1 Introduction

About This Guide

This guide contains information about Transactional Business Intelligence subject areas, their associated job and duty roles, and the business questions that they provide answers to. For your reference:

- Subject areas are the building blocks of your analytics and reports based upon them. Analytics are built by choosing an appropriate subject area that has information that answers the business question you're analyzing. Technically, subject areas are a grouping of information pieces called data objects that relate to each other in a particular context.
- Job roles are associated with duty roles, and together control access to subject areas.

2 Subject Areas

Overview

This chapter provides information on the subject areas with data you maintain in Oracle Public Sector Cloud. These subject areas, with their corresponding data, are available for you to use when creating and editing analyses and reports. The information for each subject area includes:

- Description of the subject area.
- Business questions that can be answered by data in the subject area, with a link to more detailed information about each business question.
- Job roles and duty roles that can be used to secure access to the subject area, with a link to more detailed information about each job role and duty role.
- Primary navigation to the work area that is represented by the subject area.
- Time reporting considerations in using the subject area, such as whether the subject area reports historical data or only the current data. Historical reporting refers to reporting on historical transactional data in a subject area. With a few exceptions, all dimensional data are current as of the primary transaction dates or system date.
- The lowest grain of transactional data in a subject area. The lowest transactional data grain determines how data are joined in a report.
- Special considerations, tips, and things to look out for in using the subject area to create analyses and reports.

OTBI Performance Real Time

Description

Analyze OTBI analysis and dashboard usage and performance, including logical and physical database SQL, execution time, and errors. View the last six months of OTBI usage and performance trends, commonly used subject areas, and report errors. This subject area provides data to monitor and disagnose OTBI reporting performance. Historical data older than six months is purged each week.

Business Questions

This subject area can answer the following business questions:

- *What are the long-running analyses in the past month?*
- *What are the least-used OTBI subject areas?*
- *What are the common execution errors in the past month?*
- *What are the most commonly used OTBI subject areas?*

- *Which analyses have low usage because of poor performance?*
- *Which subject areas have large data volume?*
- *Which analyses have high data row count?*
- *How many analyses and dashboards failed in the past month?*
- *What is the database SQL execution time and row count?*
- *What is the OTBI execution time histogram in the past month?*
- *Which analyses have the longest response time?*
- *Which analyses reached OTBI max row limit?*
- *Which subject areas have slow performance?*

Job Roles

The following job roles secure access to this subject area:

- *Application Implementation Consultant*
- *IT Security Manager*

Duty Roles

The following duty roles secure access to this subject area:

- *OTBI Report Performance Transactional Analysis Duty*

Primary Navigation

Not available

Time Reporting

This subject area supports six-month usage history data.

Time dimension is linked to "Time"."Report Start Date".

Transactional Grain

This subject area returns data at the grain of a query execution and database physical SQL.

Special Considerations

This subject area contains six months of query execution data. Each OTBI query execution can generate multiple database SQL statements. Usage data volume grows over time, so use proper filters to narrow reporting data load. Because this subject area has no data security, you're advised to secure user access to it.

OTBI Usage Real Time

Description

Analyze six months of subject area and analysis usage trends and patterns with a simpler and lighter-weight selection of OTBI usage metrics, including for example user, report and subject area usage patterns. Historical data older than six months is purged each week.

Business Questions

This subject area can answer the following business questions:

- *How many custom OTBI analyses have been run in the past month?*
- *How many ad-hoc OTBI analyses have been run in the past month?*
- *Who are the top N OTBI users?*
- *How many users run OTBI analyses?*
- *How many OTBI SOAP web services have been run in the past month?*
- *What are the top N most frequently-run OTBI analyses?*
- *What is the weekly OTBI analysis usage trend?*
- *What is the execution history of dashboard X in the past month?*
- *Which analyses have low usage in the past month?*
- *How many predefined OTBI analyses have been run in the past month?*

Security - Roles and Privileges Real Time

Description

Provides real-time information about the security setup in the application. This subject area is independent of the pillar and can be used to report on roles and details across pillars like HCM, ERP, SCM and so on.

Use this subject area to report on role categories, roles, functional security policies, data security policies, and the users assigned to the roles.

You can report on the correlation between the objects like the roles that are directly assigned to another role, the roles that are inherited by the virtue of the directly assigned roles, or the functional and data security policies that are directly assigned to the roles.

For a given user, all the roles that have been assigned can also be reported.

Business Questions

This subject area can answer the following business questions:

- *Can I view and edit a particular page? If yes, which functional security policy do I need to provide to a user who needs similar access?*
- *Why am I not able to view certain subject areas with my login credentials?*
- *Which data security policy would provide access to the data I need to see?*
- *I have not added a specific role to a user, but the user seem to have this job role. Can I trace how has this been inherited by the user?*

Not applicable.

Special Considerations

This subject area is used to report on users, functional security policies, and data security policies all in the correlation of roles. For a role, you can report on functional security policies, or data security policies, or users. If you try to combine all the security objects in a single report, it displays an error message. This subject area can't be used to create a cross subject area report.
