle Analytics Publisher

Create New Withholding Tax Regime

You can set up a new withholding tax regime tailored to the specific requirements of your organization or jurisdiction. This will ensure smooth and compliant tax withholding procedures.

Here's how you can create a new withholding tax regime:

1. Go to the Setup and Maintenance section in the Navigator.
2. Locate and select the Manage Tax Regimes task.
3. Open the Manage Tax Regimes UI.
4. Select the Withholding Tax option and click on the Create icon.
5. Provide the necessary information for the new tax regime.
6. Specify the legal entity that is subscribed to this regime in the Configuration Options.
7. Save your changes and close the page.

Note: Please note that this is just a possible setup for withholding tax and tax rules. Make sure you set up the withholding tax according to current tax legislation.

Create Withholding Taxes

The Withholding Tax reporting feature for Israel empowers you to track and report withholding amounts accurately.

Here are the steps for creating new withholding taxes:

1. Go to the Setup and Maintenance section in the Navigator.
2. Locate and select the Manage Taxes task.
3. Open the Manage Taxes UI.
4. Choose the Withholding Tax option and click on the Create icon to add a new tax.
5. Enter the necessary details for the withholding tax, but do not enable the tax yet.
6. Save the tax and configure the default tax rules. If you don't specify different rules, the default values will be applied when the tax is applicable.
7. Activate the Tax Jurisdiction type by selecting the Tax Jurisdiction row in the Indirect Defaults section. Then, click on the Create Default button.

8. On the Create Withholding Tax Jurisdiction page, enter the details for the tax jurisdiction. Save and close the page.
9. Activate the Tax Status type and click on the Create Default button.
10. On the Create Withholding Tax Status page, enter the details for the tax status. Save and close the page.
11. Activate the Tax Rate type and click on the Create Default button. This will open the Create Withholding Tax Rate page. Enter the details for the tax rate and assign the corresponding ledger and account information. Save and close the page.
12. You have now defined your tax defaults. Navigate to the Tax Authorities tab and assign the tax authority and site to the withholding tax.
13. Save the tax and enable it for transaction entry by selecting the Enable tax for transactions checkbox.
14. Save your changes and close the page.

Note: Please note that this is just a possible setup for withholding tax and tax rules. Make sure you set up the withholding tax according to current tax legislation.

Create Tax Rules

To create a new tax rule, you have to create a fiscal classification code, apply tax rules, configure owner tax options, and update the business unit tax profile. This must be done before you can assign the tax rule to a legal entity. After completing these steps, the tax rule will be ready to use.

Create a user-defined fiscal classification code

Here are the steps to create a new user-defined fiscal classification code:

1. Go to the Setup and Maintenance section in the Navigator.
2. Locate and select the Manage Transaction-Based Fiscal Classifications task.
3. Open the Manage Transaction-Based Fiscal Classifications UI.
4. Update the value to User-Defined Fiscal Classification Codes.
5. Click on the Create icon.
6. Provide a new code that can be used as a tax determinant for withholding tax rules on the Create User-Defined Fiscal Classification Code page.
7. Save and close the window.

Create a tax applicability rule

Here's how you can create a new tax applicability rule:

1. Go to the Setup and Maintenance section in the Navigator.
2. Locate and select the Manage Tax Rules task.
3. Open the Manage Tax Rules UI.
4. Select the Withholding Tax option and choose Tax Rule Type Tax Applicability Rules.
5. Click on the create icon.
6. Fill in the details for the new tax rule.
7. Click on Create in the list of values for the Tax Determining Factor Set, which opens the Create Tax Determining Factor Set page.
8. Define a new tax determining factor set based on the user-defined fiscal classification code.
9. Click OK to save the new record and automatically select it as the tax determining factor set for the tax rule.
10. Proceed to the next step.
11. Select Create from the list of values for the Tax Condition Set field, opening the Create Condition Set UI.
12. Enter a new condition set that utilizes the newly created user-defined fiscal classification value.
13. Click OK to save the condition set, which is automatically selected as the tax condition set for the tax rule.

14. Click Save and Next.
15. Enable the new tax rule by checking the Enabled checkbox and submit it to complete the creation of the tax applicability rule for withholding tax.

Create Configuration Owner Tax Options

Here's how you can create a configuration owner tax option:

1. Go to the Setup and Maintenance section in the Navigator.
2. Locate and select the Manage Configuration Owner Tax Options task.
3. In the Manage Configuration Owner Tax Options UI, click on the create icon to start a new record.
4. Select the Withholding Tax option.
5. Choose the first-party legal entity as the configuration owner for the tax options.
6. Enter the processing controls for the standard invoice and prepayment invoice event classes.
7. Since withholding tax in Italy is required to be created at the time of payment to the supplier, set the tax calculation point as Payment for both event classes.
8. Save the changes made to the tax options.
9. Close the Manage Configuration Owner Tax Options UI.

Update the Business Unit Tax Profile

Here are the steps to update your business unit tax profile:

1. Go to the Setup and Maintenance section in the Navigator.
2. Locate and select the Manage Party Tax Profiles task.
3. In the Manage Party Tax Profiles UI, modify the search option to Business Unit Tax Profile.
4. Search for the specific Business Unit by its name.
5. Click on the edit icon to open the Edit Business Unit Tax Profile UI.
6. On the Controls and Defaults tab, enable the option Use legal entity withholding tax subscription.
7. Save the changes made to the Business Unit Tax Profile.
8. Close the Edit Business Unit Tax Profile UI. After enabling the subscription, you will be able to see the corresponding start date.

By following these steps, you have completed the example of a possible minimum setup for withholding tax in Israel. Please note that this setup serves as a demonstration and should be customized based on the specific requirements and regulations of your business.

Legal Entity Contacts Setup

You need to manage the legal entity contacts in order to manage the withholding tax processes and the reports.

Here's how to do that:

1. Go to the Setup and Maintenance section in the Navigator.
2. Locate and select the Manage Legal Entity task.
3. In the Manage Legal Entity UI, perform a search for the desired legal entity.
4. Select the legal entity from the search results to enable the contacts icon.
5. Click on the contacts icon to access the contact information.
6. Add a new contact with a contact role of Legal contact and designate it as the primary contact. The details of the primary legal contact will be included in the withholding tax reports.
7. Create a contact for the Deduction File Number. Choose the contact role Person who is a contact for an organization and enter the last name. Enter the identification number as the first name. This contact will be listed in the Withholding Tax File to Tax Authority and the Withholding Tax Annual Certificate to Suppliers Report.

8. Create a contact for the company Tax Registration Number. Choose the contact role Person who is a contact for an organization and enter the last name. Enter the identification number as the first name. This contact will also be listed in the Withholding Tax File to Tax Authority and the Withholding Tax Annual Certificate to Suppliers Report.

Supplier Setup

Managing supplier information related to withholding tax is crucial for accurate reporting.

Follow these steps to ensure all the necessary details are provided and properly reflected in the reports:

1. Go to the Navigator and select Procurement, followed by Suppliers.
2. Open the Supplier UI.
 - o You can find various fields to provide information about suppliers, such as their names, alternate names, site names, and alternate site names. These fields are standard and provided for convenience. Withholding tax application relies on specific details entered in the regional information section of both the Supplier UI and the Supplier Site UI.
3. Suppliers subject to withholding tax can input additional attributes in the regional information section, including organization type, business occupation description, withholding tax officer number, and withholding tax group. To display these additional attributes, choose Withholding Tax for Israel from the list of values in the Regional Information field.
 - o The information entered in the regional information section of the Supplier UI and Supplier Site UI will also be reflected on the withholding tax reports for Israel.

Withholding Tax Certificates Setup

Withholding Tax Certificates Setup lets you manage tax exemptions in the system. This is done by associating certificates with suppliers or specific supplier sites, considering the applicable tax attributes and valid date ranges.

Here's how you can manage tax exemptions:

1. Go to the Navigator and select Setup and Maintenance.
2. Look for the task named Manage Tax Exemptions and open it.
3. In the Manage Tax Exemption UI, choose either Third-Party Tax Profile or Third-Party Site Tax Profile from the list.
4. Search for the supplier by name.
5. Click on the Withholding Exemptions tab to view any existing tax certificates associated with the supplier.
6. To create a new tax certificate, select the Actions option and click on the create icon.
 - o It is possible to associate multiple tax certificates with a supplier, either for a specific tax or a combination of tax attributes. Additionally, a tax certificate can be applied to a specific supplier site, considering a combination of tax attributes.
7. Specify a valid date range for the tax certificate.

Transaction entry

To complete a transaction entry, you need to create an invoice, create a payment, review the withholding tax lines and then create a receipt.

Invoice creation

Here are the steps to create an invoice:

1. Access the Navigator menu and go to Payables.
2. Select Invoices and choose Create Invoice.
3. Enter the necessary details for the invoice header and line items.

4. In the User-Defined Fiscal Classification field, input the predetermined value used for withholding tax.
5. Validate and account the invoice.

Payment creation

Here are the steps to create payment:

1. From the Navigator menu and select Payables.
2. Choose Payments and click on Create Payment.
3. Pay the invoice using the payment creation process.
4. In the Regional Information section, specify the withholding tax amount paid on behalf of the supplier.
5. Select Payments for Israel from the Regional Information field to display the withholding amount paid by the bank field. This information will also be included in the withholding tax reports for Israel.
6. Observe that the payment amount will be lower than the full invoice amount due to the withholding amount. Account the payment accordingly.

Review the withholding tax lines

Here are the steps to review the withholding tax lines:

1. Re-query the invoice in the system.
2. Review the withholding tax lines that have been created.
 - o There should be one line for withholding tax at a specific rate (e.g., 20%) based on the percentage entered in the tax certificate for the supplier site.

Receipt creation

Here are the steps to create a receipt:

1. Go to the Navigator menu and navigate to Receivables.
2. Select Accounts Receivable and choose Create Receipt 21.
3. Create a receipt and manually apply it to the relevant invoice.
4. If the receipt is paid by check, enter the bank, branch, and account number in the customer region.
5. In the Regional Information section, select Receipt Information for Israel to enter the check number. This information will be included in the Receipt Report for Israel.

Reporting for Israel

You can access all the reports from the Scheduled Processes Reporting and Scheduled Processes in the Tools section of the Navigator menu.

Here are the reports:

Withholding Tax Report for Israel

You can run the Withholding Tax Report for Israel to list all withholding tax transactions during a given period. Here are the parameters to run the report:

1. Select the Ledger and the tax year for which you want to run the report.
2. Select the period range within the tax year to be considered.
3. Choose the Legal Entity.
4. You can choose the supplier type to list only foreign suppliers, other suppliers than foreign or all suppliers.
5. Choose a supplier or site as the level of information to be applied to this report.
6. Select the name source to be listed in the report: supplier, supplier site, supplier alternate name or supplier site alternate.

7. Choose between detail or summary level for the report.
8. In the detail level, all transactions with withholding tax are listed. In the summary level, only the total by the supplier is listed, and the supplier balance is also displayed. The report information can be ordered by the supplier number or supplier taxpayer ID.

Withholding Tax Reconciliation Report for Israel

The Withholding Tax Reconciliation Report for Israel is used to list all payments with withholding tax accounted for a tax period. Here are the parameters to run the report:

1. Select the Ledger and the tax year for which you want to run the report.
2. Select the period range within the tax year to be considered.
3. Choose the Legal Entity.
4. You can choose the supplier type to list only foreign suppliers, other suppliers than foreign or all suppliers.
5. Choose supplier or site as the level of information to be applied to this report.
6. Select the name source to be listed in the report: supplier, supplier site, supplier alternate name or supplier site alternate.
7. The report information can be ordered by the supplier number or supplier taxpayer ID. Alternatively, you can run the report for a particular supplier and supplier site.
8. The report will list payments with withholding tax accounted for a tax period, including available certificates and the applied tax rates.

Withholding Tax File to Tax Authority for Israel

The Withholding Tax File to Tax Authority for Israel is used to list withheld tax amounts for each supplier, supplier personal details and the total amounts on the transactions including payments, withholding tax amounts, and liabilities. It is a text file, form 856, and sent to the tax authorities. Here are the parameters to run the report:

1. Select the Ledger and the tax year for which you want to run the report.
2. Select the period range within the tax year to be considered.
3. Choose the Legal Entity.
4. You can choose the supplier type to list only foreign suppliers, other suppliers than foreign or all suppliers.
5. Choose supplier or site as the level of information to be applied to this report.
6. Select the name source to be listed in the report: supplier, supplier site, supplier alternate name or supplier site alternate.
7. Select the value to be listed in the file corresponding to the existence of a manual report and a complementary report, also to what is the payer position in relation to the tax authority.
8. The report will generate a pre-defined text file (Form 856) to be submitted to the tax authorities. It includes withheld tax amounts, supplier details, transaction totals, payments, withholding tax amounts, and liabilities.

Withholding Tax Annual Certificate to Suppliers for Israel

The Withholding Tax Annual Certificate to Suppliers Report for Israel lists the annual summary of all supplier transactions with the entity issuing the certificate. It lists the withholding tax amounts and payments made to the supplier. Here are the parameters to run the report:

1. Select the Ledger and the tax year for which you want to run the report.
2. Select the period range within the tax year to be considered.
3. Choose the Legal Entity.
4. You can choose the supplier type to list only foreign suppliers, other suppliers than foreign or all suppliers.
5. Choose a supplier or site as the level of information to be applied to this report.
6. Select the name source to be listed in the report: supplier, supplier site, supplier alternate name or supplier site alternate. Alternatively, you can run this report for a range of suppliers.

7. The report will generate an annual summary of all supplier transactions, including withholding tax amounts, payments, and issued certificates.

Receipt Report for Israel

The Receipt Report for Israel lists each receipt, the receipt details and the payer information. The original receipt is printed only once. After the first printing, the receipt is printed as a copy. Here are the parameters to run the report:

1. Set the desired parameters.
2. The report will list each receipt, including details and payer information.
3. If the receipt is in the form of a check, the account, bank, branch, and check number information will be included.
4. For account transfers or credit card payments, relevant information will be listed accordingly, including separate regions for credit card details.

Italy

Reporting Features for Italy

Oracle Fusion Applications provide standard financial and tax reports to meet the legal and business reporting requirements of tax authorities. For countries like Italy, a set of country-specific reports is provided to meet local reporting requirements for VAT, intra-EU activity, exemptions and withholding tax.

This tables are the lists of reports for Italy by type.

VAT Reports

Report Name	Description
Declarable Input VAT Register for Italy	Lists the declarable input VAT activities with document sequences assigned to the selected tax register, including payments of invoices with deferred tax. Displays the recoverable and nonrecoverable tax amounts and corresponding taxable amounts. Provides a summary section with totals by tax rate code and a grand total.
Declarable Output VAT Register for Italy	Lists the declarable output VAT activities with document sequences assigned to the selected tax register, including receipts of invoices with deferred tax and adjustments. Displays the tax and taxable amounts. Provides a summary section with totals by tax rate code and a grand total for invoices, receipts and adjustments.
Payables Sales VAT Register for Self Invoices, EEC, VAT for Italy	Provides information about: <ul style="list-style-type: none"> • Recoverable, nonrecoverable, and deferred tax amounts. • Corresponding portions of taxable amounts for all invoices received from suppliers within the European Union. • All self-billing invoices that have accounting dates within the reporting period.
Purchase VAT Register for Italy	Lists all purchase invoices with document sequences that are assigned to the selected tax register and have accounting dates within the selected tax period.

Report Name	Description
Receivables Sales VAT Register for Italy	Lists all sales invoices with document sequences that are assigned to the selected tax register and have accounting dates within the selected tax period.
VAT Liquidation Report for Italy	Provides summary information for all reportable tax events with tax point dates within the reporting period. Identifies the associated tax register for each transaction. Provides a summary per tax rate code with the totals for each tax register. Includes a grand total section for all reportable sales and purchases VAT and credit balances from the previous report. This determines the net VAT amount to be paid to the authorities.

Intra-EU Reports

Report Name	Description
European Purchase Listing of Services for Italy	Lists all Intra-EU payables transactions for services with specific transaction details for Italy, such as service code and service mode.
European Sales Listing of Services for Italy	Lists all Intra-EU receivables transactions for services with specific transaction details for Italy, such as service code and service mode.

Exemption Reports

Companies in Italy that are regular exporters can legally request suppliers to not charge VAT on purchase transactions. The Letter of Intent is the official letter to send to suppliers and customs for this exemption. This letter contains:

- Instructions to invoice without VAT.
- Revocation or suspension of a previous letter of intent, with instructions to invoice with VAT.

The exemption limit is the total VAT exemption amount that a regular exporter can claim against suppliers, and is monitored on a periodic basis.

These reports support the exemption handling requirements:

Report Name	Description
Letter of Intent Report for Italy	Produces an exemption letter for suppliers in Italy instructing them not to include VAT on invoices that they submit.
Supplier Exemption Limit Consumption Report for Italy	Lists suppliers eligible for exemption in Italy and their monthly consumption of assigned exemption limit. Lists consumption details of all the suppliers, or a specific supplier. Includes all invoices exempted during a calendar period.
Letter of Intent Receivables Invoice Register for Italy	Lists receivables transactions associated with a letter of intent for a specific calendar year. Prints letters of intent details issued by customers and associated with the transactions.
Subledger Letter of Intent Register for Italy	Lists payables and receivables transactions issued with a letter of intent for a specific calendar year. Provides letter of intent details such as protocol number, allocation type, amount, and effective dates.

Withholding Tax Reports

Report Name	Description
Withholding Tax Letters for Italy	Creates letters sent to suppliers in Italy that confirm tax amounts that are withheld on partially or fully paid purchase invoices within a calendar year. Prints for a specific supplier or for all suppliers.
Withholding Tax Yearly Report for Italy	Shows the annual taxes withheld by first-party legal entities for a supplier during a specified year. The report is grouped by supplier name, supplier taxpayer ID or supplier tax registration number.

VAT Reports for Italy

This topic includes details about the VAT reports for Italy.

Overview

Oracle Fusion Applications provide a set of VAT reports to meet the legal and business reporting requirements of tax authorities.

The VAT reports for Italy include:

- **Declarable Input VAT Register for Italy:** Lists the declarable input VAT activities with document sequences assigned to the selected tax register, including payments of invoices with deferred tax for a specific period. The

report displays the recoverable and nonrecoverable tax amounts and corresponding taxable amounts. Provides a summary section with totals by tax rate code and a grand total.

The following figure is an example of the report.

Print Sequence	Document Date	Supplier Name	Applied To Document Number	Applied To Document Sequence Name	Tax Rate Code	Recoverable Taxable Amount	Nonrecoverable Taxable Amount	Recoverable Tax	Nonrecoverable Tax	Total Amount
	Document Number	Supplier VAT Registration Number	Applied To Document Date	Applied To Document Sequence Number

Key Insights

Before you run the VAT reports for Italy, ensure that you:

- Set up tax reporting entities and tax registers
- Configure tax reporting type and tax reporting type codes
- Associate document sequence names with tax registers

The VAT reports for Italy either use accounting date or tax point date for reporting data. Reporting of data by:

- Accounting date lets you list all invoicing activity regardless of what is declarable from tax perspective.
- Tax point date lets you report all declarable tax activity within a specific period and helps you to prepare declaration.

The following table lists the reports that use accounting date and tax point date for reporting transactions:

Report Name	Accounting Date	Tax Point Date
Declarable Input VAT Register for Italy	No	Yes
Declarable Output VAT Register for Italy	No	Yes
Payable Sales VAT Register for Self Invoices, Inter-EU Invoices, and VAT for Italy	Yes	No
Purchase VAT Register for Italy	Yes	No

Report Name	Accounting Date	Tax Point Date
Receivables Sales VAT Register for Italy	Yes	No
VAT Liquidation Report for Italy	No	Yes

Run the Select Transactions for Tax Reporting process before you run the VAT reports for Italy. The process marks the transactions with a tax reporting identifier, and identifies the tax reporting periods and tax registers defined for Italy.

Run the Finalize Transactions for Tax Reporting process to mark transactions as finally reported for the following reports:

- Declarable Input VAT Register for Italy
- Declarable Output VAT Register for Italy
- VAT Liquidation Report for Italy

Note: Only the listed reports can be printed in final mode and can be reprinted if required.

Report Parameters

The following table lists the common parameters for the VAT Reports for Italy:

Parameters	Description
Tax Calendar Period	Indicate the period name of the monthly calendar for reporting data.
Tax Register	Indicate the tax register such as, recoverable and nonrecoverable for reporting VAT reporting for Italy.
First Page Number	Indicate the starting page for the report.

The following table lists additional parameters for the VAT Liquidation Report for Italy:

Parameters	Description
Variation on Sales	Indicate the debit amount to reduce the sales VAT for net payment purposes.
Variation on Purchase	Indicate the credit amount to reduce the sales VAT for net payment purposes.

Intra-EU Reports for Italy

This topic includes details of the Intra-EU reports for Italy.

Overview

Companies in Italy must report the details of the sale or purchase of services to or from companies in European Union (EU) member states.

The reported transactions, once declared to the tax authority, must be stamped with declaration number issued by the tax authority.

Use the following reports to report intra-EU transactions to the tax authorities:

- European Sales Listing of Services for Italy: Use this report to declare services rendered by Italian companies to VAT-registered customers in European Union (EU) member states.

The report prints service mode, service code, reporting receipt method, and reporting receipt country details associated with the transactions. The following figure is an example of the report.

ORACLE Vision Italy		European Sales Listing of Services for Italy							Report Date 8/25/14 1:25 PM

Key Insights

Both the European Sales Listing of Services for Italy and European Purchase Listing of Services for Italy reports:

- Display report level totals for invoice amount.
- **Note:** Create your own templates to specify page totals, carry forward totals, or brought forward totals.
- Round off all amounts to the nearest Euro.
- List invoices that are reported and later canceled in the adjustments section of the report.

Before running the European Sales Listing of Services for Italy report, ensure that you:

- In Oracle Fusion Functional Setup Manager, use the:

- `JG_ESL_EPL_SERVICE_CODE` lookup type to specify the service code.
- `JG_ESL_EPL_SERVICE_MODE` lookup type to specify the service mode.
- `JG_ESL_EPL_RCPT_PYMT_MODE` lookup type to specify the reporting payment method.
- Configure the tax reporting type and tax reporting code for intra-EU transactions.

Before running the European Purchase Listing of Services for Italy report, ensure that you:

- Update the service code, service mode, reporting payment method, and reporting payment country for the services you purchase.
- Update the service codes for the services you purchase. Use the Service Code (`JG_ESL_EPL_SERVICE_CODE`) lookup type in Oracle Fusion Functional Setup Manager to specify the service codes.
- Configure the tax reporting type and tax reporting code for intra-EU transactions.

Report Parameters

The following table describes selected parameters of the European Sales and Purchase Listing of Services for Italy reports:

Parameter	Description
Tax Registration Number	Specify the registration number assigned to a party or party site by the tax authority when it's registered. A party or party site is identified by this registered number.
Tax Reporting Type	Select a tax reporting type code created in Oracle Fusion Tax. Select the appropriate Intra-EU transaction tax reporting type.
Tax Reporting Code	Select a tax reporting code created as a part of the tax reporting type you previously selected. Specify the tax reporting code relating to European Sales Listing of Services for Italy.

Frequently Asked Questions

The following table lists frequently asked questions about the European Sales and Purchase Listing of Services for Italy reports:

FAQ	Answer
How do I find this report?	Schedule and run this report from the Scheduled Processes work area on the Navigator menu.
Who uses this report?	<ul style="list-style-type: none"> • Tax Manager • Tax Accountant
When do I use this report?	<p>Use the European Sales Listing of Services for Italy and European Purchase Listing of Services for Italy reports to:</p> <ul style="list-style-type: none"> • Meet the reporting requirements of the Italian tax authorities. • Verify the details before submitting information as a declaration to the tax authority.

FAQ	Answer
	<ul style="list-style-type: none"> Accompany the positive receipt of the declaration number from the tax authority for future reference.

How European Sales Listing Services for Italy is Reported

You can use the European Sales Listing of Services for Italy report to declare services rendered by Italian companies to VAT-registered customers in European Union (EU) member states.

Settings That Affect Reporting

Before running the report, ensure to complete these things:

- In Oracle Fusion Functional Setup Manager, use the:
 - `JG_ESL_EPL_SERVICE_CODE` lookup type to specify the service code.
 - `JG_ESL_EPL_SERVICE_MODE` lookup type to specify the service mode.
 - `JG_ESL_EPL_RCPT_PYMT_MODE` lookup type to specify the reporting payment method.
- Configure the tax reporting type and tax reporting code for intra-EU transactions.

How Sales Listing of Services is Reported

To complete the European Sales Listing of Services for Italy report, run these processes:

1. Turnover Reporting Selection Process in final mode
2. European Sales Listing of Services for Italy

To complete the declaration, run the Turnover Reporting Declaration Closure Process to mark the reported transactions with the declaration number received from the tax authority.

Turnover Reporting Selection Process

The selection process extracts transactions to be reported from Oracle Fusion Receivables. Reporting is based on the extraction result of the Turnover Reporting Selection process.

The process extracts all the invoices, including correction transactions such as credit memos, within the specified dates for a given legal entity.

Only transactions that have the additional details entered for European Sales Listing of Services are extracted.

Run the Turnover Reporting Selection Process in the preliminary mode. After you verify the transactions to be reported, run the European Sales Listing of Services for Italy report, and ensure the transactions are reported correctly. When the transactions are reported correctly, run the Turnover Reporting Selection Process again in the final mode.

This table describes selected process parameters of the Turnover Reporting Selection Process:

Parameter	Description
Reporting Group	Specify the type of turnover reporting to be selected. Select Other to extract transactions for the European Sales Listing of Services for Italy report.
Selection Mode	Indicate the selection mode of the report, such as preliminary or final. When you run the process in final mode, it stamps the transactions as finally reported. The finally reported transactions aren't included in the next run of the Turnover Reporting Selection Process.

European Sales Listing of Services for Italy

The European Sales Listing of Services for Italy report displays all Intra-EU Receivables transactions for services.

Use the European Sales Listing of Services for Italy report to:

- Meet the reporting requirements of the Italian tax authorities.
- Verify the details before submitting information as a declaration to the tax authority.

This table describes selected parameters of the European Sales Listing of Services for Italy report:

Parameter	Description
Tax Registration Number	Specify the registration number assigned to a party or party site by the tax authority when it's registered. A party or party site is identified by this registered number.
Tax Reporting Type	Select a tax reporting type code created in Oracle Fusion Tax. Select the appropriate Intra-EU transaction tax reporting type.
Tax Reporting Code	Select a tax reporting code created under the tax reporting type you previously selected. Specify the tax reporting code relating to European Sales Listing of Services for Italy.

Turnover Declaration Closure Process

The Turnover Declaration Closure Process records the details of the finalized declaration that you submitted to the tax authority.

Run this final step after the electronic submission of the European Sales Listing of Services for Italy report to the tax authority.

Use the Turnover Declaration Closure Process to accompany the positive receipt of the declaration number from the tax authority for future reference.

The Turnover Declaration Closure Process marks all the declared transactions that are reported. Any future adjustments to these declared transactions are reported in section four of the European Sales Listing of Services for Italy report for subsequent periods.

This table describes selected process parameters of the Turnover Declaration Closure Process:

Parameter	Description
Tax Registration Number	Specify the registration number assigned to a party or party site by the tax authority when it's registered. A party or party site is identified by this registered number.
Declaration Year	Specify the year in which transactions are reported to the tax authority.
Declaration Authority	Specify the name of the tax authority responsible for receiving and processing all company declaration transaction tax reports.
Declaration Number	Specify the unique identifier assigned by the tax authority to a declaration.

How European Purchase Listing Services for Italy is Reported

Use the European Purchase Listing of Services for Italy report to declare services purchased by Italian companies from VAT-registered suppliers in European Union (EU) member states.

Settings That Affect Reporting

Before running the report:

- Update the service codes for the services you purchase. Use the Service Code (`JG_ESL_EPL_SERVICE_CODE`) lookup type in Oracle Fusion Functional Setup Manager to specify the service codes.
- Update the service code, service mode, reporting payment method, and reporting payment country for the services you purchase.
- Configure the tax reporting type and tax reporting code for intra-EU transactions.

How Purchase Listing of Services Is Reported

To complete the European Purchase Listing of Services for Italy report, run these processes:

1. Turnover Reporting Selection Process in final mode
2. European Purchase Listing of Services for Italy

To complete the declaration to the authorities, run the Turnover Reporting Declaration Closure Process. This marks the reported transactions with the declaration number received from the tax authority.

Turnover Reporting Selection Process

The selection process extracts transactions to be reported from Oracle Fusion Payables. Reporting is based on the extraction result of the Turnover Reporting Selection process.

Only transactions with the European Purchase listing of Services additional details entered are extracted.

First run the Turnover Reporting Selection Process in the preliminary mode. After you verify and confirm the transactions to be reported, run the process again in the final mode.

This table describes selected process parameters of the Turnover Reporting Selection Process:

Parameter	Description
Reporting Group	Specify the type of turnover reporting to be selected. Select Other to extract transactions for the European Purchase Listing of Services for Italy report.
Selection Mode	Indicate the selection mode of the report, such as preliminary or final. When you run the process in final mode, it stamps the transactions as finally reported. The finally reported transactions aren't included in the next run of the Turnover Reporting Selection Process.

European Purchase Listing of Services for Italy

The European Purchase Listing of Services for Italy report lists all Intra-EU Payables transactions for services.

Use the European Purchase Listing of Services for Italy report to:

- Meet the reporting requirements of the Italian tax authorities.
- Verify the details before submitting information as a declaration to the tax authority.
- Accompany the positive receipt of the declaration number from the tax authority for future reference.

This table describes selected parameters of the European Purchase Listing of Services for Italy report:

Parameter	Description
Tax Registration Number	Specify the registration number assigned to a party or party site by the tax authority when it's registered. A party or party site is identified by this registered number.
Tax Reporting Type	Select a tax reporting type code as created in Oracle Fusion Tax. Select the appropriate Intra-EU transaction tax reporting type.
Tax Reporting Code	Select a tax reporting code created under the tax reporting type that you previously selected. Specify the tax reporting code relating to European Purchase Listing of Services for Italy.

Turnover Declaration Closure Process

The Turnover Declaration Closure Process records the details of the finalized declaration you submitted to the tax authority.

Run this final step after the electronic submission of the European Purchase Listing of Services for Italy report to the Italian tax authority.

The Turnover Declaration Closure Process marks all the declared transactions that are reported. Any future adjustments to these declared transactions are reported in section four of the European Purchase Listing of Services for Italy report for subsequent periods.

Parameter	Description
Tax Registration Number	Specify the registration number that is assigned to a party or party site by the tax authority when it's registered. A party or party site is identified by this registered number.
Declaration Year	Specify the year in which transactions are reported to the tax authority.
Declaration Authority	Specify the name of the tax authority responsible for receiving and processing all company declaration transaction tax reports.
Declaration Number	Specify the unique identifier assigned by the tax authority to a declaration.

Exemption Reports for Italy

This topic includes details about the exemptions reports for Italy.

Overview

In Italy, regular exporters can legally request suppliers to not charge VAT on purchase transactions. The Letter of Intent is the official letter to send to suppliers and customs for vat exemption. This letter contains:

- Instructions to invoice without VAT.
- Revocation or suspension of a previous letter of intent, with instructions to invoice with VAT.

The exemption limit is the total VAT exemption amount that a regular exporter can claim against suppliers, and it is monitored on a periodic basis.

The following reports support exemption handling for Italy:

- Exemption Letter Report for Italy: Produces a letter of intent for each exempt supplier in Italy instructing them not to include VAT on invoices that they submit.

The following figure is an example of the report.

ORACLE		Italian Exemption Letter		Report Date 6/6/14 3:41 PM

- Supplier Exemption Limit Consumption Report: Lists the details of suppliers eligible for exemption in Italy and their monthly consumption of assigned exemption limit. Lists consumption details of all the suppliers, or a specific supplier. Details include all invoices exempted during a calendar period.

Key Insights

For each year, the initial exemption limit is the sum of all reported export invoices of the previous year. You can allocate the exemption limit as an annual or monthly amount and allocate the exemption limit among different suppliers. To each supplier, you send a Letter of Intent that indicates the exemption amounts, and request that they do not charge tax when they send the invoices.

Define the tax reporting type and tax reporting code with the usage as exempt for using letter of intent and reporting exemption data.

Exemption limits can be adjusted during the year to reflect an increase or decrease in export activities and changes in the VAT exemption amount as agreed with tax authorities. However, you will not be able to change the exemption limit type.

Report Parameters

The following table lists the common parameters for all the exemption reports:

Parameter	Description
Tax Reporting Type Code	Specify the tax reporting type code as created in Oracle Fusion Tax. Select the appropriate tax reporting type created for letter of intent.
Tax Reporting Code	Specify the tax reporting code created as a part of the tax reporting type that you previously selected. Specify the tax reporting code relating to letter of intent.
From Period and To Period	Indicate the period range for the report data.

The following table lists the parameters for the Letter of Intent Receivables Invoice Register:

Parameter	Description
Calendar Year	Indicate the year for the report data.
From Customer and To Customer	Indicate the customer range for the report data.

The following table lists the parameters for the Supplier Exemption Limit Consumption Report:

Parameter	Description
Calendar Year	Indicate the year for the report data.
Month	Indicate the month for which the consumption of exemption amount must be reported.
From Supplier and To Supplier	Indicate the supplier range for the report data.
Invoices with Letter of Intent	Indicate whether all or only invoices with a letter of intent must be included in the report.

Frequently Asked Questions

The following table lists frequently asked questions about the exemption reports for Italy.

FAQ	Answer
How do I find this report?	Schedule and run this report from the Scheduled Processes work area on the Navigator menu.
Who uses this report?	<ul style="list-style-type: none"> • Tax Manager • Tax Accountant • Tax Specialist • Accounts Receivables Manager • Accounts Receivables Specialist • Accounts Payables Manager • Accounts Payables Specialist
When do I use this report?	<p>Use the exemption reports for Italy to:</p> <ul style="list-style-type: none"> • Specify VAT exemption limit on transactions • Review transactions issued with a letter of intent during a calendar year • Review all letter of intent issued to suppliers or received from customer during a given period. • Monitor monthly consumption of exemption amounts to make sure you do not exceed the agreed limit. • Review the monthly consumption of assigned exemption limit.
What type of reports are these?	Oracle Analytics Publisher

Supplier Exemptions for Italy

In Italy, export transactions are exempted from value-added tax (VAT).

Companies classified as regular exporters have more input VAT than output VAT. They can request their suppliers to not charge VAT on transactions for export-related goods. Italian law lets you claim an exemption if you meet certain legal requirements.

These legal requirements are:

- Your regular exporter ratio is higher than 10 percent.
- The value of goods and services purchased without VAT charges is lower or equal to your exemption limit.
- You declare all export activities to your tax authorities.

The exemption limit is the total VAT exemption amount that a regular exporter can claim to its suppliers. A regular exporter can avoid purchasing and importing of goods and services without VAT up to the determined amount or ceiling. This exemption process is considered the Letter of Intent process.

For each year, the initial exemption limit is the sum of all reported export invoices of the previous year. You can allocate your yearly exemption limit among different suppliers. To each supplier:

- Send a Letter of Intent indicating the exemption amount.
- Request them not to charge tax when they send the invoices.

At the end of the year, if your total exempt purchases of goods and services is higher than your exemption limit, you incur administrative sanctions and penalties.

Exemption Limit Types

Exemption limits are of two types:

- **Annual:** The exemption is manually calculated at the beginning of the year. The calculation is based on the sum of exemption limits for all the reported export invoices of the previous year. Companies can allocate the yearly exemption limit among different suppliers. Send Letters of Intent to each supplier that indicate the exemption amounts and request that they do not charge tax when they send the invoices.
- **Monthly:** The exemption is manually calculated at the beginning of each month. The calculation is based on operations in the previous 12 months. This method is used frequently by regular exporters as it allows for progressive increase of exports since it's calculated monthly.

Once exemption limits are defined for a legal entity, the exemption limit type cannot be changed during a calendar year.

Exemption limits can be adjusted during the year to:

- Reflect the increase or decrease in export activities.
- Changes in the VAT exemption amount as agreed with the tax authorities.

Exemption Process

The following outlines the steps in the process:

1. Define the exemption type and exemption limit for the legal entity and calendar year.
2. For a supplier, create and print a Letter of Intent specifying the limit. The Letter of Intent can also be suspended or revoked, and sent to the supplier requesting that the supplier charge VAT on invoices. An inactive letter can be returned into active status if needed.

Note: A Letter of Intent can be created for a particular supplier site or for all sites. Define a Letter of Intent:

- a. Select the Manage Tax Exemptions task.
- b. Search for third-party tax profiles for which you want to define the Letter of Intent.

3. As a customer, receive and register the Letter of Intent. You can set the status of the letter to active, revoked, suspended, or inactive.

Note: Register the Letter of Intent on a particular site or on all the sites.

4. Generate Letter of Intent registers and reports to track the exemption amount consumed by the suppliers.

Withholding Tax Reports for Italy

This topic includes details about the withholding tax reports for Italy.

The withholding tax reports for Italy provide specific withholding tax information on supplier invoices as required by the tax authorities in Italy. You can use these reports to produce withholding tax letters you send to suppliers, reconcile the withholding tax letters sent to suppliers with the yearly amounts withheld for tax and social security, and prepare the yearly declarations for the tax authorities.

The following reports support withholding tax handling for Italy:

- **Withholding Tax Letters for Italy:** Creates letters sent to suppliers in Italy that confirm the tax and social security amounts withheld on purchase invoices that are partially or fully paid within a calendar year. Prints for a specific supplier or for all suppliers.
- **Yearly Withholding Tax Report for Italy:** Shows the annual taxes withheld by first-party legal entities for a supplier during a specified year, ordered by supplier name, supplier taxpayer ID or supplier tax registration number. Prints the yearly summary of tax and social security amounts withheld for the legal entity. For each supplier and supplier site:

Key Insights

Before running the reports, ensure that you:

- Set up the following entities:
 - Data Security
 - Geographies
 - Enterprise Structure
 - Suppliers
 - Tax Authorities
 - Bank accounts
 - Procurement Business Function
 - Common Options for Payables
- Complete the implementation project before entering transactions and using the transaction tax reports.

Create a new Withholding Tax Regime

Here's how you can create a new withholding tax regime:

1. From the Setup and Maintenance area navigate to the Manage Tax Regimes task.
2. Open the Manage Tax Regimes UI and switch to the Withholding Tax option.
3. Under the Withholding Tax Regimes section, create a new withholding tax regime.
4. Enter the required details for the new tax regime and save.

Create new Withholding Taxes

The Withholding Tax reporting feature for Italy enables you to report on both withholding tax and social security amounts. To achieve this you need to set up separate taxes for both the withholding and the social security.

Setting Up Withholding Tax

Here are the steps to establish a new withholding tax:

1. Navigate to the Manage Taxes task.
2. Select the Withholding Tax option and create a new tax.
3. Enter the details for the withholding tax.
4. Save and create the tax rule defaults.

- Note: Unless you specify different rules to use a different jurisdiction, status, or rate, the default values will apply whenever the tax is applicable.
- 5. Select the Tax Jurisdiction row in the Indirect Defaults area and click the Create Default button to activate the Tax Jurisdiction type.
- 6. In the Create Withholding Tax Jurisdiction UI, enter the tax jurisdiction details, save, and close.
- 7. Activate the Tax Status line and click on the Create Default button.
 - The Create Withholding Tax Status UI opens. Configure the tax status details, save, and close.
- 8. Activate the Tax Rate type and click on the Create Default button.
 - The Create Withholding Tax Rate UI opens. Configure the tax rate details. Assign the ledger and account information, then save, and close.
 - Now you have your tax defaults defined.
- 9. Click on the Tax Reporting Codes tab. Assign the predefined ORA_IT SOCIAL SECURITY tax reporting type to the withholding tax with the tax reporting code set to N(No).
 - This tax reporting type is used to identify which tax to use for the Italian withholding tax reporting. Transactions that have this tax applied are reported on the Italian withholding tax reports.
- 10. Click on the Tax Authorities tab and assign the tax authority and site to the withholding tax. Save the tax and enable it for transaction entry by selecting the Enable tax for transactions option. Save and close.
 -

Establishing Social Security Tax

Here are the steps to establish a new withholding tax:

1. Navigate to the Manage Taxes UI and define the social security tax.
 - Note that even when the social security tax is not used, you have to create it with a default 0% rate for the Withholding Tax Letter for Italy to work as expected.
 - Save and create the tax rule defaults.
 - Note: Unless you specify different rules to apply a specific jurisdiction, status, or rate, the default values will apply whenever the social security tax is applicable.
2. Activate the Tax Jurisdiction type record and click on the Create Default button. The Create Withholding Tax Jurisdiction UI opens. Enter the details for the tax jurisdiction. Save and close.
3. Activate the Tax Status type and click on the Create Default button.
 - The Create Withholding Tax Status UI opens. Enter details for the tax status. Save and close.
4. Activate the Tax Rate type and click on the Create Default button.
 - The Create Withholding Tax Rate UI opens. Enter details for the tax rate.
5. Assign the ledger and account information for the rate. Save and close.
 - Now you have your tax defaults defined.
6. Click on the Tax Reporting Codes tab and assign the ORA_IT SOCIAL SECURITY tax reporting type for IT SS tax with tax reporting code Y(Yes).
 - This reporting type code identifies the tax for Italian withholding tax reporting. Setting the tax reporting code to yes means that withholding tax amounts created for this tax will be reported as social security amounts on the Italian withholding tax reports.
7. Move to the Tax Authorities tab and enter the tax authority and site for the social security tax. Tax Authorities are entered as suppliers with the supplier type set as Tax Authority. This information is used if Tax Invoice Creation is enabled on the Controls and Defaults tab.
8. Save and enable the social security tax by selecting the Enable tax for transactions. Save again.

Create a New Tax Rule

The example below is only for demonstration purposes to show you one possible way how you can set up the tax rules for withholding tax and social security. For customers, the tax rules and tax determinants have to be based on the current legislation.

Create a new user-defined fiscal classification code

1. Go to the Manage Transaction-Based Fiscal Classifications task.
2. In the Manage Transaction-Based Fiscal Classifications UI change the value to User-Defined Fiscal Classification Codes in the top left corner. Click on the Create icon.
3. On the Create User-Defined Fiscal Classification Code UI enter a new code that you can use as a tax determinant for the withholding tax rules. Save and close the window.

Create tax applicability rules

Here are the steps to create a new tax applicability rule:

1. On the Manage Tax Rules UI choose the Withholding Tax radio button and Tax Rule Type Tax Applicability Rules in the top left corner. Click on the Create icon.
2. Enter details for the new tax rule.
3. Click on Create on the list of values for the Tax Determining Factor Set. This opens the Create Tax Determining Factor Set UI. Define a new tax determining factor set based on a user-defined fiscal classification code.
4. Click on OK. This saves the new record and automatically selects it as the tax determining factor set for the tax rule.
5. Click on the next button.
6. Select Create from the list of values for the Tax Condition Set field. This opens the Create Condition Set UI. Enter a new condition set that uses the new user-defined fiscal classification value created in the previous setup step.
7. Click on OK and the new condition set is automatically saved and selected as the tax condition set for the tax rule.
8. Click on the Save and Next button.
9. Enable the new tax rule by selecting Enabled and clicking on the Submit button. This completes the creation of the tax applicability rule for the withholding tax. The next step is to create a very similar tax rule for the social security tax.
10. On the same UI enter details for a new tax applicability rule for the social security tax.
11. For the Tax Determining Factor Set field choose the Create option from the list of values. This opens the Create Tax Determining Factor Set UI. Define a new tax determining factor set based on a user-defined fiscal classification code.
12. Click on OK. This saves the new record and automatically selects it as the tax determining factor set for the tax rule.
13. Click on the Next button.
14. Select the Create option for the Tax Condition Set field. This opens the Create Condition Set UI. Enter a new condition set that uses the new user-defined fiscal classification value created earlier. The same is used in the withholding tax rule so when this attribute is entered on the invoice both the withholding tax and social security tax will be applicable for the invoice line.
15. Click on OK and the new condition set is automatically saved and selected as the tax condition set for the tax rule.
16. Click on the Save and Next button.
17. Enable the new tax rule by selecting Enabled and clicking on the Submit button. This completes the creation of the tax applicability rule for the social security tax.

Create Configuration Owner Tax Options

1. Go to the Manage Configuration Owner Tax Options UI and select the Withholding Tax option. Click on the Create icon to enter a new record.
2. Select the first party legal entity as the configuration owner. Enter processing controls for standard invoice and prepayment invoice event class. In Italy the withholding tax has to be created at the time the payment is sent to the supplier so set the tax calculation point as Payment for both event classes. Save and close.

Update the Business Unit Tax Profile

1. Open the Manage Party Tax Profiles UI and change the search option to Business Unit Tax Profile. Search for the Business Unit by name.
2. Click on the edit icon to open the Edit Business Unit Tax Profile UI.
3. Enable the use of legal entity withholding tax subscription on the Controls and Defaults tab. Save and close.

This completes the necessary minimum setup for withholding tax for Italy.

Supplier Setup

For withholding tax suppliers who are individuals you can add their date of birth and place of birth in the regional information section of the Supplier UI. Choose Withholding Tax for Italy from the list of values in the Regional Information field for these additional attributes to appear. The information entered is used on the Withholding Tax Letters for Italy report.

Entering Transaction Details

Invoice creation

1. Go to Navigator, click on Payables, select Invoices, and choose Create Invoice.
2. Enter the invoice header and line information.
3. For the User-Defined Fiscal Classification field enter the value created in the setup. In our setup, this attribute is used as the tax determinant for withholding tax.
4. Validate and account the invoice.

Payment creation

- Go to Navigator, click on Payables, select Payments, and choose Create Payment.
- Note that the payment amount is less than the full invoice amount. The difference is the withholding amount. Account the payment.
-

Review the withholding tax lines

Re-query the invoice and review the withholding tax lines created.

Reporting

You can access all the reports from the Scheduled Processes Reporting and Scheduled Processes in the Tools section of the Navigator menu.

Here are the reports:

Withholding Tax Letters for Italy

Run the Withholding Tax Letters for Italy report to create and print letters to your suppliers about all the withholding tax transactions that were partially or fully paid during the reporting year.

The report has the following parameters:

1. Select the Legal Entity and the tax year for which you want to run the report.
2. You can also select just one specific supplier, or a range of suppliers for the report. Alternatively, you can leave the last two parameters blank and report on all withholding transactions for the year.

Yearly Withholding Tax Report for Italy

The Yearly Withholding Tax Report for Italy is used to list all withholding transactions for a tax year.

The report has the following parameters:

1. Select the Legal Entity and the tax year for which you want to run the report.
2. The information can be ordered by the supplier name, supplier taxpayer ID, or tax registration number.
 - o The report output displays summary information for each tax rate by supplier and also for the entire report.

Report Parameters

The following table describes selected process parameters:

Name	Description
Legal Entity	Specify the legal entity for reporting.
Year	Specify the calendar year to be included for reporting withholding tax.

Frequently Asked Questions

The following table lists frequently asked questions about the withholding tax reports for Italy.

FAQ	Answer
How do I find these reports?	Schedule and run these reports from the Scheduled Processes work area on the Navigator menu.
Who uses these reports?	<ul style="list-style-type: none"> • Tax Manager • Tax Accountant • Payables Manager • Payables Specialist
When do I use these reports?	Use these reports to: <ul style="list-style-type: none"> • Create letters for your suppliers in Italy to confirm withheld tax amounts. • Reconcile the withholding tax letters sent to your suppliers. • Review withheld taxes for each invoice or supplier. • Review withheld taxes by calendar year for your first-party legal entities.

FAQ	Answer

Invoice Electronic Listing for Italy

This topic explains the implementation and usage guidelines for the Invoice Electronic Listing feature.

This includes the following components:

- Invoice Electronic Listing for Italy: The process to create an electronic file of Payables and Receivables accounted invoices. The electronic file is required for transmission to the Italian Revenue Agency.
- Invoice Electronic Listing File for Italy: The child process initiated by the Invoice Electronic Listing for Italy, This child process produces a legal electronic file (in the XML format) compliant with the technical specifications defined by the Italian Revenue Agency.
- Invoice Electronic Listing Transmission Confirmation for Italy – The process to record the File Transmission Identification returned by the Italian Revenue Agency for each transmission.

The feature Invoice Electronic Listing allows you to follow the decree issued by the Italian Government in October 2016 that introduced the mandatory transmission by electronic means of Payables and Receivables invoices information. It allows you to produce an electronic file compliant with the technical specifications defined by the Italian Revenue Agency.

Assumptions and Prerequisites

The following entities are assumed to have already been setup:

- Data Security – Refer to the Fusion Security topical essay available on cloud.oracle.com
- Geographies
- Enterprise Structure
- Tax Regime to Rate setup
- Tax Party Profiles
- Tax Rules
- Suppliers
- Customers
- Document sequences
- Procurement Business Function
- Common Options for Oracle Payables and Oracle Receivables

It is recommended that the Implementation Project is complete for your organization before commencing the Feature Specific Setup outlined below.

The XML file generated by the Invoice Electronic Listing File for Italy includes the tag 1.3 <IdSistema>. Remove this tag manually from the generated XML file if you don't use the web application for the transmission.

Common Setup

Define the Tax Reporting Configuration to start using any Globalization features for Italy.

The Tax Reporting Configuration determines a reporting configuration based on the Tax Registration Number (TRN) defined for Legal Reporting Unit tax registration and is a basis for country-specific tax reporting. This configuration is referred to as the Tax Reporting Entity. Each Tax Reporting Entity is uniquely identified by entity identifier and is a combination of the Legal Entity, Tax Registration Number, and Tax Regime.

Invoice Electronic Listing for Italy feature is not based on the Select Transactions for Tax Reporting process which is a basic tool to prepare taxable records for further tax reporting. However, the feature is based on the reporting identifier generated by this process and refers to the Tax Calendar associated with the Tax Reporting Entity.

Tax Regime

Here are the steps to manage the tax regime:

- Navigate to the Manage Tax Regimes task from the Setup and Maintenance area.
- Select the Use tax reporting configuration option at the Tax Regime level. This enables the Tax Reporting Configuration tab on the Create/Edit Tax Registration page.

Legal Reporting Unit Tax Registration

Here are the steps to manage the legal reporting unit tax profile:

- Navigate to the Manage Party Tax Profiles task from the Setup and Maintenance area.
- Search for Legal Reporting Unit Tax Profile and go to Tax Registrations.
- Create legal reporting unit tax registration with the Registration Number.
 - A Tax Registration Number is a mandatory component of the Tax Reporting Configuration. Once this number is entered, the Tax Reporting Configuration tab becomes available.

Tax Reporting Configuration

Tax Reporting Configuration setup is a part of the legal reporting unit tax registrations setup. Complete the following prerequisite setup to allow access to the Tax Reporting Configuration tab:

- Navigate to the Manage Party Tax Profiles task from the Setup and Maintenance area.
- Search for Legal Reporting Unit Tax Profile.
- Go to Tax Registrations and then the Tax Reporting Configuration tab.
- Enable the Use tax reporting configuration option at the Tax Regime level.
- Enter the Tax Registration Number for the legal reporting unit tax registrations.
- Enter the Tax Calendar to create the Tax Reporting Configuration.
 - The tax calendar to be defined for tax reporting can be different from the accounting calendar you define for ledgers. You define the tax calendar using the same Manage Accounting Calendars page.

Feature Specific Setup

Document Type

Document Type (<TipoDocumento> tag) must be populated for each transaction in accordance with the electronic file technical specification:

Document Types	
TD01	Invoice
TD04	Credit note
TD05	Debit note
TD07	Simplified invoice
TD08	Simplified credit memo
TD10	Intra-EU purchase invoice of goods
TD11	Intra-EU purchase invoice of services

Use the Document Fiscal Classifications field at the transactions header level mainly to identify the transactions as TD07, TD08, TD10, TD11. It is not mandatory to enter the Document Fiscal Classification for each transaction, if it has not been entered then the tag <TipoDocumento> is populated in the electronic file based on the following rules:

For Payables:

Invoice Type	Third Party Location	Product Type	<TipoDocumento>
Invoice	Italy or non EU country		TD01
Invoice	Not in Italy but in EU country	Goods or not entered	TD10
Invoice	Not in Italy but in EU country	Services	TD11
Credit memo			TD04
Debit memo			TD05
Prepayment	Italy or non EU country		TD01
Prepayment	Not in Italy but in EU country	Goods or not entered	TD10
Prepayment	Not in Italy but in EU country	Services	TD11
Expense Report Invoice			TD01

For Receivables:

Transaction Class	<TipoDocumento>
Invoice	TD01
Credit memo	TD04
Debit memo	TD05

Document Fiscal Classifications for Document Type

You can navigate to the Manage Transaction-Based Fiscal Classifications task from the Setup and Maintenance area and search for the Document Fiscal Classification Codes. The Fiscal Classification Code ORA_IT_DOCUMENT_TYPE is seeded for the Invoice Electronic Listing.

Nature of VAT

Nature of VAT (<Natura> tag) must be populated for each zero rated transaction line, in accordance with electronic file technical specification:

Nature of VAT	
N1	Excluded pursuant to Art. 15
N2	Not subject
N3	Not taxable
N4	Exempt
N5	Margin regime
N6	Reverse charge
N7	VAT paid in another EU country (vendite a distanza ex art. 40 c. 3 e 4 e art. 41 c. 1 lett. b DL 331/93; prestazione di servizi di telecomunicazioni, tele-radiodiffusione ed elettronici ex art. 7-sexies lett. f, g, art, 74sexies DPR 633/72)

Use the Tax Reporting Type as Nature of VAT with the Tax Reporting Codes: N1, N2, N3, N4, N5, N6, N7 seeded with the usages: Process Result, Tax Status and Tax Rate.

Transaction Entry in Payables

Task name: Create Invoice

Navigation: Go to Payables Invoices and then click on Create Invoice.

Invoice to be excluded from reporting

Use the GDF segment Reporting Exclusion Indicator provided at the header and line levels of the Payables invoice to exclude specific invoices/lines from the Invoices Electronic Listing reporting. The mass exclusion is not supported.

These GDF segments on both levels are defaulted to null, which means a transaction is included in reporting by default. These segments are handled by the following rules:

- If the header level Reporting Exclusion Indicator is set to Yes then a transaction is not included in the Invoices Electronic Listing report.
- If the header level Reporting Exclusion Indicator is set to No/null then a transaction is included in the Invoices Electronic Listing report, but the line level Reporting Exclusion Indicator is analyzed for each line of the transaction.
- If the line level Reporting Exclusion Indicator is set to Yes for a particular line then this line is not included in the Invoices Electronic Listing report.

VAT Not Exposed Invoice

Use the GDF segment VAT Not Exposed provided at the header level of the Payables invoice to mark it as VAT not exposed. If the VAT Not Exposed is set to Yes then the tag <ImponibileImporto> is populated by sum of taxable and tax amounts.

Foreign Invoice accompanied by Customs bill

In case the customs bill has been issued against the foreign invoice then blocks <IdentificativiFiscali> and <AltriDatiIdentificativi> must be populated by the foreign invoice supplier information and block <DatiFatturaBodyDTR> must be populated by information captured from the Customs bill by the following rules:

- Tag <TipoDocumento> – TD01;
- Tag <Data> - Invoice Date of the Customs Bill invoice;
- Tag <Numero> - Invoice Number of the Customs Bill invoice;
- Tag <DataRegistrazione> - Invoice Accounting Date of the Customs Bill invoice;
- Tag <ImponibileImporto> - Assessable Amount from Customs Bill invoice;
- Tag <Imposta> - Tax Amount from Customs Bill invoice;
- Tag <Aliquota> - Tax Rate from Customs Bill invoice;
- Tag <Natura> - not impacted by the Customs Bill invoice.

The reason is that the Customs might have assigned different amounts to the transaction.

The Custom bill is entered against a specific supplier which represents the Italian Customs Authority. To get the foreign invoice reported with proper information from the Customs bill establish the link between the foreign invoice and the Customs bill in the following way:

- Create an invoice for the specific supplier Customs.
- Customs bill must not be reported in the Invoice Electronic Listing, therefore set the header level Reporting Exclusion Indicator to Yes.
- Create a foreign supplier invoice and navigate to the Addition Information tab.
- Set Regional Information to Payables Invoice Information for Italy and fill in the following fields:
 - Customs Name: Select from LOV the name of the supplier that represents the Italian Customs Authority.
 - Customs Bill Invoice Number: Select from LOV the invoice associated with this supplier and pertain to the foreign invoice.

You must account all Payables transactions before reporting them in the Invoice Electronic Listing. Validate the invoice and account and post to Ledger. Check the validation and accounting status in the Status region of the Create Invoice page.

Simplified Invoice and Credit Memo

Use the Document Fiscal Classification field provided at the Payables invoice header level to mark the invoice as a simplified invoice or to mark the credit memo as a simplified credit memo to get the correct document type populated in the tag <TipoDocumento>.

Note: If you don't specify the Document Fiscal Classification for the Simplified Invoices/Credit Memos, then the Invoice Electronic Listing defaults <TipoDocumento> in the XML file to TD01 for invoices and to TD04 for credit memos.

Intra-EU Purchase

Use the Document Fiscal Classification field provided at the Payables invoice header level to mark the invoice as Intra-EU purchase invoice of goods or services in order to get the correct document type populated in the tag <TipoDocumento>.

Note: If you don't specify the Document Fiscal Classification for the Intra-EU purchase invoices then the Invoice Electronic Listing defaults <TipoDocumento> in the XML file.

Expense Report

All the expense report invoice lines are reported in the Invoice Electronic Listing.

Note: Exclude expense report invoice lines related to B2C transactions by using the Reporting Exclusion Indicator at the invoice line level. This should be done because the only expense report invoice lines related to B2B transactions must be reported.

The expense report invoices with lines not excluded but without merchant information are reported but will be listed in the Log file under the message: Expense report invoices with no Merchant information on particular lines.

As invoices are grouped by a Supplier, all expense report invoice lines with empty Merchant Name are grouped.

Transaction Entry in Receivables

Task name: Create Transaction

Navigation: Navigate to the Receivables Billing task and then click on Create Transaction.

Transactions to be excluded from reporting

Use the GDF segment Reporting Exclusion Indicator provided at the header and line levels of Receivables transaction to exclude a specific transaction/lines from the Invoices Electronic Listing reporting. The mass exclusion is not supported.

These GDF segments on both levels are defaulted to null, which means a transaction is included in reporting by default. These segments are handled by the following rule:

- If the header level Reporting Exclusion Indicator is set to Yes then a transaction is not included in the Invoices Electronic Listing report.
- If the header level Reporting Exclusion Indicator is set to No/null then a transaction is included in the Invoices Electronic Listing report, but the line level Reporting Exclusion Indicator is analyzed for each line of the transaction.
- If the line level Reporting Exclusion Indicator is set to Yes for a particular line then this line is not included in the Invoices Electronic Listing report.

VAT Not Exposed Invoice

Use the GDF segment VAT Not Exposed provided at the header level of the Receivables invoice to mark it as VAT not exposed. If the VAT Not Exposed is set to Yes, then the tag <ImponibileImporto> is populated by the sum of taxable and tax amounts.

You must account all Receivables transactions before reporting them in the Invoice Electronic Listing. Complete the transaction, account, and post to Ledger.

Processing and Reporting

Navigate to Schedule Processes from Tools and click on Select Transactions for Tax Reporting.

Each run of the Select Transactions for Tax Reporting process is assigned a system generated reporting entity identifier. This reporting identifier is used for the submission of all the processes considered below. The reporting identifier is built as a concatenation of the Reporting Level, Legal Entity, Tax Regime, TRN and the Reporting Identifier ID (for example: LE:Vision Italy-1017:IT VAT:IT12345670017:300100066356392). The only accounted transactions are selected.

If the Selection process has already been run at least once as a part of the business flow of another Globalization feature for Italy and the proper reporting identifier has been generated then this processing is not required and the section doesn't require a particular attention in context of the Invoice Electronic Listing.

Note: There is no report produced for the Select Transactions for Tax Reporting. The log files show the number of transactions selected. Each tax line of the selected transaction is stamped by the reporting batch id.

Invoice Electronic Listing for Italy

Navigate to Schedule Processes from Tools and click on Invoice Electronic Listing for Italy.

The feature Invoice Electronic Listing for Italy is a process that creates an electronic file of Payables and Receivables accounted invoices. The electronic file is required for transmission to the tax authorities.

The Invoice Electronic Listing for Italy initiates a child process Invoice Electronic Listing File for Italy which produces a legal electronic file (in the XML format) compliant with the technical specification defined by the Italian Revenue Agency.

To review the content of the electronic file in a user readable format open the xml file with the Microsoft Office Excel application. Use the Excel representation for internal auditing purpose.

The XML file includes all the accounted transactions with the accounting dates within the reporting period (From/To Periods range):

- For Payables these are Standard Invoices, Credit Memos, Debit Memos, Prepayment Invoices and Expense Report Invoices.
- For Receivables these are Invoices, Credit Memos and Debit Memos

All amounts are reported in the functional currency of the primary ledger.

Invoice Electronic Listing Transmission Confirmation for Italy

Navigate to Schedule Processes from Tools and click on Invoice Electronic Listing Transmission Confirmation for Italy.

Once the Italian Revenue Agency receives the electronic file, it generates and returns back to a transmitter the electronic transmission receipt confirmation: File Transmission Identification.

The feature Invoice Electronic Listing Transmission Confirmation for Italy is to record the File Transmission Identification returned by the Italian Revenue Agency for each transmission.

It also provides the log file with the Transmission Status Report which is the list of existing records for a given Reporting Entity, Reporting Period, Transmission Type and the Source.

Turnover Reporting for Italy

This topic explains the implementation and usage guidelines for the following reports:

- European Purchase Listing of Services for Italy

The European Purchase Listing of Services for Italy report helps you to prepare your European Community Purchase Listing report for services. The report will list the services purchased from intra-EU suppliers and meets the layout required for Italy.

- European Sales Listing of Services for Italy

The European Sales Listing of Services for Italy report helps you to prepare your European Community Sales Listing report for services. The report will list the services sold to intra-EU customers and meets the layout required for Italy.

Customers belonging to EU Member States must report to the relevant authorities (Tax or Customs) the Sales and Purchases of goods and services. The 2010 EU VAT Package requires a declaration of services rendered within the European Union to VAT registered customers in other EU Member States.

Assumptions and Prerequisites

The following entities are assumed to have already been set up :

- Data Security – Refer to the Fusion Security topical essay available on cloud.oracle.com
- Geographies
- Enterprise Structure
- Tax Regime to Rate setup
- Tax Party Profiles
- Tax Rules
- Suppliers
- Customers
- Document sequences
- Procurement Business Function
- Common Options for Oracle Payables and Oracle Receivables
- Receipt Classes and Methods

It is recommended that the Implementation Project is complete for your organization before commencing the Feature Specific Setup outlined below.

Feature Specific Setup

Service Codes

Setup service codes that represent the types of services purchased and sold. These are required to report to the Tax Authorities in the declarations. The reports require that Service Codes are entered for your reportable transactions.

The list of 6 digit codes can be found on the Eurostat website. Create the Service codes that apply to your sales and purchase of services for your business. Here's how to create the lookup codes for your service code:

- Navigate to Manage Standard Lookups task.
- Query up Lookup Type JG_ESL_EPL_SERVICE_CODE.
- Create Lookup Codes for each 6 digit Service Code that applies to your business.

Note: Service Codes must be assigned to the transactions, so they can be reported in the ESL or EPL of Services for Italy Report. The Turnover Reporting Selection Process extracts transactions without Service Codes, but the reports do not include transactions without the Service Code assignments.

Tax Reporting Types and Codes

Tax Reporting Types and codes are required to identify and group your intra EU transactions. The reports will then display the invoices for your Tax Reporting Type and Code combination. Here are the steps to set up Tax Reporting Codes:

- Navigate to the Manage Tax Reporting Types task.
- Set up Tax Reporting Codes for each report, to group your transactions for reporting purposes.
- Assign the tax rates that relate to your Intra EU transactions.

Tax Rate Setup

The Tax Reporting Types and Codes need to be associated with the tax rates that apply to your intra-EU transactions. This ensures that the Turnover Reporting process can identify the transactions eligible for reporting. Here are the steps to set up the tax rate:

- Navigate to the Manage Tax Rates and Tax Recovery Rates task.
- Assign the Tax Reporting Codes to the tax rates that relate to your Intra EU transactions.
- Specify a Tax Reporting Type and a Tax Reporting Code so that the report can identify which transactions relate to your Intra EU Transactions. Both (European Purchase Listing of Services for Italy and European Sales Listing of Services for Italy) reports require you to run by a Tax Reporting Type and a Tax Reporting Code. Therefore, the tax rate codes that relate to your Intra EU Transactions need to have the Tax Reporting Type Code associated with the tax rate.

Global Descriptive Flexfield (GDF) for Italy EPL and ESL Reporting

The 2 reports (EPL and ESL of services for Italy) have Global Descriptive Flexfields (GDF) enabled on the following user interfaces:

- Payables Invoice Header
- Payables Invoice Line
- Receivables Transaction Header
- Receivables Transaction Line.

The purpose of the Global Descriptive Flexfield (GDF) is to allow you to add additional information on the transactions that are required for reporting to the authorities. In particular:

Service Code	Available at both Header and Line levels. Composed of 6 digits in length, this field must be populated with the CPA 2008 service classification (European Economic Community http://ec.europa.eu/eurostat/ramon/nomenclatures/index.cfm?
--------------	---

	<i>TargetUrl=LST_NOM_DTL&StrNom=CPA_2008&StrLanguageCode=EN&IntPcKey=&StrLayoutCode=HIERARCHIC</i> Statistical Classification of Products by Activity). The values for the Service Code are defined in the step above in the Service Codes setup section.
Service Mode	Available at both Header and Line levels. Indicates if the Service is continuous/consecutive or the Service is one-off/ad-hoc, the values are R for continuous/consecutive and I for one-off/ad-hoc.
Reporting Payment/Receipt Method	Available at Header level only. Payment and Receipt Methods on the transaction can either be classified as Direct Debit, Transfer Order, or Others.
Reporting Payment/Receipt Country	Country of the third party to which the payment/receipt is made.

Values entered at the line level take precedence. If there is no value at the line level, then the header level values will be reported. This allows you to enter for example 10 invoice lines for a particular service code/service mode, but only need to enter the GDF data at the invoice header level. If there are just 1 or 2 invoice lines that relate to a slightly different 'Service Mode' or 'Service Code' then you can enter the value for that line at the line level. Invoices and transactions that are intra EU which you want to declare on the listings must have the GDF information entered for them to be reported.

Invoice Entry in Payables

Enter invoices with the following characteristics, to ensure that they are correctly represented in the European Purchase Listing of Services for Italy report. Navigate to the Create Invoice task to create an invoice and pay special attention to the following:

- **Voucher Number:** A Voucher Number needs to be generated in the Accounting Tab section. Voucher Numbers appear on the report output as Invoice Protocol Number. Set up a gapless document sequence to achieve this. Italy requires gapless document sequencing.
- **Invoice Header Level GDF:** The Service Code, Service Mode, Reporting Payment Method, and Reporting Payment Country are selected at the invoice header level. Click on the Additional Information tab on the Invoice Header and select the European Purchase Listing of Services for Italy context from the Regional Information. The data entered for these 4 values, will appear on the report output. If you do not select the data in the GDF section, the transaction will not appear on the report.
- **Payables Invoice Line GDF:** If you have any invoice lines that have different values for Service Code or Service Mode than what you have entered at the Invoice Header level, select the values on the Invoice Lines GDF from the Details section of the invoice line. The values at the line level will take precedence. If there are no values at the line level, then the header level information will be reported. This is an optional task that depends on the nature of your transaction.
- **Tax Rate Name:** The transaction needs to be an Intra-EU transaction that will have the tax rate code applied that relates to Intra-EU purchases of services.
- **Validating, Accounting and Posting:** Validate the invoice and Account and Post to Ledger. The report only shows invoices that are validated and accounted.

Transaction Entry in Receivables

Navigate to the Create Transactions task and enter transactions with the following characteristics, to ensure that they are correctly represented in the European Sales Listing of services for Italy report:

- **Document Number:** A Document Number needs to be generated. Document Numbers appear on the report output as Invoice Protocol Number. Set up a gapless document sequence to achieve this. Italy requires gapless document sequencing.
- **Receivables Transaction Header Level GDF:** The Service Code, Service Mode, Reporting Receipt Method, and Reporting Receipt Country are selected at the transaction header level. Click on the Miscellaneous tab on the Transaction Header and select the European Sales Listing of Services for Italy context from the Regional Information. The data entered for these 4 values, will appear on the report output. If you do not select the data in the GDF section, the transaction will not appear on the report.
- **Receivables Transaction Line GDF:** If you have any transaction lines that have different values for Service Code or Service Mode than what you have entered at the Transaction Header level, then select the values on the Transaction Lines GDF from the Details section of the transaction line. The values at the line level will take precedence. If there are no values at the line level, then the header level information will be reported. This is an optional task that depends on the nature of your transaction.
- **Tax Rate Name:** The transaction needs to be an Intra EU transaction that will have the tax rate code applied that relates to Intra EU sales of services. In this example, the IT VAT Intra EU Zero Rate is applied. The tax rate applied must be the tax rate that has the Tax Reporting Code associated with the previous setup step.
- **Completing, Accounting and Posting:** Complete the transaction and Account and Post to Ledger. The report only shows transactions that are completed and accounted.

Reporting

Payables Turnover Reporting Selection Process (Preliminary Mode)

The Turnover Reporting Selection process is a prerequisite process that extracts the eligible intra EU transactions for the reporting period.

- Navigate to the Scheduled Processes.
- Select the transactions that you wish to report for the legal entity for a period. It is strongly advisable to run it in Preliminary Mode first, so that if necessary you can modify your data before you submit it to the Tax Authority.
- Run the process for your Legal Entity.
- Select Other as the Reporting Group.

Note: Although there is no report produced for the Turnover Reporting Selection Process, you can verify the list of transactions that are selected, by viewing the log file which lists the transactions. Also, you can submit the European Purchase Listing of Services for Italy report.

European Purchase Listing of Services for Italy (Preliminary Mode)

After you have extracted the transactions, review the results in the European Purchase Listing of Services for Italy report. Run the report for your Tax Registration for the period that you selected in the Turnover Reporting Selection Process. Choose the Tax Reporting Type and Tax Reporting Code that you set up earlier.

Before proceeding to run the Turnover Reporting Selection Process in Final Mode, it is important to review the European Purchase Listing of Services for Italy report output that was previously run. If there are transactions that you expect to be reported that aren't in the report, check the setup and verify the GDF data is correctly populated for the invoices and the correct tax rate is on the transaction.

Payables Turnover Reporting Selection Process (Final Mode)

Once you have verified the preliminary report output, you can proceed to run the Turnover Reporting Selection Process in Final Mode. Use the same set of parameters that you used when running in Preliminary Mode, except choose Selection Mode as Final.

Note: Although there is no report produced for the Turnover Reporting Selection Process, you can verify the list of transactions that are selected, by viewing the log file which lists the transactions. Also, you can submit the European Purchase Listing of Services for Italy report.

European Purchase Listing of Services for Italy (Final Mode)

After you have extracted the transactions in Final Mode, you can view the results in the European Purchase Listing of Services for Italy report. You run the report for your Tax Registration for the period that you selected in the Turnover Reporting Selection Process. Choose the Tax Reporting Type and Tax Reporting Code that you set up earlier.

The report represents the Intra EU transactions for the period that need to be reported to the Tax Authority. The output will list all transactions belonging to the period that is validated, accounted, posted, and also have the Service Code, Service Mode, Payment Method, and Country of Payment entered.

Payables Turnover Declaration Closure Process

After you have received the Declaration Number back from the authority, the final step is to run the Turnover Declaration Closure Process to record the details of the finalized declaration. This process assigns the declaration number to your reported transactions. It assists identification of reported transactions and enables transactions to be reported again, if they have changed since the original declaration.

Section 4 of the report output will list the modified transactions that were previously reported. Run the Turnover Declaration Closure Process. Once the closure process has taken place, the declaration for the period is complete.

Payables Reporting Adjustments

After an invoice has been finally reported and the declaration closure process has been completed, further adjustments to the invoice will result in the being re-reported in a future period. The following examples represent such changes:

- Cancelled Invoices
- Credit Memo Application
- Change in the Service Code, Service Mode, Reporting Payment Country or Payment Method

Such changes are reported in the Rectifications to Services received and reported in previous periods section of the report. The declaration details from the previous invoice are referenced, so that the authority can cross check the reference.

Receivables Turnover Reporting Selection Process (Preliminary Mode)

The Turnover Reporting Selection process is a prerequisite process that extracts the eligible intra EU transactions for the reporting period. Select the transactions that you wish to report for the legal entity for a period. It is strongly advisable to run it in Preliminary Mode first so that if necessary you can modify your data before you submit it to the Tax Authority. Run the process for your Legal Entity. Select Other as the Reporting Group.

Note: Although there is no report produced for the 'Turnover Reporting Selection Process', you can verify the list of transactions that are selected, by viewing the log file which lists the transactions. Also, you can submit the 'European Sales Listing of Services for Italy' report.

European Sales Listing of Services for Italy (Preliminary Mode)

After you have extracted the transactions, you can review the results in the European Sales Listing of Services for Italy report. Run the report for your Tax Registration for the period which you selected in the Turnover Reporting Selection Process. Choose the Tax Reporting Type and Tax Reporting Code that you set up earlier.

Before proceeding to run the Turnover Reporting Selection Process in Final Mode, it is important to review the European Sales Listing of Services for Italy report output that was previously run. If there are transactions that you expect to be reported that aren't in the report, you may need to check the setup, and the GDF data is correctly populated for the invoices and the correct tax rate is on the transaction.

Receivables Turnover Reporting Selection Process (Final Mode)

Once you have verified the preliminary report output, you can proceed to run the Turnover Reporting Selection Process in Final Mode. Use the same set of parameters that you used when running in Preliminary Mode, except choose Selection Mode of Final.

Note: Although there is no report produced for the Turnover Reporting Selection Process, you can verify the list of transactions that are selected, by viewing the log file which lists the transactions. Also, you can submit the European Sales Listing of Services for Italy report.

European Sales Listing of Services for Italy (Final Mode)

After you have extracted the transactions in Final Mode, you can view the results in the European Sales Listing of Services for Italy report. Run the report for your Tax Registration for the period that you selected in the Turnover Reporting Selection Process. Choose the Tax Reporting Type and Tax Reporting Code that you set up earlier.

The report represents the Intra EU transactions for the period that need to be reported to the Tax Authority. The output will list all transactions belonging to the period that is validated, accounted, posted and also have the Service Code, Service Mode, Receipt Method, and Country of Payment entered.

Receivables Turnover Declaration Closure Process

After you have received the Declaration Number back from the authority, the final step is to run the Turnover Declaration Closure Process to record the details of the finalized declaration. This process assigns the declaration number to your reported transactions. It assists identification of reported transactions and enables transactions to be reported again, if they have changed since the original declaration.

The report output will also list the modified transactions that were previously reported. Run the Turnover Declaration Closure Process. Once the closure process has taken place, the declaration for the period is complete.

Receivables Reporting Adjustments

After a transaction has been finally reported and the declaration closure process has been completed, further adjustments to the transaction will result in the being re-reported in a future period. The following examples represent such changes :

- Cancelled transactions
- Change in the Service Code, Service Mode, Reporting Receipt Country or Receipt Method

Such changes are reported in the Rectifications to Services received and reported in previous periods section of the report. The declaration details from the previous invoice are referenced, so that the authority can cross check the reference.

E-Filing Extract for Payables Invoices

This topic explains the implementation and usage guidelines for the E-Filing Extract for Payables Invoices for Italy feature.

The E-Filing Extract for Payables Invoices for Italy feature allows you to generate the XML file for the specific type of Payables invoices in the predefined FattutaPA format.

These are the types of Payables invoices that you must submit to the Italian Tax Authority:

- Domestic purchases subject to reverse charge
- Intra-EU purchases of goods
- Import of goods
- Purchases of services abroad
- Self-invoice
- Purchases of goods delivered from VAT Warehouse
- Self-invoice for exceeding the VAT limit amount for purchases without VAT
- Free supplies

To generate the E-Filing file, follow these steps:

1. Create a Payables invoice and select a Document Fiscal Classification code on the invoice header to mark specific types of Payables invoices for the E-Filing file generation.
2. Create accounting for this invoice.
3. Submit the Electronic Payables Invoice Extract process. Automatically, Electronic Payables Invoice E-Filing child processes and E-Filing files are generated. The files are generated as one file per invoice or one file per supplier, depending on the program parameter. The submitted Electronic Payables Invoice Extract process generates an InvoiceEFiling.zip file. This ZIP file contains all the generated files from the child processes.
4. You can review the generated InvoiceEFiling.zip file in the Electronic Payables Invoice Extract process log file 5. The generated file contains all the mandatory and conditionally mandatory tags that are reported in the blocks:
 - File header information (FatturaElettronicaHeader)

Invoice detail information (FatturaElettronicaBody)

Complete the Setup

To implement the solution, complete the respective Payables application setups and the related tax configuration.

Security Privilege

To use this feature, you need this existing privilege:

Privilege Name and Code: Create Turnover Reporting for Italy privilege (JE_CREATE_TURNOVER_REPORTING_FOR_ITALY_PRIV).

You must complete the security setup as per the steps provided in the Financials Cloud Security Topical Essay, which is available on Cloud Documentation.

Tax Reporting Type Code

The E-Filing Extract file for Italy feature uses Tax reporting type and codes to classify transactions to support E-Filing specification. The feature comes with seeded Tax reporting type, ORA_IT_NATURE_OF_VAT (Nature of VAT for zero-

rated transactions). The values starting with prefix ORA are seeded and you must manually define the new values as described in the table below.

Setup Steps:

1. Go to the Manage Tax reporting types page.
2. Search for the ORA_IT_NATURE_OF_VAT Tax reporting code.

Tax Reporting Code	Description	Effective Start Date	Effective End Date	Note
ORA_N1	Excluded pursuant to Art. 15	1.1.51		Existing
ORA_N2	Not subject	1.1.51	31.12.20	This code is no longer per 2021
N2.1	Not subject to VAT under the articles from 7 to 7-septies of DPR 633/72	1.1.51		New
N2.2	Not subject – other cases	1.1.51		New
N3.1	Not taxable - exports	1.1.51		New
N3.2	Not taxable - Intra EU transfers	1.1.51		New
N3.3	Not taxable - transfers to San Marino	1.1.51		New
N3.4	Not taxable - transactions treated as export supplies	1.1.51		New
N3.5	Not taxable - for declaration of intent	1.1.51		New
N3.6	Not taxable – other transactions that don't contribute to the determination of ceiling	1.1.51		New
ORA_N4	Exempt	1.1.51		Existing
ORA_N5	Margin regime / VAT not exposed on invoice	1.1.51		Existing
N6.1	Reverse charge - transfer of scrap and of other recyclable materials	1.1.51		New
N6.2	Reverse charge - transfer of gold and pure silver	1.1.51		New
N6.3	Reverse charge - subcontracting in the construction sector	1.1.51		New
N6.4	Reverse charge - transfer of buildings	1.1.51		New
N6.5	Reverse charge - transfer of mobile phones	1.1.51		New
N6.6	Reverse charge - transfer of electronic products	1.1.51		New
N6.7	Reverse charge - provisions in the construction and related sectors	1.1.51		New
N6.8	Reverse charge - transactions in the energy sector	1.1.05		New
N6.9	Reverse charge - other cases	1.1.05		New
ORA_N7	VAT paid in other EU countries	1.1.05		Existing

Tax Rates

The E-Filing Extract for Payables Invoices for Italy uses the Tax reporting codes assigned to the tax rates to classify taxes according to the E-Filing specification. Here are the steps to set up tax rates:

1. Navigate to the Manage Tax Rates and Tax Recovery Rates page.
2. Create the tax rate and select the tax reporting type code, ORA_IT_NATURE_OF_VAT, and tax reporting code from the drop-down list.
3. Save the data.

Standard Lookups

The E-Filing file is generated only for transactions with a document type (DFC - Document Fiscal Classification or Document Type GDF) which is included in this ORA_JEIT_EFILING_INCLUDED_DOC standard lookup code.

Example: The ORA_TD16 lookup code is linked with DFC value TD16. For an invoice with the Document Fiscal Classification code TD11, the E-Filing file will not be generated because in the ORA_JEIT_EFILING_INCLUDED_DOC lookup type the ORA_TD11 code is not defined.

All the lookup code values for ORA_JEIT_EFILING_INCLUDED_DOC standard lookup type are seeded.

ORA_JEIT_EFILING_INCLUDED_DOC - Type of invoices Included for E-Filing

Lookup Code	Display Sequence	Enabled	Start Date	End Date	Meaning
ORA_TD16	10	TRUE	1.1.51		Reverse charge internal invoice integration
ORA_TD17	20	TRUE	1.1.51		Integration self invoicing for purchase services from abroad
ORA_TD18	30	TRUE	1.1.51		Integration for purchase of intra EU goods
ORA_TD19	40	TRUE	1.1.51		Integration self-invoicing for purchase of goods
ORA_TD20	50	TRUE	1.1.51		Self-invoicing for regularization and invoice integration
ORA_TD21	60	TRUE	1.1.51		Self-invoicing for purchases beyond the limit
ORA_TD22	70	TRUE	1.1.51		Extractions of goods from VAT Warehouse
ORA_TD23	80	TRUE	1.1.51		Extractions of goods from VAT Warehouse with payment of VAT
ORA_TD27	90	TRUE	1.1.51		Self-invoicing for self-consumption or for free transfer

Document Fiscal Classification

The document fiscal classification is used for assigning a transaction type to your transactions, which is used for E-Filing file generation. You must select one of these values during transaction entry at the header level for Payables. If the standard document fiscal classification field is not defined and is not updatable, you can enter this value in the document type global descriptive flexfield that is defined for Italy on the invoice header. The Document type on invoice header is not defaulted. It is user responsibility to enter a correct value. In case when Document type is not defined the invoice will not be extracted.

Define manually the document fiscal classification codes required for E-Filing. The code values are not seeded and the user must define them manually.

Setup steps:

1. Go to the Manage Transaction-Based Fiscal Classifications page.

2. Search for the document fiscal classification codes.
3. Create child node for ORA_IT_DOCUMENT_TYPE fiscal classification code type and enter these values and save.

Fiscal Classification Code Path	Fiscal Classification Code	Fiscal Classification Name	Country	Start L
ORA_IT_DOCUMENT_TYPE	TD16	Reverse charge internal invoice integration	Italy	1.1.1951
ORA_IT_DOCUMENT_TYPE	TD17	Integration self-invoicing for purchase services from abroad	Italy	1.1.1951
ORA_IT_DOCUMENT_TYPE	TD18	Integration self-invoicing for purchase services from abroad	Italy	1.1.1951
ORA_IT_DOCUMENT_TYPE	TD19	Integration self-invoicing for purchase of goods	Italy	1.1.1951
ORA_IT_DOCUMENT_TYPE	TD20	Self-invoicing for regularization and invoice integration	Italy	1.1.1951
ORA_IT_DOCUMENT_TYPE	TD21	Self-invoicing for purchases beyond the limit	Italy	1.1.1951
ORA_IT_DOCUMENT_TYPE	TD22	Extractions of goods from VAT Warehouse	Italy	1.1.1951
ORA_IT_DOCUMENT_TYPE	TD23	Extractions of goods from VAT Warehouse	Italy	1.1.1951
ORA_IT_DOCUMENT_TYPE	TD27	Extractions of goods from VAT Warehouse	Italy	1.1.1951

Global Descriptive Flexfields

The following are new GDFs for E-Filing using the existing context Invoices for Italy:

GDF	Display Type	Read Only	Description
Document Type	LOV	No	Document Fiscal Classification codes for Italy are available in the L
E-Filing Invoice Status	LOV	No	<ul style="list-style-type: none"> • On hold • Ready • Submitted
E-Filing Transmission Number	Number	Yes	Only system update allowed. Updated when the E-Filing process is

Legal Entity

Define Legal Entity, Address, Tax Registration, and Legal Entity Fiscal Classification to report required values in the E-Filing file.

Supplier

Define Supplier, Supplier Address, and Tax Registration Number to report required values in the E-Filing file.

Supplier Address

According to the E-Filing specifications, companies need to maintain their and third-party addresses in the structured format that includes Country, Street Name with Building Number, Postal Code, City, Province, Phone, Fax, and Email. In the Province, you must define the Province code, which is reported in the E-Filing file.

Supplier Tax Registration

You can define the tax registration number for supplier in the Manage Tax Registrations as Third-Party Site Tax Profiles. The E-Filing program picks the tax registration number in the following order:

1. Third-Party Site Tax Profile
2. Third-Party Tax Profile
3. Supplier Site Tax Registration number
4. Supplier Tax Registration number

Individual Supplier

In the E-Filing file, the individual supplier is reported with the First Name (tag <Nome>) and Last Name (tag <Cognome>).

1. From the Tax Organization Type drop down list, select Individual.
2. Create Supplier Address with Phone number, Fax number, and Email.
3. Create Contact with First Name and Last Name.

Entering Payables Invoices

Invoices

1. Enter the following information for supplier invoice:
2. Define Invoice Header and Lines information
3. On the Invoice Header section, enter document fiscal classification.
4. If the document fiscal classification field is disabled, enter the document type in the GDF on Invoice Header. Select Regional Information – Invoices for Italy.
5. Define Invoice Lines details – Product Category (Goods, Services), Purchase Order Number, Quantity, Unit Price, and UOM. Detail information see in the XML Tags Mapping table.
6. Validate Invoice and create accounting. The E-Filing file is generated only for accounted transactions.

Generic rules for E-Filing file creation:

1. The E-Filing file is generated only for Payables invoices with document fiscal classification codes that are in the ORA_JEIT_EFILING_INCLUDED_DOC_TYPES lookup. Example: For an invoice with document fiscal classification value TD16 and the lookup code ORA_TD16, the E-Filing file is generated.
2. The E-Filing file is generated for the invoice, credit memo, debit memo, and prepayment invoice types.
3. The E-Filing file is generated only for invoices with tax point basis Invoice or Accounting. The invoices with tax point basis Payment are not part of the E-Filing file process.
4. A reverse charge invoice with calculated standard and offset tax line is reported only with positive tax amount and offset tax line is not reported.
5. A credit memo should be defined with the same document type as an invoice but with negative amounts.
6. If an invoice has E-Filing status as 'Submitted' and then you reverse or cancel this invoice, the reversed and cancelled lines will not be re-submitted.
7. If 'Multiple invoices of same supplier' is used, you will need to track single invoice rejection manually. You will put the E-Filing status to On hold. After invoice modification and correction, change the status from On hold to Ready and the invoice is prepared for E-Filing file generation. Invoices with generated E-Filing file are stamped with the E-Filing status Submitted.
8. All amounts <ImportoTotaleDocumento> Invoice Amount, <PrezzoUnitario> Unit Price, <PrezzoTotale> Taxable Amount, <ImponibileImporto> Taxable Amount, and <Imposta> Tax Amount are reported in EUR currency.

9. If a foreign invoice (Document fiscal classification is TD17, TD18, or TD19) is composed of more lines, one or more lines for goods and one or more lines for service, two XML files are generated with the following rules. The reference numbers you see preceding some of the tags refer to the mapping table described below in the document.
- o Example - Invoice Number is '10'
 - o The first XML file has the tag 2.1.1.4 <Numero> (invoice number) renamed to '10-TD17' and the tag 2.1.6 <DatiFattureCollegate> = '10'.
 - o The second XML file has the tag '2.1.1.4 <Numero> (invoice number) renamed to '10-TD18' (if intra-EU invoice) or '10-TD19' (if not intra-EU invoice) and the tag 2.1.6 <DatiFattureCollegate> = '10'.
 - o In this case, it is important to define Product Type (Goods or Services) at invoice line level.
 - o In EU supplier case and when Document type (DFC or Document Type GDF) is TD17 and the Product Type on invoice line is:
 - not defined or Services, then tag <TipoDocumento> is TD17 • Goods, then the tag <TipoDocumento> is TD18.
 - o In non-EU supplier case and when Document type (DFC or Document Type GDF) is TD17 and the Product Type on invoice line is:
 - not defined or Services, then tag <TipoDocumento> is TD17 • Goods, then the tag <TipoDocumento> is TD19.
 - o In EU supplier case and when Document type (DFC or Document Type GDF) is TD18 and the Product Type on invoice line is:
 - not defined or Goods, then tag <TipoDocumento> is TD18 • Services, then the tag <TipoDocumento> is TD17.
 - o In non-EU supplier case and when Document type (DFC or Document Type GDF) is TD19 and the Product Type on invoice line is:
 - not defined or Goods, then tag <TipoDocumento> is TD19 • Services, then the tag <TipoDocumento> is TD17.

Invoice Header DFC or Document Type GDF	Supplier Country	Product type on invoice line	Tag <TipoDocumento>
TD17	EU supplier	Null or Services	TD17
		Goods	TD18
TD17	Non EU supplier	Null or Services	TD17
		Goods	TD19
TD18	EU supplier	Null or Goods	TD18
		Services	TD17
TD19	Non EU supplier	Null or Goods	TD19
		Services	TD17

Process Electronic Payables Invoice Extract

Submit the Electronic Payables Invoice Extract Process

1. Navigate to the Scheduled Process page and select the Electronic Payables Invoice Extract process.
2. For the parameter Reporting Level, select Legal Entity or Ledger from the list of values.
3. Define all mandatory and optional parameters.

4. Submit the process.

The files are generated as one file per invoice or one file per supplier, depending on the program parameter. The submitted Electronic Payables Invoice Extract process generates an InvoiceEFiling.zip file. This ZIP file contains all the generated files from the child processes.

Process Parameters

Parameter Name	Default Value	Description
Reporting Level	Legal entity	Legal entity – The legal entity to which the transactions belong. Ledger – The ledger name in which transaction is accounted for. Note: The E-Filing file should be submitted only for ledgers in EUR because amounts are in EUR. The value TRN is reserved for future functionality.
Reporting Context		Legal entity reporting level – Legal entity name. Ledger reporting level – Ledger name.
Tax Registration Number		Legal entity reporting level – The first-party tax registration number of the transaction. Ledger reporting level – parameter will be empty.
Company Name		Legal entity reporting level – parameter will be empty. Ledger reporting level – Company name.
From Accounting Date	System date – 1	The earliest accounting date to select.
To Accounting Date	System date	The latest accounting date to select.
Include Submitted Invoices	No	List of values: <ul style="list-style-type: none">• Yes – all transactions with empty status, Ready and Submitted are selected.• No – all transactions with empty status and Ready are selected.
File Generation	A file per invoice	List of values <ul style="list-style-type: none">• A file per Invoice – One E-Filing file per invoice is created.• A file per Supplier – One E-Filing file per supplier is created and can contain multiple invoices.
Supplier		Supplier name.
Invoice Number		Invoice number.

Note: The descriptive flexfields segments at invoice header and line level are not part of the E-Filing extract.

Electronic Payables Invoice Extract process- Save and Review Generated ZIP File

1. Navigate to the Scheduled Process page and select the Electronic Payables Invoice Extract process.
2. Click Attachments.
3. Click InvoiceEFiling.zip file.
4. Open or Save the ZIP file.

Electronic Payables Invoice E-Filing - Save and Review Generated XML File

1. Navigate to the Scheduled Process page and select the Electronic Payables Invoice Extract process.
2. Click Attachments.
3. Click Republish / Actions / Export / XML.
4. Open or Save the ZIP file.

Tax Exemption Processing for Italy

This topic explains the implementation and usage guidelines for the following:

- Defining Letter of Intent Limits (VAT Plafond)
- Recording Letters of Intent that are
 - Sent to suppliers.
 - Received from customers.
- Reporting
 - Exemption Letter Report for Italy
 - Supplier Exemption Limit Consumption Report for Italy
 - Subledger Letter of Intent Register for Italy
 - Letter of Intent Receivables Invoice Register

In Italy, after agreeing on the VAT exempt amount with the tax authority, you set this as the Letter of Intent limit. You can generate and print Letters of Intent to send to your suppliers, requesting them not to include VAT on invoices. Likewise, you'll receive Letters of Intent from your customers, and you need to record them. When making purchase and sales invoices, you link the Letter of Intent number with the invoice.

The Italian payables exemption process is for the VAT Plafond requirements in the regular exporter's transaction cycle. The VAT Plafond amount is the VAT non-taxable sum a regular exporter can claim from suppliers when purchasing or importing goods or services. A regular exporter is someone with exported sales exceeding 10% of the total annual sales, allowing them to acquire goods and services without VAT. This process is now known as the Letter of Intent process.

Once the VAT Plafond amount is calculated, the regular exporter allocates it to domestic suppliers and customers in one of three ways:

- For a specific operation with the operation's description - print for operations specified in the exemption letter UI.
- For several operations up to a predefined amount - print for operations performed in the given year up to the amount in the Exemption Letter user interface.
- For all operations in a predefined date range within the same calendar year - print for operations in the given year from date to date (date specified in the exemption letter UI).

Use the Supplier Exemption Limit Consumption Report for Italy to track the supplier consumption of the Letter of Intent amount throughout the calendar year. You can also print the Subledger Letter of Intent Register for Italy and the Letter of Intent Receivables Invoice Register.

In summary, the process involves:

- Setting letter of intent limits.
- Creating letters of intent for suppliers and customers.

- Sending letters of intent to suppliers.
- Receiving letters of intent from customers.
- Recording letters of intent against invoices.
- Running reports.

The letter of Intent feature is fully integrated with Oracle Fusion Tax.

Initial Setup Requirements

The following entities are assumed to have already been configured:

- Data Security
- Geographies
- Enterprise Structure
- Tax Regime to Rate setup
- Tax Party Profiles
- Tax Rules
- Suppliers
- Customers
- Procurement Business Function
- Common Options for Oracle Payables and Oracle Receivables

Manually include the Manage Letter of Intent Limits for Italy task in your implementation project. Here's the process:

1. Edit your implementation project.
2. Click on Select and Add.
3. Search for the task Manage Letter of Intent Limits for Italy.
4. Apply the change.

It is recommended that the 'Implementation Project' is complete for your organization before starting the setup for tax exemption processing. Complete Setup for Tax Exemption Processing

Define Letter of Intent Limits (VAT Plafond)

The exemption limit refers to the total amount of VAT exemption that a standard exporter can request from its suppliers. Each year, the initial exemption limit is determined by adding up all reported export invoices from the previous year. There are two types of VAT Plafond:

- Annual Plafond: This involves manually calculating the VAT Plafond at the beginning of the year based on the previous year's operations.
- Monthly Plafond: This requires manual calculation at the start of each month, considering the operations of the previous 12 months. Currently, regular exporters prefer this method as it allows for a progressive increase in exports since it is recalculated monthly.

Here's how to define the letter of intent limits:

1. Navigate to the Manage Letter of Intent Limits for Italy task.
2. Define the VAT Plafond for a Legal Entity and Calendar Year.
3. Specify the annual Letter of Intent limit, which the application automatically apportions equally over twelve calendar months. Alternatively, you can set a monthly limit amount if you want different limits for each month

Adjust a Letter of Intent Limit (VAT Plafond)

Here's how to adjust a letter of intent limits:

1. Navigate to the Manage Letter of Intent Limits for Italy task.
2. Adjust the Exemption Limits throughout the calendar year in case the VAT Plafond amount must be rectified. Search for the Legal Entity, Limit Type and Calendar Year.
 - o Choose the Period you want to adjust.
 - o Edit the limit value and save.

Tax Reporting Types and Codes

Here's how to manage tax reporting types:

1. Navigate to the Manage Tax Reporting Types task.
2. Set up Tax Reporting Codes to categorize your transactions for reporting purposes. For instance, establish a tax reporting code for the Letter of Intent. This configuration allows you to generate reports based on the Tax Reporting Code.
3. Configure the Letter of Intent reporting type and code, associating it with tax exemptions (letter of intent) and tax rates. Transactions flagged with the Letter of Intent reporting type code will be included in the reporting.
4. Enable the Reporting Type Use for Tax exemptions.
5. Assign the Tax Reporting Code to the applicable tax rate(s) linked to your transactions. This step is necessary, as the reports will only include transactions with the assigned tax reporting code.

Party Tax Profile Tax Exemption

The Letter of Intent (Lettera di Intento) is the formal letter regular exporters need to send to suppliers and customs. In this letter, there are instructions either to invoice without VAT or to revoke/suspend a previous Letter of Intent, along with instructions to invoice with VAT.

A Letter of Intent is valid only for the calendar year. It's possible to register more than one Letter of Intent within the calendar year for the same third party. These letters are kept as exemptions in the party tax profile. Both customers and suppliers can qualify for tax exemption. To set up these exemptions:

1. Go to the Manage Party Tax Profiles task.
2. Search for the Third-Party Tax Profile for your Party Name.
3. Edit the Party Name.
4. Select the Tax Exemptions tab and create a Tax Exemption.
5. Define the Letter of Intent as a Third-Party Tax Profile Tax Exemption.
 - o The Letter of Intent can be defined for customers and suppliers.

Create Tax Exemption Region

Here are the details to enter in the tax exemption region:

1. Enter the Party Type of Supplier or Customer.
2. Enable the Letter of Intent option. This indicates the VAT exemption limit applies to a supplier or customer.
3. Enter the start and end date to indicate letter validity.
4. Enter the Recording Date to represent the date when the letter of intent is created for a supplier, or registered for a customer in Tax.
 - o The Certificate Number represents the internal chronological number consisting of the year and a progressive number generated sequentially. It is automatically generated when the exemption is saved

and can't be updated. If the Party Type = Supplier, the Certificate Number is not available. It is only available if the Party Type = Customer.

- The Protocol Number is generated for internal use and is applicable when the Party Type Supplier. Protocol Number is an internal chronological number consisting of the year and a progressive number generated sequentially. It is automatically generated when the exemption is saved and may not be updated.
 - The Letter Date is automatically updated with the system date when the letter created for a supplier is printed. It is printed on the Italian Supplier Exemption Limit Consumption Report and the Subledger Letter of Intent Register.
5. Enter the Tax Reporting Type and Tax Reporting Code for the letter of intent that you previously setup. These are also used as report parameters and the Tax Reporting Code is then associated to the transactions.

Exemption Details Region

Here are the details to enter in the exemption details region:

1. Enter the Exemption Status. It can be Primary, Discontinued, or Rejected.
 - Suspended letters should be Discontinued.
 - Revoked letters should be Rejected.
 - Active letters should be Primary.
2. Enter the Suspension or Revocation From Date when you suspend or revoke an exemption. Suspended letters can be re-activated later, whereas Revoked letters are end dated and can't be reversed.
3. If the status is set to Suspended, then enter the Suspension To Date to record the period the letter is suspended.
4. Use the Exempt Reason to indicate the correct reason for the Letter of Intent. Available values are:
 - Exempted amount.
 - Exempted period, which does not allow overlapping dates.
 - Specific Operation, which automatically selects the Address to customs office option.
5. Enter the supplier or customer Exemption Amount that is printed on the Letter of Intent.
6. Enter the Clause which indicates which act is cited in the Letter of Intent. Valid values are:
 - art.8 (Export Sales)
 - art.8 bis (Transactions treated as Export Sales)
 - art.8 lett.C (Indirect Exports)
 - art.9. (International services or related to international trade)
7. Enable the Prepare Letter of Intent option to direct the application to create a printed copy of the letter for mailing.
8. Enable the Letter of Intent ready to print option to generate and print a letter or a reprint of a letter.

When you need to send a copy of the Exemption Letter to the Italian Customs Office, set the Exempt Reason to Specific Operation. The Specific Operation indicates that letters are to be sent to the Customs Office, instead of the supplier.

RECORD LETTERS OF INTENT

Record Letters of Intent Against Invoices in Payables

Here are the steps to record letters of intent against invoices in payables:

- Enter the invoices in Payables that relate to your suppliers to whom you have sent a Letter of Intent.

- Assign the tax code that has the Letter of Intent reporting type code associated. The transaction should have the tax status code associated with the tax exemption.
- Ensure that the Tax Exemption details apply to the transaction and enter the Tax Exemption Certificate Number on the invoice tax lines user interface.
 - Invoices entered in Payables that relate to suppliers to whom you have sent a Letter of Intent will be displayed in the Supplier Exemption Limit Consumption Report.
- Validate and account all invoices you require to appear in the Supplier Exemption Limit Consumption Report.

Record Letters of Intent Against Transactions in Receivables

Here are the steps to record letters of intent against transactions in receivables:

1. Enter the transactions in Receivables that belong to your customers who have sent you a Letter of Intent.
2. Ensure that the Tax Exemption details apply to the transaction and verify the certificate number and reason in the invoice lines user interface.
 - Transactions entered in Receivables that belong to customers from where you have received a Letter of Intent will be displayed in the Letter of Intent Receivables Invoice Register Report and Subledger Letter of Intent Register.
3. Complete, account and post all transactions you require to appear in the Letter of Intent Receivables Invoice Register Report and Subledger Letter of Intent Register.

REPORTING

Here are the reports you should print for auditing purposes:

Exemption Letter Report for Italy

The Exemption Letter Report for Italy produces an exemption letter for each supplier, instructing them not to include VAT on invoices that they submit. Use the Exemption Letter Report for Italy to create and print the Letters of Intent. Only letters that have Letter of intent ready to print option selected, are generated and printed. To Reprint a letter of intent, enable the Letter of intent ready to print option in the Exemption Details of the Manage Party Tax Profiles UI. All report parameters are mandatory.

Supplier Exemption Limit Consumption Report for Italy

The Supplier Exemption Limit Consumption Report for Italy lists details about Italian suppliers and their consumption of the Letter of Intent amount that is assigned to them. The report will be grouped by supplier, showing the invoice and Letter of Intent details. You can monitor the consumption of the Letter of Intent amounts to make sure you do not exceed the agreed limit. Enter all the mandatory report parameters to generate the report. The report output displays details of each supplier showing the monthly consumption. The report details will also show the consumed amount during the period and the letter of intent limit amount still available at the end of the period. The Supplier Consumption Amount and invoice details will be printed for each supplier. There is a report total Letter of Intent Amount Consumed During the Period, that represents the total consumed for the whole period for all suppliers.

Subledger Letter of Intent Register

The Subledger Letter of Intent Register lists all Italian exemption letters issued within a given period range. Choose to list either the Letters of Intent you received from your customers or the Letters of Intent you sent to your suppliers. Select Source as Receivables to list letters of intent received from customers. Select Source as Payables to list letters of intent sent to suppliers. All report parameters are mandatory.

Letter of Intent Receivables Invoice Register

The Letter of Intent Receivables Invoice Register lists details about Receivables transactions issued with a Letter of Intent for a given calendar year. It also prints information about the customer who sent the letter.

Statutory Heading

Use statutory headings to print the official heading on all statutory reports. After the legal authority approves the header information for your company, you must print the header on all your statutory official company reports.

Note: You can print statutory headings according to the legal format in Italy. And you can also print statutory headings in any other country format.

After you print the statutory heading, you can see these details on every report page:

- First-party legal entity name
- Address
- Tax registration number
- Taxpayer ID
- Commercial ID

Statutory headings have two parameters:

- **First Page Number:** Indicates the starting page number that you print on the report. The default value is 1. The statutory heading prints a sequential page number on each sheet. If necessary, you can print additional sheets beginning from the next page number in the sequence.
- **Report Heading:** Indicates the heading type that you print on the report. You can print either the first page number or the first-party legal entity information, or both.

You can apply these parameters based on your report.

FAQs for Italy

Why is the credit memo amount not reflecting in the European Purchase Listing of Services for Italy report?

To reflect your credit memo amount in the European Purchase Listing of Services, verify that you have linked the credit memo with a payment invoice. This adds the credit memo amount to the invoice amount when grouping the transactions.

To link the credit memo with an invoice:

1. Create a new invoice in Oracle Fusion Payables.
2. Click the **Additional Information** tab on the Invoice Header section.
3. Select European Purchase Listing of Services for Italy from the **Regional Information** list.
4. Enter the **Service Code, Service Mode, Reporting Payment Method, and Reporting Payment Country.**
5. Enter the Credit Memo details.
6. In the Correct Unmatched Invoices section, enter the invoice to which the credit memo applies.

Related Topics

- [How European Purchase Listing Services for Italy is Reported](#)

What's the criteria to use statutory heading parameters in reports for Italy?

The Statutory headings include two parameters: First Page Number and Report Heading.

Here are the criteria to use these parameters in Italy reports:

- The annual statutory reports that are submitted on a yearly basis always start with page number 1. The page format is:
`<Calendar year> <Page number> of <Total number of pages>`
- The annual statutory reports submitted on a monthly basis must include the First Page Number and Report Heading.
- The monthly statutory reports submitted on a monthly basis must start with page number 1. It's not required to print the total number of pages.

Note: Any statutory report developed for Italy includes the year and total number of pages in the page format.

Poland

Tax Point Date

Tax Point Date Adjustment

Use the Tax Point Date Adjustment feature to change the tax point date for transactions with a tax point basis of Invoice.

You can change the tax point date on an Oracle Payables or Oracle Receivables transaction at either header or line level. When you change the tax point date at the header level, the new tax point date applies to the transaction lines where the tax point date isn't specifically modified.

The feature consists of these processes:

- Select Transactions for Tax Point Date Adjustment process: Selects transactions to download to a spreadsheet. You can apply bulk updates to the tax point dates of the selected transactions using a spreadsheet, and then upload your changes for processing.
- Tax Point Date Adjustments process: Selects transactions where you must adjust the tax point date, and updates the tax lines accordingly.

Assign a Security Privilege

Use the Tax Point Date Adjustment feature to change the tax point date for transactions with a tax point basis of Invoice. You can change the tax point date on an Oracle Payables or Oracle Receivables transaction at either header or line level.

Before You Start

To successfully implement Tax Point Date Adjustment, complete the respective Payables and Receivables application setups and the related tax configuration.

Assign a Security Privilege

To change the tax point date on a transaction, you must assign the security privilege. To assign the privilege Run Tax Point Date Adjustment Process to your Tax Manager role:

1. Navigate to the Security Console page.
2. From the **Search** box on the dashboard, select **Job Roles**.
3. Search for **Tax Manager Custom**.
4. From the **Actions** menu on the **Search Results** section, select **Edit Role**. The **Basic Information** page appears.
5. Click **Next**. The **Function Security Policies** page appears.
6. Click the **Add Function Security Policy** button. The **Add Function Security Policy** dialog box appears.
7. Search for **Run Tax Point Date Adjustment Process**.
8. In the **Privileges** section, click the **Run Tax Point Date Adjustment Process** link.
9. Click **Add Privilege to Role**. A confirmation message appears. Close the dialog box.
10. Click **Next**.
11. Save your changes.

Process Transactions Manually in Receivables

The tax point date of a Payables or Receivables transaction can be adjusted at header or line level.

The transaction must have a tax point basis of Invoice, and a status of Completed. After changing the tax point date in the Manage Transactions page, the tax manager must submit the Process Tax Point Date Adjustments process.

Invoice Header

Complete these steps to adjust the tax point date at invoice header level:

1. Navigate to **Receivables > Billing**.
2. On the **Tasks** panel tab, click the **Manage Transactions** link in the **Transactions** section.
3. On the Manage Transactions page, enter the relevant information, and click **Search**.
4. On the **Search Results** section, select the transaction to be adjusted.
5. Click **Edit**.
6. On the Review Transactions page, click the link **Show More**.
7. Click the **Miscellaneous** tab to see the regional information associated with Receivables transactions.
8. In the **Adjusted Tax Point Date** field, enter a valid date.
9. Click **OK**.
10. Save your changes.

Invoice Lines

Complete these steps to adjust the tax point date at invoice header level:

1. Navigate to **Receivables > Billing**.
2. On the **Tasks** panel tab, click the **Manage Transactions** link in the **Transactions** section.
3. On the Manage Transactions page, enter the relevant information, and click **Search**.
4. On the **Search Results** section, select the transaction to be adjusted.
5. Click **Edit**.
6. On the appropriate invoice line, click **Show More**. The Review Invoice Line page appears.
7. In the **Additional Information** section, select the **Adjusted Tax Point Date** field and enter a valid date.
8. Click **OK**.
9. Save your changes.

Process Transactions Manually in Payables

The tax point date of a Payables transaction can be adjusted at header or line level.

The transaction must have a tax point basis of Invoice, and a status of Validated. After changing the tax point date in the Manage Invoices pages, the tax manager must submit the Process Tax Point Date Adjustments process.

Invoice Header

Complete these steps to adjust the tax point date at invoice header level:

1. Navigate to **Payables> Invoices**.
2. On the **Tasks** panel tab, click the **Manage Invoices** link in the **Invoices** section.
3. Enter the relevant information, and click **Search**.
4. Select the invoice to be adjusted, and click **Edit** from the **Actions** menu.
5. Click the link **Show More** to view the **Invoice Header** section.
6. Click the **Miscellaneous** tab to see the regional information associated with Payables invoices.
7. In the **Adjusted Tax Point Date** field, enter a valid date.
8. Click **OK**.
9. Save your changes.

Invoice Lines

Complete these steps to adjust the tax point date at invoice line level:

1. Navigate to **Payables> Invoices**.
2. On the **Tasks** panel tab, click the **Manage Invoices** link in the **Invoices** section.
3. Enter the relevant information, and click **Search**.
4. Select the invoice to be adjusted, and click **Edit** from the **Actions** menu.
5. Click the link **Show More** to view the **Lines** section.
6. The Update Additional Information dialog box appears.
7. In the **Adjusted Tax Point Date** field, enter a valid date.
8. Click **OK**.
9. Save your changes.

Process Tax Point Date Adjustments Using a Spreadsheet

You can now make multiple updates to the tax point dates of an Oracle Payables or Oracle Receivables transaction using a spreadsheet.

The Select Transactions for Tax Point Date Adjustment process selects transactions to download to a spreadsheet. You can then upload your changes for processing.

Select Transactions for Tax Point Date Adjustment

Complete these steps to submit the Select Transactions for Tax Point Date Adjustment process:

1. Navigate to the Scheduled Processes work area, and search for the **Select Transactions for Tax Point Date Adjustment** task.
2. On the Process Details dialog box, enter values for the parameters listed in this table:

Parameter	Description
Legal Entity	The legal entity in which the transactions were created

Parameter	Description
Tax Registration Number	The first-party tax registration number of the transactions
Source	Payables or Receivables
From Transaction Date	The earliest transaction date to be considered
To Transaction Date	The latest transaction date to be considered
From Accounting Period	The earliest accounting period to be considered
To Accounting Period	The latest accounting period to be considered
Selection Level	Header or Line

3. Click **Submit**.
4. After the process completes, open the CSV output file in your spreadsheet application.

Columns in the spreadsheet

Consider these points regarding the content of the columns in the spreadsheet:

- Column headings ending with `_ID` are important for processing the updated rows. You must not modify the data in these columns, except when they are displayed in scientific format. If they are displayed in scientific format, you should convert such columns to number, with no decimal places, or you may encounter issues during the upload process.
- Do not change the order, or add or remove columns in the spreadsheet.
- Due to the possibility of different locale settings on your computer, any date columns that you intend to use must be formatted with the format `DD-MM-YYYY`. This includes these columns:
 - `New_Header_Tax_Point_Date`: Populate the new tax point date in this column to modify the tax point date for all the lines of the selected transaction.
 - `New_Line_Tax Point_Date`: Populate the new tax point date in this column to modify the tax point date for a specific transaction line.

When your updates are complete, use **Save As** to save your data, and select the comma-separated values or CSV file type.

Upload Spreadsheet for Processing

Perform these steps to process your spreadsheet updates:

- Upload the spreadsheet file from your computer to the server.
- Transfer the uploaded file to the interface table.

- Process the data in the interface table to update the appropriate tax lines.

Uploading the spreadsheet to the server

Perform these steps to upload the populated spreadsheet to the server:

1. Navigate to the File Import and Export page.
2. Select the icon to upload a file. The Upload File dialog box appears.
3. Select **Browse** to select the spreadsheet file containing your data from your computer.
4. From the list of values for the account, select **fin/tax/import**.
5. Click **Save and Close**.

Transferring the uploaded data to the interface table

Perform these steps to transfer the uploaded data to the interface table:

1. Navigate to the Scheduled Processes page.
2. Search and select the **Load Interface File for Import** process.
3. The Process Details page appears. Select **Process Tax Point Date Adjustments** from the list of values in the **Import Process** parameter.
4. Select the file you previously uploaded from the list of values for the Data File parameter.
5. Click **Submit**.

Processing the interface table data

When the **Load Interface File for Import** process completes successfully, submit the **Process Tax Point Date Adjustments** process, with **Import** as the **Process Type**.

Purge Data From JG_TPD_ADJUSTMENTS_INT Interface Table

To purge the data from the JG_TPD_ADJUSTMENTS_INT interface table, you must submit the Purge Interface Tables ESS job with these parameters:

- Purge Process Intent: File-based data import
- Import Process: Process Tax Point Date Adjustments
- Load Request ID: Request Id of Load Interface File for Import through which the data is loaded into the JG_TPD_ADJUSTMENTS_INT interface table.

Successful completion of the ESS job Purge Interface Tables deletes the data from the JG_TPD_ADJUSTMENTS_INT interface table.

Update Tax Lines for Tax Point Date Adjustments

You can update tax lines for tax point date adjustments. Perform these steps to update tax lines:

1. Navigate to the Scheduled Processes work area, and search for the **Process Tax Point Date Adjustments** task. The Process Details dialog box appears.
2. On the Process Details dialog box, enter values for the parameters in this table:

Parameter	Description
Legal Entity	The legal entity in which the transactions were created
Tax Registration Number	The first-party tax registration number of the transactions

Parameter	Description
Source	Payables or Receivables
Process Type	Manual or Import. Select Import to process updates made using a spreadsheet.
Processing Mode	Draft or Final.
From Transaction Date	The earliest transaction date to be considered
To Transaction Date	The latest transaction date to be considered
From Accounting Period	The earliest accounting period to be considered
To Accounting Period	The latest accounting period to be considered

3. Click Submit.

Submitting the process in Draft mode provides a list of transactions for which the tax point date of the tax lines is updated. The tax periods for which the reporting may need to be re-processed as a result of the changes are also displayed.

CAUTION: The **Draft** mode is not available when the **Process Type** is **Import**.

Submit the program again in Final mode to perform the updates. The Tax Point Date History field on each transaction line processed is also updated with a record of the change.

Accounting Entries

The Process Tax Point Date Adjustments does not change the accounting entries of the transactions. Any changes related to accounting entries must be performed manually.

Correction Document for Poland

Process Correction Documents in Receivables

The correction document is created based on the original document that needs to be corrected.

The Correction Documents for Poland background process creates the correction document in the Receivables invoice interface tables and automatically submits the Receivables AutoInvoice process to import the correction document and make it available on the Manage Transactions page.

Create a Correction Document

To create a correction document, complete these steps:

1. On the Schedule Processes page, schedule a new process.
2. On the **Process Details** dialog box, enter values for the parameters in this table:

Parameter	Description
Business Unit	Enter the business unit for which the transaction was created.
Customer Name	Enter the customer involved in the transaction.
Transaction Number	Enter the transaction number to be corrected.
Correction Reason	Enter the reason for the correction.
Transaction Date	Enter the transaction date to be applied to the correction invoice.
Accounting Date	Enter the accounting date to be applied to the correction invoice. The accounting date must be in an open or future-enterable period.
Whole Price Adjustment	Select Yes to adjust the price of all lines on the correction invoice to zero.
Adjust All Lines	Select Yes to apply a discount to all invoice lines on the correction invoice.
Discount Percentage	Enter the percentage discount to be applied to all lines on the correction invoice.

3. Click **Submit**.
4. After the process completes, review the log file for the transaction number of the correction invoice that has been created.

Update a Correction Document

To correct or update a correction document, complete these steps:

1. Navigate to **Receivables > Billing**.
2. On the **Tasks** panel tab, click the **Manage Transactions** link in the **Transactions** section.
3. On the Manage Transactions page, search for the correction document you want to update.
4. Update the **Invoice Status** to **Incomplete**, and click **Edit**.

5. Add **Document Fiscal Classification** to the transaction header.

Note: You cannot modify these reversal lines attributes:

- Line Number
- Description
- Quantity
- Unit Price
- Transaction Business Category
- Previous Invoice
- Previous Line

6. Update other fields as required, and click **Save and Close**.

7. Navigate to the **Scheduled Processes** work area, and search for the **Process Tax Point Date Adjustment** task.

8. Submit the task to update the tax lines with the revised tax point date.

Correction Invoices Parameter Options

A correction invoice is a separate value-added tax (VAT) document, which contains the changes to a transaction that has already been issued to a customer.

You can create three different types of correction invoices depending on this parameter values:

- Whole Price Adjustment
- Discount Applicable to All Lines
- Reversal for Manual Corrections
- **Whole Price Adjustment**

Select **Yes** in the **Whole Price Adjustment** parameter to create a correction document. This cancels the original invoice – the lines of the original transaction are reversed and new lines are created with zero value.

Note: The **Adjust All Lines** parameter shows the default value, **No**.

- **Discount Applicable to All Lines**

Select **Yes** in the **Adjust All Lines** parameter to create a correction invoice where the original lines are reversed. Each of the new lines has the discount rate applied to the net price of the original lines according to the value provided in the parameter Discount Percent.

Note: The **Whole Price Adjustment** parameter shows the default value, **No**.

- **Reversal for Manual Correction**

Select **No** in both **Whole Price Adjustment** and **Adjust All Lines** parameters to create a correction invoice where the original lines are all reversed, and the correction lines contain exactly the same value.

You can then make individual adjustments to the correction invoice lines.

Print Commercial Document

How You Print Commercial Documents

The Print Commercial Documents for EMEA feature lets you define key attributes for the report, such as document type, print mode, and third-party information.

To print commercial documents, navigate to the Scheduled Processes page, and search for the **Print Commercial Documents for EMEA** process.

This table illustrates the different parameters you can select before you submit the process:

Parameter	Description	Mandatory
Legal Entity	The legal entity that issued the documents to be printed. The default value is the legal entity that's linked to the reference data set of the user.	Yes
Tax Registration Number	Tax registration number that issued the documents to be printed.	No
Business Unit	Business unit that issued the documents to be printed. The default value is the business unit that is linked to the reference data set of the user.	Yes
Start Date	Start date of the period in which the documents are registered.	No
End Date	End date of the period in which the documents are registered.	No
Third Party Type	Type of third party to which the documents are sent. For Poland the third party type can only be Customer.	Yes
Third Party	The third party to whom the documents have been issued.	No
Third Party Site	The third party site to which the documents have been issued.	No
Print Mode	The options are Draft and Final . The default value is Draft. Use the Draft mode to verify data after your print. Select Final when you are ready to present the printed version to a third-party. Selecting Final also links the copy of the report to the transaction that you can view from the View Transactions page.	Yes

Parameter	Description	Mandatory
Document Type	Documents to be printed are limited to the specific Document Fiscal Classification that you define.	No
Start Document Number	First number in the range of document numbers to be printed.	No
End Document Number	Last number in the range of document numbers to be printed.	No
Print Currency	Currency in which the documents are to be printed. The options are Entered Currency and Ledger Currency .	Yes
Print Template	Template to be used to print the documents.	No
Order By	The order in which the documents are printed.	Yes

The Print Commercial Documents for EMEA process also launches a child process that performs the invoice printing.

If the Document Type column is empty but in the Print Template column a template is defined, then the transaction is printed using the template defined in the Transaction Type Regional Information field. If both columns are empty and no print template was defined in the corresponding parameter, then the transaction is not printed. The execution report can identify why some transactions, that were selected, were not printed.

Determine the Layout

The process determines the layout for each document in any one of these processes:

1. The process checks if a specific layout is requested.
2. If a layout is not specified, the process checks the layout that you assigned to the **Document Fiscal Classification** field.
3. For Receivables transactions, the process also checks the value in the **Print Template** field in the **Regional Information** section of the Receivable Transaction Types page.

Review the Execution Report

The Print Commercial Documents for EMEA process checks the information for the Print Commercial Documents Execution Report:

- Validity of association between the Document Fiscal Classification or Document Subtype and the template that is used for printing the invoice.
- Document Fiscal Information such as Third Party Name, Document Number and Transaction Date.

The report lists all the transactions that you selected for printing based on the parameters provided. If the process cannot determine a layout for the print, the report still displays the data extract for the document. In this case, the print template column is blank.

Determine the Document Print Status

When the document is printed in Final print mode, the **Print Status** field in the **Regional Information section** on the document header is set to **Printed**.

When printing a batch of invoices in the final mode, an additional process runs and creates separate attachment files for each one of the transactions in the batch. The attachment file is a copy of the original transaction marked **Duplicate** to distinguish it from the original invoice. To reprint an invoice which has previously been printed in the Final mode with the print status set to **Printed**, select the attachment from the main page of the Review Transaction page and print it.

How You Print Commercial Documents Execution Report

This topic contains summary information about the Print Commercial Documents Execution Report.

Overview

The Print Commercial Documents Execution Report lists all the selected transactions to be printed based on the parameters that you have provided. The printing program checks the following information:

- The validity of the association between Document Fiscal Classification or Document Subtype and the template, which you use for the invoice print process.
- Document Fiscal Information such as Third-Party Name, Document Number, and Transaction Date.

Key Insights

Before running the reports, ensure that you:

- Set up the following entities:
 - Data Security
 - Geographies
 - Address Style Format
 - Enterprise Structures
 - Tax Regimes to Rate Flow
 - Tax Profiles for Parties
 - Tax Rules
 - Customers and Suppliers
 - First Party Bank, Branch, and Account
- Complete the implementation project for your organization before you start the following feature-specific setup.

This is what a typical Commercial Documents Execution Report looks like:

Report Parameters

This table describes the process parameters:

Parameter	Description
Legal Entity	Indicates the legal entity that issues the documents to be printed. The default value is the legal entity that's associated to the reference data set of the user. This parameter is mandatory.
Tax Registration Number	Indicates the tax registration number that issued the documents to be printed. This parameter is optional.
Business Unit	Indicates the business unit that issued the documents to be printed. The default value is the business unit that's linked to the reference data set of the user. This parameter is mandatory.
Start Date	Indicates the start date of the period that the documents are registered in. This parameter is optional.
End Date	Indicates the end date of the period that the documents are registered in. This parameter is optional.
Third Party Type	Indicates the type of third party the documents are sent to. For Poland, value of the third-party type is Customer. This parameter is mandatory.

Parameter	Description
Third Party	Indicates the third party to whom the documents are issued. This parameter is optional.
Third Party Site	Indicates the third-party site to which the documents are issued. This parameter is optional.
Print Mode	Indicates the print mode. Select Draft or Final. The default value is Draft. Use the Draft mode to verify data after your print. Select Final when you're ready to present the printed copy to a third party. Selecting Final also links the copy of the report to the transaction that you can view from the View Transactions page. This parameter is mandatory.
Document Type	Indicates the document type to be printed. The specific Document Fiscal Classification that you defined determines the documents. This parameter is optional.
Start Document Number	Indicates the first number in the range of document numbers to be printed. This parameter is optional.
End Document Number	Indicates the last number in the range of document numbers to be printed. This parameter is optional.
Print Currency	Indicates the print currency in which the documents are to be printed. Select Entered or Ledger. This parameter is mandatory.
Print Template	Indicates the template to be used to print the documents. This parameter is optional.
Order By	Indicates the order in which the documents are printed. This parameter is mandatory.

What type of report is this?	Oracle Analytics Publisher.

FAQ	Answer

JPK Extracts for Poland

How can I enter transactions for accounting?

You can use one of these methods, to enter transactions for accounting:

- Create a Receivables or a Payables transaction in the application, and then account and post these transactions in General Ledger.
- Import transactions from external sources and then account these transactions in General Ledger.
- Manually enter transactions in General Ledger using an Adjustment or any other General Ledger category.

After accounting the transactions, you can post them in General Ledger to include in the extract. You must also account and post the journals created directly in General Ledger.

Enter Transactions in Payables and Receivables

To enter transactions in Payables or Receivables, you must specify the document fiscal classification and the first party tax registration number on the header of the Payables invoice or the Receivables transaction.

Define these components to enter transactions.

VAT Invoice and Payables VAT Correction Invoice

Perform these steps to populate a Payables invoice or a Receivables transaction with the document fiscal classification code:

1. For Payables, navigate to the Create or Manage Invoices page. For Receivables, navigate to the Create or Manage Transactions page.
2. Enter the standard commercial information for each transaction.
3. For Payables, navigate to the **Additional Information** tab, and select the appropriate supplier from the list of values in the **Taxpayer Representative** field. This applies to invoices issued by a taxpayer representative.
4. For Receivables, navigate to the **Miscellaneous** tab, and select the appropriate value in the **Document Fiscal Classification** field. If the value has not been populated automatically, enter the First Party Tax Registration Number.
5. Click **Save**.

Receivables Correction VAT Invoice

Receivables transactions with correction VAT invoices must be created according to the rules defined by Correction Documents for Poland. Refer to the Correction Documents for Poland documentation for additional information.

Sales and Purchases through Taxpayer Representative

The taxpayer representative of the company is specified in the Legal Entity setup. Perform these steps to specify that the purchase is made through the taxpayer representative:

1. From the Home work area, navigate to the Create Invoices page in Payables.
2. Click **Create**.

3. From the Invoice Header section, navigate to the Show More, Additional Information tab, and select the taxpayer representative attribute in the **Regional Information** field.
4. Select a supplier from the list of values in the **Taxpayer Representative** field.
5. Click **Save**.

Create JPK Extracts

This topic includes details about creating JPK extracts for Poland and entering transactions.

Overview

To provide the Polish tax authorities with the JPK extracts, you can schedule one of these processes from the Scheduled Processes work area:

- JPK Accounting Books Extract for Poland
- JPK Bank Statements Extract for Poland
- JPK Invoices Listing for Poland
- JPK Sales and Purchase Registers for Poland

Key Insights

Use the JPK extracts to produce the output in a legal format containing these sections:

- Header section.
 - Extract creation details, such as schema, version, creation date, and purpose.
 - Legal entity information, such as name, address, and registration numbers.
 - Requesting tax authority information.
- Detail section containing required details in the legally prescribed format.

Prerequisites

Ensure that you submit these processes before creating JPK extracts for VAT:

- Select Transactions for Tax Reporting
- Tax Allocation

Parameters

This table lists the parameters that apply to all the JPK processes that are mentioned in the topic except when there is a special indication:

Parameter Name	Description
Legal Entity	The legal entity under which the selected transactions were made.
Tax Registration Number	The tax registration number of a company or legal entity for which the JPK extract is delivered. Tax registration number is not required for accounting books.
Requesting Tax Authority Code	The code of the tax authority requesting the JPK extract.

Parameter Name	Description
Declaration Purpose	<p>The purpose of the declaration:</p> <ul style="list-style-type: none"> • First declaration delivery • Declaration correction • Subsequent number of the correct. Used for JPK VAT. <p>Declaration purpose is not required for accounting books.</p>

Create JPK Extracts

Perform these steps to run the processes:

1. Navigate to the Scheduled Processes work area.
2. Click **Schedule New Process**.
3. Search for the process name.
4. In the Process Details dialog box, enter or select the required parameters.
5. Click **Submit**.

How You Create Accounting Books Extracts

This topic includes details about creating accounting books extracts for Poland.

Overview

Submit the JPK Accounting Books Extract for Poland to create the XML output that is required by the tax authorities of Poland.

Parameters

This table lists the required parameters for the JPK Accounting Books Extract for Poland process.

Parameter Name	Description
Data Access Set	The data access set for the legal entity to be used.
Ledger	The ledger that you want to select from the data set to view the accounting activity. You can run the export for one ledger at a time.
Legal Entity	The accounting activity that you can filter by legal entity if you have associated your legal entities with the balancing segments in your chart of accounts.
From Accounting Period	The beginning period of the accounting period. The default value is the first open or closed accounting period for the ledger.
To Accounting Period	The ending period of the accounting period.

Parameter Name	Description
Top Level Parent Account	The code of the top level parent account being used for the JPK hierarchy tree.
Account Level	The maximum level that is being used for the JPK Account Hierarchy. The default value is 4.
Natural Account or Complete Account Flexfield	The level of analysis and grouping to be included in the extract.
Subsection Name	Indicate if you want to run the extract for each one of the three sections separately, or for all the accounting books in one extract.
Account Filter	The standard account filtering conditions on the different segments of the accounting flexfield with sub-filter. For example, Account and operator Descendants of can isolate the postable JPK accounts to be presented in the extract.

Output

The output of the JPK Accounting Books Extract process is an XML file, which you can review using your browser or other external applications.

Frequently Asked Questions

This table lists the frequently asked questions.

FAQ	Answer
How do I find this report?	Schedule and run this report from the Scheduled Processes work area on the Navigator menu.

What type of reports are these?	Oracle Analytics Publisher XML reports

How You Create JPK Sales and Purchase Registers Extracts

This topic includes details about creating JPK Sales and Purchase registers for Poland.

Overview

The JPK Sales and Purchase Registers extracts contain the list of Receivables transactions and Payables invoices that meet the minimum requirements as specified by the tax authorities.

Prerequisites

Ensure that you perform these tasks before creating JPK Sales and Purchase Registers extracts:

1. Enter and complete all Receivables transactions for the reported period.
2. Enter and validate all Payables invoices for the reported period.
3. Post all Receivables transactions for the reported period by submitting the Create Accounting for Receivables transactions process.
4. Account all Payables invoices for the reported period by submitting the Select Transactions for Tax Reporting for the specified period.
5. Select the transactions to be included for tax reporting.
6. Run the Tax Box Allocation process for the reported period by submitting the Tax Allocation process.
7. Run the JPK Sales and Purchase Registers Extract for Poland process from the Scheduled Processes work area.

Parameters

This table lists the required parameters for the JPK Sales and Purchase registers for Poland.

Parameter Name	Description
Legal Entity	The legal entity that created the register.
Tax Registration Number	The tax registration number for which the JPK extract is delivered.
From Tax Period	The beginning tax period of the period for which the extract is created.
To Tax Period	The ending tax period of the period for which the extract is created.
Register Type	The section to be included in the extract. Options are sales register, purchase register, or both.
Tax Box Set	The codes that you can restrict from displaying in the register output.
Requesting Tax Authority	The tax authority requesting the output.

The extract uses specific sales register and purchase register boxes to map the document to the appropriate section. These boxes also store the total tax amount for the respective sections of the purchase and sales register.

Output

The output of the JPK Sales and Purchase registers for Poland process is an XML file. You can review the output using your browser or other external applications.

How You Print Sales and Purchase VAT Registers

This topic includes details about printing Sales and Purchase VAT registers for Poland.

Overview

The VAT Registers can be printed in the PDF format. The printed output is based on the JPK extract, and contains all transactions selected for JPK VAT. The output also displays the transaction details. The amounts are grouped by

JPK Codes or Declaration VAT-7 boxes. Depending on the report parameters, the report can contain sales or purchase registers, or both. You can also restrict the printed output to a certain set of codes, such as domestic transactions only. Codes in the Tax Reporting Type ORA_JEPL_VAT_BOXES_PDF must be defined to select a subset of all tax box allocation boxes.

Key Insights

The Sales and Purchase VAT Registers process creates these output files:

- XML file in the JPK format
- PDF file with printable registers

Both files contain the same data presented in a different format. Printed registers can be used to verify the content of the JPK extract before sending it to the tax authorities.

Parameters

This table lists the required parameters for printing the JPK Sales and Purchase VAT registers for Poland.

Parameter Name	Description
Legal Entity	The legal entity that created the register.
Tax Registration Number	The tax registration number for which the JPK extract is delivered.
From Tax Period	The beginning tax period of the period for which the extract is created.
To Tax Period	The ending tax period of the period for which the extract is created.
Register Type	The section to be included in the extract. Options are sales register, purchase register, or both.
Tax Box Set	Restrict the codes displayed in the register output.
Requesting Tax Authority	Select the tax authority requesting the output.

Prerequisites

Ensure that you complete these tasks before printing either the VAT Registers or the JPK VAT extract file:

1. Create transactions for a period and complete the transactions for Receivables, or validate the invoices for Payables.
2. Run the Create Accounting process for Receivables and Payables. Verify if the transactions were accounted correctly.
3. Run the Select Transactions for Tax Reporting process for your legal entity and reported period.
4. Run the Tax Allocation process for the tax registration number of the legal reporting unit to be reported.
5. Verify the result of the allocation by running these reports with the same parameters as the Tax Box Allocation:
 - Tax Allocation Listing Report
 - Tax Allocation Exemptions Report

Print Sales and Purchase VAT Registers

Run these processes to provide the printed Sales and Purchase VAT Registers to the tax authorities:

- JPK Sales and Purchase Registers for Poland: Contains the JPK_VAT file in the XML format.
- Sales and Purchase VAT Register for Poland: Contains the Sales, Purchase, or both VAT Registers in the PDF format.

Perform these steps to run the process:

1. Navigate to the Scheduled Processes work area.
2. Click **Schedule New Process**.
3. Search for the process name.
4. In the Process Details dialog box, enter the required parameters.
5. Click **Submit**.

Create JPK Bank Statements Extracts

This topic includes details about creating JPK Bank Statements Extracts for Poland.

Parameters

This table lists the required parameters for the JPK Bank Statements Extracts for Poland.

Parameter Name	Description
Legal Entity	The legal entity that created the register.
Tax Registration Number	The tax registration number for which the JPK extract is delivered.
Bank Account	The bank account for which the extract is created.
From Date	The start date of the period for which the extract is created.
To Date	The end date of the period for which the extract is created.
Tax Authority	The tax authority requesting the extract. You can view the tax authority code in the JPK extract.

Create JPK Bank Statements Extracts

JPK Bank Statements Extract for Poland is based on entered bank statements. To submit the JPK Bank Statements Extract for Poland process:

1. Navigate to the **Scheduled Processes** work area.
2. Click **Schedule New Process**.
3. Search for the process name.
4. In the **Process Details** dialog box, enter the required parameters.
5. Click **Submit**.

JPK Bank Statements Line Selection Rules

The JPK Bank Statements Extract can be created for any specified period. The extract is always created for one bank account and assigned to the reporting legal entity.

The bank account reported must have a defined IBAN number since it's displayed as the account number in the file.

The JPK Bank Statements Extract is created as an XML file in the legally required format, JPK_WB. The bank statements are selected based on these rules:

- All bank statements with a start date between the dates **From Date** and **To Date** are selected.
- All lines with a value date between the dates in the parameters are selected. If the value date is blank, then the accounting date is retrieved from the line date, and is compared with the parameter dates.
- Debit lines are displayed as negative amounts.
- Credit lines are displayed as positive amounts.
- Statements lines are ordered by the line date.
- The extract opening balance is equal to the opening balance of the earliest bank statement period selected by the extract.
- The extract closing balance is calculated by adding or subtracting amounts of all lines in the extract to the opening balance.
- Credit and Debit totals are calculated:
 - Credit total is the sum of all positive amounts in the extract.
 - Debit total is the sum of all negative amounts in the extract. The total amount is displayed with a positive sign.
- All selected lines are counted and the line count is displayed in each line.

The credit total, debit total, and the number of lines are displayed in the file Control section.

You must have the Manage Bank Statement and Reconciliation Activities (CE_MANAGE_BANK_STATEMENT_AND_RECONCILIATION_ACTIVITIES_PRIV) privilege to enter bank statements. To enter bank statement lines:

- a. Navigate to Cash Management> Create Bank Statements page.
- b. Enter and save the bank statement header.
- c. Enter the bank statement lines.

You may enter and save a Bank Statement. Reconciliation does not affect the content of the extract.

Enter all the bank statements for the reported period to generate the correct bank statement extract data. You must also populate the statement line level fields on the Create Bank Statement Line page:

- Booking Date
- Flow Indicator: Debit or Credit
- Amount: Positive amount
- Counterparty Bank Account Name
- Customer Reference
- Additional Entry Information

Electronic Invoicing Attributes in JPK VAT Register for Poland

You must include the recently introduced electronic invoicing attributes in the JPK VAT Register for Poland to comply with the latest legislative reporting requirements.

Electronic Invoicing

The Polish Audit File, known as JPK (Jednolity Plik Kontrolny), is a standardized electronic format for submitting financial and accounting data to the Tax Authority in Poland. The JPK VAT Register is one of the JPK components that updated its format to the new version JPK_V7M(3). Using this updated format, Legal Entities in Poland can report JPK VAT Register in accordance with the latest regulations.

As countries are mandating electronic invoices over the next few years, the electronic invoicing extract requires regular updates to support additional country requirements. The JPK extract for Poland now includes the KSeF Number global descriptive flexfields on the Receivables Transaction header and on the Payables Invoice header.

Changes valid in the JPK_V7M(3) from 1st of July 2024 are:

VAT Report Changes	Product Solution
XML File Header - KodFormularza kodSystemowy	Form name changed from JPK_V7M (2) to JPK_V7M (3).
XML File Header - WariantFormularza	WariantFormularza version changed from 2 to 3.
Naglowek - KodFormularzaDekl	The name of the declaration form was changed from VAT-7 (22) to VAT-7 (23).
Naglowek - WariantFormularzaDekl	The form version was changed from 22 to 23.
PozycjeSzczegolowe - P_57 - indicator for VAT refund at 60 days was removed	The tag P_57 was removed from the <tns:Deklaracja> / <tns:PozycjeSzczegolowe> structure. In the standard ORA_JEPL_JPK_VAT_PARAMETERS Lookup Type the Lookup Code P_57 should be disabled and end dated.
New Data element NrKSeF in the Sales Register	New KSeF Clearing number added in the Sales Register JPK/Ewidencja/SprzedazWiersz/NrKSeF structure. User can add KSeF Clearing number manually in the Manage Transactions UI > Transaction Header > Miscellaneous > Global descriptive flexfield > Context = Transactions for Poland and KSeF Number global descriptive flexfield or number can be updated through SOAP Service.
New Data element NrKSeF in the Purchase Register	New KSeF Clearing number added in the Purchase Register JPK/Ewidencja/ZakupWiersz/NrKSeF structure. User can add KSeF Clearing number manually in the Create Invoices > Invoice Header > Additional Information > GDF Context - Invoices for Poland and GDF = KSeF Number global descriptive flexfield or number can be updated through SOAP Service.

Disable the Lookup Code

You must disable the Lookup Code P_57.

Follow these steps:

1. Navigate to the Setup and Maintenance, Manage Standard Lookup Types.
2. Search for ORA_JEPL_JPK_VAT_PARAMETERS Lookup Type.

3. Clear the Enable field for P_57 Lookup Code.
4. Specify the End Date.
5. Save and Close.

Foreign Currency Invoices

Enable VAT Split Payments

Oracle Payments lets you split payments made against foreign currency invoices into 2 payments. You can use one of them for paying VAT in local currency.

In some countries, such as Poland, it's a regulatory requirement to report VAT amount in local currency when the invoice line item is in a foreign currency.

Enable the Feature

1. Navigate to **My Enterprise > Setup and Maintenance > Manage Standard Lookups**.
2. Search for lookup type **ORA_ERP_CONTROLLED_CONFIG**.
3. In the lookup type, create a new lookup with the following values:
 - o Lookup Code – IBY_34548052
 - o Enabled – Checked
 - o Start Date – Select system date
 - o Meaning – VAT Split payment feature
 - o Description – VAT split payment feature

Attach the VAT Split Bank Account at Supplier Setup

The supplier bank account setup includes a field called **VAT Split Bank Account**. According to the business scenario, you should map the VAT split bank account (in ledger currency) at the profile, address, or site-level foreign currency bank account. The VAT split bank account derives its default value from the foreign currency bank account on the invoice installment.

Note: You must disable the bank account approval through the Approve Internal Changes on Supplier Profile feature for the VAT Split Bank Account field to display.

Create a New Payment Method

Here's how you create a payment method.

1. Navigate to **Setup and Maintenance > Financials > Payments > Manage Payment Methods**.
2. Click the **Create** icon.
3. Enter these header attributes:
 - o Name: VAT Split Payment Method
 - o Code: VAT_SPLIT_PM
 - o Alias: TRF
 - o From Date: Accept the defaulted value
4. In the Usage Rules tab, deselect the **Automatically assign payment method to all payees** option. This ensures that this special payment method for the VAT split isn't available to all the suppliers.

5. In the **Usage Rules > Payables** tab, select the **Enable for use in Payables** option.
6. Accept the default values for all other fields in the Payables tab.
7. Ensure that you don't enable the feature in the Receivables for Customer Refunds and Cash Management tabs.
8. Ensure that you don't select any options in the Validations, Bills Payable, and Additional Information tabs.
9. Save the payment method.

Create a New Lookup Code Under the Pay Group

Here's how you create a payment method.

1. Navigate to **Setup and Maintenance > Financials > Payables > Manage Payables Lookups**.
2. Search for lookup type **Pay Group**.
3. In the lookup type, create a new lookup with these values.
 - o Lookup Code: VAT_SPLIT
 - o Reference Data Set: Common Set
 - o Meaning: VAT Split Pay Group
 - o Enabled: Select this option.
 - o Start Date: Select system date.
 - o Description: Enter a meaningful description.

After enabling the feature, create the foreign currency invoice with the payment method and pay group specific to VAT split payments. This lets the application convert the foreign currency invoices with VAT lines into ledger currency and create separate payments for the VAT installments.

Split Invoices for VAT Payment in Local Currency

To comply with local regulatory requirements, you must report foreign currency invoices in some countries, such as in Poland, with the VAT amount reported in the local currency.

Use the split payments feature for foreign currency invoices with a VAT tax line into 2 payments. Use one for the line amount in the foreign currency and the other for the VAT amount in the ledger currency. This allows the payee bank to credit the VAT amount in the ledger currency to a separate bank account.

You must enable the split payment feature and then create the invoice with the payment method and pay group created specifically for VAT split payments.

Create VAT Installments

1. Enter the line details and then click **Actions > Manage Installments**.
2. Select the pay group as **VAT Split Pay Group**. A read-only field with the column heading **VAT Split Bank Account** appears at installment level.
3. Create 2 installments: one with the VAT lines total amount, and the other with the invoice total amount balance.
4. Select payment method as **VAT Split Payment Method**. This enables the VAT Split Bank Account field. Its default value is based on the supplier bank account setup. You can modify the value.

Set off a Credit Memo with a VAT Split Installment Marked as Pay Alone

Enable the Pay Alone option for the VAT split installments. This lets you handle the VAT split bank account details. Oracle Payables creates a separate payment for each invoice that's marked as pay alone, instead of combining them with other standard invoices or credit memos.

You can adjust a VAT-specific credit memo against the VAT-specific standard invoice (set as Pay Alone). On the Create Payment page, you can associate a standard invoice with a credit memo, if both are created with the same VAT-specific payment method.

Adjust Prepayment Against a Standard Invoice with VAT Split Installment

Prepayment invoice is created without VAT lines. When you apply a prepayment against a standard invoice with VAT and line items, the amount is automatically adjusted off against the line installment or a VAT installment. To prevent this from happening, create the VAT installment with a later due date. While applying the prepayment, the application automatically adjusts the amount against the earlier due date installment.

Portugal

Enable and Print the Invoice QR Code and ATCUD for Portugal

Overview of Invoice QR Code and ATCUD for Portugal

You can enable and print the Invoice QR code and a unique document code (ATCUD) for Portugal billing documents as required by the Portuguese tax authority.

You need these transaction details to create the QR code:

- First Party Tax Registration Number
- Customer Tax Registration Number and Country
- Document Type, Status, and Date
- ATCUD
- Tax Country Region
- Taxable, Tax, and Total Amounts
- Duty Stamp Amount
- Software Certificate Number
- Hash Number

ATCUD is composed of these attributes separated by a hyphen (-) without quotes:

- Validation code of the document series from the Portuguese tax authority
- Sequential number of the document within the series

Note: To obtain a validation code, taxpayers must communicate to the Portuguese tax authority with the document sequence identifier, document type, first number of the series and the expected start date.

The unique document code is displayed in the ATCUD field in the regional information. Transactions for Portugal after the Receivables transaction status is set to completed. This is applied only for business units for which ATCUD Numbering has been setup and the conditions specified in the setup are applicable to the transaction.

When you print the billing documents, a two-dimensional QR code and ATCUD are included in the printout.

Enable Invoice QR Code Feature

You can enable the Invoice QR code feature by adding a standard lookup using the Manage Standard Lookups task.

Follow these steps:

1. Click Navigator, Others, Setup and Maintenance, Search and then click Manage Standard Lookups.
2. Search for the lookup type, JE_ENABLE_FEATURE.
3. In the Lookup Codes section, add the lookup code: PT_21B_OI_QR_CODE.
4. Click Save.

Enable ATCUD Numbering

Enable Regional Localization

You must first enable the regional localization to use the ATCUD numbering feature.

Follow these steps:

1. Click Navigator, Others and then click Setup and Maintenance work area.
2. On the Setup page, select Financials offering and click Change Feature Opt In.
3. On the Opt In page, search for Financials and then click the Features icon in the Features column.
4. On the Edit Features page, search for Regional Localization.
5. In the Enable column, select the Portugal check box.
6. Click Save and Close.

What to do next

Enable Localization System Options

You can enable the localization system options to configure ATCUD numbering.

Follow these steps:

1. Click Navigator, Others, Setup and Maintenance, Tasks, Search and then click Manage Localization System Options.
2. On the Manage Localization System Options page, click the Create icon to add the business unit for which you want to implement the ATCUD numbering.
3. On the Create Localization System Options page, select the business unit and then select Portugal from the Country drop-down list.
4. The option, Enable ATCUD Numbering for Portugal shows. Set this option as Yes to enable the configuration of the ATCUD numbering using the Create Document Numbering spreadsheet.
5. Click Save and Close.

Enable Localization System Options

You must enable the localization system options to use the ATCUD numbering feature.

Follow these steps:

1. Click Navigator, Others, Setup and Maintenance, Tasks, Search, Manage Localization System Options.
2. On the Manage Localization System Options page, click **Create** to add the business unit for which you want to implement the ATCUD numbering.
3. On the Create Localization System Options page, select the business unit and set the country to Portugal from the Country drop-down list.

4. Set the **Enable ATCUD Numbering for Portugal** option as Yes.

This enables the configuration of the ATCUD numbering using the Create Document Numbering spreadsheet.

5. Click Save and Close.

Enable Dev Option in PTATCUD_22A_OI_ENABLEATCUDGEN

You must enable the Dev Option in - PTATCUD_22A_OI_ENABLEATCUDGEN after you enable the regional localization and the localization system options.

Follow these steps:

1. Click Navigator, Others, Setup and Maintenance, Tasks, Search and then click Manage Standard Lookups.
2. On the Manage Standard Lookups page, search for JE_ENABLE_FEATURE Lookup Type.
3. On the JE_ENABLE_FEATURE: Lookup Codes page, add the new Lookup Code - PTATCUD_22A_OI_ENABLEATCUDGEN.
4. You can enable or disable the Lookup Code, PTATCUD_22A_OI_ENABLEATCUDGEN:
 - o When the Lookup code is enabled, it validates if the ATCUD related setups are complete before Receivables transaction gets completed.
 - o When the Lookup code is disabled, it completes the Receivables transaction without validating the ATCUD setups.
5. Click Save and Close.

Set Up ATCUD Numbering

You can set up ATCUD numbering using the Create Document Numbering spreadsheet.

1. Download the Create Document Numbering spreadsheet to set up the ATCUD numbering.
 - a. Click Navigator, Others, Setup and Maintenance, Tasks, Search and then click Manage Localization Document Numbering.
 - b. On the Search For field of the Manage Fiscal Document Sequences, select Portugal.
 - c. On the Create Document Numbering in Spreadsheet window, select the business unit, then click OK to download the spreadsheet (DocumentNumberingTemplate.xlsx).
2. Define the ATCUD numbering setup, open the spreadsheet, DocumentNumberingTemplate.xlsx, and log in to the application.
3. In the Create Document Numbering spreadsheet:
 - a. In the Sequence Name column, enter the document sequence used for transaction types used for Portugal. This is required information.
 - b. In the Prefix column, enter the validation code for the relevant document sequence. This code is from the Portuguese tax authority.
 - c. In the Separator column, enter the character to separate the prefix and sequence number. Use the character “-” without quotes.
 - d. In the Start Date column, enter the effective start date for the ATCUD numbering setup. This is required information.
 - e. In the End Date column, enter the effective end date for the ATCUD numbering setup.

4. Click Upload to save the changes.

You cannot create an ATCUD numbering setup for a document sequence that has an existing setup with the same date range.

The ATCUD will not be generated if the transaction source is external (if Already Billed attribute of the regional information Batch Sources for Portugal is set to Yes). If the transaction source is external, you need to provide the value for the ATCUD along with the signature information using the regional information Transactions for Portugal.

When you run the Finalize Billing Documents for Portugal scheduled process, it validates the transaction type to ensure that the document sequence associated to it has an active ATCUD numbering setup. The application blocks the completion of transactions if the document sequence associated to the transaction type doesn't have an active ATCUD numbering setup.

Print Invoice QR Code and ATCUD

You can print the two-dimensional QR codes and ATCUD on Receivables transactions using the Print Receivables Transactions scheduled process.

You must enable the Print Receivables Transactions process to print transactions for Portugal. You can use these scheduled process:

- Print Commercial Documents
- Print Receivables Transactions

You must add a Receivables lookup using the Manage Receivables Lookups task. Alternatively, you can print QR codes and ATCUD using the default Print Commercial Documents process.

Enable Print Receivables Transactions Process

You must add a Receivables lookup using the Manage Receivables Lookups task to enable the Print Receivables Transactions process.

Follow these steps:

1. Click Navigator, Others, Setup and Maintenance, Search and Manage Receivables Lookups.
2. Search for the lookup type, ORA_AR_TRX_PRINT_REGIONS.
3. Add the ORA_PORTUGAL lookup code in the Financials Generic Lookup Type section.
4. Click Save.

Note: You can use only one printing process at a time. If you have enabled the lookup for the Print Receivables Transactions process, you can't use the Print Commercial Documents process to print Receivables transactions for Portugal.

QR Code Structure and Field Mapping

Refer the table to know more about the message incorporated in the QR code.

The table shows details such as code, description, maximum length and mandatory columns. In the Mandatory column, you must include fields with the symbol +. Fields with the symbol ++ are optional, but you must include them if the related information exists.

Description	Source Information
Issuer Tax Identification Number/Tax Registration Number (NIF/TRN)	Manage Tax Registrations, Legal Reporting Unit Tax Profile
Customer NIF/TRN	Customer, Tax Profile, Tax Registrations, Registration Number For Generic customers, display '999999990'
Customer Country	Completed by designating “Desconhecido” in <ul style="list-style-type: none"> • Non-integrated systems, if information is not known; • Operations performed with “Consumidor Final” (Generic customer)
Document Type	Transaction Type Regional Information, and AR Transaction Types
Document Status	Receivables transaction header, Miscellaneous, Regional Information and Invoice Status
Document Date	Receivables transaction header and Transaction Date
Document's Unique Identification	Combination of the transaction type, document sequence ID, and document number
ATCUD	Receivables transaction header, Miscellaneous, Regional Information, and ATCUD
Tax Country Region	Tax reporting code value of the tax rate on the Receivables transaction that has these attributes: <ul style="list-style-type: none"> • Tax Reporting Type Code: ORA_JEPT_TAX_COUNTRY • Tax Reporting Code: PT or PT-AC or PT-MA If there is only one Tax Country Region for a particular invoice, fields I1 to I8 are populated. The indication that a document exists without VAT rate is displayed in tables 4.2, 4.3, or 4.4 of the SAF-T (PT) as «0» (I1:0).
Taxable Amount for Exempt VAT rate	Lines with tax rates have these tax reporting codes for respective tax reporting type codes: <ul style="list-style-type: none"> • ORA_JEPT_TAX_COUNTRY: PT or PT-AC or PT-MA • ORA_JEPT_TAX_TYPE: VAT • ORA_JEPT_TAX_VALUE: ISE OR <ul style="list-style-type: none"> • ORA_JEPT_TAX_COUNTRY: PT or PT-AC or PT-MA • ORA_JEPT_TAX_TYPE: SELO

Software Certificate number	Receivables transaction header, Miscellaneous, Regional Information, Certificate Number
Other Optional Information	N/A

Known Limitations

Here are some known limitations:

- QR code and ATCUD are not supported in Receipt transactions, as these are not included in the signature processing.
- ATCUD is not supported in Supply Chain transactions.

Spain

Reporting Features for Spain

Oracle Fusion Applications provide standard financial and tax reports to meet the legal and business reporting requirements of tax authorities. For countries like Spain, a set of country-specific reports is provided to meet the local reporting requirements for VAT, Modelo and withholding tax.

This tables are the lists of reports for Spain by type.

VAT Reports

Report Name	Description
Input VAT Journal for Spain	Provides summary and detail tax information about invoices and expense reports. Reports by register type, such as recoverable tax register or nonrecoverable tax register. Selects transactions based on tax reporting type and tax reporting code.
Output VAT Journal for Spain	Provides summary and detail tax information about transactions. Reports by register type, such as tax register or nonrecoverable tax register. Selects transactions based on tax reporting type and tax reporting code.
VAT Inter-EU Invoice Journal for Spain	Provides summary and detail information about invoices received in Spain from suppliers located in any European Union member state. Includes invoices with offset or self-assessed tax distributions. Selects transactions based on tax reporting type and tax reporting code.
VAT Inter-EU Invoice Format for Spain	Lists details of the same invoices that appear on the VAT Inter-EU Invoices Journal for Spain. Selects transactions based on tax reporting type and tax reporting code.

Modelo Reports

Companies registered in Spain for tax purposes are legally required to submit periodic and annual turnover reports to the tax authorities in a predefined format. These reports support the specific formats for Modelo declarations 340, 347, 349 and 415:

Report Name	Description
Modelo Electronic File Generation for Spain	Prepares the electronic file for Modelo 340, 347, 349, or 415 declarations.
Modelo Verification Report for Spain	Lists all payables invoices and receivables transactions that are reported in the Modelo 340, 347, 349 or 415 declarations.

Withholding Tax Reports

Companies in Spain are legally required to submit withholding tax reports to tax authorities in a predefined format called Modelo 190. These reports support Modelo 190 submission:

Report Name	Description
Withholding Tax Extract for Spain	Extracts withholding transactions and stores them in an interface table to be used for reporting withholding tax transactions.
Withholding Tax File for Spain	Lists withholding tax transactions in a flat file using a predefined layout.
Withholding Tax Report for Spain	Provides summary or detail withholding tax information about transactions.

VAT Reports for Spain

This topic includes details about the VAT reports for Spain.

Overview

Oracle Fusion Applications provide a set of VAT reports to meet the legal and business reporting requirements of tax authorities.

The VAT reports for Spain include:

- Input VAT Journal for Spain: Provides summary and detail tax information on recoverable and nonrecoverable tax for accounted transactions entered in Oracle Fusion Payables and tax repository. Reports by register type, such as recoverable tax register or nonrecoverable tax register.

The following figure is an example of the report.

Key Insights

You can report transactions based on a specific tax reporting type and tax reporting code or report transactions associated with all the tax reporting types and codes. Ensure that you create relevant tax reporting types and tax reporting codes and assign them to tax rates before running the reports. When the tax rate is applied to a transaction, tax reporting type and tax reporting code is also applied.

If you want to use a calendar for tax reporting that is different from the accounting calendar, set up a new calendar and associate it with the tax reporting entity. However, before you create a new calendar, you must set up a new tax reporting entity.

Before you run the VAT reports for Spain, ensure you:

- Configure the document sequence to be used for reporting and printing transactions on the reports.
- Run the Select Transactions for Tax Reporting process to select and mark transactions for reporting.

When you finish reviewing the reports and want to close the tax period, run the Finalize Transactions for Tax Reporting process. The process marks all the reported transactions as finally reported.

Report Parameters

This table lists selected parameters for the VAT reports for Spain:

Parameter	Description
From Tax Calendar Period and To Tax Calendar Period	Specify the tax calendar period range for reporting data. The transactions are selected for reporting based on the tax point date that is within the specified tax calendar period range.
Tax Reporting Type	(Optional) Select a tax reporting type created in Oracle Fusion Tax. Select the appropriate tax reporting type for reporting VAT on transactions for Spain.
Tax Reporting Code	(Optional) Select a tax reporting code created as a part of the tax reporting type that you previously selected. Specify the tax reporting code for reporting VAT on transactions for Spain.
Enable Reporting Sequence	Indicate whether you want to print reporting sequences for your transactions.
Register Type	<p>Select the register type. You can select tax register, nonrecoverable tax register, or both. This parameter is applicable only for:</p> <ul style="list-style-type: none"> Input VAT Journal for Spain Output VAT Journal for Spain <p>Note: When you want to list transactions with interim tax, run the Interim Tax Register.</p>
Start Invoice Sequence	Indicate the starting invoice sequence number. When you want to continue the reporting sequence numbers from the previous reporting period, specify the number you want to use as the starting number for this period. The default value is 1.

Usability Improvements

You can define withholding keys and sub keys, and additional extracted data elements.

The Withholding Magnetic Format for Spain report includes the ability to define withholding keys and sub keys and assign them to the withholding tax rates. The keys (sub keys) allowed in the Modelo 190 are A, B (01, 02, 03), C, D, E (01, 02, 03, 04), F (01, 02), G (01, 02, 03), H (01, 02, 03, 04), I (01, 02), J, K (01, 02, 03), L (01 to 30). If withholding keys and sub keys are not defined and assigned to tax rates, expense reports are populated with the default value A00 and all other transactions populated with the default value G01.

The Withholding Magnetic Format for Spain XML Data extract file contains additional data elements:

- Header elements
 - ERP Cloud Program Version - EXTERNAL_VERSION
 - Legal Entity primary contact name, phone and email - G_LEGAL_ENTITY - FULL_NAME, EMAIL_ADDRESS and PHONE_NUM
- Detail records
 - Supplier Type and Tax Organization Type - C_VENDOR_TYPE and C_ORGANIZATION_TYPE

Setup Steps

To implement changes related to the keys and sub keys reported in the Withholding Magnetic Format for Spain output file, follow these setup steps:

1. Create new Tax Reporting Type for withholding keys and sub keys:
 - a. Navigate to the Setup and Maintenance, Manage Tax Reporting Types.
 - b. Create new Tax Reporting Type JEES_WHT_KEY_SUBKEY with these values:
 - Tax Reporting Type Code: JEES_WHT_KEY_SUBKEY
 - Tax Reporting Type Name: WHT Keys and Subkeys for Spain
 - Tax Reporting Type Purpose: Withholding tax reporting type
 - Country: Spain
 - Data Type: Text
 - Minimum Length of Reporting Codes: 1
 - Maximum Length of Reporting Codes: 3
 - Reporting Type Uses: enable Tax Rate
 - c. Add new Tax Reporting Codes:
 - Tax Reporting Code: G01
 - Description: G: Income from economic activities: Professional activities to which the general withholding rate is applicable: Sub key 01
 - d. Define all required Tax Reporting Codes for Spanish withholding keys and sub keys. Example: A01, G03, H04.
 - e. Save and Close.
2. Associate Tax Reporting Code JEES_WHT_KEY_SUBKEY to the Withholding Tax Rates Codes:
 - a. Navigate to Setup and Maintenance, Manage Tax Rate and Tax Recovery Rates.
 - b. Search for Withholding Tax and define Search Withholding Tax Rates parameters or create new Withholding Tax Rate.
 - c. Associate Withholding Tax Rate with Tax Reporting Codes with these values:
 - Tax Reporting Type Code = JEES_WHT_KEY_SUBKEY
 - Data Type = Text
 - Tax Reporting Code = G01
 - Description = G: Income from economic activities: Professional activities to which the general withholding rate is applicable: Sub key 01
 - d. Save and Close.
3. (Optional) Here are some considerations:
 - o The keys and sub keys values are defined as Tax Reporting Code for the Tax Reporting Type Code JEES_WHT_KEY_SUBKEY. The Tax Reporting Code for key and sub key is assigned to the Withholding Tax Rate. In the Withholding Magnetic Format for Spain output file the Key is the first position from the Tax Reporting Code and is reported in the position 78. The sub key is the second and third position from the Tax Reporting Code JEES_WHT_KEY_SUBKEY and is reported in the position 79 and 80.
 - o If withholding keys and sub keys are not defined and assigned to tax rates, expense reports are populated with the default value A00 and all other transactions populated with the default value G01.
 - o Define primary Legal Entity contact name, primary phone and email, Supplier Type and Tax Organization Type for supplier to extract values in the Withholding Magnetic Format for Spain XML extract data file.

Frequently Asked Questions

This table lists frequently asked questions about the VAT reports for Spain.

FAQ	Answer
How do I find this report?	Schedule and run this report from the Scheduled Processes work area on the Navigator menu.
Who uses this report?	<ul style="list-style-type: none"> • Tax Manager • Tax Accountant
When do I use this report?	<p>Use the VAT reports for Spain to review tax information on:</p> <ul style="list-style-type: none"> • Invoices and transactions entered in Payables and Receivables. • Transactions that are manually entered in the tax repository. • Invoices received in Spain from suppliers located in any European Union member state. <p>You can also use these reports for tax reconciliation and for preparing tax declarations.</p>
What type of reports are these?	Oracle Analytics Publisher.

Invoices for Accounts Payable

You must enter details of the supplier invoice.

Follow these steps:

1. Enter this information for each supplier invoice:

- a.** At invoice header, enter the document fiscal classification:

Refer to Document Fiscal Classification for a list of values that you can select from.

Note: You must enter invoice description. If you don't enter any description, your invoice is rejected. If you entered your invoices from Suppliers Portal, ensure that there's a value in the Description field at header of the portal invoice. You can also query the invoice from Payables and add or update the description.

- b.** Regional Information: Online VAT Reporting for Spain

Associating this context to a transaction makes this transaction reportable through Online VAT submission.

- c.** Transaction Status: R (Ready).

Note: A NULL value is also considered as 'Ready' (for submission) for a new transaction.

2. Enter Special Regime for your Invoice (Required):

Special Regime is a LOV field. You can select one of the seeded values or a custom value you have added to your system. You can also refer to Global Descriptive Flexfields section.

3. Optionally, enter the values in these GDFs:

- Third Party Invoice (No is default).

Enter 'Yes' if applies: In this case, the 'EmitidaPorTerceros' tag is populated with 'S' value.

Intra - EU Declared Key 'R' (Sender) or 'D' (Declarer) depending on the application.

Intra - EU Subtype (Null by default, selecting 'A' or 'B' classifies the transaction for Special Intra-EU Transactions Register).

Note: If you enter values in both Intra - EU Declared Key and Intra - EU Subtype, the transaction is selected for Special Intra-EU Transactions Register.

- Invoice Recording Date: If you enter a date in this field, it overrides the invoice accounting date value printed in the XML message. If there's no value in the field, the invoice accounting date is printed for your Payables invoices.
- Document Type Override: If you must change the invoice type of your invoice for any reason, you must select the appropriate value in this field. The field lists the same values that are listed in the document fiscal classification. If there's a value in this field, the XML message prints this value for the corresponding invoice.
- Last Document Number of Summary Invoice: This field is meaningful when the document type ID is F4. Enter the first invoice number of the summary invoice in the Invoice Number field and the last invoice number in this field.
- Date Transaction Performed (If a different date will be entered).
- Reporting Period: Enter a period if you must change the period calculated from the invoice date or accounting date based on the value you have assigned through the lookup. You can enter any calendar periods from this list: 01,02,03,04,05,06,07,08,09,10,11,12. You can also refer to Period Tag Options section.

Note: Don't change Regional Information (GDF Context) value after it's set as 'Online VAT Reporting for Spain'. If you change the context value, you can't report this transaction through online register processes.

4. Validate and account the invoice.

Equivalence Surcharge Support

You can use the Online VAT Reporting for Spain to report on possible equivalence surcharges on Receivables transactions. Equivalence surcharges occur on Receivables transactions related to taxable customers exempt from VAT declaration and not registered for VAT.

Recargo de equivalencia, the Spanish term used for surcharge of equivalence, is a special type of tax under a special VAT regime that is mandatory for certain retailers who do not transform the products they sell. This tax is in addition to VAT (an extra line), and thus the name. Generally, the supplier issues the invoice with the equivalence surcharge for those retailers that have informed the supplier that they are subjected to the surcharge of equivalence regime.

After the required setup, the value and the rate of these equivalence surcharges are listed under specific XML tags **<sii:TipoRecargoEquivalencia>** and **<sii:CoutaRecargoEquivalencia>** of the Online VAT Report for Spain, under the standard VAT rate elements to which these surcharges correspond.

The users who need to report the equivalence surcharges of their customers must have these values reported under the corresponding fields in their Online VAT report for Spain, based on the legal requirements of the Spanish Tax authorities.

You must use the existing Tax Reporting Type ORA_JEES_SII_TAX_GROUP_TYPE for the SII feature, with the new tax reporting code ORA_RE to identify the tax rates used to calculate the equivalence surcharges. These rates are calculated on Receivables transactions on top of the standard VAT rates.

This image shows the tax rates used to calculate the equivalence surcharges.

Modelo Reports for Spain

This topic details about the tax box allocation reports.

Overview

The Modelo Reports for Spain are legally required turnover reports. These reports are delivered electronically in a predefined format to the tax authorities in Spain.

The Modelo reports for Spain include:

- **Modelo Electronic File Generation for Spain:** Prepares electronic file for Modelo 340, 347, 349 or 415 declarations in a legally predefined format.
- **Modelo Verification Report for Spain:** Lists all payable invoices and receivables transactions that are reported in the Modelo 340, 347, 349, or 415 declarations. The report prints data based on the selected legal entity, period range, source, and modelo name. For receivables cash receipts, only receipts with a value more than the entered minimum cash amount are reported.

Key Insights

Modelo reporting is based on accounting date or transaction date, depending on the type of Modelo and source of data.

You can report a transaction in multiple reports, which can be submitted annually, quarterly, or monthly.

Run Modelo Electronic File Generation for Spain for one period at a time and verify your transactions or summary data.

You can't filter the foreign customers or suppliers in Modelo reports. It is controlled by the tax reporting type, which is a mandatory parameter. Hence, you must have a separate tax rate code for invoices of foreign customers or suppliers mapped to a different tax reporting type to prevent them from being reported in the Modelo reports.

Report Parameters

Let's understand the selected report parameters:

Parameter	Description
Modelo Name	Select the Modelo type. Available values for this parameter are: Modelo 340, 347, 349, or 415
Source	Select Payables or Receivables. Modelo reporting doesn't include manually entered tax transactions.
Minimum Transaction Value	Select the minimum transaction amount to be reported. This parameter is required for Modelo 347 and 415.
Receipt Method	Select the Receivables receipt method that's used to record customer payments in cash. Only receipts with the specified receipt method are selected and compared with the cash amount limit. The cash amount limit is specified using the Minimum Cash Receipt Amount parameter.
Minimum Cash Receipt Amount	Specify the minimum amount for payments in cash.
Selection Status	Select the status of the transactions to be reported. The available options are all, preliminary, and final
Driving Date	Select the transactions based on transaction date or accounting date.

Frequently Asked Questions

Here are some frequently asked questions about the Modelo Reports for Spain.

FAQ	Answer
How do I find this report?	You can schedule and run this report from the Scheduled Processes work area on the Navigator menu.
Who uses this report?	<ul style="list-style-type: none"> • Tax Manager • Tax Accountant
When do I use this report?	<p>You can use these reports to do the following things:</p> <ul style="list-style-type: none"> • Review your payables and receivables transactions before reporting to the tax authorities. • Report to the tax authorities in Spain in a predefined format.
What type of reports are these?	These are Oracle Analytics Publisher reports.

How Modelo Reports for Spain are Generated

The Modelo Reports for Spain are legally required turnover reports, delivered electronically in a predefined format to the tax authorities in Spain.

Companies operating under the Spanish VAT regime or Canary Islands IGIC regime must submit these Modelo declarations:

- Modelo 340
- Modelo 347
- Modelo 349
- Modelo 415

Modelo reporting is based on accounting date or transaction date, depending on the type of Modelo and source of data. You can report a transaction in multiple reports, which can be submitted annually, quarterly, or monthly.

Settings That Affect Report Generation

Before you generate the Modelo reports, you must:

- Complete and validate all the transactions.
- Enter appropriate data in the global descriptive flexfields.
- Select the transaction business category, document fiscal classification, and user-defined fiscal classification attributes for the transactions.

To report transactions correctly in the Modelo reports, use these transaction attributes:

Source Application	Field Name	Information used for	Header or Line Level Information	Used in Modelo
Payables or Receivables	Business Category	Tax setup, such as transaction business category	Line	347, 349, 415
Payables or Receivables	Document Fiscal Classification	Tax setup, transactions or document type	Header	340
Payables or Receivables	User-Defined Fiscal Classification	Tax setup, such as transactions or user-defined fiscal classification	Line	340
Receivables	Global Descriptive Flexfield	Global descriptive flexfield attribute	Header	340, 347, 349, 415
Human Capital Management	HR Location	Property address defined for each transaction related to property rental	Header	347
Human Capital Management	HR Location	Land registry reference number for transaction related to property rental	Header	340, 347
Payables or Receivables	Product Type	Goods or services for intra-EU operations	Line	349
Receivables	Intended Use	Triangulation	Line	349
Payables or Receivables	Tax Reporting Code	Tax reporting codes assigned by tax rule to intra-EU transactions based on source, product type and intended use	Line	349
Payables or Receivables	Tax Rule	Tax reporting codes, based on party bill to and ship-to address, source, product type and intended use	Line	349

How Reports Are Generated

To generate the Modelo reports, run these processes in the specified order:

1. Run the Turnover Reporting Selection Process in preliminary mode.
Select the Reporting Group parameter as Modelo Reporting for Spain. The Turnover Reporting Selection Process selects all the transactions with accounting date or transaction date within the selected periods.
2. Run the Modelo Verification Report for Spain.
3. Run the Modelo Electronic File Generation for Spain to generate XML files for Modelo 340, 347, 349, and 415, for a specific period.

4. Run the Turnover Reporting Selection Process in final mode to mark transactions as reported.

Withholding Tax Report for Spain

This topic explains about the withholding tax reports for Spain.

Overview

The Withholding Tax Report for Spain is an annual report that's submitted to the tax authorities at the beginning of the year. Using this report you can list the operations of the previous year.

The Withholding Tax Reports for Spain includes:

- **Withholding Tax Extract Report for Spain:** Extracts the withholding tax transactions for Spain, and stores them in an interface table. You can select information based on a specific legal entity, and optionally based on a specific supplier.
- **Withholding Tax Report for Spain:** Identifies summary or detail of withholding tax information for Spain by invoice and withholding tax type. You can print information for a selected legal entity, and optionally for a specific supplier.
- **Withholding Magnetic Format for Spain:** Lists withholding tax transactions for the selected legal entity and tax year in a flat file format in the predefined layout.

Here's an example of the report.

ORACLE		Withholding Tax Report for Spain Detailed - by Invoice Date				Report Date 7/10/14 11:43 AM	
Tax	ES WHT	Withholding at	15	%			
Supplier	Abogados Perez_FIN						
Fiscal Code							
Legal Address	Bravo Murillo 23 91116 Madrid Spain						
Invoice Number	Sequence Number	Invoice Date	GL Date	Net Amount	Tax Rate	Tax Amount	
ESWH1003		18-Jul-2013	18-Jul-2013	1,000.00	15	-150.00	
	Abogados Perez_FIN	Supplier Total		1,000.00		-150.00	
		Total for Tax		ES WHT	1,000.00	-150.00	
		Report Total		1,000.00		150.00	

Key Insights

When you submit the Withholding Tax Data Extract Report for Spain, the data extract overwrites the transactions stored from any previous submission.

The Withholding Tax Report for Spain lists only invoices that are posted to the general ledger, and includes prepayments. When you apply prepayment to an invoice on a date other than the invoice accounting date, the report displays prepayment as a negative amount with the prepayment application date.

Report Parameters

The following table lists selected report parameters:

Parameter	Description
Withholding Tax Type	Select one of the following: <ul style="list-style-type: none"> Spanish Income Tax Withholding (Modelo 190) Spanish Nonresidents Withholding Spanish Investment Income Withholding Spanish Property Rental Withholding
Selection Criteria	Select one of the following: <ul style="list-style-type: none"> Invoice accounting date, for validated or approved transactions only Payment date, for paid withholding transactions only

Frequently Asked Questions

Here are few frequently asked questions about the Withholding Tax Reports for Spain.

FAQ	Answer
How do I find this report?	Schedule and run this report from the Scheduled Processes work area on the Navigator menu.
Who uses this report?	<ul style="list-style-type: none"> Tax Manager Tax Accountant
When do I use this report?	Use these reports to declare withholding and payments on account of income from employment, economic activities, prizes, certain capital gains and income allocations.
What type of reports are these?	Oracle Analytics Publisher

Usability Improvements to Withholding Tax Reporting for Spain

You can define additional key and sub key values and assign them to the withholding tax rates. You can use new extracted data elements for customized additional withholding layouts.

You can now define withholding keys and sub keys, and additional extracted data elements.

The Withholding Magnetic Format for Spain report includes the ability to define withholding keys and sub keys and assign them to the withholding tax rates. The keys (sub keys) allowed in the Modelo 190 are A, B (01, 02, 03), C, D, E (01, 02, 03, 04), F (01, 02), G (01, 02, 03), H (01, 02, 03, 04), I (01, 02), J, K (01, 02, 03), L (01 to 30). If withholding keys and sub keys are not defined and assigned to tax rates, expense reports are populated with the default value A00 and all other transactions populated with the default value G01.

The Withholding Magnetic Format for Spain XML Data extract file contains additional data elements:

- Header elements
 - ERP Cloud Program Version - EXTERNAL_VERSION
 - Legal Entity primary contact name, phone and email - G_LEGAL_ENTITY - FULL_NAME, EMAIL_ADDRESS and PHONE_NUM
- Detail records
 - Supplier Type and Tax Organization Type - C_VENDOR_TYPE and C_ORGANIZATION_TYPE

Follow these steps:

1. Implement changes related to the keys and sub keys reported in the Withholding Magnetic Format for Spain output file:
 - a. Navigate to the Setup and Maintenance, Manage Tax Reporting Types.
 - b. Create new Tax Reporting Type JEES_WHT_KEY_SUBKEY
 - c. Add new Tax Reporting Codes:
Tax Reporting Code: G01

Description: G: Income from economic activities: Professional activities to which the general withholding rate is applicable: Sub key 01
 - d. Define all required Tax Reporting Codes for Spanish withholding keys and sub keys. Example: A01, G03, H04.
 - e. Save and Close.
2. Associate Tax Reporting Code JEES_WHT_KEY_SUBKEY to the Withholding Tax Rates Codes:
 - a. Navigate to Setup and Maintenance, Manage Tax Rate and Tax Recovery Rates.
 - b. Search for Withholding Tax and define Search Withholding Tax Rates parameters or create new Withholding Tax Rate.
 - c. Associate Withholding Tax Rate with Tax Reporting Codes with below details:
 - d. Save and Close.

Here are some tips and considerations:

- The keys and sub keys values are defined as Tax Reporting Code for the Tax Reporting Type Code JEES_WHT_KEY_SUBKEY. The Tax Reporting Code for key and sub key is assigned to the Withholding Tax Rate. In the Withholding Magnetic Format for Spain output file the Key is the first position from the Tax

Reporting Code and is reported in the position 78. The sub key is the second and third position from the Tax Reporting Code JEES_WHT_KEY_SUBKEY and is reported in the position 79 and 80.

- If withholding keys and sub keys are not defined and assigned to tax rates, expense reports are populated with the default value A00 and all other transactions populated with the default value G01.
- Define primary Legal Entity contact name, primary phone and email, Supplier Type and Tax Organization Type for supplier to extract values in the Withholding Magnetic Format for Spain XML extract data file.

Submit Online VAT Reporting for Spain - Addition

Use the Online VAT Reporting for Spain process to report VAT online.

Use **Addition** as the **Communication Type** to report new transactions, which are in the **Ready** or **Null** status, for tax reporting. You can submit the Online VAT Reporting for Spain process daily, every other day, or multiple times a day.

Complete these steps to submit Online VAT reporting for Spain:

1. Navigate to the **Scheduled Processes** work area, and submit the **Online VAT reporting for Spain** process.
2. On the **Process Details** dialog box, enter the parameters in this table:

Field	Value
Tax Registration Number	Enter the tax registration number.
Currency	Select your reporting currency. The default value is the ledger currency of the primary ledger. Note: The Reporting/Secondary Ledger Name is activated only if the currency is NOT the ledger currency.
Register Type	Select any of these register types: <ul style="list-style-type: none"> ○ Issued invoices register ○ Received invoices register ○ Intra-EU invoices register ○ All
From Date	Select a date.
To Date	Select a date.
Communication Type	Select Addition .
Selection Mode	Select one of these options: <ul style="list-style-type: none"> ○ Review: To verify your report before submission.

Field	Value
	<ul style="list-style-type: none"> ○ Report: To submit your report directly.

This table displays the processes that are submitted depending on the register selected as the parameter:

Register Name	Processes Submitted	Entities Updated After Submission
Issued Invoices Register	Invoices for the Issued Invoices Register	Receivables Invoices
Issued Invoices Register	Collections for the Received Invoices Register	Receipt Applications
Received Invoiced Register	Invoices for the Received Invoices Register	Payables Invoices
Received Invoiced Register	Payments for the Received Invoices Register	Payment Applications
Selected Intra-EU Transactions Register	Selected Intra-EU Transactions Register	Receivables and Payables Invoices

Use the Online VAT Reporting for Spain process to perform these actions:

- Select Issued Invoices Register as the Register Type. The process then selects the AR transactions in the modified status and generates an output file in a predefined format for the register type. The process also initiates payments message creation for any payments corresponding to deferred tax transactions in the selected date range.
- Select Review as the Selection Mode to get XML messages for your review. These messages indicate the review only status, and must not be submitted to the tax authority.
- Select Report as the Selection Mode so that the XML messages are created for submission. These messages are submitted to the tax authority. The transactions and payment applications are also updated as submitted. The transaction status is updated as submitted.
- Update the transactions you have modified by updating transaction status at header level as Modified. You can correct the data on the transactions, save the transaction and then submit the Online VAT Reporting for Spain process in Modified mode. If you do not want to submit a transaction that is returned by tax authorities, change the transaction status to **On Hold** to prevent the transaction from being submitted when you run the process.

How Annual Online VAT Reporting for Spain is Processed

You can use either the Cash Collections register or the Investment Goods register to submit the Annual Online VAT reporting for Spain.

Cash Collections Register

Use the Cash Collections Register to report your cash collections from your customers who have yearly amounts exceeding 6000 EUR that are paid in cash.

Submit the Cash Collections Register

To submit the register, complete these steps:

1. Submit the Cash Collections Register from the **Setup and Maintenance** work area.
2. The **Process Details** dialog box opens. Select a **Tax Registration Number**.
3. Select **Cash collections register** as the **Register Type**.
4. Enter the **Year** for which you want to report the cash collections.
5. Select **Addition** as the **Communication Type**.
6. Select **Report** as the **Selection Mode**. You can also submit the process in **Review** mode to verify the data that you have entered.

When you click **Submit** with **Report** as the **Selection Mode**, the reported customer accounts and sites are updated with the **Submitted** status.

Note: If a customer has multiple sites but a single Taxpayer ID or Tax Registration Number, cash payments from all sites are added and reported together. For customers with both Spain and other EU country sites, the reporting process groups the cash receipts separately based on the Taxpayer IDs or Tax Registration Numbers.

Investment Goods Register

The Investment Goods Register, which contains the fixed assets transactions, contains these transaction types for Invoices:

- Addition
- Modification
- Deletion
- Inquiry

Note: The register reports information about the year-end investment goods. Hence, the investment goods invoices that appear in the register are already reported in the Received Invoices register.

Prerequisites

Complete these setups before you submit Annual Online VAT Investment Goods Register:

1. Select your asset categories on the Manage Asset Categories page. Select the category and enter one of the predefined values for the **Investment Goods Reporting** field. The values are **10 Years**, **5 Years**, and **No**. If you don't enter any value, No is applied as the default value.
2. Manage your asset level exceptions in the Update Descriptive Details page. On the page, select the asset you want to modify, and click **Update Descriptive Details**. You can either enter or change the value in the **Investment Goods Register** field.

Submit the Annual Online Investment Goods Register Process

Run the Annual Online Investment Goods Register process once all your yearly asset invoices are fully processed, and the corresponding asset additions and cost adjustments are created in your Assets application. To submit the process, complete these steps:

1. Submit the **Annual Online Investment Goods Register** from the **Setup and Maintenance** work area.
2. The **Process Details** dialog box opens. Select a **Tax Registration Number**.
3. Select **Cash collections register** as the **Register Type**.
4. Enter a **From Invoice Date**.
5. Enter a **To Invoice Date**.
6. Click **Submit**.

An Asset invoice is eligible to be reported only if the invoice meets these conditions:

- The asset invoice date is within the **From Invoice Date** and **To Invoice Date**.
- The asset belongs to one of the two types for **Investment Goods Reporting: 10 years**, and **5 years**.
- The Asset level override value isn't **No**. A blank value doesn't mean No in this context.

If all the conditions are met, the Annual Online Investment Goods Register process selects and lists all the required information in an XML format. You can edit and modify the XML file before submitting to the tax authorities. You can also use an excel format for your output.

How Annual Online VAT Response for Spain is Processed

After the application receives the response messages, you can upload the messages for confirmation processing. Each response message is assigned a unique ID.

Upload the Confirmation Response Messages

Complete these steps to upload the response messages:

1. Sign in to the UCM server.
2. Select **New Check-In**.
3. The Content Check-In Form is available. Enter the required values.
4. Click **Browse** to select the XML confirmation message as your primary file.
5. Click **Check In** to receive a unique Content ID. Use Content ID as a parameter for the respective register when you run the confirmation process

Submit the Annual Online VAT Response for Spain process

Complete these steps to submit the process:

1. Search for the **Annual Online VAT Response for Spain** process on the **Setup and Maintenance** work area.
2. The **Process Details** dialog box opens. Review all the parameters, and click **Submit**.
3. After you click **Submit**, the process updates customer accounts and sites that were reported to the tax authorities with the corresponding confirmation information.
4. Ensure that the **Tax Authority** status is now **Approved**. This means that the record is correctly validated by the tax authority.

Retroactive Reporting

Use retroactive reporting to report VAT transactions in any given range for which the company has not already submitted VAT data online.

Retroactive reporting includes required and optional setups.

Setup Required for Retroactive Reporting

Here is the setup list required for retroactive reporting:

- Lookup Type: ORA_JEES_SII_RETROACTIVE_DATES
- Lookup Codes: The default lookup code is ORA_EFFECTIVE_DATES, with the start date as January 1, 2017 with the **Retroactive** option enabled. The application automatically assumes June 30, 2017 as the end date. You can change the dates, or disable the original line and add a new range.
 - **Note:** Enable only one lookup code before you run retroactive reporting.
- Application and Party Level Lookups: The application and party level default value are the same for normal and retroactive reporting.
- Global Descriptive Flexfields: You don't need additional transaction level global descriptive flexfields for Online VAT Reporting for Spain. Changes in global descriptive flexfields are only for the retroactive data that has been reported through Modelo reporting. These Modelo contexts are predefined:
 - JE_ES_MODELO347
 - JE_ES_MODELO347PR
 - JE_ES_MODELO349
 - JE_ES_MODELO415_347
 - JE_ES_MODELO415_347PR

This table displays those segments that apply to all the Modelo contexts discussed previously:

Entry Level	GDF Values	Type	Display Type	Read Only	Description	Additional Comments
AR Transaction Header	Transaction Status	Character	LOV	No	R - Ready, S-Submitted, O-On Hold, M-Modified, D-Directly Reported	

Entry Level	GDF Values	Type	Display Type	Read Only	Description	Additional Comments
	Tax Authority Status	Character	Text Box	Yes	N-New, cepted, AE-Accepted with Errors, R-Rejected	Only system update is allowed. Updated when you run the confirmation process.
	Message Code	Character	Text Box	Yes	Message codes that are available at SII web site.	Only system update is allowed. Updated when you run the confirmation process.
	Message Description	Character	Text Box	Yes	Message code descriptions that are available at SII web site.	Only system update is allowed. Updated when you run the confirmation process.
	Date Last Updated	Date	Date	No	Updated when the submission or confirmation processes are run.	

Optional Setup

Consider these actions before you run retroactive reporting:

- To assign user-defined attributes to any of the invoices in the retroactive date range, such as document type override, query the transactions and update the necessary changes in the **Regional Information** tab with **Online VAT Reporting for Spain**. Don't make any other SII changes to your transactions.
- Ensure the application and party level defaults are complete.
- If you have excluded supplier or customer accounts or sites from selection and if you have exceptions for these third parties and sites, query the corresponding transactions in both Payables and Receivables and select **E** in the **Regional Information** field.
- You don't need to perform any transaction level changes. If you need any of the invoices in the retroactive date range to be assigned with non-default attributes, such as document type override, query these transactions and update the necessary changes under Regional Information with 'Online VAT Reporting for Spain' context. Don't attempt to make any other SII changes to your transactions.

IMPORTANT: Your transaction may already have a Modelo context assigned. To avoid inconsistency, don't make any context changes. If you change the context from 'Modelo' to 'VAT Reporting for Spain', you will lose all

modelo related data that you previously entered for the transaction. This also means that this transaction will not be selected for modelo reporting auditing purposes.

- Ensure system and party level defaults are complete. These are documented in previous sections except for the new lookup 'ORA_JEES_RETROACTIVE_DATES', which is documented earlier in this section.
- If you have excluded supplier/customer accounts or sites from selection and if you have exceptions for these third parties and sites, query corresponding transactions in both Receivables and Payables and enter 'E' (Excluded) in the regional information fields.
- For Issued Invoices Register, you may want to exclude one or more batch sources from reporting. For this you can set receivables batch source global descriptive flexfield 'Exclude from Online Reporting' to 'Yes'.

Producing the Retroactive Reports

This's what a typical process flow looks like:

Related Topics

- [Online VAT Reporting for Spain](#)

Create Retroactive Reports

This topic includes details about the retroactive reports for Spain.

Overview

Use retroactive reports to generate and report transactions that occurred before:

- The start date of online reporting, which is July 1, 2017.
- The company revenue exceeded six million Euros.

Create Reports

Use these steps to create retroactive reports for Spain:

1. On the **Scheduled Processes** work area, run the **Online VAT Reporting for Spain** process.
2. Select **Yes** for the **Retroactive** parameter in the Process Details dialog box. The default value is **No**.
Note: Don't select **Selected Intra-EU Transactions Register** as the **Register Type** for retroactive reporting.
3. The report generates XML messages for the selected date range. Ensure that the date range you entered is consistent with the enabled lookup code start and end dates for the ORA_JEES_RETROACTIVE_DATES lookup.
4. Enable the **Retroactive** parameter.
5. If you're running the report for the first time, select **Addition** as the **Communication Type**. For subsequent times, select **Modification** as the **Communication Type**.
6. Submit the Online VAT Reporting Confirmation for Spain.
7. You can now submit the retroactive reports to the tax authorities.

Legislative Update for Online VAT Reporting for Spain

You can use new tags and values in Online VAT Reporting for Spain related to customers, agreements, and legal representative information.

This feature allows the Tax Authority to accept the tax information of an Uncertified Client with 07 code and the customer details can be updated after the customer is certified. This 07 code from the Customer Code field was missing from the SII XML Online VAT Reporting for Spain after the latest changes in the legislation.

The 'numregistroacuerdofacturacion' (Billing agreement number) that the customer has with a third party and the local tax authority is required for these reports:

- Issued Invoices
- Received Invoices
- Investment Goods (Refer Annual Online VAT Reporting for Spain)
- Selected Intra EU Transactions Register

The Customer Code field includes a new code: 07 that indicates Uncertified Client. When the customer is uncertified, the Company sends this code to the Tax Authority so that the customer can be certified in the future. The Tax Authority accepts the tax information with errors, allowing you to update the customer details in a future without any changes. This code was not available previously.

FAQs for Spain

How can I exclude transactions from immediate submission?

To postpone submitting a ready transaction, change the transaction status to On Hold. Once the transaction is ready for submission, update the transaction status back to Ready.

How can I mark a transaction for reporting directly to the tax authorities?

To mark a transaction for reporting manually through the tax authorities' website, change the Transaction Status to Directly Reported.

You must not change the submission status after you report the transaction. If your reporting wasn't successful, contact the tax authorities.

Turkey

Exchange Rate Difference Report for Turkey

This topic includes details about the Process Exchange Rates Difference report.

Overview

This report summarizes the exchange rate differences for invoice, credit memo, and journal. Use this report to:

- View ledger currency including tax components.
- Print the eligible gain/loss lines that are processed by the Process Exchange Rates Difference job for each trading partner and site.

Key Insights

You must run the Process Exchange Rate Difference job before running this report. The report output is a predefined PDF format that displays the following information:

- Eligible gains/losses in terms of the total exchange rate difference amount, recorded for a trading partner enabled to generate the exchange rate difference invoice.
- Total tax amount segregated from the total exchange rate difference amount.
- Line level information for the invoice, credit memo, and journal.

Use the report grouping to view the details of eligible gain/loss incurred and how it is processed at various levels. The trading partner and trading partner site at each level are the final grouping level. The following combinations are used:

- Exchange rate difference type, creation option, status, transaction currency, and receipt currency
- Exchange rate difference type, and creation option
- Exchange rate difference type

When you search for processed records, the report displays additional information about reference numbers of the invoices, credit memos, and journals. This reference number can be used to query exchange rate difference invoices, credit memos, and journals.

The following figure is an example of the report.

Report Parameters

The following table describes selected process parameters:

Parameter	Description
Source	Specify the subledger application for which the report must be run. The available options are Accounts Receivables and Accounts Payables. The default value is Accounts Receivables.
Business Unit	Specify the business unit for which the report must be run. The default value is the business unit to which a user has access. If a user has access to multiple business units, the default is the last used business unit.
Period	Specify the period for which the report must be run. The list of values includes all the open subledger periods. The default value is the earliest unprocessed open period if the exchange rate difference is enabled. Otherwise, it is the earliest open general ledger period.
Unprocessed Only	Specify if the report must be printed for unprocessed or processed records. If you select Yes, only the lines that were processed in the preview mode of the exchange rate difference job are printed. If you select No, all the invoices, credit memos, and journals are printed.
Report Mode	Specify the layout of the report. Valid values are Detail and Summary. If the report is submitted in the detail mode, it displays both header and line level details for each record. If the report is submitted in the summary mode, it displays only the header level details for each record.

United Kingdom

Reverse Charge Sales Listing Report for UK

This topic includes details about the Reverse Charge Sales Listing Report for UK.

Overview

The Reverse Charge Sales Listing Report for UK lists the sales transactions for UK that are created in Oracle Fusion Receivables. It lists transactions for high value electronic goods that are subjected to the Reverse Tax Charge and reported to HRMC (Her Majesties Revenue and Customs). Reported data is grouped by customers.

The following figure is an example of the report.

ORACLE		Reverse Charge Sales Report										Report Date 02-JUN-2014				
eBTax_UK Oracle 2																
Report Parameters																
Legal Entity		eBTax_UK Oracle-2														
Tax Registration Number		GB864431225														
Tax Reporting Type		REVERSE CHARGES FOR UK														
Tax Reporting Code		REVERSE CHARGES FOR UK														
From Tax Point Date		01-01-2014					To Tax Point Date					31-12-2014

			0									0		3		

Key Insights

Before you run the report, configure self-assessed tax in Oracle Fusion Tax and ensure that transactions with self-assessed tax are available for reporting.

The report output is available in two formats:

- XML: Provides a readable view of the report.
- CSV: Creates the electronic output to submit the report to HMRC.

HMRC requires a specific format for the CSV version, no specific format for the XML output.

Report Parameters

The following table describes selected report parameters of the report:

Parameter	Description
Legal Entity	Specify the legal entity submitting the declaration to the tax authority.
Tax Registration Number	Specify the tax registration number of the legal entity or legal reporting unit submitting the declaration to the tax authority.
Tax Reporting Type	Indicate the appropriate reporting type that you defined to be used for reporting of reverse charges. Tax reporting type identifies a specific unit of information, such as a date or a text comment, to associate with a specific tax usage.
Tax Reporting Code	Specify the appropriate tax reporting code.
From Tax Point Date and To Tax Point Date	Print all the transactions based on the selected tax point date range.

Frequently Asked Questions

Implement and Use Guidelines for Reverse Charge Sales Listing Report

Reverse Charge Sales Report - Overview

This document explains the implementation and usage guidelines for the “Reverse Charge Sales Listing Report for UK”, using an end-to-end flow example. Details provided include pre-requisite setup, important transaction entry aspects, and report output details.

The report provides a record of UK sales for the high value electronic goods subject to the reverse tax charge reported to HMRC (HM Revenue & Customs). In particular, the specified goods to which the reverse charge applies are :

- Mobile telephones
- Integrated circuit devices, such as microprocessors and central processing units, in a state prior to integration into end user products
- Emissions allowances, emissions reduction units and emissions reduction certificates

The reverse charge only applies to the sale and purchase of specified goods and services:

- between UK tax registered organizations.
- for goods, where the VAT exclusive value of the supply is above the £5,000.00 threshold.
- where the goods and services are bought and sold for business use.

The Reverse Charge Sales Listing Report for UK considers only the sales side. Therefore the customer has the responsibility, rather than the supplier, to account to HM Revenue and Customs (HMRC) for VAT on supplies of the specified goods or services.

Further details can be found on the HMRC web site. See the Appendix.

Assumptions and Prerequisites for UK VAT Report

Here are the prerequisites to generate VAT reports for the UK

Before you proceed, you must have already set up these entities:

- Data Security – For more information, see the Fusion Security topical essay available on cloud.oracle.com
- Geographies

- Enterprise Structure
- Tax Regime to Rate setup
- Tax Party Profiles
- Tax Rules
- Customers
- Common Options for Oracle Payables and Oracle Receivables
- Receipt Classes and Methods

You must complete the Implementation Project for your organization before commencing the Feature Specific Setup. For more information, see the Analyze and Report section of Oracle Financials Cloud (Get Started) web site.

Feature Specific Setup

Legal Reporting Unit Tax Profile Registration

You must set the Legal Reporting Unit tax profile as Self Assessment so that the tax is calculated correctly for UK Reverse Charges. Register the Legal Reporting Unit tax profile for Self Assessment on the Tax Registration page.

Follow these steps:

1. Navigate to Setup and Maintenance and click Manage Party Tax Profiles.
2. Search for the **Legal Reporting Unit Tax Profiles**.
3. Search and select the specific Legal Reporting Unit value that corresponds to the Legal Entity used on Receivables invoices for which self-assessed tax is to be applied.
4. Review the **Tax Registrations** tab on the existing Legal Reporting Unit Tax Profile selected. Create a tax registration for your UK tax regime if you have not done so already.
5. After defining the tax registration record, place your cursor on the Tax Regime Code for which self-assessed tax you want to use. Then, select **View Registration Details**.
6. In the Edit Tax Registration page, enable the **Set as self-assessment (reverse charge)** check box to confirm your selection.
7. Click OK.

Complete Customer Party Tax Profile Registration

Customers must be registered to enable reverse charges for the UK. The registration numbers are then displayed in the report.

Follow these steps:

1. Navigate to Setup and Maintenance and click Manage Party Tax Profiles.
2. Check if the **Tax Registration Number** field displays the registration number for the third party site tax profile.
3. Check if the **Tax Registration Status** field displays the Registered status:
4. Click OK.

Manage Taxes

You must set up the VAT tax for the UK Tax Regime. This is mandatory for the tax status code setup.

Follow these steps:

1. Navigate to Setup and Maintenance and click Manage Taxes.
2. Edit the GB VAT tax value.
3. In the Edit Tax: GB VAT dialog box, complete the setup as needed.

You must pay VAT to HMRC at the **Tax rate** of 20% of the VAT exclusive selling price for reverse charge goods.

4. Click Save.

Assign Tax Reporting Codes to the Tax Reporting Type

Tax reporting types and codes are mandatory to identify your reverse charge transactions. The report displays the transactions for your Tax Reporting Type and Code combination.

Follow these steps:

1. Navigate to Setup and Maintenance and click Manage Tax Reporting Types.
2. Edit the Reverse Charges for UK tax reporting type code.
3. In the Edit Tax Reporting Type: REVERSE CHARGES FOR UK dialog box, select these values:
 - a. Check the **Tax status** reporting type use box.
 - b. Click the plus icon and assign the **Reverse Charges for UK** tax reporting code.
4. Click Save.

Manage Tax Status

The tax status represents the VAT for the UK tax regime. You must attach the tax reporting codes for the reverse charges so that the transactions can easily be identified for reporting purposes.

Follow these steps:

1. Navigate to Setup and Maintenance and click Manage Tax Statuses.
2. Edit the Tax Status Code – GB_UK_MTIC_ZERO_RATE.
3. In the Edit Tax Status: GB_UK_MTIC_ZERO_RATE dialog box, click the plus icon. Browse and attach the **Tax Reporting Type Code** to the GB UK Missing Trader Intra community Zero Rate with Reverse Charge.
4. Click Save.

Manage Determining Factor Sets

The Tax Determining factors are required to automatically apply the correct tax rule for the Receivables transactions so that the transactions are identified as being applicable to Reverse Charges.

Follow these steps:

1. Navigate to Setup and Maintenance and click Manage Determining Factor Sets.
2. Select the Tax Determining Factor Set Code – GBMTIC NEW ZERO NO INV
3. Configure the tax determining factors and assign these Reverse Charge tax combinations when they are true:
 - o Ship to and Ship from is located in the UK.
 - o Defined Product Category is added to Receivables transaction.
 - o The customer is registered within the Party Tax Profile.
 - o The transaction contains the correct Business Transaction Category.
4. Navigate to Setup and Maintenance and click Manage Tax Condition Sets.
5. Select the Condition Set Code - GBMTIC NEW ZERO NO INV.
6. Click Save.

Set Up Tax Status Rules

The Tax Status Rules are required to attach the tax condition set for rule derivation. You must set up a tax status rule and attach the tax condition set.

Follow these steps:

1. Navigate to Setup and Maintenance and click Manage Tax Rules.
2. Select the Rule Code - GBMTIC ZERO RATE NEW AR.
3. Navigate to Setup and Maintenance and click Manage Tax Rules.
4. Select the Rule Code - GBMTIC ZERO RATE NEW AR.
5. Click OK.

Enter Receivables Transactions

You can enter Receivables transactions.

Follow these steps:

1. Navigate to Receivables Billing, Create Transaction.
2. Create invoices for your Business Unit: Select your Legal Entity in the Miscellaneous tab.
 - a. Enter the First-Party Tax Registration Number.
 - b. Select the Product Category and Transaction Business Category.

3. Complete the invoice.

The report output displays the transactions entered in Receivables with these characteristics:

- o Rounded to the nearest Pound.
- o Credit transactions are added to the month of the transaction date.
- o Discounts are applied to transaction when the receipt is entered.

Reporting

Run Report for Receivables Transactions

You can run the Reverse Charge Sales Listing Report for UK.

Follow these steps:

1. Navigate to Tools, Scheduled Processes.
2. Schedule the process Reverse Charge Sales Listing Report for UK using these mandatory parameters:
 - o Legal Entity
 - o Tax Registration Number
 - o Tax Reporting Type
 - o Tax Reporting Code
3. Optionally, enter the Tax Point Date range for the dates that you want to report on.
4. To run the report for a calendar year:
 - a. In the From Tax Point Date field, enter 1 Jan YY.
 - b. In the To Tax Point Date field, enter 31 Dec YY.
5. Click Submit.

Create a CSV File

HM Revenues and Customs () state that you may either enter the information directly on-line or you can upload a comma separated values (CSV) file. The report output can be created in .csv format.

Follow these steps:

1. Click the Advanced button.
2. Select the Output tab.

3. Select the U.K. Reverse Charge Sales List Report CSV Layout.
4. Select the Format of Text.
5. Submit the Report.
6. Save the output file as a csv file.
7. To verify the content, submit the report using pdf or html format, using the U.K. Reverse Charge Sales List Report Layout.

Report Review

You can verify the content of the U.K. Reverse Charge Sales List Report Layout.

The PDF report output format includes:

- A cover page, showing the report parameters

End Of Report

In this example, the Invoice Amount of £11,414.00 is highlighted. The report declares the whole pound amount only, and the amount is rounded off to the nearest pound.

VAT Reporting for the UK

This topic explains the implementation and usage guidelines for the Reverse Charge Sales Listing Report for UK, using an end-to-end flow example. Details provided include pre-requisite setup, important transaction entry aspects, and report output details.

The report serves as a record of UK sales for high-value electronic goods subject to the reverse tax charge, which are reported to HMRC (HM Revenue & Customs). Specifically, the specified goods to which the reverse charge applies are:

- Mobile telephones
- Integrated circuit devices, such as microprocessors and central processing units, in a state prior to integration into end-user products
- Emissions allowances, emissions reduction units, and emissions reduction certificates

Please note that the reverse charge applies only to the sale and purchase of specified goods and services:

- Between UK tax registered organizations
- For goods, where the VAT exclusive value of the supply exceeds the £5,000.00 threshold
- Where the goods and services are bought and sold for business use

It is important to understand that the Reverse Charge Sales Listing Report for the UK solely considers the sales side. Responsibility for accounting VAT to HM Revenue and Customs (HMRC) for supplies of the specified goods or services lies with the customer, not the supplier.

Key Insights

Before implementing the Reverse Charge Sales Listing Report for the UK:

- Set up the following entities:
 - Geographies
 - Enterprise Structure
 - Tax Regime to Rate setup
 - Tax Party Profiles
 - Tax Rules
 - Customers
 - Common Options for Oracle Payables and Oracle Receivables
 - Receipt Classes and Methods

Complete the implementation project before commencing the Feature Specific Setup

Feature Specific Setup

You'll need to set up the following before running the Reverse Charge Sales Listing Report for UK:

Legal Reporting Unit Tax Profile Registration

Ensure that the Legal Reporting Unit tax profile is configured as Self Assessment so that UK Reverse Charges are calculated correctly. Register the Legal Reporting Unit tax profile as Self Assessment. Follow these steps to configure the Legal Reporting Unit tax profile correctly for UK Reverse Charges:

1. Go to the Manage Party Tax Profiles task.
2. Search for Legal Reporting Unit Tax Profiles based on the specific Legal Reporting Unit value associated with the Legal Entity used on Receivables invoices requiring self-assessed tax.
3. Review the Tax Registrations tab within the selected Legal Reporting Unit Tax Profile. If not already done, create a tax registration for your UK tax regime.
4. Once the tax registration record is defined, place your cursor on the Tax Regime Code for which self-assessed tax is desired, and then select View Registration Details.
5. On the Edit Tax Registration page, ensure that the Set as self-assessment (reverse charge) option is selected.

Customer Party Tax Profile Registration

To comply with UK Reverse Charges, ensure that your customers are registered. You need to create customers and make sure to enter their Registration Number in the third-party site tax profile. Verify the Tax Registration Status and Registration number on the Edit Tax Registration page.

Taxes

To set up the VAT tax for the UK Tax Regime, follow these steps:

1. Go to the Manage Taxes task through the Navigator.
2. Under Tax - GB VAT, you need to configure the Tax Rate so that you (as the customer) pay VAT to HMRC at the rate of 20% of the VAT exclusive selling price for reverse charge goods.

Tax Reporting Types and Codes

To identify your reverse charge transactions, you need to set up Tax Reporting Types and codes. The report will display the transactions based on your Tax Reporting Type and Code combination.

Here are the steps:

- Access the Manage Tax Reporting Types task through the Navigator.
- Enable the Reporting Type Use as Tax status.
- Assign the Tax Reporting Code to the Tax Reporting Type.

Tax Status

The tax status is used to represent the VAT for the UK tax regime. It is also necessary to attach the tax reporting codes for the reverse charges, so that the transactions can easily be identified for reporting purposes. Here's how to do it:

1. Navigate to the Manage Tax Statuses task.
2. Locate the Tax Status Code - GB_UK_MTIC_ZERO_RATE.
3. Attach the Reporting Type Code to the GB UK Missing Trader Intra community Zero Rate with Reverse Charge tax status.

Tax Determining Factors

The Tax Determining factors are required to automatically apply the correct tax rule for the Receivables transactions. This will ensure that the transactions are identified as being applicable to Reverse Charges. Follow these steps:

1. Navigate to Manage Determining Factor Sets task.
2. Locate the Determining Factor Set Code – GBMTIC NEW ZERO NO INV.
3. Configure the tax determining factors and assign the Reverse Charge tax combinations when the following conditions are met:
 - Ship to and Ship from are located in the UK.
 - A Defined Product Category is added to the Receivables transaction.

- The customer is registered within the Party Tax Profile.
- The transaction contains the correct Business Transaction Category.

Tax Status Rules

To ensure proper rule derivation, you need to set up Tax Status Rules and attach the tax condition set. Follow these steps:

1. Access the Manage Tax Rules task through the Navigator.
2. Create a tax status rule with the Rule Code - GBMTIC ZERO RATE NEW AR and attach the appropriate tax condition set.
3. Also, configure another tax status rule with the Rule Code - GB VAT STATUS and link it to the corresponding tax condition set.

Transaction Entry in Receivables

To properly enter Receivables transactions, follow these steps:

1. Access the Create Transaction task using the Navigator.
2. Create invoices for your Business Unit, ensuring you take note of the following details:
 - Select your Legal Entity in the Miscellaneous tab.
 - Enter the First-Party Tax Registration Number.
 - Make sure to select the appropriate Product Category and Transaction Business Category.
 - Complete the invoice entry.

Keep in mind that the transactions you enter in Receivables will have the following characteristics in the report output:

- Amounts will be rounded to the nearest Pound.
- Credit transactions will be added to the month of the transaction date.
- Discounts will be applied to transactions when the receipt is entered.

Reporting for the UK

Report Submission

To submit the Reverse Charge Sales Listing Report for UK, follow these steps:

1. Access the Scheduled Processes from the Navigator.
2. Schedule the process Reverse Charge Sales Listing Report for UK.
3. Make sure to provide the following mandatory parameters:
4. Your Legal Entity
5. Tax Registration Number
6. Tax Reporting Type
7. Tax Reporting Code

Additionally, you have the option to specify the Tax Point Date range for the dates you wish to include in the report. Usually, the report is run for a calendar year. To do this:

- Enter 1 Jan YY for the From Tax Point Date
- Enter 31 Dec YY for the To Tax Point Date

Creating a CSV file

You have two options for submitting the information to HRMC. You can either enter it directly online or upload a comma-separated values (CSV) file.

To create the report output in .csv format, follow these steps:

1. Click the Advanced button.
2. Select the Output tab.
3. Choose the U.K. Reverse Charge Sales List Report CSV Layout.
4. Select the Format as Text.
5. Submit the report.
6. Save the output file as a .csv file.

You can submit your report in pdf or html format using the U.K. Reverse Charge Sales List Report layout. This will let you verify the content.

Russia

Customer Balance Reconciliation Report for Russia

Use the Customer Balance Reconciliation Report for Russia to comply with the Russian legislation on the 'Act of Reconciliation of Balance between Customer and Supplier'. You can create the report based on a legal entity and select the transactions based on a business unit. The report lists receivables documents (invoices, debit memos, credit memos) and customer payments to periodically reconcile settlements based on the act. You can also use this report to get the summary of reconciliation of balance between a customer and a supplier. The summary includes description number, document type, organization name, and invoiced amount.

Receivables and Payables Audit Report

This topic explains the implementation and usage guidelines for the Receivables and Payables Audit Report for Russia.

This report helps you comply with the requirements of the Russian Legislation on Credit and Financing. Using this report, you can present the audit results of settlements with vendors and customers. This report is issued in two sets and signed by the commission that performed the audit.

The report shows, balances for the customers or vendors and Receivables or Payables GL accounts for the given first party organization and division, on the reporting date. The "Addendum" section shows the list of documents that are the original sources for the payables and receivables transactions, including amounts, the start dates of debts, and the supporting documents details.

The amount is in functional currency, thus documents in foreign and conventional currency are converted in functional currency by the exchange rate defined on Transaction, Receipt or Payment.

You can submit the Receivables and Payables Audit Report for Russia through Enterprise Scheduling Services (ESS).

Here are the parameters of the report:

- Title page: Displays the report name and the report parameters.
- Heading section: Displays the first party organization details and document details.

- Debt section: Displays aggregated information of the balance for the customer or receivables account and vendor or payables account for the selected documents.
- Liability section: Displays aggregated balance information for the customer or receivables account and vendor or payables account for the selected documents.
- Addendum section: Displays the list of documents that are the origin sources for the payables and receivables transactions, including amounts, the start dates of debts, and the supporting documents details.

Assumptions and Prerequisites

We assume that you have already configured the following entities:

- Data Security
- Geographies
- Enterprise Structure
- Tax Regime to Rate setup
- Tax Party Profiles
- Tax Rules
- Suppliers
- Customers
- Procurement Business Function
- Common Options for Payables and Receivables
- Receipt Classes and Methods
- Financial Configuration

You must complete the Implementation Project for your organization before commencing the Feature Specific Setup outlined below. For more details, refer to the Appendix.

Feature Specific Setup

This part describes setup requirements for Receivables and Payables Audit Report for Russia. Setups for

Organization, Suppliers, and Customers are needed for the proper outputting Organization's or 3d parties' names and legally required identification numbers and classifiers.

Add Privileges

Here's how you can define privileges for Receivables and Payables Audit Report for Russia:

- Navigate to Security Console.
- Search for Roles.
- Edit Role Tax Manager.
- Add function security policy.

Address Style Format for Russia

Define address format for Russia as follows (task Manage Address Formats):

Prompt (*-)	Address Element
-------------	-----------------

Country*	Country
Postal Code	Postal Code
State*	State
County	County
City	City
Population Aggregate	Additional Address Attribute 1
Street	Additional Address Attribute 2
Building	Building
Bulk	Additional Address Attribute 3
Office	Additional Address Attribute 4

Note: Address element Country should have Attribute Transformation Function = hz_format_pub.get_tl_territory_name (COUNTRY).

Attach this address style format to the Russian Federation.

Use Russian Address Style in Geography validation, if you need to control addresses by Geography dictionary (task “Manage Geographies”).

Organization attributes

Setup the following Organization attributes and classifiers:

- Company Long Name: Company Long Name is stored in the Registered Name field of Legal Entity registration for the defined jurisdiction.
- Company Short Name: Company Short Name is stored in the Registered Name field of main LRU registration for the defined jurisdiction.
- Company Main Address: Legal Address for Legal Entity registration in the defined jurisdiction.
 - Note: Address of identifying registration is visible as the address of Legal Entity.
- Company INN (INT): INT field of Legal Entity registration for the defined jurisdiction Russia Tax.

Suppliers

Setup the following Supplier attributes:

- Supplier Name: Field Supplier of the Manage Suppliers page (tab Profile)
- Supplier Site Name: Field Site of the Manage Suppliers page (tab Sites)
- Supplier Site Address: Supplier site address. Regional information segments on supplier site, context Supplier Site Information for Russia:
 - State
 - County
 - City
 - Population Aggregate
 - Street

- Building
- Bulk
- Office
- Supplier INN (INT): Supplier Taxpayer ID

Customers

Setup the following Customer attributes:

Customer Name	Field Name of the Create or Edit Customer page
Customer Site Name	Field Site Name of the Create or Edit Customer Site page
Customer INN (INT)	Taxpayer Identification Number of the Create or Edit Customer page

Supporting Reference

To provide additional flexibility, this report uses data from the Subledger Accounting (SLA) supporting references to fill the column Agreement (Description, number, date).

If the SLA supporting reference called FIN_JE_RU_CONTRACT is set, the Agreement (Description, number, date) column of the report will be filled with the data from supporting reference, in other cases column will be left blank.

Navigation: Setup and Maintenance → Setup: Financials -> Receivables -> All Tasks -> Manage Supporting Reference

The Name and Short Name of the supporting references should be exactly as shown in the current document; Description could be any. Supporting references could be defined With or Without Balances based on business needs of the organization.

Approval Commission

The Approval Commission is represented as user lookup types with prefix JERU_CMTE, for example, JERU_CMTE_002.

Committee member data is stored in lookup codes:

- Lookup Code stores internal member code.
- Display Sequence defines the order committee members are printed in reports. The first person is treated as presiding commissioner (Chief of Commission). Display Sequence of presiding commissioner should not necessarily be 1.
- Lookup Meaning stores full person name. - Lookup Description person position.

You can create as many lookup types as you need for committees.

Transaction Selection

The following document details are printed in the Receivables and Payables Audit Report for Russia:

• **Receivables Section** - Receivables section includes the following documents:

- The **customer invoices** that meet the following conditions are included:
 - Transaction GL date is less than or equal to the reporting date (from report parameter).
 - The transaction has non-zero balance and is still in Open status on the reporting date. - Parameter open receivables should be ON for selected transactions.
 - Transaction receivables account number must be in the account range (from the report parameter).
- The **Receivables credit or debit memos** that meet the following conditions are included: - Credit or debit memo GL Date is less than or equal to the reporting date.
 - Credit or debit memo has unapplied amount earlier or equal to the reporting date. - Credit or debit memo account number must be in the account range.
- The **Payables debit memos** that meet the following conditions are included: - Debit memo GL Date is earlier or equal to the reporting date.
 - The debit memo has unapplied amount earlier or equal to the reporting date. - The debit memo account number must be in the account range.
- The **supplier prepayments** that meet the following conditions are included:
 - Prepayment has been paid on the reporting date (a paid date before reporting date).
 - Prepayment has an unapplied amount less than or equal to the reporting date.
 - The prepayment account number must be in the account range.

The Receivables section of the report shows aggregated information of the balance for the customer or receivables account and vendor or payables account for the selected documents.

Receivables section.

The lines in the Receivables section are sorted by the value in column 1.

Liability Section - Liability section should include the following documents:

1.The **Payables credit memos** that meet the following conditions are included:

- Transaction GL date is earlier or equal to the reporting date.
- The transaction has non-zero balance (unpaid and unapplied to invoice) and is still in Open status on the reporting date.
- Transaction receivables account number must be in the account range.

2.The **customer receipts** that meet the following conditions are included: - Receipt GL date is earlier or equal to the reporting date.

- The receipt has an unapplied or on-account amount on the reporting date. - Receipt receivables account number must be in the account range.

3.The **supplier invoices** that meet the following conditions are included: - Invoice GL Date is earlier or equal to the reporting date.

- Invoice has a non-zero balance on the reporting date.
- Liability invoice account number must be in the account range.

The section Liability of the report shows aggregated information regarding the balance for the customer or receivables account and vendor or payables account for the documents selected for this section.

Liability section

The lines in the Liability section are sorted by the value in column 1.

Addendum Section – The Addendum Document Details section shows the full list of open payables and receivables documents affecting the customer or vendor liabilities (all documents from the previous sections). The lines are sorted by Transaction Date and Third-Party Name.

All sections – All documents in all sections must be completed or validated and accounted.

Receivables and Payables Audit Report for Russia

You can submit this report through Enterprise Scheduling Services (ESS). Here are the report parameters:

- Legal Entity
- Business Unit
- Account
- Reporting Date
- Document Number
- Stamp Aria Number
- Stamp Aria Date
- Stamp Aria Transaction Type
- Stamp Aria Type of Activity
- Commission
- Print Addendum

Receivables Section

- Account name and Third-Party Name
- Account Number
- Balance Total
- Balance Including Debt Confirmed
- Balance Including Debt Non-Confirmed
- Balance Including Debt Expired

Liability Section

- Account name and Third-Party Name
- Account Number
- Posted Amount, Total
- Posted Amount Including Liability Confirmed
- Posted Amount Including Liability Non-Confirmed

- Posted Amount Including Liability Expired
- The Chief of Commission position, signature and full name
- Members Commission position, signature and full name

Addendum Section

- Sequence Number
- Name and Address of Customer/Supplier
- Accounted Debts For What
- Amount Receivables
- Amount Payables
- Supporting Document Description
- Supporting Document Number
- Supporting Document Date
- Accountant

XML extract – Purchase Order Number

In the XML extract is extracted Purchase Order Number defined on:

- Receivables Transaction Header
- Payables Invoice Header

You can customize the report output to display the Purchase Order number in the report output file.

VAT Reporting for Russia

This topic explains the implementation and usage guidelines for the VAT Reporting for Russia that includes the following components:

- Sales Ledger
- Purchase Ledger
- Sales Ledger - List of Adjustments
- Purchase Ledger - List of Adjustments
- VAT Invoice Register

The VAT Reporting for Russia feature allows you to report on issued and received transactions. The reporting is based on the Tax Allocation Process and uses tax boxes assigned to the transaction lines to include them in the appropriate report. The feature generates XML files containing data that helps meet Russian VAT reporting requirements.

Data provided in the XML files should be processed and formatted into the legal format required by the tax authority in Russia.

The section explains the prerequisite setup, important transaction entry aspects, report output details, and the business flow.

VAT Reporting for Russia Process Flow

- Transactions can be created manually, imported from spreadsheets, or imported from other sources. Regardless of creation method, all transactions must have additional Russia specific information entered in the following tax determinants: # Document Fiscal Classification
 - Transaction Business Category
 - User Defined Fiscal Classification
 - Product-Based Fiscal Classification
 - Regional Information fields that are available in the Additional Information region of the purchase and sales transaction entry pages.
- If transactions are missing Russia specific information, such as Revised Transaction or Revision Number or any of the tax determinants listed above, they should be updated with the relevant details.
- Transactions should be validated or completed, and accounted. Only accounted transactions can be reported.
- There may be specific cases where Tax Point Date needs to be overridden. For this purpose, you run Process Tax Point Date Adjustment process that updates Tax Point Date of the selected transactions.
- Next step is to run Select Transactions for Tax Reporting process for the desired reporting period.
- Tax allocation process allocates tax boxes to the transactions. Tax boxes are used to determine the report on which transactions should be reported.
- Review Tax Box Exceptions Report to check if there are any transactions that have not been allocated required tax boxes.
- Review Tax Allocation Listing to verify tax boxes allocated to the transactions.
- Run VAT Reporting for Russia process that generates XML files for the selected reports. You can run this process for all reports or a single report.
- Review XML files and prepare transactions to be reported in a legally required format.

Assumptions and Prerequisites

The information provided in this document assumes that the following entities have already been set up:

- Data Security
- Geographies
- Enterprise Structure
- Tax Regime to Rate setup
- Tax Party Profiles
- Tax Rules
- Suppliers
- Customers
- Procurement Business Function
- Common Options for Payables and Receivables

It is recommended that you complete the Implementation Project for your organization before you enter transactions and use the transaction tax reports.

Common Setup

Define the Tax Reporting Configuration to start using the Select Transactions for Tax Reporting, Tax Box Allocation, and VAT Reporting for Russia processes and reports.

The Tax Reporting Configuration determines a reporting configuration based on the Tax Registration Number (TRN) defined for Legal Reporting Unit tax registration. It is a basis for country-specific tax reporting. This configuration is referred to as the Tax Reporting Entity. Each Tax Reporting Entity is uniquely identified by an entity identifier that is a combination of the Legal Entity, Tax Registration Number, and Tax Regime.

Tax Box Allocation process and reports are based on the Select Transactions for Tax Reporting process which is a tool to prepare taxable records for further tax reporting. The Select Transactions for Tax Reporting is run for a given Tax Reporting Entity, tax period, and source. Each run of this process is assigned a system-generated reporting identifier. This reporting identifier drives all the underlying processes, such as Tax Allocation Process and VAT Reporting for Russia.

Set up the following:

- Tax Regime
- Legal Reporting Unit Tax Registration
- Tax Reporting Configuration
- Document Fiscal Classification for Russia VAT Transaction Types
- Transaction Business Category for Russia VAT Business Types
- User-Defined Fiscal Classifications for Russia VAT Operation Types
- Product-Based Fiscal Classification for Tax Agent Invoice Reporting on Purchase and Sales Ledger

Tax Agent Invoice for Russia

This topic explains the implementation and usage guidelines for the Tax Agent Invoice for Russia feature.

The Tax Agent Invoice for Russia feature enables you to create tax agent invoices for selected supplier payments. You can do the following:

- Open the Tax Agent Invoice ADFdi spreadsheet and search for supplier payments.
- Mark the payments for which you want to create a tax agent invoice and provide the additional information.
- Upload the spreadsheet to create the tax agent invoices.
- Review the tax agent invoices and add any additional information, then validate and pay the tax agent invoices.
- Print a copy of the invoice.

VAT on Export Report for Russia

This topic explains the implementation and usage guidelines for the VAT on Export Report for Russia feature.

The VAT on Export Report for Russia feature enables you to monitor the status of your export sales transactions. With this report you can:

- Identify export sales for which the export documentation is not fully confirmed.

- Monitor which export sales transactions have passed the grace days period, or for which the grace period will soon expire.
- See which export sales transactions are overdue and require a VAT on the export invoice for the unconfirmed amount.

The solution comprises the following components:

- VAT on Export Report for Russia.

This topic explains the implementation and usage guidelines, prerequisite setup, and important transaction entry aspects for the VAT on Export Report for Russia.

Complete the Setup

Complete the Receivables application setups and the related tax configuration.

Define Receivables transaction types for Export Sales, VAT on Exports, and VAT on Export refunds.

Export Sales Transaction Types

Create your export sales transaction types. You must enter the number of grace days allowed for each transaction type before a VAT on Export transaction is required.

VAT on Export Transaction Types

The VAT on Export transactions should be positive amounts. Also, consider other transaction attributes, such as whether these transactions should appear as Open Receivables.

VAT on Export Refund Transaction Types

The VAT on Export Refunds must be negative invoices. Again, consider carefully which other transaction attributes should apply for these transactions.

Security Privilege

The security privilege Prepare VAT Reports for Russia (JE_PREPARE_VAT_REPORTS_FOR_RUSSIA_PRIV) restricts access to the report submission. Assign the privilege to the roles you would like to provide access.

Enter Transactions in Receivables

Export Sales Transactions

When you know the date of export for a transaction, update the Export Date field in the Regional Information section for the transaction.

In addition, you must maintain the export confirmation amount each time you receive any customs confirmation documentation related to the transaction. Enter the cumulative amount in the invoice currency in this field.

The export confirmation amount should always be a positive amount.

VAT on Export Transactions

When an export sales transaction is not fully confirmed before the end of the grace period, you must create a VAT on Export invoice for the unconfirmed amount.

In the Cross Reference field, enter the transaction number of the export sales invoice to which it is related.

Note: The Cross Reference field is available in two different locations, when you enter a value in one location it is automatically copied to the other field.

VAT on Export Refund Transactions

When you receive the export confirmation documentation after the grace period, you are able to claim back the related VAT amount.

Enter a VAT on Export refund invoice. In the Cross Reference field, enter the transaction number of the export sales invoice to which it is related.

Note: The Cross Reference field is available in two different locations, when you enter a value in one location it is automatically copied to the other field.

You must also update the export confirmation amount on the original export sales invoice by adding the amount confirmed to the value already entered in the field.

Submit the VAT on Export Report

Navigate to the Scheduled Processes page and search for the VAT on Export for Russia process.

Enter your parameter criteria and submit the process.

Parameters

Business Unit (Mandatory)

Select the business unit for which you want to run the report. This must be a business unit to which your user profile has access.

As of Date (Mandatory)

The As of Date parameter is used to calculate the number of days overdue for a transaction based on the export date and the grace period days.

Note: The As of Date parameter value should not be earlier than the current date.

Entering a date in the future enables you to see in advance which export sales will soon become overdue and have not been fully confirmed.

Export Sales Transaction Type (Optional)

Leave this parameter blank to run the report for all your different export sales transaction types. Alternatively, select a specific transaction type to show in the report.

Customer (Optional)

Leaving this parameter blank will show all customers with export sales transactions of the type selected in the previous parameter.

You can select a specific customer if you want to see only their export sales transactions.

Show Fully Confirmed Exports

The default value is No. If an export sales transaction is fully confirmed, it will not be included in the report output.

If you want to see fully confirmed transactions, select the value Yes.

Note: Selecting Yes in combination with all export sales transaction types and all customers may result in a large report which could take some time to complete.

VAT Refund Time Limit in Years

This is the length of time after the grace period has passed, during which you may still obtain export confirmation documents and record a refund for the VAT on Export amount. Once this period has passed, you may no longer claim a refund, and the unconfirmed export sales transaction will not appear on the report.

Help Portal Topics

Trading Partner Declaration for Italy

This topic includes details about the Trading Partner Declaration for Italy.

Overview

Use the Trading Partner Declaration for Italy to generate an electronic file and audit report that supports the trading partner declarations and reporting requirements of the Italian Revenue Agency (IRA). The two-step process includes:

1. Trading Partner Declaration for Italy
2. Trading Partner Declaration Confirmation Number for Italy

Note: The currency for all transactions is Euro.

Key Insights

To designate a transaction for reporting in a particular declaration, you must associate the tax reporting type ORA_IT DECLARATION TYPES and the corresponding tax reporting code to any of these tax entities:

Order	Reporting Type Use
1	Party site tax profile
2	Party tax profile
3	Tax rate rule
4	Tax rate
5	Tax status rules
6	Tax status
7	Tax registration rules

Tax entities are processed in this order, and transactions are reported in a particular type of declaration based on the first association that is met.

To group the invoices by taxable, nontaxable, exempt, and nonsubject to VAT, you must associate the tax reporting type ORA_IT DECLARATION GROUPS and the corresponding tax reporting code to any of these tax entities:

Order	Tax Entity
1	Tax rate rule
2	Tax rate
3	Tax status rules
4	Tax status
5	Tax registration rules

Tax entities are processed in this order, and transactions are grouped according to the first association that is met.

Use the Document Fiscal Classification field at the Invoice header level to identify a specific transaction as:

- Recap Invoice
- Reverse Charge
- Self-Invoice
- Rental or Leasing (Car, Caravan, Other Vehicles, Boats, Airplanes)
- VAT Not Exposed
- Purchase of Services from Nonresident
- Transaction with Nonresident
- Tourism Invoice

Trading Partner Declaration for Italy

To run the Trading Partner Declaration for Italy, use these steps:

1. Submit the Trading Partner Declaration for Italy to generate the electronic file and audit report for one of these declaration types:

Declaration Type	Frequency
Customers and Suppliers Lists Declaration	Annual
The Republic of San Marino Purchases Declaration	Monthly
Black List Countries Transactions List Declaration	Monthly

Declaration Type	Frequency

- Use the audit report to verify the transactions in the extract. If the extract is correct, the electronic file is transmitted to the IRA.

The IRA then generates the electronic transmission receipt that contains the Transmission Protocol Number and Document Protocol Number and passes it to the reporting entity.

Note: If the transmission type is Substitution or Cancellation, enter the Transmission Protocol Number and Document Protocol Number generated by IRA for a previous transmission.

Report Parameters

This table describes selected report parameters:

Name	Description
Reporting Mode	Indicate if the report should be run in preliminary or final mode. Select Final to submit the electronic file to IRA.
Transmission Type	<p>Select the electronic file transmission type from:</p> <ul style="list-style-type: none"> • Ordinary: Contains the transactions issued and received during a reporting period. • Substitution: Replaces a previous Ordinary transmission. • Cancellation: Deletes a previous Ordinary or Substitution transmission. <p>The validation for a specific reporting entity, declaration type, and period includes these actions:</p> <ul style="list-style-type: none"> • Select an Ordinary declaration for Final reporting mode. • Select Substitute declaration for a: <ul style="list-style-type: none"> ○ Previous Ordinary declaration submitted in Final reporting mode. ○ Previous Cancellation declaration submitted in Final reporting mode. • Select Cancellation for a: <ul style="list-style-type: none"> ○ Previous Ordinary declaration submitted in Final reporting mode. ○ Previous Substitute declaration submitted in Final reporting mode.
Transmission Protocol Number	Select this number generated by the IRA for a previous transmission, when the transmission type is Substitution or Cancellation.
Document Protocol Number	Select this number generated by the IRA for a previous transmission, when the transmission type is Substitution or Cancellation.

Trading Partner Declaration Confirmation Number for Italy

The Trading Partner Declaration Confirmation Number for Italy updates the transmission and document protocol numbers. These numbers are retained for a given declaration type, transmission type, and declaration period for the Trading Partner Declaration for Italy.

Report Parameters

This table describes selected parameters:

Name	Description
Declaration Type	Enter the declaration type provided by the IRA for the Transmission Protocol Number and Document Protocol Number.
Transmission Type	Enter the electronic file transmission type provided by the IRA for the Transmission Protocol Number and Document Protocol Number.
Declaration Year	Enter the electronic file reporting year provided by the IRA for the Transmission Protocol Number and Document Protocol Number.
Declaration Period	Enter the electronic file reporting period provided by the IRA for the Transmission Protocol Number and Document Protocol Number.
Transmission Protocol Number	Enter the number provided by the IRA for a given declaration type, transmission type, and declaration period.
Document Protocol Number	Enter the number provided by the IRA for a given declaration type, transmission type, and declaration period.

Frequently Asked Questions

This table lists frequently asked questions about the Trading Partner Declaration for Italy.

FAQ	Answer
How do I find this report?	Schedule and run this report from the Scheduled Processes work area on the Navigator menu.
Who uses this report?	<ul style="list-style-type: none"> • Tax Manager • Tax Accountant • Account Receivables and Payables Manager
When do I use this report?	<p>Use this report to generate:</p> <ul style="list-style-type: none"> • The electronic file for submission of three types of declarations to the Italian Revenue Agency. • The audit report for internal audit and verification of extracted transactions.

FAQ	Answer
What type of report is this?	Oracle Analytics Publisher
How do I use the Transmission Protocol Number and Document Protocol Number generated by the Italian Revenue Agency?	Submit the Trading Partner Declaration Confirmation Number for Italy to record these numbers and use them for further reference in the Trading Partner Declaration for Italy.

Customer Balance Reconciliation Report for Russia

This topic includes details about the Customer Balance Reconciliation report for Russia.

Overview

This report is required by and complies with the legislation in Russia. Each organization must periodically reconcile settlements with customers based on the Act of Reconciliation of Balance between Customer and Supplier. This report lists all receivables documents, that is invoices and payments, for the period.

The supplier prints the report with the information about the customer's balance based on their book and sends it to the customer. The customer confirms or corrects the figures based on their book and sends it back. These corrections are entered under the third-party column headings. In case of any difference, the clarification process must be performed. The supplier must include only reconciled or confirmed balances into the accounting reporting.

This figure is an example of the report.

Key Insights

To provide additional flexibility, the Customer Balance Reconciliation report uses data from the Subledger Accounting (SLA) supporting references to update the Agreement (description, number, date), Date by Organization, and Number by Organization.

If the SLA supporting reference called FIN_JE_RU_CONTRACT is set, the Agreement (description, number, date) column of the report is updated with the data from supporting reference. Else, the column is left blank.

If FIN_JE_RU_CBRR_DOC_NUM and FIN_JE_RU_CBRR_DOC_DATE supporting references are set, the document number and document date are updated from the supporting reference. Else, the document number and document date are printed from the transaction.

Report Parameters

This table lists selected parameters for the Customer Balance Reconciliation report for Russia:

Parameter	Description
Legal Entity	Specify the legal entity for which the report is launched.
Business Unit	Specify the business unit for which the transactions are being selected.

Parameter	Description
To and From Period	Specify the time period for the transactions.

Asset Acceptance Order Report for Russia

This topic includes details about the Asset Acceptance Order Report for Russia.

Overview

This report is a required source document for commercial companies in Russia to prove asset acceptance or asset sale operation. It displays the details of any asset that an organization buys or sells goods. The report represents the GAAP legal form OS-1 for Russia.

Key Insights

Run the report to print the asset acceptance order for a single asset received or delivered by an organization. The receiving operation is based on fixed asset addition, while delivery is based on full or partial retirement of the fixed asset.

This figure is an example of the report.

Report Parameters

This table lists selected parameters for the Asset Acceptance Order Report for Russia:

Parameter	Description
Asset Book	Specify a fixed asset book for the asset.
Asset Number	Select the fixed asset for which an asset acceptance order must be printed.
Inventory Number	Specify whether the asset number or tag number must be printed as asset inventory number in the report.
Legal Entity	Specify the organization that owns the asset. You have to manually select the option when the report cannot identify a unique value. This happens when the legal entities are not linked to balancing segment values.
Legal Reporting Unit	Specify the legal reporting unit to print details from a particular organization division instead of the headquarter, if required.
Internal Bank Account	Specify the internal bank account for the organization.
Report Mode	Specify whether the organization receives or delivers the asset.

These parameters are applicable only when the Report Mode parameter is set to Deliver:

Parameter	Description
Retirement Reference Number	Select the full or partial retirement operation that contains information about asset delivery. This is an optional parameter to specify a retirement operation to ensure that the report output is not empty.
Customer	Select the customer the organization delivers the asset to.
Customer Site	Select the customer site the organization delivers the asset to.
Customer Bank Account	Select the customer bank account used for money transfer.
Customer Department	Select the customer department that receives the asset.

These parameters are applicable only when the Report Mode parameter is set to Receive:

Parameter	Description
Supplier	Select the supplier from whom the organization accepts the asset from.
Supplier Site	Select the supplier site from whom the organization accepts the asset from.
Supplier Bank Account	Select the supplier department that delivers the asset.
Supplier Department	Select the supplier department that delivers the asset.

How You Create JPK Band Purchase VAT Registers

This topic includes details about printing Sales and Purchase VAT registers for Poland.

Overview

The VAT Registers can be printed in the PDF format. The printed output is based on the JPK extract, and contain all transactions selected for JPK VAT. The output also displays the transaction details. The amounts are grouped by JPK Codes or Declaration VAT-7 boxes. Depending on the report parameters, the report can contain sales or purchase registers, or both. You can also restrict the printed output to a certain set of codes, such as domestic transactions only.

Codes in Tax Reporting Type, ORA_JEPL_VAT_BOXES_PDF, must be defined to select a subset of all tax box allocation boxes.

Key Insights

The Sales and Purchase VAT Registers process creates these two output files:

- XML file in the JPK format
- PDF file with printable registers

Both files contain the same data presented in a different format. Printed registers can be used to verify content of the JPK extract before sending it to the tax authorities.

Parameters

This table lists the required parameters for the JPK Sales and Purchase VAT registers for Poland.

Parameter Name	Description
Legal Entity	Indicate the legal entity that created the register.
Tax Registration Number	Indicate the tax registration number for which the JPK extract is delivered.
From Tax Period	Indicate the beginning tax period of the period for which the extract is created.
To Tax Period	Indicate the ending tax period of the period for which the extract is created.
Register Type	Indicate the section to be included in the extract. Options are sales register, purchase register, or both.
Tax Box Set	Restrict the codes displayed in the register output.
Requesting Tax Authority	Select the tax authority requesting the output.

Prerequisites

You must complete these tasks before printing either the VAT Registers or the JPK VAT extract file:

1. Create transactions for a period and complete the transactions for Receivables, or validate invoices for Payables.
2. Run the Create Accounting process for Receivables and Payables. Verify if the transactions were accounted correctly.
3. Run the Select Transactions for Tax Reporting process for your legal entity and reported period.
4. Run the Tax Box Allocation process for the tax registration number of the legal reporting unit to be reported.
5. Verify the result of the allocation by running these reports with the same parameters as the Tax Box Allocation:
 - Tax Box Allocation Listing
 - Tax Box Allocation Exemptions

Print Sales and Purchase VAT Registers

Run these processes to provide the printed Sales and Purchase VAT Registers to the tax authorities:

- JPK Sales and Purchase Registers for Poland to obtain the JPK_VAT legal file in the XML format.
- Sales and Purchase VAT Register for Poland to obtain the Sales, Purchase, or both VAT Registers in the PDF format.

Perform these steps to run the process:

1. Navigate to the **Scheduled Processes** work area.
2. Click **Schedule New Process**.
3. Search for the process name.
4. In the Process Details dialog box, enter the required parameters.
5. Click **Submit**.
