StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.

Trading Community Party Usage Assignment Service (Deprecated)

A framework to assign party usages to trading community members. For example, John Doe is assigned a usage to indicate he is a sales account contact and ABC Corporation is assigned a usage to indicate that it is a supplier. This service is deprecated and is replaced with New Service PartyInformationService. Internal Name oracle.apps.cdm.foundation.parties.partyService.PartyInformationService.

Life Cycle Status: Deprecated. This service is deprecated and replaced by .

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/applicationModule/}PartyInfoService

assignPartyUsage

The Create operation for the trading community party usage assignment SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyUsageAssignment	*Usage Assignment*	The trading community party usage assignment SDO to be created.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The result of the operation that includes the successfully created trading community party usage Assignment SDO and a list of warning or information messages.

endPartyUsageAssignment

The Update operation for the trading community party usage assignment SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyUsageAssignment	*Usage Assignment*	The trading community party usage assignment SDO to be updated.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The result of the operation that includes the successfully updated trading community party usage Assignment SDO and a list of warning or information messages.

findPartyUsageAssignment

The Find operation for the trading community party usage assignment SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The result of the operation that includes a list of trading community party usage Assignment SDO that satisfy the inbound criteria and any warning or information messages.

findPartyUsageAssignmentgetUsageAssignmentByPartyIdCodeDate

The Find operation for the party usage assigned to a trading community organization or trading community person.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindPartyId	long	The unique identifier of the trading community organization or the trading community person that needs to be verified along with the party usage code for a given date.

Element Name	Type	Description
bindPartyUsageCode	string	The code to filter the party usages associated with the trading community organization or the trading community person.
bindEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The effective date used to filter the party usages associated with the trading community organization or the trading community person.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The result of the operation that includes the successfully created trading community party usage Assignment SDO and a list of warning or information messages.

findPartyUsageAssignmentPartyUsageAssgnOneWaySyncVOCriteria

Verifies if the party is an external contact.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindPartyId	long	The unique identifier of the party that needs to be verified.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The result of the operation that includes a list of trading community party usage Assignment

Element Name	Type	Description
		SDO that satisfy the inbound criteria and any warning or information messages.

findPartyUsageAssignmentPartyUsageAssignRoleProvVOCriteria

Verifies if the party is an employee or contingent worker for a given date.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindPartyId	long	The unique identifier of the party that needs to be verified.
bindStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the employee or contingent worker record starts.
bindEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when employee or contingent worker record ends.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The result of the operation that includes the successfully created trading community party usage Assignment SDO and a list of warning or information messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name; an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale used to evaluate the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in the ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined for this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for the service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create,

Element Name	Type	Description
		update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

assignPartyUsage

The Create operation for the trading community party usage assignment SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyUsageAssignment	*Usage Assignment*	The trading community party usage assignment SDO to be created.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The trading community party usage assignment SDO to be updated.

endPartyUsageAssignment

The Update operation for the trading community party usage assignment SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyUsageAssignment	*Usage Assignment*	The trading community party usage assignment SDO to be updated.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The result of the operation that includes the successfully updated trading community party usage Assignment SDO and a list of warning or information messages.

findPartyUsageAssignment

The Find operation for the trading community party usage assignment SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The result of the operation that includes a list of trading community party usage Assignment SDO that satisfy the inbound criteria and any warning or information messages.

findPartyUsageAssignmentgetUsageAssignmentByPartyIdCodeDate

The Find operation for the Party Usage assigned to a trading community Organization or trading community Person.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindPartyId	long	The unique identifier of the trading community organization or the trading community person that needs to be verified along with the party usage code for a given date.
bindPartyUsageCode	string	The code to filter the party usages associated with the trading community organization or the trading community person.
bindEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The effective date used to filter the party usages associated with the trading community organization or the trading community person.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The result of the operation that includes the successfully created trading community party usage Assignment SDO and a list of warning or information messages.

findPartyUsageAssignmentPartyUsageAssgnOneWaySyncVOCriteria

Verifies if the party is an external contact.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindPartyId	long	The unique identifier of the party that needs to be verified.
bindEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}dateDate	The effective date used to filter the party usages associated with the party.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The result of the operation that includes a list of trading community party usage Assignment SDO that satisfy the inbound criteria and any warning or information messages.

findPartyUsageAssignmentPartyUsageAssignRoleProvVOCriteria

Verifies if the party is an employee or contingent worker for a given date.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindPartyId	long	The unique identifier of the party that needs to be verified.
bindStartDate	{http://xmlns.oracle.com/adf/svc/types/}dateDate	The date when the employee or contingent worker record starts.
bindEndDate	{http://xmlns.oracle.com/adf/svc/types/}dateDate	The date when employee or contingent worker record ends.

Element Name	Type	Description
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The result of the operation that includes the successfully created trading community party usage Assignment SDO and a list of warning or information messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name; an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale used to evaluate the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in the ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined for this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for the service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

ORA_ZCH_TRADING_COMMUNITY_DATA_STEWARD_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_PERSON_ADMINISTRATION_DUTY	Trading Community Person Administration	Grants privileges to setup person information.
ORA_ZBS_SALES_VP_JOB	ORA_ZCA_VIEW_CX_AI_AGENTS	View CX AI Agents	This role allows at run-time UI to access agent meta data

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZBS_SALES_MANAGER_JOB	ORA_ZCA_VIEW_CX_AI_AGENTS	View CX AI Agents	This role allows at run-time UI to access agent meta data
ORA_ZBS_SALES_ REPRESENTATIVE_JOB	ORA_ZCA_VIEW_CX_AI_AGENTS	View CX AI Agents	This role allows at run-time UI to access agent meta data

Usage Assignment

The party usage assigned to a trading community member. For example, John Doe is a contact of ABC Corporation and XYZ Corporation is a supplier.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartyUsageAssignment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Trading Community Party Usage Assignment Service*
Handled by	*Trading Community Party Information*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Relationship Type	Object or Service
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
PartyUsageCode	string	The usage context of a party's contact point.
PartyUsgAssignmentId	long	The unique identifier of the party usage assignment. • Primary Key
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.

Trading Community Person Information

An individual who either directly enters into a business relationship or represents an organization in a business relationship. For example, John Doe, Mary Doe who works at Oracle.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/applicationModule/}PersonService

getPersonProfile

The Get operation for trading community person profile. You can query the profile with party ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
PartyId	long	The unique identifier of the party.

Response Payload

Element Name	Type	Description
result	*Contact*	The trading community person profile that matches the inbound key attributes.

addFavoriteContact

Adds the key contact for the user.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contactPartyId	long	The unique identifier of the contact party.
userName	string	The user for which the key contact was stored.

Response Payload

Element Name	Type	Description
result	void	void

removeFavoriteContact

Removes the key contact for the user.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contactPartyId	long	The party ID of the person to be removed from key contacts.
userName	string	The user for which the key contact was removed.

Response Payload

Element Name	Type	Description
result	void	void

getNearByContacts

The Get operation for trading community person profile. You can query the person profile with latitude, longitude, distance and unit of measure.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
latitude	decimal	The latitude of the location.
longitude	decimal	The longitude of the location.
distance	decimal	The distance from the input location.
unitOfMeasure	string	The unit of measure of the distance.

Response Payload

Element Name	Type	Description
result	*Contact*	The collection of trading community person profiles that matches the inbound key attributes.

getNearByContactsByLocationId

The Get operation for trading community person profile. You can query the person profile with location ID, distance, and unit of measure.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
locationId	long	The unique identifier of the location.
distance	decimal	The distance from the input location.
unitOfMeasure	string	The unit of measure of the distance.

Response Payload

Element Name	Type	Description
result	*Contact*	The collection of trading community person profile that matches the inbound key attributes.

getPerson

The Get operation for the trading community person details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyId	long	The unique identifier of the party.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}PersonResult	The trading community person details that matches the inbound key attributes.

createPerson

The Create operation for the trading community person details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
personParty	*Trading Community Person Details*	The trading community person details to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}PersonResult	The result of the operation that includes the successfully created trading community person details and a list of warning or information messages.

updatePerson

The Update operation for the trading community person details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
personParty	*Trading Community Person Details*	The trading community person details to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}PersonResult	The result of the operation that includes the successfully updated trading community person details and a list of warning or information messages.

deletePerson

The Delete operation for the trading community person details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
personParty	*Trading Community Person Details*	The trading community person details to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warning or information messages encountered when the object was deleted.

mergePerson

The Merge operation for trading community person details. It performs an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
personParty	*Trading Community Person Details*	The trading community person details to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}PersonResult	The result of the operation that includes the successfully merged trading community person details and a list of warning or information messages.

findPerson

The Find operation for trading community person details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Trading Community Person Details*	The result of the operation that includes a list of trading community person details that satisfy the inbound criteria and any warning or information messages encountered during the invocation.

getPersonByOriginalSystemReference

The Get operation for trading community person filtered by the source system reference.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindOrigSystem	string	The unique code of the original system.
bindOrigSystemReference	string	The unique identifier of the original system reference.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}PersonResult	The trading community person details that matches the inbound party usage code.

getPersonsFilteredByPartyUsageCode

The Get operation for trading community person filtered by the party usage.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindPartyUsageCode	string	The party usage code used to filter users.
bindEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The effective date to filter the party usages associated with the person.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}PersonResult	The trading community person details that matches the inbound party usage code.

getPersonsFilteredByPartyUsageFilterRuleCode

The Get operation for trading community person filtered by the party usage filter rule.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindPartyUsageFrCode	string	The party usage filter rule used to filter a person.
bindEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The effective date to filter the party usages associated with the person.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}PersonResult	The trading community person details that matches the inbound party usage filter rule code.

processPerson

The Bulk load operation for trading community person details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what actions were performed, such as Create, Update, Merge, or Delete.

Element Name	Type	Description
personParty	*Trading Community Person Details*	A list of the trading community person details to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound operation contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Trading Community Person Details*	The result of the operation that includes a list of trading community person details that are successfully processed and any warning or information messages encountered during the invocation.

processCSPerson

An operation to apply the changes back to the data source for trading community person details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object used to represent the changes that were made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound operation contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The result of the operation that includes a list of created and updated data objects, and all warning and informational messages.

updatePersonProfile

The Update operation for trading community person profile. You can update the profile with the party ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
personDVO	*Contact*	The trading community person profile to be updated.

Response Payload

Element Name	Type	Description
result	*Contact*	The result of the operation that includes the successfully updated trading community person profile and a list of warning or information messages.

mergePersonProfile

The Update operation for trading community person profile. You can update the profile with the party ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
personDVO	*Contact*	The trading community person profile to be merged.

Response Payload

Element Name	Type	Description
result	*Contact*	The result of the operation that includes the successfully merged trading community person profile and a list of warning or information messages.

findPersonProfile

The Find operation for trading community person profile.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Contact*	The result of the operation that includes a list of trading community person profile that satisfy the inbound criteria and any warning or information messages encountered during the invocation.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale used when evaluating the locale-based user interface hints. The localeName is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and the Delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
deletePerson	HZ_REMOVE_TRADING_ COMMUNITY_PERSON_PRIV	Remove Trading Community Person	Allows the removal of persons.
processPerson	HZ_UPDATE_TRADING_ COMMUNITY_PERSON_PRIV	Update Trading Community Person	Allows the update of person information. If assigning, also assign the ability to view the trading community person.

Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPreferredFlag	boolean	Indicator to specify the preferred additional name of a person.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNameId	long	The unique identifier of the party name ID. It is primary key and system generated. • Primary Key
PartyNameType	string	The type of the name. It is a value defined by the additional party name and identifier type entity. The party type must be consistent with the party type that the PARTY_NAME_TYPE can be applied to.
PersonAcademicTitle	string	Used to specify the academic title for a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field degree in HL7.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	Used to specify the last name prefix such as fon, van, and so on for a person. It is used in the same way the new field PERSON_LAST_NAME_PREFIX in HZ_PERSON_PROFILES is used. It corresponds to the field Last Name Prefix in HL7.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	Used to specify the name suffix such as junior, senior, the third, and so on for a person. It is used in the same way the homonymous field in

Name	Type	Description
		HZ_PERSON_PROFILES is used. It corresponds to the field Suffix in HL7.
PersonPreNameAdjunct	string	Used to specify the name prefix such as Mr., Ms, Dr, and so on for a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Prefix in HL7. It is validated against lookup CONTACT_TITLE.
PersonPreviousLastName	string	Used to specify the previous last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It has no mapping in HL7.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PreferredFlag	boolean	Indicator to specify the name as preferred name for the party within the name type. Possible values are Y and N. Default value is N.
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
TransliterationLang	string	Used to specify the language used for the name. It is validated against FND_LANGUAGES.LANGUAGE_CODE. Default value is the Session Language.

Additional Identifier

An additional identifier of a trading community member, such as driver's license number or passport number.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}AdditionalPartyId

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Country	string	The name of the country.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
ExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The expiration date for the identifier. It may be NULL, and does not apply to all types of identifiers.
IssueDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date in which the Identifier was issued. It may be NULL and does not apply to all types of identifiers.
IssuingAuthorityName	string	The issuing authority name.
IssuingAuthorityPartyId	long	The unique identifier of the issuing authority.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party.
PartyIdentifierId	long	The unique identifier of the party identifier. • Primary Key
PartyIdentifierType	string	Indicates the type for the current identifier. The list of accepted values are defined in the lookup TYPE_CODE of HZ_NAME_AND_ID_TYPE_B. The party type should be consistent with the party type that the PARTY_IDENTIFIER_TYPE can be applied to.
PartyIdentifierType1	string	Indicates the type for the current identifier. The list of accepted values are defined in the lookup TYPE_CODE of HZ_NAME_AND_ID_TYPE_B. The party type should be consistent with the party type that the PARTY_IDENTIFIER_TYPE can be applied to.

Name	Type	Description
PartyIdentifierValue	string	The value of the party identifier.
PartyName	string	The name of the party.
RequestId	long	A system-generated read-only attribute used by the application framework.
StateProvince	string	The province of the address.
StatusCode	string	The pre-defined code used to indicate the status.

Address

An address of a trading community member, such as Oracle Corporation is located at 500 Oracle Parkway, Redwood Shores, CA.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartySite

Relationships

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AddressExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the location is no longer valid.
AddressLinesPhonetic	string	The phonetic or Kana representation of the Kanji address lines that are used in Japan.
AddressStyle	string	Style of the address.
Addressee	string	The information of the addressee.
City	string	The name of the city.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
ContactPreferenceExistFlag	boolean	Indicator to specify if the contact is primary contact for the party.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
Country	string	The name of the country.
Country1	string	The attribute country1 is not used.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DateValidated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address was last validated.
DoNotValidateFlag	boolean	Indicator to specify that a particular location is not eligible for address validation irrespective of the current validation.
Eft	*Electronic File Transfer*	The electronic file transfer information for the party.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
FormattedAddress	string	The formatted read-only address.
FormattedLocaleAddress	string	The formatted read-only local address.
FormattedMultilineAddress	string	The formatted multi line address of the party site.
GlobalLocationNumber	string	The global location number that uniquely identifies each location in a trading partners enterprise.
HouseType	string	Indicates the building type.
IdentifyingAddressFlag	boolean	Indicator to specify the identifying address for the party. Y stands for the indentifying site and N stands for sites that are not the indentifying site.

Name	Type	Description
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
Language	string	The operating language for the party site.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Latitude	decimal	The latitude of the party address.
LocationDirections	string	Directions to the location.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
LocationLanguage	string	The operating language for the locations.
Longitude	decimal	The longitude of the party address.
Mailstop	string	A user-defined code to indicate a mail drop point within the organization.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was last queried.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.

Name	Type	Description
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary address of the contact irrespective of the context. Y stands for primary address and N stands for all others.
PartyId	long	The unique identifier of the contact party.
PartyNameDba	string	Stores the doing-business_as (DBA) party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameDivision	string	Stores the division party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameLegal	string	Stores the legal party name for a party site. This column is used to store FSIO related legal party name attribute.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
PartySiteInformation	*Trading Community Address Additional Information*	The party address information.
PartySiteName	string	The user-defined name for the site.
PartySiteNumber	string	The party site number of the address.
PartySiteType	string	Stores the party site type and is based on the lookup. Currently this is either null or one-time.
PartySiteUse	*Trading Community Address Purpose*	The information of the party address usage.
PartyUsageCode	string	The usage context of a party's contact point.
Phone	*Phone*	The phone information for the entity.
Position	string	The primary direction such as north or east that is used to access the location.
PostalCode	string	The postal code element of the address.
PostalPlus4Code	string	The four digit extension to the United States postal ZIP code.

Name	Type	Description
Province	string	The name of the province.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
State	string	The name of the state.
Status	string	The status of the record.
Telex	*Telex*	The Telex information associated with the party.
UsageCode	string	The usage code is not used.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
ValidationStatusCode	string	The standardized status code describing the results of the validation.
Web	*Web*	The web information related to the record.

Certification

The certification information of a trading community member, such as a full ISO 9001 registered firm.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}Certification

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CertificationId	long	The unique identifier for certification. • Primary Key
CertificationName	string	The name of the certification such as ISO9000 and GMP001.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrentStatus	string	The name for the status of the certification. For example, applied for, granted, or expired.

Name	Type	Description
ExpiresOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the certification expires.
Grade	string	The level or grade of certification provided by the ISSUED_BY_AUTHORITY. For example, founding member, gold, fully certified, and partially certified.
IssuedByAuthority	string	The name of the certifying authority.
IssuedOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the certification was issued.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
PartyId	long	The unique identifier of the contact party.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Citizenship

The citizenship information about a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}Citizenship

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*

Relationship Type	Object or Service
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BirthOrSelected	string	Indicates if the citizenship was granted by being born in the country or by naturalization.
CitizenshipId	long	The unique citizenship identifier of a person. • Primary Key
CountryCode	string	The ISO code of the country from which a person claims citizenship.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DateDisowned	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when an individual renounced citizenship. This is usually a self-declared date that might not match a legal effective date.
DateRecognized	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the country granted citizenship to the individual. For a native-born person, this date is typically the person's date of birth.
DocumentReference	string	The unique reference number such as passport number or naturalization reference number associated with DOCUMENT_TYPE.

Name	Type	Description
DocumentType	string	The class of document that confirms citizenship. For example, a passport, or naturalization papers.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
PartyId	long	The unique identifier of the contact party.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Classification Assignment

The classification code assigned to a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}CodeAssignment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ClassCategory	string	The name of the classification category.
ClassCode	string	The code of the classification.

Name	Type	Description
CodeAssignmentId	long	The unique identifier of the assignment of an industrial classification code to an object. It is primary key and system generated. • Primary Key
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableKey1	string	The first column of the alphanumeric or multi-part foreign key.
OwnerTableKey2	string	The second column of the alphanumeric or multi-part foreign key.
OwnerTableKey3	string	The third column of the alphanumeric or multi-part foreign key.
OwnerTableKey4	string	The fourth column of the alphanumeric or multi-part foreign key.

Name	Type	Description
OwnerTableKey5	string	The fifth column of the alphanumeric or multi-part foreign key.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PrimaryFlag	boolean	Indicator that specifies if this is the primary class code of a class category for the organization. Y stands for the primary class code and N stands for all others.
Rank	decimal	Ranks classes if multiple classes are assigned to a party.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Contact

The profile information of the trading community person. The profile includes information such as marital status and additional name.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}PersonProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Person Profile Additional Information*
Contained by	*Trading Community Person Details*
Contained by	*Sales Account*

Relationship Type	Object or Service
Contained by	*Loyalty Member*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Loyalty Member Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Alias	string	Person alias name.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
Comments	string	The comments for the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DataCloudStatus	string	The enrichment status of the person.
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was born.
DateOfDeath	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person died.
DeceasedFlag	boolean	Y or N indicates whether the person is deceased or not.
DeclaredEthnicity	string	The declared ethnicity of the person.
Department	string	The free form text used to name the department.
DepartmentCode	string	The list of values for possible department codes.
Distance	decimal	The distance from the input location.
DoNotCallFlag	boolean	Indicator to specify if the user can send mail to the person or not.
DoNotContactFlag	boolean	Indicator to specify if the user can contact the person through phone, e-mail, or mail or not.
DoNotEmailFlag	boolean	Indicator to specify if the user can send e-mail to the person or not.
DoNotMailFlag	boolean	Indicator to specify if the user can send mail to the person or not.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveLatestChange	string	The date effective entity. Y indicates that this row represents the latest change in the day.

Name	Type	Description
EffectiveSequence	int	The date effective entity. Indicates the order of different changes made during a day. The lowest value represents the earliest change in the day.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
FavoriteContactFlag	boolean	Indicator to specify if the person is key contact.
Gender	string	The gender details such as male, female, or unknown of the person.
HeadOfHouseholdFlag	boolean	The head of household indicator is not used.
HouseholdIncomeAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The household income amount is not used.
HouseholdSize	decimal	The household size is not used.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
JobTitle	string	The free form text for the job title.
JobTitleCode	string	The code given to the job title.
LastContactDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the contact was last contacted.
LastEnrichmentDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was last enriched in DaaS.
LastKnownGPS	string	The geophysical location that is, GPS point last reported for the person.
LastSourceUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated by the source application.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdateSourceSystem	string	The source application that last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaritalStatus	string	The marital status of the person.
MaritalStatusEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the marital status of the person changed.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party.
PartyNumber	string	The unique identification number for the party.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PersonAcademicTitle	string	The academic title that is part of the name of a person such as Dr. Jane Smith.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonInformation	*Trading Community Person Profile Additional Information*	The information of the person.
PersonInitials	string	The Initials of the name.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.

Name	Type	Description
PersonLastNamePrefix	string	Used to identify the Last name prefix such as fon, van and so on for a person. It is used in the same way the new field PERSON_LAST_NAME_PREFIX in HZ_PERSON_PROFILES is used. Corresponds to the field, Last Name Prefix in HL7.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonName	string	The combination of title, first, middle, last, and suffix names.
PersonNameSuffix	string	Indicates the place in a family structure. For example, III in Tom Jones III.
PersonPreNameAdjunct	string	Salutary introduction such as Mr., Herr, and so on.
PersonPreviousLastName	string	The previous last or surname of the person.
PersonProfileId	long	The unique identifier of the person profile. • Primary Key
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PersonalIncomeAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated gross annual income of the person.
PlaceOfBirth	string	The place where the person was born, including city and country.
PreferredContactEmail	string	The preferred contact e-mail of the person.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactName	string	The preferred contact name of the person.

Name	Type	Description
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredContactPhone	string	The preferred contact phone of the person.
PreferredContactURL	string	The preferred contact uniform resource locator of the person.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryAddressCity	string	The city of the identifying address.
PrimaryAddressCountry	string	The country listed in the TERRITORY_CODE column of the FND_TERRITORY table for the identifying address.
PrimaryAddressCounty	string	The county of the identifying address.
PrimaryAddressLatitude	decimal	The primary address latitude information for the location for spatial proximity and containment purposes.
PrimaryAddressLine1	string	The first line of the identifying address.
PrimaryAddressLine2	string	The second line of the identifying address.
PrimaryAddressLine3	string	The third line of the identifying address.
PrimaryAddressLine4	string	The fourth line of the identifying address.
PrimaryAddressLocationId	long	The primary address location ID.

Name	Type	Description
PrimaryAddressLongitude	decimal	The primary address longitude information for the location for spatial proximity and containment purposes.
PrimaryAddressPostalCode	string	The postal code of the identifying address.
PrimaryAddressProvince	string	The province of the identifying address.
PrimaryAddressState	string	The state of the identifying address.
PrimaryCustomerId	long	The customer party identifier of a primary customer for a given person. There should be a valid relationship between the person and the customer.
PrimaryCustomerName	string	The customer party name of a primary customer for a given person. There should be a valid relationship between the person and the customer.
PrimaryCustomerRelationshipId	long	The unique identifier of the primary customer relationship.
PrimaryEmailAddress	string	The e-mail address of the person.
PrimaryEmailId	long	The primary contact point e-mail ID of the person.
PrimaryFormattedAddress	string	The primary formatted address of the person.
PrimaryFormattedPhoneNumber	string	The primary telephone number formatted in the local format of the person.
PrimaryLanguage	string	The standard name for a language.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneId	long	The primary contact point phone ID of the person.

Name	Type	Description
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURL	string	The uniform resource locator.
PrimaryWebId	long	The unique identifier of the primary uniform resource locator.
Pronunciation	string	The person pronunciation.
RentOwnInd	string	Indicates if the person rents or owns his or her residence. Lookup values include rent, own, lease, and so on.
RequestId	long	A system-generated read-only attribute used by the application framework.
SalesAffinityCode	string	The affinity of a person towards the deploying organization.
SalesBuyingRoleCode	string	The role of a person in the buying process.
Salutation	string	The phrase used to address a party in any correspondence.
Status	string	The status of the record.
SuffixOverriddenFlag	boolean	This attribute has Y if the suffix is overridden by user and N if not. Default value is N.
UniqueNameSuffix	string	Identifies system generated or manually overridden suffix.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.

Contact Address

The address of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PersonPartySite

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Phone*
Contains	*Trading Community Address Purpose*
Contains	*Contact Preference*
Contains	*Source System Reference*
Contains	*Trading Community Address Additional Information*
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Addressee	string	The information of the addressee in the contact address.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
GlobalLocationNumber	string	The global location number that uniquely identifies each location in a trading partners enterprise.
IdentifyingAddressFlag	boolean	Indicates whether this is the identifying address for the party. If the value is Y, then this is the identifying address for the party.
Language	string	The language used in the contact's location.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
Mailstop	string	A user-defined code to indicate a mail drop point within their organization.

Name	Type	Description
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary address of the associated object. If the value is True, then this is the primary address. The default value is False.
PartyId	long	The unique identifier of the contact party.
PartyNameDba	string	The doing-business_as (DBA) party name for a party site.
PartyNameDivision	string	The division of the party name for a party site.
PartyNameLegal	string	The legal party name for a party site.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
PartySiteName	string	The address associated with the party site.
PartySiteNumber	string	The alternate identifier of the party site.
PartySiteType	string	The type of the party site.
PartySiteUse	*Trading Community Address Purpose*	Indicates the use of the party site.
PartyUsageCode	string	The usage context of a party's contact point.
PersonPartySiteInformation	*Trading Community Address Additional Information*	The party site information of the person.
Phone	*Phone*	The phone information for the entity.
RelationshipId	long	The relationship identifier for the record.

Name	Type	Description
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Contact Interest

The interests of the trading community member, such as baseball, sports car, or painting.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}PersonInterest

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
InterestName	string	A text field that lets you assign a descriptive name to an interest. For example, pets, dogs, baseball, or sports car racing.
InterestTypeCode	string	A code to classify interests for evaluation.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LevelOfInterest	string	The user-defined level number or name to rate the amount of interest in the activity. For example, high, medium, or low.
LevelOfParticipation	string	The user-defined level number or name to indicate if the person participates and to what extent.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PersonInterestId	long	The unique identifier of interests of the person. • Primary Key
RequestId	long	A system-generated read-only attribute used by the application framework.
Since	{http://xmlns.oracle.com/adf/svc/types/}date-Date	An approximate date from which the person was involved with the activity.

Name	Type	Description
SportIndicator	string	Indicates if the activity is a sport. Y stands for sports and N stands for non-sport activities.
Status	string	The status of the record.
SubInterestTypeCode	string	A code to classify subinterests of the interest type code.
Team	string	Any team the person likes to watch or play for.

Contact Language

The languages known information of a trading community member. For example, Mary Smith can speak both Spanish and English but can only read and write English.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PersonLanguage

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Handled by	*Trading Community Group*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LanguageName	string	The standard name for a language. For example, Spanish, Mandarin, or American English. Foreign key to the FND_LANGUAGES table.
LanguageUseReferenceId	long	The unique identifier of the language use reference. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
NativeLanguageFlag	boolean	Indicator to specify if the language is the declared native language of a person. Y stands for a declared native language and N stands for all other languages.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PrimaryLanguageIndicator	string	Indicates if this is the primary language used by a person in day-to-day transactions. Y stands

Name	Type	Description
		for the primary language and N stands for other languages.
ReadsLevel	string	The user-defined level number or name to indicate the ability to read a language.
RequestId	long	A system-generated read-only attribute used by the application framework.
SpeaksLevel	string	The user-defined level number or name to indicate the ability to speak a language.
SpokenComprehensionLevel	string	The code to indicate comprehension of a spoken language.
Status	string	The status of the record.
WritesLevel	string	The user-defined level number or name to indicate the ability to write in a language.

Contact Preference

The contact preference of the trading community member. For example, do not call Joe Smith between 10 a.m. and 12 noon on weekdays.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}ContactPreference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactLevelTable	string	The table that stores the contact level of the contact preference, and uses the SUBJECT_TABLE lookup. The list of accepted values are HZ_PARTIES, HZ_PARTIES_SITES, or HZ_CONTACT_POINTS.
ContactLevelTableId	long	The foreign key to the table specified in CONTACT_LEVEL_TABLE column. The list of accepted values are PARTY_ID from HZ_PARTIES table, CONTACT_POINT_ID from HZ_CONTACT_POINTS table, or PARTY_SITE_ID from HZ_PARTY_SITES table.
ContactPreferenceId	long	The unique identifier for the contact preference. • Primary Key
ContactType	string	The contact party type that defines whether the contact is a sales account, a prospect, a contact, or any other user-defined party type. The default value is CUSTOMER. A list of accepted values is defined in the lookup CONTACT_TYPE.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaximumNoOfInteractUOMCode	string	The period of time during which the maximum number of interactions applies. Uses the MAX_NO_OF_INTERACT_UOM_CODE lookup.
MaximumNoOfInteractions	decimal	The number of times you can use this contact point. The period of time that this

Name	Type	Description
		number applies is stored in the MAX_NO_OF_INTERACT_UOM_CODE column.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PreferenceCode	string	Indicates whether to use a particular contact method. The list of accepted values are defined in the PREFERENCE_CODE lookup.
PreferenceEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes inactive.
PreferenceEndTimeHR	int	The hour part of time when the contact preference becomes inactive. The time is recorded in the 24 hour format.
PreferenceEndTimeMi	int	The minutes part of the time when the contact preference becomes inactive.
PreferenceStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes active.
PreferenceStartTimeHR	int	The hour part of time when the contact preference becomes active. The time is recorded in the 24 hour format.
PreferenceStartTimeMi	int	The minutes part of the time when the contact preference becomes active.
PreferenceTopicType	string	The appropriate subjects to send the party that the preference is created for. The list of accepted values are defined in the PREFERENCE_TOPIC_TYPE lookup.
PreferenceTopicTypeCode	string	The code of the preference topic type.
PreferenceTopicTypeId	long	The unique identifier of the preference topic type.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.

Name	Type	Description
RequestId	long	A system-generated read-only attribute used by the application framework.
RequestedBy	string	Indicates if the permission or restriction was created internally or requested by the party. The list of accepted values are defined in the REQUESTED_BY lookup.
Status	string	The status of the record.

Credit Rating

The trading community member's credit rating information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}CreditRating

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Relationship Type	Object or Service
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AverageHighCredit	decimal	The average of all the high credit experiences.
BankruptcyInd	string	Indicates if open bankruptcy exists. Y stands for any open bankruptcy that exists and N stands for no open bankruptcy.
BusinessDiscontinued	string	The business discontinued at the listed location. Prompts reader to contact D and B customer service center if any business is operating.
ClaimsInd	string	Indicates if open claims, legal claims, liens, protested bills, or any equivalent information exists. Y stands for availability of information and N stands for no information.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRatingId	long	The unique identifier of the credit rating. • Primary Key
CreditRiskScoreExplain	string	Explains numeric credit risk score that estimates the risk of delinquent payment over the next 12 months.
CreditScore	string	Indicates the risk of delinquent payments.
CreditScoreAge	decimal	Indicates the age of the credit score expressed in months.

Name	Type	Description
CreditScoreClass	decimal	The date when the credit score was calculated.
CreditScoreCommentary	string	The lookup for explanation codes in the CREDIT_SCORE column.
CreditScoreCommentary10	string	Indicates comments about the credit score.
CreditScoreCommentary2	string	Indicates comments about the credit score.
CreditScoreCommentary3	string	Indicates comments about the credit score.
CreditScoreCommentary4	string	Indicates comments about the credit score.
CreditScoreCommentary5	string	Indicates comments about the credit score.
CreditScoreCommentary6	string	Indicates comments about the credit score.
CreditScoreCommentary7	string	Indicates comments about the credit score.
CreditScoreCommentary8	string	Indicates comments about the credit score.
CreditScoreCommentary9	string	Indicates comments about the credit score.
CreditScoreDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the credit score was calculated.
CreditScoreIncdDefault	decimal	Indicates the probability expressed as a percentage of delinquency for a score range or class.
CreditScoreNatlPercentile	decimal	Indicates the relative credit rating of a business compared to all businesses whose credit ratings are included in the local country database.
CreditScoreOverrideCode	string	Indicates why no score was calculated or why score is equal to zero in the US.
CriminalProceedingInd	string	Indicates if criminal proceedings exist. Y stands for availability of information and N stands for no information.
DebarmentInd	string	Indicates whether the company is debarred from doing business with government agencies. Y stands for company debarred and N stands for not debarred.

Name	Type	Description
DebarmentsCount	decimal	The count of filings by government agencies in the United States that prohibit the party from entering into contracts or transactions with those agencies.
DebarmentsDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date of the most recent filing to prohibit the party from entering into contracts or transactions with a government agency in the United States.
DelqPmtPctgForAllFirms	decimal	Specifies a delinquency percentage for all firms.
DelqPmtRngPrcnt	decimal	Specifies a delinquency percentage for credit score range.
Description	string	The free text description of the record.
DetHistoryInd	string	The code that indicates if detrimental information exists for the party and whether complete details exist on management and party. Y stands for availability of information and N stands for no information.
DisasterInd	string	Indicates if information exists about disasters such as fires, hurricanes, and so on. Y stands for availability of information and N stands for no information.
FailureScore	string	For US, the failure risk class, 1 through 5. For Canada , the stability score that indicates risk of business closure, 1 through 10. For Australia, the percentile failure score.
FailureScoreAge	decimal	The failure score age in months.
FailureScoreClass	decimal	1 through 5 to indicate risk of financial stress for a customer account. 1 for a business with greatest risk and 5 for a business with least risk.
FailureScoreCommentary	string	The comments related to failure score.
FailureScoreCommentary10	string	The comments related to failure score.
FailureScoreCommentary2	string	The comments related to failure score.
FailureScoreCommentary3	string	The comments related to failure score.
FailureScoreCommentary4	string	The comments related to failure score.

Name	Type	Description
FailureScoreCommentary5	string	The comments related to failure score.
FailureScoreCommentary6	string	The comments related to failure score.
FailureScoreCommentary7	string	The comments related to failure score.
FailureScoreCommentary8	string	The comments related to failure score.
FailureScoreCommentary9	string	The comments related to failure score.
FailureScoreDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the failure score was calculated.
FailureScoreIncdDefault	decimal	Probability, in percentage, of failure for score range of class.
FailureScoreNatnlPercentile	decimal	The national percentile that reflects the relative ranking of a company among all scored companies in the local country database.
FailureScoreOverrideCode	string	In Europe, code for the reason for variance between the D and B rating and the failure score. In the US, code for the reason why no score was calculated, or why the score is zero.
FinclEmbtInd	string	Indicates if open bankruptcy, receivership liquidation, or any equivalent information exists. Y stands for availability of information and N stands for no information.
FinclLglEventInd	string	Indicates if special events such as financial embarrassment and legal filings exist. Y stands for availability of information and N stands for no information.
GlobalFailureScore	string	The global score for the risk of business default.
HighCredit	decimal	Maximum credit ever extended to the organization.
HighRngDelqScr	decimal	Specifies the high end of the range of the commercial credit score.
JudgementInd	string	Indicates if open judgments exist. Y stands for any open judgment that exists and N stands for no open judgments.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LienInd	string	Indicates if open liens exist. Y stands for any open lien that exists and N stands for no open liens.
LowRngDelqScr	decimal	Specifies the low end of the range of the commercial credit score.
MaximumCreditCurrencyCode	string	The currency used to denominate the MAXIMUM_CREDIT_RECOMMENDATION column.
MaximumCreditRecommendationAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Maximum credit limit recommended for the currency specified in the MAXIMUM_CREDIT_CURRENCY_CODE column.
NegvPmtExpl	string	The conditional comment generated when negative payments are present.
NoTradeInd	string	Indicates that no trade experiences exist. Y stands for any trade experience that exists and N stands for no trade experience.
NumberParentBankruptcyConversions	decimal	The number of bankruptcy conversions by the parent.
NumberParentBankruptcyFiling	decimal	The number of bankruptcies filed by the parent.
NumberSpecialEvent	decimal	The number of occurrences of the special events.
NumberTradeExperiences	decimal	The number of trade experiences.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OprgSpecificationEvntInd	string	Indicates if information exists about operational changes such as name changes, management

Name	Type	Description
		changes, change of control, moves, and so on. Y stands for availability of information and N stands for no information.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OtherSpecificationEvntInd	string	Indicates if special events exist that are not otherwise specified.
ParentHQBankruptcyInd	string	Indicates if parent (P) or headquarters (H) are entered into bankruptcy.
PartyId	long	The unique identifier of the contact party.
PaydexComment	string	Additional paydex information.
PaydexFirmComment	string	Comment on the paydex score for the organization.
PaydexFirmDays	string	The number of days used in the paydex score.
PaydexIndustryComment	string	Comment on the paydex score for the industry.
PaydexIndustryDays	string	The number of days used in the paydex score for the industry.
PaydexNorm	string	Median or average Paydex score for the industry.
PaydexScore	string	Paydex score for the previous 12 months payment history.
PaydexThreeMonthsAgo	string	Paydex score three months ago.
PrntBkcyChapterConv	string	The change of bankruptcy type.
PrntBkcyConvDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the bankruptcy converted from one type to another.
PrntBkcyFilgChapter	decimal	The chapter number of the bankruptcy filed by the parent under the US uniform commercial code.
PrntBkcyFilgDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The bankruptcy filing date of the parent.

Name	Type	Description
PrntBkcyFilgType	string	The type of bankruptcy filed by the parent.
PubRecExpl	string	The conditional comment generated if suits, liens, and judgments exist.
RatedAsOfDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the rating was acquired.
Rating	string	The rating number or code of the rating company.
RatingOrganization	string	The name of the credit rating organization.
RequestId	long	A system-generated read-only attribute used by the application framework.
SecuredFlngInd	string	Indicates if open secured filings such as UCC filings, secured charges or mortgages pledging, or any equivalent information exists. Y stands for availability of information and N stands for no information.
SlowTradeExpl	string	The conditional comment generated when paydex score indicates that slow trade experiences are present.
SpecialEventComment	string	The comment generated if special event section exists.
SpecialEventText	string	The narrative of the special event.
SpecialEventUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the special event was updated.
Status	string	The status of the record.
SuitInd	string	Indicates if open suits exist. Y stands for any open suit that exists and N stands for no open suits.

Customer Contact Profile

The person who functions as a contact for an organization.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}OrganizationContact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Organization Contact Additional Information*
Contains	*Customer Contact Responsibility*
Contains	*Source System Reference*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
ContactFormattedAddress	string	The formatted version of the contact address.

Name	Type	Description
ContactFormattedMultilineAddress	string	The formatted multiline version of the contact address.
ContactName	string	The name of the contact.
ContactNumber	string	The user-defined identification number for this contact.
ContactPartyId	long	The unique identifier of the contact.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CustomerEmailAddress	string	The e-mail address of the customer this contact person belongs to.
CustomerName	string	The name of the customer.
CustomerPartyId	long	The unique identifier of the customer this contact person belongs to.
CustomerPartyNumber	string	The alternate unique identifier of the customer this contact person belongs to.
CustomerUniqueName	string	The unique name of the customer. For an Organization, the value is a concatenation of unique_name_alias and suffix. For a Person, the value is a concatenation of person_name and suffix.

Name	Type	Description
DecisionMakerFlag	boolean	Indicates if this contact is a decision maker. If the value is True, then the contact is a decision maker.
Department	string	The free form text used to name the department for the contact.
DepartmentCode	string	The department code for the contact. A list of accepted values is defined in the lookup DEPARTMENT_TYPE.
EmailAddress	string	The email address associated with the record.
FormattedAddress	string	The formatted address information.
FormattedPhoneNumber	string	The formatted phone number.
JobTitle	string	The free form text for job title.
JobTitleCode	string	The code given to the job title.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgContactId	long	The unique identifier of the organization contact. • Primary Key
OrgContactInformation	*Trading Community Organization Contact Additional Information*	The information of the organization contact.
OrganizationContactRole	*Customer Contact Responsibility*	The role of the contact in the organization.
OrigSystemReference	string	The identifier for the record from the original system.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyRelationshipId	long	The unique identifier of the relationship of the party.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PartySiteName	string	The address associated with the party site.
PersonAcademicTitle	string	The part of the person's title that denotes the academic qualification, such as Dr. Jane Smith.
PersonCertReasonCode	string	The reason for the organization's current certification level assignment. A list of accepted values is defined using the lookup HZ_PARTY_CERT_REASON.
PersonCertificationLevel	string	The certification level of a organization. A list of accepted values is defined in the lookup HZ_PARTY_CERT_LEVEL.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLanguageName	string	The language name associated with the person.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	The prefix for the last name of a person, such as fon, van. For example, if a person's name is Hans Van, the last name of the person is captured using this attribute.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	The place in a family structure. For example, in "Tom Jones III", the "III".

Name	Type	Description
PersonPreNameAdjunct	string	The preferred name adjacency of a resource.
PersonPreviousLastName	string	The previous last name of a person.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PreferredContactFlag	boolean	Indicates if this contact person is primary contact for the customer.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PrimaryCustomerFlag	boolean	Indicates if this customer is primary customer for the contact.
Rank	string	The rank associated with this customer contact.
ReferenceUseFlag	boolean	Indicates if this contact can be used as a reference. If the value is Y, then the contact can be used as a reference.
RequestId	long	A system-generated read-only attribute used by the application framework.
SalesAffinityCode	string	The affinity of a contact to the deploying organization. A list of accepted values is defined in the lookup HZ_SLS_CNTCT_AFFINITY_CODE.
SalesAffinityComments	string	The comments about the contact's affinity to the deploying organization.
SalesBuyingRoleCode	string	The roles played by a contact in the buying process, for example, decision maker or supporting role. A list of accepted values is defined in the lookup HZ_SLS_CNTCT_BUY_ROLE_CODE.

Name	Type	Description
SalesInfluenceLevelCode	string	The influence of the contact has on the deploying organization. A list of accepted values are defined in the lookup HZ_SLS_CNTCT_INFLUENCE_LVL_CD.
Salutation	string	The size of the household this person is a part of.
WebUrl	string	The web URL of contact point.

Customer Contact Responsibility

The role or responsibility of an organization contact.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}OrganizationContactRole

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Customer Contact Profile*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*

Relationship Type	Object or Service
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgContactId	long	The organization contact identifier. Foreign key to the HZ_ORG_CONTACTS table.
OrgContactRoleId	long	The unique contact role identifier. It is primary key and system generated. • Primary Key
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.

Name	Type	Description
PrimaryContactPerRoleType	string	Indicates if the contact is the primary contact for the role. Y stands for primary contact and N stands for a contact that is not the primary contact for the role type. The default value is N.
PrimaryFlag	boolean	Indicator that specifies if this is the primary role for the contact. Y stands for primary role and N stands for a non-primary role for the contact. The default value is N.
RequestId	long	A system-generated read-only attribute used by the application framework.
RoleLevel	string	The role level of the contact. For example, executive, department head, or middle manager.
RoleType	string	The role performed by a contact.
Status	string	The status of the record.

E-Mail

The e-mail address associated with a trading community member. For example, john.doe@oracle.com.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Email

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*

Relationship Type	Object or Service
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key

Name	Type	Description
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmailAddress	string	The email address associated with the record.
EmailFormat	string	The preferred format for e-mail addressed to this address such as HTML or ASCII. A list of accepted values is defined using the lookup EMAIL_FORMAT.
EmailInformation	*Trading Community Contact Point Additional Information*	The additional information about the e-mail.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary e-mail of the associated object. If the value is True, then this is the primary e-mail. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

E-Mail Domain

The domain of the e-mail address associated with a trading community member. For example, ABC Corporation has CORP and BUSINESS e-mail domains.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}EmailDomain

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DomainName	string	The actual or non-reversed domain name of the organization for display purpose.
EmailDomainId	long	The sequence generated unique identifier. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
Status	string	The status of the record.
TransposedDomain	string	The reversed domain name for the purposes of searching.

Education

The trading community person's education information. For example, a person may have attended the University of California from 1995 to 1999 and received an undergraduate degree in Computer Science with a GPA of 4.0.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}Education

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CourseMajor	string	The primary area of study.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DegreeReceived	string	The abbreviation for the degree. For example, BA, BSc, MBA, MSc, PhD, and Gd (graduate diploma).
EducationId	long	The unique identifier of the education record. • Primary Key
LastDateAttended	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The year and month when a person last attended the educational institution.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
PartyId	long	The unique identifier of the contact party.
RequestId	long	A system-generated read-only attribute used by the application framework.
SchoolAttendedName	string	The name of the school.
SchoolPartyId	long	The party identifier of the school.
StartDateAttended	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the attendance of a person starts.
Status	string	The status of the record.
TypeOfSchool	string	The classification of the educational organization. For example, high school, college, university, or professional school. Note that the classification of schools varies among different cultures.

Electronic File Transfer

The electronic funds transfer information of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Eft

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Organization Details*

Relationship Type	Object or Service
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EFTPrintingProgramId	long	The printing program identifier.
EFTSWIFTCode	string	The EFT swift code information.
EFTTransmissionProgramId	long	The transmission program identifier.
EFTUserNumber	string	The number that identifies you as a user of electronic funds transfer service for your bank or clearing organization.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context.

Name	Type	Description
		Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Employment History

The employment history information of a trading community member. For example, John Doe was a Vice President at Business World from 2001 to 2007 and President at World of Business from 2007 to 2009.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}EmploymentHistory

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Work Class*
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BeginDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the employment officially began.
Branch	string	The military branch code.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmployedAsTitle	string	Job position title assigned by an employer.
EmployedAsTitleCode	string	The code for the job title. If title cannot be represented by a code, then the EMPLOYED_AS_TITLE column must be used.

Name	Type	Description
EmployedByDivisionName	string	The common name of a division or an organization at which the person was employed.
EmployedByNameCompany	string	The name of the organization at which the person was employed. Note that the name must not include the division name.
EmployedByPartyId	long	The party identifier of the employer for situations in which the employer is represented as a party.
EmploymentHistoryId	long	The unique employment history identifier. • Primary Key
EmploymentTypeCode	string	Indicates whether the employment is part-time or full-time.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FacultyPositionFlag	boolean	Indicator Y or N to specify whether the position is a faculty position or not.
FractionOfTenure	decimal	The fraction of tenure.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MilitaryRank	string	The rank of the person in the branch.
PartyId	long	The unique identifier of the contact party.
ReasonForLeaving	string	The free format text that describes the reason for leaving.
RequestId	long	A system-generated read-only attribute used by the application framework.
Responsibility	string	Job responsibility of the person.

Name	Type	Description
Served	string	Indicates where the person performed military service.
Station	string	Indicates the station name.
Status	string	The status of the record.
SupervisorName	string	The full name of the manager of the person.
TenureCode	string	The type of tenure for faculty positions.
WeeklyWorkHours	decimal	The usual number of hours worked per week.
WorkClass	*Work Class*	The custom-defined classification information about job title and work experience of a person.

Financial Profile

The financial details of a trading community member, such as bank account information that was obtained as part of a credit evaluation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}FinancialProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*

Relationship Type	Object or Service
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessAuthorityDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when access to the information in the account was granted.
AccessAuthorityGranted	string	Indicates whether access to information in a financial account was granted. If the value is True, then the access has been granted.
BalanceAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The reported balance on an account. The balance can be a positive number, negative number, or zero.
BalanceVerifiedOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the account balance was verified.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
FinancialAccountNumber	string	The alternate unique identifier of the financial account.
FinancialAccountType	string	The short name that classifies the financial accounts. For example, savings, checking, home loan, personal loan, trading, and so on.

Name	Type	Description
FinancialOrgType	string	The classification of financial organizations. For example, bank, savings and loan, private lender, building society and so on.
FinancialOrganizationName	string	The name of the financial organization that holds the account.
FinancialProfileId	long	The unique identifier of the party's financial profile. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Instant Messaging

The instant messaging information of a trading community member, such as the AOL identifier or Yahoo Messenger information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}InstantMessaging

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Relationship Type	Object or Service
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
InstantMessagingAddress	string	The instant messaging information address.
InstantMessagingInformation	*Trading Community Contact Point Additional Information*	The instant messaging information related to the record.
InstantMessengerType	string	The type of the instant messenger type.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.

Name	Type	Description
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary instant messaging Id of the associated object. If the value is True, then this is the primary instant messaging Id. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Phone

The phone number associated with a trading community member. For example, the phone number for Oracle Corporation is 650-506-6000.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Phone

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Marketing Response*
Contained by	*Partner*
Contained by	*Household*
Contained by	*Contact Address*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*

Relationship Type	Object or Service
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FormattedPhoneNumber	string	The formatted phone number.
LastContactDtTime	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date and time of last contact placed to this contact point.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.

Name	Type	Description
PagerTypeCode	string	The PAGER_TYPE_CODE column stores the lookup code for the type of pager. The type of pager determines how the page is received. For example, tone, number, alphanumeric or two-way alphanumeric.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PhoneAreaCode	string	The area code prefix for the phone number.
PhoneCallingCalendar	string	The name or code for a calling calendar used with this telephone number. This attribute is no longer used in Fusion applications.
PhoneCountryCode	string	The country code prefix for the phone number.
PhoneExtension	string	The additional number addressed after initial connection to an internal telephone system.
PhoneInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community phone.
PhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound, or outbound.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RawPhoneNumber	string	The unformatted telephone number.
RelationshipId	long	The relationship identifier for the record.

Name	Type	Description
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TimezoneCode	string	The foreign key to FND_TIMEZONES_B.TIMEZONE_CODE.
TransposedPhoneNumber	string	This column stores the concatenation of PHONE_COUNTRY_CODE, PHONE_AREA_CODE, and PHONE_NUMBER in reverse order. For example, if PHONE_COUNTRY_CODE=1, PHONE_AREA_CODE=650 and PHONE_NUMBER=5065747, this column stores 74756050561. This column is used for building an index to search for any combination of the above three columns.

Preference

The preferences of a trading community member. For example, a member may prefer that the transaction currency is the US dollar.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartyPreference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*

Relationship Type	Object or Service
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalValue1	string	The additional preference value.
AdditionalValue2	string	The additional preference value.
AdditionalValue3	string	The additional preference value.
AdditionalValue4	string	The additional preference value.
AdditionalValue5	string	The additional preference value.
Category	string	A preference category is used to logically group one or more preference codes in a particular user interface. The combination of CATEGORY and PREFERENCE_CODE identifies a preference.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Module	string	The program that creates the preference. For example, TCA MOBILE CUSTOMER DIRECTORY.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PartyPreferenceId	long	The unique identifier of the party preference. • Primary Key
PreferenceCode	string	A preference code determines if a preference is a single value or a multiple value preference. The preference code is validated by the HZ_PREFERENCE lookup. The combination of CATEGORY and PREFERENCE_CODE identifies a preference.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
ValueDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The preference value when the data type is DATE.
ValueName	string	A user-defined alias for a preference value.
ValueNumber	decimal	The preference value when the data type is NUMBER.
ValueVarchar2	string	The preference value when the data type is VARCHAR2.

Relationship

The relationship between two trading community members. For example, John Doe is the spouse of Jane Doe or Michael Smith is a contact of Oracle Corporation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}Relationship

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Phone*
Contains	*Address*
Contains	*Instant Messaging*
Contains	*Web*
Contains	*Usage Assignment*
Contains	*Trading Community Relationship Additional Information*
Contains	*Customer Contact Profile*
Contains	*Source System Reference*
Contains	*Email*
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*

Relationship Type	Object or Service
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalInformation1	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type. For operating unit and legal entity to bank relationships, column stores communication agreement ID, which identifies agreement between payer and bank on type of EDIFACT documents that can be sent for processing payments.
AdditionalInformation10	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation11	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation12	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation13	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation14	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.

Name	Type	Description
AdditionalInformation15	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation16	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation17	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation18	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation19	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation2	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation20	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation21	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation22	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation23	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation24	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation25	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.

Name	Type	Description
AdditionalInformation26	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation27	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation28	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation29	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation3	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation30	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation4	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation5	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation6	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation7	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation8	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation9	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
Comments	string	The comments for the record.

Name	Type	Description
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DirectionCode	string	The code of the relationship direction. The list of accepted values are defined in the lookup DIRECTION_CODE.
Email	*E-Mail*	The email address associated with the record.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectEmailAddress	string	The e-mail address of the object party in the relationship.
ObjectId	long	The unique identifier of the object party in this relationship.
ObjectPartyName	string	The name of the object party in this relationship.

Name	Type	Description
ObjectTableName	string	The source table name of the object party in this relationship.
ObjectType	string	The object type of the relationship.
ObjectUsageCode	string	The usage code of object party in the relationship.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationContact	*Customer Contact Profile*	The organization contact information.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyName	string	The name of the party.
PartySite	*Address*	The party site associated with the relationship.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the relationship.
PercentageOwnership	decimal	The percentage of the child entity owned by the parent entity.
Phone	*Phone*	The phone information for the entity.
PreferredContactFlag	boolean	Indicates if this contact person is primary contact for the customer.
PrimaryCustomerFlag	boolean	Indicates if this customer is primary customer for the contact.
RelationshipCode	string	The code for a forward or a backward relationship. A list of accepted relationship values is defined in the lookup PARTY_ RELATIONS_TYPE.
RelationshipId	long	The relationship identifier for the record.
RelationshipInformation	*Trading Community Relationship Additional Information*	The relationship type information.

Name	Type	Description
RelationshipRecId	long	The unique identifier of the contact's relationship record. • Primary Key
RelationshipType	string	The relationship type name. For example, CUSTOMER_SUPPLIER. A list of valid relationship types is defined in the lookup HZ_RELATIONSHIP_TYPE.
RequestId	long	A system-generated read-only attribute used by the application framework.
Role	string	The role between the subject and object party in this relationship.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
SubjectEmailAddress	string	The e-mail address of the subject party in relationship.
SubjectId	long	The unique identifier of the subject in this relationship.
SubjectPartyUsageAssignment	*Usage Assignment*	The usage assignment of the subject party in the relationship.
SubjectTableName	string	The source table of the subject.
SubjectType	string	The subject type of the relationship.
SubjectUsageCode	string	The usage code of subject party in the relationship.
Web	*Web*	The web information related to the record.

Source System Reference

The name of external source system where the trading community information is imported from.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}OriginalSystemReference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OldOrigSystemReference	string	The old source system reference that is being replaced.

Name	Type	Description
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OrigSystemReferenceId	long	The unique identifier for original system reference. • Primary Key
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
SourceSystemRefInformation	*Trading Community Original System Mapping Identifier Additional Information*	The source system reference information.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Telex

The telex number information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Telex

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key

Name	Type	Description
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary telex of the associated object. If the value is True, then this is the primary telex. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.

Name	Type	Description
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TelexNumber	string	The telex reference number (usually a telephone number) of the organization.

Trading Community Address Additional Information

The address information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/partySite/}PartySiteInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contact Address*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.

Name	Type	Description
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Address Purpose

The purpose of an address, such as Business, Home, or Ship To.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartySiteUse

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Contact Address*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Relationship Type	Object or Service
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BeginDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date at the start of the date range within which the row is active.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
IntegrationKey	string	The integration key is not used.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.

Name	Type	Description
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PartySiteUseId	long	The unique identifier of the party site used. • Primary Key
PrimaryPerType	string	Indicates if this is the primary use for the site. Y stands for the primary site and N stands for all other sites.
RequestId	long	A system-generated read-only attribute used by the application framework.
SiteUseType	string	The site use type associated with the address.
Status	string	The status of the record.

Trading Community Contact Point Additional Information

The contact point for a trading community member like phone or e-mail. For example 650-506-6000 is the phone number for Oracle Corporation, john.doe@example.com is the e-mail address for John Doe.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/contactPoint/}ContactPointInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*E-Mail*
Contained by	*Instant Messaging*
Contained by	*Phone*
Contained by	*Web*

Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointType	string	The type of the contact point.
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Organization Contact Additional Information

The additional information about the organization contact.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/orgContact/}OrganizationContactInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Customer Contact Profile*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
OrgContactId	long	The unique identifier of the organization contact. • Primary Key

Name	Type	Description
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Original System Mapping Identifier Additional Information

The unique identifier for the trading community party, associated with the address, from the external source system reference.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/sourceSystemRef/}SourceSystemRefInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Source System Reference*
Handled by	*Sales Reference Customer*
Handled by	*Trading Community Location*
Handled by	*Trading Community Customer Account*
Handled by	*Sales Party*
Handled by	*Company and User Registration*

Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalPartyId	*Additional Identifier*	The additional identifier associated with the organization or person.
AdditionalPersonName	*Additional Contact Name*	The additional name of the person.
Address1	string	The first line of the address.
Address2	string	The second line of the address.

Name	Type	Description
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
CategoryCode	string	The code of the category to which the person belongs. A list of accepted values is defined in the lookup type CUSTOMER_CATEGORY.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
Certification	*Certification*	The certification information for the person.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
Citizenship	*Citizenship*	The citizenship information of a person.
City	string	The name of the city.
CodeAssignment	*Classification Assignment*	The classification code assigned to the person.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRating	*Credit Rating*	The credit rating of the person.
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was born.

Name	Type	Description
Education	*Education*	The education information of the person.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EmailDomain	*E-Mail Domain*	The domain name of the email address.
EmploymentHistory	*Employment History*	The employment history information of a person.
FinancialProfile	*Financial Profile*	The financial profile information of a person.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
Gender	string	The gender of the person, such as male, female, and unknown. A list of accepted values is defined in the lookup HZ_GENDER.
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LanguageName	string	The standard name for the language.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaritalStatus	string	The marital status of the person. A list of accepted values is defined in the lookup MARITAL_STATUS.
MissionStatement	string	The corporate charter of organization in user-defined text format.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartyPreference	*Preference*	The preference mentioned in the person details.
PartySite	*Contact Address*	The party site associated with the person.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the person.
PersonAcademicTitle	string	The part of the person's title that denotes the academic qualification, such as Dr. Jane Smith.

Name	Type	Description
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonInterest	*Contact Interest*	The interest information associated with a person.
PersonLanguage	*Contact Language*	The language information associated with a person.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	The prefix for the last name of a person, such as fon, van. For example, if a person's name is Hans Van, the last name of the person is captured using this attribute.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	The place in a family structure. For example, in "Tom Jones III", the "III".
PersonPreNameAdjunct	string	The preferred name adjacency of a resource.
PersonPreviousLastName	string	The previous last name of a person.
PersonProfile	*Contact*	The profile information of the person.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
Phone	*Phone*	The phone information for the entity.
PostalCode	string	The postal code element of the address.

Name	Type	Description
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryEmailContactPTId	long	The unique identifier of the primary e-mail.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneContactPTId	long	The unique identifier of the primary phone contact point.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURLContactPTId	long	The unique identifier of the primary URL contact point.

Name	Type	Description
Province	string	The name of the province.
Relationship	*Relationship*	The relationship information of the person.
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The Standard Industry Classification (SIC) code.
SICCodeType	string	The version of Standard Industry Classification (SIC) code.
Salutation	string	The size of the household this person is a part of.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
SourceSystemUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the source system information was last updated.
State	string	The name of the state.
Status	string	The status of the record.
ThirdPartyFlag	boolean	Indicates whether a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. If the value is Y, then the party is a third party relationship. If Oracle Service is installed, the Third Party field in the Customers window is mandatory.
URL	string	The destination URL associated with a specific Google AdWords ad.
UserGUID	string	The "light weight" user Global Unique Id. Light Weight users defined in the Extended Security (XS) System.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.

Name	Type	Description
Web	*Web*	The web information related to the record.

Trading Community Person Profile Additional Information

The additional information about a trading community person.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/person/}PersonInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contact*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Loyalty Member Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
PersonProfileId	long	The unique identifier of the person profile. • Primary Key

Name	Type	Description
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Relationship Additional Information

The relationship between two trading community members. For example, John Doe is the spouse of Jane Doe or Michael Smith is a contact of Oracle Corporation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/relationship/}RelationshipInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*

Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.

Name	Type	Description
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
PartyUsageCode	string	The usage context of a party's contact point.
PartyUsgAssignmentId	long	The unique identifier of the party usage assignment. • Primary Key
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.

Web

The Web information associated with a trading community member. For example, Oracle's address on the Web is www.oracle.com.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Web

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*
Contained by	*Household*

Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N stands for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
URL	string	The destination URL associated with a specific Google AdWords ad.
WebInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community Web.

Name	Type	Description
WebType	string	The prefix class to a Web address. Typically, this is either FTP or HTTP.

Work Class

The custom-defined classification of information about a person's job title and work experience.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}WorkClass

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Employment History*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmploymentHistoryId	long	The foreign key to the HZ_EMPLOYMENT_HISTORY table.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LevelOfExperience	string	The user-defined rating for the level of experience in the class of work. For example, journeyman, trainee, or exposure.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.
WorkClassId	long	The unique identifier for the class of work. • Primary Key
WorkClassName	string	The user-determined classification for work. For example, bricklayer, doctor, lawyer, programmer, or minister of health.

Trading Community Real Time Data Quality

A service for real-time match and cleanse data quality operations. The match operation finds duplicate organizations, persons, or locations and cleanses to validate and standardize addresses.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/cdm/dataQuality/realTime/publicModel/}DQRealTimeService

Service WSDL URL: https://servername/crmService/DQRealTimeService?WSDL

Logical Business Objects

- CRM

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Trading Community Data Quality Cleanse Address*
Handles	*Trading Community Data Quality Address*
Handles	*Trading Community Data Quality Match Location*
Handles	*Trading Community Data Quality Location*
Handles	*Trading Community Data Quality Configuration*
Handles	*Trading Community Data Quality Person*
Handles	*Trading Community Data Quality Organization*
Handles	*Trading Community Data Quality Match Organization*
Handles	*Trading Community Data Quality Match Person*

Operations

- *matchOrganization*
- *matchPerson*
- *matchLocation*
- *cleanseAddress*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

matchOrganization

Matching operation for organization party.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
input	*Trading Community Data Quality Match Organization*	The organization party for which the match needs to be performed.

Response Payload

Element Name	Type	Description
result	*Trading Community Data Quality Match Organization*	Results of the matched organization parties.

matchPerson

Matching operation for person party.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
input	*Trading Community Data Quality Match Person*	The person party details for which the match needs to be performed.

Response Payload

Element Name	Type	Description
result	*Trading Community Data Quality Match Person*	Results of the matched person parties.

matchLocation

Matching operation for location object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
input	*Trading Community Data Quality Match Location*	The location object for which the match needs to be performed.

Response Payload

Element Name	Type	Description
result	*Trading Community Data Quality Match Location*	Results of the matched locations.

cleanseAddress

Address validation and standardization operation for the entered address.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
input	*Trading Community Data Quality Cleanse Address*	The address to be cleansed.

Response Payload

Element Name	Type	Description
result	*Trading Community Data Quality Cleanse Address*	Results of the cleansed address.

getDfltObjAttrHints

Retrieves user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

Gets the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
cleanseAddress	ZCQ_CLEANSE_TRADING_COMMUNITY_DATA_REAL_TIME_PRIV	Cleanse Trading Community Data Real-Time	Allows validating and standardizing of addresses against the country-specific postal reference files in real time
matchPerson	ZCQ_MATCH_TRADING_COMMUNITY_DATA_REAL_TIME_PRIV	Match Trading Community Data Real-Time	Allows performing real-time matching of trading community entities such as organization, person, and location to find potential duplicates that may exist in the registry along with a match score.
matchLocation	ZCQ_MATCH_TRADING_COMMUNITY_DATA_REAL_TIME_PRIV	Match Trading Community Data Real-Time	Allows performing real-time matching of trading community entities such as organization, person, and location to find potential duplicates that may exist in the registry along with a match score.
matchOrganization	ZCQ_MATCH_TRADING_COMMUNITY_DATA_REAL_TIME_PRIV	Match Trading Community Data Real-Time	Allows performing real-time matching of trading community entities such as organization, person, and location to find potential duplicates that may exist in the registry along with a match score.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCQ_CLEANSE_TRADING_COMMUNITY_DATA_REAL_TIME_PRIV	ORA_ZCQ_TRADING_COMMUNITY_DQ_MGMT_DUTY	Trading Community Data Quality Management	Performs real-time and batch data quality functions such as matching and cleansing.
ZCQ_MATCH_TRADING_COMMUNITY_DATA_REAL_TIME_PRIV	ORA_ZCQ_TRADING_COMMUNITY_DQ_MGMT_DUTY	Trading Community Data Quality Management	Performs real-time and batch data quality functions such as matching and cleansing.

Trading Community Data Quality Address

An object representing a set of attributes that is used to provide values of the address to be cleansed such as street address, city, postal code, or country.

QName: {http://xmlns.oracle.com/apps/cdm/dataQuality/realTime/publicModel/}DataQualityAddress

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Data Quality Cleanse Address*
Handled by	*Trading Community Real Time Data Quality*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AddressLine1	string	The first line of the street address.
AddressLine2	string	The second line of the street address.
AddressLine3	string	The third line of the street address.
AddressLine4	string	The fourth line of the street address.
City	string	The name of the city.
Country	string	The name of the country.
CountryISO2	string	A two-letter country code defined in ISO 3166-1.
CountrySubEntity	string	The geopolitical division within the country such as Province, State, and so on.
DataQualityRecordType	string	The type of record such as Driver, Candidate, and so on.
DataQualityRequestId	string	The consumer provided identifier for grouping the Driver and Candidate records, when more than one Driver Record is passed.
DataQualitySubRequestId	string	The input attribute provided by the service consumer. Each input record should have a unique identifier within the service request which is echoed back in the result records for correlation purpose.

Name	Type	Description
DependentLocality	string	An administrative or geopolitical level below city or locality.
DoubleDependentLocality	string	An administrative or geopolitical level below the dependent locality.
LocationIdentifier	string	The unique identifier for the location.
PostalCode	string	The postal code element of the address.
PostalPlusCode	string	The extension to the postal code such as the 4 digit code for United States ZIP code.
ResultCode	string	The code returned by the data quality service indicating the status of the service call such as ERRORED, SUCCESS, and so on.
ResultMessage	string	A return attribute which provides more details on the status of the service call.
SubProvince	string	The largest administrative level or division of a state or province. For example, for United states, this would map to county such as Dade county in Florida or Suffolk country in New York.

Trading Community Data Quality Cleanse Address

An object representing a set of attributes that is used to provide values to cleanse or validate an address such as the address elements and the cleansing configuration code.

QName: {http://xmlns.oracle.com/apps/cdm/dataQuality/realTime/publicModel/}DataQualityAddressService

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Data Quality Address*
Contains	*Trading Community Data Quality Configuration*

Relationship Type	Object or Service
Handled by	*Trading Community Real Time Data Quality*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ConfigCode	string	The configuration code defined in the Fusion Data Quality application for matching or cleansing operations and usage.
DataQualityAddress	*Trading Community Data Quality Address*	The Data Quality configuration parameter name-value pairs for overwriting parameter values associated with the configuration code per runtime request.
DataQualityParam	*Trading Community Data Quality Configuration*	A return attribute which provides more details on the status of the service call.
DataQualityRequestId	string	The consumer provided identifier for grouping the Driver and Candidate records, when more than one Driver Record is passed.
ErrorCode	string	The code returned by the data quality service informing the status of the service call such as ERRORED, SUCCESS, and so on.
Message	string	The person object attributes used by the data quality real-time matching service.

Trading Community Data Quality Configuration

An object representing a set of attributes that is used to provide data quality configuration values such as match tolerance, default country, threads hold, or maximum number of return records.

QName: {http://xmlns.oracle.com/apps/cdm/dataQuality/realTime/publicModel/}DataQualityParam

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Data Quality Match Organization*
Contained by	*Trading Community Data Quality Match Location*
Contained by	*Trading Community Data Quality Match Person*
Contained by	*Trading Community Data Quality Cleanse Address*
Handled by	*Trading Community Real Time Data Quality*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
DataQualityRequestId	string	The consumer provided identifier for grouping the Driver and Candidate records, when more than one Driver record is passed.
DataQualitySubRequestId	string	The output attribute whose value is echoed back in the result records for correlation purpose.
ParamName	string	The name of the parameter for overwriting the pre-defined configuration values per runtime request.
ParamValue	string	The value of the parameter for overwriting the pre-defined configuration values per runtime request.

Trading Community Data Quality Location

An object representing a set of attributes that is used to provide values of the location for which potential matches are returned such as street address, city, or postal code.

QName: {http://xmlns.oracle.com/apps/cdm/dataQuality/realTime/publicModel/}DataQualityLocation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Data Quality Match Location*
Handled by	*Trading Community Real Time Data Quality*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AddressEffectiveDate	string	The date when the postal address for this location becomes valid.
AddressExpirationDate	string	The date when the postal address for this location becomes invalid.
AddressLine1	string	The first line of the street address.
AddressLine2	string	The second line of the street address.
AddressLine3	string	The third line of the street address.
AddressLine4	string	The fourth line of the street address.
City	string	The name of the city.
Country	string	The name of the country.
CountrySubEntity	string	The geopolitical level below the country such as Province or State.
County	string	The name of the county.
CustomAttribute1	string	A custom attribute for the location object or its child entities to be used in location matching.
CustomAttribute10	string	A custom attribute for location object or its child entities to be used in location matching.
CustomAttribute2	string	A custom attribute for the location object or its child entities to be used in location matching.
CustomAttribute3	string	A custom attribute for the location object or its child entities to be used in location matching.

Name	Type	Description
CustomAttribute4	string	A custom attribute for the location object or its child entities to be used in location matching.
CustomAttribute5	string	A custom attribute for the location object or its child entities to be used in location matching.
CustomAttribute6	string	A custom attribute for the location object or its child entities to be used in location matching.
CustomAttribute7	string	A custom attribute for the location object or its child entities to be used in location matching.
CustomAttribute8	string	A custom attribute for the location object or its child entities to be used in location matching.
CustomAttribute9	string	A custom attribute for the location object or its child entities to be used in location matching.
DataQualityRecordType	string	The type of record such as Driver, Candidate, and so on.
DataQualityRequestId	string	The consumer provided identifier for grouping the Driver and Candidate records, when more than one Driver record is passed.
DataQualityScore	string	A value between 1 and 100 that indicates the quality of the match, where 100 indicates the best match.
DataQualitySubRequestId	string	The input attribute provided by the service consumer. Each input record should have a unique identifier within the service request which is echoed back in the result records for correlation purpose.
GeometryStatusCode	string	The spatial data integration status for the location.
HouseType	string	The type of the building.
LocationIdentifier	string	The unique identifier for the location.
PartySiteName	string	The name given to the party address.
PhoneticAddressLines	string	The phonetic or Kana representation of the Kanji address lines (used in Japan).

Name	Type	Description
Position	string	The primary direction such as North or East that is used to access the location.
PostalCode	string	The postal code element of the address.
Province	string	The name of the province.
ResultCode	string	The code returned by the data quality service indicating the status of the service call such as ERRORED, SUCCESS, and so on.
ResultMessage	string	A return attribute which provides more details on the status of the service call.
SalesTaxGeocode	string	The United States sales tax jurisdiction code.

Trading Community Data Quality Match Location

An object representing a set of attributes that is used to provide values needed to find potential location matches such as address attributes and location matching configuration code.

QName: {http://xmlns.oracle.com/apps/cdm/dataQuality/realTime/publicModel/}DataQualityLocationService

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Data Quality Configuration*
Contains	*Trading Community Data Quality Location*
Handled by	*Trading Community Real Time Data Quality*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ConfigCode	string	The configuration code defined in the Fusion Data Quality application for matching or cleansing operations and usage.
DataQualityLocation	*Trading Community Data Quality Location*	The location object attributes used by the data quality real-time matching service for location matching.
DataQualityParam	*Trading Community Data Quality Configuration*	The Data Quality configuration parameter name-value pairs for overwriting parameter values associated with the configuration code per runtime request.
DataQualityRequestId	string	A consumer provided identifier that will be echoed back in the response message for correlation purpose.
ErrorCode	string	The code returned by the data quality service informing the status of the service call such as ERRORED, SUCCESS, and so on.
Message	string	A return attribute which provides more details on the status of the service call.

Trading Community Data Quality Match Organization

An object representing a set of attributes that is used to provide values needed to find potential organization matches such as the organization matching attributes and the organization matching configuration code.

QName: {http://xmlns.oracle.com/apps/cdm/dataQuality/realTime/publicModel/}DataQualityOrgService

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Data Quality Configuration*
Contains	*Trading Community Data Quality Organization*
Handled by	*Trading Community Real Time Data Quality*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ConfigCode	string	The configuration code defined in the Fusion Data Quality application for matching or cleansing operations and usage.
DataQualityOrg	*Trading Community Data Quality Organization*	The organization object attributes used by the data quality real-time matching service.
DataQualityParam	*Trading Community Data Quality Configuration*	The Data Quality configuration parameter name-value pairs for overwriting parameter values associated with the configuration code per runtime request.
DataQualityRequestId	string	The consumer provided identifier for grouping the Driver and Candidate records, when more than one Driver record is passed.
ErrorCode	string	The code returned by the data quality service informing the status of the service call such as ERRORED, SUCCESS, and so on.
Message	string	A return attribute which provides more details on the status of the service call.

Trading Community Data Quality Match Person

An object representing a set of attributes that is used to provide values needed to find potential person matches such as person matching configuration code and person matching attributes.

QName: {http://xmlns.oracle.com/apps/cdm/dataQuality/realTime/publicModel/}DataQualityPersonService

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Data Quality Configuration*
Contains	*Trading Community Data Quality Person*

Relationship Type	Object or Service
Handled by	*Trading Community Real Time Data Quality*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ConfigCode	string	The configuration code defined in the Fusion Data Quality application for matching or cleansing operations and usage.
DataQualityParam	*Trading Community Data Quality Configuration*	The Data Quality configuration parameter name-value pairs for overwriting parameter values associated with the configuration code per runtime request.
DataQualityPerson	*Trading Community Data Quality Person*	The person object attributes used by the data quality real-time matching service.
DataQualityRequestId	string	The consumer provided identifier for grouping the Driver and Candidate records, when more than one Driver Record is passed.
ErrorCode	string	The code returned by the data quality service informing the status of the service call such as ERRORED, SUCCESS, and so on.
Message	string	A return attribute which provides more details on the status of the service call.

Trading Community Data Quality Organization

An object representing a set of attributes that is used to provide values of the organization for which potential matches are returned such as organization name, stock symbol, DUNS number.

QName: {http://xmlns.oracle.com/apps/cdm/dataQuality/realTime/publicModel/}DataQualityOrg

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Data Quality Match Organization*
Handled by	*Trading Community Real Time Data Quality*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalPartyIdentifierId1	string	The unique identifier for the additional organization identifier record.
AdditionalPartyIdentifierId2	string	The unique identifier for the additional organization identifier record.
AdditionalPartyIdentifierId3	string	The unique identifier for the additional organization identifier record.
AddressIdentifier	string	The unique identifier for the location.
AddressLine1	string	The first line of the street address.
AddressLine2	string	The second line of the street address.
AddressLine3	string	The third line of the street address.
AddressLine4	string	The fourth line of the street address.
City	string	The name of the city.
ContactName	string	The name of the primary contact for the account.
ContactPointIdentifier	string	The unique identifier for party contact point record.
Country	string	The name of the country.
CountrySubEntity	string	The state or province name in the organization address.
County	string	The name of the county.

Name	Type	Description
CustomAttribute1	string	A custom attribute for the organization object or its child entities to be used in organization matching.
CustomAttribute10	string	A custom attribute for the organization object or its child entities to be used in organization matching.
CustomAttribute2	string	A custom attribute for the organization object or its child entities to be used in organization matching.
CustomAttribute3	string	A custom attribute for the organization object or its child entities to be used in organization matching.
CustomAttribute4	string	A custom attribute for the organization object or its child entities to be used in organization matching.
CustomAttribute5	string	A custom attribute for the organization object or its child entities to be used in organization matching.
CustomAttribute6	string	A custom attribute for the organization object or its child entities to be used in organization matching.
CustomAttribute7	string	A custom attribute for the organization object or its child entities to be used in organization matching.
CustomAttribute8	string	A custom attribute for the organization object or its child entities to be used in organization matching.
CustomAttribute9	string	A custom attribute for the organization object or its child entities to be used in organization matching.
DUNSNumber	string	The D-U-N-S number in VARCHAR format. This attribute value not restricted to nine digit D-U-N-S number.
DataQualityRecordType	string	The type of record such as Driver, Candidate, and so on.

Name	Type	Description
DataQualityRequestId	string	The consumer provided identifier for grouping the Driver and the Candidate records, when more than one Driver record is passed.
DataQualityScore	string	A value between 1 and 100 that indicates the quality of the match, where 100 indicates the best match.
DataQualitySubRequestId	string	The input attribute provided by the service consumer. Each input record should have a unique identifier within the service request which is echoed back in the result records for correlation purpose.
EmailDomainId	string	The unique identifier of the organization email.
OrganizationIdentifier	string	The unique identifier for the organization.
OrganizationIdentifierId1	string	The additional identifier for the organization.
OrganizationIdentifierId2	string	The additional identifier for the organization.
OrganizationIdentifierId3	string	The additional identifier for the organization.
OrganizationName	string	The name of the party when the party type is Organization.
OrganizationProfileId	string	The unique identifier of the organization profile.
OrganizationType	string	This attribute is not used in Fusion Version 1.
PartySiteId	string	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PhoneExtension	string	The phone extension of the organization phone.
PhoneLineType	string	The type of phone line. For example, general, fax, inbound, or outbound.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PhoneticAddressLines	string	The phonetic or Kana representation of the Kanji address lines (used in Japan).

Name	Type	Description
PostalCode	string	The postal code element of the address.
PostalPlusCode	string	The extension of the postal code such as the 4 digit code for United States ZIP code.
Province	string	The name of the province.
RegistryIdentifier	string	The unique number for the organization that maps to the party number in the party foundation model.
ResultCode	string	The code returned by the data quality service indicating the status of the service call such as ERRORED, SUCCESS, and so on.
ResultMessage	string	A return attribute which provides more details on the status of the service call.
SICCode	string	The Standard Industry Classification (SIC) code.
SICCodeType	string	The version of Standard Industry Classification (SIC) code.
StockSymbol	string	The corporate stock symbol such as ORCL.
TaxRegistrationNumber	string	The taxpayer identification number, often the unique identifier of the person or the organization. For example, the Social Security Number (SSN) or the income taxpayer ID in US, the fiscal code or NIF in Europe, and so on.
TradingPartnerIdentifier	string	The Financial Systems Integration Office (FSIO) trading partner code. This attribute fulfills the need for the "Fed vs. Non-Fed" attribute.
YearEstablished	string	The year when the organization began doing business.
YearIncorporated	string	The year when the business was incorporated.
eMailDomain	string	The email domain information for the organization.

Trading Community Data Quality Person

An object representing a set of attributes that is used to provide values of the person for which potential matches are returned such as first name or last name.

QName: {http://xmlns.oracle.com/apps/cdm/dataQuality/realTime/publicModel/}DataQualityPerson

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Data Quality Match Person*
Handled by	*Trading Community Real Time Data Quality*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalPartyIdentifierId1	string	The unique identifier for the additional person identification record.
AdditionalPartyIdentifierId2	string	The unique identifier for the additional person identification record.
AdditionalPartyIdentifierId3	string	The unique identifier for the additional person identification record.
AddressIdentifier	string	The unique identifier for the location address.
AddressLine1	string	The first line of the street address.
AddressLine2	string	The second line of the street address.
AddressLine3	string	The third line of the street address.
AddressLine4	string	The fourth line of the street address.
City	string	The name of the city.

Name	Type	Description
ContactPointIdentifier	string	Unique record identifier for a person party contact point in the Fusion instance.
Country	string	The name of the country.
CountrySubEntity	string	The geopolitical division within the country such as Province, State, and so on.
County	string	The name of the county.
CustomAttribute1	string	A custom attribute for the person object or its child entities to be used in person matching.
CustomAttribute10	string	A custom attribute for the person object or its child entities to be used in person matching.
CustomAttribute2	string	A custom attribute for the person object or its child entities to be used in person matching.
CustomAttribute3	string	A custom attribute for the person object or its child entities to be used in person matching.
CustomAttribute4	string	A custom attribute for the person object or its child entities to be used in person matching.
CustomAttribute5	string	A custom attribute for the person object or its child entities to be used in person matching.
CustomAttribute6	string	A custom attribute for the person object or its child entities to be used in person matching.
CustomAttribute7	string	A custom attribute for the person object or its child entities to be used in person matching.
CustomAttribute8	string	A custom attribute for the person object or its child entities to be used in person matching.
CustomAttribute9	string	A custom attribute for the person object or its child entities to be used in person matching.
DataQualityRecordType	string	The type of record such as Driver, Candidate, and so on.
DataQualityRequestId	string	The consumer provided identifier for grouping the Driver and Candidate records, when more than one Driver Record is passed.

Name	Type	Description
DataQualityScore	string	A value between 1 and 100 that indicates the quality of the match, where 100 indicates the best match.
DataQualitySubRequestId	string	The input attribute provided by the service consumer. Each input record should have a unique identifier within the service request which is echoed back in the result records for correlation purpose.
DateofBirth	string	The date on which the person was born.
DateofDeath	string	The date on which the person died.
DeclaredEthnicity	string	The declared ethnicity of the person.
Email	string	The email address associated with the record.
EmailId	string	The unique record identifier of the email associated with the person.
Gender	string	The gender of the person such as Male, Female, or Unknown.
HouseType	string	The type of building or house.
LanguageName	string	The standard name for a language.
PartySiteId	string	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonIdentifier	string	The unique identifier of the person record.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.

Name	Type	Description
PersonName	string	The name of the person. It is the concatenation of the person's title, first name, middle name, and last name.
PersonProfileId	string	The identifier for the person profile.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonalIdentification1	string	The value of a chosen personal identifier.
PersonalIdentification2	string	The value of a chosen personal identifier.
PersonalIdentification3	string	The value of a chosen personal identifier.
PhoneExtension	string	The extension to the phone number for the person.
PhoneLineType	string	The type of phone line. For example, general, fax, inbound, or outbound.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PhoneticAddressLines	string	The phonetic or Kana representation of the Kanji address lines (used in Japan).
PlaceofBirth	string	The place where the person was born, typically, the city and the country of birth.
PostalCode	string	The postal code element of the address.
PostalPlusCode	string	The extension of the postal code such as the 4 digit code for United States ZIP code.
Province	string	The name of the province.
RegistryIdentifier	string	The unique identifier number of a party.
ResultCode	string	The code returned by the data quality service indicating the status of the service call such as ERRORED, SUCCESS, and so on.

Name	Type	Description
ResultMessage	string	A return attribute which provides more details on the status of the service call.
Salutation	string	The phrase used to address a party in any correspondence.
TaxRegistrationNumber	string	The taxpayer identification number, often the unique identifier of the person or the organization. For example, the Social Security Number (SSN) or the income taxpayer ID in US, the fiscal code or NIF in Europe, and so on.

Trading Community Relationship Type Service

A configuration of relationship types that could be used to connect trading community members. For example, spouse of and partner of.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipTypeService/applicationModule/}RelationshipTypeService

getRelationshipType

The Get operation for the trading community relationship type.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
relationshipTypeId	long	The unique identifier of the relationship type.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipTypeService/}RelationshipTypeResul	The trading community relationship type that matches the inbound key attributes.

createRelationshipType

The Create operation for the trading community relationship type.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
relationshipType	*Trading Community Relationship Type*	The trading community relationship type to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipTypeService/}RelationshipTypeResul	The result of the operation that includes the successfully created trading community relationship type and a list of warning or information messages.

updateRelationshipType

The Update operation for the trading community relationship type.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
relationshipType	*Trading Community Relationship Type*	The trading community relationship type to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipTypeService/}RelationshipTypeResul	The result of the operation that includes the successfully updated trading community relationship type and a list of warning or information messages.

deleteRelationshipType

The Delete operation for the trading community relationship type.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
relationshipType	*Trading Community Relationship Type*	The trading community relationship type to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warning or information messages encountered when the object was deleted.

mergeRelationshipType

The Merge operation for the trading community relationship type. It performs an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
relationshipType	*Trading Community Relationship Type*	The trading community relationship type to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipTypeService/}RelationshipTypeResul	The result of the operation that includes the successfully merged trading community relationship type and a list of warning or information messages.

findRelationshipType

The Find operation for the trading community relationship type.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Trading Community Relationship Type*	The result of the operation that includes a list of trading community relationship types that satisfy the inbound criteria and any warning or information messages.

processRelationshipType

The Bulk Load operation for the trading community relationship type.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action to perform, such as create, update, merge, or delete.
relationshipType	*Trading Community Relationship Type*	A list of the trading community relationship types to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk operation behavior, such as whether valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Trading Community Relationship Type*	The result of the operation that includes the successfully processed trading community relationship type and a list of warning or information messages.

processCSRelationshipType

An operation to apply the changes back to the data source for trading community relationship type.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object to represent the changes.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk operation behavior, such as whether valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The result of the operation that includes a list of created and updated data objects, and all warning and information messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name; an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale used to evaluate the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in the ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined for this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for the service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
createRelationshipType	HZ_MANAGE_TRADING_COMMUNITY_RELATIONSHIP_TYPE_PRIV	Manage Trading Community Relationship Type	Allows the specification of relationship types that can be created between organizations and persons in the business community, such as contact of and competitor of.

Operation Name	Privilege Code	Privilege Name	Privilege Description
getRelationshipType	HZ_MANAGE_TRADING_COMMUNITY_RELATIONSHIP_TYPE_PRIV	Manage Trading Community Relationship Type	Allows the specification of relationship types that can be created between organizations and persons in the business community, such as contact of and competitor of.
findRelationshipType	HZ_MANAGE_TRADING_COMMUNITY_RELATIONSHIP_TYPE_PRIV	Manage Trading Community Relationship Type	Allows the specification of relationship types that can be created between organizations and persons in the business community, such as contact of and competitor of.
processCSRelationshipType	HZ_MANAGE_TRADING_COMMUNITY_RELATIONSHIP_TYPE_PRIV	Manage Trading Community Relationship Type	Allows the specification of relationship types that can be created between organizations and persons in the business community, such as contact of and competitor of.
deleteRelationshipType	HZ_MANAGE_TRADING_COMMUNITY_RELATIONSHIP_TYPE_PRIV	Manage Trading Community Relationship Type	Allows the specification of relationship types that can be created between organizations and persons in the business community, such as contact of and competitor of.
mergeRelationshipType	HZ_MANAGE_TRADING_COMMUNITY_RELATIONSHIP_TYPE_PRIV	Manage Trading Community Relationship Type	Allows the specification of relationship types that can be created between organizations and persons in the business community, such as contact of and competitor of.
processRelationshipType	HZ_MANAGE_TRADING_COMMUNITY_RELATIONSHIP_TYPE_PRIV	Manage Trading Community Relationship Type	Allows the specification of relationship types that can be created between organizations and persons in the business community, such as contact of and competitor of.
updateRelationshipType	HZ_MANAGE_TRADING_COMMUNITY_RELATIONSHIP_TYPE_PRIV	Manage Trading Community Relationship Type	Allows the specification of relationship types that can be created between organizations and persons in the business community, such as contact of and competitor of.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_MANAGE_TRADING_COMMUNITY_RELATIONSHIP_TYPE_PRIV	ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Customer Relationship Management Application Administrator	Individual responsible for customer relationship management application administration. Collaborates with customer relationship management application users to maintain consistent financial application setup, rules, and access.
HZ_MANAGE_TRADING_COMMUNITY_RELATIONSHIP_TYPE_PRIV	ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Master Data Management Application Administrator	Administers the installation and maintenance of customer data management application and foundation model.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_CHANNEL_MANAGER_DASHBOARD_DUTY	Channel Manager Dashboard	Provides channel roles a dashboard to manage their daily transactions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_AMENDMENT_DUTY_CRM	Contract Amendment	Amends approved contracts. This includes initiating an amendment, reverting the contract to the previous signed version, updating all allowable attributes, and submitting the amendment for approval.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_AUTHORING_DUTY_CRM	Contract Authoring	Authors contracts, including terms and conditions, interactions, and customer account information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_SEARCH_VIEW_DUTY_CRM	Contract Search and View Access	Searches and views contracts for the assigned business units.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_SETUP_DUTY_CRM	Contract Setup	Contract Setup
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_CONV_MESSAGE_ADMINISTRATION	Conversation Message Administration	Has complete conversation message management capabilities including create messages, reply to messages, change a reply to ready to send status and delete a message.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_CDM_ADMIN_DUTY	Customer Data Management Administration	Administers customer data management.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_CDM_ADMIN_DUTY	Customer Data Management Administration	Administers customer data management.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_CSS_ADMINISTRATION	Customer Self-Service Administration	Manages the provisioning and approval of self service registration requests
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_DATA_INTEGRATION_MANAGEMENT_DUTY	Data Integration Management	This role allows setup and management of data integration maps and instances.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_FFS_FIELD_SERVICE_APPLICATION_ADMINISTRATOR_DUTY	Field Service Application Administrator	Individual responsible for the duty of configuring Field Service mobile application
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_GEO_ADMIN_DUTY	Geography Administration	Grants privileges to set up geographies
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_GEO_ADMIN_DUTY	Geography Administration	Grants privileges to set up geographies
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_CN_INCENTIVES_ADMINISTRATION_DUTY_CRM	Incentive Compensation Administration	Configure and maintain incentive compensation enterprise and business unit setup.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_AUTHORING_DUTY	Interview Definition Authoring	Manage access for authoring Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_MANAGING_DUTY	Interview Definition Managing	Manage access for deleting and forcing checkout of Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_PUBLISHING_DUTY	Interview Definition Publishing	Manage access for publishing and unpublishing Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_VIEWING_DUTY	Interview Definition Viewing	Manage access for viewing Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_EGP_ITEM_MANAGEMENT_DUTY_CRM	Item Management	Creates and manages items including item attributes, item structures, packs, associations, relationships, and catalog assignments.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_CSO_KNOWLEDGE_SETUP_AND_MAINTENANCE_DUTY	Knowledge Setup and Maintenance	Provides the users with the ability to setup and manage knowledge base
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_LEAD_REGISTRATION_MANAGEMENT_DUTY	Lead Registration Management	Manages and analyzes sales lead registrations. Includes the ability to create sales lead registrations, edit both internal and partner lead attributes as needed, and view lead age and status.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_LEAD_REGISTRATION_SUBMISSION_DUTY	Lead Registration Submission	Submits sales lead registrations to the enterprise and manages sales lead attributes. Includes the ability to create, accept, and reject sales lead registrations.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKT_MARKETING_BUDGET_MAINTENANCE_DUTY	MDF Budget Maintenance	Manages MDF budgets including import, export, and viewing budget fund requests and claims that use budgeted funds for marketing activities.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_MANAGE_CX_AI_AGENTS	Manage CX AI Agents	This role allows administrators to manage CX AI Agents in Agent Studio
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKT_MARKETING_MAINTENANCE_DUTY	Marketing Maintenance	Creates and maintains setup for marketing campaigns, responses, segments, lists, and treatments across the enterprise. Additional duties include file import management for the import of marketing campaign responses.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOO_OPPORTUNITY_CHANNEL_ADMINISTRATION_DUTY	Opportunity Channel Administration	Administers all aspects of the application, including some setup. This role is for channel administrators.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_PARTNER_ACCOUNT_ADMINISTRATION_DUTY	Partner Account Administration	Maintains a partner account, including managing members and partner profile information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_PARTNER_ACCOUNT_REVIEW_DUTY	Partner Account Review	Views a partner account, including viewing a partner's members, profile, and account team.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_PARTNER_IMPORT_ADMINISTRATION_DUTY	Partner Import Administration	Partner Import Administration Duty role. This duty will allow for administration activities of Partner Import
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_PARTNER_SALES_PARTY_MANAGEMENT_DUTY	Partner Sales Party Management	Manages creation and maintenance of sales organizations and consumers for partners. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts. This role has limited access to customers and contacts.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_VIEW_PARTY_CENTER_DUTY	Party Center Inquiry	Grants privileges to view party center nodes.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_MANAGE_PARTY_CENTER_DUTY	Party Center Management	Grants privileges to manage party center nodes.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ADMINISTRATOR_DUTY	Resource Administration	Administers resource information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ADMINISTRATOR_DUTY	Resource Administration	Administers resource information.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ORGANIZATION_ADMINISTRATOR_DUTY	Resource Organization Administration	Administers resource organizations.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ORGANIZATION_ADMINISTRATOR_DUTY	Resource Organization Administration	Administers resource organizations.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_TEAM_ADMINISTRATOR_DUTY	Resource Team Administration	Defines resource teams.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_TEAM_ADMINISTRATOR_DUTY	Resource Team Administration	Defines resource teams.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_REVIEW_CRM_APPROVAL_TRANSACTIONS_ADMINISTRATOR	Review CRM Approval Transactions Administrator	Allows viewing of information for CRM approval transactions by an administrator.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZBS_SALES_CHANGE_HISTORY_INQUIRY_DUTY	Sales Change History Inquiry	Views change history of sales business objects for members within the sales organization.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_SALES_LEAD_FOLLOW_UP_DUTY	Sales Lead Follow Up	Processes sales lead for follow up actions including the qualification and conversion of sales lead to revenue opportunities.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_AVAILABILITY_MANAGEMENT	Service Availability Management	Manage the service availability data including reading and writing the availability of a service.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_PROFILE_ADMINISTRATION	Service Profile Administration	Manages all aspects of the Service Profile object, including deleting a service profile.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_STATUS_COMPUTATION	Service Status Computation	Perform actions required to determine the availability of a service.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_SETUP_CUSTOMER_CENTER_DUTY	Setup Customer Center	Manages customer center set up, sales party creation and their related objects, such as appointments, assessments, interactions, notes and tasks.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HRS_SOCIAL_CONNECTION_PARTNER_DUTY_CRM	Social Connection Partner	Performs all Oracle Fusion Social Connection partner duties.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SPECIALIST_JOB	Subscription Specialist	Individual responsible for managing subscriptions, establishing recurring and usage billing processes, initiating manual discounts and invoice adjustments, and handling billing discrepancies and disputes.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	Territory Management Setup	Manages sales territory setup, including lookups, profile options, flexfields, and dimension data. Runs dimension synchronization, and visibility jobs. Additional duties include quota management setup.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_CUSTOMER_ACCOUNT_ADMINISTRATION_DUTY	Trading Community Customer Account Administration	Grants privileges to setup customer account information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_CUSTOMER_ACCOUNT_ADMINISTRATION_DUTY	Trading Community Customer Account Administration	Grants privileges to setup customer account information.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DATA_QUALITY_ADMIN_DUTY	Trading Community Data Quality Administration	Configures, reviews, and edits predefined data quality server configurations and the predefined matching, synchronization, and cleansing configurations.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DATA_QUALITY_ADMIN_DUTY	Trading Community Data Quality Administration	Configures, reviews, and edits predefined data quality server configurations and the predefined matching, synchronization, and cleansing configurations.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCQ_TRADING_COMMUNITY_DQ_MGMT_DUTY	Trading Community Data Quality Management	Performs real-time and batch data quality functions such as matching and cleansing.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DUP_IDEN_MANAGE_DUTY	Trading Community Duplicate Identification Batch Management	Grants privileges to manage duplicate identification batches
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DUP_RES_MANAGE_DUTY	Trading Community Duplicate Resolution Request Management	Grants privileges to manage duplicate resolution requests
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_PERSON_ADMINISTRATION_DUTY	Trading Community Person Administration	Grants privileges to setup person information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_PERSON_ADMINISTRATION_DUTY	Trading Community Person Administration	Grants privileges to setup person information.

Trading Community Relationship Type

The role or relationship type that a trading community member plays in its relationship with another. For example, contact of or subsidiary of.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipTypeService/}RelationshipType

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Trading Community Relationship Type Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AllowCircularRelationships	string	Indicates if circular relationships are allowed using this relationship type.
AllowRelateToSelfFlag	boolean	Indicates if a party can be related to itself.
BackwardRelationshipCode	string	The backward relationship code used to describe relationships. For example, SUPPLIER_OF.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DirectionCode	string	Validated by DIRECTION_CODE lookup type. P for Parent, C for Child, and N for Not Directional.
ForwardRelationshipCode	string	The forward relationship code used to describe relationships. For example, CUSTOMER_OF.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectRolePlural	string	Plural value of relationship role for the object party.
ObjectRoleSingular	string	Singular value of relationship role for the object party.
ObjectType	string	Object type of the relationship type.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
RelationshipType	string	The relationship type name. For example, CUSTOMER_SUPPLIER.
RelationshipTypeId	long	Relationship type identifier. • Primary Key
Role	string	Unique relationship role lookup code based on relationship type and phrase. In the HZ_RELATIONSHIP_ROLE lookup type meaning is the plural role and description is the singular role.
Status	string	The status of the record.
SubjectRoleMeaning	string	Description of the relationship role for the subject party.

Name	Type	Description
SubjectRolePlural	string	Plural value of relationship role for the subject party.
SubjectRoleSingular	string	Singular value of relationship role for the subject party.
SubjectType	string	Subject type of the relationship type.

Trading Community Resolution Request

The service used to send a request electronically or as a document to resolve potential duplicate information. The request may attempt to resolve duplicate parties in the system or to resolve duplicate detail information for a party.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/cdm/hubBase/publicModel/endUserMerge/}DuplicateResolutionRequestService

Service WSDL URL: https://servername/crmService/DuplicateResolutionRequestService?WSDL

Logical Business Objects

- CRM : Trading Community Hub : Trading Community Duplicate Resolution Request

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Trading Community Merge Result*
Handles	*Trading Community Merge Request*

Operations

- *createPartyMergeRequest*
- *createMergeRequest*
- *getMergeResult*
- *getDfltObjAttrHints*

- *getServiceLastUpdateTime*
- *getEntityList*

createPartyMergeRequest

Creates a merge duplicate resolution request for immediate processing for parties which are not sales accounts or pending data steward review and approval. Requests can be entered for review if Fusion Customer Hub is configured and request entry privilege was granted. Requests can be submitted for immediate processing if the request submission privilege was granted and the User Merge Request profile option is set to Process Without Approval.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
mergedRecordList	string	A list of party identifiers to be merged. Child entities of the non-master parties are transferred to the master party and non-master parties are inactivated. At least two party identifiers must be specified.
status	string	Indicates the status of the request to be created. Recommended that this parameter be left unspecified. Used for backward compatibility.
masterId	string	Identifier of the master party. If the master party is not specified and cannot be determined automatically, the request will be entered for review to choose a master party.

Response Payload

Element Name	Type	Description
result	string	Reference to the newly created party merge duplicate resolution request.

createMergeRequest

Creates a merge duplicate resolution request for immediate processing or pending data steward review and approval. Requests can be entered for review if Fusion Customer Hub is configured and request entry privilege was granted. Requests can be submitted for immediate processing if the request submission privilege was granted and the User Merge Request profile option is set to Process Without Approval.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
record	*Trading Community Merge Request*	Master and the non master records that need to be merged.

Response Payload

Element Name	Type	Description
result	*Trading Community Merge Result*	Returns the status of the merge request such as pending, submitted or error along with the duplicate resolution request identifier.

getMergeResult

Retrieves the status of a duplicate resolution request which was created using the Create Merge Request method.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
record	*Trading Community Merge Request*	The duplicate resolution request information such as request identifier.

Response Payload

Element Name	Type	Description
result	*Trading Community Merge Result*	The status of the duplicate resolution request such as completed, rejected, errored along with the record level details in case of errors or violation of agreement rules.

getDfltObjAttrHints

Retrieves user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

Gets the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create,

Element Name	Type	Description
		update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	ZCH_ENTER_TRADING_COMMUNITY_MERGE_REQUEST_PRIV	Enter Trading Community Merge Request	Allows the creation of a manual merge request by searching and selecting the duplicate person or organization records to merge.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCH_ENTER_TRADING_COMMUNITY_MERGE_REQUEST_PRIV	ORA_AR_CUSTOMER_MAINTENANCE_SEGREGATED_DUTY_CRM	Customer Maintenance Segregated	Maintains customer related data except the creation and management of customers.
ZCH_ENTER_TRADING_COMMUNITY_MERGE_REQUEST_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.

Trading Community Merge Request

An object representing a set of attributes that is used to provide values for the parties and the child entities to be merged.

QName: {http://xmlns.oracle.com/apps/cdm/hubBase/publicModel/endUserMerge/}MergeRequestData

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Trading Community Resolution Request*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Master	string	The entity type for the master in Fusion such as HZ_PARTIES, HZ_PARTY_SITES. If this attribute is specified, then do not specify the non-master or the request in the same service data object.
NonMaster	string	The entity type for the non-master record in Fusion such as HZ_PARTIES and HZ_PARTY_SITES. If this attribute is specified, do not specify the master or the request in the same service data object.
Request	string	The duplicate resolution request entity in Fusion such as ZCH_DEDUP_REQUEST. If this attribute is specified, do not specify the master or the non-master in the same object.
SourceSystem	string	The source system name where the record originated.
SourceSystemReference	string	The identifier of the master or the non-master in the source system and the Fusion identifier for request entity.

Trading Community Merge Result

An object representing a set of attributes that is returned by the get merge results operation.

QName: {http://xmlns.oracle.com/apps/cdm/hubBase/publicModel/endUserMerge/}MergeResultData

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Trading Community Resolution Request*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Master	string	The entity type for the non-master record in Fusion such as HZ_PARTIES, HZ_PARTY_SITES.

Name	Type	Description
		If this attribute is specified, do not specify the non-master or the request in the same service data object.
NonMaster	string	The entity type for the non-master record in Fusion such as HZ_PARTIES, HZ_PARTY_SITES. If this attribute is specified, do not specify the master or the request in the same service data object.
RecordStatusCode	string	The status code of the master or the non-master records for the merge request. This does not apply to the request entity.
RecordStatusMessage	string	The detailed status message for the master or the non-master records in the merge request. This does not apply to the request entity.
Request	string	The duplicate resolution request entity in Fusion such as HZ_DEDUP_REQUEST.
RequestStatusCode	string	The status code duplicate resolution request such as Completed, Errored, Processing, and so on.
RequestStatusMessage	string	The detailed message for the status of the duplicate resolution request.
SourceSystem	string	The source system name where the record originated.
SourceSystemReference	string	The identifier of the master or the non-master in the source system and the Fusion identifier for the request entity.

Trading Community Resource

A trading community member that can be assigned a work object. For example, employee John Smith or partner contact Jack Brown.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/applicationModule/}ResourceService

Service WSDL URL: https://servername/crmService/ResourceServiceV2?WSDL

Logical Business Objects

- CRM : Trading Community Model : Trading Community Resource

processResourceRoleProvisioning

Process the resource role provisioning for Trading Community Resource

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourcePartyId	long	Process the resource role provisioning for Trading Community Resource filtered by the resource identifier provided.

Response Payload

Element Name	Type	Description
result	void	

terminateResource

An operation to terminate or remove from usage a Trading Community Resource

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyId	long	An operation to terminate the Trading Community Resource filtered by the resource identifier provided.

Response Payload

Element Name	Type	Description
result	void	

getResource

Get operation for Trading Community Resource Profile

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceProfileId	long	Unique identifier for the Resource Profile. Primary Key.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceResult	Trading Community Resource Profile that matches the inbound key attributes.

createResource

Create operation for Trading Community Resource Profile

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resource	*Resource*	Trading Community Resource Profile to be created

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceResult	Result of the operation includes the successfully created Trading Community Resource Profile and/or a list of warnings or informational messages.

updateResource

Update operation for Trading Community Resource Profile

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resource	*Resource*	Trading Community Resource Profile to be updated

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceResult	Result of the operation includes the successfully updated Trading Community Resource Profile and/or a list of warnings or informational messages.

deleteResource

Delete operation for Trading Community Resource Profile

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resource	*Resource*	Trading Community Resource Profile to be deleted

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warnings or informational messages encountered when deleting the object.

mergeResource

Merge operation for Trading Community Resource Profile. It will perform an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resource	*Resource*	Trading Community Resource Profile to be merged

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceResult	Result of the operation includes the successfully merged Trading Community Resource Profile and/or a list of warnings or informational messages.

findResource

Find operation for Trading Community Resource Profile

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, etc.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Resource*	Result of the operation including a list of Trading Community Resource Profile that satisfy the inbound criteria and any warnings or informational messages encountered during the invocation.

processResource

Bulk load operation for Trading Community Resource Profile

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action shall be performed, such as Create, Update, Merge, or Delete
resource	*Resource*	A list of Trading Community Resource Profile to be processed
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Control your bulk upload behavior, such as whether the valid data will be committed if there are other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Resource*	Result of the operation including a list of Trading Community Resource Profile that are successfully processed and any warnings or informational messages encountered during the invocation.

processCSResource

An operation to apply the changes back to the data source for Trading Community Resource Profile

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object that is used to represent the changes that have been made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Control your bulk upload behavior, such as whether the valid data will be committed if there are other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	Result of the operation including a list of created/updated data objects, and all warning and informational messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

Element Name	Type	Description

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
createResource	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_PRIV	Manage Trading Community Resource	Allows the specification of resources for any employees or partner members who are to be associated to leads, opportunities, and territories and given sales credits or compensated for that work.

LastUpdateLogin	string	Obsolete
LastUpdatedBy	string	Obsolete
ObjectVersionNumber	int	Obsolete
PartyId	long	Obsolete
PrimaryOrgId	long	Obsolete
ResourcePrimaryOrgRecId	long	Obsolete • Primary Key

Resource

A front office person. For example, sales persons or partner members can be tagged as resources.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}Resource

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Primary Resource Organization by Usage*
Contains	*Resource Role Assignment*
Contains	*Resource Team Member*
Contains	*Resource Organization Member*
Handled by	*Trading Community Resource*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttachmentEntityName	string	Not Used.
Company	string	Name of the Company that this resource belongs to
CorpCurrencyCode	string	Corporate Currency Code This attribute is used by CRM Extensibility framework
CreatedBy	string	Who column: indicates the user who created the row.
CreatedByModule	string	Created By Module. Look up of type HZ_CREATED_BY_MODULES in HZ_LOOKUPS table.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
CurcyConvRateType	string	Currency Conversion Rate Type This attribute is used by CRM Extensibility framework
CurrencyCode	string	Currency Code This attribute is used by CRM Extensibility framework
DepartmentMeaning	string	Department for this resource if it is employee
EmailAddress	string	E-mail address
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date at which the resource becomes inactive
FormattedAddress	string	Primary Formatted address for the resource
FormattedPhoneNumber	string	Primary Formatted phone number for the resource
IdenAddrPartySiteId	long	Identifier Address PartySite Id
ImageURL	string	Not Used.
InternalFlag	boolean	Internal Flag
JobMeaning	string	Job for this resource if it is employee
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the session login associated to the user who last updated the row.
LastUpdatedBy	string	Who column: indicates the user who last updated the row.
Manager	string	Name of the manager for this resource
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether

Name	Type	Description
		another session has updated the row since it was queried.
Organizations	string	Name of Organizations this resource is member of
PartyId	long	Identifier for the party. Foreign key to the HZ_PARTIES PARTY_ID.
PartyName	string	Name of the Party
PartyNumber	string	Unique identification number for this party
PersonFirstName	string	Peron First Name
PersonLastName	string	Peron LastName
PersonLastNamePrefix	string	Resource Peron Last name
PersonMiddleName	string	Peron Middle Name.
PersonNameSuffix	string	Peron Name suffix
PersonPreNameAdjunct	string	Person Preferred Name adjacency
PersonPreviousLastName	string	perin Previous flag mage
PersonSecondLastName	string	peron secind last name
RequestId	long	Enterprise Service Scheduler: indicates the request ID of the job that created or last updated the row.
ResourceOrganizationMember	*Resource Organization Member*	The organization associated with a resource.
ResourcePrimaryOrg	string	Primary organizations for this resource
ResourcePrimaryOrganization	*Primary Resource Organization by Usage*	The primary organization associated with a resource.
ResourceProfileId	long	Unique identifier for the Resource Profile. Primary Key. • Primary Key

Name	Type	Description
ResourceRoleAssign	*Resource Role Assignment*	Role assigned to a resource.
ResourceTeamMember	*Resource Team Member*	The team associated with a resource.
ResourceType	string	Type of Resource ex employee
Roles	string	Resource roles assigned to this resource
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date at which the resource becomes active
Teams	string	Name of Teams this resource is member of
TimezoneCode	string	Foreign key to FND_TIMEZONES_B.TIMEZONE_CODE
URL	string	Primary URL for the resource
Usage	string	Read only party usage for resource party
UserAccountActiveFlag	boolean	Indicates if the resource has active user account or not
Username	string	Name of the user account associated with this resource

Resource Organization Member

A resource that is a member of an organization. For example, Joe Smith is a sales representative in the sales organization of ABC Corporation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceOrganizationMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Handled by	*Trading Community Resource Organization*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DeleteFlag	boolean	Delete Flag. Indicates whether this member is logically deleted or not.
GroupId	long	Resource Group identifier foreign key to JTF_RS_GROUPS.
GroupMemberId	long	Resource Group Member identifier • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the session login associated to the user who last updated the row.
LastUpdatedBy	string	Who column: indicates the user who last updated the row.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
ResourceId	long	Resource identifier. Foreign key to HZ_PARTIES.

Name	Type	Description
ResourceOrgMemberRoleAssign	*Trading Community Resource Organization Member Role Assignment*	Role assigned to a resource in the context of an organization membership.

Resource Role Assignment

A resource role assigned to a resource. For example, Joe Smith is assigned a sales representative role.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceRoleAssign

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Resource*
Contained by	*Trading Community Resource Roles Setup SDO*
Handled by	*Trading Community Resource*
Handled by	*Trading Community Resource Role*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DeleteFlag	boolean	Delete Flag indicates whether this record is logically deleted or not?
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date this role-resource becomes inactive

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the session login associated to the user who last updated the row.
LastUpdatedBy	string	Who column: indicates the user who last updated the row.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
RoleId	long	Role identifier (foreign key to JTF_RS_ROLES)
RoleRelateId	long	Role Relation identifier (PK) • Primary Key
RoleResourceId	long	Resource identifier (foreign key to HZ_PARTIES) or (foreign key to JTF_RS_GROUPS_MEMBERS or (foreign key to JTF_RS_TEAM_MEMBERS)
RoleResourceType	string	Resource type. (lookup type: JTF_RS_ ROLE_ RES_TYPE)
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date this role-resource becomes active

Resource Team Member

A resource that forms part of a team.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceTeamMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Resource Team Member Role Assignment*
Contained by	*Trading Community Resource Team SDO*
Contained by	*Resource*
Handled by	*Trading Community Resource*
Handled by	*Trading Community Resource Team*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DeleteFlag	boolean	Delete Flag indicates whether this record is logically deleted or not?
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the session login associated to the user who last updated the row.
LastUpdatedBy	string	Who column: indicates the user who last updated the row.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
ResourceTeamMemberRoleAssign	*Trading Community Resource Team Member Role Assignment*	Role assignment for a resource team member.
ResourceType	string	Type of the resource

Name	Type	Description
TeamId	long	Resource Team identifier (foreign key to JTF_RS_TEAMS)
TeamMemberId	long	Resource Team Member identifier • Primary Key
TeamResourceId	long	A team member can be a Resource or a Resource Organization.

Trading Community Resource Organization Member Role Assignment

A role the resource plays within an organization. For example, sales manager or call center agent.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceOrgMemberRoleAssign

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Resource Organization Member*
Handled by	*Trading Community Resource*
Handled by	*Trading Community Resource Organization*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.

Name	Type	Description
DeleteFlag	boolean	Delete Flag indicates whether this record is logically deleted or not?
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date this role-resource becomes inactive
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the session login associated to the user who last updated the row.
LastUpdatedBy	string	Who column: indicates the user who last updated the row.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
RoleId	long	Role identifier (foreign key to JTF_RS_ROLES)
RoleRelateId	long	Role Relation identifier (PK) • Primary Key
RoleResourceId	long	Resource identifier (foreign key to HZ_PARTIES) or (foreign key to JTF_RS_GROUPS_MEMBERS or (foreign key to JTF_RS_TEAM_MEMBERS)
RoleResourceType	string	Resource type. (lookup type: JTF_RS_ ROLE_RES_TYPE)
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date this role-resource becomes active

Trading Community Resource Team Member Role Assignment

A role to indicates a team member performs within a team. For example, Sales Manager, Call Center Agent, Project Lead.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceTeamMemberRoleAssign

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Resource Team Member*
Handled by	*Trading Community Resource*
Handled by	*Trading Community Resource Team*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DeleteFlag	boolean	Delete Flag indicates whether this record is logically deleted or not?

- *getEntityList*

processResourceRoleProvisioning

Process of the resource role provisioning of the trading community resource.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourcePartyId	long	Processes the resource role provisioning for trading community resource filtered by the resource identifier.

Response Payload

Element Name	Type	Description
result	void	void

terminateResource

An operation to terminate or remove from usage a trading community resource.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyId	long	An operation to terminate the Trading Community Resource filtered by the resource identifier.

Response Payload

Element Name	Type	Description
result	void	void

getResource

The Get operation for the trading community resource profile.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceProfileId	long	The unique identifier of the resource profile.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceResult	The trading community resource profile that matches the inbound key attributes.

Element Name	Type	Description

createResource

The Create operation for the trading community resource profile.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resource	*Resource*	The trading community resource profile to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceResult	The result of the operation that includes the successfully created trading community resource profile and a list of warning or information messages.

updateResource

The Update operation for the trading community resource profile.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resource	*Resource*	The trading community resource profile to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceResult	The result of the operation that includes the successfully updated trading community resource profile and a list of warning or information messages.

deleteResource

The Delete operation for the trading community resource profile.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resource	*Resource*	The trading community resource profile to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warning or information messages encountered when the object was deleted.

mergeResource

The Merge operation for the trading community resource profile. It performs an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resource	*Resource*	The trading community resource profile to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceResult	The result of the operation that includes the successfully merged trading community resource profile and a list of warning or information messages.

findResource

The Find operation for the trading community resource profile.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Resource*	The result of the operation that includes a list of trading community resource profile that satisfy the inbound criteria and any warning or information messages.

processResource

The Bulk load operation for the trading community resource profile.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what actions were performed, such as Create, Update, Merge, or Delete.
resource	*Resource*	A list of the trading community resource profiles to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound operation contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Resource*	The result of the operation that includes a list of trading community resource profile that are successfully processed and any warning or information messages.

processCSResource

An operation to apply the changes back to the data source for the trading community resource profile.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object used to represent the changes that were made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound operation contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The result of the operation that includes a list of created/updated data objects, and all warning and informational messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value

Element Name	Type	Description
		of the name element from the getEntityList operation response payload.
localeName	string	The locale used when evaluating the locale-based user interface hints. The localeName is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and The Delete operations can be performed on the object.

Element Name	Type	Description

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
createResource	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_PRIV	Manage Trading Community Resource	Allows the specification of resources for any employees or partner members who are to be associated to leads, opportunities, and territories and given sales credits or compensated for that work.
updateResource	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_PRIV	Manage Trading Community Resource	Allows the specification of resources for any employees or partner members who are to be associated to leads, opportunities, and territories and given sales credits or compensated for that work.
deleteResource	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_PRIV	Manage Trading Community Resource	Allows the specification of resources for any employees or partner members who are to be associated to leads, opportunities, and territories and given sales credits or compensated for that work.
processCSResource	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_PRIV	Manage Trading Community Resource	Allows the specification of resources for any employees or partner members who are to be associated to leads, opportunities, and territories and given sales credits or compensated for that work.
processResource	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_PRIV	Manage Trading Community Resource	Allows the specification of resources for any employees or partner members who are to be associated to leads, opportunities, and territories and given sales credits or compensated for that work.
findResource	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_PRIV	Manage Trading Community Resource	Allows the specification of resources for any employees or partner members who are to be

Operation Name	Privilege Code	Privilege Name	Privilege Description
			associated to leads, opportunities, and territories and given sales credits or compensated for that work.
findResource	HZ_VIEW_TRADING_ COMMUNITY_RESOURCE_ DETAILS_PRIV	View Trading Community Resource Details	Allows viewing of resource basic information, such as name, primary phone, primary address, and primary e-mail.
mergeResource	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_PRIV	Manage Trading Community Resource	Allows the specification of resources for any employees or partner members who are to be associated to leads, opportunities, and territories and given sales credits or compensated for that work.
getResource	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_PRIV	Manage Trading Community Resource	Allows the specification of resources for any employees or partner members who are to be associated to leads, opportunities, and territories and given sales credits or compensated for that work.
getResource	HZ_VIEW_TRADING_ COMMUNITY_RESOURCE_ DETAILS_PRIV	View Trading Community Resource Details	Allows viewing of resource basic information, such as name, primary phone, primary address, and primary e-mail.
terminateResource	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_PRIV	Manage Trading Community Resource	Allows the specification of resources for any employees or partner members who are to be associated to leads, opportunities, and territories and given sales credits or compensated for that work.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_PRIV	ORA_HZRESOURCE_ ADMINISTRATOR_DUTY	Resource Administration	Administers resource information.
HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_PRIV	ORA_ATC_OFFER_MANAGEMENT_ DUTY	Offer Management	Creates and manages catalogs, categories, product offers including attributes, components, rules, terms, pricing, catalog assignments and lifecycle statuses

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_VIEW_TRADING_COMMUNITY_RESOURCE_DETAILS_PRIV	ORA_HZRESOURCE_ADMINISTRATOR_DUTY	Resource Administration	Administers resource information.
HZ_VIEW_TRADING_COMMUNITY_RESOURCE_DETAILS_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
HZ_VIEW_TRADING_COMMUNITY_RESOURCE_DETAILS_PRIV	ORA_HZ_RESOURCE_ABSTRACT	Resource	Identifies the person as front office personnel.
HZ_VIEW_TRADING_COMMUNITY_RESOURCE_DETAILS_PRIV	ORA_ZCM_PARTNER_SALES_PARTY_MANAGEMENT_DUTY	Partner Sales Party Management	Manages creation and maintenance of sales organizations and consumers for partners. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts. This role has limited access to customers and contacts.
HZ_VIEW_TRADING_COMMUNITY_RESOURCE_DETAILS_PRIV	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_HZ_RESOURCE_ABSTRACT	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	ORA_OKC_ALL_BUSINESS_UNITS_CONTRACT_INQUIRY_DUTY_CRM	Contract View Access Across All Contracts	Views all contracts across an enterprise.
ORA_HZRESOURCE_ADMINISTRATOR_DUTY	ORA_PER_MANAGE_USER_AND_ROLES_DUTY_CRM	Manage Users	Creates and updates users and assigns roles to users.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	ORA_ZCM_SALES_PARTY_REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.

Primary Resource Organization by Usage

The primary organization by usage for a resource. For example, ABC 20 is the primary sales organization and ABC 30 is the primary marketing organization.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourcePrimaryOrganization

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Resource*
Handled by	*Trading Community Resource*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ClassificationCode	string	Obsolete
ClassificationId	long	Obsolete
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PrimaryOrgId	long	Obsolete
ResourcePrimaryOrgRecId	long	Obsolete • Primary Key

Resource

The front office person. For example, sales persons or partner members can be tagged as resources.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}Resource

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Resource Team Member*

Relationship Type	Object or Service
Contains	*Resource Organization Member*
Contains	*Primary Resource Organization by Usage*
Handled by	*Trading Community Resource*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttachmentEntityName	string	Not Used.
Company	string	The name of the company that this resource belongs to.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DeptMeaning	string	The department for this resource if it is employee.
EmailAddress	string	The email address associated with the record.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
FormattedAddress	string	The primary formatted address for the resource.

Name	Type	Description
FormattedPhoneNumber	string	The formatted phone number.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
ImageURL	string	Not Used.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JobMeaning	string	The job for this resource if it is employee.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Manager	string	The name of the manager for this resource.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
Organizations	string	The name of organizations that this resource is a member of.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_

Name	Type	Description
		PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	The resource person's last name prefix.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	The person's name suffix.
PersonPreNameAdjunct	string	Person Preferred Name adjacency.
PersonPreviousLastName	string	The person's previous last name.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PrimaryOrganization	string	The primary organizations for this resource.
RequestId	long	A system-generated read-only attribute used by the application framework.
ResourceOrgRoleCode	string	Code value for the role assigned to a resource.
ResourceOrgRoleName	string	The role that defines the function of the resource in an organization or hierarchy.
ResourceOrganizationMember	*Resource Organization Member*	The organization associated with a resource.
ResourcePrimaryOrganization	*Primary Resource Organization by Usage*	The primary organization associated with a resource.
ResourceProfileId	long	The unique identifier for the resource profile. Primary Key. • Primary Key
ResourceRoleAssign	*Resource Role Assignment*	The role assigned to a resource.
ResourceTeamMember	*Resource Team Member*	The team associated with a resource.
ResourceType	string	The type of resource. For example, employee.

Name	Type	Description
Roles	string	The resource roles assigned to this resource.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Teams	string	The name of teams that this resource is a member of.
TimezoneCode	string	Foreign key to FND_TIMEZONES_B.TIMEZONE_CODE.
Url	string	The primary URL for the resource.
Usage	string	The read-only party usage for the resource party.
UserAccountActiveFlag	boolean	Indicates if the resource has active user account or not.
Username	string	The name of the user account associated with this resource.

Resource Organization Member

The resource that is a member of an organization. For example, Joe Smith is a sales representative in the sales organization of ABC Corporation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceOrganizationMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
GroupId	long	The resource group identifier foreign key to JTF_RS_GROUPS.
GroupMemberId	long	The resource group member identifier. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ResourceId	long	The unique identifier of the resource.
ResourceOrgMemberRoleAssign	*Trading Community Resource Organization Member Role Assignment*	The role assigned to a resource in the context of an organization membership.

Resource Role Assignment

The resource role assigned to a resource. For example, Joe Smith is assigned a sales representative role.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceRoleAssign

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Handled by	*Trading Community Resource*

Relationship Type	Object or Service
Handled by	*Trading Community Resource Team*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ResourceTeamMemberRoleAssign	*Trading Community Resource Team Member Role Assignment*	The role assignment for a resource team member.
ResourceType	string	The type of the resource.
TeamId	long	The resource team identifier (foreign key to JTF_RS_TEAMS).
TeamMemberId	long	The resource team member identifier. • Primary Key
TeamResourceId	long	A team member can be a resource or a resource organization.

Trading Community Resource Organization Member Role Assignment

The role the resource plays within an organization. For example, sales manager or call center agent.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceOrgMemberRoleAssign

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Resource Organization Member*
Handled by	*Trading Community Resource*
Handled by	*Trading Community Resource Organization*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.

Name	Type	Description
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
RoleId	long	The role identifier (foreign key to JTF_RS_ROLES).
RoleRelateId	long	The role relation identifier (PK). • Primary Key
RoleResourceId	long	The resource identifier (foreign key to HZ_PARTIES) or (foreign key to JTF_RS_GROUPS_MEMBERS or (foreign key to JTF_RS_TEAM_MEMBERS).
RoleResourceType	string	The resource type. (lookup type: JTF_RS_ROLE_RES_TYPE).
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.

Trading Community Resource Team Member Role Assignment

The role to indicates a team member performs within a team. For example, Sales Manager, Call Center Agent, Project Lead.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceTeamMemberRoleAssign

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
RoleId	long	The role identifier (foreign key to JTF_RS_ROLES).
RoleRelateId	long	The role relation identifier. This attribute is a primary key. • Primary Key
RoleResourceId	long	The resource identifier (foreign key to HZ_PARTIES) or (foreign key to JTF_RS_GROUPS_MEMBERS or (foreign key to JTF_RS_TEAM_MEMBERS).
RoleResourceType	string	The resource type. (lookup type: JTF_RS_ROLE_RES_TYPE).

Name	Type	Description
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.

Trading Community Resource Organization

An organizational unit whose membership is composed of resources. Resource organizations are usually hierarchically structured to form an organizational hierarchy and they are used to model sales organizations, service organizations, et cetera. This object is not available for Oracle Fusion upgrade nor is it available for use by Oracle Fusion application teams.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceOrganizationService

Service WSDL URL: https://servername/crmService/ResourceOrganizationServiceV2?WSDL

Logical Business Objects

- CRM : Trading Community Model : Trading Community Resource

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Trading Community Resource Organization Member Role Assignment*
Handles	*Resource Organization Member*

Operations

- *getEntityList*

getResourceOrganizationMember

Get operation for Trading Community Resource Organization Member

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
groupMemberId	long	Resource Group Member identifier

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceOrganizationMeml	Trading Community Resource Organization Member that matches the inbound key attributes.

createResourceOrganizationMember

Create operation for Trading Community Resource Organization Member

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceOrganizationMember	*Resource Organization Member*	Trading Community Resource Organization Member to be created

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceOrganizationMeml	Result of the operation includes the successfully created Trading Community Resource Organization Member and/or a list of warnings or informational messages.

updateResourceOrganizationMember

Update operation for Trading Community Resource Organization Member

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceOrganizationMember	*Resource Organization Member*	Trading Community Resource Organization Member to be updated

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceOrganizationMeml	Result of the operation includes the successfully updated Trading Community Resource Organization Member and/or a list of warnings or informational messages.

deleteResourceOrganizationMember

Delete operation for Trading Community Resource Organization Member

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceOrganizationMember	*Resource Organization Member*	Trading Community Resource Organization Member to be deleted

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warnings or informational messages encountered when deleting the object.

mergeResourceOrganizationMember

Merge operation for Trading Community Resource Organization Member. It will perform an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceOrganizationMember	*Resource Organization Member*	Trading Community Resource Organization Member to be merged

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceOrganizationMeml	Result of the operation includes the successfully merged Trading Community Resource Organization Member and/or a list of warnings or informational messages.

findResourceOrganizationMember

Find operation for Trading Community Resource Organization Member

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, etc.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Resource Organization Member*	Result of the operation including a list of Trading Community Resource Organization Member that satisfy the inbound criteria and any warnings or informational messages encountered during the invocation.

processResourceOrganizationMember

Bulk load operation for Trading Community Resource Organization Member

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action shall be performed, such as Create, Update, Merge, or Delete
resourceOrganizationMember	*Resource Organization Member*	A list of Trading Community Resource Organization Member to be processed
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Control your bulk upload behavior, such as whether the valid data will be committed if there are other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Resource Organization Member*	Result of the operation including a list of Trading Community Resource Organization Member that are successfully processed and any warnings or informational messages encountered during the invocation.

processCSResourceOrganizationMember

An operation to apply the changes back to the data source for Trading Community Resource Organization Member

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object that is used to represent the changes that have been made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Control your bulk upload behavior, such as whether the valid data will be committed if there are other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	Result of the operation including a list of created/updated data objects, and all warning and informational messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

Element Name	Type	Description

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
deleteResourceOrganizationMembe	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_ORGANIZATION_MEMBERSHIPS_PRIV	Manage Trading Community Resource Organization Memberships	Allows the specification of resource organization members. If assigning, also assign the ability to view the trading community resource organization memberships.
getResourceOrganizationMember	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_ORGANIZATION_MEMBERSHIPS_PRIV	Manage Trading Community Resource Organization Memberships	Allows the specification of resource organization members. If assigning, also assign the ability to view the trading community resource organization memberships.
processResourceOrganizationMemb	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_ORGANIZATION_MEMBERSHIPS_PRIV	Manage Trading Community Resource Organization Memberships	Allows the specification of resource organization members. If assigning, also assign the ability to view the trading community resource organization memberships.

Operation Name	Privilege Code	Privilege Name	Privilege Description
findResourceOrganizationMember	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_ ORGANIZATION_MEMBERSHIPS_ PRIV	Manage Trading Community Resource Organization Memberships	Allows the specification of resource organization members. If assigning, also assign the ability to view the trading community resource organization memberships.
processCSResourceOrganizationMe	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_ ORGANIZATION_MEMBERSHIPS_ PRIV	Manage Trading Community Resource Organization Memberships	Allows the specification of resource organization members. If assigning, also assign the ability to view the trading community resource organization memberships.
mergeResourceOrganizationMembe	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_ ORGANIZATION_MEMBERSHIPS_ PRIV	Manage Trading Community Resource Organization Memberships	Allows the specification of resource organization members. If assigning, also assign the ability to view the trading community resource organization memberships.
updateResourceOrganizationMemb	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_ ORGANIZATION_MEMBERSHIPS_ PRIV	Manage Trading Community Resource Organization Memberships	Allows the specification of resource organization members. If assigning, also assign the ability to view the trading community resource organization memberships.
createResourceOrganizationMembe	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_ ORGANIZATION_MEMBERSHIPS_ PRIV	Manage Trading Community Resource Organization Memberships	Allows the specification of resource organization members. If assigning, also assign the ability to view the trading community resource organization memberships.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_ ORGANIZATION_MEMBERSHIPS_ PRIV	ORA_HZRESOURCE_ ADMINISTRATOR_DUTY	Resource Administration	Administers resource information.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_HZRESOURCE_ ADMINISTRATOR_DUTY	ORA_PER_MANAGE_USER_AND_ ROLES_DUTY_CRM	Manage Users	Creates and updates users and assigns roles to users.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description

Resource Organization Member

A resource that is a member of an organization. For example, Joe Smith is a sales representative in the sales organization of ABC Corporation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceOrganizationMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Contained by	*Resource*
Handled by	*Trading Community Resource*
Handled by	*Trading Community Resource Organization*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DeleteFlag	boolean	Delete Flag. Indicates whether this member is logically deleted or not.
GroupId	long	Resource Group identifier foreign key to JTF_RS_GROUPS.
GroupMemberId	long	Resource Group Member identifier

Name	Type	Description
		• Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the session login associated to the user who last updated the row.
LastUpdatedBy	string	Who column: indicates the user who last updated the row.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
ResourceId	long	Resource identifier. Foreign key to HZ_PARTIES.
ResourceOrgMemberRoleAssign	*Trading Community Resource Organization Member Role Assignment*	Role assigned to a resource in the context of an organization membership.

Trading Community Resource Organization Member Role Assignment

A role the resource plays within an organization. For example, sales manager or call center agent.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceOrgMemberRoleAssign

getResourceOrganizationMemberVO

The Get operation for the trading community resource organization member.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
groupMemberId	long	The unique identifier of the resource group member.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceOrganizationMember	The trading community resource organization member that matches the inbound key attributes.

createResourceOrganizationMemberVO

The Create operation for the trading community resource organization member.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceOrganizationMemberVO	*Resource Organization Member*	The trading community resource organization member to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceOrganizationMember	The result of the operation that includes the successfully created trading community resource organization member and a list of warning or information messages.

Element Name	Type	Description

updateResourceOrganizationMemberVO

The Update operation for the trading community resource organization member.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceOrganizationMemberVO	*Resource Organization Member*	The trading community resource organization member to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceOrganizationMember	The result of the operation that includes the successfully updated trading community resource organization member and a list of warning or information messages.

deleteResourceOrganizationMemberVO

The Delete operation for the trading community resource organization member.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceOrganizationMemberVO	*Resource Organization Member*	The trading community resource organization member to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warning or information messages encountered when the object was deleted.

mergeResourceOrganizationMemberVO

The Merge operation for the trading community resource organization member. It performs an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceOrganizationMemberVO	*Resource Organization Member*	The trading community resource organization member to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceOrganizationMember	The result of the operation that includes the successfully merged trading community resource organization member and a list of warning or information messages.

findResourceOrganizationMemberVO

The Find operation for the trading community resource organization member.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.

ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ResourceId	long	The unique identifier of the resource.
ResourceOrgMemberRoleAssign	*Trading Community Resource Organization Member Role Assignment*	The role assigned to a resource in the context of an organization membership.

Trading Community Resource Organization Member Role Assignment

The role the resource plays within an organization. For example, sales manager or call center agent.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceOrgMemberRoleAssign

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Resource Organization Member*
Handled by	*Trading Community Resource*
Handled by	*Trading Community Resource Organization*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
RoleId	long	The role identifier (foreign key to JTF_RS_ROLES).
RoleRelateId	long	The role relation identifier (PK). • Primary Key
RoleResourceId	long	The resource identifier (foreign key to HZ_PARTIES) or (foreign key to JTF_RS_GROUPS_MEMBERS or (foreign key to JTF_RS_TEAM_MEMBERS).
RoleResourceType	string	The resource type. (lookup type: JTF_RS_ROLE_RES_TYPE).
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.

Trading Community Resource Role

A trading community member that can be assigned a work object. For example, employee John Smith or partner contact Jack Brown.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/applicationModule/}ResourceRoleService

Service WSDL URL: https://servername/crmService/ResourceRoleServiceV2?WSDL

Logical Business Objects

getResourceRole

Get operation for Trading Community Resource Roles Setup SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
roleId	long	Get operation for Trading Community Resource Roles Setup filtered by the role identifier provided.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceRoleResult	Trading Community Resource Roles Setup SDO that matches the inbound key attributes.

createResourceRole

Create operation for Trading Community Resource Roles Setup SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceRole	*Trading Community Resource Roles Setup SDO*	Trading Community Resource Roles Setup SDO to be created

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceRoleResult	Result of the operation includes the successfully created Trading Community Resource Roles Setup SDO and/or a list of warnings or informational messages.

updateResourceRole

Update operation for Trading Community Resource Roles Setup SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceRole	*Trading Community Resource Roles Setup SDO*	Trading Community Resource Roles Setup SDO to be updated

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceRoleResult	Result of the operation includes the successfully updated Trading Community Resource Roles Setup SDO and/or a list of warnings or informational messages.

deleteResourceRole

Delete operation for Trading Community Resource Roles Setup SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceRole	*Trading Community Resource Roles Setup SDO*	Trading Community Resource Roles Setup SDO to be deleted

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warnings or informational messages encountered when deleting the object.

mergeResourceRole

Merge operation for Trading Community Resource Roles Setup SDO. It will perform an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceRole	*Trading Community Resource Roles Setup SDO*	Trading Community Resource Roles Setup SDO to be merged

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceRoleResult	Result of the operation includes the successfully merged Trading Community Resource Roles Setup SDO and/or a list of warnings or informational messages.

findResourceRole

Find operation for Trading Community Resource Roles Setup SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, etc.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Trading Community Resource Roles Setup SDO*	Result of the operation including a list of Trading Community Resource Roles Setup SDO that satisfy the inbound criteria and any warnings or informational messages encountered during the invocation.

processResourceRole

Bulk load operation for Trading Community Resource Roles Setup SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action shall be performed, such as Create, Update, Merge, or Delete
resourceRole	*Trading Community Resource Roles Setup SDO*	A list of Trading Community Resource Roles Setup SDO to be processed
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Control your bulk upload behavior, such as whether the valid data will be committed if there are other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Trading Community Resource Roles Setup SDO*	Result of the operation including a list of Trading Community Resource Roles Setup SDO that are successfully processed and any warnings or informational messages encountered during the invocation.

processCSResourceRole

An operation to apply the changes back to the data source for Trading Community Resource Roles Setup SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object that is used to represent the changes that have been made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Control your bulk upload behavior, such as whether the valid data will be committed if there are other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	Result of the operation including a list of created/updated data objects, and all warning and informational messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

Element Name	Type	Description

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getResourceRole	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_ROLE_PRIV	Manage Trading Community Resource Role	Allows the specification of resource roles which indicate the resource function and which usually correspond to a set of jobs. Roles are used to facilitate assignment of appropriate resources, and to derive reporting relationship within an organization.
processCSResourceRole	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_ROLE_PRIV	Manage Trading Community Resource Role	Allows the specification of resource roles which indicate the resource function and which usually correspond to a set of jobs. Roles are used to facilitate assignment of appropriate resources, and to derive reporting relationship within an organization.
createResourceRole	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_ROLE_PRIV	Manage Trading Community Resource Role	Allows the specification of resource roles which indicate the resource function and which usually correspond to a set of jobs. Roles

ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCQ_TRADING_COMMUNITY_DQ_MGMT_DUTY	Trading Community Data Quality Management	Performs real-time and batch data quality functions such as matching and cleansing.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DUP_IDEN_MANAGE_DUTY	Trading Community Duplicate Identification Batch Management	Grants privileges to manage duplicate identification batches
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DUP_RES_MANAGE_DUTY	Trading Community Duplicate Resolution Request Management	Grants privileges to manage duplicate resolution requests
ORA_MKT_MARKETING_OPERATIONS_MANAGER_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_PERSON_ADMINISTRATION_DUTY	Trading Community Person Administration	Grants privileges to setup person information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_PERSON_ADMINISTRATION_DUTY	Trading Community Person Administration	Grants privileges to setup person information.

Resource Role Assignment

A resource role assigned to a resource. For example, Joe Smith is assigned a sales representative role.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceRoleAssign

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Resource*
Contained by	*Trading Community Resource Roles Setup SDO*
Handled by	*Trading Community Resource*
Handled by	*Trading Community Resource Role*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DeleteFlag	boolean	Delete Flag indicates whether this record is logically deleted or not?
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date this role-resource becomes inactive
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the session login associated to the user who last updated the row.
LastUpdatedBy	string	Who column: indicates the user who last updated the row.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
RoleId	long	Role identifier (foreign key to JTF_RS_ROLES)
RoleRelateId	long	Role Relation identifier (PK) • Primary Key
RoleResourceId	long	Resource identifier (foreign key to HZ_PARTIES) or (foreign key to JTF_RS_GROUPS_MEMBERS or (foreign key to JTF_RS_TEAM_MEMBERS)
RoleResourceType	string	Resource type. (lookup type: JTF_RS_ ROLE_ RES_TYPE)
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date this role-resource becomes active

Trading Community Resource Job Role

A relationship between the roles and the job information of the resource.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceJobRole

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Resource Roles Setup SDO*
Handled by	*Trading Community Resource Role*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
JobId	long	Job Identifier from PER_JOBS
JobRoleId	long	Job Role Identifier. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the session login associated to the user who last updated the row.
LastUpdatedBy	string	Who column: indicates the user who last updated the row.

Name	Type	Description
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
RoleId	long	Role Identifier from JTF_RS_ROLES_B

Trading Community Resource Role Translation

The resource role information in a local language.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceRoleTranslation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Resource Roles Setup SDO*
Handled by	*Trading Community Resource Role*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
Language	string	Indicates the code of the language into which the contents of the translatable columns are translated. • Primary Key

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the session login associated to the user who last updated the row.
LastUpdatedBy	string	Who column: indicates the user who last updated the row.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
RoleDescription	string	Resource Role Description
RoleId	long	Unique role identifier • Primary Key
RoleName	string	Resource Role name
SourceLang	string	Indicates the code of the language in which the contents of the translatable columns were originally created.

Trading Community Resource Roles Setup Additional Information

The role or function performed by a resource. For example sales representative or marketing administrator.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/flex/role/}RoleInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Resource Roles Setup SDO*
Contained by	*Trading Community Resource Roles Setup*

Relationship Type	Object or Service
Handled by	*Trading Community Resource Role*
Handled by	*Trading Community Resource Role*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
RoleId	long	The unique role identifier. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Resource Roles Setup SDO

A configuration of roles that can be used to indicate the function of a resource. For example sales representative or marketing administrator.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceRole

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Resource Role Assignment*
Contains	*Trading Community Resource Roles Setup Additional Information*
Contains	*Trading Community Resource Job Role*
Contains	*Trading Community Resource Role Translation*
Handled by	*Trading Community Resource Role*

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveFlag	boolean	Flag to indicate if role is active.
AdministratorFlag	boolean	Flag indicating if this role is an administrator role or not.
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the session login associated to the user who last updated the row.
LastUpdatedBy	string	Who column: indicates the user who last updated the row.
LeadFlag	boolean	Flag indicating if this role is a leader role or not.
ManagerFlag	boolean	Flag indicating if this role is a manager role or not.
MemberFlag	boolean	Flag indicating if this role is a member role or not.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
ResourceJobRole	*Trading Community Resource Job Role*	Job role associated with the role.
ResourceRoleAssign	*Resource Role Assignment*	Resource role assignment.

Name	Type	Description
ResourceRoleInformation	*Trading Community Resource Roles Setup Additional Information*	Resource role information.
ResourceRoleTranslation	*Trading Community Resource Role Translation*	Language specific resource role.
RoleCode	string	Unqiue code for a resource role.
RoleDescription	string	Description for role.
RoleId	long	Unique identifier for the role. • Primary Key
RoleName	string	Resource role name.
RoleTypeCode	string	Role type identifier.
SeededFlag	boolean	Flag indicating pre-defined role types.

Trading Community Resource Role

A trading community member that can be assigned a work object. For example, employee John Smith or partner contact Jack Brown.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/applicationModule/}ResourceRoleService

Service WSDL URL: https://servername/crmService/ResourceRoleService?WSDL

Logical Business Objects

- CRM : Trading Community Model : Trading Community Resource

getResourceRole

The Get operation for the trading community resource roles setup SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
roleId	long	The Get operation of the trading community resource roles setup filtered by the role identifier.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceRoleResult	The trading community resource roles setup SDO that matches the inbound key attributes.

createResourceRole

The Create operation for the trading community resource roles setup SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceRole	*Trading Community Resource Roles Setup*	The trading community resource roles setup SDO to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceRoleResult	The result of the operation that includes the successfully created trading community resource roles setup SDO and a list of warning or information messages.

updateResourceRole

The Update operation for the trading community resource roles setup SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceRole	*Trading Community Resource Roles Setup*	The trading community resource roles setup SDO to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceRoleResult	The result of the operation that includes the successfully updated trading community resource roles setup SDO and a list of warning or information messages.

deleteResourceRole

The Delete operation for the trading community resource roles setup SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceRole	*Trading Community Resource Roles Setup*	The trading community resource roles setup SDO to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warning or information messages encountered when the object was deleted.

mergeResourceRole

The Merge operation for the trading community resource roles setup SDO. It performs an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceRole	*Trading Community Resource Roles Setup*	The trading community resource roles setup SDO to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceRoleResult	The result of the operation that includes the successfully merged trading community resource roles setup SDO and a list of warning or information messages.

findResourceRole

The Find operation for the trading community resource roles setup SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Trading Community Resource Roles Setup*	The result of the operation that includes a list of trading community resource roles setup SDO that satisfy the inbound criteria and any warning or information messages.

processResourceRole

The Bulk load operation for the trading community resource roles setup SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what actions were performed, such as Create, Update, Merge, or Delete.
resourceRole	*Trading Community Resource Roles Setup*	A list of the trading community resource roles setup SDOs to be processed.

Element Name	Type	Description
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound operation contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Trading Community Resource Roles Setup*	The result of the operation that includes a list of trading community resource roles setup SDO that are successfully processed and any warning or information messages.

processCSResourceRole

An operation to apply the changes back to the data source for the trading community resource roles setup SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object used to represent the changes that were made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound operation contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The result of the operation that includes a list of created and updated data objects, and all warning and informational messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale used when evaluating the locale-based user interface hints. The localeName is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and The Delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getResourceRole	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_ROLE_PRIV	Manage Trading Community Resource Role	Allows the specification of resource roles which indicate the resource function and which usually correspond to a set of jobs. Roles are used to facilitate assignment of appropriate resources, and to derive reporting relationship within an organization.
processCSResourceRole	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_ROLE_PRIV	Manage Trading Community Resource Role	Allows the specification of resource roles which indicate the resource function and which usually correspond to a set of jobs. Roles are used to facilitate assignment of appropriate resources, and to derive reporting relationship within an organization.
createResourceRole	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_ROLE_PRIV	Manage Trading Community Resource Role	Allows the specification of resource roles which indicate the resource function and which usually correspond to a set of jobs. Roles are used to facilitate assignment of appropriate resources, and to derive reporting relationship within an organization.
processResourceRole	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_ROLE_PRIV	Manage Trading Community Resource Role	Allows the specification of resource roles which indicate the resource function and which usually correspond to a set of jobs. Roles are used to facilitate assignment of appropriate resources, and to

Operation Name	Privilege Code	Privilege Name	Privilege Description
			derive reporting relationship within an organization.
findResourceRole	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_ROLE_ PRIV	Manage Trading Community Resource Role	Allows the specification of resource roles which indicate the resource function and which usually correspond to a set of jobs. Roles are used to facilitate assignment of appropriate resources, and to derive reporting relationship within an organization.
updateResourceRole	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_ROLE_ PRIV	Manage Trading Community Resource Role	Allows the specification of resource roles which indicate the resource function and which usually correspond to a set of jobs. Roles are used to facilitate assignment of appropriate resources, and to derive reporting relationship within an organization.
deleteResourceRole	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_ROLE_ PRIV	Manage Trading Community Resource Role	Allows the specification of resource roles which indicate the resource function and which usually correspond to a set of jobs. Roles are used to facilitate assignment of appropriate resources, and to derive reporting relationship within an organization.
mergeResourceRole	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_ROLE_ PRIV	Manage Trading Community Resource Role	Allows the specification of resource roles which indicate the resource function and which usually correspond to a set of jobs. Roles are used to facilitate assignment of appropriate resources, and to derive reporting relationship within an organization.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_ROLE_ PRIV	ORA_ZCA_CUSTOMER_ RELATIONSHIP_MANAGEMENT_ APPLICATION_ADMINISTRATOR_ JOB	Customer Relationship Management Application Administrator	Individual responsible for customer relationship management application administration. Collaborates with customer relationship management application users to maintain consistent financial application setup, rules, and access.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_ROLE_ PRIV	ORA_AR_RECEIVABLES_ ADMINISTRATION_DUTY_CRM	Receivables Administration	Manages Receivables setup activities.
HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_ROLE_ PRIV	ORA_ZCH_MASTER_DATA_ MANAGEMENT_APPLICATION_ ADMINISTRATOR_JOB	Master Data Management Application Administrator	Administers the installation and maintenance of customer data management application and foundation model.
HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_ROLE_ PRIV	ORA_ZBS_SALES_ ADMINISTRATOR_JOB	Sales Administrator	Manages sales department and personnel. Performs ongoing administrative tasks, corrects erroneous data, and configures the application according to business needs.
HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_ROLE_ PRIV	ORA_IEX_COLLECTIONS_ MANAGER_DUTY_CRM	Collections Management Advanced	Allows user to perform activities in Collections.
HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_ROLE_ PRIV	ORA_MKT_MARKETING_ OPERATIONS_MANAGER_JOB	Marketing Operations Manager	Manages the operations for marketing and leads. Develops tactical campaigns to carry out marketing strategies and communicate offers to customer segments using multiple marketing channels. Monitors campaign interactions, captures campaign responses, and manages sales leads to fill the sales pipeline. Creates and maintains the setup for marketing campaigns, responses, segments, lists, and treatments.

Duty Roles to Duty or Job Roles Mapping

Resource Role Assignment

The resource role assigned to a resource. For example, Joe Smith is assigned a sales representative role.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceRoleAssign

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Resource*
Contained by	*Trading Community Resource Roles Setup*
Handled by	*Trading Community Resource Role*
Handled by	*Trading Community Resource*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
RoleId	long	The role identifier (foreign key to JTF_RS_ROLES).
RoleRelateId	long	The role relation identifier (PK). • Primary Key
RoleResourceId	long	The resource identifier (foreign key to HZ_PARTIES) or (foreign key to JTF_RS_GROUPS_MEMBERS or (foreign key to JTF_RS_TEAM_MEMBERS).
RoleResourceType	string	The resource type. (lookup type: JTF_RS_ROLE_RES_TYPE).
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.

Trading Community Resource Job Role

The relationship between the roles and the job information of the resource.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceJobRole

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Resource Roles Setup*
Handled by	*Trading Community Resource Role*

Attributes

The following table describes attributes in the service data object.

JobRoleId	long	The job role identifier. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
RoleId	long	The role identifier from JTF_RS_ROLES_B.

Trading Community Resource Role Translation

The resource role information in a local language.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceRoleTranslation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Resource Roles Setup*
Handled by	*Trading Community Resource Role*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Language	string	Indicates the code of the language into which the contents of the translatable columns are translated. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
RoleDescription	string	The resource role description.
RoleId	long	The unique role identifier. • Primary Key
RoleName	string	The resource role name.
SourceLang	string	Indicates the code of the language in which the contents of the translatable columns were originally created.

Trading Community Resource Roles Setup Additional Information

The role or function performed by a resource. For example sales representative or marketing administrator.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/flex/role/}RoleInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Resource Roles Setup SDO*
Contained by	*Trading Community Resource Roles Setup*
Handled by	*Trading Community Resource Role*
Handled by	*Trading Community Resource Role*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
RoleId	long	The unique role identifier. • Primary Key

Name	Type	Description
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Resource Roles Setup

The configuration of roles that can be used to indicate the function of a resource. For example sales representative or marketing administrator.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceRole

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Resource Roles Setup Additional Information*
Contains	*Trading Community Resource Job Role*
Contains	*Trading Community Resource Role Translation*
Contains	*Resource Role Assignment*
Handled by	*Trading Community Resource Role*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveFlag	boolean	Indicates if role is active.
AdministratorFlag	boolean	Indicates if this role is an administrator role or not.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LeadFlag	boolean	Indicates if this role is a leader role or not.
ManagerFlag	boolean	Indicates if this role is a manager role or not.
MemberFlag	boolean	Indicates if this role is a member role or not.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ResourceJobRole	*Trading Community Resource Job Role*	The job role associated with the role.
ResourceRoleAssign	*Resource Role Assignment*	The resource role assignment.
ResourceRoleInformation	*Trading Community Resource Roles Setup Additional Information*	The resource role information.
ResourceRoleTranslation	*Trading Community Resource Role Translation*	The language specific resource role.
RoleCode	string	The unique code for a resource role.
RoleDescription	string	The description for role.
RoleId	long	The unique identifier for the role. • Primary Key
RoleName	string	The resource role name.
RoleTypeCode	string	The role type identifier.

Name	Type	Description
SeededFlag	boolean	Indicates the pre-defined role types.

Trading Community Resource Team

A collection of resources and resource groups brought together for a purpose. For example, a sales team formed to work on a specific opportunity or lead. These teams are not aligned with a given organization.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/applicationModule/}ResourceTeamService

Service WSDL URL: https://servername/crmService/ResourceTeamService?WSDL

getResourceTeam

The Get operation for the trading community resource team SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
teamId	long	The Get operation of the trading community resource team filtered by the team identifier.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceTeamResult	The trading community resource team SDO that matches the inbound key attributes.

createResourceTeam

The Create operation for the trading community resource team SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceTeam	*Trading Community Resource Team*	The trading community resource team SDO to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceTeamResult	The result of the operation that includes the successfully created trading community resource team SDO and a list of warning or information messages.

updateResourceTeam

The Update operation for the trading community resource team SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceTeam	*Trading Community Resource Team*	The trading community resource team SDO to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceTeamResult	The result of the operation that includes the successfully updated trading community resource team SDO and a list of warning or information messages.

deleteResourceTeam

The Delete operation for the trading community resource team SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceTeam	*Trading Community Resource Team*	The trading community resource team SDO to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warning or information messages encountered when the object was deleted.

mergeResourceTeam

The Merge operation for the trading community resource team SDO. It performs an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceTeam	*Trading Community Resource Team*	The trading community resource team SDO to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceTeamResult	The result of the operation that includes the successfully merged trading community resource team SDO and a list of warning or information messages.

findResourceTeam

The Find operation for the trading community resource team SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.

Element Name	Type	Description
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Trading Community Resource Team*	The result of the operation that includes a list of trading community resource team SDO that satisfy the inbound criteria and any warning or information messages.

processResourceTeam

The Bulk load operation for the trading community resource team SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what actions were performed, such as Create, Update, Merge, or Delete.
resourceTeam	*Trading Community Resource Team*	A list of the trading community resource team SDOs to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound operation contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Trading Community Resource Team*	The result of the operation that includes a list of trading community resource team SDO that are successfully processed and any warning or information messages.

processCSResourceTeam

An operation to apply the changes back to the data source for the trading community resource team SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object used to represent the changes that were made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound operation contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The result of the operation that includes a list of created/updated data objects, and all warning and informational messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale used when evaluating the locale-based user interface hints. The localeName is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and The Delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
mergeResourceTeam	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_TEAM_ PRIV	Manage Trading Community Resource Team	Allows the specification of groups of resources that work together, usually across organization hierarchy boundaries. For example, define marketing teams for campaigns. If assigning, also assign the ability to view the trading community resource team.
createResourceTeam	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_TEAM_ PRIV	Manage Trading Community Resource Team	Allows the specification of groups of resources that work together, usually across organization hierarchy boundaries. For example, define marketing teams for campaigns. If assigning, also assign the ability to view the trading community resource team.
deleteResourceTeam	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_TEAM_ PRIV	Manage Trading Community Resource Team	Allows the specification of groups of resources that work together, usually across organization hierarchy boundaries. For example, define marketing teams for campaigns. If assigning, also assign the ability to view the trading community resource team.
getResourceTeam	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_TEAM_ PRIV	Manage Trading Community Resource Team	Allows the specification of groups of resources that work together, usually across organization hierarchy boundaries. For example, define marketing teams for campaigns. If assigning, also assign the ability to view the trading community resource team.
processCSResourceTeam	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_TEAM_ PRIV	Manage Trading Community Resource Team	Allows the specification of groups of resources that work together, usually across organization hierarchy boundaries. For example, define marketing teams for campaigns. If assigning, also assign the ability to view the trading community resource team.
processResourceTeam	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_TEAM_ PRIV	Manage Trading Community Resource Team	Allows the specification of groups of resources that work together, usually across organization hierarchy boundaries. For example, define marketing teams for campaigns. If assigning, also assign the ability to view the trading community resource team.
updateResourceTeam	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_TEAM_ PRIV	Manage Trading Community Resource Team	Allows the specification of groups of resources that work together, usually across organization

Operation Name	Privilege Code	Privilege Name	Privilege Description
			hierarchy boundaries. For example, define marketing teams for campaigns. If assigning, also assign the ability to view the trading community resource team.
findResourceTeam	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_TEAM_ PRIV	Manage Trading Community Resource Team	Allows the specification of groups of resources that work together, usually across organization hierarchy boundaries. For example, define marketing teams for campaigns. If assigning, also assign the ability to view the trading community resource team.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_TEAM_ PRIV	ORA_HZRESOURCE_TEAM_ ADMINISTRATOR_DUTY	Resource Team Administration	Defines resource teams.

Resource Team Member

The resource that forms part of a team.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceTeamMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Resource Team Member Role Assignment*
Contained by	*Resource*
Contained by	*Trading Community Resource Team*
Handled by	*Trading Community Resource*
Handled by	*Trading Community Resource Team*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ResourceTeamMemberRoleAssign	*Trading Community Resource Team Member Role Assignment*	The role assignment for a resource team member.
ResourceType	string	The type of the resource.
TeamId	long	The resource team identifier (foreign key to JTF_RS_TEAMS).
TeamMemberId	long	The resource team member identifier. • Primary Key
TeamResourceId	long	A team member can be a resource or a resource organization.

Trading Community Resource Organization or Team Member

The membership of a resource within organizations or teams.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceTeamOrgMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Resource Team*
Handled by	*Trading Community Resource Team*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ResourceType	string	The type of the resource.
TeamId	long	The resource team identifier (foreign key to JTF_RS_TEAMS).
TeamMemberId	long	The resource team member identifier.

Name	Type	Description
		• Primary Key
TeamResourceId	long	A team member can be a resource or a resource organization.

Trading Community Resource Team Member Role Assignment

The role to indicates a team member performs within a team. For example, Sales Manager, Call Center Agent, Project Lead.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceTeamMemberRoleAssign

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Resource Team Member*
Handled by	*Trading Community Resource*
Handled by	*Trading Community Resource Team*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
RoleId	long	The role identifier (foreign key to JTF_RS_ROLES).
RoleRelateId	long	The role relation identifier. This attribute is a primary key. • Primary Key
RoleResourceId	long	The resource identifier (foreign key to HZ_PARTIES) or (foreign key to JTF_RS_GROUPS_MEMBERS or (foreign key to JTF_RS_TEAM_MEMBERS).
RoleResourceType	string	The resource type. (lookup type: JTF_RS_ROLE_RES_TYPE).
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.

Trading Community Resource Team

The team that a resource belongs to. For example, resources from North American and Asia Pacific sales organizations are part of a resource team.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceTeam

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Resource Team Translation*
Contains	*Trading Community Resource Team Additional Information*
Contains	*Trading Community Resource Organization or Team Member*
Contains	*Trading Community Resource Team Usage*
Contains	*Resource Team Member*
Handled by	*Trading Community Resource Team*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmailAddress	string	The email address associated with the record.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ResourceTeamInformation	*Trading Community Resource Team Additional Information*	Additional information about the trading community resource team.

Name	Type	Description
ResourceTeamMember	*Resource Team Member*	A resource person that forms part of the team.
ResourceTeamOrgMember	*Trading Community Resource Organization or Team Member*	An organization that forms part of the team.
ResourceTeamTranslation	*Trading Community Resource Team Translation*	The language specific resource team.
ResourceTeamUsage	*Trading Community Resource Team Usage*	The usage associated with a resource team.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
TeamDescription	string	The description of the team.
TeamId	long	The unique identifier of a resource team. • Primary Key
TeamName	string	The name associated with the team.
TeamNumber	string	The resource team number.

Trading Community Resource Team Additional Information

The team that a resource belongs to.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/flex/team/}TeamInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Resource Team SDO*
Contained by	*Trading Community Resource Team*
Handled by	*Trading Community Resource Team*
Handled by	*Trading Community Resource Team*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
TeamId	long	The identifier for the resource team. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Resource Team Translation

The resource team information in a local language.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceTeamTranslation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Resource Team*
Handled by	*Trading Community Resource Team*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
Language	string	Indicates the code of the language into which the contents of the translatable columns are translated. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
SourceLang	string	Indicates the code of the language in which the contents of the translatable columns were originally created.
TeamDescription	string	The resource team description.
TeamId	long	The resource team unique identifier. • Primary Key
TeamName	string	The resource team name.

Trading Community Resource Team Usage

The usage of the resource team within the organization.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceTeamUsage

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Resource Team*

Relationship Type	Object or Service

getResourceTeam

Get operation for Trading Community Resource Team SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
teamId	long	Get operation for Trading Community Resource Team filtered by the team identifier provided.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceTeamResult	Trading Community Resource Team SDO that matches the inbound key attributes.

createResourceTeam

Create operation for Trading Community Resource Team SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceTeam	*Trading Community Resource Team SDO*	Trading Community Resource Team SDO to be created

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceTeamResult	Result of the operation includes the successfully created Trading Community Resource Team SDO and/or a list of warnings or informational messages.

updateResourceTeam

Update operation for Trading Community Resource Team SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceTeam	*Trading Community Resource Team SDO*	Trading Community Resource Team SDO to be updated

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceTeamResult	Result of the operation includes the successfully updated Trading Community Resource Team SDO and/or a list of warnings or informational messages.

deleteResourceTeam

Delete operation for Trading Community Resource Team SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceTeam	*Trading Community Resource Team SDO*	Trading Community Resource Team SDO to be deleted

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warnings or informational messages encountered when deleting the object.

mergeResourceTeam

Merge operation for Trading Community Resource Team SDO. It will perform an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceTeam	*Trading Community Resource Team SDO*	Trading Community Resource Team SDO to be merged

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceTeamResult	Result of the operation includes the successfully merged Trading Community Resource Team SDO and/or a list of warnings or informational messages.

findResourceTeam

Find operation for Trading Community Resource Team SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, etc.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Trading Community Resource Team SDO*	Result of the operation including a list of Trading Community Resource Team SDO that satisfy the inbound criteria and any warnings or informational messages encountered during the invocation.

processResourceTeam

Bulk load operation for Trading Community Resource Team SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action shall be performed, such as Create, Update, Merge, or Delete
resourceTeam	*Trading Community Resource Team SDO*	A list of Trading Community Resource Team SDO to be processed
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Control your bulk upload behavior, such as whether the valid data will be committed if there are other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Trading Community Resource Team SDO*	Result of the operation including a list of Trading Community Resource Team SDO that are successfully processed and any warnings or informational messages encountered during the invocation.

processCSResourceTeam

An operation to apply the changes back to the data source for Trading Community Resource Team SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object that is used to represent the changes that have been made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Control your bulk upload behavior, such as whether the valid data will be committed if there are other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	Result of the operation including a list of created/updated data objects, and all warning and informational messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
mergeResourceTeam	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_TEAM_PRIV	Manage Trading Community Resource Team	Allows the specification of groups of resources that work together, usually across organization hierarchy boundaries. For example, define marketing teams for campaigns. If assigning, also assign the ability to view the trading community resource team.

Operation Name	Privilege Code	Privilege Name	Privilege Description
createResourceTeam	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_TEAM_ PRIV	Manage Trading Community Resource Team	Allows the specification of groups of resources that work together, usually across organization hierarchy boundaries. For example, define marketing teams for campaigns. If assigning, also assign the ability to view the trading community resource team.
deleteResourceTeam	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_TEAM_ PRIV	Manage Trading Community Resource Team	Allows the specification of groups of resources that work together, usually across organization hierarchy boundaries. For example, define marketing teams for campaigns. If assigning, also assign the ability to view the trading community resource team.
getResourceTeam	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_TEAM_ PRIV	Manage Trading Community Resource Team	Allows the specification of groups of resources that work together, usually across organization hierarchy boundaries. For example, define marketing teams for campaigns. If assigning, also assign the ability to view the trading community resource team.
processCSResourceTeam	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_TEAM_ PRIV	Manage Trading Community Resource Team	Allows the specification of groups of resources that work together, usually across organization hierarchy boundaries. For example, define marketing teams for campaigns. If assigning, also assign the ability to view the trading community resource team.
processResourceTeam	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_TEAM_ PRIV	Manage Trading Community Resource Team	Allows the specification of groups of resources that work together, usually across organization hierarchy boundaries. For example, define marketing teams for campaigns. If assigning, also assign the ability to view the trading community resource team.
updateResourceTeam	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_TEAM_ PRIV	Manage Trading Community Resource Team	Allows the specification of groups of resources that work together, usually across organization hierarchy boundaries. For example, define marketing teams for campaigns. If assigning, also assign the ability to view the trading community resource team.
findResourceTeam	HZ_MANAGE_TRADING_ COMMUNITY_RESOURCE_TEAM_ PRIV	Manage Trading Community Resource Team	Allows the specification of groups of resources that work together, usually across organization

Operation Name	Privilege Code	Privilege Name	Privilege Description
			hierarchy boundaries. For example, define marketing teams for campaigns. If assigning, also assign the ability to view the trading community resource team.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_TEAM_PRIV	ORA_HZRESOURCE_TEAM_ADMINISTRATOR_DUTY	Resource Team Administration	Defines resource teams.

Resource Team Member

A resource that forms part of a team.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceTeamMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Resource Team Member Role Assignment*
Contained by	*Trading Community Resource Team SDO*
Contained by	*Resource*
Handled by	*Trading Community Resource*
Handled by	*Trading Community Resource Team*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DeleteFlag	boolean	Delete Flag indicates whether this record is logically deleted or not?
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the session login associated to the user who last updated the row.
LastUpdatedBy	string	Who column: indicates the user who last updated the row.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
ResourceTeamMemberRoleAssign	*Trading Community Resource Team Member Role Assignment*	Role assignment for a resource team member.
ResourceType	string	Type of the resource
TeamId	long	Resource Team identifier (foreign key to JTF_RS_TEAMS)
TeamMemberId	long	Resource Team Member identifier • Primary Key
TeamResourceId	long	A team member can be a Resource or a Resource Organization.

Trading Community Resource Organization or Team Member

A membership of a resource within organizations or teams.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceTeamOrgMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Resource Team SDO*
Handled by	*Trading Community Resource Team*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DeleteFlag	boolean	Delete Flag indicates whether this record is logically deleted or not?
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the session login associated to the user who last updated the row.
LastUpdatedBy	string	Who column: indicates the user who last updated the row.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
ResourceType	string	Type of the resource
TeamId	long	Resource Team identifier (foreign key to JTF_RS_TEAMS)

Name	Type	Description
TeamMemberId	long	Resource Team Member identifier • Primary Key
TeamResourceId	long	A team member can be a Resource or a Resource Organization.

Trading Community Resource Team Additional Information

The team that a resource belongs to.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/flex/team/}TeamInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Resource Team SDO*
Contained by	*Trading Community Resource Team*
Handled by	*Trading Community Resource Team*
Handled by	*Trading Community Resource Team*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
TeamId	long	The identifier for the resource team. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Resource Team Member Role Assignment

A role to indicates a team member performs within a team. For example, Sales Manager, Call Center Agent, Project Lead.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceTeamMemberRoleAssign

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Resource Team Member*
Handled by	*Trading Community Resource*
Handled by	*Trading Community Resource Team*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DeleteFlag	boolean	Delete Flag indicates whether this record is logically deleted or not?
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date this role-resource becomes inactive
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the session login associated to the user who last updated the row.

Name	Type	Description
LastUpdatedBy	string	Who column: indicates the user who last updated the row.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
RoleId	long	Role identifier (foreign key to JTF_RS_ROLES)
RoleRelateId	long	Role Relation identifier (PK) • Primary Key
RoleResourceId	long	Resource identifier (foreign key to HZ_PARTIES) or (foreign key to JTF_RS_GROUPS_MEMBERS or (foreign key to JTF_RS_TEAM_MEMBERS)
RoleResourceType	string	Resource type. (lookup type: JTF_RS_ ROLE_ RES_TYPE)
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date this role-resource becomes active

Trading Community Resource Team SDO

A team that a resource belongs to. For example, resources from North American and Asia Pacific sales organizations are part of a resource team.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceTeam

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Resource Team Additional Information*
Contains	*Resource Team Member*
Contains	*Trading Community Resource Team Translation*

Relationship Type	Object or Service
Contains	*Trading Community Resource Team Usage*
Contains	*Trading Community Resource Organization or Team Member*
Handled by	*Trading Community Resource Team*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
EmailAddress	string	Email address of a resource team.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date on which the resource team stops being active.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the session login associated to the user who last updated the row.
LastUpdatedBy	string	Who column: indicates the user who last updated the row.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
ResourceTeamInformation	*Trading Community Resource Team Additional Information*	Trading Community Resource Team Additional Information
ResourceTeamMember	*Resource Team Member*	A resource person that formms part of the team.

Name	Type	Description
ResourceTeamOrgMember	*Trading Community Resource Organization or Team Member*	An organization that forms part of the team.
ResourceTeamTranslation	*Trading Community Resource Team Translation*	Language specific resource team.
ResourceTeamUsage	*Trading Community Resource Team Usage*	Usage associated with a resource team.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date on which the resource team becomes active.
TeamDescription	string	Description of the team.
TeamId	long	Unqiue identifier of a resource team. • Primary Key
TeamName	string	Name associated with the team.
TeamNumber	string	Resource Team Number.

Trading Community Resource Team Translation

The resource team information in a local language.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceTeamTranslation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Resource Team SDO*
Handled by	*Trading Community Resource Team*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
Language	string	Indicates the code of the language into which the contents of the translatable columns are translated. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the session login associated to the user who last updated the row.
LastUpdatedBy	string	Who column: indicates the user who last updated the row.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
SourceLang	string	Indicates the code of the language in which the contents of the translatable columns were originally created.
TeamDescription	string	Resource Team Description
TeamId	long	Resource team unique identifier • Primary Key
TeamName	string	Resource Team name

Trading Community Resource Team Usage

The usage of the resource team within the organization.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceTeamUsage

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Resource Team SDO*
Handled by	*Trading Community Resource Team*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the session login associated to the user who last updated the row.
LastUpdatedBy	string	Who column: indicates the user who last updated the row.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
StatusFlag	boolean	Record Status Flag used to soft delete entity. Possible values are 'A' (active) and 'I' (inactive).
TeamId	long	Resource Team identifier (foreign key to JTF_RS_TEAMS_B)
TeamUsageId	long	Resource Team Usage identifier (PK) • Primary Key

Name	Type	Description
Usage	string	Usage attached to Team (Lookup Type : JTF_RS_USAGE)

Work Order Service

Service to operate on work order. For example, querying for a single work order or updating a work order. Access to this SOAP service is restricted only for use by the Oracle Integration Cloud Service.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crm/service/fieldservice/workOrderService/}WorkOrderService

Service WSDL URL: https://servername/crmService/CustomerWorkOrderService?WSDL

Logical Business Objects

- CRM : Service : Field Service Work Order

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Work Order*
Handles	*Work Order Part*

Operations

- *getWorkOrder*
- *updateWorkOrder*
- *findWorkOrder*

getWorkOrder

Queries for a single work order record by primary key.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
wold	long	Unique identifier of a work order.

Response Payload

Element Name	Type	Description
result	*Work Order*	Updated work order.

updateWorkOrder

Updates a single work order record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
workOrder	*Work Order*	Work order to be updated.

Response Payload

Element Name	Type	Description
result	*Work Order*	Updated work order.

findWorkOrder

Queries a list of work orders based on a filter criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to query the list of work orders.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Not currently used.

Response Payload

Element Name	Type	Description
result	*Work Order*	A list of work orders that satisfy the inbound parameters.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
findWorkOrder	SVC_VIEW_SERVICE_WORK_ORDER_PRIV	View Service Work Order	Allows viewing of service work order(s).
getWorkOrder	SVC_VIEW_SERVICE_WORK_ORDER_PRIV	View Service Work Order	Allows viewing of service work order(s).
updateWorkOrder	SVC_EDIT_SERVICE_WORK_ORDER_PRIV	Edit Service Work Order	Allows editing of a service work order.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
SVC_EDIT_SERVICE_WORK_ORDER_PRIV	ORA_CSI_ASSET_SERVICE_DUTY_CRM	Asset Service Management	Provide access to view and manage service business objects, such as service request, service work order, that are related to an asset.
SVC_EDIT_SERVICE_WORK_ORDER_PRIV	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
SVC_EDIT_SERVICE_WORK_ORDER_PRIV	ORA_SVC_SR_CONTRIBUTOR	Service Request Contributor	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request Management capabilities. Would not be able to respond to customer, assign SR to a user or change the status of a SR.
SVC_EDIT_SERVICE_WORK_ORDER_PRIV	ORA_RCL_FIELD_SERVICE_ADMINISTRATOR_JOB	Field Service Administrator	Individual responsible for the administration of field service logistics.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
SVC_EDIT_SERVICE_WORK_ORDER_PRIV	ORA_SVC_SR_POWER_USER	Service Request Power User	Advanced Service Request management capabilities not available to Service Representatives
SVC_EDIT_SERVICE_WORK_ORDER_PRIV	ORA_SVC_SR_TROUBLESHOOTER	Service Request Troubleshooter	Manages all aspects of the Service Request object
SVC_EDIT_SERVICE_WORK_ORDER_PRIV	ORA_SVC_WO_ADMINISTRATION	Service Work Order Administration	Administers all aspects of Service Work Orders.
SVC_EDIT_SERVICE_WORK_ORDER_PRIV	ORA_RCL_FIELD_SERVICE_TECHNICIAN_DUTY_CRM	Field Service Technician	Individual responsible for the duty of field service logistics.
SVC_VIEW_SERVICE_WORK_ORDER_PRIV	ORA_CSI_ASSET_SERVICE_DUTY_CRM	Asset Service Management	Provide access to view and manage service business objects, such as service request, service work order, that are related to an asset.
SVC_VIEW_SERVICE_WORK_ORDER_PRIV	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
SVC_VIEW_SERVICE_WORK_ORDER_PRIV	ORA_SVC_SR_CONTRIBUTOR	Service Request Contributor	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request Management capabilities. Would not be able to respond to customer, assign SR to a user or change the status of a SR.
SVC_VIEW_SERVICE_WORK_ORDER_PRIV	ORA_RCL_FIELD_SERVICE_ADMINISTRATOR_JOB	Field Service Administrator	Individual responsible for the administration of field service logistics.
SVC_VIEW_SERVICE_WORK_ORDER_PRIV	ORA_SVC_SR_POWER_USER	Service Request Power User	Advanced Service Request management capabilities not available to Service Representatives
SVC_VIEW_SERVICE_WORK_ORDER_PRIV	ORA_SVC_SR_TROUBLESHOOTER	Service Request Troubleshooter	Manages all aspects of the Service Request object
SVC_VIEW_SERVICE_WORK_ORDER_PRIV	ORA_SVC_WO_ADMINISTRATION	Service Work Order Administration	Administers all aspects of Service Work Orders.
SVC_VIEW_SERVICE_WORK_ORDER_PRIV	ORA_RCL_FIELD_SERVICE_TECHNICIAN_DUTY_CRM	Field Service Technician	Individual responsible for the duty of field service logistics.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_CUST_SERVICE_BILLING_VIEWING	Customer Service Billing Information Viewing	View customer billing information across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_TROUBLESHOOTER	ORA_SVC_CUST_SERVICE_BILLING_VIEWING	Customer Service Billing Information Viewing	View customer billing information across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_POWER_USER	ORA_SVC_CUST_SERVICE_BILLING_VIEWING	Customer Service Billing Information Viewing	View customer billing information across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_CONTRIBUTOR	ORA_SVC_CUST_SERVICE_BILLING_VIEWING	Customer Service Billing Information Viewing	View customer billing information across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_CUST_SERVICE_SCM_ORDERS_MANAGEMENT	Customer Service SCM Orders Management	Allow creation and management of supply chain management orders across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_TROUBLESHOOTER	ORA_SVC_CUST_SERVICE_SCM_ORDERS_MANAGEMENT	Customer Service SCM Orders Management	Allow creation and management of supply chain management orders across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_POWER_USER	ORA_SVC_CUST_SERVICE_SCM_ORDERS_MANAGEMENT	Customer Service SCM Orders Management	Allow creation and management of supply chain management orders across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_CONTRIBUTOR	ORA_SVC_CUST_SERVICE_SCM_ORDERS_MANAGEMENT	Customer Service SCM Orders Management	Allow creation and management of supply chain management orders across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_CUST_SERVICE_SCM_ORDERS_VIEWING	Customer Service SCM Orders Viewing	View supply chain management orders across Oracle Fusion Service, including service requests and service work orders.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_SVC_SR_TROUBLESHOOTER	ORA_SVC_CUST_SERVICE_SCM_ORDERS_VIEWING	Customer Service SCM Orders Viewing	View supply chain management orders across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_POWER_USER	ORA_SVC_CUST_SERVICE_SCM_ORDERS_VIEWING	Customer Service SCM Orders Viewing	View supply chain management orders across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_CONTRIBUTOR	ORA_SVC_CUST_SERVICE_SCM_ORDERS_VIEWING	Customer Service SCM Orders Viewing	View supply chain management orders across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_GEN_AI_ADMIN	Service Generative AI Administrator	Administer activities related to Service Gen AI APIs such as configuration of prompts across all areas of Oracle Fusion Service, such as Service Center, Knowledge, and Chat.
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_GEN_AI_USER	Service Generative AI User	Can use generative AI features across Oracle Fusion Service including but not limited to Service Center, Knowledge Management and Chat areas. Usage requires access to all generative AI API's essential to input data and fetch results from the LLM model.

Work Order

An order received from a customer to perform some work. For example, install cable or fix an air conditioner.

QName: {http://xmlns.oracle.com/apps/crm/service/fieldservice/workOrderService/}WorkOrder

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Work Order Part*
Handled by	*Work Order Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountPartyId	long	Account party identifier.
AccountPartyName	string	Account party name.
ActualEndDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The actual end date and time of the work completed at the customer location.
ActualStartDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The actual start date and time of the work at the customer location.
AddrElementAttribute1	string	The first additional address element to support flexible address format.
AddrElementAttribute2	string	The second additional address element to support flexible address format.
AddrElementAttribute3	string	The third additional address element to support flexible address format.
AddrElementAttribute4	string	The fourth additional address element to support flexible address format.
AddrElementAttribute5	string	The fifth additional address element to support flexible address format.
Address1	string	Work order specific address line 1, where the service will be performed.
Address2	string	Work order specific address line 2, where the service will be performed.
Address3	string	Work order specific address line 3, where the service will be performed.
Address4	string	Work order specific address line 4, where the service will be performed.
AddressLinesPhonetic	string	The phonetic or Kana representation of the Kanji address lines which is used in Japan.
AssigneeEmail	string	The assignee resource email associated to the work order.

Name	Type	Description
AssigneePersonName	string	The assignee resource name associated to the work order.
AssigneePhoneNumber	string	The assignee resource phone number associated to the work order.
AssigneeResourceId	long	The assignee resource ID associated to the work order.
BookedDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The booked date of the scheduled date and time slot of the work order.
Building	string	The specific building name or number at a given address.
CancelReason	string	A brief description of the reason for cancelling the work order.
CaseNote	string	A note field to contain any useful information which pertains to the work order as entered by service agents.
City	string	Work order specific city where the service will be performed.
ContactAltPhoneNumber	string	Work order specific alternate phone number of the customer contact.
ContactEmail	string	Work order specific email for the customer contact.
ContactName	string	Work order specific contact name of the customer.
ContactPartyFirstName	string	Contact party first name.
ContactPartyId	long	Contact party identifier.
ContactPartyLastName	string	Contact party last name.
ContactPhoneNumber	string	Work order specific phone number of the customer contact.
Country	string	Work order specific country where the service will be performed.

Name	Type	Description
County	string	Work order specific county where the service will be performed.
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DeliveryWinEndDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	An estimated delivery window end time for the pending work.
DeliveryWinStartDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	An estimated delivery window start time for the pending work.
Duration	int	The manual duration value documenting the expected time to complete the work order.
EstimatedArrivalTime	string	An estimated arrival time window of the field service technician for the pending work.
EstimatedStartDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The estimated expected time of arrival of the field service tech at the customer location.
FieldServiceResourceId	long	The field service resource ID who is assigned to complete the work order.
FloorNumber	string	The specific floor number at a given address or in a particular building when the building number is provided.
FormattedAddress	string	Work order-specific formatted address which contains all pertinent information about where the service will be performed.
FsActivityId	long	The integration activity identifier of the work order, used for data synchronization.
FsContactFlag	boolean	Indicates whether the contact came from OFSC into Fusion.
FsErrorDetail	string	Field Service integration error message. Not exposed in the user interface.
FsNote	string	A note field to contain any useful information which pertains to the work order dispatch or scheduling comments.

Name	Type	Description
FsResource	string	The resource being used to complete this work order.
FsResourceExternalId	string	The external ID of the resource being used to complete this work order.
FsTypeCd	string	The work order type. Corresponds to the activity type in OFSC.
IBAssetActiveFlag	boolean	Flag indicating the installed base asset feature is active or inactive.
IBAssetDescription	string	The description of the installed base asset attached to the work order.
IBAssetEndDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The end date of the installed base asset attached to the work order.
IBAssetId	long	The ID of the installed base asset attached to the work order.
IBAssetInstalledDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The install date of the installed base asset attached to the work order.
IBAssetItemDescription	string	The product description of the installed base asset attached to the work order.
IBAssetItemNumber	string	The product number of the installed base asset attached to the work order.
IBAssetNumber	string	The number of the installed base asset attached to the work order.
IBAssetPurchaseDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The purchase date of the installed base asset attached to the work order.
IBAssetQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The quantity of the installed base asset attached to the work order.
IBAssetSerialNumber	string	The serial number of the installed base asset attached to the work order.
IBAssetStartDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The start date of the installed base asset attached to the work order.
IBAssetStatusCode	string	The status of the installed base asset attached to the work order.

Name	Type	Description
IBAssetTag	string	The tag of the installed base asset attached to the work order.
IBAssetUOMCode	string	The unit of measure for the quantity of the installed base asset attached to the work order.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the session login associated to the user who last updated the row.
LastUpdateSourceCd	string	Source code that indicates how the work order was last updated such as AGENT_UI, OFSC or API.
LastUpdatedBy	string	Who column: indicates the user who last updated the row.
ObjectVersionNumber	int	Object version number.
OpportunityId	long	Opportunity identifier.
OverridePartyId	long	Override party identifier.
OverridePartyName	string	Override party name.
OverrideReason	string	A brief description of the reason for requesting an override on the time slot scheduled.
OverrideStatusCd	string	Lookup code used to indicate the status of an override request having lookup type ORA_SVC_WO_OVERRIDE_CD.
OwnerTypeCd	string	The owner type code associated to the account for the work order.
PartnerAccountName	string	The partner account name of the partner associated to the work order.
PartnerAccountPartyId	long	The partner account party id associated to the work order.
PostalCode	string	Work order specific postal code where the service will be performed.

Name	Type	Description
PostalPlus4Code	string	The four digit extension to the United States Postal ZIP code.
PrimaryAssetDescription	string	The description field of the asset.
PrimaryAssetEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. The date is inclusive and the status of an entity is dependent on the active date.
PrimaryAssetId	long	The unique identifier of the asset.
PrimaryAssetInstallDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date the asset was installed.
PrimaryAssetName	string	The name that describes the asset.
PrimaryAssetNumber	string	The number that identifies the asset.
PrimaryAssetProduct	string	The product associated to the primary asset for the work order.
PrimaryAssetPurchaseDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date the asset was purchased.
PrimaryAssetQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The quantity purchased.
PrimaryAssetSerialNumber	string	The asset's serial number.
PrimaryAssetStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. The date is inclusive and the status of an entity is dependent on the active date.
PrimaryAssetStatusCode	string	The pre-defined code used to indicate the status.
PrimaryAssetTag	string	The tag number associated with the asset.
PrimaryAssetUOMCode	string	The unit of measure.
Province	string	Work order specific province where the service will be performed.

Name	Type	Description
ReminderTime	int	A time in minutes before the scheduled time slot when a reminder will be given to the field service tech in OFSC.
RequestedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The requested date of the work order, no time component.
RequestedTime	string	The combined requested date and time slot of the work order.
RequestedTimeSlot	string	The requested time slot for the work order.
RequirementLine	*Work Order Part*	Parts for an order received from a customer to perform some work.
RescheduleReason	string	A brief description of the reason for rescheduling the work order time slot.
ResolutionDueDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The resolution due date based on customers service level agreement (SLA).
ResolutionDueDateLocal	string	The resolution due date of a service level agreement (SLA) from the time zone of the work order.
ScheduledDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The scheduled date of the work order, no time component.
ScheduledTime	string	The combined scheduled date and time slot of the work order.
ScheduledTimeSlot	string	The scheduled time slot for the work order.
SourceCd	string	Source of the work order. A list of accepted values is defined in the lookup type ORA_SVC_SOURCE_CD.
SrId	long	Service request identifier.
SrNumber	string	The unique number that is used to identify the parent service request of the work order.
State	string	Work order specific state where the service will be performed.
TimezoneCode	string	The time zone code of the work order specific address where the service will be performed.

Name	Type	Description
Title	string	A brief title of the work order.
TravelTime	int	The time in minutes the field service agent.
WoArea	string	The work order location of the customer.
WoId	long	Work order identifier. • Primary Key
WoIntegrationCd	string	Work order integration code to represent the current integration state of the work order.
WoIntegrationMsgCd	string	Work order integration message code used to show user-friendly error messages and provide information to fix the issue.
WoIntegrationStatusCd	string	Work order integration status to represent the state of the work order in the work order life cycle.
WoNumber	string	Autogenerated unique number with configurable format.
WoRecordType	string	The type of the work order such as regular, multiday work order, or multiday work order segment.
WoStatusCd	string	Lookup code indicating the current life-cycle status of the work order having configurable values with lookup type ORA_SVC_WO_STATUS_CD.
WoTypeId	long	Work order type identifier.

Work Order Part

Work Order Part ADF Business Component View Object.

QName: {http://xmlns.oracle.com/apps/crm/service/fieldservice/workOrderService/view/}WoExtRequirementLine

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Work Order*
Handled by	*Work Order Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ExpectedArrivalDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Date the ordered parts are expected to arrive.
ExpectedArrivalDateLocal	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Expected Arrival Date in Local Time Zone
ItemNumber	string	Unique item identifier of the part ordered.
LineStatus	string	Status of the part ordered.
Quantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	Quantity of the part ordered.
ShipAddress	string	Address of the person or organization where the ordered parts are being shipped.
UnitOfMeasure	string	Unit which is used to measure quantity of the part ordered.

9 Process Services

Check Product Eligibility Service (Deprecated)

Evaluates if the customer in context is eligible to select this product. WARNING: This service has been deprecated and will not be superseded by a new public service.

Life Cycle Status: Deprecated

Operations

- *process*

process

Product Eligibility Service.

Callback Operation Name:

Service Type: Synchronous

Input Payload

- Description: Input of Product Eligibility Service.
- Type: {http://xmlns.oracle.com/apps/OrderCaptureEligibilityCompatibilityComposite/CheckProductEligibility}CheckProductEligibilityRequestMessage

Output Payload

- **Description:** Output of Product Eligibility Service.
- **Type:** {http://xmlns.oracle.com/apps/OrderCaptureEligibilityCompatibilityComposite/CheckProductEligibility}CheckProductEligibilityResponseMessage

Check Product Group Eligibility Service (Deprecated)

Evaluates if the customer in the context is eligible to select any product or promotion from a product group. WARNING: This service has been deprecated and will not be superseded by a new public service.

Life Cycle Status: Deprecated

Operations

- *process*

process

Product Group Eligibility Service.

Callback Operation Name:

Service Type: Synchronous

Input Payload

- Description: Input of Product Group Eligibility Service.
- Type: {http://xmlns.oracle.com/apps/OrderCaptureEligibilityCompatibilityComposite/CheckProductGroupEligibility}CheckProductGroupEligibilityRequestMessage

Output Payload

- **Description:** Output of Product Group Eligibility Service.
- **Type:** {http://xmlns.oracle.com/apps/OrderCaptureEligibilityCompatibilityComposite/CheckProductGroupEligibility}CheckProductGroupEligibilityResponseMessage

Convert Marketing Response to Lead Service

Converts a marketing response to a sales lead.

Life Cycle Status: Active

Operations

- *initiate*

initiate

A Web service method that converts a response to a Lead

Callback Operation Name:

Service Type: Asynchronous

Input Payload

- Description: An input parameter of the web service method. It contains the set of attributes that are needed for the conversion
- Type: {http://xmlns.oracle.com/apps/marketing/MktResponse/MktResponseToLeadComposite/ResponseToLeadProcess}ResponseToLeadProcessRequestMessage

Convert Marketing Response to Opportunity Service

Converts a marketing response to a sales opportunity.

Life Cycle Status: Active

Operations

- *initiate*

initiate

A Web service method that converts a response to an opportunity

Callback Operation Name:

Service Type: Asynchronous

Input Payload

- Description: An input parameter of the web service method. It contains the set of attributes that are needed for the conversion
- Type: {http://xmlns.oracle.com/apps/marketing/MktResponse/MktResponseToOptyComposite/ResponseToOptyProcess}ResponseToOptyProcessRequestMessage

10 Sample Payloads

Perform Batch SOAP Operations

You can perform batch SOAP operations to create or update large volumes of data in a single SOAP call. To perform batch actions, you must include multiple sets of entity in the SOAP request payload.

You must ensure that you don't have unmanageable number of entities in your request for smooth processing. Also, ensure that you have error handling and post-processing data validation in place that can manage multiple entities. You might encounter timeout issues or data conflicts when processing large number records in a single SOAP call.

Below is a sample request payload for creating multiple sales accounts using a single SOAP call:

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"

```

Contract Web Service Sample Payloads

The following topics describe the sample payloads for ContractService External V2, for different use cases.

For each use case, you can find the contract type, the operation involved to invoke the web service, followed by sample payload.

Add New Contract Line to an Existing Contract

In this use case, we will create use mergeContract to create a new contract line to an existing contract.

Operation: **mergeContract**

```
<soapenv:Header/>
    <soapenv:Body>
        <typ:mergeContract>
            <typ:contractHeader>
                <con:Id>300000257967465</con:Id>
                <con:MajorVersion>1</con:MajorVersion>
                <con:Cognomen>Test SOAP WT Contract 002aa</con:Cognomen>
                <con:ContractLine>
                    <con:LineNumber>2</con:LineNumber>
                    <con:LineTypeId>300000000099381</con:LineTypeId>
                    <con:LineTypeName>Free-form, project</con:LineTypeName>
                    <con:ItemNameTxt>Line number 2</con:ItemNameTxt>
                </con:ContractLine>
            </typ:contractHeader>
        </typ:mergeContract>
    </soapenv:Body>
</soapenv:Envelope>
```

Add Project Line with Associated Project

In this use case, we'll add a project line with the associated project.

Contract type: Project

Operation: **mergeContract**

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:mergeContract xmlns:ns1="http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/types/">
 <ns1:contractHeader xmlns:ns2="http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/">
 <ns2:Id>300100095009733</ns2:Id>
 <ns2:MajorVersion>1</ns2:MajorVersion>
 <ns2:ContractLine>
 <ns2:LineNumber>1</ns2:LineNumber>
 <ns2:LineTypeId>102</ns2:LineTypeId>
 <ns2:Object1Id1>8313</ns2:Object1Id1>
 <ns2:ItemName>AS55888</ns2:ItemName>
 <ns2:ItemDescription>Sentinel Standard Desktop</ns2:ItemDescription>
 <ns2:StartDate>2016-09-21</ns2:StartDate>
 <ns2:AssociatedProject xmlns:ns3="http://xmlns.oracle.com/apps/projects/billing/contracts/
contractPublicService/">
 <ns3:ProjectId>300100048824006</ns3:ProjectId>
 <ns3:FundingAmount currencyCode="USD">6000.00</ns3:FundingAmount>
 <ns3:ActiveFlag>true</ns3:ActiveFlag>
 </ns2:AssociatedProject>
 </ns2:ContractLine>
 </ns1:contractHeader>
 </ns1:mergeContract>
 </soap:Body>
</soap:Envelope>
```

Apply Hold on a Contract

In this use case, we'll apply hold on a contract.

Contract type: All

Operation: **applyHoldOnContract**

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:applyHoldOnContract xmlns:ns1="http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/
types/">
 <ns1:contractId>300100093217887</ns1:contractId>
 <ns1:holdUntilDate>2016-10-30</ns1:holdUntilDate>
 <ns1:holdReasonCode>HOLD_QUALITY</ns1:holdReasonCode>
 <ns1:applyHldRsnSetId>21</ns1:applyHldRsnSetId>
 </ns1:applyHoldOnContract>
 </soap:Body>
</soap:Envelope>
```

Apply Hold on a Contract Line

In this use case, we'll apply hold on a contract line.

Contract type: All

Operation: **applyHoldOnContract**

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
```

```
 <soap:Body>
 <ns1:applyHoldOnContract xmlns:ns1="http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/
types/">
 <ns1:lineId>300100093217887</ns1:lineId>
 <ns1:holdUntilDate>2016-10-30</ns1:holdUntilDate>
 <ns1:holdReasonCode>HOLD</ns1:holdReasonCode>
 <ns1:applyHldRsnSetId>21</ns1:applyHldRsnSetId>
 </ns1:applyHoldOnContract>
 </soap:Body>
</soap:Envelope>
```

Associate a Project to an Existing Line

In this use case, we'll associate a project to an existing contract line.

Contract type: Project

Operation: **mergeContract**

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
<soap:Body>
<ns1:mergeContract xmlns:ns1="http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/types/">
<ns1:contractHeader xmlns:ns2="http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/">
<ns2:Id>300100095009733</ns2:Id>
<ns2:MajorVersion>1</ns2:MajorVersion>
<ns2:ContractLine>
<ns2:Id>300100095009743</ns2:Id>
<ns2:MajorVersion>1</ns2:MajorVersion>
<ns2:AssociatedProject xmlns:ns3="http://xmlns.oracle.com/apps/projects/billing/contracts/
contractPublicService/">
<ns3:ProjectId>300100048824006</ns3:ProjectId>
<ns3:FundingAmount currencyCode="USD">6000.00</ns3:FundingAmount>
<ns3:ActiveFlag>true</ns3:ActiveFlag>
</ns2:AssociatedProject>
</ns2:ContractLine>
</ns1:contractHeader>
</ns1:mergeContract>
</soap:Body>
</soap:Envelope>
```

Associate Bill Plan and Revenue Plan to a Line

In this use case, we'll associate bill plan and revenue plan to a contract line.

Contract type: Project

Operation: **updateContract**

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
<soap:Body>
<ns1:updateContract xmlns:ns1="http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/types/">
<ns1:contractHeader xmlns:ns2="http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/">
<ns2:Id>300100156339520</ns2:Id>
<ns2:MajorVersion>1</ns2:MajorVersion>
<ns2:ContractLine>
<ns2:Id>300100156339524</ns2:Id>
<ns2:MajorVersion>1</ns2:MajorVersion>
<ns2:BillPlanId>300100156339525</ns2:BillPlanId>
```

```
<ns2:RevenuePlanId>300100156339525</ns2:RevenuePlanId>
</ns2:ContractLine>
</ns1:contractHeader>
</ns1:updateContract>
</soap:Body>
</soap:Envelope>
```

Create Contract with Child Entities

In this use case, we'll create a contract with the following child entities: lines, associated project, contract parties, contract party contacts, bill plan, revenue plan, and billing control.

Contract type: Project

Operation: **createContract**

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:createContract xmlns:ns1="http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/
types/">
 <ns1:contractHeader xmlns:ns2="http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/">
 <ns2:OrgId>204</ns2:OrgId>
 <ns2:InvOrganizationId>204</ns2:InvOrganizationId>
 <ns2:ContractTypeId>104</ns2:ContractTypeId>
<ns2:ContractNumber>VinSellContract09252016a</ns2:ContractNumber>
<ns2:CurrencyCode>USD</ns2:CurrencyCode>
<ns2:ContractParty>
<ns2:PartyRoleCode>CUSTOMER</ns2:PartyRoleCode>
<ns2:PartyId>1004</ns2:PartyId>
<ns2:ContractPartyContact>
<ns2:ContactRoleCode>PARTY_CONTACT</ns2:ContactRoleCode>
<ns2:ContactId>2888</ns2:ContactId>
</ns2:ContractPartyContact>
</ns2:ContractParty>
<ns2:ContractLine>
<ns2:LineNumber>1</ns2:LineNumber>
<ns2:LineTypeId>102</ns2:LineTypeId>
<ns2:Object1Id1>8313</ns2:Object1Id1>
<ns2:ItemName>AS55888</ns2:ItemName>
<ns2:AssociatedProject xmlns:ns3="http://xmlns.oracle.com/apps/projects/billing/contracts/
contractPublicService/">
<ns3:ProjectId>300100155887540</ns3:ProjectId>
<ns3:TaskNumber>RECEIPTPROJECT1</ns3:TaskNumber>
<ns3:FundingAmount currencyCode="USD">6000.00</ns3:FundingAmount>
<ns3:ActiveFlag>true</ns3:ActiveFlag>
</ns2:AssociatedProject>
</ns2:ContractLine>
<ns2:BillPlan xmlns:ns3="http://xmlns.oracle.com/apps/projects/billing/contracts/contractPublicService/">

Create Contract with Header and Line DFFs (Global and CSS)

In this use case, we'll create a contract with header and line Dynamic Flex Fields (DFFs).

Contract type: All

Operation: **createContract**

Note that DFFs are supported only through standard operations.

```
