Preface

This preface introduces information sources that can help you use the application.

Using Oracle Applications

Using Applications Help

Use help icons  to access help in the application. If you don't see any help icons on your page, click your user image or name in the global header and select **Show Help Icons**. Not all pages have help icons. You can also access [Oracle Applications Help](#).

 **Watch:** This video tutorial shows you how to find help and use help features.

You can also read [Using Applications Help](#).

Additional Resources

- Community: Use [Oracle Cloud Customer Connect](#) to get information from experts at Oracle, the partner community, and other users.
- Guides and Videos: Go to the [Oracle Help Center](#) to find guides and videos.
- Training: Take courses on Oracle Cloud from [Oracle University](#).

Conventions

The following table explains the text conventions used in this guide.

Convention	Meaning
boldface	Boldface type indicates user interface elements, navigation paths, or values you enter or select.
monospace	Monospace type indicates file, folder, and directory names, code examples, commands, and URLs.
>	Greater than symbol separates elements in a navigation path.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the [Oracle Accessibility Program website](#).

Videos included in this guide are provided as a media alternative for text-based help topics also available in this guide.

1 Security Reference: Overview

Security Reference Implementation

The Oracle Fusion Applications security approach supports a reference implementation that addresses common business security needs and consists of roles and policies.

Oracle Fusion Applications Security Reference Guides present the following information about the predefined security reference implementation.

- The abstract and job roles for an offering
- Duty roles and the role hierarchy for each job role and abstract role
- Privileges required to perform each duty defined by a duty role
- Data security policies for each job role, or abstract role
- Policies that protect personally identifiable information
- Data security policies on fact and dimension to ensure enforcement across tools and access methods

For an overview and detailed information about the Oracle Fusion Applications security approach, including an explanation of role types, enforcement, and how to implement and administer security for your deployment, see your product security guide.

How to Use this Security Reference Guide

Enterprises address needs specific to their organization by changing or extending the role definitions, role hierarchies, and data security policies of the reference implementation. You may also be subject to specific legal, regulatory, and industry requirements. You are solely responsible for your adherence to these requirements when assigning roles, privileges and granting access for your enterprise.

For each job or abstract role, review the duties, role hierarchy, and policies that it carries so you understand which users should be provisioned with the role, or which adjustments your enterprise requires before the role can be provisioned.

 **Note:** All information presented in this guide can be accessed in the various user interface pages of Oracle Fusion Applications provided for security setup, implementation changes, and administration. The advantage of reviewing the security reference implementation as it is presented in this guide is that you can more easily compare and plan your configurations.

 **Tip:** From the entitlement of a role as expressed by privileges, you can deduce the function security enforced by a role. If your enterprise needs certain functions removed from access by certain roles, a copy must be made to configure the data security policies or duties carried by the role.

Review the data security policies conferred on job roles by their inherited duty roles.

Review the privacy in effect for a job or abstract role based on its data security policies. Privacy is additionally protected by security components, as described in your product security guide.

▲ CAUTION: It's important that as you make changes to the security reference implementation for an Oracle Fusion Applications deployment, the predefined implementation as delivered remains available. Upgrade and maintenance patches to the security reference implementation preserve your changes to the implementation.

2 What's New

PSC Review Summary Management Self	View Pre-Application Review Summary Comments	Allows user to view comments in pre-application review summary.
PSC Run Inspection Activity Report	Run Inspection Activity Report	Allows user to run Inspection Activity Report.
PSC Run Inspection Job card Report	Run Inspection Job card Report	Allows user to run Inspection Job card Report.
PSC Run Planning Application Report	Run Planning Application Report	Allows user to run Planning Application Report.

3 Application Identity for PSC (Abstract Role)

Description

Identifies roles with elevated access aimed at developers to help achieve code based access control that is beyond the access of the current operator.

Role Hierarchy

The Application Identity for PSC abstract role directly and indirectly inherits these roles.

- Application Identity for PSC
 - PSC Apply Permit
 - PSC Add Comments to Permit intake form
 - PSC Cancel Inspection Request
 - PSC Download Permit Attachments
 - PSC Permits Attachments User
 - PSC Add Permit Attachments
 - PSC Delete Permit Attachments that were added by self
 - PSC Update Permit Attachments that were added by self
 - PSC View Inspection Attachments
 - PSC View Permit Attachments
 - PSC View Property Attachments
 - PSC Public User Account Management

Duties

This table lists the duties assigned directly and indirectly to the Application Identity for PSC abstract role.

Duty Role	Description
PSC Apply Permit	Apply Permit Duty
PSC Permits Attachments User	Permits Attachments User Duty
