3 Introduction

Overview of Security Reference

If you are an IT Security Manager, this guide is for you. Use the reference information for implementing security for an offering in Oracle Applications Cloud. Depending on the needs of your enterprise, determine what works best for your offering, and make the required configuration changes.

Broadly, the reference information includes these details:

- Abstract and job roles for an offering
- Duty roles and the role hierarchy for each job role and abstract role
- Privileges that are required to perform duties defined by a duty role
- Data security policies for each job role or abstract role
- Policies that protect personally identifiable information

To know more about the roles, privileges, and polices and to learn how to implement and administer security for your offering, refer to your product security guide.

How to Use This Guide

You can review the information in this guide to decide how to assign roles and privileges to specific users. For each role, you will find these details:

- The role hierarchy that lists the other inherited roles
- A list of duties assigned to that role
- Privileges granted to that role
- Data security policies and their implementation scope

> **Note:** The changes you make to the security reference implementation are preserved during upgrades or maintenance patches.

Financials Offering

This guide describes the security reference implementation for the Financials offering.

There is a set of common roles that are required to set up and administer an offering. For information about these common roles, see the *Oracle Applications Cloud Security Reference for Common Features* guide.

Advisory Note on Subscription Impact

Assigning predefined roles and privileges as is to users may impact subscription usage, even if you haven't purchased the subscription. Privileges that are assigned but remain unused can still account for subscription consumption.

Before you assign predefined roles with privileges, evaluate the business needs of your users. Do your users need the entire role and all its privileges in full scope? Or, do they need the role but only a few of its privileges? Evaluating what your users need will help you avoid potential security risks and also keep a check on the subscription consumption.

If you want users to have the predefined role in full scope and have purchased all the impacted cloud services, you can assign the role with privileges as is. For example, only while setting up an application, you may need to assign the predefined Application Implementation Consultant role as is. Once the setup is complete, you can unassign it. Otherwise, Oracle recommends that you make a copy of that predefined role, remove the privileges you don't need, and assign only the required privileges. For a list of all predefined roles with privileges that impact subscription usage, see the spreadsheet *Predefined Roles with Subscription Impact*. To give you an example, here's an indicative list of the top three roles that impact subscription usage:

- Employee (ORA_PER_EMPLOYEE_ABSTRACT)
- Application Implementation Consultant (ORA_ASM_APPLICATION_IMPLEMENTATION_CONSULTANT_JOB)
- Contingent Worker (ORA_PER_CONTINGENT_WORKER_ABSTRACT)

For insights into how Oracle measures and counts Oracle Fusion licenses, see *Metrics Description for Fusion Offerings*
