LaborSchFixedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	User-specified date used to derive the bill rate from the person or job rate schedule.
LaborTpSchFixedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	User-specified date used to derive the bill rate from the intercompany labor transfer price schedule.

Name	Type	Description
LaborTpScheduleId	long	Unique identifier of the transfer price labor schedule used to derive the bill rate for intercompany labor transactions.
MajorVersion	long	Unique identifier of the revenue method used to recognize revenue against this revenue plan. • Primary Key
NlBillBasisCode	string	Identifies if applicable nonlabor expenditure items must be billed at raw cost or burdened cost.
NlBillRateSchId	long	Unique identifier of the nonlabor rate schedule used to derive the bill rate for nonlabor transactions.
NlDiscountPercentage	decimal	The factor by which all bill rates derived from the nonlabor rate schedule for this revenue plan are to be discounted.
NlDiscountReasonCode	string	Explains the reason for the discount percentage offered against the nonlabor rate schedule specified in the revenue plan.
NlMarkupPercentage	decimal	The factor by which the revenue amount will be calculated over the nonlabor cost.
NlSchFixedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	User-specified date used to derive the bill rate from the nonlabor rate schedule.
NlTpSchFixedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	User-specified date used to derive the bill rate from the intercompany nonlabor transfer price schedule.
NlTpScheduleId	long	Unique identifier of the transfer price labor schedule used to derive the bill rate for intercompany nonlabor transactions.
NonLaborRateOverride	*Non-labor Rate Override*	Section that displays the nonlabor rate overrides for a revenue plan.
NonlaborCostBasis	string	The nonlabor cost basis for the reimbursable cost reimbursable.
NonlaborRateChangeReason	string	The reason for change in the nonlabor rate.
OnHoldFlag	boolean	Indicator to check if revenue plan is eligible for revenue generation.

Name	Type	Description
PersonBillRateSchId	long	The unique identifier of the employee bill rate schedule.
PersonRateOverride	*Person Rate Override*	Section that displays the person rate overrides for a revenue plan.
ProjectRoleBillRateSchId	long	
RevenuePlanDescriptiveFlexField	*Contract Bill Plan Descriptive Flexfields*	The revenue plan of the descriptive flex field linkage.
RevenuePlanTranslation	*Contract Bill Plan Translation*	The revenue plan translation linkage.

Contract Service Billing Summary

Contract Service Billing Summary

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractBillLine

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Line*
Contained by	*Contract Covered Asset*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Amount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount that will be billed for a billing period.

Name	Type	Description
CurrencyCode	string	Currency Code
DateBilledFrom	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The start date of a billing period.
DateBilledTo	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The end date of a billing period.
DateToInterface	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the service bill gets interfaced.
Id	long	Contract Bill Line Id • Primary Key
MajorVersion	long	Major Version • Primary Key
SentYnFlag	boolean	Indicates whether the invoice has been sent to the customer.
SequenceNumber	decimal	The number that indicates the sequence in which bills are interfaced for a contract line.
TrxAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The invoice amount.
TrxDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on the invoice.
TrxNumber	string	The invoice number.
UOMCode	string	The code identifying the unit of measure.
UsageCaptureDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date of capture of the usage.
UsageQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The quantity of usage.

Contract Tier Header

Contract Tier Header View Object

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}TierHeader

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Contract Tier Line*
Contained by	*Pricing Terms Sales Agreement*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdjustmentBasisId	long	Adjustment Basis Id
AdjustmentTypeCode	string	Adjustment Type Code
AggregationMethodCode	string	Aggregation Method Code
ApplicationMethodCode	string	Application Method Code
GraduatedCode	string	Graduated Code
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Last Update Date
PricingTermTierLine	*Contract Tier Line*	Contract Pricing Term Tier Lines
TierBasisId	long	Tier Basis Id
TierBasisTypeCode	string	Tier Basis Type Code
TieredPricingHeaderId	long	Tiered Pricing Header Id • Primary Key

Contract Tier Line

Contract Tier Line View Object

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}TierLine

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Tier Header*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Adjustment	decimal	Adjustment amount or percent
AdjustmentBasisId	long	Adjustment Basis Id
AdjustmentTypeCode	string	Adjustment Type Code
ApplicationMethodCode	string	Application Method Code
IncrementValue	long	Increment Value
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Last Update Date
MaximumValue	decimal	Maximum Value
MinimumValue	decimal	Minimum Value
TierLineNumber	int	Tier Line Number
TieredPricingHeaderId	long	Tiered Pricing Header Id

Name	Type	Description
TieredPricingLineId	long	Tiered Pricing Line Id • Primary Key

Contract Variable Values

Service to capture user defined variable values associated to a document.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}VariableValues

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
VariableCode	string	The unique code that identifies a variable value.
VariableValue	string	The value provided for a variable.
VariableValueId	string	The variable value id.

Event Parameters

The UserTransitionEventParams object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}UserTransitionEventParams

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Event Payload*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
EventParamName	string	To Store EventParamName
EventParamValue	string	To Store EventParamValue

Event Payload

The UserTransitionEvent object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}UserTransitionParams

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Event Parameters*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
EventName	string	User Transition EventName
ExternalKey	string	Used to identify external records that were imported.
ExternalSource	string	The source application where the contract was created. Used to identify records created through external web services.
Id	long	Contract Id • Primary Key
UserTransitionEventParams	*Event Parameters*	ViewLink Object to store User Transition Event params.

Get Contract Document Content

Parameters object of custom operation getContractDocumentFileContents

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}GetContractDocumentFileContentsParams

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttachedDocumentId	long	Attached Document ID
ContractId	long	Contract ID
ExternalKey	string	Used to identify external records that were imported.

Name	Type	Description
ExternalSource	string	The source application where the contract was created. Used to identify records created through external web services.
MajorVersion	long	Contract Major Version

Get Contract Documents List

Parameters object of custom operation getContractDocuments

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}GetContractDocumentsParams

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContractId	long	Contract ID
ExternalKey	string	Used to identify external records that were imported.
ExternalSource	string	The source application where the contract was created. Used to identify records created through external web services.
MajorVersion	long	Contract Major Version

Internal Contract Line Attributes SDO

An object that contains the internal contract line attributes.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/contractBillingService/}ClinInternalAttribute

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Line*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContractId	long	Unique identifier of the contract. • Primary Key
ContractLineId	long	Unique identifier of the contract line. • Primary Key
ExpOrgSourceFlag	boolean	Indicates whether the expenditure organization populated on the intercompany invoice line sent to payables comes from the task owning organization on the original expenditure item or the expenditure organization on the intercompany contract line.
ExpTypeOrigEiFlag	boolean	Indicates whether the expenditure type populated on the internal invoice line sent to payables comes from the expenditure type on the original expenditure item or the expenditure type on the internal contract line..
ExpenditureTypeId	long	Unique identifier for the expenditure type which is recorded on the internal invoices of the receiver in Oracle Fusion Payables for the contract line.

Name	Type	Description
ExpenditureTypeName	string	Name of the expenditure type that is recorded on the internal invoices of the receiver in Oracle Fusion Payables for the contract line.
MajorVersion	long	Identification of the version of the contract, created by amending the contract, used to generate the revenue distribution. • Primary Key
OrganizationId	long	Unique identifier for the expenditure organization which is recorded on the internal invoices of the receiver in Oracle Fusion Payables for the contract line.
OrganizationName	string	Name of the organization that is recorded on the internal invoices of the receiver in Oracle Fusion Payables for the contract line.
ProviderBusinessUnitId	long	Unique identifier for the business unit that provides goods or services which are charged using the internal contract line.
ProviderBusinessUnitName	string	Name of the business unit that provides goods or services which are charged using the internal contract line.
ReceiverProjectId	long	Unique identifier for the project which is recorded on the internal invoices of the receiver in Oracle Fusion Payables for the contract line.
ReceiverProjectName	string	Name of the project that is recorded on the internal invoices of the receiver in Oracle Fusion Payables for the contract line.
ReceiverTaskId	long	Unique identifier for the task which is recorded on the internal invoices of the receiver in Oracle Fusion Payables for the contract line.
ReceiverTaskName	string	Name of the task that is recorded on the internal invoices of the receiver in Oracle Fusion Payables for the contract line.

Job Assignment Override SDO

Job Assignment Override SDO You must either specify names or internal ID for all payload attributes. If you specify a mix of names and internal ID attributes then the application might ignore one of them (neither validate nor save) and

save it as null. For example, you can either specify JobName or JobId. But, if you specify JobName and JobId, then JobId is ignored.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/contractBillingService/}JobAssignmentOverride

Logical Business Objects

- Projects
- Projects : Project Billing

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Bill Plan*
Contained by	*Contract Revenue Plan*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BillingTitle	string	Name of the override job title being assigned to the person for this bill plan. Used to display on the invoice to the customer.
ContractLineId	long	Unique identifier of the contract line for which the job assignment override is defined.
ContractLineNumber	string	The contract line for which the job assignment override is defined.
EmailAddress	string	The email address for whom the job assignment override is defined.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date to which a job assignment override applies.
ExternalReferenceKey	string	Unique identifier of the job assignment override in the source application. Used to identify job assignment overrides created through external webservices.

Name	Type	Description
ExternalSourceKey	string	Unique identifier of the source application from where the job assignment override originates. Used to identify job assignment overrides created through external webservices.
JobAssignmentOverrideId	long	Unique identifier of the job assignment override on the bill plan that identifies the negotiated job assigned to a specific person, rather than the normal job for that person. • Primary Key
JobCode	string	The job code of the override being assigned to the person for this bill or revenue plan.
JobId	long	Unique identifier of the override job being assigned to the person for this bill or revenue plan.
JobName	string	The job name of the override being assigned to the person for this bill or revenue plan.
MajorVersion	long	Version of the contract containing this particular set of job assignment override details. • Primary Key
PersonId	long	Unique identifier of the person for whom the job assignment override is defined.
PersonName	string	The person for whom the job assignment override is defined.
PersonNumber	string	The person number for whom the job assignment override is defined.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date from which a job assignment override applies.

Job Rate Override

The job rate overrides for a bill or revenue plan.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/contractBillingService/}JobRateOverride

Logical Business Objects

- Projects : Project Billing

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Bill Plan*
Contained by	*Contract Revenue Plan*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BillRateOverrideId	long	Unique identifier of the job rate override. • Primary Key
ContractLineId	long	Unique identifier of the contract line for which the job rate override is defined.
ContractLineNumber	string	The contract line number for which the bill rate override applies.
DiscountPercentage	decimal	The factor by which the bill rate derived for the job and bill or revenue plan is to be discounted.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date to which a job rate override applies.
ExternalReferenceKey	string	Unique identifier of the job rate override in the source application. Used to identify job rate overrides created through external webservices.
ExternalSourceKey	string	Unique identifier of the source application from where the job rate override originates. Used to identify job rate overrides created through external webservices.

Name	Type	Description
JobCode	string	The code of the job for which the bill rate is being overridden.
JobId	long	Unique identifier of the job for which the job rate override is defined.
JobName	string	The name of the job for which bill rate is being overridden.
MajorVersion	long	Version of the contract containing this particular set of job rate override details. • Primary Key
Rate	decimal	A unit rate override for the job and bill or revenue plan.
RateCurrency	string	The currency of the bill rate override.
RateCurrencyCode	string	Currency of the job rate override on the bill or revenue plan.
RateDiscReasonCode	string	Explains the reason for the discount percentage offered against the job.
RateDiscountReason	string	The reason for applying a discount.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date from which a job rate override applies.

Job Title Override SDO

Job Title Override SDO The job title assigned to a specific person on a contract bill or revenue plan, rather than the normal job title for that person. You must either specify names or internal ID for all payload attributes. If you specify a mix of names and internal ID attributes then the application might ignore one of them (neither validate nor save) and save it as null. For example, you can either specify JobName or JobId. But, if you specify JobName and JobId, then JobId is ignored.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/contractBillingService/}JobTitleOverride

Logical Business Objects

- Projects : Project Billing

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Bill Plan*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BillingTitle	string	Name of the override job title being assigned to the job for this bill plan. Used to display on the invoice to the customer.
ContractLineId	long	Unique identifier of the contract line for which the job title override is defined.
ContractLineNumber	string	The contract line number for which the job title override is defined.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date to which a job title override applies.
ExternalReferenceKey	string	Unique identifier of the job title override in the source application. Used to identify job title overrides created through external webservices.
ExternalSourceKey	string	Unique identifier of the source application from where the job title override originates. Used to identify job title overrides created through external webservices.
JobCode	string	Code of the job for which the job title override is defined.
JobId	long	Unique identifier of the job for which the job title override is defined.
JobName	string	Name for the Job for which the job title override is defined.

Name	Type	Description
JobTitleOverrideId	long	Unique identifier of the job title override on the bill plan that identifies the negotiated job title assigned to a specific person, rather than the normal title for that person. • Primary Key
MajorVersion	long	Version of the contract containing this particular set of job title override details. • Primary Key
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date from which a job title override applies.

Labor Multiplier Override SDO

Labor Multiplier Override SDO You must either specify names or internal ID for all payload attributes. If you specify a mix of names and internal ID attributes then the application might ignore one of them (neither validate nor save) and save it as null. For example, you can only specify ContractLineId or ContractLineNumber. But, if you specify ContractLineId and ContractLineNumber, then ContractLineId is ignored.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/contractBillingService/}LaborMultiplierOverride

Logical Business Objects

- Projects : Project Billing

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Bill Plan*
Contained by	*Contract Revenue Plan*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContractLineId	long	Unique identifier of the contract line for which the labor multiplier override applies.
ContractLineNumber	string	Contract line number for which labor mutliplier override applies.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date to which a labor multiplier override applies.
ExternalReferenceKey	string	Unique identifier of the source application where the override is created. Used to identify overrides created through external webservices.
ExternalSourceKey	string	Unique identifier of the source application where the override is created. Used to identify overrides created through external webservices.
LaborMultiplier	decimal	Labor multiplier.
LaborMultiplierId	long	Unique identifier of the labor multiplier override on the bill plan or revenue plan that identifies the negotiated value to be multiplied by the cost rate for labor. • Primary Key
MajorVersion	long	Version of the contract containing this particular set of labor multiplier override details. • Primary Key
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date from which a labor multiplier override applies.

Non-labor Rate Override

The negotiated rate, discount, or markup for nonlabor on a contract bill or revenue plan.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/contractBillingService/}NonLaborRateOverride

Logical Business Objects

- Projects : Project Billing

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Bill Plan*
Contained by	*Contract Revenue Plan*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BillRateOverrideId	long	Unique identifier of the nonlabor rate override. • Primary Key
ContractLineId	long	Unique identifier of the contract line for which the nonlabor rate override is defined.
DiscountPercentage	decimal	The factor by which the bill rate derived for the nonlabor expenditure type, resource, and organization and bill or revenue plan is to be discounted.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date to which a nonlabor rate override applies.
ExpenditureTypeId	long	Unique identifier of the expenditure type for which the nonlabor rate override applies.
ExpenditureTypeName	string	The expenditure type name for which the bill rate is being overridden.
ExternalReferenceKey	string	Unique identifier of the nonlabor rate override in the source application. Used to identify nonlabor rate overrides created through external webservices.
ExternalSourceKey	string	Unique identifier of the source application from where the nonlabor rate override originates. Used to identify nonlabor rate overrides created through external webservices.

Name	Type	Description
MajorVersion	long	Version of the contract containing this particular set of nonlabor rate override details. • Primary Key
MarkupPercentage	decimal	Identifies the factor by which the bill amount will be calculated over the cost for this nonlabor rate override.
NonLaborResourceId	long	Unique identifier of the nonlabor resource for which the nonlabor rate override applies.
NonLaborResourceName	string	The nonlabor resource name for which the bill rate is being overridden.
OrganizationId	long	Unique identifier of the nonlabor resource organization for which the nonlabor rate override applies.
OrganizationName	string	The name of the party when the party type is Organization.
Rate	decimal	A unit rate override for the nonlabor expenditure type, resource, and organization and bill or revenue plan.
RateCurrency	string	The currency of the bill rate override.
RateCurrencyCode	string	Currency of the nonlabor rate override on the bill or revenue plan.
RateDiscReasonCode	string	Explains the reason for the discount percentage offered against the nonlabor expenditure type, oranization, and resource.
RateDiscountReason	string	The reason for applying a discount.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date from which a nonlabor rate override applies.

Person Rate Override

The set of instructions, assigned to one or many contract lines, on how to recognize project contract revenue.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/contractBillingService/}PersonRateOverride

Logical Business Objects

- Projects : Project Billing

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Bill Plan*
Contained by	*Contract Revenue Plan*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BillRateOverrideId	long	The unique identifier of the person rate override element. • Primary Key
ContractLineId	long	The unique identifier of the contract line for which the bill rate override applies.
ContractLineNumber	string	The contract line number for which the bill rate override applies.
DiscountPercentage	decimal	The discount in percentage of the contract applied to the bill rate.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
ExternalReferenceKey	string	The unique identifier of the override in the source application. Used to identify overrides created through external web services.
ExternalSourceKey	string	The unique identifier of the source application where the person rate override was created.

Name	Type	Description
		Used to identify overrides created through external web services.
MajorVersion	long	The current version of the record. • Primary Key
PersonEmail	string	The email of the person whose bill rate is being overridden.
PersonId	long	The unique identifier of the person whose bill rate is being overridden.
PersonName	string	The name of the person whose bill rate is being overridden.
Rate	decimal	The amount billed to the customer for an item.
RateCurrency	string	The currency of the bill rate override.
RateCurrencyCode	string	The code identifying the currency of the bill rate override.
RateDiscReasonCode	string	The code identifying the reason for applying a discount.
RateDiscountReason	string	The reason for applying a discount.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.

Pricing Terms Sales Agreement

Relationship Type	Object or Service
Contained by	*Contract Line*
Contained by	*Contract*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveFlag	boolean	The flag to validate whether the sales credit is active.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
ExternalReferenceKey	string	The unique identifier of the override in the source application. Used to identify overrides created through external web services.
ExternalSourceKey	string	The unique identifier of the source application where the sales credit was created. Used to identify records created through external web services.
Id	long	The unique identifier of the sales credit. • Primary Key
MajorVersion	long	The major version of the record. • Primary Key
Percent	decimal	The sales credit percentage.
SalesCreditPuid	string	sales Credit PUID
SalesCreditType	string	Sales Credit Type
SalesCreditTypeId	long	The unique identifier of the sales credit type.
SalesrepId	long	The unique identifier of the salesperson.
SalesrepName	string	Sales Representative Name
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.

Sign Contract

SignContractParams SDO.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}SignContractParams

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

SignerRole	string	Signer Role

Custom Business Object

A service to create, update, delete, or find custom business objects created in the Oracle Fusion CRM application. A custom business object stores extended information for an Oracle Fusion business object.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/custom/extnService/}CustomReferenceService

Service WSDL URL: https://servername/crmService/CustomReferenceService?WSDL

Logical Business Objects

- CRM : CRM Application Composer : CRM Extensible Object

Operations

- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*
- *invokeObjectFunction*

- *createEntity*
- *getEntity*
- *updateEntity*
- *deleteEntity*
- *findEntity*
- *mergeEntity*
- *processEntity*

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

invokeObjectFunction

invoke custom object row function.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
row	anyType	DataObject used to invoke the script
viewName	string	Custom Object type name
scriptName	string	row function name
params	anyType	row function parameters

Response Payload

Element Name	Type	Description
result	anyType	DataObject

Element Name	Type	Description

createEntity

Create operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject created for the custom object.

getEntity

Get operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
keyValue	string	A list of key values for identifying the custom object.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject identified by the keyValue.

updateEntity

Update operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be updated. The DataObject must include key fields for identifying the updated record, as well as the fields to be updated.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject updated for the custom object.

deleteEntity

Delete operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be deleted. The DataObject must include key fields for identifying the deleted record.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	void	DataObject that is deleted.

findEntity

Find operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	List of DataObjects identified by the findCriteria.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Search control.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObjects found

mergeEntity

merge with existing custom object if exist, create new object if does not exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be merged. The DataObject must include key fields for identifying the record, as well as the fields to be merged.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject result from the merge

processEntity

batch process for custom object operation

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Operation name
object	anyType	DataObjects to be batch processed
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	process control
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject result list

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
processEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea
getEntityList	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
updateEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea

Operation Name	Privilege Code	Privilege Name	Privilege Description
getEntity	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
deleteEntity	ZCX_DELETE_CUSTOM_OBJECT_PRIV	DELETE custom object resources (WorkArea)	PermissionSet to DELETE for custom object WorkArea
findEntity	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
getDfltObjAttrHints	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
createEntity	ZCX_CREATE_CUSTOM_OBJECT_PRIV	CREATE custom object resources (WorkArea)	PermissionSet to CREATE for custom object WorkArea
getServiceLastUpdateTime	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
mergeEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea

Custom Common Business Object (Deprecated)

A service used to create, update, delete, or find custom Oracle Fusion CRM Common business objects. A custom business object stores extended information for an Oracle Fusion business object.

Life Cycle Status: Deprecated. This service is deprecated and replaced by .

QName: {http://xmlns.oracle.com/apps/cdm/foundation/custextn/extnService/}CrmCommonReferenceService

Service WSDL URL: https://servername/crmService/CrmCommonReferenceService?WSDL

Logical Business Objects

- CRM : CRM Application Composer : CRM Extensible Object

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Next version is	*Custom Business Object*

Operations

- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*
- *createEntity*
- *getEntity*
- *updateEntity*
- *deleteEntity*
- *findEntity*
- *mergeEntity*
- *processEntity*

getDfltObjAttrHints

An operation to retrieve the user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name; an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale used to evaluate the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files were referenced in the service definition that was last updated.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition was last updated in the ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for the service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

createEntity

The Create operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	The data object to be created. The data object must include key fields for identifying the created record and the required fields.
objectName	string	The name of the custom object type.

Response Payload

Element Name	Type	Description
result	anyType	The data object created for the custom object.

getEntity

The Get operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
keyValue	string	A list of key values to identify the custom object.
objectName	string	The name of the custom object type.

Response Payload

Element Name	Type	Description
result	anyType	The data object identified by the key value.

updateEntity

The Update operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	The data object to be updated. The data object must include key fields for identifying the updated record and the fields to be updated.
objectName	string	The name of the custom object type.

Response Payload

Element Name	Type	Description
result	anyType	The data object created for the custom object.

deleteEntity

The Delete operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	The data object to be deleted. The data object must include key fields for identifying the deleted record.
objectName	string	The name of the custom object type.

Response Payload

Element Name	Type	Description
result	void	The data object deleted for the custom object.

findEntity

The Find operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The list of data objects identified by the findCriteria operation.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The list of data objects identified by the findCriteria operation.
objectName	string	The search criteria for looking up custom object records.

Response Payload

Element Name	Type	Description
result	anyType	The name of the custom object type.

mergeEntity

Updates a row if it exists; otherwise, creates a new one.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	The data object to be merged.
objectName	string	The name of the custom object type.

Response Payload

Element Name	Type	Description
result	anyType	The data object created for the custom object.

processEntity

Performs a Create, Update, Delete, or Merge operation on a list of rows. The specified operation is applied to all rows in the given list.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action to perform, such as create, update, merge, or delete.
object	anyType	The data object to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk operation behavior, such as whether valid data is committed if there are other invalid data in the same batch,

Element Name	Type	Description
		and whether the outbound contains the key attributes only or the full object.
objectName	string	The name of the custom object type.

Response Payload

Element Name	Type	Description
result	anyType	The custom data object having the processed rows.

Custom Business Object

A service to create, update, delete, or find custom business objects created in the Oracle Fusion CRM application. A custom business object stores extended information for an Oracle Fusion business object.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/custom/extnService/}CustomReferenceService

Service WSDL URL: https://servername/crmService/CustomReferenceService?WSDL

Logical Business Objects

- CRM : CRM Application Composer : CRM Extensible Object

Operations

- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*
- *invokeObjectFunction*
- *createEntity*
- *getEntity*
- *updateEntity*
- *deleteEntity*
- *findEntity*
- *mergeEntity*
- *processEntity*

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

invokeObjectFunction

invoke custom object row function.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
row	anyType	DataObject used to invoke the script
viewName	string	Custom Object type name
scriptName	string	row function name
params	anyType	row function parameters

Response Payload

Element Name	Type	Description
result	anyType	DataObject

createEntity

Create operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject created for the custom object.

getEntity

Get operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
keyValue	string	A list of key values for identifying the custom object.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject identified by the keyValue.

updateEntity

Update operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be updated. The DataObject must include key fields for identifying the updated record, as well as the fields to be updated.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject updated for the custom object.

deleteEntity

Delete operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be deleted. The DataObject must include key fields for identifying the deleted record.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	void	DataObject that is deleted.

findEntity

Find operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	List of DataObjects identified by the findCriteria.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Search control.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObjects found

mergeEntity

merge with existing custom object if exist, create new object if does not exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be merged. The DataObject must include key fields for identifying the record, as well as the fields to be merged.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject result from the merge

processEntity

batch process for custom object operation

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Operation name
object	anyType	DataObjects to be batch processed
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	process control
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject result list

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
processEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea
getEntityList	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
updateEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea
getEntity	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
deleteEntity	ZCX_DELETE_CUSTOM_OBJECT_PRIV	DELETE custom object resources (WorkArea)	PermissionSet to DELETE for custom object WorkArea
findEntity	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
getDfltObjAttrHints	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea

Operation Name	Privilege Code	Privilege Name	Privilege Description
createEntity	ZCX_CREATE_CUSTOM_OBJECT_PRIV	CREATE custom object resources (WorkArea)	PermissionSet to CREATE for custom object WorkArea
getServiceLastUpdateTime	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
mergeEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea

Customer Custom Business Object (Deprecated)

Service to operate on custom Oracle Fusion Customer Center business objects. The supported operations are create, update, get, and find. Some examples of custom objects could be a customer trouble ticket to track customer complaints or a customer tracking event to keep track of customer participation in marketing events.

Life Cycle Status: Deprecated. This service is deprecated and replaced by .

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/custExtn/extnService/}CustomerCenterCustomObjectService

Service WSDL URL: https://servername/crmService/CustomerCenterCustomObjectService?WSDL

Logical Business Objects

- CRM : Customer Center : Sales Party

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Next version is	*Custom Business Object*

getDfltObjAttrHints

Retrieves user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The locale name is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Retrieves the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

Element Name	Type	Description

getEntityList

Retrieves the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

createEntity

Creates records of an Oracle Fusion Customer custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	A required input parameter of the createEntity web service method. Includes the attribute values that the records will be created with.
objectName	string	A required input parameter of the createEntity web service method. Use the API name of the custom object you want to create.

Response Payload

Element Name	Type	Description
result	anyType	The return value of the createEntity web service method. Includes the full set of attributes and child entities of the record.

getEntity

Queries by ID a single record of an Oracle Fusion Customer custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
keyValue	string	A required input parameter of the getEntity Web service method. Includes the row ID of the record you want to query.
objectName	string	A required input parameter of the getEntity web service method. Use the API name of the custom object you want to query for.

Response Payload

Element Name	Type	Description
result	anyType	The return value of the getEntity web service method. Includes the full set of attributes and child entities of the record.

updateEntity

Updates a set of records of an Oracle Fusion Customer custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	The required input parameter of the updateEntity web service method. The object includes only the IDs and the attribute values you want to update. Records with the matching IDs will be updated with the attribute values in the object.
objectName	string	The required input parameter of the updateEntity web service method. Use the API name of the custom object you want to update.

Response Payload

Element Name	Type	Description
result	anyType	

deleteEntity

Deletes a set of records of an Oracle Fusion Customer custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	A required input parameter of the deleteEntity web service method. All records matching the input attribute values specified in this input object are deleted.
objectName	string	A required input parameter of the deleteEntity web service method. Use the API name of the custom object you want to delete.

Response Payload

Element Name	Type	Description
result	void	

findEntity

Retrieves a set of records of an Oracle Fusion Customer custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findEntity web service method. Includes optional search criteria, sort filter, and attributes to be excluded when returning the set of records. Also includes the option to return any of the custom object's child entities, as well as the set of search criteria to use on the child entities.

Element Name	Type	Description
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.
objectName	string	A required input parameter of the findEntity web service method. Use the API name of the custom object you want to query for.

Response Payload

Element Name	Type	Description
result	anyType	The return value of the findEntity web service method. Includes the full set of attributes and child entities of the records.

mergeEntity

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	
objectName	string	

Response Payload

Element Name	Type	Description
result	anyType	

processEntity

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	

Element Name	Type	Description
object	anyType	
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	
objectName	string	

Response Payload

Element Name	Type	Description
result	anyType	

Custom Business Object

A service to create, update, delete, or find custom business objects created in the Oracle Fusion CRM application. A custom business object stores extended information for an Oracle Fusion business object.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/custom/extnService/}CustomReferenceService

Service WSDL URL: https://servername/crmService/CustomReferenceService?WSDL

Logical Business Objects

- CRM : CRM Application Composer : CRM Extensible Object

Operations

- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*
- *invokeObjectFunction*
- *createEntity*
- *getEntity*
- *updateEntity*
- *deleteEntity*
- *findEntity*
- *mergeEntity*
- *processEntity*

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

invokeObjectFunction

invoke custom object row function.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
row	anyType	DataObject used to invoke the script
viewName	string	Custom Object type name
scriptName	string	row function name
params	anyType	row function parameters

Response Payload

Element Name	Type	Description
result	anyType	DataObject

createEntity

Create operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject created for the custom object.

getEntity

Get operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
keyValue	string	A list of key values for identifying the custom object.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject identified by the keyValue.

updateEntity

Update operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be updated. The DataObject must include key fields for identifying the updated record, as well as the fields to be updated.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject updated for the custom object.

deleteEntity

Delete operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be deleted. The DataObject must include key fields for identifying the deleted record.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	void	DataObject that is deleted.

findEntity

Find operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	List of DataObjects identified by the findCriteria.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Search control.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObjects found

mergeEntity

merge with existing custom object if exist, create new object if does not exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be merged. The DataObject must include key fields for identifying the record, as well as the fields to be merged.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject result from the merge

processEntity

batch process for custom object operation

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Operation name
object	anyType	DataObjects to be batch processed
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	process control
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject result list

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
processEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea
getEntityList	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
updateEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea
getEntity	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
deleteEntity	ZCX_DELETE_CUSTOM_OBJECT_PRIV	DELETE custom object resources (WorkArea)	PermissionSet to DELETE for custom object WorkArea
findEntity	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
getDfltObjAttrHints	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea

Operation Name	Privilege Code	Privilege Name	Privilege Description
createEntity	ZCX_CREATE_CUSTOM_OBJECT_PRIV	CREATE custom object resources (WorkArea)	PermissionSet to CREATE for custom object WorkArea
getServiceLastUpdateTime	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
mergeEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea

Customer Interaction (Deprecated)

Service to communicate between an internal resource such as Mary Smith and a customer through email, phone, or any another channel. WARNING: This service has been deprecated and is being replaced with ActivityService.

Life Cycle Status: Deprecated. This service is deprecated and replaced by .

QName: {http://xmlns.oracle.com/apps/crmCommon/interactions/interactionService/}InteractionService

Service WSDL URL: https://servername/crmService/InteractionService?WSDL

Relationships

getInteractionAttachment

Get operation for interaction attachment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
getParameters	*Common Attachment*	Parameters driving the get operation for interaction attachment.

Response Payload

Element Name	Type	Description
result	*Common Attachment*	The interaction attachment that satisfy the inbound Get criteria.

createInteractionAttachment

Creates an interaction attachment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
attachmentVORows	*Common Attachment*	The list of attachment objects to be copied or created.

Response Payload

Element Name	Type	Description
result	string	The interaction attachment to be created.

copyInteractionAttachment

Copy operation for interaction attachment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
attachmentVORows	*Common Attachment*	The list of attachment objects to be copied or created.

Response Payload

Element Name	Type	Description
result	string	A list of warnings or informational messages encountered when copying the interaction attachment.

deleteInteractionAttachment

Deletes an interaction attachment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
attachmentVORows	*Common Attachment*	The list of attachment objects to be copied or create.

Response Payload

Element Name	Type	Description
result	string	A list of warnings or informational messages encountered when deleting the appointment attachment.

updateInteraction

Updates an Interaction.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
interaction	*Interaction*	Interaction to be updated.

Response Payload

Element Name	Type	Description
result	*Interaction*	Updated interaction.

getInteraction

Retrieves an interaction.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
interactionId	long	Unique interaction identifier for the interaction.

Response Payload

Element Name	Type	Description
result	*Interaction*	Interaction that matches the inbound key attributes.

deleteInteraction

Deletes an interaction.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
interaction	*Interaction*	Interaction to be deleted.

Response Payload

Element Name	Type	Description
result	void	

createInteraction

Creates an Interaction.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
interaction	*Interaction*	Interaction to be created.

Response Payload

Element Name	Type	Description
result	*Interaction*	Created interaction.

createInteractionParticipant

Creates an interaction participant.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
interactionParticipantWS	*Interaction Participant*	Interaction participant to be created.

Response Payload

Element Name	Type	Description
result	*Interaction Participant*	Created interaction participant.

deleteInteractionParticipant

Deletes an interaction participant.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
interactionParticipantWS	*Interaction Participant*	Interaction participant to be deleted.

Response Payload

Element Name	Type	Description
result	void	

getInteractionParticipant

Retrieves an interaction participant.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
interactionParticipantId	long	Unique identifier for the interaction participant object.

Response Payload

Element Name	Type	Description
result	*Interaction Participant*	Interaction participant that matches the inbound key attributes.

updateInteractionParticipant

Updates an interaction participant.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
interactionParticipantWS	*Interaction Participant*	Interaction participant to be updated.

Response Payload

Element Name	Type	Description
result	*Interaction Participant*	Updated interaction participant.

mergeInteraction

Merge operation for Interaction. It will perform an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
interaction	*Interaction*	Interaction to be merged.

Response Payload

Element Name	Type	Description
result	*Interaction*	Merged interaction.

findInteraction

Find operation for interaction.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Interaction*	A list of Interaction that satisfy the inbound criteria.

processInteraction

Bulk load operation for interaction.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action shall be performed, such as create, update, merge, or delete.

Element Name	Type	Description
interaction	*Interaction*	A list of interaction to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Control your bulk upload behavior, such as whether the valid data will be committed if there is other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Interaction*	A list of interaction that are successfully processed.

getInteractionAssociation

Retrieves an interaction association.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
interactionAssociationId	long	Unique identifier for the interaction association.

Response Payload

Element Name	Type	Description
result	*Interaction Association*	Interaction association that matches the inbound key attributes.

createInteractionAssociation

Creates an interaction association.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
interactionAssociationWS	*Interaction Association*	Interaction association to be created.

Response Payload

Element Name	Type	Description
result	*Interaction Association*	Created interaction association.

updateInteractionAssociation

Updates an interaction association.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
interactionAssociationWS	*Interaction Association*	Interaction association to be updated.

Response Payload

Element Name	Type	Description
result	*Interaction Association*	Updated interaction association.

deleteInteractionAssociation

Deletes an interaction association.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
interactionAssociationWS	*Interaction Association*	Interaction association to be deleted.

Response Payload

Element Name	Type	Description
result	void	

findInteractionAssociation

Find operation for interaction association.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Interaction Association*	A list of interaction association that satisfy the inbound criteria.

processInteractionAssociation

Bulk load operation for interaction association.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action shall be performed, such as create, update, merge, or delete.
interactionAssociationWS	*Interaction Association*	A list of interaction association to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Control your bulk upload behavior, such as whether the valid data will be committed if there is other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	*Interaction Association*	A list of interaction association that are successfully processed.

findInteractionParticipant

Find operation for interaction participant.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Interaction Participant*	A list of interaction participant that satisfy the inbound criteria.

processInteractionParticipant

Bulk load operation for interaction participant.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action shall be performed, such as create, update, merge, or delete.

Element Name	Type	Description
interactionParticipantWS	*Interaction Participant*	A list of interaction participant to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Control your bulk upload behavior, such as whether the valid data will be committed if there is other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Interaction Participant*	A list of interaction participant that are successfully processed.

getDfltObjAttrHints

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	
localeName	string	

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	

getServiceLastUpdateTime

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	

getEntityList

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	

Activity Service

Service to operate on activity object.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activityManagementService/}ActivityService

Service WSDL URL: https://servername/crmService/ActivityService?WSDL

Logical Business Objects

- CRM : Applications Common Components : Activity

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Common Attachment SDO*
Handles	*Activity Assignee*
Handles	*Activity Delete Exception*
Handles	*Note Descriptive Flexfields*

Relationship Type	Object or Service
Handles	*Activity Contact*
Handles	*Note*
Handles	*Activity*
Handles	*Activity Objective*

Operations

- *deleteAttachment*
- *getAttachmentsListWithoutContent*
- *getAttachmentContent*
- *copyAttachment*
- *createAttachment*
- *generateActivitiesFromTemplate*
- *getActivity*
- *createActivity*
- *updateActivity*
- *deleteActivity*
- *mergeActivity*
- *findActivity*
- *processActivity*
- *createActivityAssignee*
- *updateActivityAssignee*
- *deleteActivityAssignee*
- *findActivityAssignee*

- *updateActivityContact*
- *deleteActivityContact*
- *findActivityContact*
- *findActivityDeleteExceptions*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

deleteAttachment

An operation to delete a single or multiple attachments associated to an activity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
deleteParams	*Common Attachment*	The parameter based on which deletion of attachments should trigger.
commitData	string	A flag to indicate whether or not to commit transaction for this operation.

Response Payload

Element Name	Type	Description
result	string	The parameter returns the success or failure status of the operation.

getAttachmentsListWithoutContent

An operation to get list of all the attachment associated with an activity without any file content.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
getParameters	*Common Attachment*	The parameters based on which list of attachments to be fetched is determined.

Response Payload

Element Name	Type	Description
result	*Common Attachment*	The parameter returns the list of all the attachments without any file content.

getAttachmentContent

An operation to get attachment associated with an activity with file content if applicable.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
getParameters	*Common Attachment*	The parameters based on which attachment to be fetched is determined.

Response Payload

Element Name	Type	Description
result	*Common Attachment*	The parameter returns the attachment with file content, if applicable.

copyAttachment

An operation to copy a single or multiple attachments associated to an activity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
attachmentRows	*Common Attachment*	The parameter for the list of attachments to be copied.
commitData	string	A flag to indicate whether or not to commit transaction for this operation.

Response Payload

Element Name	Type	Description
result	string	The parameter returns the success or failure status of the operation.

createAttachment

An operation to create a single or multiple attachments associated to an activity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
attachmentRows	*Common Attachment*	The parameter which provides the list of attachments to be created.

Element Name	Type	Description
commitData	string	A flag to indicate whether or not to commit transaction for this operation.

Response Payload

Element Name	Type	Description
result	string	The parameter returns the success or failure status of the operation.

generateActivitiesFromTemplate

An operation to generate activities from a template. A valid value for templateId should be passed. Only following activity attributes are supported in activityAttributes input parameter as of now: CustomerId, OwnerId, AssesmentId, ActivityContact, ActivityAssignee, ActivityStartDate, LeadId, OpportunityId, and CampaignId.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
templateId	long	The unique identifier of the template-set using which the activities are to be generated.
activityAttributes	*Activity*	The Activity SDO attribute list using which template activities should be generated.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns the list of all the generated activities using the template.

getActivity

The out-of-the-box Get operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityId	long	The activity ID for which the activity record is to be fetched.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns the activity record based on input activity ID.

createActivity

The out-of-the-box Create operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activity	*Activity*	The activity record to be created for the method createActivity.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns the created activity record.

updateActivity

The out-of-the-box Update operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activity	*Activity*	The activity record to be updated for the method createActivity carrying updated attributes.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns the updated activity record.

deleteActivity

The out-of-the-box Delete operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activity	*Activity*	The activity record to be deleted for the method deleteActivity.

Response Payload

Element Name	Type	Description
result	void	This operation returns nothing for the method deleteActivity.

mergeActivity

OOTB merge operation on Activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activity	*Activity*	Activities which have to be merged.

Response Payload

Element Name	Type	Description
result	*Activity*	Merged Activity.

findActivity

The out-of-the-box Find operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The FindCriteria object using which the find operation works for the method findActivity.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The FindControl object using which the find operation works for the method findActivity.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns the list of activity records based on FindCriteria and FindControl input objects.

processActivity

The out-of-the-box Process operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	The name of the operation to be performed like, create, update, and so on.
activity	*Activity*	The list of activity records on which the operation is to be performed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The optional ProcessControl object to be used while performing this operation.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns a list of activity records after the operation is complete.

createActivityAssignee

The out-of-the-box Create operation for the activity assignee SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityAssigneeWebService	*Activity Assignee*	The activity assignee record to be created for the method createActivityAssignee.

Response Payload

Element Name	Type	Description
result	*Activity Assignee*	The parameter returns the created activity assignee record.

updateActivityAssignee

The out-of-the-box Update operation for the activity assignee SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityAssigneeWebService	*Activity Assignee*	The activity assignee record to be updated for the method updateActivityAssignee.

Response Payload

Element Name	Type	Description
result	*Activity Assignee*	The parameter returns the updated activity assignee record.

deleteActivityAssignee

The out-of-the-box Delete operation for the activity assignee SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityAssigneeWebService	*Activity Assignee*	The activity assignee record to be deleted for the method deleteActivityAssignee.

Response Payload

Element Name	Type	Description
result	void	This operation returns nothing for the method deleteActivityAssignee.

findActivityAssignee

The out-of-the-box Find operation for the activity assignee SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The FindCriteria object using which the find operation works for the method findActivityAssignee.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The FindControl object using which the find operation works for the method findActivityAssignee.

Response Payload

Element Name	Type	Description
result	*Activity Assignee*	The parameter returns the list of activity assignee records based on FindCriteria and FindControl input objects.

createActivityContact

The out-of-the-box Create operation for the activity contact SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityContactWebService	*Activity Contact*	The activity contact record to be created for the method createActivityContact.

Response Payload

Element Name	Type	Description
result	*Activity Contact*	The parameter returns the created activity contact record.

updateActivityContact

The out-of-the-box Update operation for the activity contact SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityContactWebService	*Activity Contact*	The activity contact record to be updated for the method updateActivityContact.

Response Payload

Element Name	Type	Description
result	*Activity Contact*	The parameter returns the updated activity contact record.

deleteActivityContact

The out-of-the-box Delete operation for the activity contact SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityContactWebService	*Activity Contact*	The activity contact record to be deleted for the method deleteActivityContact.

Response Payload

Element Name	Type	Description
result	void	This operation returns nothing for the method deleteActivityContact.

findActivityContact

The out-of-the-box Find operation for the activity contact SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The FindCriteria object using which the find operation works for the method findActivityContact.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The FindControl object using which the find operation works for the method findActivityContact.

Response Payload

Element Name	Type	Description
result	*Activity Contact*	The parameter returns the list of activity contact records based on FindCriteria and FindControl input objects.

findActivityDeleteExceptions

The out-of-the-box Find operation on activity delete exception SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The FindCriteria object using which the find operation works for the method findActivityDeleteExceptions.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The FindControl object using which the find operation works for the method findActivityDeleteExceptions.

Response Payload

Element Name	Type	Description
result	*Activity Delete Exception*	The parameter returns the list of activity delete exception records based on FindCriteria and FindControl input objects.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The parameter returns the label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The parameter returns the date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	The parameter returns a list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getActivity	ZMM_VIEW_ONLY_ACTIVITY_PRIV	View Only Activity	Allows only viewing of activities.
getActivity	ZMM_VIEW_ACTIVITY_PRIV	View Activity	Allows viewing activities.
createActivity	ZMM_LOG_A_CALL_ACTIVITY_PRIV	Log a Call Activity	Allows logging a call for activities.

Operation Name	Privilege Code	Privilege Name	Privilege Description
createActivity	ZMM_CREATE_ACTIVITY_PRIV	Create Activity	Allows creating activities.
createActivity	ZMM_CREATE_ACTIVITY_APPOINTMENT_PRIV	Create Activity Appointment	Allows creating activities of type appointment.
createActivity	ZMM_CREATE_ACTIVITY_CALL_REPORT_PRIV	Create Activity Call Report	Allows creating activities of type call report.
createActivity	ZMM_CREATE_ACTIVITY_TASK_PRIV	Create Activity Task	Allows creating activities of type task.
deleteActivityContact	ZMM_DELETE_ACTIVITY_PRIV	Delete Activity	Allows deleting activities.
deleteActivityContact	ZMM_UPDATE_ONLY_ACTIVITY_PRIV	Update Only Activity	Allows only editing of activities.
deleteActivityContact	ZMM_UPDATE_ACTIVITY_PRIV	Update Activity	Allows editing activities.
generateActivitiesFromTemplate	ZMM_CREATE_ACTIVITY_PRIV	Create Activity	Allows creating activities.
generateActivitiesFromTemplate	ZMM_CREATE_ACTIVITY_TASK_PRIV	Create Activity Task	Allows creating activities of type task.
updateActivityContact	ZMM_UPDATE_ONLY_ACTIVITY_PRIV	Update Only Activity	Allows only editing of activities.
updateActivityContact	ZMM_UPDATE_ACTIVITY_PRIV	Update Activity	Allows editing activities.
findActivityContact	ZMM_VIEW_ONLY_ACTIVITY_PRIV	View Only Activity	Allows only viewing of activities.
findActivityContact	ZMM_VIEW_ACTIVITY_PRIV	View Activity	Allows viewing activities.
deleteAttachment	ZMM_DELETE_ACTIVITY_PRIV	Delete Activity	Allows deleting activities.
deleteAttachment	ZMM_UPDATE_ONLY_ACTIVITY_PRIV	Update Only Activity	Allows only editing of activities.
deleteAttachment	ZMM_UPDATE_ACTIVITY_PRIV	Update Activity	Allows editing activities.
createActivityAssignee	ZMM_LOG_A_CALL_ACTIVITY_PRIV	Log a Call Activity	Allows logging a call for activities.
createActivityAssignee	ZMM_CREATE_ACTIVITY_PRIV	Create Activity	Allows creating activities.

Operation Name	Privilege Code	Privilege Name	Privilege Description
createActivityAssignee	ZMM_CREATE_ACTIVITY_APPOINTMENT_PRIV	Create Activity Appointment	Allows creating activities of type appointment.
createActivityAssignee	ZMM_CREATE_ACTIVITY_CALL_REPORT_PRIV	Create Activity Call Report	Allows creating activities of type call report.
createActivityAssignee	ZMM_CREATE_ACTIVITY_TASK_PRIV	Create Activity Task	Allows creating activities of type task.
createActivityAssignee	ZMM_UPDATE_ONLY_ACTIVITY_PRIV	Update Only Activity	Allows only editing of activities.
createActivityAssignee	ZMM_UPDATE_ACTIVITY_PRIV	Update Activity	Allows editing activities.
getDfltObjAttrHints	ZMM_VIEW_ONLY_ACTIVITY_PRIV	View Only Activity	Allows only viewing of activities.
getDfltObjAttrHints	ZMM_VIEW_ACTIVITY_PRIV	View Activity	Allows viewing activities.
createAttachment	ZMM_LOG_A_CALL_ACTIVITY_PRIV	Log a Call Activity	Allows logging a call for activities.
createAttachment	ZMM_CREATE_ACTIVITY_PRIV	Create Activity	Allows creating activities.
createAttachment	ZMM_CREATE_ACTIVITY_APPOINTMENT_PRIV	Create Activity Appointment	Allows creating activities of type appointment.
createAttachment	ZMM_CREATE_ACTIVITY_CALL_REPORT_PRIV	Create Activity Call Report	Allows creating activities of type call report.
createAttachment	ZMM_CREATE_ACTIVITY_TASK_PRIV	Create Activity Task	Allows creating activities of type task.
createAttachment	ZMM_UPDATE_ONLY_ACTIVITY_PRIV	Update Only Activity	Allows only editing of activities.
createAttachment	ZMM_UPDATE_ACTIVITY_PRIV	Update Activity	Allows editing activities.
findActivity	ZMM_VIEW_ONLY_ACTIVITY_PRIV	View Only Activity	Allows only viewing of activities.
findActivity	ZMM_VIEW_ACTIVITY_PRIV	View Activity	Allows viewing activities.
deleteActivity	ZMM_DELETE_ACTIVITY_PRIV	Delete Activity	Allows deleting activities.
deleteActivityAssignee	ZMM_DELETE_ACTIVITY_PRIV	Delete Activity	Allows deleting activities.

Operation Name	Privilege Code	Privilege Name	Privilege Description
deleteActivityAssignee	ZMM_UPDATE_ONLY_ACTIVITY_PRIV	Update Only Activity	Allows only editing of activities.
deleteActivityAssignee	ZMM_UPDATE_ACTIVITY_PRIV	Update Activity	Allows editing activities.
createActivityContact	ZMM_LOG_A_CALL_ACTIVITY_PRIV	Log a Call Activity	Allows logging a call for activities.
createActivityContact	ZMM_CREATE_ACTIVITY_PRIV	Create Activity	Allows creating activities.
createActivityContact	ZMM_CREATE_ACTIVITY_APPOINTMENT_PRIV	Create Activity Appointment	Allows creating activities of type appointment.
createActivityContact	ZMM_CREATE_ACTIVITY_CALL_REPORT_PRIV	Create Activity Call Report	Allows creating activities of type call report.

Common Attachment

The attachment that can include documents, files, or web site links associated with appointments, interactions or tasks.

QName: {http://xmlns.oracle.com/apps/crmCommon/objects/objectsService/}CommonAttachments

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Appointment Service*
Handled by	*Customer Interaction*
Handled by	*Activity Service*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttachedDocumentId	long	The identifier of the document attachment.
Attachment	string	The title or name of the attachment.
CategoryName	string	The name of the attachment category.
DatatypeCode	string	The code value of the data type.
Description	string	The free text description of the record.
DmFolderPath	string	The folder path of the attachment.
DmNode	decimal	The attachment node.
DmRepository	string	The attachment repository.
DmType	string	The type of attachment.
DmVersionNumber	string	The version number of the attachment.
DocumentAttributes	string	The attributes of the document attachment.
DocumentEntityId	long	The identifier of document entity.
DownloadStatus	string	The download status of attachment.
EntityAttributes	string	The entity attributes of the attachment.

Name	Type	Description
EntityName	string	The name of the entity attachment.
FileName	string	The name of the file attachment.
FileURL	string	The URL of the file attachment.
Pk1Value	string	Value of primary key 1.
Pk2Value	string	Value of primary key 2.
Pk3Value	string	Value of primary key 3.
Pk4Value	string	Value of primary key 4.
Pk5Value	string	Value of primary key 5.
TableName	string	The table name of attachment.
Title	string	The attachment title.
URL	string	The destination URL associated with a specific Google AdWords ad.
UploadedFile	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The uploaded attachment file.
UploadedFileContentType	string	The content type of file attachment.
UploadedFileLength	long	The length of file attachment.
UploadedFileName	string	The name of the file attachment.
UploadedText	string	The attachment text.
UsageType	string	The usage type of the attachment.
VersionControlIcon	string	The attachment version control.

Interaction

An interaction that represents the communication between an internal resource such as Mary Smith and a customer through e-mail, phone, or another channel.

QName: {http://xmlns.oracle.com/apps/crmCommon/interactions/interactionService/}Interaction

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Interaction Association*
Contains	*Interaction Participant*
Handled by	*Customer Interaction*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CustomerId	long	The identifier of the customer with which the interaction is associated.

Name	Type	Description
DirectionCode	string	Indicates whether the interaction is inbound or outbound.
InteractionAssociation	*Interaction Association*	The view link attribute for the "Related To" child objects.
InteractionDescription	string	The subject or brief description of the interaction.
InteractionEndDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the interaction ended.
InteractionId	long	The unique identifier for the interaction. • Primary Key
InteractionNumber	string	This is a test attribute.
InteractionParticipant	*Interaction Participant*	The name of the interaction participant.
InteractionStartDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the interaction started.
InteractionSubject	string	The subject of the interaction.
InteractionTypeCode	string	The channel of communication such as email, phone call, chat, and so on.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MediaItemId	long	The media identifier. This attribute is not used in Version 1.
MediaTypeCode	string	The media type code of the interaction.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
OtherPartyPhoneNumber	string	The phone number of the person with whom the agent spoke.
OutcomeCode	string	The lookup code of the interaction outcome.
SalesAccountId	long	The sales account identifier for the customer associated with the interaction. It will be used in the future.
SwitchCallId	string	The unique identifier of the call in the CTI system. It is used by the customers and the vendors to tie an interaction in Fusion back to the record in the telephony system.

Interaction Association

An association data object that represents an interaction in the context of an Oracle Fusion Applications business object such as an opportunity or lead.

QName: {http://xmlns.oracle.com/apps/crmCommon/interactions/interactionService/}InteractionAssociation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Interaction*
Handled by	*Customer Interaction*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActionCode	string	The type of action performed on the business object such as created, updated, viewed, re-opened, closed, and so on. The value is obtained through a lookup.

Name	Type	Description
AssociatedObjectCode	string	The identifier of the ZMM Object Type from Objects Metadata. It holds the consuming product table's information, and the corresponding Object Type is retrieved using Objects Metadata.
AssociatedObjectUid	string	The identifier of the ZMM Object from Objects Metadata. It holds the consuming product table's information, and the corresponding ObjectId is retrieved using Objects Metadata.
AssociationSequenceNumber	long	The sequence of business objects for an interaction. For example, sequence can be like create an order, update a service request, create an opportunity, and so on.
ConflictId	decimal	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
InteractionAssociationId	long	The unique identifier for the interaction associations table. • Primary Key
InteractionId	long	The identifier of the interaction that the associated object belongs to. All business objects associated to Interaction are identified by this attribute.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Interaction Participant

An interaction participant representing a contact or resource such as Mary Smith or Jane Doe.

QName: {http://xmlns.oracle.com/apps/crmCommon/interactions/interactionService/}InteractionParticipant

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Interaction*
Handled by	*Customer Interaction*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ConflictId	decimal	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
InteractionId	long	The identifier of the interaction that the participant record relates to.
InteractionParticipantId	long	The unique identifier for the interaction participant object. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.

Name	Type	Description
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ParticipantId	long	The party identifier of the TCA Party, Account, or Site. These participants can be internal (resources) or external (contacts, accounts, sites, or employees).
ParticipantTypeCode	string	The type of the participant such as Contact, Resource, and so on.
RelationshipId	long	The relationship identifier for the record.
ResourceOrgId	long	The sales organization identifier for a resource participant.
UserGUID	string	The "light weight" user global unique identifier. It is the foreign key to FND_USER. Light Weight users are defined in the Extended Security (XS) System.

Deal Registration Service

External service to operate on deal registration.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/marketing/dealMgmt/deals/dealService/}DealService

Service WSDL URL: https://servername/crmService/DealService?WSDL

Logical Business Objects

performDealAssignment

A web service method which allows user to do the deal assignment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
dealId	long	The input parameter of performDealAssignment operation. The deal identifier is a mandatory input parameter.

Response Payload

Element Name	Type	Description
result	string	The return parameter of performDealAsssignment operation. It returns the result of assignment operation.

getDeal

A web service method which queries a single record of Oracle Fusion Deal Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
dealId	long	A required input parameter of the getDeal web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/dealMgmt/deals/dealService/}DealResult	The return value of getDeal web service method. It includes the full set of attributes of the record.

createDeal

A web service method which creates Oracle Fusion Deal Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
deal	*Deal Registration*	A required input parameter of the createDeal web Service method. The input object includes the attribute values that the deal record is created with.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/dealMgmt/deals/dealService/}DealResult	The return value of the createDeal web Service method. It includes the full set of attributes of the record.

updateDeal

A web service method which updates an Oracle Fusion Deal object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
deal	*Deal Registration*	A required parameter of the updateDeal web Service method. The record matching the ID specified in this input, is updated with the corresponding input attribute values.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/dealMgmt/deals/dealService/}DealResult	The return value of the updateDeal web Service method. It includes the full set of attributes of the record.

mergeDeal

Creates a single record of Oracle Fusion Deal Object or updates a record with given ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
deal	*Deal Registration*	A required parameter of the mergeDeal web service method. The record matching the ID specified in this input is updated. If no ID is specified, then the record is created instead.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/dealMgmt/deals/dealService/}DealResult	The return value of the mergeDeal web service method. It includes the full set of attributes of the record.

findDeal

Queries a single record or set of records of Oracle Fusion Deal Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findDeal web service method. The filter criteria is the cumulative set of attribute criteria that identifies record queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findDeal.

Response Payload

Element Name	Type	Description
result	*Deal Registration*	The return value of the findDeal web service method. It includes the full set of attributes of records queried.

processDeal

Create or update Oracle Fusion Deal object records in bulk.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	As a input parameter value either of create, merge or update needs to be passed.
deal	*Deal Registration*	A required parameter of the process deal web service method. The list of deal input records to be created or merged or updated.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	It has three parts. For the first parameter, value can be full which means full set of deal attributes to be returned, value of key means only deal ID values to be returned, value of none means non value returned. For the second parameter, similar to first parameter but related to exceptions. For the third mandatory parameter, indicates true or false for partial failure allowed or not.

Response Payload

Element Name	Type	Description
result	*Deal Registration*	The return value of the processDeal web service method. It can be none or a list of only the deal IDs or a list of full set of deal records.

processCSDeal

A web service operation that processes the deals.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	A required input parameter to pass the data to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	It has three parts. For the first parameter, value can be full which means full set of deal attributes to be returned, value of key means only deal Id values to be returned, value of none means non value returned. For the second parameter, similar to first parameter but related to exceptions. For the third mandatory

Element Name	Type	Description
		parameter, indicates true or false for partial failure allowed or not.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The return value of the processCSDeal web service method. It can be none or a list of only the deal IDs or a list of full set of deal records.

deleteDealProduct

A web service method which deletes an Oracle Fusion Deal Product Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
dealProduct	*Deal Products*	A required input parameter of the deleteDealProduct web service method. The record matching the input attribute values specified in the deal product is deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteDealProduct.

deleteDealResource

A web service method which deletes an Oracle Fusion Deal Resource Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
dealResource	*Deal Resources*	A required input parameter of the deleteDealResource web service method. The

Element Name	Type	Description
		record matching the input attribute values specified in the Deal Resource is deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteDealResource.

getDfltObjAttrHints

Retrieves user interface hint, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition was last updated. The parameter is present in ISO 8601 format.

getEntityList

Gets the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getDeal	MKL_VIEW_PARTNER_DEAL_PRIV	Review Partner Deal	Allows view of all tabs in the deal registration UI with the exception of the social tab.
createDeal	MKL_CREATE_PARTNER_DEAL_PRIV	Create Partner Deal	Allows creating a deal registration.
mergeDeal	MKL_UPDATE_PARTNER_DEAL_PRIV	Update Partner Deal Details	Allows updating a deal registration summary details.
getEntityList	MKL_VIEW_PARTNER_DEAL_PRIV	Review Partner Deal	Allows view of all tabs in the deal registration UI with the exception of the social tab.

Operation Name	Privilege Code	Privilege Name	Privilege Description
performDealAssignment	MKL_UPDATE_PARTNER_DEAL_PRIV	Update Partner Deal Details	Allows updating a deal registration summary details.
updateDeal	MKL_UPDATE_PARTNER_DEAL_PRIV	Update Partner Deal Details	Allows updating a deal registration summary details.
getDfltObjAttrHints	MKL_VIEW_PARTNER_DEAL_PRIV	Review Partner Deal	Allows view of all tabs in the deal registration UI with the exception of the social tab.
processCSDeal	MKL_UPDATE_PARTNER_DEAL_PRIV	Update Partner Deal Details	Allows updating a deal registration summary details.
findDeal	MKL_VIEW_PARTNER_DEAL_PRIV	Review Partner Deal	Allows view of all tabs in the deal registration UI with the exception of the social tab.
deleteDealResource	MKL_UPDATE_PARTNER_DEAL_PRIV	Update Partner Deal Details	Allows updating a deal registration summary details.
getServiceLastUpdateTime	MKL_VIEW_PARTNER_DEAL_PRIV	Review Partner Deal	Allows view of all tabs in the deal registration UI with the exception of the social tab.
processDeal	MKL_UPDATE_PARTNER_DEAL_PRIV	Update Partner Deal Details	Allows updating a deal registration summary details.
deleteDealProduct	MKL_UPDATE_PARTNER_DEAL_PRIV	Update Partner Deal Details	Allows updating a deal registration summary details.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MKL_CREATE_PARTNER_DEAL_PRIV	ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Customer Relationship Management Application Administrator	Individual responsible for customer relationship management application administration. Collaborates with customer relationship management application users to maintain consistent financial application setup, rules, and access.
MKL_CREATE_PARTNER_DEAL_PRIV	ORA_MKL_PARTNER_DEAL_REG_MANAGEMENT_DUTY	Partner Deal Registration Management	Creates and submits deal registrations. Includes the ability to create deal registrations, submit deal registrations and view updates.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MKL_VIEW_PARTNER_DEAL_PRIV	ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Customer Relationship Management Application Administrator	Individual responsible for customer relationship management application administration. Collaborates with customer relationship management application users to maintain consistent financial application setup, rules, and access.
MKL_VIEW_PARTNER_DEAL_PRIV	ORA_MKL_PARTNER_DEAL_REG_MANAGEMENT_DUTY	Partner Deal Registration Management	Creates and submits deal registrations. Includes the ability to create deal registrations, submit deal registrations and view updates.
MKL_UPDATE_PARTNER_DEAL_PRIV	ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Customer Relationship Management Application Administrator	Individual responsible for customer relationship management application administration. Collaborates with customer relationship management application users to maintain consistent financial application setup, rules, and access.
MKL_UPDATE_PARTNER_DEAL_PRIV	ORA_MKL_PARTNER_DEAL_REG_MANAGEMENT_DUTY	Partner Deal Registration Management	Creates and submits deal registrations. Includes the ability to create deal registrations, submit deal registrations and view updates.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_CHANNEL_MANAGER_DASHBOARD_DUTY	Channel Manager Dashboard	Provides channel roles a dashboard to manage their daily transactions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_AMENDMENT_DUTY_CRM	Contract Amendment	Amends approved contracts. This includes initiating an amendment, reverting the contract to the previous signed version, updating all allowable attributes, and submitting the amendment for approval.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_AUTHORING_DUTY_CRM	Contract Authoring	Authors contracts, including terms and conditions, interactions, and customer account information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_SEARCH_VIEW_DUTY_CRM	Contract Search and View Access	Searches and views contracts for the assigned business units.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_SETUP_DUTY_CRM	Contract Setup	Contract Setup
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_CONV_MESSAGE_ADMINISTRATION	Conversation Message Administration	Has complete conversation message management capabilities including create messages, reply to messages, change a reply to ready to send status and delete a message.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_CDM_ADMIN_DUTY	Customer Data Management Administration	Administers customer data management.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_CSS_ADMINISTRATION	Customer Self-Service Administration	Manages the provisioning and approval of self service registration requests
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_DATA_INTEGRATION_MANAGEMENT_DUTY	Data Integration Management	This role allows setup and management of data integration maps and instances.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_FFS_FIELD_SERVICE_APPLICATION_ADMINISTRATOR_DUTY	Field Service Application Administrator	Individual responsible for the duty of configuring Field Service mobile application
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_GEO_ADMIN_DUTY	Geography Administration	Grants privileges to set up geographies
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_CN_INCENTIVES_ADMINISTRATION_DUTY_CRM	Incentive Compensation Administration	Configure and maintain incentive compensation enterprise and business unit setup.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_AUTHORING_DUTY	Interview Definition Authoring	Manage access for authoring Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_MANAGING_DUTY	Interview Definition Managing	Manage access for deleting and forcing checkout of Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_PUBLISHING_DUTY	Interview Definition Publishing	Manage access for publishing and unpublishing Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_VIEWING_DUTY	Interview Definition Viewing	Manage access for viewing Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_EGP_ITEM_MANAGEMENT_DUTY_CRM	Item Management	Creates and manages items including item attributes, item structures, packs, associations, relationships, and catalog assignments.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_CSO_KNOWLEDGE_SETUP_AND_MAINTENANCE_DUTY	Knowledge Setup and Maintenance	Provides the users with the ability to setup and manage knowledge base
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_LEAD_REGISTRATION_MANAGEMENT_DUTY	Lead Registration Management	Manages and analyzes sales lead registrations. Includes the ability to create sales lead registrations, edit both internal and partner lead attributes as needed, and view lead age and status.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_LEAD_REGISTRATION_SUBMISSION_DUTY	Lead Registration Submission	Submits sales lead registrations to the enterprise and manages sales lead attributes. Includes the ability to create, accept, and reject sales lead registrations.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKT_MARKETING_BUDGET_MAINTENANCE_DUTY	MDF Budget Maintenance	Manages MDF budgets including import, export, and viewing budget fund requests and claims that use budgeted funds for marketing activities.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_MANAGE_CX_AI_AGENTS	Manage CX AI Agents	This role allows administrators to manage CX AI Agents in Agent Studio
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKT_MARKETING_MAINTENANCE_DUTY	Marketing Maintenance	Creates and maintains setup for marketing campaigns, responses, segments, lists, and treatments across the enterprise. Additional duties include file import management for the import of marketing campaign responses.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOO_OPPORTUNITY_CHANNEL_ADMINISTRATION_DUTY	Opportunity Channel Administration	Administers all aspects of the application, including some setup. This role is for channel administrators.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_PARTNER_ACCOUNT_ADMINISTRATION_DUTY	Partner Account Administration	Maintains a partner account, including managing members and partner profile information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_PARTNER_ACCOUNT_REVIEW_DUTY	Partner Account Review	Views a partner account, including viewing a partner's members, profile, and account team.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_PARTNER_IMPORT_ADMINISTRATION_DUTY	Partner Import Administration	Partner Import Administration Duty role. This duty will allow for administration activities of Partner Import
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_PARTNER_SALES_PARTY_MANAGEMENT_DUTY	Partner Sales Party Management	Manages creation and maintenance of sales organizations and consumers for partners. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts. This role has limited access to customers and contacts.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ADMINISTRATOR_DUTY	Resource Administration	Administers resource information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ORGANIZATION_ADMINISTRATOR_DUTY	Resource Organization Administration	Administers resource organizations.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_TEAM_ADMINISTRATOR_DUTY	Resource Team Administration	Defines resource teams.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_REVIEW_CRM_APPROVAL_TRANSACTIONS_ADMINISTRATOR	Review CRM Approval Transactions Administrator	Allows viewing of information for CRM approval transactions by an administrator.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZBS_SALES_CHANGE_HISTORY_INQUIRY_DUTY	Sales Change History Inquiry	Views change history of sales business objects for members within the sales organization.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_SALES_LEAD_FOLLOW_UP_DUTY	Sales Lead Follow Up	Processes sales lead for follow up actions including the qualification and conversion of sales lead to revenue opportunities.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_AVAILABILITY_MANAGEMENT	Service Availability Management	Manage the service availability data including reading and writing the availability of a service.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_PROFILE_ADMINISTRATION	Service Profile Administration	Manages all aspects of the Service Profile object, including deleting a service profile.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_STATUS_COMPUTATION	Service Status Computation	Perform actions required to determine the availability of a service.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_SETUP_CUSTOMER_CENTER_DUTY	Setup Customer Center	Manages customer center set up, sales party creation and their related objects, such as appointments, assessments, interactions, notes and tasks.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HRS_SOCIAL_CONNECTION_PARTNER_DUTY_CRM	Social Connection Partner	Performs all Oracle Fusion Social Connection partner duties.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SPECIALIST_JOB	Subscription Specialist	Individual responsible for managing subscriptions, establishing recurring and usage billing processes, initiating manual discounts and invoice adjustments, and handling billing discrepancies and disputes.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	Territory Management Setup	Manages sales territory setup, including lookups, profile options, flexfields, and dimension data. Runs dimension synchronization, and visibility jobs. Additional duties include quota management setup.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_CUSTOMER_ACCOUNT_ADMINISTRATION_DUTY	Trading Community Customer Account Administration	Grants privileges to setup customer account information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DATA_QUALITY_ADMIN_DUTY	Trading Community Data Quality Administration	Configures, reviews, and edits predefined data quality server configurations and the predefined matching, synchronization, and cleansing configurations.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_PERSON_ADMINISTRATION_DUTY	Trading Community Person Administration	Grants privileges to setup person information.

Address

An address of a trading community member, such as Oracle Corporation is located at 500 Oracle Parkway, Redwood Shores, CA.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartySite

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Phone*
Contains	*Trading Community Address Purpose*
Contains	*Instant Messaging*
Contains	*Web*
Contains	*Telex*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contains	*Trading Community Address Additional Information*
Contains	*Email*
Contains	*Electronic File Transfer*
Contained by	*Marketing Response*
Contained by	*Partner*

Relationship Type	Object or Service
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*

Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.

Name	Type	Description
Address4	string	The fourth line of the address.
AddressExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the location is no longer valid.
AddressLinesPhonetic	string	The phonetic or Kana representation of the Kanji address lines that are used in Japan.
AddressStyle	string	Style of the address.
Addressee	string	The information of the addressee.
City	string	The name of the city.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
ContactPreferenceExistFlag	boolean	Indicator to specify if the contact is primary contact for the party.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
Country	string	The name of the country.
Country1	string	The attribute country1 is not used.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.

Name	Type	Description
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DateValidated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address was last validated.
DoNotValidateFlag	boolean	Indicator to specify that a particular location is not eligible for address validation irrespective of the current validation.
Eft	*Electronic File Transfer*	The electronic file transfer information for the party.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
FormattedAddress	string	The formatted read-only address.
FormattedLocaleAddress	string	The formatted read-only local address.
FormattedMultilineAddress	string	The formatted multi line address of the party site.
GlobalLocationNumber	string	The global location number that uniquely identifies each location in a trading partners enterprise.
HouseType	string	Indicates the building type.
IdentifyingAddressFlag	boolean	Indicator to specify the identifying address for the party. Y stands for the indentifying site and N stands for sites that are not the indentifying site.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.

Name	Type	Description
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
Language	string	The operating language for the party site.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Latitude	decimal	The latitude of the party address.
LocationDirections	string	Directions to the location.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
LocationLanguage	string	The operating language for the locations.
Longitude	decimal	The longitude of the party address.
Mailstop	string	A user-defined code to indicate a mail drop point within the organization.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was last queried.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary address of the contact irrespective of the context. Y stands for primary address and N stands for all others.

Name	Type	Description
PartyId	long	The unique identifier of the contact party.
PartyNameDba	string	Stores the doing-business_as (DBA) party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameDivision	string	Stores the division party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameLegal	string	Stores the legal party name for a party site. This column is used to store FSIO related legal party name attribute.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
PartySiteInformation	*Trading Community Address Additional Information*	The party address information.
PartySiteName	string	The user-defined name for the site.
PartySiteNumber	string	The party site number of the address.
PartySiteType	string	Stores the party site type and is based on the lookup. Currently this is either null or one-time.
PartySiteUse	*Trading Community Address Purpose*	The information of the party address usage.
PartyUsageCode	string	The usage context of a party's contact point.
Phone	*Phone*	The phone information for the entity.
Position	string	The primary direction such as north or east that is used to access the location.
PostalCode	string	The postal code element of the address.
PostalPlus4Code	string	The four digit extension to the United States postal ZIP code.
Province	string	The name of the province.

Name	Type	Description
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
State	string	The name of the state.
Status	string	The status of the record.
Telex	*Telex*	The Telex information associated with the party.
UsageCode	string	The usage code is not used.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
ValidationStatusCode	string	The standardized status code describing the results of the validation.
Web	*Web*	The web information related to the record.

Classification Assignment

The classification code assigned to a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}CodeAssignment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*

Relationship Type	Object or Service
Contained by	*Sales Competitor*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Reference*

Handled by	*Sales Party Territory service*
Handled by	*Sales Party Resource Service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ClassCategory	string	The name of the classification category.
ClassCode	string	The code of the classification.
CodeAssignmentId	long	The unique identifier of the assignment of an industrial classification code to an object. It is primary key and system generated. • Primary Key
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableKey1	string	The first column of the alphanumeric or multi-part foreign key.
OwnerTableKey2	string	The second column of the alphanumeric or multi-part foreign key.
OwnerTableKey3	string	The third column of the alphanumeric or multi-part foreign key.

Name	Type	Description
OwnerTableKey4	string	The fourth column of the alphanumeric or multi-part foreign key.
OwnerTableKey5	string	The fifth column of the alphanumeric or multi-part foreign key.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PrimaryFlag	boolean	Indicator that specifies if this is the primary class code of a class category for the organization. Y stands for the primary class code and N stands for all others.
Rank	decimal	Ranks classes if multiple classes are assigned to a party.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Contact Preference

The contact preference of the trading community member. For example, do not call Joe Smith between 10 a.m. and 12 noon on weekdays.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}ContactPreference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Relationship Type	Object or Service
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactLevelTable	string	The table that stores the contact level of the contact preference, and uses the SUBJECT_TABLE lookup. The list of accepted values are HZ_PARTIES, HZ_PARTIES_SITES, or HZ_CONTACT_POINTS.
ContactLevelTableId	long	The foreign key to the table specified in CONTACT_LEVEL_TABLE column. The list of accepted values are PARTY_ID from HZ_PARTIES table, CONTACT_POINT_ID from HZ_CONTACT_POINTS table, or PARTY_SITE_ID from HZ_PARTY_SITES table.
ContactPreferenceId	long	The unique identifier for the contact preference. • Primary Key
ContactType	string	The contact party type that defines whether the contact is a sales account, a prospect, a contact, or any other user-defined party type. The default value is CUSTOMER. A list of accepted values is defined in the lookup CONTACT_TYPE.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
MaximumNoOfInteractUOMCode	string	The period of time during which the maximum number of interactions applies. Uses the MAX_NO_OF_INTERACT_UOM_CODE lookup.
MaximumNoOfInteractions	decimal	The number of times you can use this contact point. The period of time that this number applies is stored in the MAX_NO_OF_INTERACT_UOM_CODE column.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PreferenceCode	string	Indicates whether to use a particular contact method. The list of accepted values are defined in the PREFERENCE_CODE lookup.
PreferenceEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes inactive.
PreferenceEndTimeHR	int	The hour part of time when the contact preference becomes inactive. The time is recorded in the 24 hour format.
PreferenceEndTimeMi	int	The minutes part of the time when the contact preference becomes inactive.
PreferenceStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes active.
PreferenceStartTimeHR	int	The hour part of time when the contact preference becomes active. The time is recorded in the 24 hour format.
PreferenceStartTimeMi	int	The minutes part of the time when the contact preference becomes active.
PreferenceTopicType	string	The appropriate subjects to send the party that the preference is created for. The list of accepted values are defined in the PREFERENCE_TOPIC_TYPE lookup.
PreferenceTopicTypeCode	string	The code of the preference topic type.

Name	Type	Description
PreferenceTopicTypeId	long	The unique identifier of the preference topic type.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
RequestedBy	string	Indicates if the permission or restriction was created internally or requested by the party. The list of accepted values are defined in the REQUESTED_BY lookup.
Status	string	The status of the record.

Deal Products

The product or product family associated with the deal registration that a customer is interested in.

QName: {http://xmlns.oracle.com/apps/marketing/dealMgmt/deals/dealService/}DealProduct

Logical Business Objects

- CRM : Lead Management : Sales Lead

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Deal Registration*
Handled by	*Deal Registration Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Amount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount.
ConvCurrencyCode	string	The conversion currency code.
ConvExchangeRate	decimal	The conversion exchange rate.
ConvRateType	string	The conversion rate type.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DealId	long	The deal identifier to which the product row belongs to.
DealProdId	long	The deal product identifier. It is a primary key. • Primary Key
InvOrgId	long	The inventory organization identifier.
InventoryItemId	long	The inventory item identifier.
ItemDescription	string	The item description.
ItemName	string	The item name.
ItemNumber	string	Public Unique Identifier for Item in Deal Registration
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the

Name	Type	Description
		start and end of a transaction to determine whether another session has updated the row.
ProductGroupDescription	string	The product group description.
ProductGroupId	long	The product group identifier.
ProductGroupName	string	The product group name.
ProductGroupNumber	string	Public Unique Identifier for Product Group in Deal Registration
ProductType	string	The product type.
Quantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The product quantity.
RegisteredPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The product registered price.
UOMCode	string	The product UOM Code.

Deal Registration

The process by which a partner user registers a business opportunity with the brand owner in order to become eligible for benefits, such as exclusive rights to the opportunity, additional rebates, presales support, and so on.

QName: {http://xmlns.oracle.com/apps/marketing/dealMgmt/deals/dealService/}Deal

Logical Business Objects

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Partner*
Contains	*Deal Products*

Relationship Type	Object or Service
Contains	*Deal Resources*
Contains	*Deal Registration Territory Resource*
Handled by	*Deal Registration Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountPartyNumber	string	Public Unique Identifier of Account Party on the Deal Registration
ApprovalTaskStatusCode	string	The approval task status code.
ApprovedByPartyName	string	Approved by party name.
ApprovedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the deal is approved.
CloseDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The close date.
ConPrPhoneAreaCode	string	The primary phone area code of the contact.
ConPrPhoneCountryCode	string	The primary phone country code of the contact.
ConPrPhoneNumber	string	The primary phone number of the contact.
ContactEmailAddress	string	The e-mail address of the contact.
ContactId	long	The unique identifier of the contact.
ContactJobTitle	string	The contact job title.
ContactPartyNumber	string	Public Unique Identifier of Contact Party on the Deal Registration
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CustomerId	long	The unique identifier of the customer.
CustomerLocationAddrElementAttribute1	string	The address element 1 for the customer location.
CustomerLocationAddrElementAttribute2	string	The address element 2 for the customer location.
CustomerLocationAddrElementAttribute3	string	The address element 3 for the customer location.
CustomerLocationAddrElementAttribute4	string	The address element 4 for the customer location.
CustomerLocationAddrElementAttribute5	string	The address element 5 for the customer location.
CustomerLocationAddress1	string	The first line of the address associated with the deal.
CustomerLocationAddress2	string	The second line of the address associated with the deal.
CustomerLocationAddress3	string	The third line of the address associated with the deal.
CustomerLocationAddress4	string	The fourth line of the address associated with the deal.
CustomerLocationAddressLinesPhonetic	string	The phonetic or Kana representation of the Kanji address lines used in Japan.
CustomerLocationBuilding	string	The specific building name or number at a given address.
CustomerLocationCity	string	The city in which customer is located.
CustomerLocationCountry	string	The country in which customer is located.
CustomerLocationCounty	string	The county in which customer is located.

Name	Type	Description
CustomerLocationFloorNumber	string	The specific floor number at a given address or in a particular building when the building number is provided.
CustomerLocationPostalCode	string	The postal code of customer location.
CustomerLocationPostalPlus4Code	string	The four digit extension to the United States postal code.
CustomerLocationProvince	string	The province in address associated with the deal.
CustomerLocationState	string	The state in which customer is located.
CustomerPartyType	string	The customer party type.
DealContactName	string	The deal contact name.
DealCustomerName	string	The deal customer name.
DealExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the deal expires.
DealId	long	The unique identifier of the deal. • Primary Key
DealName	string	The deal name.
DealNumber	string	The deal number.
DealProduct	*Deal Products*	The deal product.
DealRejectedComments	string	The deal rejection comments.
DealRejectedReasonCode	string	The deal rejection reason code.
DealResources	*Deal Resources*	The deal resources.
DealReturnComments	string	The deal return comments.
DealReturnReasonCode	string	The deal return reason code.

Name	Type	Description
DealSize	decimal	The deal size.
DealTerritoryResource	*Deal Registration Territory Resource*	The deal territory resource.
DealType	string	The deal type.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LeadNumber	string	Public Unique Identifier of Lead associated to the Deal Registration
MatchedAccountPartyId	long	The unique identifier of the matched account party.
MatchedAccountPartyNumber	string	Public Unique Identifier of Matched Account Party on the Deal Registration
MatchedAccountPartyUniqueName	string	Matched account name.
MatchedContactPartyId	long	The unique identifier of the matched contact party.
MatchedContactPartyName	string	Matched contact name.
MatchedContactPartyNumber	string	Public Unique Identifier of Matched Contact Party on the Deal Registration
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OptyId	long	The unique identifier of the opportunity.
OptyNumber	string	Public Unique Identifier of Opportunity associated to the Deal Registration
OwnerId	long	The unique identifier of the owner.

Name	Type	Description
OwnerPartyName	string	The name of the owner party.
OwnerPartyNumber	string	Public Unique Identifier of Owner Party on the Deal Registration
PartnerCompanyNumber	string	Public Unique Identifier of Partner company associated to the Deal Registration
PartnerId	long	The unique identifier of the partner.
PartnerLevel	string	The partner level.
PartnerOwnerName	string	The partner owner name.
PartnerPartyName	string	The name of the partner party.
PartnerProfileOrgPartyPVO	*Partner*	Partner object associated to the deal.
PartnerType	string	The partner type.
ProgramEnrollmentId	long	The unique identifier of the program enrollment.
ProgramEnrollmentNumber	string	Public Unique Identifier of Partner Program associated to the Deal Registration
RejectedByPartyName	string	Rejected by party name.
RejectedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the deal is rejected.
ReturnedByPartyName	string	Returned by party name.
ReturnedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the deal is returned.
StatusCode	string	The pre-defined code used to indicate the status.
SubmittedByPartyName	string	Submitted by party name.
SubmittedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date of submission.

Name	Type	Description
UpdateFlag	boolean	Indicator to control whether the user has access to update the record.
WithdrawnByPartyName	string	Withdrawn by party name.
WithdrawnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the deal is withdrawn.
isApproverFlag	boolean	Is Approver indicator.

Deal Registration Territory Resource

The territory resource for the deal registration.

QName: {http://xmlns.oracle.com/apps/marketing/dealMgmt/deals/dealService/}DealTerritoryResource

Logical Business Objects

- CRM : Lead Management : Deal Registration

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Deal Registration*
Handled by	*Deal Registration Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
DealId	long	The unique identifier of the deal.
DealTerritoryId	long	The unique identifier of the deal territory. • Primary Key

Name	Type	Description
ResourceId	long	The unique identifier of the resource.
ResourceUserName	string	The territory resource user name.
TerrResourceId	long	The territory resource identifier.
TerritoryVersionId	long	The territory version identifier.
TypeCode	string	The territory type code.

Deal Resources

The resource associated with the deal registration.

QName: {http://xmlns.oracle.com/apps/marketing/dealMgmt/deals/dealService/}DealResource

Logical Business Objects

- CRM : Lead Management : Sales Lead

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Deal Registration*
Handled by	*Deal Registration Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevelCode	string	The access level code.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DealId	long	The deal identifier.
DealNumber	string	Public Unique Identifier of Deal Registration on the Deal Resource Team
DealResourceId	long	The deal resource identifier. • Primary Key
EmailAddress	string	The email address associated with the record.
FormattedPhoneNumber	string	The formatted phone number.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MemberFunctionCode	string	The member function code.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OwnerFlag	boolean	Indicator to specify the owner.
ResourceId	long	The unique identifier of the resource.
ResourceName	string	The resource name.
ResourcePartyNumber	string	Public Unique Identifier of Resource Party on the Deal Resource Team
ResourceUsername	string	The resource user name.

Electronic File Transfer

The electronic funds transfer information of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Eft

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Handled by	*Partner Program Enrollment Service*

Relationship Type	Object or Service
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EFTPrintingProgramId	long	The printing program identifier.
EFTSWIFTCode	string	The EFT swift code information.
EFTTransmissionProgramId	long	The transmission program identifier.
EFTUserNumber	string	The number that identifies you as a user of electronic funds transfer service for your bank or clearing organization.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

E-Mail

The e-mail address associated with a trading community member. For example, john.doe@oracle.com.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Email

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*

Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmailAddress	string	The email address associated with the record.
EmailFormat	string	The preferred format for e-mail addressed to this address such as HTML or ASCII. A list of accepted values is defined using the lookup EMAIL_FORMAT.
EmailInformation	*Trading Community Contact Point Additional Information*	The additional information about the e-mail.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary e-mail of the associated object. If the value is True, then this is the primary e-mail. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.

Name	Type	Description
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Expertise

The expertise of a partner.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerExpertise

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extends	*Partner Generic List of Values*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributePk1	string	This is the ATTRIBUTE PK1 column.
AttributePk2	string	This is the ATTRIBUTE PK1 column.
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DimSubtypeCode	string	A specific type of item within the dimension code. For example, for the products dimension, product items and product categories are there.
DimensionCode	string	The dimension of the item being stored. For example, geography.
DimensionMemberName	string	The name of the dimension member.

Name	Type	Description
DimensionMemberNameBackup	string	The name of the dimension member to which this record refers to. This is stored in case the dimension member was removed and the user still requires the name of the item that was removed.
IntegrationId	string	The reference to the actual dimension member item.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OwnerId	long	The unique identifier of the entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
OwnerType	string	The type of entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
PartitionTypeCode	string	The type of partition in which the data is stored.
PartnerDimMembersId	long	This column is the private key of the table. • Primary Key
TerrDimMemberId	long	The key data for the territory dimension.
TerrDimPartitionId	long	The primary key.
TypeCode	string	The type of the partition.

Instant Messaging

The instant messaging information of a trading community member, such as the AOL identifier or Yahoo Messenger information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}InstantMessaging

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*

Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
InstantMessagingAddress	string	The instant messaging information address.
InstantMessagingInformation	*Trading Community Contact Point Additional Information*	The instant messaging information related to the record.

Name	Type	Description
InstantMessengerType	string	The type of the instant messenger type.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary instant messaging Id of the associated object. If the value is True, then this is the primary instant messaging Id. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.

Name	Type	Description
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Partner

The set of partner profile attributes used to provide values while creating or changing a partner account.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}Partner

Logical Business Objects

- CRM : Partner Management : Partner

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountDirectorId	long	The unique identifier of a valid employee resource who owns and manages the partner sales account.
Address1	string	The first line of the address.
AnalysisFy	string	The fiscal year that the financial information is based on.
AnnualRevenue	decimal	The partner's annual revenue. This field is maintained by the channel manager and partner administrator.
Auxiliary1ClassCode	string	The auxiliary Class Code 1 for a classification.
Auxiliary1CodeAssignmentId	long	The unique identifier of the assignment of the auxiliary Class Code 1.
Auxiliary1EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 1 is no longer active.
Auxiliary1StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 1 becomes effective.
Auxiliary2ClassCode	string	The auxiliary Class Code 2 for a classification.
Auxiliary2CodeAssignmentId	long	The unique identifier of the assignment of the auxiliary Class Code 2.
Auxiliary2EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 2 is no longer active.
Auxiliary2StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 2 becomes effective.
Auxiliary3ClassCode	string	The auxiliary Class Code 3 for a classification.
Auxiliary3CodeAssignmentId	long	The unique identifier of the assignment of the auxiliary Class Code 3.
Auxiliary3EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 3 is no longer active.
Auxiliary3StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 3 becomes effective.

Name	Type	Description
BusinessScope	string	The physical class of business in which a business participates. For example, local, national, or international.
CeoName	string	The name of the chief executive officer. It is the denormalized value of the CEO_NAME in HZ_ORGANIZATION_PROFILES.
CeoTitle	string	The formal title of the chief executive officer.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
City	string	The name of the city.
ClassificationTypes	*Classification Assignment*	The classification type of a partner.
CompanyNumber	string	The partner's company number that is an alternate unique identifier of the partner. This value is maintained by the channel manager and partner administrator.
ComplianceReviewedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the compliance review for the partner was last completed.
ComplianceStatus	string	Indicates whether the partner is compliant with vendor's criteria such as certifications, training, and so on. If the value is True, then the partner is compliant.
ControlYr	decimal	The year when current ownership gained control of the organization.
CorpCurrencyCode	string	Corporate currency
Country	string	The name of the country.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
CurrencyCode	string	Currency
CurrentFyPotentialRevenue	decimal	The estimated revenues that can be earned by the organization during its current fiscal year.
DUNSNumber	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DbRating	string	The Dun & Bradstreet credit rating.
Description	string	The free text description of the record.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
EligibleForPublicProfile	string	Indicates whether the partner is eligible to publish their public profile. If the value is True, then the partner can publish their public profile.
Email	*E-Mail*	The email address associated with the record.
EmployeesTotal	decimal	The total number of employees.
ExportInd	string	Indicates whether the organization is an exporter. If the value is Y, then the organization is an exporter. The default value is N.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
FormattedAddress	string	The formatted address information.
FormattedPhoneNumber	string	The formatted phone number.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.

Name	Type	Description
GeoNameReferenceId	long	The unique name reference identifier.
GeographyId	long	The geography ID for the geography served by the partner.
HomeCountry	string	The home country associated with the party.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
IncorpYear	int	The year that the business was formally incorporated.
IndustryClassCode	string	The Industry classification code. The classification codes are defined for every classification category as specified in IndustryCodeType attribute.
IndustryCodeAssignmentId	long	The unique identifier of the assignment of an industrial classification code.
IndustryCodeEndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the industry class code is no longer valid.
IndustryCodeStartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the industry class code applies to the industry.
IsSelfRegisteredPartner	string	Indicates whether the partner registered through the self-service user interface.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LastTerritoryAssignedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the territory was last assigned.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
LegalStatus	string	The legal structure of the organization such as partnership, corporation, and so on.
LineOfBusiness	string	The type of business activities performed at this site.
Location	string	The location information of the partner.
LockTerritoryAssignment	string	Indicates if the automatic territory assignment can be set. If the value is True, then the automatic territory assignment cannot remove the sales account team resource. The default value is False.
MinorityOwnedInd	string	Indicates whether the organization is primarily owned by ethnic or racial minorities. If the value is Y, then the organization is owned by ethnic or racial minorities. The default value is N.
MinorityOwnedType	string	The type of minority-owned firm.
NextFyPotentialRevenue	decimal	The estimated revenues that can be earned by the organization during its next fiscal year.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OpportunitiesWonPriorYear	decimal	Opportunities that the partner sales representatives closed and won in the prior fiscal year.
OpportunitiesWonYTD	decimal	Opportunities that the partner sales representatives closed and won in the current fiscal year-to-date.
OrgTypeClassCode	string	The classification code for the organization type.
OrgTypeCodeAssignmentId	long	The unique identifier of the assignment of an industrial classification code to an organization type.
OrgTypeCodeEndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the organization type class code is no longer valid.

Name	Type	Description
OrgTypeCodeStartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the class code applies to the organization type.
OrganizationName	string	The name of the party when the party type is Organization.
OrganizationProfileId	long	The unique identifier of the organization profile.
OrganizationSize	string	The size of the organization based on its revenue, number of employees, and so on.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OrigSystemReferenceId	long	The unique identifier for original system reference.
OwnerName	string	The name of a valid employee resource that owns and manages the partner account.
OwnerPersonPartyId	long	The unique identifier of a valid employee resource who owns and manages the partner account.
ParentPartnerPartyId	long	A foreign key reference to the TCA party records that represents the Partner's parent company.
ParentPartnerPartyNumber	string	Candidate for public surrogate key field and serves as a user-entered identifier for the Partner's Parent company.
ParentPk1Value	string	Attribute Deprecated, use Attribute ParentPartnerPartyId instead
PartnerAccountId	long	The unique identifier of the partner account resource team member.
PartnerAccountResourceToAccountP	*Partner Account Team*	The list of account resources for the partner account.
PartnerCertificationP	*Partner Certification*	The list of certifications for partner.
PartnerDimensionMemberPVO	*Partner Dimension Member*	The list of dimension members for the partner.

Name	Type	Description
PartnerEmailPVO	*Partner E-Mail*	The list of e-mails for the partner.
PartnerExpertise	*Expertise*	The list of expertise for the partner.
PartnerFaxPVO	*Partner Phone*	The list of fax for the partner.
PartnerGeography	*Geographies Served*	The list of geographies served by the partner.
PartnerIndustry	*Industries Served*	The list of industries served by the partner.
PartnerLevel	string	The relative tier of the partner.
PartnerMember	*Partner Members*	The list of members for a partner.
PartnerMemberPVO	*Partner Public Contact*	The public contact information of the partner.
PartnerPhonePVO	*Partner Phone*	The list of phones of the partner.
PartnerProductSpeciality	*Focus Areas*	The list of product specialties of the partner.
PartnerProfileMultivalueLovP	*Partner Generic List of Values*	The list of partner profile values for the partner.
PartnerSummary	string	The description of the partner company.
PartnerTypeDimensionMemberP	*Partner Type*	The list of partner type dimensions for the partner.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartySite	*Address*	The party site associated with the partner.
Phone	*Phone*	The phone information for the entity.
PostalCode	string	The postal code element of the address.

Name	Type	Description
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PrefferedContactId	long	The unique identifier of the preferred contact person for the partner.
PrefferedContactName	string	The name of the preferred contact person for the partner.
PrimaryPhoneContactPointId	long	The unique identifier of the primary phone contact point.
PrimaryURLContactPointId	long	The unique identifier of the primary URL contact point.
PrincipalName	string	The Name of the highest ranking person in the company.
PrincipalTitle	string	The title of the highest ranking person in the organization.
ProfileObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
Province	string	The name of the province.
PublicAddressId	long	The partner company address displayed in Partner Finder.
PublicContactId	long	The partner contact name displayed in Partner Finder.
PublicEmailId	long	The e-mail displayed in Partner Finder.
PublicFaxId	long	The fax number displayed in in Partner Finder.
PublicPhoneId	long	The phone displayed in Partner Finder.

Name	Type	Description
PublicPrivateOwnershipFlag	boolean	Indicates whether the organization is publically or privately owned. If the value is Y, then the organization is a privately owned organization. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
PublicStatus	string	Status of approval of public profile.
RangeEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The end date in the import range.
RangeStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The start date in the import range.
ReassignTerritory	string	Indicates whether this partner needs territory reassignment.
RegistrationType	string	Indicates the registration type of the partner.
SmallBusInd	string	Indicates whether the organization is considered as a small business. If the value is Y, then the organization is considered as a small business. The default value is N.
SolutionOverview	string	The overview description of partner solutions.
State	string	The name of the state.
Status	string	The status of the record.
StockSymbol	string	The corporate stock symbol of the organization as listed in stock exchanges.
Synergy	string	The description of the value of the partnership between the Vendor and Partner.
TierId	long	The unique identifier for a tier to which a partner applies.
TotalEmployeesInd	string	Indicates if subsidiaries are included in the calculation of total employees. The accepted values are defined in the lookup type TOTAL_EMPLOYEES_INDICATOR.
TotalEmployeesText	string	The total number of employees in text format.

Name	Type	Description
TreeCode	string	The unique code of the partner organization tree.
TreeStructureCode	string	The unique code for the partner organization tree structure.
URL	string	The destination URL associated with a specific Google AdWords ad.
UniqueNameSuffix	string	The suffix used to generate the attribute PartyUniqueName. The suffix is concatenated to the Organization Name attribute to generate the PartyUniqueName. The primary address is defaulted as the suffix.
Web	*Web*	The web information related to the record.
YearEstablished	int	The year when the organization began doing business.

Partner Account Team

The person assigned to a partner account team.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerAccountResource

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevelCode	string	The type of access granted to the resource as well as managers of the organizations.
AssignmentTypeCode	string	The code indicating how the resource is assigned to the sales account team.
CreatedBy	string	Who column: indicates the date and time of the creation of the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who created the row.
EmailAddress	string	The email address associated with the record.
FormattedPhoneNumber	string	The formatted phone number.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the user who last updated the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
MemberFunctionCode	string	The code indicating the role of a sales team member in the resource team such as Integrator, Executive Sponsor, and Technical Account Manager. A list of accepted values is defined in the lookup FND_LOOKUPS.
OrganizationName	string	The name of the party when the party type is Organization.
OrganizationRole	string	The role of the partner in the organization.
PartnerAccountId	long	The unique identifier of the partner account resource team.
PartnerAccountResourceId	long	The unique identifier of the member of the partner account resource team. • Primary Key

Name	Type	Description
PartnerPartyId	long	The PartyId of Partner whose Account Team includes this resource.
ResourceId	long	The unique identifier of the resource.
ResourceName	string	The name of the resource associated with the partner account team.
TerritoryName	string	The name of the territory for the partner account.

Partner Certification

The list of certifications that a partner has achieved.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerCertification

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extends	*Partner Generic List of Values*
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CertificationCode	string	The code for the certification.
CertificationName	string	The name of this certification.
LookupCode1	string	The key information for the certification.
LookupType1	string	The key information for the certification.
Meaning	string	The name of this certification.

Partner Generic List of Values

The generic list of multiple values used for certifications and expertise.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerProfileMultivalueLov

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Partner Certification*

Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
LookupCode	string	The value from a multi-value list of values category that applies to the profile.
LookupType	string	The list of values code that defines the category to which the list of values belong. This value indicates the profile field to which the value belongs.
PartnerMultivalLovId	long	The unique identifier of the list of values code selected for a specific multi-value field in the partner profile. • Primary Key
PartyId	long	The unique identifier of the contact party.

Partner Dimension Member

A generic list of multiple values used for territory dimensions.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerDimensionMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributePk1	string	This is the ATTRIBUTE PK1 column.
AttributePk2	string	This is the ATTRIBUTE PK1 column.
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DimSubtypeCode	string	A specific type of item within the dimension code. For example, for the products dimension, product items and product categories are there.
DimensionCode	string	The dimension of the item being stored. For example, geography.
DimensionMemberName	string	The name of the dimension member.
DimensionMemberNameBackup	string	The name of the dimension member to which this record refers to. This is stored in case the dimension member was removed and the user still requires the name of the item that was removed.

Name	Type	Description
IntegrationId	string	The reference to the actual dimension member item.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OwnerId	long	The unique identifier of the entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
OwnerType	string	The type of entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
PartitionTypeCode	string	The type of partition in which the data is stored.
PartnerDimMembersId	long	This column is the private key of the table. • Primary Key
TerrDimMemberId	long	The key data for the territory dimension.
TerrDimPartitionId	long	The primary key.
TypeCode	string	The type of the partition.

Partner E-Mail

The e-mail address of the partner.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerPublicEmail

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActualContentSource	string	The information regarding the source of the contact point.
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPointValue	string	The key information for the contact point.
CreatedByModule	string	The module that created the record.
EmailAddress	string	The email address associated with the record.
EmailFormat	string	The information on how to interpret the e-mail address.

Name	Type	Description
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
OrigSystemReference	string	The identifier for the record from the original system.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
Primary2Flag	boolean	Indicator to specify that the contact point is the primary point of contact.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
RelationshipId	long	The relationship identifier for the record.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Focus Areas

The focus areas or product specialties of the partner.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerProductSpeciality

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
LookupCode	string	The value from a multi-value list of values category that applies to the profile.
LookupType	string	The list of values code that defines the category to which the list of values belong. This value indicates the profile field to which the value belongs.

Name	Type	Description
PartnerMultivalLovId	long	The unique identifier of the list of values code selected for a specific multi-value field in the partner profile. • Primary Key
PartyId	long	The unique identifier of the contact party.

Geographies Served

The geographies in which a partner operates.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerGeographyServed

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributePk1	string	This is the ATTRIBUTE PK1 column.
AttributePk2	string	This is the ATTRIBUTE PK1 column.
CreatedBy	string	Who column: indicates the user who created the row.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DimSubtypeCode	string	A specific type of item within the dimension code. For example, for the products dimension there could be product items and product categories.
DimensionCode	string	The dimension of the item being stored. For example, geography.
DimensionMemberName	string	Name of dimension member.
DimensionMemberNameBackup	string	The name of the dimension remember this record refers to. This is stored in case the dimension member was removed and the user still needs to know the name of the item that was removed.
GeographyId	string	The geography ID of the geography served.
GeographyName	string	The geography name of the geography served.
IntegrationId	string	The reference to the actual dimension member item.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
OwnerId	long	The identifier of the entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.

Name	Type	Description
OwnerType	string	The type of entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
PartitionTypeCode	string	The type of partition in which the data is stored.
PartnerDimMembersId	long	This column is the private key of this table. • Primary Key
TerrDimMemberId	long	Key data for the territory dimension.
TerrDimPartitionId	long	Primary key.
TypeCode	string	Type of the partition.

Partner Members

The partner members for a partner.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalPartyId	*Additional Identifier*	The additional identifier associated with the organization or person.
AdditionalPersonName	*Additional Contact Name*	The additional name of the person.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
CategoryCode	string	The code of the category to which the person belongs. A list of accepted values is defined in the lookup type CUSTOMER_CATEGORY.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
Certification	*Certification*	The certification information for the person.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
Citizenship	*Citizenship*	The citizenship information of a person.
City	string	The name of the city.
CodeAssignment	*Classification Assignment*	The classification code assigned to the person.
Comments	string	The comments for the record.

Name	Type	Description
ContactPreference	*Contact Preference*	The contact preference associated with the record.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRating	*Credit Rating*	The credit rating of the person.
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was born.
Education	*Education*	The education information of the person.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EmailDomain	*E-Mail Domain*	The domain name of the email address.
EmploymentHistory	*Employment History*	The employment history information of a person.
FinancialProfile	*Financial Profile*	The financial profile information of a person.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
Gender	string	The gender of the person, such as male, female, and unknown. A list of accepted values is defined in the lookup HZ_GENDER.

Name	Type	Description
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LanguageName	string	The standard name for the language.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaritalStatus	string	The marital status of the person. A list of accepted values is defined in the lookup MARITAL_STATUS.
MissionStatement	string	The corporate charter of organization in user-defined text format.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.

Name	Type	Description
PartyPreference	*Preference*	The preference mentioned in the person details.
PartySite	*Contact Address*	The party site associated with the person.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the person.
PersonAcademicTitle	string	The part of the person's title that denotes the academic qualification, such as Dr. Jane Smith.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonInterest	*Contact Interest*	The interest information associated with a person.
PersonLanguage	*Contact Language*	The language information associated with a person.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	The prefix for the last name of a person, such as fon, van. For example, if a person's name is Hans Van, the last name of the person is captured using this attribute.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	The place in a family structure. For example, in "Tom Jones III", the "III".
PersonPreNameAdjunct	string	The preferred name adjacency of a resource.

Name	Type	Description
PersonPreviousLastName	string	The previous last name of a person.
PersonProfile	*Contact*	The profile information of the person.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
Phone	*Phone*	The phone information for the entity.
PostalCode	string	The postal code element of the address.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryEmailContactPTId	long	The unique identifier of the primary e-mail.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneContactPTId	long	The unique identifier of the primary phone contact point.

Name	Type	Description
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURLContactPTId	long	The unique identifier of the primary URL contact point.
Province	string	The name of the province.
Relationship	*Relationship*	The relationship information of the person.
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The Standard Industry Classification (SIC) code.
SICCodeType	string	The version of Standard Industry Classification (SIC) code.
Salutation	string	The size of the household this person is a part of.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
SourceSystemUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the source system information was last updated.
State	string	The name of the state.

Name	Type	Description
Status	string	The status of the record.
ThirdPartyFlag	boolean	Indicates whether a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. If the value is Y, then the party is a third party relationship. If Oracle Service is installed, the Third Party field in the Customers window is mandatory.
URL	string	The destination URL associated with a specific Google AdWords ad.
UserGUID	string	The "light weight" user Global Unique Id. Light Weight users defined in the Extended Security (XS) System.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
Web	*Web*	The web information related to the record.

Partner Phone

The phone number for a contact point.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerPublicPhone

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActualContentSource	string	The information regarding the source of the contact point.
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPointValue	string	The key information for the contact point.
CreatedByModule	string	The module that created the record.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FormattedPhoneNumber	string	The formatted phone number.
LastContactDtTime	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The last time when the contact point was contacted.
OrigSystemReference	string	The identifier for the record from the original system.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PagerTypeCode	string	The type of pager for the phone number.
PartyUsageCode	string	The usage context of a party's contact point.
PhoneAreaCode	string	The area code prefix for the phone number.
PhoneCallingCalendar	string	The information on proper calling times.

Name	Type	Description
PhoneCountryCode	string	The country code prefix for the phone number.
PhoneExtension	string	The extension of the phone number.
PhoneLineType	string	The type of phone line.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
RawPhoneNumber	string	The unformatted phone number.
RelationshipId	long	The relationship identifier for the record.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TransposedPhoneNumber	string	The transposed phone number.

Partner Public Contact

The point of contact used for the public profile.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerPublicContact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*

Relationship Type	Object or Service
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AnalysisFy	string	The fiscal year that the financial information is based on.
CategoryCode	string	The user-defined category. The lookup type is CUSTOMER_CATEGORY.
CeoName	string	The name of the chief executive officer. It is the denormalized value of the CEO_NAME in HZ_ORGANIZATION_PROFILES.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
City	string	The name of the city.

Name	Type	Description
Comments1	string	The denormalization of the COMMENTS in HZ_GROUP_PROFILES.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy1	string	The user who created the account record.
CreatedByModule1	string	The module that created the account record.
CreationDate1	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyFyPotentialRevenue	decimal	The potential revenue of the organization in this fiscal year.
DUNSNumber	string	DUNS_NUMBER in VARCHAR format. Column value is not restricted to nine digit DUNS number.
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The denormalization of the DATE_OF_BIRTH in HZ_PERSON_PROFILES.
EmailAddress	string	The email address associated with the record.
EmployeesTotal	decimal	The total number of employees.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
FormattedAddress	string	The formatted address of the contact.
FormattedPhoneNumber	string	The formatted phone number.
Gender	string	The denormalization of the GENDER in HZ_PERSON_PROFILES.
GroupType	string	The lookup for the group type.
HQBranchInd	string	The status of the site. Identifies if the location is the headquarters, a branch, or a single location.
HomeCountry	string	The home country associated with the party.

Name	Type	Description
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LanguageName	string	The standard name for a language.
LastUpdateDate1	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin1	string	The login of the user who last updated the record.
LastUpdatedBy1	string	The user who last updated the record.
MaritalStatus	string	The denormalization of the MARITAL_STATUS in HZ_PERSON_PROFILES.
MissionStatement	string	The corporate charter of the organization.
NextFyPotentialRevenue	decimal	The potential revenue of the organization for the next fiscal year.
OrigSystemReference	string	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PersonAcademicTitle	string	An academic title that is part of the name of a person, such as Dr. John Smith.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_

Name	Type	Description
		PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	Used to specify the last name prefix such as fon, van, and so on for a person. It is used in the same way the new field PERSON_LAST_NAME_PREFIX in HZ_PERSON_PROFILES is used. Corresponds to the field Last Name Prefix in HL7.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	Indicates the place in a family structure. For example, in Tom Jones III, III is the suffix.
PersonPreNameAdjunct	string	The salutary introduction such as Mr. or Herr.
PersonPreviousLastName	string	The previous last or surname of the person.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PostalCode	string	The postal code element of the address.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.

Name	Type	Description
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryEmailContactPTId	long	The key to primary e-mail contact point.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneContactPTId	long	The key to the primary contact point.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURLContactPTId	long	The key to the primary URL contact point.
Province	string	The name of the province.
SICCode	string	The standard industry classification (SIC) code.
SICCodeType	string	The version of standard industry classification (SIC) code.
Salutation	string	The phrase used to address a party in any correspondence.
State	string	The name of the state.

Name	Type	Description
Status1	string	The party status indicator.
TradingPartnerIdentifier	string	One column to store the FSIO related trading partner codes. This column stores alpha numeric values. The column also addresses Fed vs. Non-Fed attribute requirement.
URL	string	The destination URL associated with a specific Google AdWords ad.
UserGUID	string	Stores the light weight user Global Unique ID. Light weight users are defined in the Extended Security (XS) system. Foreign key to FND_USER.
YearEstablished	int	The year when the organization began doing business.

Partner Type

The information about the partner type.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerTypeDimensionMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributePk1	string	This is the ATTRIBUTE PK1 column.
AttributePk2	string	This is the ATTRIBUTE PK2 column.
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DimSubtypeCode	string	This attribute is not used.
DimensionCode	string	This will contain the string 'SChnl' to indicate Partner Type.
DimensionMemberName	string	Name of dimension member.
DimensionMemberNameBackup	string	The name of the dimension remember this record refers to. This is stored in case the dimension member was removed and the user still needs to know the name of the item that was removed.
IntegrationId	string	The reference to the actual dimension member item.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
OwnerId	long	Partner Party Id of the Partner.
OwnerType	string	The type of entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.

Name	Type	Description
PartitionTypeCode	string	The type of partition in which the data is stored.
PartnerDimMembersId	long	This column is the private key of this table. • Primary Key
PartnerTypeCode	string	The partner type code for partner.
PartnerTypeName	string	The name of the partner type, such as Value Added Reseller.
TerrDimMemberId	long	Key data for the territory dimension.
TerrDimPartitionId	long	Primary key.
TypeCode	string	Type of the partition.

Phone

The phone number associated with a trading community member. For example, the phone number for Oracle Corporation is 650-506-6000.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Phone

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*

Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FormattedPhoneNumber	string	The formatted phone number.
LastContactDtTime	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date and time of last contact placed to this contact point.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PagerTypeCode	string	The PAGER_TYPE_CODE column stores the lookup code for the type of pager. The type of pager determines how the page is received. For example, tone, number, alphanumeric or two-way alphanumeric.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PhoneAreaCode	string	The area code prefix for the phone number.
PhoneCallingCalendar	string	The name or code for a calling calendar used with this telephone number. This attribute is no longer used in Fusion applications.
PhoneCountryCode	string	The country code prefix for the phone number.
PhoneExtension	string	The additional number addressed after initial connection to an internal telephone system.
PhoneInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community phone.
PhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound, or outbound.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party

Name	Type	Description
		or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RawPhoneNumber	string	The unformatted telephone number.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TimezoneCode	string	The foreign key to FND_TIMEZONES_B.TIMEZONE_CODE.
TransposedPhoneNumber	string	This column stores the concatenation of PHONE_COUNTRY_CODE, PHONE_AREA_CODE, and PHONE_NUMBER in reverse order. For example, if PHONE_COUNTRY_CODE=1, PHONE_AREA_CODE=650 and PHONE_NUMBER=5065747, this column stores 74756050561. This column is used for building an index to search for any combination of the above three columns.

Source System Reference

The name of external source system where the trading community information is imported from.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}OriginalSystemReference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Original System Mapping Identifier Additional Information*

Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OldOrigSystemReference	string	The old source system reference that is being replaced.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.

Name	Type	Description
OrigSystemReferenceId	long	The unique identifier for original system reference. • Primary Key
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
SourceSystemRefInformation	*Trading Community Original System Mapping Identifier Additional Information*	The source system reference information.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Telex

The telex number information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Telex

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*

Relationship Type	Object or Service
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.

Name	Type	Description
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary telex of the associated object. If the value is True, then this is the primary telex. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.

Name	Type	Description
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TelexNumber	string	The telex reference number (usually a telephone number) of the organization.

Trading Community Address Additional Information

The address information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/partySite/}PartySiteInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contact Address*
Contained by	*Address*

Relationship Type	Object or Service
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Address Purpose

The purpose of an address, such as Business, Home, or Ship To.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartySiteUse

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Contact Address*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BeginDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date at the start of the date range within which the row is active.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
IntegrationKey	string	The integration key is not used.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PartySiteUseId	long	The unique identifier of the party site used. • Primary Key

Name	Type	Description
PrimaryPerType	string	Indicates if this is the primary use for the site. Y stands for the primary site and N stands for all other sites.
RequestId	long	A system-generated read-only attribute used by the application framework.
SiteUseType	string	The site use type associated with the address.
Status	string	The status of the record.

Trading Community Contact Point Additional Information

The contact point for a trading community member like phone or e-mail. For example 650-506-6000 is the phone number for Oracle Corporation, john.doe@example.com is the e-mail address for John Doe.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/contactPoint/}ContactPointInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*E-Mail*
Contained by	*Instant Messaging*
Contained by	*Phone*
Contained by	*Web*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Relationship Type	Object or Service
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointType	string	The type of the contact point.
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Original System Mapping Identifier Additional Information

The unique identifier for the trading community party, associated with the address, from the external source system reference.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/sourceSystemRef/}SourceSystemRefInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Source System Reference*
Handled by	*Sales Reference Customer*
Handled by	*Trading Community Location*
Handled by	*Trading Community Customer Account*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Competitor Service*
Handled by	*Source Information Technology System Reference*
Handled by	*Trading Community Person Information*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Marketing Response Service*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
OrigSystemRefId	long	Sequentially generated identifier. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Web

The Web information associated with a trading community member. For example, Oracle's address on the Web is www.oracle.com.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Web

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*
Contained by	*Household*

Relationship Type	Object or Service
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.

Name	Type	Description
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N stands for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.

Name	Type	Description
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
URL	string	The destination URL associated with a specific Google AdWords ad.
WebInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community Web.
WebType	string	The prefix class to a Web address. Typically, this is either FTP or HTTP.

Duplicate Resolution Service

The service to find and merge duplicate parties and the child entities.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/cdm/dataStewardship/resolutionService/}DuplicateResolutionService

Service WSDL URL: https://servername/crmService/DuplicateResolutionService?WSDL

Logical Business Objects

- CRM : Trading Community Hub : Trading Community Duplicate Resolution Request

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Duplicate Party Information*
Handles	*Duplicate Entity Reference*
Handles	*Duplicate Resolution Detail*
Handles	*Duplicate Resolution Request*

Operations

- *getResolutionRequest*
- *findResolutionRequest*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

getResolutionRequest

A web service method which queries a single record of resolution request based on the primary key identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
requestId	long	Input parameter of the getResolutionRequest web service method. It is the primary key identifier of the request you want to query for.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/dataStewardship/resolutionService/}ResolutionRequestResult	The return value of getResolutionRequest web service method. It includes the key set of attributes for the queried request identifier.

findResolutionRequest

A web service method that queries a single record or set of records of resolution request objects that match the supplied criteria

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findResolutionRequest web service method. The criteria used to limit the query result, such as the filter (where clause).
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Duplicate Resolution Request*	The result of the findResolutionRequest operation that includes the successfully resolved and merged parties and a list of warning or information messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	An operation to get the list of service data objects defined on this service.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getResolutionRequest	ZCH_VIEW_TRADING_ COMMUNITY_DUPLICATE_ RESOLUTION_REQUEST_PRIV	View Trading Community Duplicate Resolution Request	Allows viewing of the duplicate resolution request details.
findResolutionRequest	ZCH_VIEW_TRADING_ COMMUNITY_DUPLICATE_ RESOLUTION_REQUEST_PRIV	View Trading Community Duplicate Resolution Request	Allows viewing of the duplicate resolution request details.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCH_VIEW_TRADING_ COMMUNITY_DUPLICATE_ RESOLUTION_REQUEST_PRIV	ORA_DUP_RES_MANAGE_DUTY	Trading Community Duplicate Resolution Request Management	Grants privileges to manage duplicate resolution requests
ZCH_VIEW_TRADING_ COMMUNITY_DUPLICATE_ RESOLUTION_REQUEST_PRIV	ORA_DUP_RES_INQUIRY_DUTY	Trading Community Duplicate Resolution Request Inquiry	Grants privileges to view duplicate resolution requests
ZCH_VIEW_TRADING_ COMMUNITY_DUPLICATE_ RESOLUTION_REQUEST_PRIV	ORA_ZCH_DATA_STEWARD_ MANAGER_JOB	Data Steward Manager	Manages customer data stewards and has additional privileges including assigning requests.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_DATA_STEWARD_ MANAGER_JOB	ORA_ZCA_ACCESS_GROUPS_ ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_ZCH_DATA_STEWARD_ MANAGER_JOB	ORA_ZCH_VIEW_PARTY_CENTER_ DUTY	Party Center Inquiry	Grants privileges to view party center nodes.
ORA_ZCH_DATA_STEWARD_ MANAGER_JOB	ORA_ZCH_MANAGE_PARTY_ CENTER_DUTY	Party Center Management	Grants privileges to manage party center nodes.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_DATA_STEWARD_MANAGER_JOB	ORA_ZCQ_TRADING_COMMUNITY_DQ_MGMT_DUTY	Trading Community Data Quality Management	Performs real-time and batch data quality functions such as matching and cleansing.
ORA_ZCH_DATA_STEWARD_MANAGER_JOB	ORA_DUP_IDEN_MANAGE_DUTY	Trading Community Duplicate Identification Batch Management	Grants privileges to manage duplicate identification batches
ORA_DUP_RES_MANAGE_DUTY	ORA_DUP_RES_INQUIRY_DUTY	Trading Community Duplicate Resolution Request Inquiry	Grants privileges to view duplicate resolution requests
ORA_ZCH_DATA_STEWARD_MANAGER_JOB	ORA_DUP_RES_MANAGE_DUTY	Trading Community Duplicate Resolution Request Management	Grants privileges to manage duplicate resolution requests
ORA_ZCH_DATA_STEWARD_MANAGER_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCH_DATA_STEWARD_MANAGER_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.

Duplicate Entity Reference

The unique identifier of the duplicate record.

QName: {http://xmlns.oracle.com/apps/cdm/dataStewardship/resolutionService/}SourceSystemReference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Duplicate Party Information*
Handled by	*Duplicate Resolution Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
SourceSystem	string	Original System
SourceSystemReferenceId	long	Primary key of the original source system
SourceSystemReferenceValue	string	Original System Reference

Duplicate Party Information

The details of a duplicate party including its name and identifier.

QName: {http://xmlns.oracle.com/apps/cdm/dataStewardship/resolutionService/}DuplicateParty

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Duplicate Entity Reference*
Contained by	*Duplicate Resolution Request*
Handled by	*Duplicate Resolution Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
MasterFlag	boolean	Indicates if the party is master.
PartyId	long	Unique identifier of the party.
PartyName	string	Name of the party.
PartyNumber	string	Unique identification number for this party.
PartyType	string	Type of party such as Organization, Person, or Group

Name	Type	Description
SourceSystemReference	*Duplicate Entity Reference*	Original System Reference for the Party.

Duplicate Resolution Detail

The information used to determine master record and surviving entities during the duplicate resolution.

QName: {http://xmlns.oracle.com/apps/cdm/dataStewardship/resolutionService/}ResolutionDetail

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Duplicate Resolution Request*
Handled by	*Duplicate Resolution Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Action	string	Type of the actions like Transfer, Merge, Remove or Retain
EntityId	long	Primary key of the record.
EntityObject	string	Logical business entity of this record.
MasterFlag	boolean	Indicates if the party is master.
MasterId	long	Refers to the master record of this record.
ParentId	long	Refers to parent record of this record.
ParentMasterId	long	Refers to the master record of the parent record.

Name	Type	Description
ParentObject	string	Logical business entity of the parent record.

Duplicate Resolution Request

The web service call that contains information about consolidating a set of duplicate records.

QName: {http://xmlns.oracle.com/apps/cdm/dataStewardship/resolutionService/}ResolutionRequest

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Duplicate Party Information*
Contains	*Duplicate Resolution Detail*
Handled by	*Duplicate Resolution Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the request.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the request was created
DuplicateParty	*Duplicate Party Information*	Duplicate party information
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the request was last updated
LastUpdatedBy	string	The user who last updated the request
ObjectVersionNumber	int	Internal attribute used for optimistic locking.

Name	Type	Description
RequestId	long	Resolution request identifier • Primary Key
RequestName	string	Name of the request.
RequestNumber	string	Unique identification number for this request.
ResolutionDetail	*Duplicate Resolution Detail*	Duplicate resolution detail
ResolutionStatus	string	Status of the request.
ResolutionStatusMessage	string	Reason for ERROR or REJECT status
ResolutionType	string	Type of the request.

Entitlements Service

Contract Entitlements External Service

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/entitlements/service/}ContractsSrvcEntitlementsService

Service WSDL URL: https://servername/fscmService/ContractsSrvcEntitlementsService?WSDL

Logical Business Objects

- CRM
- CRM
- CRM

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Entitlement Matrix Result*
Handles	*Entitlement Output*

Relationship Type	Object or Service
Handles	*Entitlement Input*

Operations

- *getContractEntitlements*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

getContractEntitlements

Get Coverage details of a particular asset

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
params	*Entitlement Input*	Entitlement Input Row

Response Payload

Element Name	Type	Description
result	*Entitlement Output*	List of Entitlement Output Rows returned

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.

Element Name	Type	Description
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getContractEntitlements	OKC_VIEW_SERVICE_CONTRACT_ENTITLEMENTS_PRIV	View Service Contract Entitlements	Allows to check service entitlement for a contract.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
OKC_VIEW_SERVICE_CONTRACT_ENTITLEMENTS_PRIV	ORA_OKC_ALL_BUSINESS_UNITS_CONTRACT_MANAGEMENT_DUTY	Contract Management Across All Contracts Web Service	Permits an application using the CRM application ID to manage contracts across all business units.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_OKC_ALL_BUSINESS_UNITS_CONTRACT_MANAGEMENT_DUTY	ORA_EGP_ITEM_INQUIRY_DUTY	Item Inquiry	Queries and views items in the enterprise.
ORA_OKC_ALL_BUSINESS_UNITS_CONTRACT_MANAGEMENT_DUTY	ORA_PON_NEGOTIATION_VIEWING_DUTY	Negotiation Viewing	View the negotiation summary and details pages.

Entitlement Input

Entitlement Input Object

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/entitlements/service/}EntitlementInput

Logical Business Objects

- CRM

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Entitlement Matrix Result*
Handled by	*Entitlements Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ChannelCode	string	Channel code
ContractCoverageLineId	long	Contract COverage Line Id
ContractCoverageLineNumber	string	Contract Coverage Line Number
ContractCoverageLineType	string	Contract Coverage Line Type
ContractCoverageProductDescription	string	Contract COverage Product Description
ContractCoverageProductName	string	Contract Coverage Product Name
ContractCoveredAssetCloseDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Contract Covered Asset Close Date
ContractCoveredAssetEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Contract Covered Asset End Date
ContractCoveredAssetId	long	Contract Covered Asset Id
ContractCoveredAssetLineNumber	string	Contract COvered Asset Line Number
ContractCoveredAssetProductDescription	string	Contract Covered Asset Product Description
ContractCoveredAssetProductName	string	Contract Covered Asset Product Name
ContractCoveredAssetStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Contract COvered Asset Start Date
ContractId	long	The internal identifier along with contract version identifies a unique contract.

Name	Type	Description
ContractIntent	string	The Buy or Sell intent of the contract. This will always be Sell.
ContractNumber	string	The alphanumeric key along with contract number modifier, contract type, and contract intent identifies a contract to an end user.
ContractNumberModifier	string	The alphanumeric number that is shown only for a renewal contract.
ContractType	string	The type of the contract.
ContractVersion	long	The version number of the contract.
CoverageDescription	string	Coverage Description
CoverageId	long	Coverage Id
CoverageName	string	Coverage Name
CustomerPartyName	string	Customer Party Name
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	End Date
EntitlementId	long	Entitlement Id • Primary Key
EntitlementResult	*Entitlement Matrix Result*	Entitlement Result Object
EntitlementRuleId	long	Entitlement Rule Id
EntitlementSource	string	Entitlement Source
EntitlementSourceCode	string	Entitlement Source Code
IsContractEntitled	string	If 'Yes' means the contract is entitled, else for 'No', the contract is not entitled as per state model setup for the status of the contract.
MatrixId	long	Matrix Id
Message	string	Additional Message

Name	Type	Description
PriorityCode	string	Priority Code
ServiceRequestId	long	Service Request Id
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Start Date

File Import Activity Service

Service related to file based import activity. This service enables submitting import activity and monitoring the status of the same.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/marketing/commonMarketing/mktImport/model/}ImportPublicService

Service WSDL URL: https://servername/crmService/ImportPublicService?WSDL

Logical Business Objects

- CRM : Marketing : File Import

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*File Import Activity Status Output Parameters*
Handles	*File Import Activity Log Output Parameters*
Handles	*Import Job Parameters View Object*
Handles	*Name*
Handles	*File Import Activity Output Parameters*
Handles	*Name*
Handles	*Import Job Object Parameters View Object*

Relationship Type	Object or Service
Handles	*Name*
Handles	*File Import Activity Input Parameters*
Handles	*File Import Activity Output Parameters*

Operations

- *getImportActivityLogs*
- *getImportActivityStatus*
- *submitImportActivity*
- *submitSimplifiedImportActivity*
- *getImportActivityLogFiles*
- *submitSimplifiedImportActivityWithParam*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

getImportActivityLogs

The method to get the file import activity logs.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
importJobId	long	The unique identifier of the import job.
batchId	long	The unique identifier of the batch for the import job.

Response Payload

Element Name	Type	Description
result	*File Import Activity Log Output Parameters*	The return parameter of the file import activity.

getImportActivityStatus

The method to get the file import activity status.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
importJobId	long	The unique identifier of the import job.

Response Payload

Element Name	Type	Description
result	*File Import Activity Status Output Parameters*	The return parameter of the getImportActivityStatus process.

submitImportActivity

The method to submit the file import activity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
importJobSubmitParam	*File Import Activity Input Parameters*	The input parameters of the file import activity.

Response Payload

Element Name	Type	Description
result	*File Import Activity Output Parameter*	The return parameter of the submitImportActivity process.

submitSimplifiedImportActivity

The method to submit the file import activity with input parameters.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
objectCode	string	The code identifying the object.
inputFileContent	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The content of the input file.

Response Payload

Element Name	Type	Description
result	*Simplified File Import Activity Output Parameter*	The return parameter of the submitSimplifiedImportActivity process.

getImportActivityLogFiles

Process to get the log files. Supports both Zip and non Zip formats.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
importJobId	long	The unique identifier of the import job.
batchId	long	The unique identifier of the batch for the import job.

Response Payload

Element Name	Type	Description
result	*Import Service File*	The return parameter of the getImportActivityLogFiles.

submitSimplifiedImportActivityWithParam

The parameters of the simplified import activity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
inputFileContent	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The content of the input file.
importJobParams	*Import Job Parameters View Object*	The input parameters of the file import activity.
importObjectParams	*Import Job Object Parameters View Object*	The parameters of the import job object.

Response Payload

Element Name	Type	Description
result	*Import Job Parameters View Object*	The return parameter of the submitSimplifiedImportActivityWithParam process.

getDfltObjAttrHints

Service implemented as part of devconnect bug.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	Service implemented as part of devconnect bug.
localeName	string	The locale used when evaluating the locale-based user interface hints. The localeName is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	Service implemented as part of devconnect bug.

getServiceLastUpdateTime

Service implemented as part of devconnect bug.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Service Implemented as part of devconnect bug.

getEntityList

Service implemented as part of devconnect bug.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	Service Implemented as part of devconnect bug.

File Import Activity Input Parameters

Input parameters accepted by the submit import activity process.

QName: {http://xmlns.oracle.com/oracle/apps/marketing/commonMarketing/mktImport/model/}ImportJobSubmitParams

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*File Import Activity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CallListCode	string	The call list code used for file import.

Name	Type	Description
ContentId	string	Stores the UCM File ContentId.
DateFormat	string	The date format used in the records being imported.
Delimiter	string	Indicates the delimiter used in source file.
ErrorThreshold	long	Specifies the error threshold.
FileContent	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The content of the import source file.
FileEcodingMode	string	The file encoding mode used for import source file.
FileFormat	string	The file format used for import source file.
FileName	string	The file name of the import file.
FileTypeCd	string	Stores either xml or csv information.
HeaderRowIncluded	string	Specifies if a header row is included in the source file to be imported.
ImportMode	string	The import mode used for file import.
JobDescription	string	The import job description.
JobName	string	The name of the import job.
LookbackDays	long	The lookback days used for importing records.
MappingNumber	string	The mapping number being used. • Primary Key
Notification	string	Indicates if notification is enabled or not.
TimestampFormat	string	The timestamp format used in the records being imported.

File Import Activity Log Output Parameters

Parameters returned by the get import activity logs process.

QName: {http://xmlns.oracle.com/oracle/apps/marketing/commonMarketing/mktImport/model/}ImportServiceLogs

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*File Import Activity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BatchId	string	The batch Identifier of the import job. • Primary Key
ErrorLogFileContent	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The content of the error log generated by the import process.
ErrorLogFileName	string	The file name of the error log file generated by the import process.
ExceptionLogFileContent	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The content of the exception log generated by the import process.
ExceptionLogFileName	string	The name of the exception log file generated by the import process.
LogFileContent	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The content of the success log generated by the import process.
LogFileName	string	The name of the success log file generated by the import process.

File Import Activity Output Parameter

Parameters returned by the submit import activity process.

QName: {http://xmlns.oracle.com/oracle/apps/marketing/commonMarketing/mktImport/model/}ImportJobReturnParams

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*File Import Activity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
JobId	long	The import job identifier. • Primary Key
Result	string	The result of the import job.

Simplified File Import Activity Output Parameter

Returns response of simplified import web service.

QName: {http://xmlns.oracle.com/apps/marketing/commonMarketing/mktImport/model/}SimplifiedImportJobReturnParams

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*File Import Activity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
FailureCause	string	The failure cause.
JobId	long	The job identifier of the import activity. • Primary Key
ObjectCode	string	The object code.
Status	string	The status of the record.
SubmitTime	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The creation time of the import activity.
SubmittedBy	string	The user who created the import activity.

File Import Activity Status Output Parameters

Parameters returned by the get import activity status process.

QName: {http://xmlns.oracle.com/oracle/apps/marketing/commonMarketing/mktImport/model/}ImportServiceReturnParams

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*File Import Activity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BatchId	long	The import batch identifier.

Name	Type	Description
		• Primary Key
FormatErrors	long	The number of formatting errors encountered during the import process.
LoadDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the imported records are loaded.
LoadErrors	long	The number of loading errors encountered during the import process.
RecordReadFromFile	long	The number of records read from the file during import.
Status	string	The status of the record.
SuccessfullyLoaded	long	The number of successfully loaded records during the import process.

Import Job Object Parameters View Object

Contains the object parameters.

QName: {http://xmlns.oracle.com/apps/marketing/commonMarketing/mktImport/model/}ImportObjectParam

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*File Import Activity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ObjectName	string	The object name.
ParamName	string	The parameter name.

Name	Type	Description
		• Primary Key
ParamType	string	The parameter type.
ParamValue	string	The parameter value.

Import Job Parameters View Object

Contains the name value pairs.

QName: {http://xmlns.oracle.com/apps/marketing/commonMarketing/mktImport/model/}ImportParam

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*File Import Activity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Name	string	The name of the parameter. • Primary Key
Value	string	The value of the parameter.

Import Service File

The Import Service File view object.

QName: {http://xmlns.oracle.com/apps/marketing/commonMarketing/mktImport/model/}ImportServiceFiles

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Name*
Handled by	*File Import Activity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Files	*Import Service File Tag*	The files tag view link.

Import Service File Tag

The Import Service File Tag view object.

QName: {http://xmlns.oracle.com/apps/marketing/commonMarketing/mktImport/model/}ImportServiceFileTag

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Name*
Contained by	*Import Service File*
Handled by	*File Import Activity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
File	*Import Service File Detail*	The file tag.

Import Service File Detail

The Import Service Details view object.

QName: {http://xmlns.oracle.com/apps/marketing/commonMarketing/mktImport/model/}ImportServiceFileDetails

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Import Service File Tag*
Handled by	*File Import Activity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
FileContent	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The response file content.
FileExtension	string	The response file extension.
FileType	string	The response file type.
Name	string	The response file name.

Incentive Compensation Calendar Period Status

Service to retrieve the current status of an incentive compensation calendar period. You can also use the service to close the calendar period. To close the period, payment batches must be paid and prior periods must not have a status of Not Opened, Future Entry, or Open.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/systemSetup/calendarService/}PeriodStatusService

Service WSDL URL: https://servername/fscmService/IncentivePeriodStatusService?WSDL

Logical Business Objects

- IC : Incentive Compensation : Incentive Compensation Calendar

Operations

- *getPeriodStatus*
- *closePeriod*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

getPeriodStatus

Gets the period status for a given calendar period and business unit.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
orgName	string	The business unit to which the calendar belongs. You assign a calendar to your business unit using the Setup and Maintenance, Manage Parameters task.
periodName	string	The calendar period name. You define period names for your calendar using the Setup and Maintenance, Manage Calendars task.

Response Payload

Element Name	Type	Description
result	string	The status of the period.

closePeriod

Closes the calendar period for a business unit.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
orgName	string	The business unit to which the calendar belongs. You assign a calendar to your business unit using the Setup and Maintenance, Manage Parameters task.
periodName	string	The calendar period name. You define period names for your calendar using the Setup and Maintenance, Manage Calendars task.

Response Payload

Element Name	Type	Description
result	string	The request ID of the close period process.

getDfltObjAttrHints

Gets user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.

Element Name	Type	Description
localeName	string	The locale to use when evaluating the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Gets the date and time for when the schema files, referenced in the service definition, last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The payload output date and time for when the schema files, referenced in the service definition, last changed.

getEntityList

Gets the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	CN_CONFIGURE_INCENTIVE_COMPENSATION_TABLES_AND_COLUMNS_PRIV	Configure Incentive Compensation Tables and Columns	Allows configuration of tables and columns required for incentive compensation processing.
All Operations	CN_REGISTER_INCENTIVE_COMPENSATION_PARTICIPANT_PRIV	Register Incentive Compensation Participant	Allows import of incentive compensation participant, a person or organization. For example, an employee, salesperson, party, supplier contract, partner, or third party resale contractor whose data and payments the incentive compensation application computes and manages.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
CN_CONFIGURE_INCENTIVE_COMPENSATION_TABLES_AND_COLUMNS_PRIV	ORA_CN_INCENTIVES_ADMINISTRATION_DUTY	Incentive Compensation Administration	Configure and maintain incentive compensation enterprise and business unit setup.
CN_CONFIGURE_INCENTIVE_COMPENSATION_TABLES_AND_COLUMNS_PRIV	ORA_CN_INCENTIVE_COMPENSATION_ADMINISTRATOR_JOB	Incentive Compensation Application Administrator	Set up incentive compensation application
CN_REGISTER_INCENTIVE_COMPENSATION_PARTICIPANT_PRIV	ORA_CN_INCENTIVE_COMPENSATION_ASSIGNMENT_ADMISTRATION_DUTY	Incentive Compensation Participant Assignments	Create and maintain the assignments of analyst to participant, participants and roles to compensation and payment plans as well as pay groups
CN_REGISTER_INCENTIVE_COMPENSATION_PARTICIPANT_PRIV	ORA_CN_INCENTIVE_COMPENSATION_ADMINISTRATOR_JOB	Incentive Compensation Application Administrator	Set up incentive compensation application

Incentive Compensation Credit Rule

Service to create, retrieve, delete, and update credit rules. This includes credit rule criteria and credit receivers.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/creditSetup/creditRule/creditRuleService/}CreditRuleService

Service WSDL URL: https://servername/fscmService/CreditRuleService?WSDL

Logical Business Objects

- IC : Incentive Compensation : Incentive Compensation Credit Rule

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

- *getEntityList*

getRuleStats

Method to analyze and gather the overall statistics of all Rule related data such as, Rule, Rule Attributes, Rule Attribute Values and Rule Assignments

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	void	No return object

getRuleAttribute

Gets a single rule attribute that matches the specified unique rule attribute identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
ruleAttributeId	long	The unique identifier of the rule attribute.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Credit Rule Attribute*	The rule attribute that matches the specified criteria.

createRuleAttribute

Creates a single rule attribute.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
ruleAttribute	*Incentive Compensation Credit Rule Attribute*	The input payload for the rule attribute to be created.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Credit Rule Attribute*	The created rule attribute.

updateRuleAttribute

Updates a single rule attribute.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
ruleAttribute	*Incentive Compensation Credit Rule Attribute*	The input payload for the rule attribute to be updated.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Credit Rule Attribute*	The updated rule attribute.

deleteRuleAttribute

Deletes a single rule attribute.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
ruleAttribute	*Incentive Compensation Credit Rule Attribute*	The input payload for the rule attribute to be deleted.

Response Payload

Element Name	Type	Description
result	void	No return object.

findRuleAttribute

Finds and returns a list of rule attributes based on a query statement.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The input payload criteria used to find the rule attributes.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The control object used as a placeholder for finding credit rules. Not currently used.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Credit Rule Attribute*	The list of rule attributes that match the specified criteria.

processRuleAttribute

Performs a create, update, delete or merge operation on a list of rule attributes. The specified operation is applied to all objects in the given list.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	The create, update, delete, or merge operation to perform.
ruleAttribute	*Incentive Compensation Credit Rule Attribute*	The list of rule attributes for which the specified operation was applied.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The object of type ProcessControl, which provides optional process control.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Credit Rule Attribute*	The list of rule attributes for which the specified operation was applied.

getRuleAssignment

Gets a single rule assignment that matches the specified unique rule assignment identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
ruleAssignmentId	long	The unique identifier of the rule assignment.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Credit Rule Participant*	The rule assignment that matches the specified criteria.

createRuleAssignment

Creates a single rule assignment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
ruleAssignment	*Incentive Compensation Credit Rule Participant*	The input payload for the rule assignment to be created.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Credit Rule Participant*	The created rule assignment.

updateRuleAssignment

Updates a single rule assignment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
ruleAssignment	*Incentive Compensation Credit Rule Participant*	The input payload for the rule assignment to be updated.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Credit Rule Participant*	The updated rule assignment.

deleteRuleAssignment

Deletes a single rule assignment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
ruleAssignment	*Incentive Compensation Credit Rule Participant*	The input payload for the rule assignment to be deleted.

Response Payload

Element Name	Type	Description
result	void	No return object.

findRuleAssignment

Finds and returns a list of rule assignments based on a query statement.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The input payload criteria used to find the rule assignments.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The control object used as a placeholder for finding credit rules. Not currently used.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Credit Rule Participant*	The list of rule assignments that match the specified criteria.

processRuleAssignment

Performs a create, update, delete or merge operation on a list of rule assignments. The specified operation is applied to all objects in the given list.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	The create, update, delete, or merge operation to perform.
ruleAssignment	*Incentive Compensation Credit Rule Participant*	The list of rule assignments for which the specified operation was applied.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The object of type ProcessControl, which provides optional process control.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Credit Rule Participant*	The list of rule assignments for which the specified operation was applied.

getRuleAttributeValue

Gets a single rule attribute value that matches the specified unique rule attribute value identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
ruleAttrValueId	long	The unique identifier of the attribute value.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Credit Rule Attribute Value*	The rule attribute value that matches the specified criteria.

createRuleAttributeValue

Creates a single rule attribute value.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
ruleAttributeValue	*Incentive Compensation Credit Rule Attribute Value*	The input payload for the rule attribute value to be created.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Credit Rule Attribute Value*	The created rule attribute value.

updateRuleAttributeValue

Updates a single rule attribute value.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
ruleAttributeValue	*Incentive Compensation Credit Rule Attribute Value*	The input payload for the rule attribute value to be updated.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Credit Rule Attribute Value*	The updated rule attribute value.

deleteRuleAttributeValue

Deletes a single rule attribute value.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
ruleAttributeValue	*Incentive Compensation Credit Rule Attribute Value*	The input payload for the rule attribute value to be deleted.

Response Payload

Element Name	Type	Description
result	void	No return object.

findRuleAttributeValue

Finds and returns a list of rule attribute values based on a query statement.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The input payload criteria used to find the rule attribute values.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The control object used as a placeholder for finding credit rules. Not currently used.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Credit Rule Attribute Value*	The list of rule attribute values that match the specified criteria.

processRuleAttributeValue

Performs a create, update, delete or merge operation on a list of rule attribute values. The specified operation is applied to all objects in the given list.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	The create, update, delete, or merge operation to perform.
ruleAttributeValue	*Incentive Compensation Credit Rule Attribute Value*	The list of rule attribute values for which the specified operation was applied.

Element Name	Type	Description
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The object of type ProcessControl, which provides optional process control.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Credit Rule Attribute Value*	The list of rule attribute values for which the specified operation was applied.

getRule

Gets a single rule that matches the specified unique rule identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
ruleId	long	The unique identifier of the rule.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Credit Rule*	The rule that matches the specified criteria.

createRule

Creates a single rule.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
rule	*Incentive Compensation Credit Rule*	The input payload for the rule to be created.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Credit Rule*	The created rule.

updateRule

Updates a single rule.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
rule	*Incentive Compensation Credit Rule*	The input payload for the rule to be updated.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Credit Rule*	The updated rule.

deleteRule

Deletes a single rule.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
rule	*Incentive Compensation Credit Rule*	The input payload for the rule to be deleted.

Response Payload

Element Name	Type	Description
result	void	No return object.

findRule

Finds and returns a list of rules based on a query statement.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The input payload criteria used to find the rules.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The control object used as a placeholder for finding credit rules. Not currently used.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Credit Rule*	The list of rules that match the specified criteria.

findRuleByRuleName

Finds a rule by the rule name.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The input payload criteria used to find a rule by the rule name.
RuleName	string	The rule name.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The control object used as a placeholder for finding credit rules. Not currently used.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Credit Rule*	The list of rules that match the specified criteria.

processRule

Performs a create, update, delete or merge operations on a list of rules. The specified operation is applied to all objects in the given list.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	The create, update, delete, or merge operation to perform.
rule	*Incentive Compensation Credit Rule*	The list of rules for which the specified operation was applied.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The object of type ProcessControl, which provides optional process control.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Credit Rule*	The list of rules for which the specified operation was applied.

getDfltObjAttrHints

Gets user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Gets the date and time for when the schema files, referenced in the service definition, last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in the ISO 8601 format.

getEntityList

Gets the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	CN_REVIEW_INCENTIVE_COMPENSATION_CLASSIFICATION_RULE_HIERARCHY_PRIV	Review Incentive Compensation Classification Rule Hierarchy	Allows review of rule hierarchy used by incentive compensation to classify sales transactions into user-defined credit categories.
All Operations	CN_MANAGE_INCENTIVE_COMPENSATION_TEAM_PRIV	Manage Incentive Compensation Team	Allows maintenance of incentive compensation teams used in determining incentive compensation credit receivers.
All Operations	CN_MANAGE_INCENTIVE_COMPENSATION_CLASSIFICATION_RULE_HIERARCHY_PRIV	Manage Incentive Compensation Classification Rule Hierarchy	Allows maintenance of rule hierarchy used to classify sales transactions into user-defined credit categories of business revenue.
All Operations	CN_MANAGE_INCENTIVE_COMP_ROLLUP_GROUP_PRIV	Manage Incentive Compensation Rollup Group	Allows maintenance of incentive compensation groups used to determine who receives rollup credits.
All Operations	CN_MANAGE_INCENTIVE_COMPENSATION_CREDIT_RULE_PRIV	Manage Incentive Compensation Credit Rule	Allows maintenance of rule criteria used to determine who receives incentive compensation credit.
All Operations	CN_REVIEW_INCENTIVE_COMPENSATION_ROLLUP_GROUP_PRIV	Review Incentive Compensation Rollup Group	Allows review of rollup group hierarchy used to determine who receives incentive compensation rollup credits.
All Operations	CN_REVIEW_INCENTIVE_COMPENSATION_CREDIT_RULE_PRIV	Review Incentive Compensation Credit Rule	Allows maintenance of assignment to credit rules used to determine who receives incentive compensation credit.
All Operations	CN_CREATE_INCENTIVE_COMPENSATION_TEAM_PRIV	Create Incentive Compensation Team	Allows creation of teams used in determining incentive compensation credit receivers.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
CN_MANAGE_INCENTIVE_COMPENSATION_CLASSIFICATION_RULE_HIERARCHY_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PLAN_ADMINISTRATOR_JOB	Incentive Compensation Plan Administrator	Configure and manage incentive plans, plan components, and classification rules
CN_CREATE_INCENTIVE_COMPENSATION_TEAM_PRIV	ORA_CN_INCENTIVE_COMPENSATION_ASSIGNMENT_ADMISTRATION_DUTY	Incentive Compensation Participant Assignments	Create and maintain the assignments of analyst to participant, participants and roles

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			to compensation and payment plans as well as pay groups
CN_MANAGE_INCENTIVE_COMP_ROLLUP_GROUP_PRIV	ORA_CN_INCENTIVE_COMPENSATION_ASSIGNMENT_ADMISTRATION_DUTY	Incentive Compensation Participant Assignments	Create and maintain the assignments of analyst to participant, participants and roles to compensation and payment plans as well as pay groups
CN_MANAGE_INCENTIVE_COMPENSATION_CREDIT_RULE_PRIV	ORA_CN_INCENTIVE_COMPENSATION_ASSIGNMENT_ADMISTRATION_DUTY	Incentive Compensation Participant Assignments	Create and maintain the assignments of analyst to participant, participants and roles to compensation and payment plans as well as pay groups
CN_MANAGE_INCENTIVE_COMPENSATION_TEAM_PRIV	ORA_CN_INCENTIVE_COMPENSATION_ASSIGNMENT_ADMISTRATION_DUTY	Incentive Compensation Participant Assignments	Create and maintain the assignments of analyst to participant, participants and roles to compensation and payment plans as well as pay groups

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_CN_INCENTIVE_COMPENSATION_PLAN_ADMINISTRATOR_JOB	ORA_CN_INCENTIVE_COMPENSATION_CREDITS_EARNINGS_MANAGEMENT_DUTY	Incentive Compensation Credits and Earnings	Create, review, and adjust incentive compensation transactions, credits and earnings. Create and manage requests to calculate the incentive compensation for a set of participants.
ORA_CN_INCENTIVE_COMPENSATION_PLAN_ADMINISTRATOR_JOB	ORA_CN_INCENTIVE_COMPENSATION_ASSIGNMENT_ADMISTRATION_DUTY	Incentive Compensation Participant Assignments	Create and maintain the assignments of analyst to participant, participants and roles to compensation and payment plans as well as pay groups

Incentive Compensation Credit Rule Attribute

The input payload service data object to create and manage credit rule qualifying criteria attributes. The attributes must be enabled for crediting using the Setup and Maintenance, Configure Tables and Columns task. When the attribute is based on a descriptive flex field, define and deploy the flex field and then define the attribute as a custom qualifier using the Setup and Maintenance, Manage Custom Rule Qualifiers task.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/creditSetup/creditRule/creditRuleService/}RuleAttribute

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Incentive Compensation Credit Rule*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttrUsageId	long	The unique identifier for the attribute usage record.
Attribute1	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute10	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute11	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute12	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute13	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute14	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute15	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute2	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute3	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute4	string	The user-definable descriptive flex field for a character data type value. Not currently used.

Name	Type	Description
Attribute5	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute6	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute7	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute8	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute9	string	The user-definable descriptive flex field for a character data type value. Not currently used.
AttributeCategory	string	The context segment for the descriptive flex field. Not currently used.
OrgId	long	The unique identifier of the business unit record.
RuleAttributeId	long	The unique identifier for the rule attribute record. • Primary Key
RuleId	long	The unique identifier for the associated rule record.

Incentive Compensation Credit Rule Attribute Value

The input payload service data object to create and manage credit rule qualifying criteria attribute values. For example, the qualifying attributes values equal to Invoice and Chargeback for the attribute Transaction Type.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/creditSetup/creditRule/creditRuleService/}RuleAttributeValue

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Incentive Compensation Credit Rule*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Attribute1	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute10	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute11	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute12	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute13	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute14	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute15	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute2	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute3	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute4	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute5	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute6	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute7	string	The user-definable descriptive flex field for a character data type value. Not currently used.

Name	Type	Description
Attribute8	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute9	string	The user-definable descriptive flex field for a character data type value. Not currently used.
AttributeCategory	string	The context segment for the descriptive flex field. Not currently used.
ComparisonOperator	string	The lookup code that represents the comparison operator. The operator indicate how the attribute values are considered for rule evaluation. For example, EQUAL_TO, BETWEEN, and LIKE.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
FirstChar	string	The first character of the minimum alphanumeric value criteria, used for attributes with a character data type. For example, the value "B" for an attribute value of "Brand A".
FirstValueId	long	A unique identifier generated by Oracle for use by the rule processing.
FourthValueId	long	A unique identifier generated by Oracle for use by the rule processing.
HighValueChar	string	The maximum alphanumeric value for the qualifying criteria attribute, used for attributes with a character data type and the BETWEEN operator.
HighValueNumber	long	The maximum numeric value for the qualifying criteria, used for attributes with a number data type and the BETWEEN operator.
LowValueChar	string	The minimum alphanumeric value for the qualifying criteria attribute, used for attributes with a character data type. For example, the value "Brand A" for a product attribute and the LIKE comparison operator.
LowValueCharCode	string	A unique code generated by Oracle for use by the rule processing.
LowValueCharId	long	The unique record identifier for the minimum alphanumeric value for the qualifying criteria

Name	Type	Description
		attribute, used for attributes of type character. For example, the value ID "10003890" for the inventory item Brand A Appliances.
LowValueNumber	long	The minimum numeric value for the qualifying criteria, used for attributes with a number data type.
OrgId	long	The unique identifier of the business unit record.
RuleAttrValueId	long	The unique identifier for the rule attribute value record. • Primary Key
RuleAttributeId	long	The unique identifier for the associated rule attribute record.
SecondValueId	long	A unique identifier generated by Oracle for use by the rule processing.
ThirdValueId	long	A unique identifier generated by Oracle for use by the rule processing.

Incentive Compensation Credit Rule Participant

The input payload service data object to manage rule credit receivers. The credits are generated for the credit receivers when the transaction meets the rule qualifying criteria. For example, the participant, John, is the credit receiver when the transaction product matches the rule qualifying criteria for the product attribute.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/creditSetup/creditRule/creditRuleService/}RuleAssignment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Incentive Compensation Credit Rule*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AssignedObjectId	long	The unique identifier of the credit receiver rule assignment record.
AssignedObjectType	string	The lookup code that represents the assigned object type. The code value INDIVIDUAL indicates a participant is specified. The code value PARTICIPANT_ON_TXN indicates the direct participant on the transaction is the credit receiver.
Attribute1	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute10	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute11	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute12	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute13	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute14	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute15	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute2	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute3	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute4	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute5	string	The user-definable descriptive flex field for a character data type value. Not currently used.

Name	Type	Description
Attribute6	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute7	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute8	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute9	string	The user-definable descriptive flex field for a character data type value. Not currently used.
AttributeCategory	string	The context segment for the descriptive flex field. Not currently used.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
GroupMemberCreditFlag	boolean	Indicates whether the participant will receive rollup credit from direct credit receivers in the group or groups lower in the hierarchy. Valid values are: Y,N.
OrgId	long	The unique identifier of the business unit record.
RevenueType	string	Lookup code that represents the revenue type, such as REVENUE or NONREVENUE.
RoleId	long	The unique identifier for the role record.
RollupFlag	boolean	A value that indicates whether to roll up the direct credits of the credit receiver to every individual on the parent rules in the rule hierarchy. Valid values are: Y,N.
RuleAssignmentId	long	The unique identifier for the rule credit receiver assignment record. • Primary Key
RuleId	long	The unique identifier for the associated rule record.
SplitPct	decimal	The percentage applied against the transaction amount to calculate the credit amount.

Name	Type	Description
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
SummaryFlag	boolean	Indicates whether to summarize the direct credits rolled up to an individual. Valid values are: Y,N.

Incentive Compensation Credit Rule

The input payload service data object to create and manage the credit rule and the rule position in the credit rule hierarchy.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/creditSetup/creditRule/creditRuleService/}Rule

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Incentive Compensation Credit Rule Translation SDO*
Handled by	*Incentive Compensation Credit Rule*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AbsoluteRank	long	The absolute position of this rule in the hierarchy.
AttrRelationProduct	decimal	A field not currently used.
Attribute1	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute10	string	The user-definable descriptive flex field for a character data type value. Not currently used.

Name	Type	Description
Attribute11	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute12	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute13	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute14	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute15	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute2	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute3	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute4	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute5	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute6	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute7	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute8	string	The user-definable descriptive flex field for a character data type value. Not currently used.
Attribute9	string	The user-definable descriptive flex field for a character data type value. Not currently used.
AttributeCategory	string	The context segment for the descriptive flex field. Not currently used.
Description	string	The free text description of the record.
EnabledFlag	boolean	The enable indicator used to determine whether to include this rule, and any child rules, when processing rules.

Name	Type	Description
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
Name	string	The credit rule name, used to identify the rule.
NumberAttr	long	The number of rule attributes.
NumberWinners	long	The number of winners to designate how many credit rules can win when the application evaluates each transaction during the crediting process.
OrgId	long	The unique identifier of the business unit record.
ParentRuleId	long	The unique identifier for the rule parent record.
Rank	long	The rank used to break ties between winning rules. The highest rank (lowest number) wins against lowest rank (highest number).
RelativeRank	long	The rule rank position in relation to another rule.
RuleId	long	The unique identifier for the rule record. • Primary Key
RuleNumber	string	The public unique identifier
RuleTranslationAccessor	*Incentive Compensation Credit Rule Translation*	The view link access to the translation records.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
UsageId	long	The unique identifier of the rule usage record.

Incentive Compensation Credit Rule Translation

The input payload service data object for the translatable attributes of the rule.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/creditSetup/creditRule/creditRuleService/}RuleTranslation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Incentive Compensation Credit Rule*
Handled by	*Incentive Compensation Credit Rule*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Description	string	The free text description of the record.
Language	string	The language into which the rule name and description are translated. The value must exist in the FND_LANGUAGES table. View existing languages using the Setup and Maintenance, Manage ISO Languages task. • Primary Key
Name	string	The credit rule name in the specified language.
RuleId	long	The unique identifier for the associated rule record. • Primary Key
SourceLanguage	string	The source language for the translated name and description. If providing a value, the value must exist in the FND_LANGUAGES table. View existing languages using the Setup and Maintenance, Manage ISO Languages task.

Incentive Compensation Dispute Request

Service to create, retrieve, and update incentive compensation disputes. A dispute can be related to an incentive compensation paysheet, credit, or calculated earning, as well as transactions for which the participant did not receive credit.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/disputeManagement/disputeService/}DisputeService

Service WSDL URL: https://servername/fscmService/DisputeService?WSDL

Logical Business Objects

getAssigneesList

Gets the list of assignees for the tasks related to a single dispute that matches the specified unique dispute identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
disputeId	string	The unique identifier of the dispute human task instance.

Response Payload

Element Name	Type	Description
result	string	The list of assignees for the dispute task that matches the specified criteria. The list is in the <UserId> | <User Name> format.

approveDisputeWithResolutionOnBehalfOf

Approves the task for the specified dispute and user. The task should be in Assigned state and Assigned to the user. The dispute resolution can also be provided using this method.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
disputeId	string	The unique identifier of the dispute human task instance.
user	string	The identifier of the user for whom the approval is on behalf of. The user identifier can be obtained from the getAssigneesList method.
resolution	string	The lookup code that represents the dispute resolution. Valid lookup codes for lookup type CN_DISPUTE_RESLN_TYPE can be reviewed using the Setup and Maintenance, Manage Incentive Compensation Lookups task.

Element Name	Type	Description
comments	string	The comments for the approval.

Response Payload

Element Name	Type	Description
result	string	Returns SUCCESS if the dispute approval is successful.

approveDisputeOnBehalfOf

Approves the task for the specified dispute and user. The task should be in Assigned state and Assigned to the user.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
disputeId	string	The unique identifier of the dispute human task instance.
user	string	The identifier of the user for whom the approval is on behalf of. The user identifier can be obtained from the getAssigneesList method.
comments	string	The comments for the approval.

Response Payload

Element Name	Type	Description
result	string	Returns SUCCESS if the dispute approval is successful.

rejectDisputeWithResolutionOnBehalfOf

Rejects the task for the specified dispute and user. The task should be in Assigned state and Assigned to the user. The dispute resolution can also be provided using this method.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
disputeId	string	The unique identifier of the dispute human task instance.
user	string	The identifier of the user for whom the rejection is on behalf of. The user identifier can be obtained from the getAssigneesList method.
resolution	string	The lookup code that represents the dispute resolution. Valid lookup codes for lookup type CN_DISPUTE_RESLN_TYPE can be reviewed using the Setup and Maintenance, Manage Incentive Compensation Lookups task.
comments	string	The comments for the rejection.

Response Payload

Element Name	Type	Description
result	string	Returns SUCCESS if the dispute rejection is successful.

rejectDisputeOnBehalfOf

Rejects the task for the specified dispute and user. The task should be in Assigned state and Assigned to the user.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
disputeId	string	The unique identifier of the dispute human task instance.
user	string	The identifier of the user for whom the rejection is on behalf of. The user identifier can be obtained from the getAssigneesList method.
comments	string	The comments for the rejection.

Response Payload

Element Name	Type	Description
result	string	Returns SUCCESS if the dispute rejection is successful.

initMOAC

Initializes the business unit context.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
privName	string	Name of the privilege with which to initialize the business unit context.

Response Payload

Element Name	Type	Description
result	void	No return object.

submitRequestedInformation

Submits the request for information for a dispute.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
disputeId	string	The unique identifier of the dispute human task instance.
user	string	The identifier of the user for whom the request for more information is from. The user identifier can be obtained from the getAssigneesList method.
comments	string	The comments for the request for more information.

Response Payload

Element Name	Type	Description
result	string	Returns SUCCESS if the dispute request for more information is successful.

reassignTasksonBehalfOf

Method to reassign a particular task associated with the disputeId (parameter) and assigned to the user (parameter - currentUser). The task should be in ASSIGNED state and assigned to the user. User Type can also be provided using this method.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
disputeId	string	DisputeId which is associated with the Human Tasks
currentUser	string	User obtained from the getAssigneesList method
newUser	string	New User to which the task has to be reassigned.
type	string	The type of new User. The type can be one of the following values 1. user 2. group 3. role

Response Payload

Element Name	Type	Description
result	string	Returns a message if the task for the specific dispute Id is successfully reassigned

getUserComments

Method to get the User Comments for the tasks related to the dispute with the specified disputeId

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
disputeId	string	DisputeId which is associated with the Human Tasks

Response Payload

Element Name	Type	Description
result	string	User Comments List for the tasks related to the dispute with the specified disputeId. This will be a list of strings where each string will be of the format '<Time> | <User Name>|<Comment>'.

delegateTaskonBehalfOf

Method to delegate a particular task associated with the disputeId (parameter) and assigned to the user (parameter - currentUser). The task should be in ASSIGNED state and assigned to the user.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
disputeId	string	DisputeId which is associated with the Human Tasks
currentUser	string	User obtained from the getAssigneesList method
newUser	string	New User to which the task has to be delegated.

Response Payload

Element Name	Type	Description
result	string	Returns a message if the task for the specific dispute Id is successfully reassigned

createDispute

Creates a single dispute.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
disputeP	*Incentive Compensation Dispute Request*	The input payload for the dispute to be created.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Dispute Request*	The created dispute.

updateDispute

Updates a single dispute.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
disputeP	*Incentive Compensation Dispute Request*	The input payload for the dispute to be updated.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Dispute Request*	The updated dispute.

getDispute

Gets a single dispute that matches the specified unique dispute identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
disputeId	long	The unique identifier of the dispute human task instance.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Get Dispute*	The dispute that matches the specified criteria.

getDfltObjAttrHints

Gets user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Gets the date and time for when the schema files, referenced in the service definition, last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

Gets the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	CN_MANAGE_INCENTIVE_COMPENSATION_DISPUTE_PRIV	Manage Incentive Compensation Dispute	Allows analysis of incentive compensation disputes.
All Operations	CN_MAINTAIN_INCENTIVE_COMPENSATION_PARTICIPANT_DETAIL_PRIV	Maintain Incentive Compensation Participant Detail	Allows assignment of participants to analysts, who manage incentive compensation details for a person or organization whose credits, attainment, earnings, disputes, and payments the incentive compensation application computes and manages. A person or organization can be an employee, salesperson, party, supplier contract, partner, or third party resale contractor.
All Operations	CN_CREATE_INCENTIVE_COMPENSATION_DISPUTE_PRIV	Create Incentive Compensation Dispute	Allows creation of dispute over incentive compensation credits,

Operation Name	Privilege Code	Privilege Name	Privilege Description
			earnings, payments, and goals for participant.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
CN_MAINTAIN_INCENTIVE_COMPENSATION_PARTICIPANT_DETAIL_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PARTICIPANT_PLAN_MANAGEMENT_DUTY	Incentive Compensation Participant Snapshot Management	Assign and maintain incentive plans and transactions for participants
CN_CREATE_INCENTIVE_COMPENSATION_DISPUTE_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PARTICIPANT_MANAGER_ABSTRACT	Incentive Compensation Participant Manager	Manage participants who receive incentive compensation and review reports
CN_CREATE_INCENTIVE_COMPENSATION_DISPUTE_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PARTICIPANT_ABSTRACT	Incentive Compensation Participant	Receive incentive compensation computed by the application and review reports
CN_CREATE_INCENTIVE_COMPENSATION_DISPUTE_PRIV	ORA_ZBS_SALES_VP_JOB	Sales VP	Manages sales managers within the organization. Responsible for account planning, territory and quota management, and managing sales forecasts for the territory.
CN_CREATE_INCENTIVE_COMPENSATION_DISPUTE_PRIV	ORA_ZBS_SALES_REPRESENTATIVE_JOB	Sales Representative	Represents the business to sell its products. Maintains relationships with customers and contacts, builds pipeline, manages leads and opportunities and performs sales forecasting.
CN_CREATE_INCENTIVE_COMPENSATION_DISPUTE_PRIV	ORA_ZBS_SALES_MANAGER_JOB	Sales Manager	Manages salespersons within the organization. Generates revenue within a territory, builds pipeline, manages territory forecasts, and assists salespersons in closing deals.
CN_MANAGE_INCENTIVE_COMPENSATION_DISPUTE_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PARTICIPANT_MANAGER_ABSTRACT	Incentive Compensation Participant Manager	Manage participants who receive incentive compensation and review reports
CN_MANAGE_INCENTIVE_COMPENSATION_DISPUTE_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PARTICIPANT_PLAN_MANAGEMENT_DUTY	Incentive Compensation Participant Snapshot Management	Assign and maintain incentive plans and transactions for participants
CN_MANAGE_INCENTIVE_COMPENSATION_DISPUTE_PRIV	ORA_ZBS_SALES_VP_JOB	Sales VP	Manages sales managers within the organization. Responsible for account planning, territory and

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			quota management, and managing sales forecasts for the territory.
CN_MANAGE_INCENTIVE_ COMPENSATION_DISPUTE_PRIV	ORA_ZBS_SALES_MANAGER_JOB	Sales Manager	Manages salespersons within the organization. Generates revenue within a territory, builds pipeline, manages territory forecasts, and assists salespersons in closing deals.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZBS_SALES_ REPRESENTATIVE_JOB	ORA_OKC_CONTRACT_REQUEST_ AUTHORING_DUTY	Contract Request Authoring	Authors contract request, uploads relevant documents and provides sufficient information to assignee to create contract.
ORA_CN_INCENTIVE_ COMPENSATION_PARTICIPANT_ MANAGER_ABSTRACT	ORA_CN_INCENTIVE_ COMPENSATION_PARTICIPANT_ ABSTRACT	Incentive Compensation Participant	Receive incentive compensation computed by the application and review reports
ORA_ZBS_SALES_VP_JOB	ORA_ZCM_SALES_PARTY_ MANAGEMENT_DUTY_FSCM	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ORA_ZBS_SALES_MANAGER_JOB	ORA_ZCM_SALES_PARTY_ MANAGEMENT_DUTY_FSCM	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ORA_ZBS_SALES_ REPRESENTATIVE_JOB	ORA_ZCM_SALES_PARTY_ MANAGEMENT_DUTY_FSCM	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_ZCM_SALES_PARTY_REVIEW_DUTY_FSCM	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ORA_ZBS_SALES_VP_JOB	ORA_SVC_SR_CONTRIBUTOR_FSCM	Service Request Contributor	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request Management capabilities. Would not be able to respond to customer, assign SR to a user or change the status of a SR.
ORA_ZBS_SALES_MANAGER_JOB	ORA_SVC_SR_CONTRIBUTOR_FSCM	Service Request Contributor	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request Management capabilities. Would not be able to respond to customer, assign SR to a user or change the status of a SR.
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_SVC_SR_CONTRIBUTOR_FSCM	Service Request Contributor	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request Management capabilities. Would not be able to respond to customer, assign SR to a user or change the status of a SR.
ORA_ZBS_SALES_VP_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY_FSCM	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
ORA_ZBS_SALES_MANAGER_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY_FSCM	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY_FSCM	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
ORA_ZBS_SALES_VP_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY_FSCM	Territory Management	Manages sales territories, territory proposals, and quotas.
ORA_ZBS_SALES_MANAGER_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY_FSCM	Territory Management	Manages sales territories, territory proposals, and quotas.

Incentive Compensation Dispute Request

The input payload service data object to create and update a dispute.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/disputeManagement/disputeService/}DisputeP

Logical Business Objects

- IC : Incentive Compensation : Incentive Compensation Dispute

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Incentive Compensation Dispute Request*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActualValue	decimal	The actual amount.
Attachment	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The attached file stored as binary data.
AttachmentName	string	The name of the file attached to the dispute.
BusinessUnit	string	The business unit name.
ClosedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the dispute is considered closed.
Comment	string	The comments for the dispute update.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
Customer	string	The customer name that is relevant to the dispute.
CustomerId	long	The unique identifier for the customer that is relevant to the dispute.

Name	Type	Description
DisputeDescription	string	Text entered to describe the dispute.
DisputeId	long	The unique identifier for the dispute record. • Primary Key
DisputeJustification	string	Text entered to justify the dispute.
DisputeName	string	Text entered to summarize the dispute. Used as the dispute notification abstract.
DisputeType	string	The lookup code that represents the dispute type, such as INCORRECT_PAYMENT or INCORRECT_CREDIT. The value must be a valid lookup code for lookup type CN_DISPUTE_TYPE. You can view lookup CN_DISPUTE_TYPE from the Setup and Maintenance, Manage Incentive Compensation Lookups task.
DisputeTypeMeaning	string	The lookup code meaning that represents the dispute type, such as missing transaction or incorrect payment adjustment. The value must be a valid lookup code meaning for lookup type CN_DISPUTE_TYPE. You can view lookup CN_DISPUTE_TYPE from the Setup and Maintenance, Manage Incentive Compensation Lookups task.
ExpectedValue	decimal	The expected amount.
InventoryItemId	long	The unique identifier for the inventory item or product that is relevant to the dispute.
Item	string	The name for the inventory item or product that is relevant to the dispute.
MeasureType	string	The measure type for the transaction quantity.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgId	long	The unique identifier of the business unit record. You can view the business unit identifier for a business unit from the Setup and Maintenance, Define Business Units task. (In the search results region, click the View menu to add the Business Unit ID column.) The

Name	Type	Description
		Incentive Compensation parameters must be defined for the business unit. You can define the parameters for the business unit scope using the Setup and Maintenance, Manage Parameters task.
ParticipantId	long	The unique record identifier for the participant for whom the dispute is for. You can view the participant identifier from the Participant Snapshot work area, Select Participant search results. You can also use the participant export web service.
ParticipantName	string	The participant name for whom the dispute is for.
PaymentAdjustmentType	string	The lookup code that represents the payment adjustment type for the payment adjustment that is relevant to the dispute. The value must be a valid lookup code for lookup type CN_PAYMENT_ADJUSTMENT_TYPE. You can view lookup CN_PAYMENT_ADJUSTMENT_TYPE from the Setup and Maintenance, Manage Incentive Compensation Lookups task.
PaymentAdjustmentTypeMeaning	string	The lookup code meaning that represents the payment adjustment type for the payment adjustment that is relevant to the dispute. The value must be a valid lookup code meaning for lookup type CN_PAYMENT_ADJUSTMENT_TYPE. You can view lookup CN_PAYMENT_ADJUSTMENT_TYPE from the Setup and Maintenance, Manage Incentive Compensation Lookups task.
PeriodId	long	The unique period number within a calendar, for the period in which the relevant event occurred.
PeriodName	string	The period name within a calendar, for the period in which the relevant event occurred.
PlanComponentName	string	The plan component name that is relevant to the dispute.
PrimaryParticipantId	long	The unique record identifier for the participant identified as the primary participant on the relevant transaction. You can view the participant identifier from the Participant Snapshot work area, Select Participant search results. You can also use the participant export web service.

Name	Type	Description
PrimaryParticipantName	string	The participant name for the participant identified as the primary participant on the relevant transaction.
RequestorParticipantId	long	The unique record identifier for the participant requesting the dispute. You can view the participant identifier from the Participant Snapshot work area, Select Participant search results. You can also use the participant export web service.
SourceEventDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The event date that is relevant to the dispute.
SourceTrxNumber	string	The transaction number for the transaction that is relevant to the dispute.
TaskId	long	The unique identifier for the human task record.
TransactionAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The transaction amount that is relevant to the dispute.
TransactionQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The transaction quantity that is relevant to the dispute.
TransactionType	string	The lookup code that represents the transaction type, such as INVOICE or ORDER, for the transaction that is relevant to the dispute. The value must be a valid lookup code for lookup type CN_TP_TRANSACTION_TYPE. You can view lookup CN_TP_TRANSACTION_TYPE from the Setup and Maintenance, Manage Incentive Compensation Lookups task.
TransactionTypeMeaning	string	The lookup code meaning that represents the transaction type, such as invoice or order, for the transaction that is relevant to the dispute. The value must be a valid lookup code meaning for lookup type CN_TP_TRANSACTION_TYPE. You can view lookup CN_TP_TRANSACTION_TYPE from the Setup and Maintenance, Manage Incentive Compensation Lookups task.

Incentive Compensation Get Dispute

The input payload service data object to retrieve dispute details.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/disputeManagement/disputeService/}GetDisputeP

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Incentive Compensation Dispute Request*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActualValue	decimal	The actual amount.
Attachment	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The attached file stored as binary data.
AttachmentName	string	The name of the file attached to the dispute.
ClosedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the dispute is considered closed.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CustomerId	long	The unique identifier for the customer that is relevant to the dispute.
DisputeDescription	string	Text entered to describe the dispute.
DisputeId	long	The unique identifier for the dispute record. • Primary Key
DisputeJustification	string	Text entered to justify the dispute.
DisputeName	string	Text entered to summarize the dispute. Used as the dispute notification abstract.
DisputeStatus	string	The lookup code that represents the dispute status, such as new, approved, or rejected.

Name	Type	Description
DisputeType	string	The lookup code that represents the dispute type, such as INCORRECT_PAYMENT or INCORRECT_CREDIT. The value must be a valid lookup code for lookup type CN_DISPUTE_TYPE. You can view lookup CN_DISPUTE_TYPE from the Setup and Maintenance, Manage Incentive Compensation Lookups task.
ExpectedValue	decimal	The expected amount.
InventoryItemId	long	The unique identifier for the inventory item or product that is relevant to the dispute.
MeasureType	string	The measure type for the transaction quantity.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgId	long	The unique identifier of the business unit record.
ParticipantId	long	The unique identifier for the participant record, the participant for whom the dispute is for.
PaymentAdjustmentType	string	The lookup code that represents the payment adjustment type for the payment adjustment that is relevant to the dispute.
PeriodId	long	The unique period number within a calendar, for the period in which the relevant event occurred.
PlanComponentName	string	The plan component name that is relevant to the dispute.
PrimaryParticipantId	long	The unique identifier for the participant record, the participant identified as the primary participant on the relevant transaction.
RequestorParticipantId	long	The unique identifier for the participant requesting the dispute.
ResolutionCode	string	The lookup code that represents the dispute resolution.

Name	Type	Description
SourceEventDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The event date that is relevant to the dispute.
SourceTrxNumber	string	The transaction number for the transaction that is relevant to the dispute.
TaskId	long	The unique identifier for the human task record.
TransactionAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The transaction amount that is relevant to the dispute.
TransactionQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The transaction quantity that is relevant to the dispute.
TransactionType	string	The lookup code that represents the transaction type, such as invoice (INVOICE) or order (ORDER), for the transaction that is relevant to the dispute.

Incentive Compensation Estimated Compensation

Service to estimate compensation. Estimation includes potential earnings and attainment for a participant based on a set of future transactions.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/transactionProcessing/estimatedCompensation/publicService/}EstimatedCompensationServiceService

Service WSDL URL: https://servername/fscmService/EstimatedCompensationServiceService?WSDL

Logical Business Objects

estimateCompensation

Estimates compensation for a participant based on a set of transactions.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
personInformation	*Incentive Compensation Estimated Compensation Participant*	The input payload for the participant for which the compensation was estimated. Uses the Incentive Compensation Estimated Compensation Participant service data object for this parameter.

Element Name	Type	Description
transactionList	*Incentive Compensation Est. Compensation Transactions*	The input payload for the transactions to be estimated.

Response Payload

Element Name	Type	Description
result	long	The scenario identifier created after estimation of earnings.

createEstimatedTransactions

Method to create transactions for estimation

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
personInformation	*Incentive Compensation Estimated Compensation Participant*	Personal information object
transactionList	*Incentive Compensation Est. Compensation Transactions*	List of transactions to be created for estimation

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Estimated Compensation Transaction Response SDO*	Status for each record requested via create operation

updateEstimatedTransactions

Method to update transactions for estimation

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
personInformation	*Incentive Compensation Estimated Compensation Participant*	Personal information object

Element Name	Type	Description
transactionList	*Incentive Compensation Est. Compensation Transactions*	List of transactions to be updated for estimation

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Estimated Compensation Transaction Response SDO*	Status for each record requested via update operation

deleteEstimatedTransactions

Method to delete existing transactions from estimation

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
personInformation	*Incentive Compensation Estimated Compensation Participant*	Personal information object
transactionReferenceList	*Incentive Compensation Estimated Compensation Transaction Reference SDO*	Transaction attributes to identify the records to delete, such as transaction name, transaction , line number.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Estimated Compensation Transaction Response SDO*	Status for each record requested via delete operation

getAttainmentSummary

Gets the aggregated attainment for each compensation plan, for each plan component within the plan, for each performance measure within the plan component, and for each interval for the performance measure.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The input payload criteria used to find the attainment summary.
scenarioId	long	The unique identifier of the estimated compensation scenario. The scenario identifier is provided in response to the estimateCompensation operation.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The control object used as a placeholder for finding the attainment summary. Not currently used.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Est. Compensation Attainment Summary*	The attainment summary.

getEarningSummary

Gets the aggregated earnings for each compensation plan, for each plan component within the plan, and for each interval for the plan component. Applicable for plan components that calculate individually and per interval.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The input payload criteria used to find the earning summary.
scenarioId	long	The unique identifier of the estimated compensation scenario. The scenario identifier is provided in response to the estimateCompensation operation.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The control object used as a placeholder for finding the earnings summary. Not currently used.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Est. Compensation Earning Summary*	The earning summary.

getIndividualEarnings

Gets the individual earnings for each transaction and participant. Applicable only for plan components that calculate individually.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The input payload criteria used to find the individual earnings.
scenarioId	string	The unique identifier of the estimated compensation scenario. The scenario identifier is provided in response to the estimateCompensation operation.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The control object used as a placeholder for finding individual earnings. Not currently used.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Est. Compensation Individual Earnings*	The individual earnings.

getDfltObjAttrHints

Gets user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value

Element Name	Type	Description
		of the name element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Gets the date and time for when the schema files, referenced in the service definition, last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

Gets the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Element Name	Type	Description

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	CN_PROJECT_INCENTIVE_COMPENSATION_COMMISSION_LINE_PRIV	Project Incentive Compensation Commission Line	Allows projection of incentive compensation earning.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
CN_PROJECT_INCENTIVE_COMPENSATION_COMMISSION_LINE_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PARTICIPANT_MANAGER_ABSTRACT	Incentive Compensation Participant Manager	Manage participants who receive incentive compensation and review reports
CN_PROJECT_INCENTIVE_COMPENSATION_COMMISSION_LINE_PRIV	ORA_ZBS_SALES_RESTRICTED_USER_JOB	Sales Restricted User	Has the same scope of visibility as the Sales Manager role to application data but can only view or read most of that data. The ability to create, update or delete data is restricted to notes, activities, attachments and reports.
CN_PROJECT_INCENTIVE_COMPENSATION_COMMISSION_LINE_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PARTICIPANT_ABSTRACT	Incentive Compensation Participant	Receive incentive compensation computed by the application and review reports
CN_PROJECT_INCENTIVE_COMPENSATION_COMMISSION_LINE_PRIV	ORA_ZBS_SALES_VP_JOB	Sales VP	Manages sales managers within the organization. Responsible for account planning, territory and quota management, and managing sales forecasts for the territory.
CN_PROJECT_INCENTIVE_COMPENSATION_COMMISSION_LINE_PRIV	ORA_ZBS_SALES_REPRESENTATIVE_JOB	Sales Representative	Represents the business to sell its products. Maintains relationships with customers and contacts, builds pipeline, manages leads and opportunities and performs sales forecasting.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
CN_PROJECT_INCENTIVE_COMPENSATION_COMMISSION_LINE_PRIV	ORA_ZBS_SALES_MANAGER_JOB	Sales Manager	Manages salespersons within the organization. Generates revenue within a territory, builds pipeline, manages territory forecasts, and assists salespersons in closing deals.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_OKC_CONTRACT_REQUEST_AUTHORING_DUTY	Contract Request Authoring	Authors contract request, uploads relevant documents and provides sufficient information to assignee to create contract.
ORA_CN_INCENTIVE_COMPENSATION_PARTICIPANT_MANAGER_ABSTRACT	ORA_CN_INCENTIVE_COMPENSATION_PARTICIPANT_ABSTRACT	Incentive Compensation Participant	Receive incentive compensation computed by the application and review reports
ORA_ZBS_SALES_VP_JOB	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY_FSCM	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ORA_ZBS_SALES_MANAGER_JOB	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY_FSCM	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY_FSCM	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ORA_ZBS_SALES_RESTRICTED_USER_JOB	ORA_ZCM_SALES_PARTY_MANAGEMENT_READ_ONLY_DUTY_FSCM	Sales Party Management Read Only	Read Only role for Sales Party Management Duty.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_ZCM_SALES_PARTY_REVIEW_DUTY_FSCM	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ORA_ZBS_SALES_VP_JOB	ORA_SVC_SR_CONTRIBUTOR_FSCM	Service Request Contributor	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request Management capabilities. Would not be able to respond to customer, assign SR to a user or change the status of a SR.
ORA_ZBS_SALES_MANAGER_JOB	ORA_SVC_SR_CONTRIBUTOR_FSCM	Service Request Contributor	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request Management capabilities. Would not be able to respond to customer, assign SR to a user or change the status of a SR.
ORA_ZBS_SALES_RESTRICTED_USER_JOB	ORA_SVC_SR_CONTRIBUTOR_FSCM	Service Request Contributor	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request Management capabilities. Would not be able to respond to customer, assign SR to a user or change the status of a SR.
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_SVC_SR_CONTRIBUTOR_FSCM	Service Request Contributor	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request Management capabilities. Would not be able to respond to customer, assign SR to a user or change the status of a SR.
ORA_ZBS_SALES_VP_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY_FSCM	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
ORA_ZBS_SALES_MANAGER_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY_FSCM	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY_FSCM	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZBS_SALES_VP_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY_FSCM	Territory Management	Manages sales territories, territory proposals, and quotas.
ORA_ZBS_SALES_MANAGER_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY_FSCM	Territory Management	Manages sales territories, territory proposals, and quotas.

Incentive Compensation Est. Compensation Attainment Summary

The output service data object for the aggregated compensation attainment estimation. This includes the aggregated attainment for each compensation plan, for each plan component within the plan, for each performance measure within the plan component, and for each interval within the performance measure.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/transactionProcessing/estimatedCompensation/publicService/}AttainmentSummaryP

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Incentive Compensation Estimated Compensation*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CompensationPlanId	decimal	The unique identifier for the plan record.
CompensationPlanName	string	The compensation plan name.
CurrentAttainmentAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The current attainment amount.
EarningTypeId	long	The unique identifier for the earning type record. The earning type, selected for the plan component, is used to classify earnings into monetary and nonmonetary categories.

Name	Type	Description
EarningTypeMeaning	string	Earning Type Name
EmailAddress	string	The email address associated with the record.
EstimatedAttainmentAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated attainment amount.
FormulaName	string	The performance measure name. • Primary Key
HomeCurrencyCode	string	The participant home currency code that is in effect as of the source event date.
IntervalGoal	decimal	The performance measure interval goal.
MeasureGoal	decimal	The performance measure goal.
ObjectStatus	string	The attainment record status.
OrgId	long	Business Unit Identifier
ParticipantName	string	The participant name.
PartyId	long	The unique identifier of the contact party.
PayPeriodId	decimal	The calendar period number.
PayoutFrequency	long	The plan component payout frequency..
PayoutFrequencyMeaning	string	Payout Frequency Name
PlanComponentId	decimal	The unique identifier for the plan component record.
PlanComponentName	string	The plan component name.
PlanComponentType	string	The plan component type.
ScenarioId	long	The unique identifier for the calculation estimation scenario.
SourceSystemId	string	The generated identifier for the participant party record in the Trading Community Model.

Name	Type	Description
TotalAttainmentAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total attainment amount.
UnitOfMeasure	string	The goal unit of measure.

Incentive Compensation Est. Compensation Earning Summary

The output service data object for the aggregated incentive earnings estimation. This service data object is used when the related plan component is defined to calculate transactions individually or grouped per interval.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/transactionProcessing/estimatedCompensation/publicService/}EarningSummaryP

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Incentive Compensation Estimated Compensation*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CompensationPlanId	decimal	The unique identifier for the plan record.
CompensationPlanName	string	The compensation plan name.
CurrentEarningAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The current earnings amount.
EarningTypeId	long	The unique identifier for the earning type record. The earning type, selected for the plan component, is used to classify earnings into monetary and nonmonetary categories.
EarningTypeMeaning	string	Earning Type Name

Name	Type	Description
EmailAddress	string	The email address associated with the record.
EstimatedEarningAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated earnings amount.
HomeCurrencyCode	string	The participant home currency code that is in effect as of the source event date.
ObjectStatus	string	The earning estimation record status. If the status value is CALCULATED, then the earnings amount is from the previous calculation.
OrgId	long	Business Unit Identifier
ParticipantName	string	The participant name.
PartyId	long	The unique identifier of the contact party.
PayPeriodId	decimal	The calendar period number.
PayoutFrequency	long	The plan component payout frequency..
PayoutFrequencyMeaning	string	Payout Frequency Name
PlanComponentId	long	The unique identifier for the plan component record. • Primary Key
PlanComponentName	string	The plan component name.
PlanComponentType	string	The plan component type.
ScenarioId	long	The unique identifier for the calculation estimation scenario.
SourceSystemId	string	The generated identifier for the participant party record in the Trading Community Model.
TotalEarningAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total earnings amount.

Incentive Compensation Est. Compensation Individual Earnings

The output service data object for the incentive earning estimation for each transaction. This service data object is used when the related plan component is defined to calculate transactions individually.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/transactionProcessing/estimatedCompensation/publicService/}IndividualEarningsP

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Incentive Compensation Estimated Compensation*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CompensationPlanId	long	The unique identifier for the plan record.
CompensationPlanName	string	The compensation plan name.
EarningId	long	The unique identifier for the earning record. • Primary Key
EarningTypeId	long	The unique identifier for the earning type record. The earning type, selected for the plan component, is used to classify earnings into monetary and nonmonetary categories.
EligibleCatId	long	The unique record identifier for the credit category to use when overriding the classification process. The credit category is a user-defined business category used to classify a transaction for compensation purposes.
EmailAddress	string	The email address associated with the record.
EstimatedEarningAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated earning amount.

Name	Type	Description
HomeCurrencyCode	string	The participant home currency code that is in effect as of the source event date.
InventoryItemId	decimal	The unique record identifier for the inventory item.
ObjectStatus	string	The earning estimation record status. If the status value is CALCULATED, then the earnings amount is from the previous calculation.
ParticipantName	string	The participant name.
PartyId	long	The unique identifier of the contact party.
PayPeriodId	decimal	The calendar period number.
PayoutFrequency	long	The plan component payout frequency..
PlanComponentId	long	The unique identifier for the plan component record.
PlanComponentName	string	The plan component name.
PlanComponentType	string	The plan component type.
ScenarioId	long	The plan component type.
SourceSystemId	string	The generated identifier for the participant party record in the Trading Community Model.
TransactionId	long	The unique identifier for the transaction record.
TransactionLineNumber	long	The number for the transaction line in the source application.
TransactionSubLineNumber	long	The number for the transaction sales credit line in the source application.
TransactionType	string	The lookup code that represents the type of transaction, such as INVOICE or ORDER.

Incentive Compensation Estimated Compensation Participant

The input payload service data object for the participant, used to identify the participant for estimating compensation.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/transactionProcessing/estimatedCompensation/publicService/}PersonInfo

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Incentive Compensation Estimated Compensation*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BusinessUnitName	string	The business unit name to which the participant belongs.
Email	string	The email address associated with the record.
ParticipantName	string	The name of the participant. • Primary Key
PartyNumber	string	The unique identification number for the party.
PersonNumber	string	The generated identifier for the participant person record in Oracle HCM Cloud.

Incentive Compensation Est. Compensation Transaction Flexfield

The input payload service data object for the user-defined details of the transactions to be estimated, such as geographic attributes and sales channels.

QName: {http://xmlns.oracle.com/apps/flex/incentiveCompensation/cn/transactionProcessing/estimatedCompensation/EstimatedCompTransPublicDFF/}EstimatedCompPublicDFF

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Incentive Compensation Est. Compensation Transactions*
Handled by	*Incentive Compensation Estimated Compensation*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AreaCode	string	The geographic transaction attribute for the area code. The area code is a component of a phone number and is usually a 3-digit number that identifies each telephone service area in a country.
BillingAddress	decimal	The unique identifier for the customer billing location.
BillingContact	decimal	The unique identifier for the contact person at the bill-to location.
City	string	The name of the city.
Country	string	The name of the country.
FLEXContext	string	The context segment for the descriptive flex field.
FLEXNumberOfSegments	int	The number of user-definable descriptive flex field segments.
FLEXNumberOfVisibleSegments	int	The number of visible user-definable descriptive flex field segments.
PostalCode	string	The postal code element of the address.
ProductItemId	decimal	The unique record identifier for the inventory item or product.

Name	Type	Description
Province	string	The name of the province.
SalesChannel	string	The sales channel which represents how the transaction was sold. For example, indirect or direct.
ShippingAddress	decimal	The unique identifier for the customer ship-to location.
ShippingContact	decimal	The unique identifier for the contact person at the ship-to location.
SoldToCustomer	decimal	The unique identifier for customer who purchased the items or services listed on the transaction.
SoldToCustomerDisplay	decimal	The name of the customer who purchased the items or services listed on the transaction.
State	string	The name of the state.

Incentive Compensation Estimated Compensation Transaction Reference SDO

Incentive Compensation Estimated Compensation Transaction Reference

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/transactionProcessing/estimatedCompensation/publicService/}EstimatedCompTransactionReference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Incentive Compensation Estimated Compensation*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
TransactionLineNumber	long	Transaction Line Number
TransactionName	string	Transaction Name • Primary Key
TransactionSubLineNumber	long	Transaction Sub Line Number
TransactionType	string	Transaction Type

Incentive Compensation Estimated Compensation Transaction Response SDO

Incentive Compensation Estimated Compensation Transaction Response

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/transactionProcessing/estimatedCompensation/publicService/}EstimatedCompTransactionResponse

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Incentive Compensation Estimated Compensation*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BusinessUnitName	string	Business Unit Name in the requested Payload • Primary Key
ErrorReason	string	Valid reason in case of failure
OperationStatus	string	SUCCESS/FAILURE
ParticipantId	long	Participant Id derived based on Request Payload

Name	Type	Description
ParticipantName	string	Participant Name derived based on Request Payload
TransactionId	long	Transaction ID of the record in IC that was created/updated/deleted. Will be populated only for Success status
TransactionLineNumber	long	Transaction Line Number attribute in requested payload
TransactionName	string	Transaction Name attribute in requested payload
TransactionSubLineNumber	long	Transaction Sub Line attribute in requested payload
TransactionType	string	Transaction Type attribute in requested payload

Incentive Compensation Est. Compensation Transactions

The input payload service data object for the transactions to be estimated, such as opportunities or quotes.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/transactionProcessing/estimatedCompensation/publicService/}EstimatedCompTransaction

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Incentive Compensation Estimated Compensation Transaction Flexfield SDO*
Handled by	*Incentive Compensation Estimated Compensation*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
DiscountPercentage	decimal	The percentage of the transaction amount that depicts the net amount to be paid by the customer.
EligibleCatId	long	The unique record identifier for the credit category to use when overriding the classification process. The credit category is a user-defined business category used to classify a transaction for compensation purposes.
EstimatedCompPublicDFF	*Incentive Compensation Est. Compensation Transaction Flexfield*	The context segment for the descriptive flex field.
MarginPercentage	decimal	The percentage of the transaction amount that depicts the profit of the sale.
RevenueType	string	Revenue Type
SalesStage	long	The opportunity sales stage.
SourceCurrencyCode	string	The currency code that represents the currency of the monetary transaction amount in the source application.
SourceEventDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The incentive event date, such as the estimated close date for the deal. This is a required attribute.
SplitPct	decimal	The percent of the transaction amount that the credit receiver should receive.
TransactionAmountSourceCurrency	decimal	The amount of the transaction in the source application currency. This is a required attribute.
TransactionLineNumber	long	The number for the transaction line in the source application.
TransactionName	string	The transaction name used to identify the transaction. This is a required attribute.
TransactionQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	Transaction Quantity
TransactionSubLineNumber	long	The number for the transaction sales credit line in the source application.

Name	Type	Description
TransactionType	string	The lookup code that represents the type of transaction, such as INVOICE or ORDER. The value must be a valid lookup code for lookup type CN_TP_TRANSACTION_TYPE. You can view lookup CN_TP_TRANSACTION_TYPE from the Setup and Maintenance, Manage Incentive Compensation Lookups task. This is a required attribute.
WinProbabilty	decimal	The probability of winning the deal.

Incentive Compensation Participant Export Web Service

Service to retrieve participant identifiers from the Oracle HCM Cloud person, Oracle Sales Cloud Customer Data Management party, and Oracle Sales Cloud Incentive Compensation participant. For example, you can retrieve the party identifier, person identifier, person number, and business unit. You can also retrieve the participant identifier, which you can add to relevant transaction data for collection and processing.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/participants/participantSetup/participantSetupService/}ParticipantExportService

Service WSDL URL: https://servername/fscmService/ParticipantExportService?WSDL

Logical Business Objects

- IC : Incentive Compensation : Incentive Compensation Participant

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Incentive Compensation Participant Export Service SDO*

Operations

- *recoverParticipantInformation*
- *findParticipantInformation*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*

- *getEntityList*

recoverParticipantInformation

Finds participant records with values that match the specified input criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
businessUnit	string	The name of the business unit.
email	string	The participant email.
name	string	The name of the participant.
partyOriginalSystemId	string	The unique identifier of the participant originating system.
partyOriginalSystem	string	The originating system of the participant.
creationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the participant record was created.
startDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The participant active start date.
partyType	string	The participant type. Valid values are Participant and Analyst.

Response Payload

Element Name	Type	Description
result	string	List of participants that match the specified criteria.

findParticipantInformation

Finds and returns a list of participants that match the specified input criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The input payload criteria used to find the participants.
partyId	long	The unique identifier of the participant party in the Trading Community Model.
personId	string	The unique identifier of the participant in Oracle HCM Cloud.
emailAddress	string	The participant email.
partySystemIdentifier	string	The unique identifier of the participant party originating system.
personNumber	string	The participant person number.
orgId	long	The unique identifier of the business unit to which the participant belongs. You can view the business unit identifier for a business unit from the Setup and Maintenance, Define Business Units task.
creationDate	{http://xmlns.oracle.com/adf/svc/types/}dateDate	The date when the participant record was created.
originatingSystem	string	The originating system of the participant party.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The control object used as a placeholder for finding participants. Not currently used.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Participant Export Service*	The list of participants that match the specified criteria.

getDfltObjAttrHints

Gets user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Gets the date and time for when the schema files, referenced in the service definition, last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in the ISO 8601 format.

getEntityList

Gets the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create,

Element Name	Type	Description
		update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	CN_REGISTER_INCENTIVE_COMPENSATION_PARTICIPANT_PRIV	Register Incentive Compensation Participant	Allows import of incentive compensation participant, a person or organization. For example, an employee, salesperson, party, supplier contract, partner, or third party resale contractor whose data and payments the incentive compensation application computes and manages.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
CN_REGISTER_INCENTIVE_COMPENSATION_PARTICIPANT_PRIV	ORA_CN_INCENTIVE_COMPENSATION_ASSIGNMENT_ADMISTRATION_DUTY	Incentive Compensation Participant Assignments	Create and maintain the assignments of analyst to participant, participants and roles to compensation and payment plans as well as pay groups
CN_REGISTER_INCENTIVE_COMPENSATION_PARTICIPANT_PRIV	ORA_CN_INCENTIVE_COMPENSATION_ADMINISTRATOR_JOB	Incentive Compensation Application Administrator	Set up incentive compensation application

Incentive Compensation Participant Export Service

The output service data object for participant identifiers.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/participants/participantSetup/publicService/participantService/}ParticipantExport

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Incentive Compensation Participant Export Web Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
EmailAddress	string	The email address associated with the record.
HRPersonNumberHCM	string	The generated person number for the participant person record in Oracle HCM Cloud.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateDateHCM	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time of the last update of the record in HCM. Used to identify if the already imported participant has been updated in the source system.
OrgId	long	The unique identifier of the business unit record.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system .
ParticipantId	long	The unique identifier for the participant record. • Primary Key
ParticipantName	string	The name of the participant.
PartyId	long	The unique identifier of the contact party.
PersonId	string	The unique identifier for the person record in Oracle HCM Cloud.

Incentive Compensation Participant Goal

Service to update participant performance measure interval goal and period goal values.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/participants/compensationPlanSetup/goalService/}GoalService

Service WSDL URL: https://servername/fscmService/IncentiveGoalService?WSDL

Logical Business Objects

updateIntervalGoal

Updates an interval goal and period goal for a participant.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
intervalGoal	*Incentive Compensation Participant Interval Goal*	The input payload of the interval goal, which includes the period goal, to be updated.

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Participant Interval Goal*	The updated interval goal.

getDfltObjAttrHints

Gets user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Gets the date and time for when the schema files, referenced in the service definition, last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in the ISO 8601 format.

getEntityList

Gets the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	CN_MAINTAIN_INCENTIVE_COMPENSATION_PARTICIPANT_DETAIL_PRIV	Maintain Incentive Compensation Participant Detail	Allows assignment of participants to analysts, who manage incentive compensation details for a person or organization whose credits, attainment, earnings, disputes, and payments the incentive compensation application computes and manages. A person or organization can be an employee, salesperson, party, supplier contract, partner, or third party resale contractor.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
CN_MAINTAIN_INCENTIVE_COMPENSATION_PARTICIPANT_DETAIL_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PARTICIPANT_PLAN_MANAGEMENT_DUTY	Incentive Compensation Participant Snapshot Management	Assign and maintain incentive plans and transactions for participants

Incentive Compensation Participant Interval Goal

The input payload service data object for to update the participant interval goal.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/participants/compensationPlanSetup/publicService/}IntervalGoal

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Incentive Compensation Participant Period Goal SDO*
Handled by	*Incentive Compensation Participant Goal*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AlternateTarget1Interval	decimal	The first of five alternate goal targets for a performance measure interval.
AlternateTarget2Interval	decimal	The second of five alternate goal targets for a performance measure interval.
AlternateTarget3Interval	decimal	The third of five alternate goal targets for a performance measure interval.
AlternateTarget4Interval	decimal	The fourth of five alternate goal targets for a performance measure interval.
AlternateTarget5Interval	decimal	The fifth of five alternate goal targets for a performance measure interval.
BusinessUnitName	string	The business unit name.

Name	Type	Description
EmailAddress	string	The email address associated with the record.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
HRPersonNumber	string	The generated person number for the participant person record in Oracle HCM Cloud.
IntervalGoalId	long	The unique identifier for the interval goal record.
IntervalNumber	decimal	The interval number, such as 2016004.
MeasureName	string	The performance measure name.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgId	long	The unique identifier of the business unit record.
ParticipantName	string	The name of the participant.
PartyId	long	The unique identifier of the contact party.
PartyNumber	string	The unique identification number for the party.
PeriodGoal	*Incentive Compensation Participant Period Goal*	The period goals associated with the interval goal.
PlanComponentName	string	The plan component name.
SrpGoalId	long	The unique identifier for the participant goal record.
SrpIntervalGoalId	long	The unique identifier for the participant interval goal record. • Primary Key
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.

Name	Type	Description
TargetInterval	decimal	The target goal for a performance measure interval.

Incentive Compensation Participant Period Goal

The input payload service data object for to update the participant period goal.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/participants/compensationPlanSetup/publicService/}PeriodGoal

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Incentive Compensation Participant Interval Goal*
Handled by	*Incentive Compensation Participant Goal*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AlternateTarget1ITD	decimal	The first of five alternate interval-to-date period goal targets. The interval-to-date value is the aggregate total of alternate target 1 values since the start of the interval.
AlternateTarget1Period	decimal	The first of five alternate goal targets for a performance measure period.
AlternateTarget2ITD	decimal	The second of five alternate interval-to-date period goal targets. The interval-to-date value is the aggregate total of alternate target 2 values since the start of the interval.
AlternateTarget2Period	decimal	The second of five alternate goal targets for a performance measure period.

Name	Type	Description
AlternateTarget3ITD	decimal	The third of five alternate interval-to-date period goal targets. The interval-to-date value is the aggregate total of alternate target 3 values since the start of the interval.
AlternateTarget3Period	decimal	The third of five alternate goal targets for a performance measure period.
AlternateTarget4ITD	decimal	The fourth of five alternate interval-to-date period goal targets. The interval-to-date value is the aggregate total of alternate target 4 values since the start of the interval.
AlternateTarget4Period	decimal	The forth of five alternate goal targets for a performance measure period.
AlternateTarget5ITD	decimal	The fifth of five alternate interval-to-date period targets. The interval-to-date value is the aggregate total of alternate target 5 values since the start of the interval.
AlternateTarget5Period	decimal	The fifth of five alternate goal targets for a performance measure period.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgId	long	The unique identifier of the business unit record.
PeriodGoalId	long	The unique identifier for the period goal record. Used internally as a reference to the originating plan component performance measure period goal.
PeriodId	long	The unique identifier for the period within the calendar.
SrpIntervalGoalId	long	The unique identifier for the participant interval goal record, to which this period goal belongs.
SrpPeriodGoalId	long	The unique identifier for the participant period goal record.

Name	Type	Description
		• Primary Key
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
TargetITD	decimal	The interval-to-date goal target. The interval-to-date value is the aggregate total of period goal target values since the start of the interval.
TargetPeriod	decimal	The period name.

Incentive Compensation Participant Plan

Service to approve or reject an incentive compensation plan for a participant.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/participants/compensationPlanSetup/srpCompPlanService/}SrpCompensationPlanService

Service WSDL URL: https://servername/fscmService/SrpCompensationPlanService?WSDL

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Incentive Compensation Participant Plan Approval SDO*

Operations

- *rejectSrpCompensationPlan*
- *getAssigneesList*
- *approveSrpCompensationPlan*
- *publishSrpCompensationPlan*

rejectSrpCompensationPlan

Rejects the task for the specified participant incentive compensation plan and user. The task should be in Assigned state and Assigned to the user.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
srpCompensationPlanApprovalId	string	The unique identifier of the participant compensation plan approval human task instance.
onBehalfOfUser	string	The identifier of the user for whom the approval is on behalf of. The user identifier can be obtained from the getAssigneesList method.
comments	string	The comments for the rejection.

Response Payload

Element Name	Type	Description
result	string	Returns SUCCESS if successful.

getAssigneesList

Gets the list of assignees for the task related to a participant incentive compensation plan approval as specified by the approval instance identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
srpCompensationPlanApprovalId	string	The unique identifier of the participant compensation plan approval human task instance.

Response Payload

Element Name	Type	Description
result	string	The list of assignees for the participant incentive compensation plan approval human task that matches the specified criteria. The list is in the <UserId> | <User Name> format.

approveSrpCompensationPlan

Approves the task for the specified participant incentive compensation plan and user. The task should be in Assigned state and Assigned to the user.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
srpCompensationPlanApprovalId	string	The unique identifier of the participant compensation plan approval human task instance.
onBehalfOfUser	string	The identifier of the user for whom the approval is on behalf of. The user identifier can be obtained from the getAssigneesList method.
comments	string	The comments for the approval.

Response Payload

Element Name	Type	Description
result	string	Returns SUCCESS if successful.

publishSrpCompensationPlan

Initiates the publish event for the participant incentive compensation plan approval, as specified by the parameter set.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
participantCompensationPlanApprovalRow	*Incentive Compensation Participant Plan Approval SDO*	The parameters available to invoke the web service method.

Response Payload

Element Name	Type	Description
result	string	Returns a SUCESS message if the business event has been successfully raised along with the SrpApprovalInstanceId. Returns a FAILURE message if business event was not raised.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	CN_VERIFY_PARTICIPANT_EARNINGS_AND_ATTAINMENT_REPORT_PRIV	Verify Participant Earnings and Attainment Report	Allows review of participant earnings and attainment report.
All Operations	CN_CUSTOMIZE_INCENTIVE_COMPENSATION_PARTICIPANT_COMPENSATION_PLAN_PRIV	Individualize Incentive Compensation Participant Compensation Plan	Allows individualization of participant distributed goals for incentive plans, which ties participant earnings to actual production on an individual or group basis.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
CN_VERIFY_PARTICIPANT_EARNINGS_AND_ATTAINMENT_REPORT_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PARTICIPANT_MANAGER_ABSTRACT	Incentive Compensation Participant Manager	Manage participants who receive incentive compensation and review reports
CN_VERIFY_PARTICIPANT_EARNINGS_AND_ATTAINMENT_REPORT_PRIV	ORA_ZBS_SALES_RESTRICTED_USER_JOB	Sales Restricted User	Has the same scope of visibility as the Sales Manager role to application data but can only view or read most of that data. The ability to create, update or delete data is restricted to notes, activities, attachments and reports.
CN_VERIFY_PARTICIPANT_EARNINGS_AND_ATTAINMENT_REPORT_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PARTICIPANT_ABSTRACT	Incentive Compensation Participant	Receive incentive compensation computed by the application and review reports

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
CN_VERIFY_PARTICIPANT_EARNINGS_AND_ATTAINMENT_REPORT_PRIV	ORA_ZBS_SALES_VP_JOB	Sales VP	Manages sales managers within the organization. Responsible for account planning, territory and quota management, and managing sales forecasts for the territory.
CN_VERIFY_PARTICIPANT_EARNINGS_AND_ATTAINMENT_REPORT_PRIV	ORA_ZBS_SALES_REPRESENTATIVE_JOB	Sales Representative	Represents the business to sell its products. Maintains relationships with customers and contacts, builds pipeline, manages leads and opportunities and performs sales forecasting.
CN_VERIFY_PARTICIPANT_EARNINGS_AND_ATTAINMENT_REPORT_PRIV	ORA_ZBS_SALES_MANAGER_JOB	Sales Manager	Manages salespersons within the organization. Generates revenue within a territory, builds pipeline, manages territory forecasts, and assists salespersons in closing deals.
CN_CUSTOMIZE_INCENTIVE_COMPENSATION_PARTICIPANT_COMPENSATION_PLAN_PRIV	ORA_CN_INCENTIVE_COMPENSATION_ASSIGNMENT_ADMISTRATION_DUTY	Incentive Compensation Participant Assignments	Create and maintain the assignments of analyst to participant, participants and roles to compensation and payment plans as well as pay groups
CN_CUSTOMIZE_INCENTIVE_COMPENSATION_PARTICIPANT_COMPENSATION_PLAN_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PARTICIPANT_PLAN_MANAGEMENT_DUTY	Incentive Compensation Participant Snapshot Management	Assign and maintain incentive plans and transactions for participants

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_OKC_CONTRACT_REQUEST_AUTHORING_DUTY	Contract Request Authoring	Authors contract request, uploads relevant documents and provides sufficient information to assignee to create contract.
ORA_CN_INCENTIVE_COMPENSATION_PARTICIPANT_MANAGER_ABSTRACT	ORA_CN_INCENTIVE_COMPENSATION_PARTICIPANT_ABSTRACT	Incentive Compensation Participant	Receive incentive compensation computed by the application and review reports
ORA_ZBS_SALES_VP_JOB	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY_FSCM	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZBS_SALES_MANAGER_JOB	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY_FSCM	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY_FSCM	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ORA_ZBS_SALES_RESTRICTED_USER_JOB	ORA_ZCM_SALES_PARTY_MANAGEMENT_READ_ONLY_DUTY_FSCM	Sales Party Management Read Only	Read Only role for Sales Party Management Duty.
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_ZCM_SALES_PARTY_REVIEW_DUTY_FSCM	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ORA_ZBS_SALES_VP_JOB	ORA_SVC_SR_CONTRIBUTOR_FSCM	Service Request Contributor	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request Management capabilities. Would not be able to respond to customer, assign SR to a user or change the status of a SR.
ORA_ZBS_SALES_MANAGER_JOB	ORA_SVC_SR_CONTRIBUTOR_FSCM	Service Request Contributor	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request Management capabilities. Would not be able to respond to customer, assign SR to a user or change the status of a SR.
ORA_ZBS_SALES_RESTRICTED_USER_JOB	ORA_SVC_SR_CONTRIBUTOR_FSCM	Service Request Contributor	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request Management capabilities. Would not be able to respond to customer, assign SR to a user or change the status of a SR.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_SVC_SR_CONTRIBUTOR_FSCM	Service Request Contributor	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request Management capabilities. Would not be able to respond to customer, assign SR to a user or change the status of a SR.
ORA_ZBS_SALES_VP_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY_FSCM	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
ORA_ZBS_SALES_MANAGER_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY_FSCM	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY_FSCM	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
ORA_ZBS_SALES_VP_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY_FSCM	Territory Management	Manages sales territories, territory proposals, and quotas.
ORA_ZBS_SALES_MANAGER_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY_FSCM	Territory Management	Manages sales territories, territory proposals, and quotas.

Incentive Compensation Participant Plan Approval SDO

The service data object works with the corresponding service to initiate the compensation plan approval for a participant.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/participants/compensationPlanSetup/srpCompPlanService/}SrpCompensationPlanApproval

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Incentive Compensation Participant Plan*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BusinessUnitId	long	The unique identifier for the business unit of the participant. • Primary Key
BusinessUnitName	string	The business unit name of the participant. It is a case sensitive field. Consuming application should provide either BusinessUnitId or BusinessUnitName. • Primary Key
CompensationPlanId	long	The unique identifier for the compensation plan assigned to the participant.
CompensationPlanName	string	Name of the compensation plan assigned to the participant. It is a case-sensitive field. Consuming applications should provide either the CompensationPlanId or CompensationPlanName.
EmailId	string	E-mail address of the participant. It is a case-sensitive field.
ParticipantId	long	The unique identifier for the participant.
ParticipantName	string	Name of the participant. It is a case-sensitive field. Consuming application should provide either PersonNumber, EmailId, ParticipantId , ParticipantName, or PartyId.
PartyId	long	Party identifier of the participant.
PersonNumber	string	HR PersonNumber of the participant.
PlanAssignmentEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the compensation plan becomes inactive for the participant. The format is 'YYYY-MM-DD'. This field only needs to be passed if the same compensation plan is assigned several times to the participant for different date ranges. In other cases, you need to pass a value '4712-12-31' in place of a 'null' value.
PlanAssignmentStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the compensation plan becomes active for the participant. The format is 'YYYY-MM-DD'. This field only needs to

Name	Type	Description
		be passed if the same compensation plan is assigned several times to the participant for different date ranges. In other cases, you must pass a value '4712-12-31' in place of a 'null' value.
RoleId	long	The unique identifier for the role to which the participant is assigned.
RoleName	string	Name of the role to which the participant is assigned to. It is a case-sensitive field. The consuming application should provide either RoleId or RoleName, if the plan is assigned through a role.

Incentive Compensation Participant Version 2

This service enables you to manage participant events and assignments through the role within the application.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/participants/participantSetup/publicService/participantServiceV2/}ParticipantService

Service WSDL URL: https://servername/fscmService/ParticipantServiceV2?WSDL

Logical Business Objects

- IC : Incentive Compensation : Incentive Compensation Participant

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Incentive Compensation Participant Plan Search SDO*
Handles	*Incentive Compensation Participant Plan Additional Attributes SDO*
Handles	*Incentive Compensation Participant Plan SDO*
Handles	*Incentive Compensation Participant Detail Flexfield SDO*

Relationship Type	Object or Service
Handles	*Incentive Compensation Terminate Participant SDO*
Handles	*Incentive Compensation Participant Detail SDO*
Handles	*Incentive Compensation Participant Role SDO*
Handles	*Incentive Compensation Participant Plan Target SDO*

Operations

- *holdParticipantPayment*
- *terminateParticipant*
- *assignCOMPRoleToParticipant*
- *processParticipantTargetIncentive*
- *automaticTerminateParticipant*
- *assignRoleToParticipant*
- *mergeParticipantDetail*
- *terminateActiveParticipant*
- *findParticipantPlan*
- *updateParticipantPlan*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

holdParticipantPayment

Set the participant's (header) Hold Payment to Y to exclude the participant from the Payment process. This method requires one of the first three parameters; pass 0 for unknow or null values.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
personId	string	Unique identifier for the person
partyId	long	Unique identifier for the party
participantId	long	Unique identifier for the participant
orgId	long	Unique identifier for the business unit

Element Name	Type	Description
holdReason	string	Reason for the payment hold

Response Payload

Element Name	Type	Description
result	int	Number of participants for whom to hold payment

terminateParticipant

End date the participant. The Payment process looks at the compensation end date first. If that value is Null, it uses the active end date. Paysheets do not include payments processed after the participant's end date. This method requires one of the first three parameters; pass 0 for unknown or null values.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
personId	string	Unique identifier for the person
partyId	long	Unique identifier for the party
participantId	long	Unique identifier for the participant
orgId	long	Unique identifier for the business unit
activeEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Format for dates is YYYY-MM-DD
compensationEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Format for dates is YYYY-MM-DD

Response Payload

Element Name	Type	Description
result	int	List of participants who were end dated

assignCOMPRoleToParticipant

Assigns a compensation role to a participant. If the role is assigned to a compensation plan, payment plan, or pay group, assign the participant to these entities through the role. This method requires one of the first three parameters; pass 0 for unknown or null values.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
personId	string	Unique identifier for the person
partyId	long	Unique identifier for the party
participantId	long	Unique identifier for the participant
orgId	long	Unique identifier for the business unit
roleId	long	Unique identifier for the role
assignmentStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Format for dates is YYYY-MM-DD
assignmentEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Format for dates is YYYY-MM-DD

Response Payload

Element Name	Type	Description
result	int	Number of compensation role assignment records created for given participant.

processParticipantTargetIncentive

Modify the target incentive amount of participant to comp plan assingment. Business Unit Name,Participant Name,Plan Name and Target Incentive Amount are mandatory.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
participantTargetIncentive	*Incentive Compensation Participant Plan Target SDO*	Input List of Service data object for Participant Target Incentive

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Participant Plan Target SDO*	Returns List of Service data object for Participant Target Incentive modified

automaticTerminateParticipant

This process automatically terminates participant along with, terminating Participants Compensation Plan and Payment Plan, with respect to the system parameters.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
terminateParticipant	*Incentive Compensation Terminate Participant*	The Input List of Service data objects for Automatic Terminate Participant.

Response Payload

Element Name	Type	Description
result	string	Returns a list of errors, if any, in the Automated participant termination function.

assignRoleToParticipant

Assigns Role to a Participant

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
participantRole	*Incentive Compensation Participant Role SDO*	Input Service data object for Participant Role assignment

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Participant Role SDO*	Output Service data object for Participant Role assigned

mergeParticipantDetail

Merge a new Participant Detail Record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
participantDetail	*Incentive Compensation Participant Detail*	Input Service data object for Participant Detail

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Participant Detail*	Returns Service data object for Participant Detail merged

terminateActiveParticipant

Terminate an active Participant.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
terminateParticipant	*Incentive Compensation Terminate Participant*	Input Service data object for Terminate Participant

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Terminate Participant*	Returns Service data object for Terminated Participant

findParticipantPlan

Operation used to search participant comp plan.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	Criteria to find Participant Plan
BusinessUnitName	string	Business Unit Name
PlanName	string	Compensation Plan Name
ParticipantName	string	Participant Name
PartyNumber	string	Party Number
PartyId	long	Party Identifier
ParticipantEmail	string	Participant Email Address
PersonNumber	string	Person Number
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Common Data Object to retrieve all translations in response

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Participant Plan Search SDO*	List of Participant plans matching the criteria

updateParticipantPlan

Operation used to update the Participant comp plan details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
srpCompensationPlanDetail	*Incentive Compensation Participant Plan SDO*	The service data object for updating the participant plan.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Participant Plan SDO*	Returns updated participant plan

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	CN_MAINTAIN_INCENTIVE_COMPENSATION_PARTICIPANT_DETAIL_PRIV	Maintain Incentive Compensation Participant Detail	Allows assignment of participants to analysts, who manage incentive compensation details for a person or organization whose credits, attainment, earnings, disputes, and payments the incentive compensation application computes and manages. A person or organization can be an employee, salesperson, party, supplier contract, partner, or third party resale contractor.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
CN_MAINTAIN_INCENTIVE_COMPENSATION_PARTICIPANT_DETAIL_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PARTICIPANT_PLAN_MANAGEMENT_DUTY	Incentive Compensation Participant Snapshot Management	Assign and maintain incentive plans and transactions for participants

Incentive Compensation Participant Detail Flexfield

The Flex Context field for SDO .

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/participants/participantSetup/model/flex/}IcSrpDetailDFF

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Incentive Compensation Participant Detail*
Handled by	*Incentive Compensation Participant Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ParticipantDetailId	long	The unique identifier for the participant detail record. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Incentive Compensation Participant Detail

The service data object for Participant Detail.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/participants/participantSetup/publicService/participantService/}ParticipantDetail

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Incentive Compensation Participant Detail Flexfield*
Handled by	*Incentive Compensation Participant Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BusinessUnitName	string	The business unit name to which the participant belongs.
CostCenter	string	The participant cost center as of the effective date range of the detail record.
CountryCode	string	The code representing the country where the participant works as of the effective date range of the detail record.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
EmailAddress	string	The email address associated with the record.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
HRPersonNumber	string	The generated person number for the participant person record in Oracle HCM Cloud.
IcSrpDetailDFFVL	*Incentive Compensation Participant Detail Flexfield*	The user-definable descriptive flex field value.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the

Name	Type	Description
		start and end of a transaction to determine whether another session has updated the row.
OrgId	long	The unique identifier of the business unit record to which the participant belongs.
ParticipantDetailId	long	The unique identifier for the participant detail record. • Primary Key
ParticipantId	long	The unique identifier for the participant record.
ParticipantName	string	The name of the participant.
PartyId	long	The unique identifier of the contact party.
PartyNumber	string	The unique identification number for the party.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.

Incentive Compensation Participant Plan Additional Attributes SDO

The service data object for the additional attributes of the incentive compensation participant plan.

QName: {http://xmlns.oracle.com/apps/flex/incentiveCompensation/cn/participants/compensationPlanSetup/srpCompPlanDFF/}SrpCompPlanDFF

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Incentive Compensation Participant Plan SDO*
Handled by	*Incentive Compensation Participant Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
SrpCompPlanId	long	Participant Compensation Plan identifier • Primary Key
_FLEX_NumOfSegments	int	Number of additional attributes
__FLEX_Context	string	Context segment code
__FLEX_Context_DisplayValue	string	Context segment name

Incentive Compensation Participant Plan SDO

The service data object for updating the participant plan.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/participants/compensationPlanSetup/model/}SrpCompPlanDetail

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Incentive Compensation Participant Plan Additional Attributes SDO*
Handled by	*Incentive Compensation Participant Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BusinessUnitName	string	Business Unit Name
CustomizedFlag	boolean	Customize target incentive

Name	Type	Description
ParticipantEmailAddress	string	Participant Email Address
ParticipantName	string	Participant Name
PartyId	long	Party Identifier
PartyNumber	string	Party Number
PersonNumber	string	Party Number
PlanName	string	Compensation Plan Name
SrpCompPlanDFF	*Incentive Compensation Participant Plan Additional Attributes SDO*	Participant plan DFF View Link
SrpCompensationPlanId	long	Participant Compensation Plan identifier • Primary Key
TargetIncentive	decimal	Target Incentive Amount

Incentive Compensation Participant Plan Search SDO

The service data object for searching a participant plan.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/participants/compensationPlanSetup/model/}SrpCompPlanSearch

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Incentive Compensation Participant Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Businessunitname	string	Business Unit Name
CompensationPlanId	long	Compensation Plan identifier
CompensationPlanName	string	Compensation Plan Name
CustomizedFlag	boolean	Customize target incentive
EmailAddress	string	Participant Email Address
OrgId	long	Compensation Plan business unit identifier
ParticipantId	long	Participant identifier
ParticipantName	string	Participant Name
PartyId	long	Party Identifier
PartyNumber	string	Party Number
PersonNumber	string	Person Number
SrpCompensationPlanId	long	Participant Compensation Plan identifier • Primary Key
TargetIncentive	decimal	Target Incentive Amount

Incentive Compensation Participant Plan Target SDO

Service data object for Participant Target Incentive

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/participants/participantSetup/publicService/participantService/}ParticipantTargetIncentive

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Incentive Compensation Participant Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BusinessUnitName	string	Business Unit Name • Primary Key
ParticipantEmailAddress	string	Participants's Email Address
ParticipantName	string	Participant Name • Primary Key
ParticipantPlanEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Compensation Plan to Participant Assignment End Date
ParticipantPlanStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Compensation Plan to Participant Assignment Start Date
PartyId	long	Party Identifier
PartyNumber	string	Party Number
PersonNumber	string	Person Number
PlanName	string	Compensation Plan Name • Primary Key
TargetIncentiveAmount	decimal	Target Incentive Amount

Incentive Compensation Participant Role SDO

Service data object for Participant Role assignment

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/participants/participantSetup/publicService/participantService/}ParticipantRole

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Incentive Compensation Participant Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AssignmentEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	End Date of Role Assignment
AssignmentStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Start Date of Role Assignment
BusinessUnitName	string	Business Unit Name • Primary Key
EMailAddress	string	Email Address • Primary Key
HRPersonNumber	string	HR Person Number • Primary Key
ParticipantName	string	Participant Name • Primary Key
PartyId	long	Party Identifier • Primary Key
PartyNumber	string	Party Number • Primary Key
RoleName	string	Role Name • Primary Key

Incentive Compensation Terminate Participant

The service data object for Terminate Participant.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/participants/participantSetup/publicService/participantService/}TerminateParticipant

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Incentive Compensation Participant Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the participant is no longer active.
BusinessUnitName	string	The business unit name. • Primary Key
CompensationEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The compensation end date, after which paysheets are no longer generated for the participant.
EmailAddress	string	The email address associated with the record. • Primary Key
HRPersonNumber	string	The generated person number for the participant person record in Oracle HCM Cloud. • Primary Key
ParticipantName	string	Name of the participant. • Primary Key
PartyId	long	The unique identifier of the contact party. • Primary Key

Name	Type	Description
PartyNumber	string	The unique identification number for the party. • Primary Key

Incentive Compensation Payment Acknowledgment

Service to update incentive compensation paysheet payment acknowledgement details.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/paymentSetup/paysheets/paysheetService/}PaymentAcknowledgementService

Service WSDL URL: https://servername/fscmService/PaymentAcknowledgementService?WSDL

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Incentive Compensation Payment Acknowledgment SDO*

Operations

- *updatePaymentDetails*

updatePaymentDetails

Updates the payment details for a paid pay sheet.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
paymentDetails	*Incentive Compensation Payment Acknowledgment*	The input payload of the participant and payment batch attributes used to identify the pay sheet.

Response Payload

Element Name	Type	Description
result	boolean	Returns true if the operation was successful.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	CN_MANAGE_INCENTIVE_COMPENSATION_PAYSHEET_PRIV	Manage Incentive Compensation Paysheet	Allows maintenance of incentive compensation paysheets that contain the payable commission, draw and recovery, and payment adjustments for a single eligible participant.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
CN_MANAGE_INCENTIVE_COMPENSATION_PAYSHEET_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PAYMENT_DUTY	Incentive Compensation Payments	Create and maintain payment batches. Adjust incentive compensation paysheets and payment transactions. Submit paysheets for approval.

Incentive Compensation Payment Acknowledgment

The input payload service data object for participant and payment batch attributes used to uniquely identify the paysheet. It is also used to include the payment acknowledgment attributes from the paying system, such as payables or payroll.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/paymentSetup/paysheets/paysheetService/}PaymentAcknowledgement

Logical Business Objects

- IC : Incentive Compensation : Incentive Compensation Paysheet

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Incentive Compensation Payment Acknowledgment*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BusinessUnitId	long	The unique identifier of the business unit record. You can view the business unit identifier for a business unit from the Setup and Maintenance, Define Business Units task. (In the search results region, click the View menu to add the Business Unit ID column.)
BusinessUnitName	string	The business unit name.
Email	string	The email address associated with the record.
ParticipantId	long	The unique identifier for the participant record. You can view the participant identifier from the Participant Snapshot work area, Select Participant search results. You can also use the participant export web service or the payment export web service.
ParticipantName	string	The participant name.
PartyId	long	The unique identifier of the contact party.
PartyNumber	string	The unique identification number for the party.
PaymentBatchId	long	The unique identifier for the payment batch record. You can view the payment batch identifier using the payment export web service.
PaymentBatchName	string	The payment batch name.
PaymentDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The acknowledged paysheet payment date from a paying system, such as payables or payroll.

Name	Type	Description
PaymentMethod	string	The acknowledged method of payment, such as electronic funds transfer or a check, from a paying system, such as payables or payroll.
PaymentReferenceNumber	string	The acknowledged payment reference number, such as an electronic funds transfer number or a check number, from a paying system, such as payables or payroll.
PersonNumber	string	The generated identifier for the participant person record in Oracle HCM Cloud. You can view the participant person number from the Participant Snapshot work area, Select Participant search results. You can also use the participant export web service or the payment export web service.

Incentive Compensation Payment Export

Service to export paysheet and related payment batch and participant information. This service is typically used to retrieve incentive compensation payment information for your internal or external payment system.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/paymentSetup/paysheets/paymentTransactionService/}PaymentExportService

Service WSDL URL: https://servername/fscmService/PaymentExportService?WSDL

Logical Business Objects

- IC : Incentive Compensation : Incentive Compensation Payment Transaction

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Incentive Compensation Payment Export SDO*

Operations

- *exportPaymentTransactionByPeriodName*
- *exportPaymentTransactionByPaymentDateRange*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

exportPaymentTransactionByPeriodName

Exports payment transactions for a period and business unit.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
pdName	string	The calendar period name. You define period names for your calendar using the Setup and Maintenance, Manage Calendars task.
orgId	long	The unique identifier of the business unit to which the pay sheet belongs. You can view the business unit identifier for a business unit from the Setup and Maintenance, Define Business Units task.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Payment Export*	The list of payment transactions.

exportPaymentTransactionByPaymentDateRange

Exports paid payment transactions for a payment date range and business unit.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
startDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The start of the date range used to select pay sheet payment transactions. Use the format YYYY-MM-DD. For example, 2016-12-01.

Element Name	Type	Description
endDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The last date, of the date range, used to select pay sheet payment transactions. Use the format YYYY-MM-DD. For example, 2016-12-31.
orgId	long	The unique identifier of the business unit to which the pay sheet belongs. You can view the business unit identifier for a business unit from the Setup and Maintenance, Define Business Units task.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Payment Export*	The list of payment transactions.

getDfltObjAttrHints

Gets user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Gets the date and time for when the schema files, referenced in the service definition, last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in the ISO 8601 format.

getEntityList

Gets the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	CN_MANAGE_INCENTIVE_COMPENSATION_PAYSHEET_PRIV	Manage Incentive Compensation Paysheet	Allows maintenance of incentive compensation paysheets that contain the payable commission, draw and recovery, and payment adjustments for a single eligible participant.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
CN_MANAGE_INCENTIVE_COMPENSATION_PAYSHEET_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PAYMENT_DUTY	Incentive Compensation Payments	Create and maintain payment batches. Adjust incentive compensation paysheets and payment transactions. Submit paysheets for approval.

Incentive Compensation Payment Export

The output service data object for the paysheet payment transaction details.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/paymentSetup/paysheets/paymentTransactionService/}PaymentTransactionExp

Logical Business Objects

- IC : Incentive Compensation : Incentive Compensation Payment Transaction

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Incentive Compensation Payment Export*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveFlag	boolean	The current active value, which indicates whether the participant is marked as active or inactive.
AdjustComments	string	A field for commentary entered (for a payment transaction or manual paysheet adjustment).
AdjustStatus	string	The adjustment status. Not currently used.
ApExpId	long	The plan component payable expense account. Not currently used.

Name	Type	Description
ApLiabId	long	The plan component payable liability account. Not currently used.
CalculationCurrencyCommAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The payment transaction amount in the calculation currency.
CommissionValue	decimal	The incentive rate table amount or rate used to calculate the earning.
CompensationEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The compensation end date, after which paysheets are no longer generated for the participant.
CostCenter	string	The participant cost center that is in effect as of the source event date for the payment of earnings, or the payment batch period for the payment of manual paysheet adjustments.
CountryCode	string	The participant country code that is in effect as of the source event date for the payment of earnings, or the payment batch period for the payment of manual paysheet adjustments.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditTypeId	long	The unique identifier for the earning type record. The earning type, selected for the plan component, is used to classify earnings into monetary and nonmonetary categories.
CreditedEmployeeNumber	string	The worker (employee) number for the participant who received credit for the earning source transaction.
CreditedParticipantId	long	The unique participant record identifier for the participant who received credit from the source transaction.
EarningId	long	The unique identifier for the earning record.
EarningTypeId	long	The unique identifier for the earning type record. The earning type, selected for the plan component, is used to classify earnings into monetary and nonmonetary categories.

Name	Type	Description
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
ExpenseCcid	long	The payment payable expense code. Not currently used.
FuncCurrencyPayAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The payment (payment transaction or manual paysheet adjustment) amount in the operating currency.
HRPrimaryWorkerNumber	string	The participant worker (employee) number.
HoldFlag	boolean	A flag that indicates whether to keep from paying a payment transaction until the hold is explicitly released.
HoldPaymentFlag	boolean	The current hold payment value, which indicates whether participant payments should be held or not.
HomeCurrencyCode	string	The participant home currency code that is in effect as of the source event date for the payment of earnings, or the payment batch period for the payment of manual paysheet adjustments.
HomeCurrencyPayAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The payment (payment transaction or manual paysheet adjustment) amount in the participant home currency.
IncentiveTypeCode	string	The incentive type (for earnings) is the lookup code that represents whether to calculate earnings per event or per interval. The calculate incentive type is selected when defining the plan component. Where the calculated amount is based on the payment plan minimum and recoverable amounts, the incentive type value is PMTPLN or PMTPLN_REC. For paysheet manual adjustments, the incentive type value is MANUAL_PAY_ADJ.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
LiabilityCcid	long	The payment payable liability code. Not currently used.
ObjectStatus	string	The code indicating whether the paysheet status has a value of paid.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgId	long	The unique identifier of the business unit record.
ParticipantPayId	long	The unique identifier of the payment (payment transaction or paysheet manual adjustment) record. • Primary Key
ParticipantType	string	The code that represents the participant type as either a participant or compensation administrator.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PayCurrencyCode	string	The processing currency code for the payment (payment transaction or manual paysheet adjustment) amount.
PayCurrencyPayAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The payment (payment transaction or manual paysheet adjustment) amount in the processing currency.
PayDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The payment batch pay date.
PayElementTypeId	long	The payment element type. Not currently used.
PayPeriodId	long	The period number representing the period of the payment transaction earning event date or the payment batch period for the manual paysheet adjustment.

Name	Type	Description
PayToFuncCurrencyCnvrt	decimal	The rate used to convert the payment amount from the calculation currency to operating currency.
PayToHomeCurrencyCnvrt	decimal	The rate used to convert the payment amount from the calculation currency to participant's home currency.
PayeeEmployeeNumber	string	The worker (employee number) for the payee participant.
PayeeOnly	string	The current payee-only value, which indicates whether the participant is marked as a payee only.
PayeeParticipantId	long	The unique identifier for the participant record, for the participant payee.
PaymentGroupCode	string	The plan component payment plan category used to apply payment plan adjustments.
PayrunId	long	The unique identifier for the payment batch record.
PersonNumber	string	The generated identifier for the participant person record in Oracle HCM Cloud.
PlanComponentId	long	The unique identifier for the plan component record.
PlanComponentName	string	The plan component name.
RecoverableFlag	boolean	A flag that Indicates whether the payment adjustment (payment transaction adjustment or manual paysheet adjustment) is recoverable.
ReportGroup	string	The lookup code that represents the incentive type, such as bonus or commission. The incentive type is selected when defining the plan component.
RoleId	long	The unique identifier for the role record. Not currently used.
SourceEarningId	long	The unique identifier for the source earning record, from which this earning originated from.

Name	Type	Description
SourceEventDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The earning source transaction event date.
SourceOrgId	long	The unique identifier of the source business unit for the earning source transaction.
SourceSystem	string	The source system name where the record originated.
SourceSystemId	string	The generated identifier for the participant party record in the Trading Community Model.
SourceTrxNumber	string	The earning source transaction number.
SourceType	string	The lookup code that represents whether the earning source transaction was collected or entered manually. Not currently used.
SrpPlanAssignId	long	The unique identifier for the participant plan assignment record.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
TransactionType	string	The lookup code that represents the earning's source transaction type. For example, INVOICE (Invoice) or GRP (Grouped by calculation).
WaiveFlag	boolean	A paysheet indicator for whether to waive payment recovery.

Incentive Compensation Paysheet Approval

Service to manage the paysheet request for approval notification and response from eligible approvers.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/paymentSetup/paysheets/paysheetApprovalService/}PaysheetApprovalService

Service WSDL URL: https://servername/fscmService/PaysheetApprovalService?WSDL

Operations

- *approvePaysheet*
- *getAssigneesList*
- *rejectPaysheet*

approvePaysheet

Approves the task for the specified pay sheet and user. The task should be in Assigned state and Assigned to the user.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
paysheetId	string	The unique identifier of the pay sheet approval human task instance .
onBehalfOfUser	string	The identifier of the user for whom the approval is on behalf of. The user identifier can be obtained from the getAssigneesList method.
comments	string	The comments for the approval.

Response Payload

Element Name	Type	Description
result	string	Returns SUCCESS if successful.

getAssigneesList

Gets the list of assignees for the task related to a pay sheet approval as specified by the pay sheet approval instance identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
paysheetId	string	The unique identifier of the pay sheet approval human task instance .

Response Payload

Element Name	Type	Description
result	string	The list of assignees for the pay sheet approval task that matches the specified criteria. The list is in the <UserId> | <User Name> format.

rejectPaysheet

Rejects the task for the specified pay sheet and user. The task should be in Assigned state and Assigned to the user.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
paysheetId	string	The unique identifier of the pay sheet approval human task instance .
onBehalfOfUser	string	The identifier of the user for whom the approval is on behalf of. The user identifier can be obtained from the getAssigneesList method.
comments	string	The comments for the rejection.

Response Payload

Element Name	Type	Description
result	string	Returns SUCCESS if successful.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	CN_MANAGE_INCENTIVE_COMPENSATION_DISPUTE_PRIV	Manage Incentive Compensation Dispute	Allows analysis of incentive compensation disputes.
All Operations	CN_APPROVE_INCENTIVE_COMPENSATION_PAYSHEET_PRIV	Approve Incentive Compensation Paysheet	Allows approval of worksheets that contain the payable commission, draw and recovery, and payment

Operation Name	Privilege Code	Privilege Name	Privilege Description
			adjustments for participants for a period.
All Operations	CN_CREATE_INCENTIVE_COMPENSATION_DISPUTE_PRIV	Create Incentive Compensation Dispute	Allows creation of dispute over incentive compensation credits, earnings, payments, and goals for participant.
All Operations	CN_REVIEW_INCENTIVE_COMPENSATION_DISPUTE_PRIV	Review Incentive Compensation Dispute	Allows review and closure of incentive compensation disputes.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
CN_REVIEW_INCENTIVE_COMPENSATION_DISPUTE_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PARTICIPANT_MANAGER_ABSTRACT	Incentive Compensation Participant Manager	Manage participants who receive incentive compensation and review reports
CN_REVIEW_INCENTIVE_COMPENSATION_DISPUTE_PRIV	ORA_ZBS_SALES_RESTRICTED_USER_JOB	Sales Restricted User	Has the same scope of visibility as the Sales Manager role to application data but can only view or read most of that data. The ability to create, update or delete data is restricted to notes, activities, attachments and reports.
CN_REVIEW_INCENTIVE_COMPENSATION_DISPUTE_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PARTICIPANT_ABSTRACT	Incentive Compensation Participant	Receive incentive compensation computed by the application and review reports
CN_REVIEW_INCENTIVE_COMPENSATION_DISPUTE_PRIV	ORA_ZBS_SALES_VP_JOB	Sales VP	Manages sales managers within the organization. Responsible for account planning, territory and quota management, and managing sales forecasts for the territory.
CN_REVIEW_INCENTIVE_COMPENSATION_DISPUTE_PRIV	ORA_ZBS_SALES_REPRESENTATIVE_JOB	Sales Representative	Represents the business to sell its products. Maintains relationships with customers and contacts, builds pipeline, manages leads and opportunities and performs sales forecasting.
CN_REVIEW_INCENTIVE_COMPENSATION_DISPUTE_PRIV	ORA_ZBS_SALES_MANAGER_JOB	Sales Manager	Manages salespersons within the organization. Generates revenue within a territory, builds pipeline, manages territory forecasts, and assists salespersons in closing deals.

Has basic Service Request Management capabilities. Would not be able to respond to customer, assign SR to a user or change the status of a SR.
ORA_ZBS_SALES_VP_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY_FSCM	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
ORA_ZBS_SALES_MANAGER_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY_FSCM	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY_FSCM	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
ORA_ZBS_SALES_VP_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY_FSCM	Territory Management	Manages sales territories, territory proposals, and quotas.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZBS_SALES_MANAGER_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY_FSCM	Territory Management	Manages sales territories, territory proposals, and quotas.

Incentive Compensation Rate Table

This is a service to create/Update Rate Table Value. This service can be used to update either Compensation Plan - Rate Table Value or Participant - Rate Table Value

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/compensationPlanSetup/rateTables/rateTableService/}RateTableServiceService

Service WSDL URL: https://servername/fscmService/RateTableServiceService?WSDL

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Incentive Compensation Rate List*

Operations

- *createUpdateRate*
- *createUpdatePlanComponentRate*
- *createUpdatePerformanceMeasureRate*

createUpdateRate

Method used to Create/Update Rate Table Value. The user who has Plan Adminstrator Role can update the base rate table value The user who has Compensation Manager/Analyst role can update the rate table value for a participant

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
buName	string	Business Unit Name. The parameter is case sensitive. Exact name as per as the UI has to be given
participantId	long	Participant Id It is mandatory for updating the Participant - Rate Table Value by the user with Compensation Manager/Analyst role. The Participant Id is not mandatory for update the Compensation Plan - Rate Table Value by the user with Plan Administator role. It should be -9999 in case 'null' has to be passed
rateTableName	string	Rate Table Name. The parameter is case sensitive. Exact name as per as the UI has to be given
rateList	*Incentive Compensation Rate List*	List Containing 1) Rate Dimension Name 2) Rate Tier Value The parameters are case sensitive. Exact name as per as the UI has to be given Rate Tier Value Example Type: Amount 0-200 Type: String Test Type: Percent 0-25 Type: Expression Exp1-/$Exp2 (Note : -/$ is being used as the delimiter as the expression name could itself contain a hyphen)
value	decimal	The Commission Value to be updated.

Response Payload

Element Name	Type	Description
result	string	Returns a message if the rate table value is created/updated successfully

createUpdatePlanComponentRate

Updates the individualized rate table values for a participant. This covers rate tables associated with plan components only.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
buName	string	The unique identifier of the business unit. It is a mandatory parameter and is case sensitive.

Element Name	Type	Description
participantId	long	The unique identifier of the participant. It is mandatory for updating the participant rate table value.
compensationPlanName	string	The name of the compensation plan which defines the participant earnings based on performance. It is a mandatory parameter and is case sensitive.
planAssignmentStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the compensation plan becomes active. The format is 'YYYY-MM-DD'. You need to pass the value only if the same compensation plan is assigned multiple times to the participant for different date ranges. In other cases, you need to pass the value as '4712-12-31'.
planAssignmentEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the compensation plan becomes inactive. The format is 'YYYY-MM-DD'. You need to pass the value only if the same compensation plan is assigned multiple times to the participant for different date ranges. In other cases, you need to pass the value as '4712-12-31'.
planComponentName	string	The name of the plan component which defines the earnings of a participant based on performance. It is a mandatory parameter and is case sensitive.
rateTableName	string	The name of a rate table which is used to establish compensation percentage rates or fixed amounts for different performance levels. It is a mandatory parameter and is case sensitive.
rateAssignmentStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the rate table becomes active for the plan component. The format is 'YYYY-MM-DD'. You need to pass the value only if the same rate table is assigned multiple times to the plan component for different date ranges. In other cases, you need to pass the value as '4712-12-31'.
rateAssignmentEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the rate table becomes inactive for that plan component. The format is 'YYYY-MM-DD'. You need to pass the value only if the same rate table is assigned multiple times to the plan component for different date ranges. In other cases, you need to pass the value as '4712-12-31'.
rateList	*Incentive Compensation Rate List*	The list containing the rate dimension name and the rate tier value. It is a mandatory parameter and is case sensitive. Examples

Element Name	Type	Description
		of the rate tier value for different types are: Type: Amount, "0-200" Type: String, "Test" Type: Percent, "0-25" Type: Expression, "Exp1-/$Exp2" Note - In Type: Expression, "-/$" is being used as the delimiter for hyphen to distinguish between the from/to values. This is done because the expression could itself contain a hyphen.
value	decimal	The commission value to be updated.

Response Payload

Element Name	Type	Description
result	string	A message if the rate table value is created/updated successfully.

createUpdatePerformanceMeasureRate

Updates the individualized rate table values for a participant. This covers rate tables associated with performance measures only.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
buName	string	The unique identifier of the business unit. It is a mandatory parameter and is case sensitive.
participantId	long	The unique identifier of the participant. It is mandatory for updating the participant rate table value.
compensationPlanName	string	The name of the compensation plan which defines the participant earnings based on performance. It is a mandatory parameter and is case sensitive.
planAssignmentStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the compensation plan becomes active. The format is 'YYYY-MM-DD'. You need to pass the value only if the same compensation plan is assigned multiple times to the participant for different date ranges. In other cases, you need to pass the value as '4712-12-31'.

Element Name	Type	Description
planAssignmentEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the compensation plan becomes inactive. The format is 'YYYY-MM-DD'. You need to pass the value only if the same compensation plan is assigned multiple times to the participant for different date ranges. In other cases, you need to pass the value as '4712-12-31'.
planComponentName	string	The name of the plan component which defines the earnings of a participant based on performance. It is a mandatory parameter and is case sensitive.
measureName	string	The name of a performance measure which defines the performance or accomplishment of a participant. It is a mandatory parameter and is case sensitive.
rateTableName	string	The name of a rate table which is used to establish compensation percentage rates or fixed amounts for different performance levels. It is a mandatory parameter and is case sensitive.
rateAssignmentStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the rate table becomes active for the performance measure. The format is 'YYYY-MM-DD'. You need to pass the value only if the same rate table is assigned multiple times to the performance measure for different date ranges. In other cases, you need to pass the value as '4712-12-31'.
rateAssignmentEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the rate table becomes inactive for that performance measure. The format is 'YYYY-MM-DD'. You need to pass the value only if the same rate table is assigned multiple times to the performance measure for different date ranges. In other cases, you need to pass the value as '4712-12-31'.
rateList	*Incentive Compensation Rate List*	The list containing the rate dimension name and the rate tier value. It is a mandatory parameter and is case sensitive. Examples of the rate tier value for different types are: Type: Amount, "0-200" Type: String, "Test" Type: Percent, "0-25" Type: Expression, "Exp1-/$Exp2" Note - In Type: Expression, "-/$" is being used as the delimiter for hyphen to distinguish between the from and to values. This is done because the expression could itself contain a hyphen.
value	decimal	The commission value to be updated.

Response Payload

Element Name	Type	Description
result	string	A message if the rate table value is created/ updated successfully.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	CN_REVIEW_INCENTIVE_ COMPENSATION_RATE_TABLE_ PRIV	Review Incentive Compensation Rate Table	Allows review of incentive compensation rate table, which enables establishment of compensation percentage rates or fixed amounts for different performance levels.
All Operations	CN_MANAGE_INCENTIVE_ COMPENSATION_RATE_TABLE_ PRIV	Manage Incentive Compensation Rate Table	Allows maintenance of incentive compensation rate table, which enables establishment of compensation percentage rates or fixed amounts for different performance levels.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
CN_REVIEW_INCENTIVE_ COMPENSATION_RATE_TABLE_ PRIV	ORA_CN_INCENTIVE_ COMPENSATION_ASSIGNMENT_ ADMISTRATION_DUTY	Incentive Compensation Participant Assignments	Create and maintain the assignments of analyst to participant, participants and roles to compensation and payment plans as well as pay groups
CN_REVIEW_INCENTIVE_ COMPENSATION_RATE_TABLE_ PRIV	ORA_CN_INCENTIVE_ COMPENSATION_PARTICIPANT_ PLAN_MANAGEMENT_DUTY	Incentive Compensation Participant Snapshot Management	Assign and maintain incentive plans and transactions for participants
CN_MANAGE_INCENTIVE_ COMPENSATION_RATE_TABLE_ PRIV	ORA_CN_INCENTIVE_ COMPENSATION_PLAN_ ADMINISTRATOR_JOB	Incentive Compensation Plan Administrator	Configure and manage incentive plans, plan components, and classification rules

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_CN_INCENTIVE_COMPENSATION_PLAN_ADMINISTRATOR_JOB	ORA_CN_INCENTIVE_COMPENSATION_CREDITS_EARNINGS_MANAGEMENT_DUTY	Incentive Compensation Credits and Earnings	Create, review, and adjust incentive compensation transactions, credits and earnings. Create and manage requests to calculate the incentive compensation for a set of participants.
ORA_CN_INCENTIVE_COMPENSATION_PLAN_ADMINISTRATOR_JOB	ORA_CN_INCENTIVE_COMPENSATION_ASSIGNMENT_ADMISTRATION_DUTY	Incentive Compensation Participant Assignments	Create and maintain the assignments of analyst to participant, participants and roles to compensation and payment plans as well as pay groups

Incentive Compensation Rate List

List to get the Rate Dimension Name, Rate Tier Value Pair

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/compensationPlanSetup/rateTables/rateTableService/}RateList

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Incentive Compensation Rate Table*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
RateDimensionName	string	Rate Dimension Name • Primary Key
RateTierValue	string	Rate Tier Value

Incentive Compensation Real Time Credit

This service enables you to credit transactions based on the credit rules setup in the application.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/transactionProcessing/transactionManagement/rtimeCreditService/}RtimeCreditTransactionsService

Service WSDL URL: https://servername/fscmService/RtimeCreditTransactionsService?WSDL

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Incentive Compensation Real Time Credit Transactions SDO*
Handles	*Incentive Compensation Real Time Credit Winners SDO*
Handles	*Incentive Compensation Real Time Credit Transaction Flexfield SDO*

Operations

- *creditTransactions*
- *getRtimeAttributeCattegoryServicePropertyPath*
- *getRtimeServiceNamespaceAndName*
- *getRtimeServicePropertyPaths*
- *createRtimeCreditTransactions*
- *findRtimeCreditTransactions*

creditTransactions

Method to get the participants that will receive credit

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
transactionList	*Incentive Compensation Real Time Credit Transactions SDO*	List of transactions to be credited

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Real Time Credit Winners SDO*	The list of participants that will receive credit

getRtimeAttributeCattegoryServicePropertyPath

Method to get the property path for "Attribute Category"

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	string	Property path for "Attribute Category"

getRtimeServiceNamespaceAndName

Method to get the namespace and name of the service data object for a given context value

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contextValue	string	Context value

Response Payload

Element Name	Type	Description
result	string	List of namespace and name of the service data object

getRtimeServicePropertyPaths

Method to get the property paths for a list of segments specific to an attribute category

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contextValue	string	Context value
segmentCodes	string	List of segment codes

Response Payload

Element Name	Type	Description
result	string	List of property paths for the given list of segments

createRtimeCreditTransactions

Method to create a new real time transaction

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
rtimeCreditTransactions	*Incentive Compensation Real Time Credit Transactions SDO*	Real time transaction information

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Real Time Credit Transactions SDO*	The transaction created

findRtimeCreditTransactions

Method to find an already created transaction

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	Find criteria
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find control

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Real Time Credit Transactions SDO*	List of transactions that matched the find criteria

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	CN_MAINTAIN_INCENTIVE_COMPENSATION_TRANSACTION_PRIV	Maintain Incentive Compensation Transaction	Allows verification of earning transaction detail for which the application calculated incentive compensation commission, bonus, or nonmonetary incentive.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
CN_MAINTAIN_INCENTIVE_COMPENSATION_TRANSACTION_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PARTICIPANT_PLAN_MANAGEMENT_DUTY	Incentive Compensation Participant Snapshot Management	Assign and maintain incentive plans and transactions for participants
CN_MAINTAIN_INCENTIVE_COMPENSATION_TRANSACTION_PRIV	ORA_CN_INCENTIVE_COMPENSATION_CREDITS_EARNINGS_MANAGEMENT_DUTY	Incentive Compensation Credits and Earnings	Create, review, and adjust incentive compensation transactions, credits and earnings. Create and manage requests to calculate the incentive compensation for a set of participants.

Incentive Compensation Real Time Credit Transaction Flexfield SDO

User-defined detail of the transaction, such as state, sales channel, or any descriptive flexfields.

QName: {http://xmlns.oracle.com/apps/flex/incentiveCompensation/cn/transactionProcessing/transactionManagement/RtimeCreditTransDFF/}RtimeTransDFF

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Incentive Compensation Real Time Credit Transactions SDO*
Handled by	*Incentive Compensation Real Time Credit*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AreaCode	string	Area code
BillingAddress	decimal	Billing address
BillingContact	decimal	Billing contact
City	string	City name
Country	string	Country name
FLEXContext	string	Flex context
PostalCode	string	Postal code
ProductItemId	decimal	Product item identifier
Province	string	Province name
SalesChannel	string	Sales channel

Name	Type	Description
ShippingAddress	decimal	Shipping address
ShippingContact	decimal	Shipping contact
SoldToCustomer	decimal	Sold to customer
State	string	State name
_FLEX_NumOfSegments	int	Number of flex segments

Incentive Compensation Real Time Credit Transactions SDO

The list of transactions for crediting, and that contains details such as transaction identifier, customer name, and product name.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/transactionProcessing/transactionManagement/rtimeCreditService/}RtimeCreditTransactions

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Incentive Compensation Real Time Credit Transaction Flexfield SDO*
Handled by	*Incentive Compensation Real Time Credit*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BusinessUnitName	string	Business Unit Name
ClsfnRuleName	string	Classification Rule Name
DiscountPercentage	decimal	Discount Percentage

Name	Type	Description
EligibleCatName	string	Eligible Category Name
MarginPercentage	decimal	Margin Percentage
ParticipantEmail	string	Participant Email
ParticipantName	string	Participant Name
RoleName	string	Role Name
RtimeCreditTransDFFVL	*Incentive Compensation Real Time Credit Transaction Flexfield SDO*	Flexfield context
SourceBusinessUnitName	string	Source Business Unit Name
SourceCurrencyCode	string	Source Currency Code
SourceEventDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Source Event Date
SourceTrxId	long	Source Transaction Id
SourceTrxLineId	long	Source Transaction Line Id
SourceTrxNumber	string	Source Transaction Number
TransactionAmountSourceCurrency	decimal	Transaction Amount
TransactionSubType	string	Transaction Sub Type
TransactionType	string	Transaction Type
UOMCode	string	Unit Of Measure

Incentive Compensation Real Time Credit Winners SDO

The list of participants who will receive credit, and that contains details such as participant name, rule name, revenue type, and split percentage.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/transactionProcessing/transactionManagement/rtimeCreditService/}RtimeCreditWinners

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Incentive Compensation Real Time Credit*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreditedParticipantId	long	Credited Participant ID
CreditedParticipantName	string	Credited Participant Name
ProcessAuditId	long	Process Audit ID
RevenueType	string	Revenue Type
SplitPct	decimal	Split Percentage
WinnerRuleId	decimal	Winner Rule ID
WinnerRuleName	string	Winner Rule Name

Incentive Compensation Transaction

Service to create, retrieve, delete, and update staging table transactions. You can also use this service to place and release holds for uncredited transactions.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/transactionProcessing/transactionManagement/publicService/}TransactionService

Service WSDL URL: https://servername/fscmService/IncentiveTransactionService?WSDL

Logical Business Objects

- IC : Incentive Compensation : Incentive Compensation Transaction

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Incentive Compensation Staging Transaction SDO*

Operations

- *holdTransaction*
- *getIncentiveTransactionStaging*
- *createIncentiveTransactionStaging*
- *updateIncentiveTransactionStaging*
- *deleteIncentiveTransactionStaging*
- *mergeIncentiveTransactionStaging*
- *findIncentiveTransactionStaging*
- *processIncentiveTransactionStaging*
- *processCSIncentiveTransactionStaging*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

holdTransaction

Holds the transaction. Applicable to transactions that are not credited.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
sourceTrxNumber	string	The transaction number.
transactionType	string	The lookup code that represents the transaction type. For example, Invoice and Order. The value must be a valid lookup code for lookup type CN_TP_TRANSACTION_TYPE. You can view the CN_TP_TRANSACTION_TYPE

Element Name	Type	Description
		lookup using the Setup and Maintenance, Manage Incentive Compensation Lookups task.

Response Payload

Element Name	Type	Description
result	boolean	Indicates if the transaction was held successfully.

getIncentiveTransactionStaging

Gets a single staging transaction that matches the transaction number, transaction type and credited participant identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
creditedParticipantId	long	The unique identifier of the credited participant.
sourceTrxNumber	string	The transaction number for the staging transaction.
transactionType	string	The transaction type code for the staging transaction. For example, Invoice or Order.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Staging Transaction*	The staging transaction that matches the specified criteria.

createIncentiveTransactionStaging

Creates a single transaction in the staging table.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
incentiveTransactionStaging	*Incentive Compensation Staging Transaction*	The input payload for the staging transaction to be created.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Staging Transaction*	The created staging transaction.

updateIncentiveTransactionStaging

Updates a single transaction in the staging table.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
incentiveTransactionStaging	*Incentive Compensation Staging Transaction*	The input payload for the staging transaction to be updated.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Staging Transaction*	The updated staging transaction.

deleteIncentiveTransactionStaging

Deletes a single transaction in the staging table.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
incentiveTransactionStaging	*Incentive Compensation Staging Transaction*	The input payload for the staging transaction to be deleted.

Response Payload

Element Name	Type	Description
result	void	No return object.

mergeIncentiveTransactionStaging

Updates a transaction in the staging table if it exists, otherwise it creates a new one.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
incentiveTransactionStaging	*Incentive Compensation Staging Transaction*	The input payload for the staging transactions to be merged.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Staging Transaction*	The updated or created staging transaction.

findIncentiveTransactionStaging

Finds and returns a list of transactions in the staging table.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria to find the staging transactions.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The control object used as a placeholder for finding staging transactions. Not currently used.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Staging Transaction*	The list of staging transactions that match the specified criteria.

processIncentiveTransactionStaging

Performs a create, update, delete or merge operation on a list of transactions in the staging table. The specified operation is applied to all objects in the given list.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	The create, update, delete, or merge operation to perform.
incentiveTransactionStaging	*Incentive Compensation Staging Transaction*	The input payload for the staging transactions to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The object of type ProcessControl, which provides optional process control.

Response Payload

Element Name	Type	Description
result	*Incentive Compensation Staging Transaction*	The staging transactions for which the specified operation was applied.

processCSIncentiveTransactionStaging

Performs a create, update, delete or merge operation on a list of transactions in the staging table. Different options may be applied to different objects depending on what is specified in the Change Summary object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The input payload for the staging transactions.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The object of type ProcessControl, which provides optional process control.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The staging transactions for which the specified operation was applied.

getDfltObjAttrHints

Gets user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Gets the date and time for when the schema files, referenced in the service definition, last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

Gets the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	CN_MAINTAIN_INCENTIVE_COMPENSATION_TRANSACTION_PRIV	Maintain Incentive Compensation Transaction	Allows verification of earning transaction detail for which the application calculated incentive compensation commission, bonus, or nonmonetary incentive.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
CN_MAINTAIN_INCENTIVE_COMPENSATION_TRANSACTION_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PARTICIPANT_PLAN_MANAGEMENT_DUTY	Incentive Compensation Participant Snapshot Management	Assign and maintain incentive plans and transactions for participants
CN_MAINTAIN_INCENTIVE_COMPENSATION_TRANSACTION_PRIV	ORA_CN_INCENTIVE_COMPENSATION_CREDITS_EARNINGS_MANAGEMENT_DUTY	Incentive Compensation Credits and Earnings	Create, review, and adjust incentive compensation transactions, credits and earnings. Create and manage requests to calculate the incentive compensation for a set of participants.

Incentive Compensation Staging Transaction

The input payload service data object to create and manage transactions and credits in the staging table.

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/transactionProcessing/transactionManagement/publicService/}TransactionStaging

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Incentive Compensation Transaction*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdjustmentComments	string	The commentary for an adjustment to the transaction.
AdjustmentStatus	string	The lookup code that represents the adjustment state of the transaction.
AreaCode	string	The geographic transaction attribute for the area code. The area code is a component of a phone number and is usually a 3-digit number that identifies each telephone service area in a country.
Attribute1	string	The user-definable descriptive flex field for a character data type value.
Attribute10	string	The user-definable descriptive flex field for a character data type value.
Attribute100	string	The user-definable descriptive flex field for a character data type value.
Attribute101	string	The user-definable descriptive flex field for a character data type value.
Attribute102	string	The user-definable descriptive flex field for a character data type value.

Name	Type	Description
Attribute103	string	The user-definable descriptive flex field for a character data type value.
Attribute104	string	The user-definable descriptive flex field for a character data type value.
Attribute105	string	The user-definable descriptive flex field for a character data type value.
Attribute106	string	The user-definable descriptive flex field for a character data type value.
Attribute107	string	The user-definable descriptive flex field for a character data type value.
Attribute108	string	The user-definable descriptive flex field for a character data type value.
Attribute109	string	The user-definable descriptive flex field for a character data type value.
Attribute11	string	The user-definable descriptive flex field for a character data type value.
Attribute110	string	The user-definable descriptive flex field for a character data type value.
Attribute111	string	The user-definable descriptive flex field for a character data type value.
Attribute112	string	The user-definable descriptive flex field for a character data type value.
Attribute113	string	The user-definable descriptive flex field for a character data type value.
Attribute114	string	The user-definable descriptive flex field for a character data type value.
Attribute115	string	The user-definable descriptive flex field for a character data type value.
Attribute116	string	The user-definable descriptive flex field for a character data type value.

Name	Type	Description
Attribute117	string	The user-definable descriptive flex field for a character data type value.
Attribute118	string	The user-definable descriptive flex field for a character data type value.
Attribute119	string	The user-definable descriptive flex field for a character data type value.
Attribute12	string	The user-definable descriptive flex field for a character data type value.
Attribute120	string	The user-definable descriptive flex field for a character data type value.
Attribute121	string	The user-definable descriptive flex field for a character data type value.
Attribute122	string	The user-definable descriptive flex field for a character data type value.
Attribute123	string	The user-definable descriptive flex field for a character data type value.
Attribute124	string	The user-definable descriptive flex field for a character data type value.
Attribute125	string	The user-definable descriptive flex field for a character data type value.
Attribute126	string	The user-definable descriptive flex field for a character data type value.
Attribute127	string	The user-definable descriptive flex field for a character data type value.
Attribute128	string	The user-definable descriptive flex field for a character data type value.
Attribute129	string	The user-definable descriptive flex field for a character data type value.
Attribute13	string	The user-definable descriptive flex field for a character data type value.
Attribute130	string	The user-definable descriptive flex field for a character data type value.

Name	Type	Description
Attribute131	string	The user-definable descriptive flex field for a character data type value.
Attribute132	string	The user-definable descriptive flex field for a character data type value.
Attribute133	string	The user-definable descriptive flex field for a character data type value.
Attribute134	string	The user-definable descriptive flex field for a character data type value.
Attribute135	string	The user-definable descriptive flex field for a character data type value.
Attribute136	string	The user-definable descriptive flex field for a character data type value.
Attribute137	string	The user-definable descriptive flex field for a character data type value.
Attribute138	string	The user-definable descriptive flex field for a character data type value.
Attribute139	string	The user-definable descriptive flex field for a character data type value.
Attribute14	string	The user-definable descriptive flex field for a character data type value.
Attribute140	string	The user-definable descriptive flex field for a character data type value.
Attribute141	string	The user-definable descriptive flex field for a character data type value.
Attribute142	string	The user-definable descriptive flex field for a character data type value.
Attribute143	string	The user-definable descriptive flex field for a character data type value.
Attribute144	string	The user-definable descriptive flex field for a character data type value.

Name	Type	Description
Attribute145	string	The user-definable descriptive flex field for a character data type value.
Attribute146	string	The user-definable descriptive flex field for a character data type value.
Attribute147	string	The user-definable descriptive flex field for a character data type value.
Attribute148	string	The user-definable descriptive flex field for a character data type value.
Attribute149	string	The user-definable descriptive flex field for a character data type value.
Attribute15	string	The user-definable descriptive flex field for a character data type value.

Attribute49	string	The user-definable descriptive flex field for a character data type value.
Attribute5	string	The user-definable descriptive flex field for a character data type value.
Attribute50	string	The user-definable descriptive flex field for a character data type value.
Attribute51	string	The user-definable descriptive flex field for a character data type value.

Name	Type	Description
Attribute52	string	The user-definable descriptive flex field for a character data type value.
Attribute53	string	The user-definable descriptive flex field for a character data type value.
Attribute54	string	The user-definable descriptive flex field for a character data type value.
Attribute55	string	The user-definable descriptive flex field for a character data type value.
Attribute56	string	The user-definable descriptive flex field for a character data type value.
Attribute57	string	The user-definable descriptive flex field for a character data type value.
Attribute58	string	The user-definable descriptive flex field for a character data type value.
Attribute59	string	The user-definable descriptive flex field for a character data type value.
Attribute6	string	The user-definable descriptive flex field for a character data type value.
Attribute60	string	The user-definable descriptive flex field for a character data type value.
Attribute61	string	The user-definable descriptive flex field for a character data type value.
Attribute62	string	The user-definable descriptive flex field for a character data type value.
Attribute63	string	The user-definable descriptive flex field for a character data type value.
Attribute64	string	The user-definable descriptive flex field for a character data type value.
Attribute65	string	The user-definable descriptive flex field for a character data type value.

Name	Type	Description
Attribute66	string	The user-definable descriptive flex field for a character data type value.
Attribute67	string	The user-definable descriptive flex field for a character data type value.
Attribute68	string	The user-definable descriptive flex field for a character data type value.
Attribute69	string	The user-definable descriptive flex field for a character data type value.
Attribute7	string	The user-definable descriptive flex field for a character data type value.
Attribute70	string	The user-definable descriptive flex field for a character data type value.
Attribute71	string	The user-definable descriptive flex field for a character data type value.
Attribute72	string	The user-definable descriptive flex field for a character data type value.
Attribute73	string	The user-definable descriptive flex field for a character data type value.
Attribute74	string	The user-definable descriptive flex field for a character data type value.
Attribute75	string	The user-definable descriptive flex field for a character data type value.
Attribute76	string	The user-definable descriptive flex field for a character data type value.
Attribute77	string	The user-definable descriptive flex field for a character data type value.
Attribute78	string	The user-definable descriptive flex field for a character data type value.
Attribute79	string	The user-definable descriptive flex field for a character data type value.
Attribute8	string	The user-definable descriptive flex field for a character data type value.

Name	Type	Description
Attribute80	string	The user-definable descriptive flex field for a character data type value.
Attribute81	string	The user-definable descriptive flex field for a character data type value.
Attribute82	string	The user-definable descriptive flex field for a character data type value.
Attribute83	string	The user-definable descriptive flex field for a character data type value.
Attribute84	string	The user-definable descriptive flex field for a character data type value.
Attribute85	string	The user-definable descriptive flex field for a character data type value.
Attribute86	string	The user-definable descriptive flex field for a character data type value.
Attribute87	string	The user-definable descriptive flex field for a character data type value.
Attribute88	string	The user-definable descriptive flex field for a character data type value.
Attribute89	string	The user-definable descriptive flex field for a character data type value.
Attribute9	string	The user-definable descriptive flex field for a character data type value.
Attribute90	string	The user-definable descriptive flex field for a character data type value.
Attribute91	string	The user-definable descriptive flex field for a character data type value.
Attribute92	string	The user-definable descriptive flex field for a character data type value.
Attribute93	string	The user-definable descriptive flex field for a character data type value.

Name	Type	Description
Attribute94	string	The user-definable descriptive flex field for a character data type value.
Attribute95	string	The user-definable descriptive flex field for a character data type value.
Attribute96	string	The user-definable descriptive flex field for a character data type value.
Attribute97	string	The user-definable descriptive flex field for a character data type value.
Attribute98	string	The user-definable descriptive flex field for a character data type value.
Attribute99	string	The user-definable descriptive flex field for a character data type value.
AttributeCategory	string	The context segment for the descriptive flex field.
AttributeNumber1	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber10	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber11	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber12	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber13	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber14	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber15	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber16	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber17	decimal	The user-definable descriptive flex field for a numeric data type value.

Name	Type	Description
AttributeNumber18	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber19	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber2	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber20	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber21	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber22	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber23	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber24	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber25	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber26	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber27	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber28	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber29	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber3	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber30	decimal	The user-definable descriptive flex field for a numeric data type value.

Name	Type	Description
AttributeNumber31	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber32	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber33	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber34	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber35	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber36	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber37	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber38	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber39	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber4	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber40	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber41	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber42	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber43	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber44	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber45	decimal	The user-definable descriptive flex field for a numeric data type value.

Name	Type	Description
AttributeNumber46	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber47	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber48	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber49	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber5	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber50	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber6	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber7	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber8	decimal	The user-definable descriptive flex field for a numeric data type value.
AttributeNumber9	decimal	The user-definable descriptive flex field for a numeric data type value.
BillToAddressId	long	The unique identifier for the customer billing location.
BillToContactId	long	The unique identifier for the contact person at the bill-to location.
BookedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the sales order was booked in the order management application.
BusinessUnitId	long	The unique identifier of the business unit record. You can view the business unit identifier for a business unit from the Setup and Maintenance, Define Business Units task. (In the search results region, click the View menu to add the Business Unit ID column.) The Incentive Compensation parameters must be defined for the business unit. You can define the parameters for the business unit scope

Name	Type	Description
		using the Setup and Maintenance, Manage Parameters task.
ChangedTrxFlag	boolean	A flag that indicates if the transaction is a new transaction or modified.
City	string	The name of the city.
ClsfnRuleId	long	The unique record identifier for the classification rule to use when classifying the transaction or credit.
CollectionStatus	string	The lookup code that represents the reason for a collection error.
Country	string	The name of the country.
CreditDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date the credit receiver received credit. The date is used to determine the credit receivers when processing the credit rules against transactions.
CreditHoldFlag	boolean	Indicates whether the application must exclude the credit from processing further
CreditRuleId	long	The unique identifier for the credit rule record.
CreditedParticipantId	long	The unique record identifier of the active participant receiving credit. You can view the participant identifier from the Participant Snapshot work area, Select Participant search results. Select the participant to navigate to the Manage Participant Details page to view the Active indicator. You can also use the participant export web service. If you are importing credits, this is a required attribute. • Primary Key
CustomerId	long	The unique identifier for customer who purchased the items or services listed on the transaction.
DiscountPercentage	decimal	The percentage of the transaction amount that depicts the net amount to be paid by the buyer.
EligibleCatId	long	The unique record identifier for the credit category to use when overriding the classification process. The credit category is a user-defined business category used to classify a transaction for compensation purposes.

Name	Type	Description
HoldFlag	boolean	The transaction hold indicator. The hold excludes an uncredited transaction from processing. If providing a value, valid values are: Y, N.
InventoryItemId	long	The unique record identifier for the inventory item.
InvoiceDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The invoice date for the transaction in the source application.
InvoiceNumber	string	The invoice number entered in the source application.
MarginPercentage	decimal	The percentage of the transaction amount that depicts the profit of the sale.
ObjectStatus	string	The lookup code that represents the current state of the transaction such as New, Obsolete, or Collection Error.
OrderNumber	string	The sales order number entered in the source application.
ParticipantId	long	The unique record identifier for the active direct participant. You can view the participant identifier from the Participant Snapshot work area, Select Participant search results. Select the participant to navigate to the Manage Participant Details page to view the Active indicator. You can also use the participant export web service.
PostalCode	string	The postal code element of the address.
ProcessCode	string	The process code is a five letter code that determines the combination of Override Classification, Preserve Credits, Do Not Roll Up, and Do Not Calculate values for the transaction. For example, the process code CCREC indicates that the Override Classification, Preserve Credits, and Do Not Roll Up check boxes are not checked and the normal calculation processing will occur. Override Classification - The first letter determines the Override Classification setting. Valid values are N and C. Enter a code starting with N to check the Override Classification checkbox. You must also provide a credit category to avoid the collection error status. For regular classification processing, enter a code starting with C. Preserve Credits - The second letter determines the Preserve

Name	Type	Description
		Credits setting. Valid values are N and C. Enter a code with N as the second letter to check the Preserve Credits checkbox. For regular credit processing, enter C. Do Not Rollup - The third letter determines the Do Not Rollup setting. Valid values are N and R. Enter a code with N as the third letter to check the Do Not Rollup checkbox. To allow rollup credit processing, enter R. Eligibility and Calculation - The last two letters indicate earnings edibility and calculation. Valid values are EC, EN,NN, and NC. Enter a code with the value of N in either or both of the fourth and fifth position to exclude the credit from calculation. For regular calculation processing, enter EC.
Province	string	The name of the province.
ReasonCode	string	The lookup code that represents the reason for adjusting a transaction. If providing a value, then the value must be a valid lookup code for lookup type CN_TP_ADJUSTMENT_REASON. You can view the CN_TP_ADJUSTMENT_REASON lookup from the Setup and Maintenance, Manage Incentive Compensation Lookups task.
RevenueType	string	The lookup code that represents the revenue type, such as REVENUE or NONREVENUE. If you are importing credits, this is a required attribute.
RoleId	long	The unique record identifier for the compensation role assigned to incentive compensation participants. Not currently used.
RollupDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date used to determine the roll up credit receivers when processing the roll up rules against transactions.
SalesChannel	string	The sales channel represents how the transaction was sold. For example, indirect or direct.
ShipToAddressId	long	The unique identifier for the customer ship-to location.
ShipToContactId	long	The unique identifier for the contact person at the ship-to location.
SourceBusinessUnitId	long	The unique identifier of the source transaction business unit record. You can view business unit identifier for a business unit from the Setup and Maintenance, Define Business Units task.

Name	Type	Description
		(In the search results region, click the View menu to add the Business Unit ID column.)
SourceCurrencyCode	string	The currency code that represents the currency of the monetary transaction amount in the source application.
SourceCurrencyCreditAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount of the credit in the source application currency. If you are importing credits, this is a required attribute.
SourceCurrencyTransactionAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount of the transaction in the source application currency. This is a required attribute.
SourceEventDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The incentive event date. The event date is used to determine the effective currency conversion rate when the participant's home currency is used as the processing currency. The date must be within a defined Incentive Compensation calendar period where the period has an Open status and the calendar is defined for the same business unit as the transaction's business unit. If the value does not meet these requirements, the transaction process status is updated to a value of Collection Error. This is a required attribute.
SourceTrxId	long	The unique number for the transaction in the source application.
SourceTrxLineId	long	The number for the transaction line in the source application.
SourceTrxNumber	string	The transaction number. Use an identifier that participants recognize and can search with, for example, an invoice number or order number. If adjusting a transaction, the combination of the business unit, transaction number, and the transaction type uniquely identify an existing transaction. This is a required attribute. • Primary Key
SourceTrxSalesLineId	long	The number for the transaction sales credit line in the source application.
SplitPct	decimal	The percent of the transaction amount that the credit receiver received. If you are importing credits, this is a required attribute.
State	string	The name of the state.

Name	Type	Description
TerrId	long	The unique identifier for the territory in the source application.
TerrName	string	The territory name in the source application.
TransactionId	long	The unique identifier for the transaction record.
TransactionQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The quantity for the transaction line item.
TransactionSubType	string	The lookup code that represents the additional categorization of the transaction type. If providing a value, then the value must be a valid lookup code for lookup type CN_TP_TRANSACTION_SUB_TYPE. You can view lookup CN_TP_TRANSACTION_SUB_TYPE from the Setup and Maintenance, Manage Incentive Compensation Lookups task.
TransactionType	string	The lookup code that represents the type of transaction, such as INVOICE or ORDER. If adjusting a transaction, the combination of the business unit, transaction number, and the transaction type uniquely identify an existing transaction. The value must be a valid lookup code for lookup type CN_TP_TRANSACTION_TYPE. You can view lookup CN_TP_TRANSACTION_TYPE from the Setup and Maintenance, Manage Incentive Compensation Lookups task. This is a required attribute. • Primary Key
UOMCode	string	The unit of measure for the transaction line item.
WorkerId	long	The worker used internally to group transactions into batches.

Loyalty Member Service

An member integration web service

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/sales/loyalty/member/service/memberService/}MemberIntegrationService

Service WSDL URL: https://servername/crmService/MemberIntegrationService?WSDL

Logical Business Objects

- CRM : Loyalty : Loyalty Member

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Card*
Handles	*Trading Community Person Profile Additional Information*
Handles	*Member Promotion Enrollment*
Handles	*Voucher*
Handles	*Loyalty Member*
Handles	*Loyalty Bucket*
Handles	*Loyalty Transaction*
Handles	*Point Type*
Handles	*Contact*
Handles	*Loyalty Member Tier*

Operations

- *getMemberAttribute*
- *getPromotionEnrollment*
- *getMember*
- *getMemberTier*
- *getMemberVoucher*
- *getMemberCard*

getMemberAttribute

A web service method that queries by Keys, a single record of Member Attribute Object

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
memberAttributeId	long	A required input parameter of the getMemberAttribute web servcie method. It is the primary key of member attribute
previousAttributeValue	string	The old value of member attribute

Response Payload

Element Name	Type	Description
result	*Point Type*	The return value of getMemberAttribute web service method. Includes the full set of attributes of the member attribute record

getPromotionEnrollment

A web service method that queries by Keys, a single record of Promotion enrollment object

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
promotionEnrollmentId	long	A required input parameter of the getPromotionEnrollment web servcie method. It is the primary key of promotion enrollment

Response Payload

Element Name	Type	Description
result	*Member Promotion Enrollment*	The return value of getPromotionEnrollment web service method. Includes the full set of attributes of the promotion record

getMember

A web service method that queries by Keys, a single record of Loyalty Member Object

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
loyMemberId	long	A required input parameter of the getMember web servcie method. It is the primary key of member

Response Payload

Element Name	Type	Description
result	*Loyalty Member*	The return value of getMember web service method. Includes the full set of attributes of the member record

getMemberTier

A web service method that queries by ID, a single record of Loyalty Member Tier Object

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
memTierId	long	A required input parameter of the getMemberTier web servcie method. It is the primary key of member tier

Response Payload

Element Name	Type	Description
result	*Loyalty Member Tier*	The return value of getMemberTier web service method. Includes the full set of attributes of the member tier record

getMemberVoucher

A web service method that queries by ID, a single record of Loyalty Member Voucher Object

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
loyMemVchrId	long	A required input parameter of the getMemberVoucher web servcie method. It is the primary key of member voucher

Response Payload

Element Name	Type	Description
result	*Voucher*	The return value of getMemberVoucher web service method. Includes the full set of attributes of the member voucher record

getMemberCard

A web service method that queries by Keys, a single record of Loyalty Member Card Object

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
loyCardId	long	A required input parameter of the getMemberCard web servcie method. It is the primary key of member card

Response Payload

Element Name	Type	Description
result	*Card*	The return value of getMemberCard web service method. Includes the full set of attributes of the member card record

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getPromotionEnrollment	LOY_MANAGE_MEMBER_PRIV	Manage Member	Allow User to view, Create, Edit, Delete Member

Operation Name	Privilege Code	Privilege Name	Privilege Description
getMember	LOY_MANAGE_MEMBER_PRIV	Manage Member	Allow User to view, Create, Edit, Delete Member
getMemberCard	LOY_MANAGE_MEMBER_PRIV	Manage Member	Allow User to view, Create, Edit, Delete Member
getMemberVoucher	LOY_MANAGE_MEMBER_PRIV	Manage Member	Allow User to view, Create, Edit, Delete Member
getMemberTier	LOY_MANAGE_MEMBER_PRIV	Manage Member	Allow User to view, Create, Edit, Delete Member
getMemberAttribute	LOY_MANAGE_MEMBER_PRIV	Manage Member	Allow User to view, Create, Edit, Delete Member

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
LOY_MANAGE_MEMBER_PRIV	ORA_LOY_MANAGEMENT_DUTY	Loyalty Management	Manages all aspects of a Loyalty Program
LOY_MANAGE_MEMBER_PRIV	ORA_LOY_MEMBER_SERVICES_DUTY	Loyalty Member Services	Manages all aspects of a Loyalty Member and Transaction

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_LOY_MANAGEMENT_DUTY	ORA_ZPM_PARTNER_ACCOUNT_MAINTENANCE_DUTY	Partner Account Maintenance	Maintains a partner account, including managing members and partner profile information. This role is for members of the partner account team and their management chain.
ORA_LOY_MANAGEMENT_DUTY	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.

Card

Member Card Data Object for Loyalty Member Service

QName: {http://xmlns.oracle.com/apps/sales/loyalty/member/service/memberService/}Card

Logical Business Objects

- CRM : Loyalty : Loyalty Member

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Loyalty Member*
Handled by	*Loyalty Member Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CardNumber	string	Member card number
CardStatus	string	Card status
CardType	string	Card type
CardTypeCode	string	Member card type code
ConflictId	long	COnflict Id
CreatedBy	string	Who created the member card
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	When the member card is created
ExpiryDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Member card expiration date

Name	Type	Description
ExpiryDateOnCard	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Expiration date on card
ExpiryStampedOnCard	string	Expiration date stamped on card
IssueDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Member card issue date
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Member card last update date
LastUpdateLogin	string	Member card last update login
LastUpdatedBy	string	Member card last updated by who
LoyMemberId	long	Loyalty member Id
LoyTierId	long	Loyalty tier Id
MemberId	long	Member identifier associated with member card
MemberName	string	Member name
MemberNumber	string	Member number
MemberStatus	string	Member status
MemberStatusMeaning	string	Member status meaning
MemberTier	string	Member tier
MemberTierMeaning	string	Member tier meaning
NameOnCard	string	Name on card
PersonFirstName	string	Person first name
PersonLastName	string	Person last name
PersonName	string	Person name
PersonProfileId	long	Person profile Id

Name	Type	Description
PrConId	long	Primary contact Id
ProgramName	string	Program name
RequestDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Member card request date
StartDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Member card start date
StatusCode	string	Member card status code
TierId	long	Member card tier Id
TierIdAttr	string	Tier Id attribute
TierName	string	Tier name
UpdateFlag	boolean	It indicates whehter the record can be updated

Contact

The profile information of the trading community person. The profile includes information such as marital status and additional name.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}PersonProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Person Profile Additional Information*
Contained by	*Trading Community Person Details*
Contained by	*Sales Account*
Contained by	*Loyalty Member*

Relationship Type	Object or Service
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Loyalty Member Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Alias	string	Person alias name.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
Comments	string	The comments for the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DataCloudStatus	string	The enrichment status of the person.
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was born.
DateOfDeath	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person died.
DeceasedFlag	boolean	Y or N indicates whether the person is deceased or not.
DeclaredEthnicity	string	The declared ethnicity of the person.
Department	string	The free form text used to name the department.
DepartmentCode	string	The list of values for possible department codes.
Distance	decimal	The distance from the input location.
DoNotCallFlag	boolean	Indicator to specify if the user can send mail to the person or not.
DoNotContactFlag	boolean	Indicator to specify if the user can contact the person through phone, e-mail, or mail or not.
DoNotEmailFlag	boolean	Indicator to specify if the user can send e-mail to the person or not.
DoNotMailFlag	boolean	Indicator to specify if the user can send mail to the person or not.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveLatestChange	string	The date effective entity. Y indicates that this row represents the latest change in the day.

Name	Type	Description
EffectiveSequence	int	The date effective entity. Indicates the order of different changes made during a day. The lowest value represents the earliest change in the day.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
FavoriteContactFlag	boolean	Indicator to specify if the person is key contact.
Gender	string	The gender details such as male, female, or unknown of the person.
HeadOfHouseholdFlag	boolean	The head of household indicator is not used.
HouseholdIncomeAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The household income amount is not used.
HouseholdSize	decimal	The household size is not used.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
JobTitle	string	The free form text for the job title.
JobTitleCode	string	The code given to the job title.
LastContactDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the contact was last contacted.
LastEnrichmentDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was last enriched in DaaS.
LastKnownGPS	string	The geophysical location that is, GPS point last reported for the person.
LastSourceUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated by the source application.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdateSourceSystem	string	The source application that last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaritalStatus	string	The marital status of the person.
MaritalStatusEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the marital status of the person changed.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party.
PartyNumber	string	The unique identification number for the party.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PersonAcademicTitle	string	The academic title that is part of the name of a person such as Dr. Jane Smith.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonInformation	*Trading Community Person Profile Additional Information*	The information of the person.
PersonInitials	string	The Initials of the name.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.

Name	Type	Description
PersonLastNamePrefix	string	Used to identify the Last name prefix such as fon, van and so on for a person. It is used in the same way the new field PERSON_LAST_NAME_PREFIX in HZ_PERSON_PROFILES is used. Corresponds to the field, Last Name Prefix in HL7.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonName	string	The combination of title, first, middle, last, and suffix names.
PersonNameSuffix	string	Indicates the place in a family structure. For example, III in Tom Jones III.
PersonPreNameAdjunct	string	Salutary introduction such as Mr., Herr, and so on.
PersonPreviousLastName	string	The previous last or surname of the person.
PersonProfileId	long	The unique identifier of the person profile. • Primary Key
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PersonalIncomeAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated gross annual income of the person.
PlaceOfBirth	string	The place where the person was born, including city and country.
PreferredContactEmail	string	The preferred contact e-mail of the person.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactName	string	The preferred contact name of the person.

Name	Type	Description
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredContactPhone	string	The preferred contact phone of the person.
PreferredContactURL	string	The preferred contact uniform resource locator of the person.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryAddressCity	string	The city of the identifying address.
PrimaryAddressCountry	string	The country listed in the TERRITORY_CODE column of the FND_TERRITORY table for the identifying address.
PrimaryAddressCounty	string	The county of the identifying address.
PrimaryAddressLatitude	decimal	The primary address latitude information for the location for spatial proximity and containment purposes.
PrimaryAddressLine1	string	The first line of the identifying address.
PrimaryAddressLine2	string	The second line of the identifying address.
PrimaryAddressLine3	string	The third line of the identifying address.
PrimaryAddressLine4	string	The fourth line of the identifying address.
PrimaryAddressLocationId	long	The primary address location ID.

Name	Type	Description
PrimaryAddressLongitude	decimal	The primary address longitude information for the location for spatial proximity and containment purposes.
PrimaryAddressPostalCode	string	The postal code of the identifying address.
PrimaryAddressProvince	string	The province of the identifying address.
PrimaryAddressState	string	The state of the identifying address.
PrimaryCustomerId	long	The customer party identifier of a primary customer for a given person. There should be a valid relationship between the person and the customer.
PrimaryCustomerName	string	The customer party name of a primary customer for a given person. There should be a valid relationship between the person and the customer.
PrimaryCustomerRelationshipId	long	The unique identifier of the primary customer relationship.
PrimaryEmailAddress	string	The e-mail address of the person.
PrimaryEmailId	long	The primary contact point e-mail ID of the person.
PrimaryFormattedAddress	string	The primary formatted address of the person.
PrimaryFormattedPhoneNumber	string	The primary telephone number formatted in the local format of the person.
PrimaryLanguage	string	The standard name for a language.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneId	long	The primary contact point phone ID of the person.

Name	Type	Description
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURL	string	The uniform resource locator.
PrimaryWebId	long	The unique identifier of the primary uniform resource locator.
Pronunciation	string	The person pronunciation.
RentOwnInd	string	Indicates if the person rents or owns his or her residence. Lookup values include rent, own, lease, and so on.
RequestId	long	A system-generated read-only attribute used by the application framework.
SalesAffinityCode	string	The affinity of a person towards the deploying organization.
SalesBuyingRoleCode	string	The role of a person in the buying process.
Salutation	string	The phrase used to address a party in any correspondence.
Status	string	The status of the record.
SuffixOverriddenFlag	boolean	This attribute has Y if the suffix is overridden by user and N if not. Default value is N.
UniqueNameSuffix	string	Identifies system generated or manually overridden suffix.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.

Loyalty Bucket

Promotion attribute data object for Loyalty Transaction Service

QName: {http://xmlns.oracle.com/apps/sales/loyalty/transaction/transactionService/}Bucket

Logical Business Objects

- CRM : Loyalty : Loyalty Transaction

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Loyalty Transaction*
Handled by	*Loyalty Member Service*
Handled by	*Loyalty Transaction*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributeDisplayName	string	Promotion attribute display name
AttributePreviousValue	string	Promotion attribute original value
AttributeValue	string	Promotion attribute current value
MemberNumber	string	Member number
PrimaryContactId	long	Primary contact Id
PromotionName	string	Promotion name
Status	string	List of Value Meaning for StatusCode

Loyalty Member

Member Data Object for Loyalty Member Service

QName: {http://xmlns.oracle.com/apps/sales/loyalty/member/service/memberService/}Member

Logical Business Objects

- CRM : Loyalty : Loyalty Member

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Card*
Contains	*Member Promotion Enrollment*
Contains	*Voucher*
Contains	*Loyalty Member*
Contains	*Loyalty Transaction*
Contains	*Point Type*
Contains	*Contact*
Contains	*Loyalty Member Tier*
Contained by	*Loyalty Member*
Handled by	*Loyalty Member Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccntId	long	Account Id

Name	Type	Description
AccountFullName	string	Account full name
AccountName	string	Account name
AccountPartyNumber	string	Account party number
AccrualLookupCode	string	Accrual lookup code
AccrualLookupType	string	Accrual lookup type
AccrualMeaning	string	Accrual meaning
AccrualStartDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when member starts to accrue the points
AccrualToHouseholdFlg	string	Accrual to household flag
AccrualToMemId	long	Member that any new transaction will accrual points to
AccrualType	string	Used to store the Accrual type
AccrualTypeCode	string	Accrual type code
AttributeCategory	string	Structure definition of the user descriptive flexfield
ClassLookupCode	string	Class lookup code
ClassLookupType	string	Class lookup type
ClassMeaning	string	Class meaning
ContactDateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date the contact person was born
ContactFirstName	string	Contact first name
ContactId	long	Contact Id
ContactLastName	string	Contact last name

Name	Type	Description
ContactName	string	Contact name
CorpCurrencyCode	string	Corporate currency code for extensibility
CorpMemberNumber	string	Used to store the corporate membership number reference
CreatedBy	string	Created By
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Creation Date
CreationSource	string	Creation source
CurcyConvRateType	string	Currency conversion rate type for extensibility
CurrencyCode	string	Currency code
CurrencyDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Currency date
CurrentDateTimeAttr	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Current date time attribute
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date the person was born
EditTransactionUI	*Loyalty Transaction*	Transaction object associated with Member
EmailAddress	string	Email address
FormattedPhoneNumber	string	Formatted phone number
GroupLookupCode	string	Group lookup code
GroupLookupType	string	Group lookup type
GroupMeaning	string	Group meaning
HouseholdFullName	string	Household full name
HouseholdMemIsChanged	string	Indicates whether the household member is changed

Name	Type	Description
HouseholdMember	string	Household member
HouseholdMemberId	long	Household member Id
HouseholdName	string	Household name
LastAccrTransactionDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	LLast accural transaction date
LastRdmTransactionDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the members last redemption transaction date
LastTransactionProcedDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Last transaction proceed date
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Last Update Date
LastUpdateLogin	string	Last Update Login
LastUpdatedBy	string	Last Updated By
LftmPointTypeAVal	decimal	Lifetime payment type A value
LftmPointTypeBVal	decimal	Lifetime payment type B value
LftmPointTypeCVal	decimal	Lifetime payment type C value
LftmPointTypeDVal	decimal	Lifetime payment type D value
LftmPointTypeEVal	decimal	Lifetime payment type E value
LftmPointTypeFVal	decimal	Lifetime payment type F value
LftmPointTypeGVal	decimal	Lifetime payment type G value
LftmPointTypeHVal	decimal	Lifetime payment type H value
LookupCode	string	Status lookup code
LookupType	string	Status lookup type
LoyAccountName	string	Name of an Account

Name	Type	Description
LoyHouseholdName	string	Name of a Household
LoyProgramName	string	Name of the Loyalty Program.
LoyaltyProgramName	string	Name of the loyalty program
LstTierChangeDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Date of member's last tier change
MemberAttributes	*Point Type*	Attributes associated with Member
MemberCard	*Card*	Member card object associated with Member
MemberClassCode	string	Member class code
MemberClassMeaning	string	Member class meaning
MemberEmailAddress	string	Email address of the member
MemberGrpCode	string	Member group code
MemberId	long	Member unique identifier
MemberName	string	Name of the member
MemberNumber	string	Member number
MemberPhaseCode	string	Member phase code
MemberPhaseMeaning	string	Member phase meaning
MemberPromotionsEnrolled	*Member Promotion Enrollment*	Member Enrollments into Enrollable Promotions.
MemberTier	*Loyalty Member Tier*	Member tier object associated to the Member
MemberTransactions	*Loyalty Transaction*	Transaction Object Associated with Member
MemberTypeCode	string	Member type code
MemberTypeMeaning	string	Member type meaning

Name	Type	Description
MemberVoucher	*Voucher*	Member voucher object associated to the Member
MembershipSchemeId	long	Refers to the product id(enrollment product)
MobileNumber	string	Mobile number
ObjectVersionNumber	int	It is used to imiplement optimistic lock
OrgGroupId	long	Orgnization group Id
OrgGroupPartyNumber	string	Organization group party number
ParentMember	string	Parent member flag
PartyId	long	Party identifier
PartyName	string	Party Name
PartyNumber	string	The Party Number of the contact associated to the Loyalty Member
PersonD	*Contact*	Person object associated to the Member
PersonFirstName	string	Person first name
PersonLastName	string	Person last name
PersonName	string	Person name
PersonProfileId	long	Person profile identifier
PhaseLookupCode	string	Phase lookup code
PhaseLookupType	string	Phase lookup type
PhaseMeaning	string	Phase meaning
PhoneNumber	string	Phone number
PointTypeAVal	decimal	Point type A value

Name	Type	Description
PointTypeBVal	decimal	Point type B value
PointTypeCVal	decimal	Point type C value
PointTypeDVal	decimal	Point type D value
PointTypeEVal	decimal	Point type E value
PointTypeFVal	decimal	Point type F value
PointTypeGVal	decimal	Point type G value
PointTypeHVal	decimal	Point type H value
Points	string	Points balance
PrConId	long	Primary contact Id
PreviousTierName	string	Previous tier name
ProgId	long	Program identification number
ProgName	string	Loyalty program name
ProgramName	string	Name of the Program
ProgramNumber	string	Program number
RealTimeBonusFlag	boolean	Real Time Bonus Flag
ReferConId	long	Primary contact Id of referral member
ReferredById	long	Referred by identification reference
ReferredByIdMember	*Loyalty Member*	Referred by member object associated to the Member
ReferredByName	string	Referred by member name
ReferredByNumber	string	Referred by member number

Name	Type	Description
RelationshipId	long	To store relationship between members
RelationshipRecId	long	Relationship record Id
RelationshipType	string	Relationship type
StartDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Start date
Status	string	Member status
StatusCode	string	Status code
SuppressCall	string	Suppress call
SuppressCallFlag	boolean	Block Member Call Contact
SuppressEmail	string	Suppress email
SuppressEmailFlag	boolean	Block Member Email Contact
SuppressFax	string	Suppress fax
SuppressFaxFlag	boolean	Block Member Fax Contact
SuppressMail	string	Suppress mail
SuppressMailFlag	boolean	Block Member Mail Contact
SuppressSMS	string	Suppress SMS
SuppressSMSFlag	boolean	Block Member SMS Contact
SurvMemNumber	string	Surviving member number
TierName	string	Tier name
ValLifeScore	string	Holds the life time values score of the member
WorkPhoneNumber	string	Work phone number
cards	*Card*	Member card object associated to the Member

Name	Type	Description
promotions	*Member Promotion Enrollment*	Member Enrollments into Enrollable Promotions.
reltype	string	Relationship type
vouchers	*Voucher*	Member voucher object associated to the Member

Loyalty Member Tier

Member Tier Data Object for Loyalty Member Service

QName: {http://xmlns.oracle.com/apps/sales/loyalty/member/service/memberService/}MemberTier

Logical Business Objects

- CRM : Loyalty : Loyalty Member

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Loyalty Member*
Handled by	*Loyalty Member Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveFlg	string	Active flag
Comments	string	Member tier Comments
CreatedBy	string	Tier created by reference

Name	Type	Description
EndDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Member tier end date
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Last update date
LookupCode	string	Reason lookup code
LookupType	string	Reason lookup type
LoyTierClsId	long	Loyalty tier class Id
LoyTierId	long	Loyalty tier Id
MemTierId	long	Primary key • Primary Key
MemberId	long	Tier associated member identifier
MemberTierNumber	string	Member tier number
NextTierName	string	Next tier name
ObjectVersionNumber	int	It is used to implement optimistic lock
PresentQualPoints	decimal	Present qualifying points
QualPointsToUpgrade	decimal	Required qualifying points to upgrade to next tier
ReasonValue	string	Reason for change the tier
StartDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Start date
StartQualPd	string	LOV Meaning of the LOV Code 'StaryQualPdCode'
StartQualPdCode	string	Start qualifying period code
TierClassId	long	Member tier identifier
TierClassName	string	Tier class name

Name	Type	Description
TierId	long	Tier identifier
TierName	string	Tier name
TierQualPoints	decimal	Tier qualifying points
TillDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Till date for upgrade to next tier

Loyalty Transaction

Transaction Data Object for Loyalty Transaction Service

QName: {http://xmlns.oracle.com/apps/sales/loyalty/transaction/transactionService/}Transaction

Logical Business Objects

- CRM : Loyalty : Loyalty Transaction

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Voucher*
Contains	*Loyalty Bucket*
Contained by	*Loyalty Member*
Handled by	*Loyalty Member Service*
Handled by	*Loyalty Transaction*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccrRuleId	long	Accrual rule Id
AccrualDisputeStatus	string	List of Value Meaning for Accrual Dispute Status
AccrualDisputeStatusCode	string	Accrual Dispute Status Code
AccrualDisputeType	string	List of Value Meaning for Accrual Dispute Type
AccrualDisputeTypeCode	string	Accrual Dispute Type Code
AccrualDisputedTransactionNumber	string	Accrual Disputed Transaction Number
ActivityDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Activity date
ActivityDay	decimal	Activity day
ActivityHour	decimal	Activity hour
AdjustedListPriceValue	decimal	Adjusted list price value
AmountValue	decimal	Amount value
ApproveDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Approve date
ApproveId	long	Approve Id
AttributeDefnBId	long	Loyalty attribute definition Id
BUId	long	BU Id
BackupInvOrgId	long	Backup InvOrgId
BackupProductNumber	string	Backup Product Number
Balance	decimal	Transaction balance
BookClassCode	string	Book class code
BookingClass	string	List of Value Meaning for Booking Class Code

Name	Type	Description
BookingDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Booking date
Bucket	*Loyalty Bucket*	Bucket object associated with transaction
CancReasonCode	string	Cancel reason code
CancelledTransactionId	long	Cancelled transaction Id
CancelledTransactionNumber	string	Cancelled transaction number
ChildTransactionId	long	Child transaction Id
ChildTransactionNumber	string	Child transaction number
Comments	string	Transaction comments
ConflictId	long	Conflict Id
CorpCurrencyCode	string	Corp currency code
CorpReferenceMemberId	long	Corp reference member Id
CorpReferenceMemberType	string	Corp reference member type
CorpReferenceName	string	Corp reference name
CorporateReferenceNumber	string	Corporate reference number
CreatedBy	string	Indicates who create the transaction
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time of the creation of the row
CurcyCode	string	Currency code
CurcyConvRateType	string	Currency conv rate type
CurcyExchDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Currency exchange date
Description	string	Transaction description

Name	Type	Description
DestAirport	string	List of Value Meaning for Dest Airport Code
DestAirportCode	string	Destination airport code
DestCityCode	string	Destination city code
DestZone	string	List of Value Meaning for Dest AirlineZone Code
DestZoneCode	string	Destination zone code
DisplayName	string	Point Type Name
DocumentNumber	string	Doucment number
EndDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	End date
EventName	string	Event name
ExpireInDays	decimal	Expire in days
ExternProdLineMeaning	string	Exernal product line meaning
ExternProdTypeMeaning	string	External product type meaning
ExternalProductLine	string	External product line
ExternalProductLineMeaning	string	List of Value Meaning for External Product Line Code
ExternalProductName	string	External product name
ExternalProductTyeMeaning	string	List of Value Meaning for External Product Type Code
ExternalProductType	string	External product type
ExternalReservationNumber	string	External reservation number
ExternalTransaction	string	External Transaction
FareBasis	string	Fare basis

Name	Type	Description
FareBasisCode	string	Fare basis code
FareBasisMeaning	string	List of Value Meaning for Fare Basis Code
FareType	string	List of Value Meaning for Fare Type Code
FareTypeCode	string	Fare type code
FlightNumber	string	Flight number
FltTypeCode	string	Flight type code
GdsRecLocator	string	Gds record locator
IncentivChoice	string	Incentive choice
IntegrationId	string	Integration Id
InternalDest	string	Internal destination
InternalFlightDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Internal flight date
InternalOrigin	string	Internal origin
InvOrgId	long	Inventory organization Id
InventoryItemId	long	Inventory item Id
ItemNumber	string	Item number
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time of the last update of the row
LastUpdateLogin	string	Indicates the session login associated to the user who last updated the row
LastUpdatedBy	string	Indicates the user who last updated the row
LineItemNumber	long	Line item number
LoanBalance	decimal	Loan balance

Name	Type	Description
LoanRepaymentDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Loan repayment date
LocationCode	long	Location code
LocationName	string	Location name
LoyMemberId	long	Loyalty member Id
LoyProgramId	long	Loyalty program Id
MarketingFlightNumber	string	marketing flight number
MemName	string	Member name
MemTypeCode	string	Member type code
MemberId	long	Member identifier
MemberName	string	Member name
MemberNumber	string	Member number
MemberTypeCode	string	Member type code
ObjectVersionNumber	int	Used to implement optimistic locking
OperCarrierId	long	Oper carrier Id
OperFltNumber	string	Oper flight number
OptyCost	decimal	Opportunity cost
OrderNumber	string	Order number
OrderQuantityValue	decimal	Order quantity value
OrganizationCode	string	Organization Code
OrganizationId	long	Organization Id

Name	Type	Description
OrigAcrlReferenceId	long	Origin accrual reference Id
OrigAirport	string	List of Value Meaning for Org Airport Code
OrigAirportCode	string	Origin airport code
OrigAmountValue	decimal	Original amount value
OrigOrdItmId	long	Origin order item Id
OrigOrderId	long	Origin order Id
OrigPoints	decimal	Origin points
OrigZone	string	List of Value Meaning for Org AirlineZone Code
OrigZoneCode	string	Origin zone code
OriginCityCode	string	Origin city code
OvrDupCheck	string	Ovr dup check flag
OwnerId	long	Owner Id
PackageCode	string	Package code
ParentTransactionId	long	Parent transaction Id
ParentTransactionNumber	string	Parent transaction number
PartitionName	string	Partition name
PartnerCompanyNumber	string	Partner Company Number
PartnerId	long	Partner Id
PartnerNumber	string	Partner Number
PartyId	long	Party Id
PartyName	string	Party name

Name	Type	Description
PartyNumber	string	Party Number
PaymentTypeMeaning	string	List of Value Meaning for Payment Type Code
PeriodDurCode	string	Period dur code
PeriodTypeCode	string	Period type code
PersonId	long	Person Id
PnrName	string	Pnr name
PnrNumber	string	Pnr number
PointTypeId	long	Point type Id
PointTypeName	string	Point type name
Points	decimal	Transaction points
PostDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Post date
PrConId	long	Primary contact Id
PrgName	string	Program name
PriceOverriden	string	Price overriden
ProcessDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Process date
ProcessingComment	string	Processing comment
ProcessingLog	string	Processing log
ProdId	long	Product Id
ProdItemNumber	string	Product Item Number
ProductDescription	string	Product description

Name	Type	Description
ProductNumber	string	Product Number
ProgId	long	Program Id
ProgName	string	Program name
ProgramName	string	Program Name
ProgramNumber	string	Transaction associated program number
Promotions	*Loyalty Bucket*	Promotion object associated with transaction
PtnrProcDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Partener process date
PtnrStatusCode	string	Partener status code
PtnrUserId	long	Partener user Id
PymtTypeCode	string	Payment type code
QualifyingPointUsed	string	Qualifying point used
QueuedProcessingFlag	boolean	Queued Processing Flag
ReasonCode	string	Reason code
RedemptionQuantityUOMCode	string	Redemption quantity UOM code
RedemptionQuantityValue	decimal	Redemption quantity value
ReferredByMemId	long	Referred by member Id
ReferredByMemNumber	string	Referred by member number
RefundPct	decimal	Refund pct
RfndOvrdCmnts	string	Refund overriden comments
RfndOvrdRsnCode	string	Refund overriden rsn code
SmActionMeaning	string	Sm action meaning

Name	Type	Description
SmActionType	string	List of Value Meaning for Social Action Type Code
SmActionTypeCode	string	Sm action type code
SmDataId	long	Sm data Id
Source	string	List of Value Meaning for Transaction Source Code
SourceCode	string	Source code
StartDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Start date
StatusCode	string	Transaction status code
StatusLookupCode	string	Status lookup code
StatusLookupType	string	Status lookup type
StatusLookupTypeValue	string	Status lookup type value
StatusMeaning	string	Transaction status meaning
SubStatus	string	List of Value Meaning for Sub Status Code
SubStatusCode	string	Substatus code
SubTypeCode	string	Transaction sub type code
SubTypeLookupCode	string	Subtype lookup code
SubTypeLookupType	string	Subtype lookup type
SubTypeMeaning	string	Transaction sub type meaning
SubTypeName	string	Sub type name
SubmitDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Submit date

Name	Type	Description
SubmitToId	long	Submit to Id
TaxAmountValue	decimal	Tax amount value
TicketNumber	string	Ticket number
ToMemberNumber	string	To member number
TotalDays	long	Storing number of days stayed in a hotel or car rented or any other service taken on per-day basis
TotalLines	decimal	Total lines
TransactionChannel	string	List of Value Meaning for Transaction Channel Code
TransactionChannelCode	string	Transaction channel code
TransactionDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Transaction date
TransactionId	long	Loyalty transaction identifier
TransactionNumber	string	Transaction number
TransactionSourceCode	string	Transaction source code
TransferMemId	long	Transfer member Id
TransferMemName	string	Transfer member name
TransferMemNumber	string	Transfer Member Number
TransferPoints	decimal	Transfer points
TransferToMember	string	Fransfer to member
TransferTransactionId	long	Transfer transaction Id
TrvClass	string	List of Value Meaning for Travel Class Code
TrvClassCode	string	Travel class code

Name	Type	Description
TrvlDistance	decimal	Travel distance
TypeCode	string	Transaction type code
TypeCodeName	string	Type code name
TypeLookupCode	string	Type lookup code
TypeMeaning	string	Transaction type meaning
UnaccMinor	string	Unacc minor
ValStatusCode	string	Val status code
Voucher	*Voucher*	Voucher object associated with transaction
VoucherId	string	Voucher Id
VoucherNumber	string	Voucher Number
VoucherQuantityValue	decimal	Voucher quantity value
VoucherTypeId	long	Voucher type Id
Vouchers	*Voucher*	Voucher object associated with transaction

Member Promotion Enrollment

Promotion enrollment data object for Loyalty Member Service

QName: {http://xmlns.oracle.com/apps/sales/loyalty/member/service/memberService/}MemberPromotionsEnrolled

Logical Business Objects

- CRM : Loyalty : Loyalty Member

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Loyalty Member*
Handled by	*Loyalty Member Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactFirstName	string	Member contact first name
ContactLastName	string	Member contact last name
EnrollmentStart	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Promotion enrollment start date
IncentiveChoice	string	Incentive choice
MemName	string	Member name
MemTierName	string	Member tier name
MemberName	string	Member name
MemberNumber	string	Member number
MemberStatusCode	string	Member status code
Name	string	Name of promotion
PrimaryContactId	long	Primary contact Id
PromoMemNumber	string	Public unique identifier of Member promotion enrolled object
PromotionName	string	Name of the promotion
PromotionNumber	string	
SubType	string	Sub type of the promotion

Name	Type	Description
SubTypeCode	string	Sub type code of the promotion
SubTypeCodeMeaning	string	Sub type meaning of the promotion
TierName	string	Tier name
TypeCode	string	Promotion type code
TypeCodeMeaning	string	Type meaning of the promotion

Point Type

Member Attributes data object for Member attributes service

QName: {http://xmlns.oracle.com/apps/sales/loyalty/member/service/memberService/}MemberAttributes

Logical Business Objects

- CRM : Loyalty : Loyalty Member

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Loyalty Member*
Handled by	*Loyalty Member Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
DisplayName	string	Member attribute display name
MemberNumber	string	Member number

Name	Type	Description
PreviousValue	string	Old member attribute value
PrimaryContactId	long	Primary contact Id
Value	string	Member attribute value

Trading Community Person Profile Additional Information

The additional information about a trading community person.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/person/}PersonInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contact*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Loyalty Member Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
PersonProfileId	long	The unique identifier of the person profile. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Voucher

Voucher Data Object for Loyalty Member Service

QName: {http://xmlns.oracle.com/apps/sales/loyalty/member/service/memberService/}Voucher

Logical Business Objects

- CRM : Loyalty : Loyalty Member

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Loyalty Transaction*
Contained by	*Loyalty Member*
Handled by	*Loyalty Member Service*
Handled by	*Loyalty Transaction*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActionNote	string	Action note

Name	Type	Description
ActivityDate	string	Activity date
Basis	string	List of Value Meaning for Basis Code
BasisCode	string	Voucher Basis -Tier Reward / Redemption
ConsumedTransactionId	long	Consumed transaction Id
ConsumedTransactionNumber	string	Consumed Transaction Number
CreatedBy	string	Created By
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Creation Date
CurcyExchDt	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Currency Exchange Date
CurrencyAmountValue	decimal	Currency amount value
CurrencyCode	string	Currency Code
Description	string	Voucher description
DiscountValue	string	This field signifies the discount percentage associated to the voucher
ExpirationDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Voucher expiration date
InvOrgId	long	Inventory organization Id is required for identifying the product name
InventoryItemId	long	Inventory item Id
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Last Update Date
LastUpdatedBy	string	Last Updated By
LoyMemberId	long	Loyalty member Id
LoyPromoId	long	Loyalty promotion Id

Name	Type	Description
MemNumber	string	Member number
MemberId	long	Member associated member Id
MemberNumber	string	Voucher associated member number
MemberVoucherId	long	Member voucher Id
Name	string	Promotion name
ObjectVersionNumber	int	It is used to implement optimistic lock
OrganizationCode	string	Organization Code
OrganizationId	long	Organization Id
OriginalVoucherNumber	string	Original Voucher Number
PrConId	long	Member primary contact Id
ProdId	long	Product Id
ProductId	long	Product Id
ProductNumber	string	Product Number
Productdescriptionvalue	string	Product description value
PromotionNumber	string	Promotion Number
QuantityValue	decimal	Quantity value
StatusCode	string	Status code
StatusLookupCode	string	Voucher status lookup code
StatusLookupType	string	Voucher status lookup type
StatusMeaning	string	Voucher status meaning
TransactionId	long	Transaction Id

Name	Type	Description
TransactionItemId	long	Transaction item Id
TransactionNumber	string	Transaction number
UsedDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Voucher used date
VchrBasis	string	List of Value Meaning for Voucher Basis Code
VchrBasisCode	string	Voucher basis code
VoucherDiscountValue	decimal	Voucher discount value
VoucherEffectiveStartDt	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Voucher effective start date
VoucherNumber	string	Voucher number
validFlag	boolean	Voucher valid flag
voucherStatus	string	Voucher status

Loyalty Transaction

An integration web service for loyalty transaction

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/sales/loyalty/transaction/transactionService/}TransactionIntegrationService

Service WSDL URL: https://servername/crmService/TransactionIntegrationService?WSDL

Logical Business Objects

- CRM : Loyalty : Loyalty Transaction

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Voucher*
Handles	*Loyalty Bucket*
Handles	*Loyalty Transaction*

Operations

- *getPromotionAttribute*
- *getTransaction*

getPromotionAttribute

A web service method that queries by Keys, a single record of Bucket Object

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
bucketId	long	A required input parameter of the getPromotionAttribute web servcie method. It is the primary key of bucket
originalTextValues	string	Original text attribute values
originalNumberValues	string	Original number attribute values
orignialDateValues	string	Original date attribute values

Response Payload

Element Name	Type	Description
result	*Loyalty Bucket*	The return value of getPromotionAttribute web service method. Includes the full set of attributes of the bucket record

getTransaction

A web service method that queries by Keys, a single record of Loyalty Transaction Object

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
loyTransactionId	long	A required input parameter of the getTransaction web servcie method. It is the primary key of transaction

Response Payload

Element Name	Type	Description
result	*Loyalty Transaction*	The return value of getTransaction web service method. Includes the full set of attributes of the transaction record

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getPromotionAttribute	LOY_MANAGE_TRANSACTION_PRIV	Manage Transaction	Allows View, create, update and delete of Transactions
getTransaction	LOY_MANAGE_TRANSACTION_PRIV	Manage Transaction	Allows View, create, update and delete of Transactions

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
LOY_MANAGE_TRANSACTION_PRIV	ORA_LOY_MANAGEMENT_DUTY	Loyalty Management	Manages all aspects of a Loyalty Program
LOY_MANAGE_TRANSACTION_PRIV	ORA_LOY_MEMBER_SERVICES_DUTY	Loyalty Member Services	Manages all aspects of a Loyalty Member and Transaction

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_LOY_MANAGEMENT_DUTY	ORA_ZPM_PARTNER_ACCOUNT_MAINTENANCE_DUTY	Partner Account Maintenance	Maintains a partner account, including managing members and partner profile information. This role is for members of the partner account team and their management chain.
ORA_LOY_MANAGEMENT_DUTY	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.

Loyalty Bucket

Promotion attribute data object for Loyalty Transaction Service

QName: {http://xmlns.oracle.com/apps/sales/loyalty/transaction/transactionService/}Bucket

Logical Business Objects

- CRM : Loyalty : Loyalty Transaction

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Loyalty Transaction*
Handled by	*Loyalty Member Service*
Handled by	*Loyalty Transaction*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributeDisplayName	string	Promotion attribute display name
AttributePreviousValue	string	Promotion attribute original value
AttributeValue	string	Promotion attribute current value
MemberNumber	string	Member number
PrimaryContactId	long	Primary contact Id
PromotionName	string	Promotion name
Status	string	List of Value Meaning for StatusCode

Loyalty Transaction

Transaction Data Object for Loyalty Transaction Service

QName: {http://xmlns.oracle.com/apps/sales/loyalty/transaction/transactionService/}Transaction

Logical Business Objects

- CRM : Loyalty : Loyalty Transaction

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Voucher*
Contains	*Loyalty Bucket*
Contained by	*Loyalty Member*
Handled by	*Loyalty Member Service*
Handled by	*Loyalty Transaction*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccrRuleId	long	Accrual rule Id
AccrualDisputeStatus	string	List of Value Meaning for Accrual Dispute Status
AccrualDisputeStatusCode	string	Accrual Dispute Status Code
AccrualDisputeType	string	List of Value Meaning for Accrual Dispute Type
AccrualDisputeTypeCode	string	Accrual Dispute Type Code
AccrualDisputedTransactionNumber	string	Accrual Disputed Transaction Number
ActivityDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Activity date
ActivityDay	decimal	Activity day
ActivityHour	decimal	Activity hour
AdjustedListPriceValue	decimal	Adjusted list price value
AmountValue	decimal	Amount value
ApproveDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Approve date
ApproveId	long	Approve Id
AttributeDefnBId	long	Loyalty attribute definition Id
BUId	long	BU Id
BackupInvOrgId	long	Backup InvOrgId
BackupProductNumber	string	Backup Product Number
Balance	decimal	Transaction balance

Name	Type	Description
BookClassCode	string	Book class code
BookingClass	string	List of Value Meaning for Booking Class Code
BookingDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Booking date
Bucket	*Loyalty Bucket*	Bucket object associated with transaction
CancReasonCode	string	Cancel reason code
CancelledTransactionId	long	Cancelled transaction Id
CancelledTransactionNumber	string	Cancelled transaction number
ChildTransactionId	long	Child transaction Id
ChildTransactionNumber	string	Child transaction number
Comments	string	Transaction comments
ConflictId	long	Conflict Id
CorpCurrencyCode	string	Corp currency code
CorpReferenceMemberId	long	Corp reference member Id
CorpReferenceMemberType	string	Corp reference member type
CorpReferenceName	string	Corp reference name
CorporateReferenceNumber	string	Corporate reference number
CreatedBy	string	Indicates who create the transaction
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time of the creation of the row
CurcyCode	string	Currency code
CurcyConvRateType	string	Currency conv rate type

Name	Type	Description
CurcyExchDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Currency exchange date
Description	string	Transaction description
DestAirport	string	List of Value Meaning for Dest Airport Code
DestAirportCode	string	Destination airport code
DestCityCode	string	Destination city code
DestZone	string	List of Value Meaning for Dest AirlineZone Code
DestZoneCode	string	Destination zone code
DisplayName	string	Point Type Name
DocumentNumber	string	Doucment number
EndDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	End date
EventName	string	Event name
ExpireInDays	decimal	Expire in days
ExternProdLineMeaning	string	Exernal product line meaning
ExternProdTypeMeaning	string	External product type meaning
ExternalProductLine	string	External product line
ExternalProductLineMeaning	string	List of Value Meaning for External Product Line Code
ExternalProductName	string	External product name
ExternalProductTyeMeaning	string	List of Value Meaning for External Product Type Code
ExternalProductType	string	External product type

Name	Type	Description
ExternalReservationNumber	string	External reservation number
ExternalTransaction	string	External Transaction
FareBasis	string	Fare basis
FareBasisCode	string	Fare basis code
FareBasisMeaning	string	List of Value Meaning for Fare Basis Code
FareType	string	List of Value Meaning for Fare Type Code
FareTypeCode	string	Fare type code
FlightNumber	string	Flight number
FltTypeCode	string	Flight type code
GdsRecLocator	string	Gds record locator
IncentivChoice	string	Incentive choice
IntegrationId	string	Integration Id
InternalDest	string	Internal destination
InternalFlightDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Internal flight date
InternalOrigin	string	Internal origin
InvOrgId	long	Inventory organization Id
InventoryItemId	long	Inventory item Id
ItemNumber	string	Item number
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time of the last update of the row
LastUpdateLogin	string	Indicates the session login associated to the user who last updated the row

Name	Type	Description
LastUpdatedBy	string	Indicates the user who last updated the row
LineItemNumber	long	Line item number
LoanBalance	decimal	Loan balance
LoanRepaymentDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Loan repayment date
LocationCode	long	Location code
LocationName	string	Location name
LoyMemberId	long	Loyalty member Id
LoyProgramId	long	Loyalty program Id
MarketingFlightNumber	string	marketing flight number
MemName	string	Member name
MemTypeCode	string	Member type code
MemberId	long	Member identifier
MemberName	string	Member name
MemberNumber	string	Member number
MemberTypeCode	string	Member type code
ObjectVersionNumber	int	Used to implement optimistic locking
OperCarrierId	long	Oper carrier Id
OperFltNumber	string	Oper flight number
OptyCost	decimal	Opportunity cost
OrderNumber	string	Order number
OrderQuantityValue	decimal	Order quantity value

Name	Type	Description
OrganizationCode	string	Organization Code
OrganizationId	long	Organization Id
OrigAcrlReferenceId	long	Origin accrual reference Id
OrigAirport	string	List of Value Meaning for Org Airport Code
OrigAirportCode	string	Origin airport code
OrigAmountValue	decimal	Original amount value
OrigOrdItmId	long	Origin order item Id
OrigOrderId	long	Origin order Id
OrigPoints	decimal	Origin points
OrigZone	string	List of Value Meaning for Org AirlineZone Code
OrigZoneCode	string	Origin zone code
OriginCityCode	string	Origin city code
OvrDupCheck	string	Ovr dup check flag
OwnerId	long	Owner Id
PackageCode	string	Package code
ParentTransactionId	long	Parent transaction Id
ParentTransactionNumber	string	Parent transaction number
PartitionName	string	Partition name
PartnerCompanyNumber	string	Partner Company Number
PartnerId	long	Partner Id
PartnerNumber	string	Partner Number

Name	Type	Description
PartyId	long	Party Id
PartyName	string	Party name
PartyNumber	string	Party Number
PaymentTypeMeaning	string	List of Value Meaning for Payment Type Code
PeriodDurCode	string	Period dur code
PeriodTypeCode	string	Period type code
PersonId	long	Person Id
PnrName	string	Pnr name
PnrNumber	string	Pnr number
PointTypeId	long	Point type Id
PointTypeName	string	Point type name
Points	decimal	Transaction points
PostDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Post date
PrConId	long	Primary contact Id
PrgName	string	Program name
PriceOverriden	string	Price overriden
ProcessDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Process date
ProcessingComment	string	Processing comment
ProcessingLog	string	Processing log
ProdId	long	Product Id

Name	Type	Description
ProdItemNumber	string	Product Item Number
ProductDescription	string	Product description
ProductNumber	string	Product Number
ProgId	long	Program Id
ProgName	string	Program name
ProgramName	string	Program Name
ProgramNumber	string	Transaction associated program number
Promotions	*Loyalty Bucket*	Promotion object associated with transaction
PtnrProcDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Partener process date
PtnrStatusCode	string	Partener status code
PtnrUserId	long	Partener user Id
PymtTypeCode	string	Payment type code
QualifyingPointUsed	string	Qualifying point used
QueuedProcessingFlag	boolean	Queued Processing Flag
ReasonCode	string	Reason code
RedemptionQuantityUOMCode	string	Redemption quantity UOM code
RedemptionQuantityValue	decimal	Redemption quantity value
ReferredByMemId	long	Referred by member Id
ReferredByMemNumber	string	Referred by member number
RefundPct	decimal	Refund pct

Name	Type	Description
RfndOvrdCmnts	string	Refund overriden comments
RfndOvrdRsnCode	string	Refund overriden rsn code
SmActionMeaning	string	Sm action meaning
SmActionType	string	List of Value Meaning for Social Action Type Code
SmActionTypeCode	string	Sm action type code
SmDataId	long	Sm data Id
Source	string	List of Value Meaning for Transaction Source Code
SourceCode	string	Source code
StartDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Start date
StatusCode	string	Transaction status code
StatusLookupCode	string	Status lookup code
StatusLookupType	string	Status lookup type
StatusLookupTypeValue	string	Status lookup type value
StatusMeaning	string	Transaction status meaning
SubStatus	string	List of Value Meaning for Sub Status Code
SubStatusCode	string	Substatus code
SubTypeCode	string	Transaction sub type code
SubTypeLookupCode	string	Subtype lookup code
SubTypeLookupType	string	Subtype lookup type
SubTypeMeaning	string	Transaction sub type meaning

Name	Type	Description
SubTypeName	string	Sub type name
SubmitDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Submit date
SubmitToId	long	Submit to Id
TaxAmountValue	decimal	Tax amount value

TransactionId	long	Loyalty transaction identifier
TransactionNumber	string	Transaction number
TransactionSourceCode	string	Transaction source code
TransferMemId	long	Transfer member Id
TransferMemName	string	Transfer member name
TransferMemNumber	string	Transfer Member Number
TransferPoints	decimal	Transfer points
TransferToMember	string	Fransfer to member

Name	Type	Description
TransferTransactionId	long	Transfer transaction Id
TrvClass	string	List of Value Meaning for Travel Class Code
TrvClassCode	string	Travel class code
TrvlDistance	decimal	Travel distance
TypeCode	string	Transaction type code
TypeCodeName	string	Type code name
TypeLookupCode	string	Type lookup code
TypeMeaning	string	Transaction type meaning
UnaccMinor	string	Unacc minor
ValStatusCode	string	Val status code
Voucher	*Voucher*	Voucher object associated with transaction
VoucherId	string	Voucher Id
VoucherNumber	string	Voucher Number
VoucherQuantityValue	decimal	Voucher quantity value
VoucherTypeId	long	Voucher type Id
Vouchers	*Voucher*	Voucher object associated with transaction

Voucher

Voucher Data Object for Loyalty Member Service

QName: {http://xmlns.oracle.com/apps/sales/loyalty/member/service/memberService/}Voucher

Logical Business Objects

- CRM : Loyalty : Loyalty Member

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Loyalty Transaction*
Contained by	*Loyalty Member*
Handled by	*Loyalty Member Service*
Handled by	*Loyalty Transaction*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActionNote	string	Action note
ActivityDate	string	Activity date
Basis	string	List of Value Meaning for Basis Code
BasisCode	string	Voucher Basis -Tier Reward / Redemption
ConsumedTransactionId	long	Consumed transaction Id
ConsumedTransactionNumber	string	Consumed Transaction Number
CreatedBy	string	Created By
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Creation Date
CurcyExchDt	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Currency Exchange Date

Name	Type	Description
CurrencyAmountValue	decimal	Currency amount value
CurrencyCode	string	Currency Code
Description	string	Voucher description
DiscountValue	string	This field signifies the discount percentage associated to the voucher
ExpirationDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Voucher expiration date
InvOrgId	long	Inventory organization Id is required for identifying the product name
InventoryItemId	long	Inventory item Id
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Last Update Date
LastUpdatedBy	string	Last Updated By
LoyMemberId	long	Loyalty member Id
LoyPromoId	long	Loyalty promotion Id
MemNumber	string	Member number
MemberId	long	Member associated member Id
MemberNumber	string	Voucher associated member number
MemberVoucherId	long	Member voucher Id
Name	string	Promotion name
ObjectVersionNumber	int	It is used to implement optimistic lock
OrganizationCode	string	Organization Code
OrganizationId	long	Organization Id
OriginalVoucherNumber	string	Original Voucher Number

Name	Type	Description
PrConId	long	Member primary contact Id
ProdId	long	Product Id
ProductId	long	Product Id
ProductNumber	string	Product Number
Productdescriptionvalue	string	Product description value
PromotionNumber	string	Promotion Number
QuantityValue	decimal	Quantity value
StatusCode	string	Status code
StatusLookupCode	string	Voucher status lookup code
StatusLookupType	string	Voucher status lookup type
StatusMeaning	string	Voucher status meaning
TransactionId	long	Transaction Id
TransactionItemId	long	Transaction item Id
TransactionNumber	string	Transaction number
UsedDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Voucher used date
VchrBasis	string	List of Value Meaning for Voucher Basis Code
VchrBasisCode	string	Voucher basis code
VoucherDiscountValue	decimal	Voucher discount value
VoucherEffectiveStartDt	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Voucher effective start date
VoucherNumber	string	Voucher number

Name	Type	Description
validFlag	boolean	Voucher valid flag
voucherStatus	string	Voucher status

MDF Service

Service to operate on marketing budgets including market development funds. The supported operations are create, update, delete, and search.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/marketingBudgetService/}MarketingBudgetService

Service WSDL URL: https://servername/crmService/MarketingBudgetService?WSDL

Logical Business Objects

- CRM : Marketing : Marketing Budget

getBudget

A web service method for Get operation of the Marketing Budget.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budgetId	long	The unique identifier of the Marketing Budget.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}BudgetResult	The service returns a Marketing Budget that matches the inbound key attributes.

createBudget

A web service method for Create operation of the Marketing Budget.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budget	*MDF Budget*	The service for the Marketing Budget to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}BudgetResult	The service returns the created Marketing Budget.

updateBudget

A web service method for Update operation of the Marketing Budget.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budget	*MDF Budget*	The service for the Marketing Budget to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}BudgetResult	The service returns the updated Marketing Budget.

deleteBudget

A web service method for Delete operation of the Marketing Budget.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budget	*MDF Budget*	The service for the Marketing Budget to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The parameter is not applicable for the method deleteBudget.

findBudget

A web service method that queries a single record of Marketing Budget by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findBudgetEntry web service method. The filter criteria is a cumulative set of attribute criteria that identifies the Marketing Budget records.

Element Name	Type	Description
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findBudget.

Response Payload

Element Name	Type	Description
result	*MDF Budget*	The return value of the findBudget web service method. It includes the full set of attributes of the record.

getBudgetEntry

A web service method for Get operation of the Marketing Budget Entry.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budgetEntryId	long	Returns a uniquely identified budget entry associated to a marketing budget.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}BudgetEntryResult	The service returns the Marketing Budget Entry that matches the inbound key attributes.

createBudgetEntry

A web service method for Create operation of the Marketing Budget Entry.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budgetEntry	*Marketing Budget Entry Version 2*	The service for the Marketing Budget Entry to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}BudgetEntryResult	The service returns the created Marketing Budget Entry.

updateBudgetEntry

A web service method for Update operation of the Marketing Budget Entry.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budgetEntry	*Marketing Budget Entry Version 2*	The service for the Marketing Budget Entry to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}BudgetEntryResult	The service returns the updated Marketing Budget Entry.

findBudgetEntry

A web service method that queries a single record of Marketing Budget Entry by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findBudgetEntry web service method. The filter

Element Name	Type	Description
		criteria is a cumulative set of attribute criteria that identifies Marketing Budget Entry records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findBudgetEntry.

Response Payload

Element Name	Type	Description
result	*Marketing Budget Entry Version 2*	The return value of the findBudgetEntry web service method. It includes the full set of attributes of the record.

getClaim

A web service method for Get operation of the Marketing Claim.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claimId	long	Returns a uniquely identified claim associated to a marketing budget or fund request.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}ClaimResult	Marketing Claim that matches the inbound key attributes.

createClaim

A web service method for Create operation of the Marketing Claim.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claim	*MDF Claim*	The service for the Marketing Claim to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}ClaimResult	The service returns the created Marketing Claim.

updateClaim

A web service method for Update operation of the Marketing Claim.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claim	*MDF Claim*	The service for the Marketing Claim to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}ClaimResult	The service returns the updated Marketing Claim.

deleteClaim

A web service method for Delete operation of the Marketing Claim.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claim	*MDF Claim*	The service for the Marketing Claim to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The parameter is not applicable for the method deleteClaim.

findClaim

A web service method that queries a single record of Marketing Claim by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findBudgetEntry web service method. The filter criteria is a cumulative set of attribute criteria that will identify Marketing Claim records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findClaim.

Response Payload

Element Name	Type	Description
result	*MDF Claim*	The return value of the findClaim web service method. It includes the full set of attributes of the record.

getClaimSettlements

A web service method for Get operation of the Marketing Claim Settlements.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claimSettlementId	long	Returns a uniquely identified claim settlement associated to a marketing claim.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}ClaimSettlementsResult	The service returns a Marketing Claim Settlement that matches the inbound key attributes.

createClaimSettlements

A web service method for Create operation of the Marketing Claim Settlement.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claimSettlements	*MDF Claim Settlement*	The service for the Marketing Claim Settlement to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}ClaimSettlementsResult	The service returns the created Marketing Claim Settlement.

updateClaimSettlements

A web service method for Update operation of the Marketing Claim Settlement.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claimSettlements	*MDF Claim Settlement*	The service for the Marketing Claim Settlement to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}ClaimSettlementsResult	The service returns the updated Marketing Claim Settlement.

findClaimSettlements

A web service method that queries a single record of Marketing Claim Settlement by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findBudgetEntry web service method. The filter criteria is a cumulative set of attribute criteria that identifies marketing claim settlement records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findClaimSettlements.

Response Payload

Element Name	Type	Description
result	*MDF Claim Settlement*	The return value of the findClaimSettlement web service method. It includes the full set of attributes of the record.

getFundRequest

A web service method for Get operation of the Marketing Fund Request.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
fundRequestId	long	Returns a uniquely identified fund request associated to a marketing budget.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}FundRequestResult	The service returns Marketing Fund Request that matches the inbound key attributes.

createFundRequest

A web service method for Create operation of the Marketing Fund Request.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
fundRequest	*MDF Request*	The service for the Marketing Fund Request to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}FundRequestResult	The service returns the created Marketing Fund Request.

updateFundRequest

A web service method for Update operation of the Marketing Fund Request.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
fundRequest	*MDF Request*	The service for the Marketing Fund Request to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}FundRequestResult	The service returns the updated Marketing Fund Request.

Element Name	Type	Description

deleteFundRequest

A web service method for Delete operation of the Marketing Fund Request.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
fundRequest	*MDF Request*	The service for the Marketing Fund Request to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The parameter is not applicable for the method deleteFundRequest.

findFundRequest

A web service method that queries a single record of Marketing Fund Request by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findFundRequest web service method. The filter criteria is a cumulative set of attribute criteria that identifies marketing fund request records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findFundRequest.

Response Payload

Element Name	Type	Description
result	*MDF Request*	The return value of the findFundRequest web service method. It includes the full set of attributes of the record.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition was last updated. The parameter is present in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MKT_VIEW_MARKETING_CLAIM_PRIV	View Marketing Claim	
All Operations	MKT_UPDATE_MARKETING_FUND_REQUEST_PRIV	Update Marketing Fund Request	Allows updating requests to allocate marketing budget funds for anticipated marketing expenses.
All Operations	MKT_UPDATE_MARKETING_CLAIM_SETTLEMENT_PRIV	Update Marketing Claim Settlement	Allows updating settlements of marketing claims after reimbursement of actual expenses.
All Operations	MKT_UPDATE_MARKETING_FUND_REQUEST_APPROVAL_DETAILS_PRIV	Update Marketing Fund Request Approval Details	Allows updating the MDF request approval details

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MKT_VIEW_MARKETING_FUND_REQUEST_PRIV	View Marketing Fund Request	
All Operations	MKT_CREATE_MARKETING_BUDGET_PRIV	Create Marketing Budget	
All Operations	MKT_UPDATE_COMPLETED_MARKETING_CLAIM_SETTLEMENT_PRIV	Update Completed Marketing Claim Settlement	Allows updating the attributes of MDF Marketing Claim Settlements in Complete status
All Operations	MKT_CREATE_MARKETING_CLAIM_SETTLEMENT_PRIV	Create Marketing Claim Settlement	Allows creating settlements of marketing claims after reimbursement of actual expenses.
All Operations	MKT_UPDATE_MARKETING_CLAIM_SETTLEMENT_DETAILS_PRIV	Update Marketing Claim Settlement Details	Allows updating the attributes of MDF Marketing Claim Settlements
All Operations	MKT_CREATE_MARKETING_CLAIM_PRIV	Create Marketing Claim	
All Operations	MKT_VIEW_MARKETING_BUDGET_ANALYTICS_PRIV	View Marketing Budget Analytics	Allows viewing marketing budget analytics. A marketing budget is used to track budgeted funds for marketing activities and requests and claims for those funds.
All Operations	MKT_UPDATE_MARKETING_CLAIM_PRIV	Update Marketing Claim	Allows updating claims to marketing budgets for reimbursement of actual expenses.
All Operations	MKT_UPDATE_MARKETING_BUDGET_PRIV	Update Marketing Budget	Allows updating a marketing budget used to track budgeted funds for marketing activities and requests for those funds.
All Operations	MKT_VIEW_MARKETING_BUDGET_ENTRY_PRIV	View Marketing Budget Entry	
All Operations	MKT_UPDATE_MARKETING_CLAIM_APPROVAL_DETAILS_PRIV	Update Marketing Claim Approval Details	Allows updating the MDF claim approval details
All Operations	MKT_VIEW_MARKETING_CLAIM_SETTLEMENT_PRIV	View Marketing Claim Settlement	Allows viewing settlements of marketing claims after reimbursement of actual expenses.
All Operations	MKT_CREATE_MARKETING_BUDGET_ENTRY_PRIV	Create Marketing Budget Entry	

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MKT_VIEW_MARKETING_BUDGET_PRIV	View Marketing Budget	Allows viewing a marketing budget used to track budgeted funds for marketing activities and requests for those funds.
All Operations	MKT_VIEW_MARKETING_BUDGET_CHECKBOOK_PRIV	View Marketing Budget Checkbook	Allows viewing a marketing budget checkbook used to track budgeted funds for marketing activities and request and claims for those funds.
All Operations	MKT_UPDATE_MARKETING_BUDGET_ENTRY_PRIV	Update Marketing Budget Entry	Allows updating entries for a marketing budget that establish the budget amount.
All Operations	MKT_UPDATE_MARKETING_FUND_REQUEST_BUDGET_DETAILS_PRIV	Update Marketing Fund Request Budget Details	Allows updating the MDF request budget details
All Operations	MKT_CREATE_MARKETING_FUND_REQUEST_PRIV	Create Marketing Fund Request	

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description

MDF Budget

The budget, and its details, of monetary incentives for partners to execute marketing activities.

QName: {http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}Budget

Logical Business Objects

- CRM : Marketing : Marketing Budget

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*MDF Budget Team*
Contains	*Marketing Budget Translation Version 2*
Handled by	*MDF Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivatedBy	string	The user who activated the marketing budget.
ActivatedById	long	The ID of the person who activated the marketing budget.
ActivationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The marketing budget activation date.
AdditionalReferenceId	long	The additional reference identifier associated to the marketing budget, that identifies a particular partner program or marketing source.
AdditionalReferenceSourceCode	string	Display label for two attributes, reference type and reference value. It provides a secondary reference in addition to the primary reference. When the additional reference type is marketing source code, the reference value containing the source code is stored in this attribute.

Name	Type	Description
AdditionalReferenceType	string	The type of the additional reference associated to the marketing budget, that is, partner program or marketing source.
AllowNegativeBalanceFlag	boolean	The check box that enables fund requests and claims submission which may cause the marketing budget to go negative upon approval.
BudgetCode	string	The user-defined, unique marketing budget label.
BudgetId	long	The unique identifier for the marketing budget. • Primary Key
BudgetName	string	The display name for the marketing budget.
BudgetSource	string	The parent budget that is the source of the marketing budget.
BudgetTeam	*MDF Budget Team*	The Resources/Team associated to the Budget.
BudgetTranslation	*Marketing Budget Translation Version 2*	The reference to the budget translation service data object with translation information.
BudgetType	string	The type of marketing budget such as internal only or partner.
CategoryCode	string	The attribute used to enter and categorize marketing budgets.
Country	string	The name of the country.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
Description	string	The free text description of the record.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.

Name	Type	Description
ExchangeRate	decimal	The conversion rate of a marketing budget.
FundingToleranceAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total marketing budget amount multiplied by the funding tolerance percent.
GeneralLedgerAccount	string	The reference to the general ledger account where marketing budgeted funds are reserved or accounted.
InactivatedBy	string	The user who inactivated the marketing budget.
InactivatedById	long	The ID of the person who inactivated the marketing budget.
InactivationDate	{http://xmlns.oracle.com/adf/svc/types/}dateDate	The date when the marketing budget was inactivated.
InitialBudgetAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The original or starting marketing budget amount.
LastCalculatedDate	{http://xmlns.oracle.com/adf/svc/types/}dateDate	The last calculation date of the marketing budget check book that factors in fund requests, claims, and marketing budget entries.
LastUpdatedBy	string	The user who last updated the record.
NumberClaimsPendingApproval	decimal	The number of claims pending approval.
NumberFundRequestPendingApproval	decimal	The number of fund requests pending approval.
OverdraftThreshold	decimal	The amount in percentage that a fund request can exceed above the available marketing budget amount. By default, the value is 10%.
OwnerId	long	The internal resource responsible for the management of the marketing budget.
OwnerPartyNumber	string	Public Unique Identifier for the Resource.
PartnerCompanyNumber	string	Public Unique Identifier for the Partner.
PartnerId	long	The unique identifier of the partner.

Name	Type	Description
PrimaryReferenceId	long	The primary reference is a display label for two attributes placed side by side that include a reference type and reference value. An additional string provides a hidden label for the second 'value' field.
PrimaryReferenceSourceCode	string	The primary reference for a marketing budget is a display label for two attributes placed side by side that include a reference type and reference value. When the primary reference type is marketing source code, the reference value containing the source code is stored in this attribute.
PrimaryReferenceType	string	The primary reference is a display label for two attributes placed side by side that include a reference type and reference value. An additional string provides a hidden label for the second 'value' field.
Region	string	The regions used to categorize marketing budgets by geographical area.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
StatusCode	string	The pre-defined code used to indicate the status.
SubmitClaimsBy	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The last date a marketing budget claim is accepted for reimbursement.
SubmitFundRequestBy	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The last date a marketing budget fund request is accepted.
TotalApprovedClaimAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount of approved claims for expense reimbursements against the marketing budget.
TotalApprovedRequestAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total approved fund requests for a marketing budget.
TotalAvailableBudgetAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The marketing budget amount available for fund requests and claims.
TotalBudgetAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total marketing budget amount based on the initial marketing budget plus any adjustments.

Name	Type	Description
TotalClaimAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount of marketing budget claims for reimbursement that are submitted, pending approval, approved, or rejected.
TotalClaimSettledAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount of marketing budget claims for reimbursement that are financially settled.
TotalCreditAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount from all marketing budget accounting entries of type credit.
TotalDebitAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount from all marketing budget accounting entries of type debit.
TotalOutstandingClaimLiabilityAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount of marketing budget claims for reimbursement that are approved but not settled.
TotalPendingClaimAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount of claims that are submitted or pending approval.
TotalPendingFundRequestAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount of fund requests that are submitted or pending approval.
TotalRejectedClaimAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount of claims for reimbursement that are rejected.
TotalRejectedFundRequestAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount of fund requests that are rejected.
TotalRequestedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount from all fund requests that are submitted, pending approval, approved, or rejected.
TotalUnclaimedFundRequestAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total approved fund requests less the total approved claims.

MDF Budget Team

The budget, and its details, of monetary incentives for partners to execute marketing activities.

QName: {http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}BudgetTeam

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*MDF Budget*
Handled by	*MDF Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevelCode	string	The Access Level Code of the resource within the campaign.
BudgetCode	string	Public Unique Identifier for the marketing Budget.
BudgetId	long	The unique identifier for the marketing budget.
BudgetTeamId	long	The system-generated, unique identifier for the marketing budget team. • Primary Key
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmailAddress	string	The email address associated with the record.
EmailAddress1	string	The email address associated with the record.
FormattedPhoneNumber	string	The formatted phone number.
MembershipType	string	The type of membership.
Name	string	The name of the resource associated to team.
OwnerFlag	boolean	The owner flag.

Name	Type	Description
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
ResourceId	long	The unique identifier of the resource.
ResourceOrgId	long	The identifier of the resource organization.
ResourcePartyNumber	string	Public Unique Identifier for the Resource.
ResourceType	string	The type of the resource.
UserFunction	string	The user function.
UserFunctionCode	string	The user function code.

MDF Claim

The request for reimbursement of marketing expenses submitted by a partner.

QName: {http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}Claim

Logical Business Objects

- CRM : Marketing : Marketing Budget

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*MDF Claim Team*
Handled by	*MDF Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivityOutcome	string	Partner Activity Out come.
AdditionalReferenceId	long	The additional reference identifier associated to the marketing claim, that identifies a particular partner program or marketing source.
AdditionalReferenceSourceCode	string	Display label for two attributes, reference type and reference value. It provides a secondary reference in addition to the primary reference. When the additional reference type is marketing source code, the reference value containing the source code is stored in this attribute.
AdditionalReferenceType	string	The type of the additional reference associated to the marketing claim, that is, partner program or marketing source.
Age	decimal	The number of days since the creation of the marketing claim.
ApprovedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount approved for the marketing claim.
ApprovedBy	string	The user who approved the marketing claim.
ApprovedById	long	The id of person who approved the marketing claim.
ApprovedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the marketing claim was approved.
BudgetId	long	The unique identifier for the marketing budget.
BudgetName	string	The display name of the marketing budget associated to the marketing claim.
ChannelManagerId	long	The resource identifier of the partner owner associated to the claim.
ClaimAging	string	The number of days since the creation of the marketing claim.

Name	Type	Description
ClaimAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount submitted for the marketing claim.
ClaimCode	string	The user-defined, unique label for the marketing claim.
ClaimCreationMethod	string	The method used to create the marketing claim. For example manually, via file import or via web service.
ClaimId	long	The system-generated, unique identifier of the marketing claim. • Primary Key
ClaimName	string	The display name of the marketing claim.
ClaimResource	*MDF Claim Team*	The claim resource.
ClaimStatusCode	string	The status code of the marketing claim.
Comments	string	The comments for the record.
ConversionRateType	string	The currency conversion rate type that is used to derive the exchange rate for converting the user-entered currency to CRM Corporate currency.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
Description	string	The free text description of the record.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
ExpenseCategoryCode	string	The expense category that matches a budget category, used for reporting purposes.
FundRequestCode	string	Public Unique Identifier for the marketing fund request.

Name	Type	Description
FundRequestId	long	The marketing fund request associated to the marketing claim.
LastUpdatedBy	string	The user who last updated the record.
OutstngClaimLiabilityAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The outstanding claim Liability amount.
OwnerId	long	The owner of marketing claim.
OwnerName	string	The name of the owner of the marketing claim.
OwnerPartyNumber	string	Public Unique Identifier for the Resource.
PartnerCompanyNumber	string	Public Unique Identifier for the Partner.
PartnerContactId	long	The partner contact associated to the marketing claim.
PartnerId	long	The unique identifier of the partner.
PartnerName	string	The partner account name associated to the marketing claim.
RejectedBy	string	The user who rejected the marketing claim.
RejectedById	long	The id of person who rejected the marketing claim.
RejectedDate	{http://xmlns.oracle.com/adf/svc/types/}dateDate	The date when the marketing claim was rejected.
RejectionReasonCode	string	The reason for rejecting the marketing claim.
SubmittedBy	string	The user who submitted the marketing claim.
SubmittedById	long	The id of person who submitted the marketing claim.
SubmittedDate	{http://xmlns.oracle.com/adf/svc/types/}dateDate	The submission date of the marketing claim.

MDF Claim Settlement

The payments made to partners for reimbursement of marketing expenses incurred by them.

QName: {http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}ClaimSettlements

Logical Business Objects

- CRM : Marketing : Marketing Budget

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*MDF Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountClassification	string	The account classification for the claim settlement account.
AccountingType	string	The accounting type of the marketing claim settlement, which represents a credit or debit in the back-end financial system.
ActiveFlag	boolean	Indicates the activity status of the marketing claim settlement as Active or Inactive.
AdditionalReferenceCode	string	The additional reference associated to the marketing claim settlement, that identifies a particular partner program or marketing source.
AdditionalReferenceType	string	The type of the additional reference associated to the marketing claim settlement, that is, partner program or marketing source.
BudgetCurrencyExchangeRate	decimal	The exchange rate used to convert from the marketing claim settlement currency to the parent budget currency.

Name	Type	Description
BudgetId	decimal	The unique identifier for the marketing budget.
ClaimCode	string	Public Uinique Identifier for the marketing claim.
ClaimCurrencyExchangeRate	decimal	The exchange rate used to convert from the marketing claim settlement currency to the parent marketing claim currency.
ClaimId	decimal	The system-generated, unique identifier of the parent marketing claim for the marketing claim settlement.
ClaimSettlementAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount settled for the marketing claim settlement.
ClaimSettlementCode	string	The user-defined, unique label for the marketing claim settlement.
ClaimSettlementId	long	The system-generated, unique identifier of the marketing claim settlement. • Primary Key
ClaimSettlementType	string	The type of marketing claim settlement. For example, deduction or payment.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreationMethod	string	The method used to create the marketing claim settlement. For example, manually, file import, or web service.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
Description	string	The free text description of the record.
InactivatedBy	string	The user who inactivated the marketing claim settlement.
InactivationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the marketing claim was inactivated.

Name	Type	Description
InvoiceReference	string	The reference identifier of the vendor invoice to be settled with the marketing claim settlement.
LastUpdatedBy	string	The user who last updated the record.
PaymentCheckReference	string	The reference identifier of the check that covers the marketing claim settlement, issued by the back-end financial system to the vendor.
PaymentMethod	string	The payment method used to cover the marketing claim settlement.
StatusCode	string	The pre-defined code used to indicate the status.
TransactionDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the claim settlement is processed or turns to Complete status.
TransactionMethod	string	The method through which the claim settlement transaction is processed.

MDF Claim Team

The request for reimbursement of marketing expenses submitted by a partner.

QName: {http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}ClaimResource

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*MDF Claim*
Handled by	*MDF Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevelCode	string	The Access Level Code of the resource within the campaign.
ClaimCode	string	Public Unique Identifier for the marketing claim.
ClaimId	long	The unique identifier of the claim.
ClaimResourceId	long	The system-generated, unique identifier for the marketing claim resource. • Primary Key
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmailAddress	string	The email address associated with the record.
FormattedPhoneNumber	string	The formatted phone number.
LastUpdatedBy	string	The user who last updated the record.
MemberFunctionCode	string	The code of the member function.
OwnerFlag	boolean	The owner flag.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
ResourceId	long	The unique identifier of the resource.
ResourcePartyNumber	string	Public Unique Identifier for the Resource.
ResourceUsername	string	The user name of the resource.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

MDF Request

The request for a portion of the budget to be allocated towards execution of marketing activities.

QName: {http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}FundRequest

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*MDF Request Team*
Handled by	*MDF Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivityEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The end date of the request.
ActivityStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The start date of the MDF request.
AdditionalReferenceId	long	The additional reference identifier associated to the marketing budget, that identifies a particular partner program or marketing source.
AdditionalReferenceSourceCode	string	Display label for two attributes, reference type and reference value. It provides a secondary reference in addition to the primary reference. When the additional reference type is marketing source code, the reference value containing the source code is stored in this attribute.
AdditionalReferenceType	string	The type of the additional reference associated to the marketing fund request, that is, partner program or marketing source.
Age	decimal	The number of days since the creation of the marketing fund request.

Name	Type	Description
ApprovedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount approved for the marketing fund request.
ApprovedAmountPercent	decimal	The percentage of the approved amount.
ApprovedBy	string	The user who approved the marketing fund request.
ApprovedById	long	The Id of person who approved the marketing fund request.
ApprovedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the marketing fund request was approved.
AvailableFundRequestAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The difference between total approved marketing fund request and total approved claim amounts, which is available to new claims.
BudgetCode	string	Public Unique Identifier for the marketing Budget.
BudgetId	long	The unique identifier for the marketing budget.
ChannelManager	string	The channel manager for the fund request.
ChannelManagerId	long	The identifier of the channel manager.
Comments	string	The comments for the record.
ConversionRateType	string	The currency conversion rate type that is used to derive the exchange rate for converting the user-entered currency to CRM Corporate currency.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
Description	string	The free text description of the record.
FundRequestCode	string	The user-defined, unique label for the marketing fund request.

Name	Type	Description
FundRequestId	long	The system-generated, unique identifier for the marketing fund request. • Primary Key
FundRequestName	string	The display name for the marketing fund request.
FundRequestResource	*MDF Request Team*	The fund request resource.
FundRequestStatusCode	string	The status code of the marketing fund request.
FundRequestType	string	The type of the fund request.
Justification	string	The justification for the request.
LastUpdatedBy	string	The user who last updated the record.
OriginalFundRequestId	long	The unique identifier of the initial fund request to allocate marketing budget funds for anticipated marketing expenses.
OwnerId	long	The owner of marketing fund request.
OwnerName	string	The name of the owner of the marketing fund request.
OwnerPartyNumber	string	Public Unique Identifier for the Resource.
PartnerCompanyNumber	string	Public Unique Identifier for the Partner.
PartnerContactId	long	The partner contact identifier associated to the marketing fund request.
PartnerId	long	The unique identifier of the partner.
PartnerName	string	The partner account identifier name associated to the marketing fund request.
RejectedBy	string	The user who rejected the marketing fund request.
RejectedById	long	The id of person who rejected the marketing fund request.

Name	Type	Description
RejectedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the marketing fund request was rejected.
RejectionReasonCode	string	The reason for rejecting the marketing fund request.
RequestedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount submitted for the marketing fund request.
SubmittedBy	string	The user who submitted the marketing fund request.
SubmittedById	long	The id of person who submitted the marketing fund request.
SubmittedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The submission date of the marketing fund request.
TotalApprovedClaimAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount of all approved claims for the marketing fund request.

MDF Request Team

The request for a portion of the budget to be allocated towards execution of marketing activities.

QName: {http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}FundRequestResource

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*MDF Request*
Handled by	*MDF Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevelCode	string	The Access Level Code of the resource within the campaign.
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmailAddress	string	The email address associated with the record.
FormattedPhoneNumber	string	The formatted phone number.
FundRequestCode	string	Public Unique Identifier for the marketing fund request.
FundRequestId	long	The system-generated, unique identifier for the marketing fund request.
FundRequestResourceId	long	The system-generated, unique identifier for the marketing fund request resource. • Primary Key
LastUpdatedBy	string	The user who last updated the record.
MemberFunctionCode	string	The code of the member function.
OwnerFlag	boolean	The owner flag.
PartyId	long	The unique identifier of the contact party.
ResourceId	long	The unique identifier of the resource.
ResourceName	string	The name of the resource.
ResourcePartyNumber	string	Public Unique Identifier for the Resource.
ResourceUsername	string	The user name of the resource.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Name	Type	Description

Marketing Budget Entry Version 2

The marketing budget entry that includes any changes or adjustments to a marketing budget after the initial budget is created.

QName: {http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}BudgetEntry

Logical Business Objects

- CRM : Marketing : Marketing Budget

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*MDF Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountTypeCode	string	The accounting type of the marketing budget entry, which can be a credit or a debit to the total budget amount.
ActiveFlag	boolean	Indicates the activity status of the marketing budget entry as Active or Inactive.
AdditionalReference	string	The additional reference identifier associated to the marketing budget entry, that identifies a particular partner program or marketing source.
AdditionalReferenceType	string	The type of the additional reference associated to the marketing budget entry, that is, partner program or marketing source.
BudgetEntryAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount entered for the marketing budget entry.

Name	Type	Description
BudgetEntryCode	string	The user-defined, unique label for the marketing budget entry.
BudgetEntryId	long	The system-generated, unique identifier for the marketing budget entry. • Primary Key
BudgetEntryType	string	The extensible type of marketing budget entry.
BudgetId	long	The unique identifier for the marketing budget.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
Description	string	The free text description of the record.
EffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the marketing budget entry becomes effective and accounted for in the budget balance summary.
ExchangeRate	decimal	The exchange rate used to convert from the marketing budget entry currency to the parent budget currency.
InactivatedBy	string	The user who inactivated the marketing budget entry.
InactivationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the marketing budget entry was inactivated.
LastUpdatedBy	string	The user who last updated the record.
StatusCode	string	The pre-defined code used to indicate the status.
TargetBudgetEntryId	long	The unique identifier for the marketing target budget entry to track changes or adjustment made (transfer in and transfer out transactions) to a marketing budget after the initial budget is created.

Name	Type	Description
TargetBudgetId	long	The unique identifier for the marketing budget funds that will be transferred from (for Transfer In request) or transferred to (for Transfer Out request).

Marketing Budget Service

Service to operate on marketing budgets including market development funds. The supported operations are create, update, delete, and search. WARNING: This service has been deprecated and is being replaced with Marketing Budget Service Version 2 (oracle.apps.marketing.commonMarketing.budgets.budgetService.MarketingBudgetService).

Life Cycle Status: Deprecated. This service is deprecated and replaced by .

A web service method for Get operation of the Marketing Budget Entry.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budgetEntryId	long	Returns a uniquely identified budget entry associated to a marketing budget.

Response Payload

Element Name	Type	Description
result	*Marketing Budget Entry*	The service returns the Marketing Budget Entry that matches the inbound key attributes.

createBudgetEntry

A web service method for Create operation of the Marketing Budget Entry.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budgetEntry	*Marketing Budget Entry*	The service for the Marketing Budget Entry to be created.

Response Payload

Element Name	Type	Description
result	*Marketing Budget Entry*	The service returns the created Marketing Budget Entry.

updateBudgetEntry

A web service method for Update operation of the Marketing Budget Entry.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budgetEntry	*Marketing Budget Entry*	The service for the Marketing Budget Entry to be updated.

Response Payload

Element Name	Type	Description
result	*Marketing Budget Entry*	The service returns the updated Marketing Budget Entry.

Element Name	Type	Description

findBudgetEntry

A web service method that queries a single record of Marketing Budget Entry by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findBudgetEntry web service method. The filter criteria are a cumulative set of attribute criteria that identifies Marketing Budget Entry records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findBudgetEntry.

Response Payload

Element Name	Type	Description
result	*Marketing Budget Entry*	The return value of the findBudgetEntry web service method. It includes the full set of attributes of the record.

getClaim

A web service method for Get operation of the Marketing Claim.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claimId	long	Returns a uniquely identified claim associated to a marketing budget or fund request.

Response Payload

Element Name	Type	Description
result	*Marketing Claim*	Marketing Claim that matches the inbound key attributes.

createClaim

A web service method for Create operation of the Marketing Claim.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claim	*Marketing Claim*	The service for the Marketing Claim to be created.

Response Payload

Element Name	Type	Description
result	*Marketing Claim*	The service returns the created Marketing Claim.

updateClaim

A web service method for Update operation of the Marketing Claim.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claim	*Marketing Claim*	The service for the Marketing Claim to be updated.

Response Payload

Element Name	Type	Description
result	*Marketing Claim*	The service returns the updated Marketing Claim.

deleteClaim

A web service method for Delete operation of the Marketing Claim.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claim	*Marketing Claim*	The service for the Marketing Claim to be deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteClaim.

findClaim

A web service method that queries a single record of Marketing Claim by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findBudgetEntry web service method. The filter criteria are a cumulative set of attribute criteria that identifies Marketing Claim records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findClaim.

Response Payload

Element Name	Type	Description
result	*Marketing Claim*	The return value of the findClaim web service method. It includes the full set of attributes of the record.

getClaimSettlement

A web service method for Get operation of the Marketing Claim Settlements.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claimSettlementId	long	Returns a uniquely identified claim settlement associated to a marketing claim.

Response Payload

Element Name	Type	Description
result	*Marketing Claim Settlement*	The service returns a Marketing Claim Settlement that matches the inbound key attributes.

createClaimSettlement

A web service method for Create operation of the Marketing Claim Settlement.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claimSettlement	*Marketing Claim Settlement*	The service for the Marketing Claim Settlement to be created.

Response Payload

Element Name	Type	Description
result	*Marketing Claim Settlement*	The service returns the created Marketing Claim Settlement.

updateClaimSettlement

A web service method for Update operation of the Marketing Claim Settlement.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claimSettlement	*Marketing Claim Settlement*	The service for the Marketing Claim Settlement to be updated.

Response Payload

Element Name	Type	Description
result	*Marketing Claim Settlement*	The service returns the updated Marketing Claim Settlement.

findClaimSettlement

A web service method that queries a single record of Marketing Claim Settlement by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findBudgetEntry web service method. The filter criteria are a cumulative set of attribute criteria that identifies marketing claim settlement records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findClaimSettlements.

Response Payload

Element Name	Type	Description
result	*Marketing Claim Settlement*	The return value of the findClaimSettlement web service method. It includes the full set of attributes of the record.

getFundRequest

A web service method for Get operation of the Marketing Fund Request.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
fundRequestId	long	Returns a uniquely identified fund request associated to a marketing budget.

Response Payload

Element Name	Type	Description
result	*Marketing Fund Request*	The service returns Marketing Fund Request that matches the inbound key attributes.

createFundRequest

A web service method for Create operation of the Marketing Fund Request.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
fundRequest	*Marketing Fund Request*	The service for the Marketing Fund Request to be created.

Response Payload

Element Name	Type	Description
result	*Marketing Fund Request*	The service returns the created Marketing Fund Request.

updateFundRequest

A web service method for Update operation of the Marketing Fund Request.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
fundRequest	*Marketing Fund Request*	The service for the Marketing Fund Request to be updated.

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	*Marketing Fund Request*	The service returns the updated Marketing Fund Request.

deleteFundRequest

A web service method for Delete operation of the Marketing Fund Request.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
fundRequest	*Marketing Fund Request*	The service for the Marketing Fund Request to be deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteFundRequest.

findFundRequest

A web service method that queries a single record of Marketing Fund Request by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findFundRequest web service method. The filter criteria are a cumulative set of attribute criteria that identifies marketing fund request records.

Element Name	Type	Description
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findFundRequest.

Response Payload

Element Name	Type	Description
result	*Marketing Fund Request*	The return value of the findFundRequest web service method. It includes the full set of attributes of the record.

getBudget

A web service method for Get operation of the Marketing Budget.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budgetId	long	The unique identifier of the Marketing Budget.

Response Payload

Element Name	Type	Description
result	*Marketing Budget*	The service returns a Marketing Budget that matches the inbound key attributes.

createBudget

A web service method for Create operation of the Marketing Budget.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budget1	*Marketing Budget*	The service for the Marketing Budget to be created.

Response Payload

Element Name	Type	Description
result	*Marketing Budget*	The service returns the created Marketing Budget.

updateBudget

A web service method for Update operation of the Marketing Budget.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budget1	*Marketing Budget*	The service for the Marketing Budget to be updated.

Response Payload

Element Name	Type	Description
result	*Marketing Budget*	The service returns the updated Marketing Budget.

deleteBudget

A web service method for Delete operation of the Marketing Budget.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budget1	*Marketing Budget*	The service for the Marketing Budget to be deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteBudget.

findBudget

A web service method that queries a single record of Marketing Budget by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findBudgetEntry web service method. The filter criteria are a cumulative set of attribute criteria that identifies the Marketing Budget records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findBudget.

Response Payload

Element Name	Type	Description
result	*Marketing Budget*	The return value of the findBudget web service method. It includes the full set of attributes of the record.

getDfltObjAttrHints

Retrieves user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

A web service method that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition was last updated. The parameter is present in ISO 8601 format.

getEntityList

A web service method to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the Object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MKT_MANAGE_BUDGETS_WORK_AREA_PRIV	Manage Budgets Work Area	Allows managing marketing budgets from the work area. A work area is a landing page for frequent tasks and reports useful for managing budgets.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MKT_MANAGE_BUDGETS_WORK_AREA_PRIV	ORA_MKT_MARKETING_BUDGET_MAINTENANCE_DUTY	MDF Budget Maintenance	Manages MDF budgets including import, export, and viewing budget fund requests and claims that use budgeted funds for marketing activities.
MKT_MANAGE_BUDGETS_WORK_AREA_PRIV	ORA_MKT_MARKETING_FUND_REQUEST_AND_CLAIM_PROCESSING_DUTY	Marketing Fund Request and Claim Processing	Reviews and approves budget fund requests and claims to use budgeted funds for marketing activities. Includes reviewing and exporting budget information.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_MKT_MARKETING_BUDGET_MAINTENANCE_DUTY	ORA_MKT_MARKETING_BUDGET_UTILIZATION_DUTY	MDF Utilization	Creates and manages MDF requests and claims for marketing activities.

Marketing Budget Translation Version 2

The marketing budget that includes details of the monetary incentives for partners to execute marketing activities. This service data object includes translatable attributes.

QName: {http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}BudgetTranslation

Logical Business Objects

- CRM : Marketing : Marketing Budget

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*MDF Budget*
Handled by	*MDF Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BudgetId	long	The unique identifier for the marketing budget. • Primary Key
BudgetName	string	The display name for the marketing budget.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
Language	string	The target translation language for the marketing budget. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
SourceLanguage	string	The source translation language for the marketing budget.

Manage Process Submission

Service to submit incentive compensation processes. Processes include transaction collection, crediting, classification, and calculation. Other processes include participant import, plan deployment, and currency rate import.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/incentiveCompensation/cn/processes/manageProcess/manageProcessSubmissionService/}ManageProcessSubmissionService

submitTransactionsJob

Submits the Import Transactions to Staging process to import transactions from a file into the transaction staging table.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
fileName	string	The name of the file containing the transactions to be imported into the staging table.
documentId	string	The identifier for the file that resides in Oracle Web Center Content repository. If you do not provide the document identifier, then use the value #NULL to indicate an empty value.
retainFile	string	Indicates whether the method should keep or delete the file after the process successfully completes. The value is Y, then the file is retained.

Response Payload

Element Name	Type	Description
result	string	The request identifier is returned when this process is submitted successfully.

submitRollupJob

Submits the Generate Incentive Rollup Credits process. Indirect credit transactions are created for participants when rollup rules are processed for the rollup hierarchy.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
orgName	string	The incentive compensation business unit name.
startDate	string	The start of the date range used to select credits for indirect crediting. Use the format YYYY-MM-DD. For example, 2016-12-01.
endDate	string	The last date, of the date range, used to select credits for indirect crediting. Use the format YYYY-MM-DD. For example, 2016-12-31.
runFor	string	The run for mode. The mode is either New or All. Use the New option to process transactions that have not been processed before. Use the All option to process all eligible transactions for the date range.

Response Payload

Element Name	Type	Description
result	string	The request identifier is returned when this process is submitted successfully.

submitRevertTransactionsJob

Submits the Revert Incentive Transactions process. The revert process moves obsolete transactions and credits to history tables and creates any adjustment offsets if related earnings were processed through payment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
orgName	string	The incentive compensation business unit name.
type	string	The transaction type.
startDate	string	The start of the date range used to select the obsolete transactions and credits for processing. Use the format YYYY-MM-DD. For example, 2016-12-01.
endDate	string	The last date, of the date range, used to select the obsolete transactions and credits for

Element Name	Type	Description
		processing. Use the format YYYY-MM-DD. For example, 2016-12-31.

Response Payload

Element Name	Type	Description
result	string	The request identifier is returned when this process is submitted successfully.

submitPayPayrunJob

Submits the Pay Incentive Payment Batch process to update the payment batch and pay sheets to paid.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
orgName	string	The incentive compensation business unit name.
payrunName	string	The name of the payment batch.

Response Payload

Element Name	Type	Description
result	string	The request identifier is returned when this process is submitted successfully.

submitParticipantImportJob

Submits the Import Incentive Participants process. The import process collects participants from staging tables or from HCM cloud persons and Sales cloud parties.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
scenarioName	string	The value CN_IMPORT_PARTICIPANTS is provided.
scenarioVersion	string	The value 001 is provided.
runFor	string	The run for mode. The mode is either Oracle Incentive Compensation Participant Import or Staging and Oracle Incentive Compensation Participant Import. Use the Staging and Oracle Incentive Compensation Participant Import if you are using Oracle Sales Cloud. This option collects matching parties and persons for participant import. Use the Oracle Incentive Compensation Participant Import mode for on-premise installations when you populate the participant staging table.
orgName	string	The incentive compensation business unit name.
targetCountry	string	The override participant country. If you do not provide the country, then use the value #NULL to indicate an empty value. A default value is provided.
targetParticipantHomeCurrency	string	The override participant home currency. If you do not provide the currency, then use the value #NULL to indicate an empty value. The default currency is the business unit operating currency defined using the Setup and Maintenance, Manage Parameters task.
activeStartDate	string	The date when the override participant becomes active. If you provide a date, use the format YYYY-MM-DD. For example, 2016-01-21. If you do not provide a date, use the value #NULL and a default value will be derived.
analyst	string	The incentive compensation analyst that is assigned to the participant. For example, Hughes, Ryan. If you do not provide the analyst, use the value #NULL to indicate an empty value.
participantType	string	The participant type. Valid values are Participant and Analyst.
partyUsage	string	The party usage selection criteria. For example, HR Employee.
startDate	string	The start date selection criteria. Use the format YYYY-MM-DD. For example, 2016-12-01. If you

Element Name	Type	Description
		do not provide the date, then use the value #NULL to indicate an empty value.
endDate	string	The end date of the selection criteria. If you provide a date, then use the format YYYY-MM-DD. For example, 2016-12-31. If you do not provide the date, then use the value #NULL to indicate an empty value.
partyName	string	The party name selection criteria. If you do not provide the party name, use the value #NULL to indicate an empty value.
resourceRole	string	The resource role selection criteria. If you do not provide the resource role, use the value #NULL to indicate an empty value.
hcmJob	string	The HCM job selection criteria. If you do not provide the job, then use the value #NULL to indicate an empty value.
roleType	string	The resource role type selection criteria. If you do not provide the resource role type, then use the value #NULL to indicate an empty value.
country	string	The country selection criteria, for example, Canada. If you do not provide the country, use the value #NULL to indicate an empty value.
personNumber	string	The person number selection criteria. If you do not provide the person number, use the value #NULL to indicate an empty value.

Response Payload

Element Name	Type	Description
result	string	The request identifier is returned when this process is submitted successfully.

submitParticipantDetailImportJob

Submits the Incentive Compensation Participant Detail Import process to import participant updates from a source file.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
fileName	string	The name of the file containing the participant details to be imported into the staging table.
documentId	string	The identifier for the file that resides in Oracle Web Center Content repository. If you do not provide the document identifier, then use the value #NULL to indicate an empty value.
retainFile	string	Indicates whether the method should keep or delete the file after the process successfully completes. The value is Y, then the file is retained.

Response Payload

Element Name	Type	Description
result	string	The request identifier is returned when this process is submitted successfully.

submitDeployPlansJob

Submits the Deploy Incentive Plans process. The deployment process creates participant assignments to compensation plans, pay groups, and payment plans based on roles.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
orgName	string	The incentive compensation business unit name.

Response Payload

Element Name	Type	Description
result	string	The request identifier is returned when this process is submitted successfully.

submitDeployCreditRulesJob

Submits the Deploy Incentive Credit Rules process. The deployment process flattens credit rules to enhance performance while generating direct and indirect credits.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
startDate	string	The start of the date range used to select the rules to deploy. Use the format YYYY-MM-DD. For example, 2016-12-01.
endDate	string	The last date, of the date range, used to select the rules to deploy. Use the format YYYY-MM-DD. For example, 2016-12-31.

Response Payload

Element Name	Type	Description
result	string	The request identifier is returned when this process is submitted successfully.

submitDeployClassificationRulesJob

Submits the Deploy Incentive Classification Rules process. The deployment process flattens classification rules to enhance performance while identifying credit categories used in calculation.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
startDate	string	The start of the date range used to select the rules to deploy. Use the format YYYY-MM-DD. For example, 2016-12-01.
endDate	string	The last date, of the date range, used to select the rules to deploy. Use the format YYYY-MM-DD. For example, 2016-12-31.

Response Payload

Element Name	Type	Description
result	string	The request identifier is returned when this process is submitted successfully.

submitCreditingJob

Submits the Generate Direct Incentive Credits process. Direct credit transactions are created for participants when credit rules are matched against transaction attributes.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
orgName	string	The incentive compensation business unit name.
startDate	string	The start of the date range used to select transactions for crediting. Use the format YYYY-MM-DD. For example, 2016-12-01.
endDate	string	The last date, of the date range, used to select transactions for crediting. Use the format YYYY-MM-DD. For example, 2016-12-31.
type	string	The run for mode. The mode is either New or All. Use the New option to process transactions that have not been processed before. Use the All option to process all eligible transactions for the date range.

Response Payload

Element Name	Type	Description
result	string	The request identifier is returned when this process is submitted successfully.

submitCreditingAndRollupJob

Submits the Generate Direct and Indirect Incentive Credits process. Direct and indirect credit transactions are created for participants when credit hierarchy rules are processed.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
orgName	string	The incentive compensation business unit name.
startDate	string	The start of the date range used to select transactions can credits for direct and indirect crediting. Use the format YYYY-MM-DD. For example, 2016-12-01.
endDate	string	The last date, of the date range, used to select transactions and credits for direct and indirect crediting. Use the format YYYY-MM-DD. For example, 2016-12-31.
runFor	string	The run for mode. The mode is either New or All. Use the New option to process transactions that have not been processed before. Use the All option to process all eligible transactions for the date range.

Response Payload

Element Name	Type	Description
result	string	The request identifier is returned when this process is submitted successfully.

submitCreatePayrunJob

Submits the Create Incentive Payment Batch process. A payment batch generates the participant pay sheets.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
orgName	string	The incentive compensation business unit name.
payrunName	string	The name of the payment batch.

Response Payload

Element Name	Type	Description
result	string	The request identifier is returned when this process is submitted successfully.

submitCollectionJob

Submits the Collect Transactions process. Transactions are used to credit and calculate incentives. Required input parameters are the collection business unit, the date range for the transactions you are collecting, and the transaction type. You may optionally specify the organization from which the transactions originated.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
scenarioName	string	The value CN_IMPORT_TRANSACTIONS is provided.
scenarioVersion	string	The value 001 is provided.
sourceOrgName	string	The source business unit name.
orgName	string	The incentive compensation business unit name.
startDate	string	The start of the date range used to select transactions for collection from the staging table. Use the format YYYY-MM-DD. For example, 2016-12-01.
endDate	string	The last date, of the date range, used to select transactions for collection from the staging table. Use the format YYYY-MM-DD. For example, 2016-12-31.
transactionType	string	The lookup code that represents the transaction type, such as Invoice and Order.

Response Payload

Element Name	Type	Description
result	string	The request identifier is returned when this process is submitted successfully.

submitClassificationsJob

Submits the Classify Incentive Transactions process. This process classifies incentive compensation transactions or credits using classification rules.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
orgName	string	The incentive compensation business unit name.
startDate	string	The start of the date range used to select transactions or credits for classification. Use the format YYYY-MM-DD. For example, 2016-12-01.
endDate	string	The last date, of the date range, used to select transactions or credits for classification. Use the format YYYY-MM-DD. For example, 2016-12-31.
type	string	The run for mode. The mode is either New or All. Use the New option to classify transactions or credits not classified before. Use the All option to process all eligible transactions or credits for the date range.

Response Payload

Element Name	Type	Description
result	string	The request identifier is returned when this process is submitted successfully.

submitCalculationJob

Submits the Calculate Incentive Earnings process. This process calculates commission and bonus incentive earnings based on incentive plans.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
orgName	string	The business unit for which the process runs.
batchName	string	The name of the calculation process.

Element Name	Type	Description
fromDate	string	The start of the date range used to calculate earnings. Use the format YYYY-MM-DD. For example, 2016-12-01.
toDate	string	The last date, of the date range, used to calculate earnings. Use the format YYYY-MM-DD. For example, 2016-12-31.

Response Payload

Element Name	Type	Description
result	string	The request identifier is returned when this process is submitted successfully.

submitCalculateAllJob

Submits the Calculate Incentive Earnings process synchronously. This process calculates commission and bonus incentive earnings based on incentive plans for all participants in a business unit and date range.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
orgName	string	The business unit for which the process runs.
startDate	string	The start of the date range to calculate earnings. Use the format YYYY-MM-DD. For example, 2016-12-01.
endDate	string	The last date, of the date range, used to calculate earnings. Use the format YYYY-MM-DD. For example, 2016-12-31.
runFor	string	The run for mode. The mode is either Incremental or Total. Use the Incremental mode to consider only new credits and updated plan configurations since the last calculation run. Use the Total mode to consider all transactions in the incentive compensation transaction table.

Response Payload

Element Name	Type	Description
result	string	The request identifier is returned when this process is submitted successfully.

getICJobStatus

Gets the current status for a single incentive compensation process as specified by the request identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
requestId	string	The request identifier is returned by each of the submitted processes and passed to this method to find the current status of the process.

Response Payload

Element Name	Type	Description
result	string	The current process status.

submitCurrencyRateslimportJob

Submits the Import Currency Conversion Rates process to import currency conversion rates from a source file.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
fileName	string	The name of the file containing the conversion rate details to be imported into the staging table.
documentId	string	The identifier for the file that resides in Oracle Web Center Content repository. If you do not provide the document identifier, then use the value #NULL to indicate an empty value.
retainFile	string	Indicates whether the method should keep or delete the file after the process successfully completes. The value is Y, then the file is retained.

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	string	The request identifier is returned when this process is submitted successfully.

submitDeployIncentivePlansJob

Method to operate on compensation plans and groups. The deployment process creates participant assignments to compensation plans, pay groups, and payment plans based on roles associated to these entities. Call this service to run the plan deployment process in either total or incremental mode.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
orgName	string	Unique identifier for the business unit.
deployOnlySRPCOMPDirectPlanAssgnRqts	string	If this is enabled then the Deploy Incentive Plans process will only complete the processing of direct participant assignment requests to the compensation plan and ignore everything else. Yes and No are acceptable values. This is an optional field with a default of No if not passed.

Response Payload

Element Name	Type	Description
result	string	RequestID of the ESSJob when this job is submitted successfully.

submitCalculateAllPEROrgJob

Calls and runs the globally compatible but domain incompatible process synchronously to calculate incentive compensation attainments and earnings for all participants in a business unit, for a date range.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
orgName	string	Unique identifier for the business unit.
startDate	string	Start of the date range
endDate	string	End of the date range
runFor	string	Either Incremental to consider only new credits and updated plan configurations since the last calculation run or Total to consider all transactions in the incentive copmensation transaction table.

Response Payload

Element Name	Type	Description
result	string	RequestID of the ESSJob when this job is submitted successfully.

submitCalculateSpecificParticipants

This method can be called to run the calculation process for specific participants. Calculation determines commission and bonus incentive earnings based on incentive plan rules.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
orgName	string	Unique identifier for the business unit.
batchName	string	Process Name
fromDate	string	Start of the date range
toDate	string	End of the date range
participantIds	long	List of Participant Identifiers
participantNames	string	List of Participant Names
compPlanIds	long	List of Compensation Plan Identifiers

Element Name	Type	Description
compPlanNames	string	List of Compensation Plan Names
payGroupIds	long	List of Pay Group Identifiers
payGroupNames	string	List of Pay Group Names
onlyWithNewEventsOrCredits	boolean	Only participants with new events or credits.

Response Payload

Element Name	Type	Description
result	string	RequestID of the ESSJob when this job is submitted successfully.

submitCreditingAndRollupJobWithRuleSet

This method can be called to run the crediting and roll up processes with optional parameter Filter Transactions by which will let you choose the filter criteria rule to filter transactions.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
orgName	string	Unique identifier for the business unit.
startDate	string	Start of the date range
endDate	string	End of the date range
runFor	string	You may process New transactions, or All transactions for the date range specified.
ruleSetName	string	Filter Transactions by which will let you choose the filter criteria rule to filter transactions.

Response Payload

Element Name	Type	Description
result	string	RequestID of the ESSJob when this job is submitted successfully.

submitCreditingJobWithRuleSet

This method can be called to run the crediting process with optional parameter filter transactions by which will let you choose the filter criteria rule to filter transactions.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
orgName	string	Unique identifier for the business unit.
startDate	string	Start of the date range
endDate	string	End of the date range
type	string	You may process New credits or All credits for the date range specified.
ruleSetName	string	Filter Transactions by which will let you choose the filter criteria rule to filter transactions.

Response Payload

Element Name	Type	Description
result	string	RequestID of the ESSJob when this job is submitted successfully.

getDfltObjAttrHints

Gets user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Gets the date and time for when the schema files, referenced in the service definition, last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

Gets the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create,

Element Name	Type	Description
		update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	CN_MANAGE_INCENTIVE_COMPENSATION_IMPORT_JOBS_PRIV	Manage Incentive Compensation File Import Jobs	Allows import of incentive compensation transactions into staging using CRM File Based Data Import.
All Operations	CN_MANAGE_INCENTIVE_COMPENSATION_CLASSIFICATION_RULE_HIERARCHY_PRIV	Manage Incentive Compensation Classification Rule Hierarchy	Allows maintenance of rule hierarchy used to classify sales transactions into user-defined credit categories of business revenue.
All Operations	CN_MANAGE_INCENTIVE_COMP_ROLLUP_GROUP_PRIV	Manage Incentive Compensation Rollup Group	Allows maintenance of incentive compensation groups used to determine who receives rollup credits.
All Operations	CN_MANAGE_INCENTIVE_COMPENSATION_PLAN_ASSIGNMENT_TO_ROLE_PRIV	Manage Incentive Compensation Plan Assignment to Role	Allows maintenance of incentive compensation plan assignment to participants using role, which is the function that a participant plays within a group, team, or an organization.
All Operations	CN_MAINTAIN_INCENTIVE_COMPENSATION_TRANSACTION_PRIV	Maintain Incentive Compensation Transaction	Allows verification of earning transaction detail for which the application calculated incentive compensation commission, bonus, or nonmonetary incentive.
All Operations	CN_REGISTER_INCENTIVE_COMPENSATION_PARTICIPANT_PRIV	Register Incentive Compensation Participant	Allows import of incentive compensation participant, a person or organization. For example, an employee, salesperson, party, supplier contract, partner, or third party resale contractor whose data and payments the incentive compensation application computes and manages.

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	CN_MANAGE_INCENTIVE_COMPENSATION_CREDIT_BATCH_PRIV	Manage Incentive Compensation Credit Batch	Allows flattening of credit rules used by batch processes, which determine who receives direct incentive compensation credit.
All Operations	CN_MANAGE_INCENTIVE_COMPENSATION_TRANSACTION_COLLECTION_BATCH_PRIV	Manage Incentive Compensation Transaction Collection Batch	Allows maintenance of incentive compensation transaction collection batch.
All Operations	CN_SUBMIT_INCENTIVE_COMPENSATION_CALCULATION_BATCH_PRIV	Submit Incentive Compensation Calculation Batch	Allows submission of incentive compensation calculation batch.
All Operations	CN_MANAGE_INCENTIVE_COMPENSATION_CREDIT_ROLLUP_BATCH_PRIV	Manage Incentive Compensation Credit and Rollup Group Batch	Allows maintenance of credit and rollup batch used to generate direct and rollup incentive compensation credits.
All Operations	CN_MANAGE_INCENTIVE_COMPENSATION_CLASSIFICATIO_BATCH_PRIV	Manage Incentive Compensation Calculation Batch	Allows maintenance of incentive compensation calculation batch.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
CN_MANAGE_INCENTIVE_COMPENSATION_CREDIT_ROLLUP_BATCH_PRIV	ORA_CN_INCENTIVE_COMPENSATION_CREDITS_EARNINGS_MANAGEMENT_DUTY	Incentive Compensation Credits and Earnings	Create, review, and adjust incentive compensation transactions, credits and earnings. Create and manage requests to calculate the incentive compensation for a set of participants.
CN_MANAGE_INCENTIVE_COMPENSATION_CLASSIFICATION_RULE_HIERARCHY_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PLAN_ADMINISTRATOR_JOB	Incentive Compensation Plan Administrator	Configure and manage incentive plans, plan components, and classification rules
CN_MANAGE_INCENTIVE_COMPENSATION_IMPORT_JOBS_PRIV	ORA_CN_INCENTIVE_COMPENSATION_ASSIGNMENT_ADMISTRATION_DUTY	Incentive Compensation Participant Assignments	Create and maintain the assignments of analyst to participant, participants and roles to compensation and payment plans as well as pay groups
CN_MANAGE_INCENTIVE_COMPENSATION_IMPORT_JOBS_PRIV	ORA_CN_INCENTIVE_COMPENSATION_ADMINISTRATOR_JOB	Incentive Compensation Application Administrator	Set up incentive compensation application
CN_MANAGE_INCENTIVE_COMPENSATION_CLASSIFICATIO_BATCH_PRIV	ORA_CN_INCENTIVE_COMPENSATION_CREDITS_EARNINGS_MANAGEMENT_DUTY	Incentive Compensation Credits and Earnings	Create, review, and adjust incentive compensation transactions, credits and earnings. Create and

getBudgetEntry

A web service method for Get operation of the Marketing Budget Entry.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budgetEntryId	long	Returns a uniquely identified budget entry associated to a marketing budget.

Response Payload

Element Name	Type	Description
result	*Marketing Budget Entry*	The service returns the Marketing Budget Entry that matches the inbound key attributes.

createBudgetEntry

A web service method for Create operation of the Marketing Budget Entry.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budgetEntry	*Marketing Budget Entry*	The service for the Marketing Budget Entry to be created.

Response Payload

Element Name	Type	Description
result	*Marketing Budget Entry*	The service returns the created Marketing Budget Entry.

updateBudgetEntry

A web service method for Update operation of the Marketing Budget Entry.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budgetEntry	*Marketing Budget Entry*	The service for the Marketing Budget Entry to be updated.

Response Payload

Element Name	Type	Description
result	*Marketing Budget Entry*	The service returns the updated Marketing Budget Entry.

findBudgetEntry

A web service method that queries a single record of Marketing Budget Entry by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findBudgetEntry web service method. The filter criteria are a cumulative set of attribute criteria that identifies Marketing Budget Entry records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findBudgetEntry.

Response Payload

Element Name	Type	Description
result	*Marketing Budget Entry*	The return value of the findBudgetEntry web service method. It includes the full set of attributes of the record.

getClaim

A web service method for Get operation of the Marketing Claim.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claimId	long	Returns a uniquely identified claim associated to a marketing budget or fund request.

Response Payload

Element Name	Type	Description
result	*Marketing Claim*	Marketing Claim that matches the inbound key attributes.

createClaim

A web service method for Create operation of the Marketing Claim.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claim	*Marketing Claim*	The service for the Marketing Claim to be created.

Response Payload

Element Name	Type	Description
result	*Marketing Claim*	The service returns the created Marketing Claim.

updateClaim

A web service method for Update operation of the Marketing Claim.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claim	*Marketing Claim*	The service for the Marketing Claim to be updated.

Response Payload

Element Name	Type	Description
result	*Marketing Claim*	The service returns the updated Marketing Claim.

deleteClaim

A web service method for Delete operation of the Marketing Claim.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claim	*Marketing Claim*	The service for the Marketing Claim to be deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteClaim.

findClaim

A web service method that queries a single record of Marketing Claim by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findBudgetEntry web service method. The filter

Element Name	Type	Description
		criteria are a cumulative set of attribute criteria that identifies Marketing Claim records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findClaim.

Response Payload

Element Name	Type	Description
result	*Marketing Claim*	The return value of the findClaim web service method. It includes the full set of attributes of the record.

getClaimSettlement

A web service method for Get operation of the Marketing Claim Settlements.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claimSettlementId	long	Returns a uniquely identified claim settlement associated to a marketing claim.

Response Payload

Element Name	Type	Description
result	*Marketing Claim Settlement*	The service returns a Marketing Claim Settlement that matches the inbound key attributes.

createClaimSettlement

A web service method for Create operation of the Marketing Claim Settlement.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claimSettlement	*Marketing Claim Settlement*	The service for the Marketing Claim Settlement to be created.

Response Payload

Element Name	Type	Description
result	*Marketing Claim Settlement*	The service returns the created Marketing Claim Settlement.

updateClaimSettlement

A web service method for Update operation of the Marketing Claim Settlement.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claimSettlement	*Marketing Claim Settlement*	The service for the Marketing Claim Settlement to be updated.

Response Payload

Element Name	Type	Description
result	*Marketing Claim Settlement*	The service returns the updated Marketing Claim Settlement.

findClaimSettlement

A web service method that queries a single record of Marketing Claim Settlement by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findBudgetEntry web service method. The filter criteria are a cumulative set of attribute criteria that identifies marketing claim settlement records.

Element Name	Type	Description
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findClaimSettlements.

Response Payload

Element Name	Type	Description
result	*Marketing Claim Settlement*	The return value of the findClaimSettlement web service method. It includes the full set of attributes of the record.

getFundRequest

A web service method for Get operation of the Marketing Fund Request.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
fundRequestId	long	Returns a uniquely identified fund request associated to a marketing budget.

Response Payload

Element Name	Type	Description
result	*Marketing Fund Request*	The service returns Marketing Fund Request that matches the inbound key attributes.

createFundRequest

A web service method for Create operation of the Marketing Fund Request.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
fundRequest	*Marketing Fund Request*	The service for the Marketing Fund Request to be created.

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	*Marketing Fund Request*	The service returns the created Marketing Fund Request.

updateFundRequest

A web service method for Update operation of the Marketing Fund Request.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
fundRequest	*Marketing Fund Request*	The service for the Marketing Fund Request to be updated.

Response Payload

Element Name	Type	Description
result	*Marketing Fund Request*	The service returns the updated Marketing Fund Request.

deleteFundRequest

A web service method for Delete operation of the Marketing Fund Request.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
fundRequest	*Marketing Fund Request*	The service for the Marketing Fund Request to be deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteFundRequest.

findFundRequest

A web service method that queries a single record of Marketing Fund Request by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findFundRequest web service method. The filter criteria are a cumulative set of attribute criteria that identifies marketing fund request records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findFundRequest.

Response Payload

Element Name	Type	Description
result	*Marketing Fund Request*	The return value of the findFundRequest web service method. It includes the full set of attributes of the record.

getBudget

A web service method for Get operation of the Marketing Budget.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budgetId	long	The unique identifier of the Marketing Budget.

Response Payload

Element Name	Type	Description
result	*Marketing Budget*	The service returns a Marketing Budget that matches the inbound key attributes.

createBudget

A web service method for Create operation of the Marketing Budget.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budget1	*Marketing Budget*	The service for the Marketing Budget to be created.

Response Payload

Element Name	Type	Description
result	*Marketing Budget*	The service returns the created Marketing Budget.

updateBudget

A web service method for Update operation of the Marketing Budget.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budget1	*Marketing Budget*	The service for the Marketing Budget to be updated.

Response Payload

Element Name	Type	Description
result	*Marketing Budget*	The service returns the updated Marketing Budget.

deleteBudget

A web service method for Delete operation of the Marketing Budget.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budget1	*Marketing Budget*	The service for the Marketing Budget to be deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteBudget.

findBudget

A web service method that queries a single record of Marketing Budget by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findBudgetEntry web service method. The filter criteria are a cumulative set of attribute criteria that identifies the Marketing Budget records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findBudget.

Response Payload

Element Name	Type	Description
result	*Marketing Budget*	The return value of the findBudget web service method. It includes the full set of attributes of the record.

getDfltObjAttrHints

Retrieves user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

A web service method that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition was last updated. The parameter is present in ISO 8601 format.

getEntityList

A web service method to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the Object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MKT_MANAGE_BUDGETS_WORK_AREA_PRIV	Manage Budgets Work Area	Allows managing marketing budgets from the work area. A work area is a landing page for frequent tasks and reports useful for managing budgets.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MKT_MANAGE_BUDGETS_WORK_AREA_PRIV	ORA_MKT_MARKETING_BUDGET_MAINTENANCE_DUTY	MDF Budget Maintenance	Manages MDF budgets including import, export, and viewing budget fund requests and claims that use budgeted funds for marketing activities.
MKT_MANAGE_BUDGETS_WORK_AREA_PRIV	ORA_MKT_MARKETING_FUND_REQUEST_AND_CLAIM_PROCESSING_DUTY	Marketing Fund Request and Claim Processing	Reviews and approves budget fund requests and claims to use budgeted funds for marketing activities. Includes reviewing and exporting budget information.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_MKT_MARKETING_BUDGET_MAINTENANCE_DUTY	ORA_MKT_MARKETING_BUDGET_UTILIZATION_DUTY	MDF Utilization	Creates and manages MDF requests and claims for marketing activities.

MDF Service

Service to operate on marketing budgets including market development funds. The supported operations are create, update, delete, and search.

Life Cycle Status: Active

getBudget

A web service method for Get operation of the Marketing Budget.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budgetId	long	The unique identifier of the Marketing Budget.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}BudgetResult	The service returns a Marketing Budget that matches the inbound key attributes.

createBudget

A web service method for Create operation of the Marketing Budget.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budget	*MDF Budget*	The service for the Marketing Budget to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}BudgetResult	The service returns the created Marketing Budget.

updateBudget

A web service method for Update operation of the Marketing Budget.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budget	*MDF Budget*	The service for the Marketing Budget to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}BudgetResult	The service returns the updated Marketing Budget.

deleteBudget

A web service method for Delete operation of the Marketing Budget.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budget	*MDF Budget*	The service for the Marketing Budget to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The parameter is not applicable for the method deleteBudget.

findBudget

A web service method that queries a single record of Marketing Budget by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findBudgetEntry web service method. The filter criteria is a cumulative set of attribute criteria that identifies the Marketing Budget records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findBudget.

Response Payload

Element Name	Type	Description
result	*MDF Budget*	The return value of the findBudget web service method. It includes the full set of attributes of the record.

getBudgetEntry

A web service method for Get operation of the Marketing Budget Entry.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budgetEntryId	long	Returns a uniquely identified budget entry associated to a marketing budget.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}BudgetEntryResult	The service returns the Marketing Budget Entry that matches the inbound key attributes.

createBudgetEntry

A web service method for Create operation of the Marketing Budget Entry.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budgetEntry	*Marketing Budget Entry Version 2*	The service for the Marketing Budget Entry to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}BudgetEntryResult	The service returns the created Marketing Budget Entry.

Element Name	Type	Description

updateBudgetEntry

A web service method for Update operation of the Marketing Budget Entry.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
budgetEntry	*Marketing Budget Entry Version 2*	The service for the Marketing Budget Entry to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}BudgetEntryResult	The service returns the updated Marketing Budget Entry.

findBudgetEntry

A web service method that queries a single record of Marketing Budget Entry by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findBudgetEntry web service method. The filter criteria is a cumulative set of attribute criteria that identifies Marketing Budget Entry records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findBudgetEntry.

Response Payload

Element Name	Type	Description
result	*Marketing Budget Entry Version 2*	The return value of the findBudgetEntry web service method. It includes the full set of attributes of the record.

getClaim

A web service method for Get operation of the Marketing Claim.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claimId	long	Returns a uniquely identified claim associated to a marketing budget or fund request.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}ClaimResult	Marketing Claim that matches the inbound key attributes.

createClaim

A web service method for Create operation of the Marketing Claim.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claim	*MDF Claim*	The service for the Marketing Claim to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}ClaimResult	The service returns the created Marketing Claim.

Element Name	Type	Description

updateClaim

A web service method for Update operation of the Marketing Claim.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claim	*MDF Claim*	The service for the Marketing Claim to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}ClaimResult	The service returns the updated Marketing Claim.

deleteClaim

A web service method for Delete operation of the Marketing Claim.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claim	*MDF Claim*	The service for the Marketing Claim to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The parameter is not applicable for the method deleteClaim.

findClaim

A web service method that queries a single record of Marketing Claim by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findBudgetEntry web service method. The filter criteria is a cumulative set of attribute criteria that will identify Marketing Claim records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findClaim.

Response Payload

Element Name	Type	Description
result	*MDF Claim*	The return value of the findClaim web service method. It includes the full set of attributes of the record.

getClaimSettlements

A web service method for Get operation of the Marketing Claim Settlements.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claimSettlementId	long	Returns a uniquely identified claim settlement associated to a marketing claim.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}ClaimSettlementsResult	The service returns a Marketing Claim Settlement that matches the inbound key attributes.

createClaimSettlements

A web service method for Create operation of the Marketing Claim Settlement.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claimSettlements	*MDF Claim Settlement*	The service for the Marketing Claim Settlement to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}ClaimSettlementsResult	The service returns the created Marketing Claim Settlement.

updateClaimSettlements

A web service method for Update operation of the Marketing Claim Settlement.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
claimSettlements	*MDF Claim Settlement*	The service for the Marketing Claim Settlement to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}ClaimSettlementsResult	The service returns the updated Marketing Claim Settlement.

findClaimSettlements

A web service method that queries a single record of Marketing Claim Settlement by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findBudgetEntry web service method. The filter criteria is a cumulative set of attribute criteria that identifies marketing claim settlement records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findClaimSettlements.

Response Payload

Element Name	Type	Description
result	*MDF Claim Settlement*	The return value of the findClaimSettlement web service method. It includes the full set of attributes of the record.

getFundRequest

A web service method for Get operation of the Marketing Fund Request.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
fundRequestId	long	Returns a uniquely identified fund request associated to a marketing budget.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}FundRequestResult	The service returns Marketing Fund Request that matches the inbound key attributes.

createFundRequest

A web service method for Create operation of the Marketing Fund Request.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
fundRequest	*MDF Request*	The service for the Marketing Fund Request to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}FundRequestResult	The service returns the created Marketing Fund Request.

updateFundRequest

A web service method for Update operation of the Marketing Fund Request.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
fundRequest	*MDF Request*	The service for the Marketing Fund Request to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/commonMarketing/budgets/publicModel/}FundRequestResult	The service returns the updated Marketing Fund Request.

deleteFundRequest

A web service method for Delete operation of the Marketing Fund Request.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
fundRequest	*MDF Request*	The service for the Marketing Fund Request to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The parameter is not applicable for the method deleteFundRequest.

findFundRequest

A web service method that queries a single record of Marketing Fund Request by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findFundRequest web service method. The filter criteria is a cumulative set of attribute criteria that identifies marketing fund request records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findFundRequest.

Response Payload

Element Name	Type	Description
result	*MDF Request*	The return value of the findFundRequest web service method. It includes the full set of attributes of the record.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition was last updated. The parameter is present in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name,

Element Name	Type	Description
		and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MKT_VIEW_MARKETING_CLAIM_PRIV	View Marketing Claim	
All Operations	MKT_UPDATE_MARKETING_FUND_REQUEST_PRIV	Update Marketing Fund Request	Allows updating requests to allocate marketing budget funds for anticipated marketing expenses.
All Operations	MKT_UPDATE_MARKETING_CLAIM_SETTLEMENT_PRIV	Update Marketing Claim Settlement	Allows updating settlements of marketing claims after reimbursement of actual expenses.
All Operations	MKT_UPDATE_MARKETING_FUND_REQUEST_APPROVAL_DETAILS_PRIV	Update Marketing Fund Request Approval Details	Allows updating the MDF request approval details
All Operations	MKT_VIEW_MARKETING_FUND_REQUEST_PRIV	View Marketing Fund Request	
All Operations	MKT_CREATE_MARKETING_BUDGET_PRIV	Create Marketing Budget	
All Operations	MKT_UPDATE_COMPLETED_MARKETING_CLAIM_SETTLEMENT_PRIV	Update Completed Marketing Claim Settlement	Allows updating the attributes of MDF Marketing Claim Settlements in Complete status
All Operations	MKT_CREATE_MARKETING_CLAIM_SETTLEMENT_PRIV	Create Marketing Claim Settlement	Allows creating settlements of marketing claims after reimbursement of actual expenses.
All Operations	MKT_UPDATE_MARKETING_CLAIM_SETTLEMENT_DETAILS_PRIV	Update Marketing Claim Settlement Details	Allows updating the attributes of MDF Marketing Claim Settlements
All Operations	MKT_CREATE_MARKETING_CLAIM_PRIV	Create Marketing Claim	

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MKT_VIEW_MARKETING_BUDGET_ANALYTICS_PRIV	View Marketing Budget Analytics	Allows viewing marketing budget analytics. A marketing budget is used to track budgeted funds for marketing activities and requests and claims for those funds.
All Operations	MKT_UPDATE_MARKETING_CLAIM_PRIV	Update Marketing Claim	Allows updating claims to marketing budgets for reimbursement of actual expenses.
All Operations	MKT_UPDATE_MARKETING_BUDGET_PRIV	Update Marketing Budget	Allows updating a marketing budget used to track budgeted funds for marketing activities and requests for those funds.
All Operations	MKT_VIEW_MARKETING_BUDGET_ENTRY_PRIV	View Marketing Budget Entry	
All Operations	MKT_UPDATE_MARKETING_CLAIM_APPROVAL_DETAILS_PRIV	Update Marketing Claim Approval Details	Allows updating the MDF claim approval details
All Operations	MKT_VIEW_MARKETING_CLAIM_SETTLEMENT_PRIV	View Marketing Claim Settlement	Allows viewing settlements of marketing claims after reimbursement of actual expenses.
All Operations	MKT_CREATE_MARKETING_BUDGET_ENTRY_PRIV	Create Marketing Budget Entry	
All Operations	MKT_VIEW_MARKETING_BUDGET_PRIV	View Marketing Budget	Allows viewing a marketing budget used to track budgeted funds for marketing activities and requests for those funds.
All Operations	MKT_VIEW_MARKETING_BUDGET_CHECKBOOK_PRIV	View Marketing Budget Checkbook	Allows viewing a marketing budget checkbook used to track budgeted funds for marketing activities and request and claims for those funds.
All Operations	MKT_UPDATE_MARKETING_BUDGET_ENTRY_PRIV	Update Marketing Budget Entry	Allows updating entries for a marketing budget that establish the budget amount.
All Operations	MKT_UPDATE_MARKETING_FUND_REQUEST_BUDGET_DETAILS_PRIV	Update Marketing Fund Request Budget Details	Allows updating the MDF request budget details
All Operations	MKT_CREATE_MARKETING_FUND_REQUEST_PRIV	Create Marketing Fund Request	

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MKT_UPDATE_MARKETING_FUND_REQUEST_PRIV	ORA_MKT_MARKETING_BUDGET_UTILIZATION_DUTY	MDF Utilization	Creates and manages MDF requests and claims for marketing activities.
MKT_UPDATE_MARKETING_CLAIM_APPROVAL_DETAILS_PRIV	ORA_ZPM_CHANNEL_ACCOUNT_MANAGER_JOB	Channel Account Manager	Sets the objectives and goals for partners. Marketing Budget

The marketing budget contains details pertaining to monetary incentives for partners to execute marketing activities.

QName: {http://xmlns.oracle.com/oracle/apps/marketing/commonMarketing/budgets/budgetPublicService/}Budget

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Marketing Budget Translation*
Handled by	*Marketing Budget Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivatedBy	string	The user who activated the marketing budget.

Name	Type	Description
ActivationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The marketing budget activation date.
AdditionalReferenceId	long	The additional reference identifier associated to the marketing budget, that identifies a particular partner program or marketing source.
AdditionalReferenceType	string	The type of the additional reference associated to the marketing budget, that is, partner program or marketing source.
AllowNegativeBalanceFlag	boolean	The check box that enables fund requests and claims submission which may cause the budget to go negative upon approval.
BudgetCode	string	The code used to uniquely identify the marketing budget.
BudgetId	long	The unique identifier for the marketing budget. • Primary Key
BudgetName	string	The display name for the marketing budget.
BudgetSource	string	The parent budget that is the source of the marketing budget.
BudgetTranslation	*Marketing Budget Translation*	The reference to the budget service data object with translation information.
BudgetType	string	The type of budget such as internal only or partner.
CategoryCode	string	The attribute used to enter and categorize marketing budgets.
ConversionCurrencyCode	string	The currency code of the currency being converted to.
ConversionExchangeRate	decimal	The exchange rate of the currency being converted to.
ConversionRateType	string	The currency conversion rate type that is used to derive the exchange rate for converting the user-entered currency to CRM Corporate currency.
Country	string	The name of the country.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
Description	string	The free text description of the record.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
ExchangeRate	decimal	The conversion rate of a marketing budget.
FundingToleranceAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total marketing budget amount multiplied by the funding tolerance percent.
GeneralLedgerAccount	string	The reference to the general ledger account where budgeted funds are reserved or accounted.
InactivatedBy	string	The user who inactivated the budget.
InactivationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the marketing budget was inactivated.
InitialBudgetAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The original or starting marketing budget amount.
LastCalculatedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The last calculation date of the budget check book that factors in fund requests, claims, and budget entries.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdatedBy	string	The user who last updated the record.
NumberClaimsPendingApproval	decimal	The number of claims pending approval.
NumberFundRequestPendingApproval	decimal	The number of fund requests pending approval.

Name	Type	Description
OrgId	long	The internal marketing organization that utilizes the budgeted funds.
OverdraftThreshold	decimal	The amount in percentage that a fund request can exceed above the available marketing budget amount. By default, the value is 10%.
OwnerId	long	The internal resource responsible for the management of the marketing budget.
PartnerId	long	The unique identifier of the partner.
PrimaryReferenceId	long	The primary reference is a display label for two attributes placed side by side that include a reference type and reference value. An additional string provides a hidden label for the second 'value' field.
PrimaryReferenceType	string	The primary reference is a display label for two attributes placed side by side that include a reference type and reference value. An additional string provides a hidden label for the second 'value' field.
Region	string	The regions used to categorize marketing budgets by geographical area.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
StatusCode	string	The pre-defined code used to indicate the status.
SubmitClaimsBy	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The last date a marketing budget claim is accepted for reimbursement.
SubmitFundRequestBy	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The last date a marketing budget fund request is accepted.
TotalApprovedClaimAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount of approved claims for expense reimbursements against the marketing budget.
TotalApprovedRequestAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total approved fund requests for a marketing budget.
TotalAvailableBudgetAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The budget amount available for fund requests and claims.

Name	Type	Description
TotalBudgetAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total budget amount based on the initial budget plus any adjustments.
TotalClaimAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount of marketing budget claims for reimbursement that are submitted, pending approval, approved, or rejected.
TotalClaimSettledAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount of marketing budget claims for reimbursement that are financially settled.
TotalCreditAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount from all budget accounting entries of type credit.
TotalDebitAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount from all budget accounting entries of type debit.
TotalOutstandingClaimLiabilityAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount of marketing budget claims for reimbursement that are approved but not settled.
TotalPendingClaimAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount of claims that are submitted or pending approval.
TotalPendingFundRequestAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount of fund requests that are submitted or pending approval.
TotalRejectedClaimAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount of claims for reimbursement that are rejected.
TotalRejectedFundRequestAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount of fund requests that are rejected.
TotalRequestedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount from all fund requests that are submitted, pending approval, approved, or rejected.
TotalUnclaimedFundRequestAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total approved fund requests less the total approved claims.

Marketing Budget Entry

The marketing budget entry that includes any changes or adjustments to a marketing budget after the initial budget is created.

QName: {http://xmlns.oracle.com/oracle/apps/marketing/commonMarketing/budgets/budgetPublicService/}BudgetEntry

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Marketing Budget Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountTypeCode	string	The accounting type of the marketing budget entry, which can be a credit or a debit to the total budget amount.
ActivatedBy	string	The user who activated the marketing budget entry.
ActiveFlag	boolean	Indicates the activity status of the marketing budget entry as Active or Inactive.
AdditionalReference	string	The additional reference identifier associated to the marketing budget entry, that identifies a particular partner program or marketing source.
AdditionalReferenceType	string	The type of the additional reference associated to the marketing budget entry, that is, partner program or marketing source.
BudgetEntryAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount entered for the marketing budget entry.
BudgetEntryCode	string	The user-defined, unique label for the marketing budget entry.
BudgetEntryId	long	The system-generated, unique identifier for the marketing budget entry. • Primary Key
BudgetEntryType	string	The extensible type of marketing budget entry.

Name	Type	Description
BudgetId	long	The unique identifier for the marketing budget.
ConversionCurrencyCode	string	The currency code of the currency being converted to.
ConversionExchangeRate	decimal	The exchange rate of the currency being converted to.
ConversionRateType	string	The currency conversion rate type that is used to derive the exchange rate for converting the user-entered currency to CRM Corporate currency.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
Description	string	The free text description of the record.
EffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the complete budget entry amounts are considered for budget checkbook calculations.
ExchangeRate	decimal	The ledger currency exchange rate from Budget entry to Budget Currency.
InactivatedBy	string	The user who has inactivated the budget entry.
InactivationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the marketing budget entry was inactivated.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdatedBy	string	The user who last updated the record.
StatusCode	string	The pre-defined code used to indicate the status.

Marketing Budget Translation

The marketing budget that includes details of the monetary incentives for partners to execute marketing activities. This service data object includes translatable attributes.

QName: {http://xmlns.oracle.com/oracle/apps/marketing/commonMarketing/budgets/budgetPublicService/}BudgetTranslation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Marketing Budget*
Handled by	*Marketing Budget Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BudgetId	long	The unique identifier for the marketing budget. • Primary Key
BudgetName	string	The display name for the marketing budget.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
Language	string	The target translation language for the marketing budget. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
SourceLanguage	string	The source translation language for the marketing budget.

Marketing Claim

The request for reimbursement of marketing expenses submitted by a partner.

QName: {http://xmlns.oracle.com/oracle/apps/marketing/commonMarketing/budgets/budgetPublicService/}Claim

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Marketing Budget Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalReferenceId	long	The additional reference identifier associated to the marketing claim, that identifies a particular partner program or marketing source.
AdditionalReferenceType	string	The type of the additional reference associated to the marketing claim, that is, partner program or marketing source.
Age	decimal	The number of days since the creation of the marketing claim.
ApprovedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount approved for the marketing claim.
ApprovedBy	string	The user who approved the marketing claim.

Name	Type	Description
ApprovedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the marketing claim was approved.
BudgetId	long	The unique identifier for the marketing budget.
ClaimAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Amount for the Claim. It is used in Budget checkbook calculations based on claim status.
ClaimCode	string	The unique identifier of the claim. User enterable text field.
ClaimCreationMethod	string	The method used to create the marketing claim. For example manually, via file import or via web service.
ClaimId	long	The unique identifier of the claim. • Primary Key
ClaimName	string	The display name of the marketing claim.
ClaimPaidDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the claim was paid.
ClaimSettledAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount settled or paid to the claimant.
ClaimStatusCode	string	The current status of the claim. Possible values are Draft, Submitted, Pending Approval, Approved, or Rejected.
Comments	string	The comments for the record.
ConversionCurrencyCode	string	The currency code of the currency being converted to.
ConversionExchangeRate	decimal	The exchange rate of the currency being converted to.
ConversionRateType	string	The currency conversion rate type that is used to derive the exchange rate for converting the user-entered currency to CRM Corporate currency.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
Description	string	The free text description of the record.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
ExpenseCategoryCode	string	The expense category that matches a budget category, used for reporting purposes.
FundRequestCurrencyExchangeRate	decimal	The exchange rate from Claim to Fund Request.
FundRequestId	long	The marketing fund request associated to the marketing claim.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdatedBy	string	The user who last updated the record.
OutstandingClaimLiabilityAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The unsettled claim amount. It is the difference between the approved and settled amounts.
PartnerContactId	long	The partner contact associated to the claim.
PartnerId	long	The unique identifier of the partner.
RejectedBy	string	The user who rejected the marketing claim.
RejectedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the marketing fund request was rejected.
RejectionReasonCode	string	The reason for rejecting the marketing claim.
SubmittedBy	string	The user who submitted the marketing claim.
SubmittedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The submission date of the marketing claim.

Marketing Claim Settlement

The payments made to partners for reimbursement of marketing expenses incurred by them.

QName: {http://xmlns.oracle.com/oracle/apps/marketing/commonMarketing/budgets/budgetPublicService/}ClaimSettlement

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Marketing Budget Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountClassification	string	The account classification for the claim settlement account.
AccountingType	string	The accounting type of the marketing claim settlement, which represents a credit or debit in the back-end financial system. This is for reference only, as the claim settlements do not have any effect on available budget.
ActiveFlag	boolean	Indicates the activity status of the marketing claim settlement as Active or Inactive.
AdditionalReferenceCode	string	The additional reference associated to the marketing claim settlement, that identifies a particular partner program or marketing source.
AdditionalReferenceType	string	The type of the additional reference associated to the marketing claim settlement, that is, partner program or marketing source.
BudgetCurrencyExchangeRate	decimal	The exchange rate used to convert from the marketing claim settlement currency to the parent budget currency.
BudgetId	decimal	The unique identifier for the marketing budget.

Name	Type	Description
ClaimCurrencyExchangeRate	decimal	The ledger currency exchange rate from claim settlement currency to claim currency.
ClaimId	decimal	The parent claim for the claim settlement.
ClaimSettlementAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount settled in the claim settlement.
ClaimSettlementCode	string	The unique identifier for claim settlements.
ClaimSettlementId	long	The system generated unique identifier of the claim settlement. • Primary Key
ClaimSettlementType	string	The type of transaction for the claim settlement.
ConversionCurrencyCode	string	The currency code of the currency being converted to.
ConversionExchangeRate	decimal	The exchange rate of the currency being converted to.
ConversionRateType	string	The currency conversion rate type that is used to derive the exchange rate for converting the user-entered currency to CRM Corporate currency.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreationMethod	string	The method used to create the marketing claim settlement. For example, manually, file import, or web service.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
Description	string	The free text description of the record.
InactivatedBy	string	The user who inactivated the claim settlement.
InactivationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the marketing claim was inactivated.

Name	Type	Description
InvoiceReference	string	Free form text to store Invoice reference.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdatedBy	string	The user who last updated the record.
PaymentCheckReference	string	This is a free form text field. This field can be used by the Finance Users to record the Payment Check Reference for the Claim Settlement of type Payment.
PaymentMethod	string	The payment method used for the claim payment.
StatusCode	string	The pre-defined code used to indicate the status.

Marketing Fund Request

The request for a portion of the budget to be allocated towards execution of marketing activities.

QName: {http://xmlns.oracle.com/oracle/apps/marketing/commonMarketing/budgets/budgetPublicService/}FundRequest

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Marketing Budget Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalReferenceId	long	The additional reference identifier associated to the marketing budget, that identifies a particular partner program or marketing source.

Name	Type	Description
AdditionalReferenceType	string	The type of the additional reference associated to the marketing fund request, that is, partner program or marketing source.
Age	decimal	The number of days since the creation of the marketing fund request.
ApprovedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount approved for the marketing fund request.
ApprovedBy	string	The user who approved the marketing fund request.
ApprovedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the marketing fund request was approved.
AvailableFundRequestAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The difference between total approved marketing fund request and total approved claim amounts, which is available to new claims.
BudgetCurrencyExchangeRate	decimal	The exchange rate from Fund Request To Budget Currency.
BudgetId	long	The unique identifier for the marketing budget.
Comments	string	The comments for the record.
ConversionCurrencyCode	string	The currency code of the currency being converted to.
ConversionExchangeRate	decimal	The exchange rate of the currency being converted to.
ConversionRateType	string	The currency conversion rate type that is used to derive the exchange rate for converting the user-entered currency to CRM Corporate currency.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.

Name	Type	Description
Description	string	The free text description of the record.
FundRequestCode	string	The unique identifier of the fund request.
FundRequestId	long	The system-generated, unique identifier for the marketing fund request. • Primary Key
FundRequestName	string	The display name for the marketing fund request.
FundRequestStatusCode	string	The status code of the marketing fund request.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdatedBy	string	The user who last updated the record.
PartnerContactId	long	The partner contact associated to the fund request.
PartnerId	long	The unique identifier of the partner.
RejectedBy	string	The user who rejected the marketing fund request.
RejectedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the marketing fund request was rejected.
RejectionReasonCode	string	The reason for rejecting the marketing fund request.
RequestedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount requested for the fund request.
SubmittedBy	string	The user who submitted the marketing fund request.
SubmittedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The submission date of the marketing fund request.
TotalApprovedClaimAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Sum of approved amounts for all claims in Approved status.

Marketing Campaign Service

Service to operate on marketing campaigns. The supported operations are create, update, delete, and search.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/oracle/apps/marketing/coreMarketing/campaigns/campaignPublicService/}CampaignPublicService

Service WSDL URL: https://servername/crmService/CampaignPublicService?WSDL

Logical Business Objects

Handles	*Deprecated - Marketing Campaign*
Handles	*Marketing Source Code*

Operations

- *getCampaign*
- *createCampaign*
- *updateCampaign*
- *deleteCampaign*
- *findCampaignNew*
- *findCampaign*
- *findCampaigns*
- *getDfltObjAttrHints*

- *getServiceLastUpdateTime*
- *getEntityList*

getCampaign

A web service method that queries a single record of an Oracle Fusion Marketing Campaign Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
campaignId	long	A required input parameter of the getCampaign web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	*Marketing Campaign*	The return value of the getCampaign web service method. It includes the full set of attributes and child entities of the record.

createCampaign

A web service method that creates Oracle Fusion Marketing Campaign Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
campaign	*Marketing Campaign*	A required input parameter of the createCampaign web service method. The input campaign Object includes the attribute values that the record is created with.

Response Payload

Element Name	Type	Description
result	*Marketing Campaign*	The return value of the createCampaign web service method. It includes the full set of attributes and child entities of the record.

updateCampaign

A web service method that updates an Oracle Fusion Marketing Campaign Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
campaign	*Marketing Campaign*	An input parameter of the updateCampaign web service method. The record matching the ID specified in this input campaign Object is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Marketing Campaign*	The return value of the updateCampaign web service method. It includes the full set of attributes and child entities of the record.

deleteCampaign

A web service method that delete an Oracle Fusion Marketing Campaign Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
campaign	*Marketing Campaign*	A required input parameter of the deleteCampaign web service method. The record matching the input Object's attribute values specified in the campaign are deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteCampaign.

findCampaignNew

A web service method that queries list of records of matching Oracle Fusion Marketing Campaign Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findCampaignNew web service method. The filter criteria are a cumulative set of attribute criteria that identifies records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findCampaignNew.

Response Payload

Element Name	Type	Description
result	*Marketing Campaign*	The return value of the findCampaignNew web service method. It includes the full set of attributes of records queried.

findCampaign

A web service method that queries a single record of an Oracle Fusion Marketing Campaign Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findCampaign web service method. The filter criteria are a cumulative set of attribute criteria that identifies records queried for.
BindLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The input parameter of the findCampaign web service method that identifies the last update date on the campaign.
BindCampaignName	string	The input parameter of the findCampaign web service method that identifies the campaign name.

Element Name	Type	Description
BindCampaignStartDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The input parameter of the findCampaign web service method that identifies the campaign start date.
BindCampaignEndDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The input parameter of the findCampaign web service method that identifies the campaign end date.
BindExecutionStatus	string	The input parameter of the findCampaign web service method that identifies the campaign execution status code.
BindSourceCode	string	The input parameter of the findCampaign web service method that identifies the source code.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findCampaign.

Response Payload

Element Name	Type	Description
result	*Marketing Campaign*	The return value of the findCampaign web service method. It includes the full set of attributes of records queried.

findCampaigns

A web service method that queries records of matching Oracle Fusion Marketing Campaign Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findCampaigns web service method. The filter criteria are a cumulative set of attribute criteria that identifies records queried for.
BindCreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The input parameter of the findCampaigns web service method that identifies the creation date.
BindCampaignName	string	The input parameter of the findCampaigns web service method that identifies the campaign name.

Element Name	Type	Description
BindCampaignType	string	The input parameter of the findCampaigns web service method that identifies the campaign type.
BindCampaignStartDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The input parameter of the findCampaigns web service method that identifies the campaign start date.
BindCampaignEndDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The input parameter of the findCampaigns web service method that identifies the campaign end date.
BindExecutionStatus	string	The input parameter of the findCampaigns web service method that identifies the campaign execution status code.
BindSourceCode	string	The input parameter of the findCampaigns web service method that identifies the source code.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findCampaigns.

Response Payload

Element Name	Type	Description
result	*Marketing Campaign*	The return value of the findCampaigns web service method. It includes the full set of attributes of records queried.

getDfltObjAttrHints

A web service method to retrieve user interface hints, such as the service data object label and Object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.

Element Name	Type	Description
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

A web service method that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition was last updated. The parameter is present in ISO 8601 format.

getEntityList

A web service method to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the Object.

Element Name	Type	Description

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MKT_UPDATE_MARKETING_CAMPAIGN_PRIV	Update Marketing Campaign	Allows updating simple campaigns and the plans, design, and execution of complex marketing campaigns.
All Operations	MKT_MANAGE_MARKETING_CAMPAIGN_PRIV	Manage Marketing Campaign	Allows web services management of simple campaigns and the plan, design, and execution of complex marketing campaigns.
All Operations	MKT_MANAGE_SALES_CAMPAIGN_PRIV	Manage Sales Campaign	For internal use only. Allows web services management of sales campaigns.
All Operations	MKT_VIEW_SALES_CAMPAIGN_PRIV	View Sales Campaign	Allows viewing sales campaigns and tracking of customer responses. A sales campaign is an e-mail promoting products or events to specific customers, that can include personalized information and links where the customer can respond.
All Operations	MKT_VIEW_MARKETING_CAMPAIGN_PRIV	View Marketing Campaign	Allows viewing simple campaigns and the plans, design, execution, and results of complex marketing campaigns.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MKT_MANAGE_MARKETING_CAMPAIGN_PRIV	ORA_MKT_MARKETING_CAMPAIGN_MANAGEMENT_DUTY	Marketing Campaign Management	Manages secured marketing campaigns from planning to design and execution. Defines and maintains secured marketing treatments, lists, segments, and content.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MKT_UPDATE_MARKETING_CAMPAIGN_PRIV	ORA_MKT_MARKETING_APPROVAL_DUTY	Marketing Approval	Reviews and approves secured marketing campaigns by viewing detailed campaign, list, segment, and treatment information from the campaign, audience, and treatment work areas.

ORA_MKL_SALES_LEAD_QUALIFIER_JOB	ORA_MKL_LEAD_REGISTRATION_PROCESSING_DUTY	Lead Registration Processing	Reviews, accepts, and rejects sales lead registrations. Includes the ability to view sales lead details and update internal attributes.
ORA_MKL_SALES_LEAD_QUALIFIER_JOB	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
ORA_MKL_SALES_LEAD_QUALIFIER_JOB	ORA_HZ_RESOURCE_ABSTRACT	Resource	Identifies the person as front office personnel.
ORA_MKL_SALES_LEAD_QUALIFIER_JOB	ORA_MKL_SALES_LEAD_QUALIFICATION_DUTY	Sales Lead Qualification	Qualifies sales leads to determine the sales readiness of the lead.
ORA_MKL_SALES_LEAD_QUALIFIER_JOB	ORA_ZCM_SALES_PARTY_ADMINISTRATION_DUTY	Sales Party Administration	Manages named sales accounts, sales account import scheduler and the flagging of existing accounts. Additional duties include managing sales parties, functional setups, customer center objects, and relationship information inquiries.

Marketing Campaign

The medium to convey a marketing message to the targeted audience with the goal of retaining existing customers or generating new selling opportunities.

QName: {http://xmlns.oracle.com/apps/marketing/coreMarketing/campaigns/campaignService/}Campaign

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Marketing Campaign Lead Distribution Partner*
Contains	*Marketing Campaign Resource*
Contains	*Marketing Source Code*

Relationship Type	Object or Service
Handled by	*Marketing Campaign Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveFlag	boolean	Indicates the activity status of the marketing campaign as Active or Inactive.
ApproverId	long	The identifier of the approver for this campaign.
ApproverNote	string	A note provided by the approver of this campaign.
AttachmentEntityName	string	The name of the attachment associated with this campaign.
BUId	long	The identifier of the business unit associated with this record.
CalculationSubCost	decimal	The calculated sub cost.
CampaignCode	string	The code associated with this campaign.
CampaignEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The end date of the campaign.
CampaignId	long	The unique identifier for the campaign. • Primary Key
CampaignName	string	The name of the campaign.
CampaignNumber	string	The number associated with this campaign. This attribute acts as a public surrogate key.
CampaignPartners	*Marketing Campaign Lead Distribution Partner*	Reference to marketing campaign partners.
CampaignResources	*Marketing Campaign Resource*	Reference to marketing campaign resources.
CampaignStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The start date associated with this campaign.

Name	Type	Description
CampaignTypeCode	string	The type of campaign.
CampaignUsage	string	The usage of this campaign.
ClassificationCode	string	The organization's classification code.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
Description	string	The free text description of the record.
DesignStatusCode	string	The status of the campaign design for this campaign.
DialogStatusMeaning	string	The meaning associated with the campaign design status for this campaign.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
EnforceApprovalFlag	boolean	Indicates whether approval is enforced for this campaign.
ExecutionStatusCode	string	The status of the campaign execution.
LanguageCode	string	The language associated with this campaign.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdatedBy	string	The user who last updated the record.
LaunchFinishDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The end date of the campaign launch window.
LaunchStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The start date of the campaign launch window.

Name	Type	Description
LeadDistributionMode	string	Indicates whether lead assignment is done based on sales territories or rules, or both.
MktgTmplId	long	Identifier of the campaign template used to created this campaign.
Name	string	The name of the organization.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was last queried.
Objective	string	The objective of this campaign.
Organization	string	The name of the organization.
OrganizationId	long	The organization Id of the campaign.
Owner	string	The owner associated with the treatment.
OwnerId	decimal	The resource identifier associated with the campaign coordinator.
OwnerResourceOrgId	long	The resource organization identifier associated with the campaign coordinator.
OwnerTreeCode	string	The resource organization hierarchy code associated with the resource organization associated with the campaign coordinator.
OwnerTreeStructureCode	string	The resource organization hierarchy structure code associated with the resource organization associated with the campaign coordinator.
OwnerTreeVersionId	string	The resource organization hierarchy version associated with the resource organization associated with the campaign coordinator.

Name	Type	Description
PartnerProgramId	long	The identifier of the partner program for which this campaign is created to generate demand.
PartnerProgramName	string	The name of the partner program for which this campaign is created to generate demand.
PartnerType	string	The partner type recorded on the campaign. This campaign is created to generate demand for this type of partners.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PeriodId	long	The fiscal calendar period associated with this campaign.
PlannedCampaignEndDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The end date of the campaign.
PlannedCampaignStartDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The start date of the campaign.
PlannedLaunchFinishDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The end date of the campaign launch.
PlannedLaunchStartDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The start date of the campaign launch.
PrimaryPartnerId	decimal	The identifier of the partner sponsoring this campaign. All leads generated from this campaign are typically routed to this partner.
PriorityCode	string	The priority code associated with the campaign.
PublicSiteURL	string	The public site URL to track the publicly accessible site for collecting responses for the Fusion social campaign.
PurposeCode	string	The purpose of the campaign.
RegionCode	string	The region associated with this campaign.
RegionId	decimal	The identifier of the region associated with this campaign.

Name	Type	Description
SalesChannelType	string	The sales channel recorded on the campaign. This campaign is created to generate demand for this specific sales channel.
SourceCodes	*Marketing Source Code*	The reference to the marketing campaign source codes.
StatusCode	string	The pre-defined code used to indicate the status.
TaskTemplateId	long	The identifier of the task template used to create tasks for this campaign.
TemplateFlag	boolean	Indicates whether this record is a campaign template.

Marketing Campaign Lead Distribution Partner

The sales partners identified during campaign planning who will follow-up on the leads generated by the campaign.

QName: {http://xmlns.oracle.com/apps/marketing/coreMarketing/campaigns/campaignService/}CampaignPartners

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Marketing Campaign*
Handled by	*Marketing Campaign Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CampaignId	long	The unique identifier for the campaign.
CampaignPartnerId	long	The unique identifier of the campaign partner. • Primary Key

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartnerContactName	string	The partner contact name.
PartnerId	long	The unique identifier of the partner.
PartnerName	string	The name of the partner.
PrimaryFlag	boolean	Indicates if the campaign partner is primary.

Marketing Campaign Resource

The individual resources assigned to participate in the marketing campaign plan, design, and execution.

QName: {http://xmlns.oracle.com/apps/marketing/coreMarketing/campaigns/campaignService/}CampaignResources

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Marketing Campaign*

Relationship Type	Object or Service
Handled by	*Marketing Campaign Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevelCode	string	The Access Level Code of the resource within the campaign.
CampaignId	long	The unique identifier for the campaign.
CampaignResourceId	long	The unique identifier of the campaign resource. • Primary Key
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OrganizationTreeCode	string	The organization tree code for the resource organization hierarchy to which the resource belongs.
OrganizationTreeStructureCode	string	The organization tree structure code for the resource organization hierarchy to which the resource belongs.
OrganizationTreeVersionId	string	The organization tree version identifier for the resource organization hierarchy to which the resource belongs.
ResourceId	long	The unique identifier of the resource.
ResourceOrganizationId	long	The identifier of the resource organization.

Marketing Source Code

The unique identifier representing a marketing campaign and the underlying treatment and segment or list used within each execution. The source code is used to track responses and leads generated by each marketing campaign execution, which helps gauge the effectiveness of each initiative.

QName: {http://xmlns.oracle.com/apps/marketing/coreMarketing/sourcecode/sourceService/}SourceCode

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Marketing Campaign*
Handled by	*Marketing Source Code Service*
Handled by	*Marketing Campaign Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveFlag	boolean	Indicates the activity status of the marketing source code as Active or Inactive.
ActivityChannel	string	The channel associated with the source code.
ActivityEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The end date of the source code.
ActivityName	string	The name of the marketing activity associated with the source code.
ActivityStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The start date of the marketing activity associated with this source code.
ActivityStatusCode	string	Indicates the status of the marketing activity associated with this source code.

Name	Type	Description
ActivityType	string	Indicates the type of the marketing activity associated with this source code.
AllocationId	long	Stage allocation identifier identifying the marketing activity associated with this source code.
CallListId	long	The primary identifier of the list or segment associated with this source code.
CallLstName	string	The name of the list or segment associated with this source code.
CampaignId	long	The unique identifier for the campaign.
CampaignName	string	The name of the campaign associated with this source code.
CampaignUsage	string	The campaign usage associated with source code.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EventId	long	The identifier of the event associated with this source code.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
SearchCampaignId	long	The identifier of the search marketing campaign. This is the foreign key to the search marketing campaign represented by this source code.

Name	Type	Description
SourceCode	string	The source code that represents this record.
SourceCodeId	long	The primary key identifier associated with this record. • Primary Key
StageId	long	The identifier of the campaign stage associated with the marketing activity this source code represents.
StageName	string	The name of the campaign stage associated with this source code.
StageTreatmentId	long	The treatment identifier associated with the marketing activity associated with this source code.
TreatmentId	long	The identifier of the treatment associated with this source code.

Marketing Custom Business Object (Deprecated)

Service to operate on custom business objects created in the Oracle Fusion Marketing application. The supported operations are create, update, delete, and search. A custom business object stores extended information for an Oracle Fusion business object, for example, related orders for a marketing campaign.

Life Cycle Status: Deprecated. This service is deprecated and replaced by .

QName: {http://xmlns.oracle.com/apps/marketing/custExtn/extnService/}MarketingCustomObjectService

Service WSDL URL: https://servername/crmService/MarketingCustomObjectService?WSDL

Logical Business Objects

- CRM : Marketing : Marketing Custom Object

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Relationship Type	Object or Service

Operations

- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*
- *createEntity*
- *getEntity*
- *updateEntity*
- *deleteEntity*
- *findEntity*
- *mergeEntity*
- *processEntity*

getDfltObjAttrHints

Retrieves user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Retrieves the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

A web service method to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the Object.

createEntity

Creates records of an Oracle Fusion marketing custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	A required input parameter of the createEntity web service method. It includes the attribute values that the records is created with.
objectName	string	A required input parameter of the createEntity web service method. Use the API name of the custom object you want to create.

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	anyType	The return value of the createEntity web service method. It includes the full set of attributes and child entities of the record.

getEntity

Queries by ID a single record of an Oracle Fusion marketing custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
keyValue	string	A required input parameter of the getEntity web service method. It includes the row ID of the record you want to query for.
objectName	string	A required input parameter of the getEntity web service method. Use the API name of the custom object you want to query for.

Response Payload

Element Name	Type	Description
result	anyType	The return value of the getEntity web service method. It includes the full set of attributes and child entities of the record.

updateEntity

Updates a set of records of an Oracle Fusion marketing custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	A required input parameter of the updateEntity method. All records matching the IDs specified in this input Object are updated with the corresponding input attribute values also specified.
objectName	string	A required input parameter of the updateEntity web service method. Use the API name of the custom object you want to update.

Response Payload

Element Name	Type	Description
result	anyType	

deleteEntity

Deletes a set of records of an Oracle Fusion marketing custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	A required input parameter of the deleteEntity web service method. All records matching the input attribute values specified in this input Object are deleted.
objectName	string	A required input parameter of the deleteEntity web service method. Use the API name of the custom object you want to delete.

Response Payload

Element Name	Type	Description
result	void	Not applicable

findEntity

Queries for a set of records of an Oracle Fusion marketing custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findEntity web service method. It includes optional search criteria, sort filter, and attributes to be excluded when returning the set of records. Also includes the option to return any of the custom object's child entities,
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Not applicable
objectName	string	A required input parameter of the findEntity web service method. Use the API name of the custom object you want to query for.

Response Payload

Element Name	Type	Description
result	anyType	The return value of the findEntity web service method. It includes the full set of attributes and child entities of the records.

mergeEntity

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	
objectName	string	

Response Payload

Element Name	Type	Description
result	anyType	

processEntity

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	
object	anyType	
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	
objectName	string	

Response Payload

Element Name	Type	Description
result	anyType	

Custom Business Object

A service to create, update, delete, or find custom business objects created in the Oracle Fusion CRM application. A custom business object stores extended information for an Oracle Fusion business object.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/custom/extnService/}CustomReferenceService

Service WSDL URL: https://servername/crmService/CustomReferenceService?WSDL

Logical Business Objects

- CRM : CRM Application Composer : CRM Extensible Object

Operations

- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*
- *invokeObjectFunction*
- *createEntity*
- *getEntity*

- *updateEntity*
- *deleteEntity*
- *findEntity*
- *mergeEntity*
- *processEntity*

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

invokeObjectFunction

invoke custom object row function.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
row	anyType	DataObject used to invoke the script
viewName	string	Custom Object type name
scriptName	string	row function name
params	anyType	row function parameters

Response Payload

Element Name	Type	Description
result	anyType	DataObject

createEntity

Create operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject created for the custom object.

getEntity

Get operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
keyValue	string	A list of key values for identifying the custom object.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject identified by the keyValue.

updateEntity

Update operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be updated. The DataObject must include key fields for identifying the updated record, as well as the fields to be updated.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject updated for the custom object.

deleteEntity

Delete operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be deleted. The DataObject must include key fields for identifying the deleted record.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	void	DataObject that is deleted.

findEntity

Find operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	List of DataObjects identified by the findCriteria.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Search control.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObjects found

mergeEntity

merge with existing custom object if exist, create new object if does not exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be merged. The DataObject must include key fields for identifying the record, as well as the fields to be merged.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject result from the merge

processEntity

batch process for custom object operation

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Operation name
object	anyType	DataObjects to be batch processed
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	process control
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject result list

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
processEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea
getEntityList	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
updateEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea
getEntity	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
deleteEntity	ZCX_DELETE_CUSTOM_OBJECT_PRIV	DELETE custom object resources (WorkArea)	PermissionSet to DELETE for custom object WorkArea
findEntity	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
getDfltObjAttrHints	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea

Operation Name	Privilege Code	Privilege Name	Privilege Description
createEntity	ZCX_CREATE_CUSTOM_OBJECT_PRIV	CREATE custom object resources (WorkArea)	PermissionSet to CREATE for custom object WorkArea
getServiceLastUpdateTime	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
mergeEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea

Marketing List Service

Service to operate on marketing lists and underlying members. The supported operations are create, update, delete, and search.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/oracle/apps/marketing/coreMarketing/lists/listPublicService/}MktListPublicService

Service WSDL URL: https://servername/crmService/MktListPublicService?WSDL

getMktList

A web service method of the Get operation for Marketing List.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
callListId	long	The unique Marketing List identifier for the method getMktList.

Response Payload

Element Name	Type	Description
result	*Marketing List*	The parameter returns the Marketing List that matches the inbound key attributes.

createMktList

A web service method of the Create operation for Marketing List.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
mktList	*Marketing List*	The Marketing List to be created for the method createMktList.

Response Payload

Element Name	Type	Description
result	*Marketing List*	The parameter returns the created Marketing List.

Element Name	Type	Description

updateMktList

A web service method of the Update operation for Marketing List.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
mktList	*Marketing List*	The Marketing List to be updated for the method updateMktList.

Response Payload

Element Name	Type	Description
result	*Marketing List*	The parameter returns the updated Marketing List.

deleteMktList

A web service method of the Delete operation for Marketing List.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
mktList	*Marketing List*	The Marketing List to be deleted for the method deleteMktList.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteMktList.

getMktListMember

A web service method of the Get operation for Marketing List Contact.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
callListMemberId	long	An input parameter of the getMktListMember web service method. It is the row ID of the list record you want to query for.

Response Payload

Element Name	Type	Description
result	*Marketing List Contact*	The parameter returns the Marketing List Contact that matches the inbound key attributes.

createMktListMember

A web service method of the Create operation for Marketing List Contact.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
mktListMember	*Marketing List Contact*	The Marketing List Contact to be created for the method createMktListMember.

Response Payload

Element Name	Type	Description
result	*Marketing List Contact*	The parameter returns the created Marketing List Contact.

updateMktListMember

A web service method of the Update operation for Marketing List Contact.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
mktListMember	*Marketing List Contact*	The Marketing List Contact to be updated for the method updateMktListMember.

Response Payload

Element Name	Type	Description
result	*Marketing List Contact*	The parameter returns the updated Marketing List Contact.

deleteMktListMember

A web service method of the Delete operation for Marketing List Contact.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
mktListMember	*Marketing List Contact*	The Marketing List Contact to be deleted for the method deleteMktListMember.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteMktListMember.

getDfltObjAttrHints

A web service method to retrieve user interface hints, such as the service data object label and Object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

A web service method that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition was last updated. The parameter is present in ISO 8601 format.

getEntityList

A web service method to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the Object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MKT_VIEW_MARKETING_SEGMENT_PRIV	View Marketing Segment	Allows viewing marketing segments and segment trees used to identify and group specific members of the customer base.
All Operations	MKT_MANAGE_MARKETING_LIST_PRIV	Manage Marketing List	For internal use only. Allows web services management of marketing lists.
All Operations	MKT_UPDATE_MARKETING_LIST_PRIV	Update Marketing List	Allows updating a list of contacts created for marketing campaigns.
All Operations	MKT_CREATE_MARKETING_LIST_PRIV	Create Marketing List	Allows creating a grouping of contacts for use in marketing campaigns.
All Operations	MKT_VIEW_MARKETING_LIST_PRIV	View Marketing List	Allows viewing a list of contacts created for marketing campaigns.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MKT_VIEW_MARKETING_LIST_PRIV	ORA_MKT_MARKETING_ANALYSIS_DUTY	Marketing Analysis	Analyzes marketing effectiveness across the enterprise by viewing detailed marketing campaign, list, segment, and treatment information from the audience and campaign work areas.

Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ORA_MKT_MARKETING_OPERATIONS_MANAGER_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.

Marketing List

The static list of customer contacts and prospects who can be targeted within a marketing a campaign.

QName: {http://xmlns.oracle.com/apps/marketing/coreMarketing/lists/listService/}MktList

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Marketing List Contact*
Handled by	*Marketing List Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BUId	long	The business unit id stamped on this record.
CallListCode	string	The alternate key associated with this record.
CallListId	long	The primary identifier associated with this record. • Primary Key
CallListName	string	The name associated with this list or segment.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DataSourceType	string	The data source type indicating whether this list holds person parties or organization contacts.
DescriptionText	string	The description text.

Name	Type	Description
DesiredNumberCons	long	The desired number of contacts.
ExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the campaign expires.
FolderPath	string	The folder path.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdatedBy	string	The user who last updated the record.
ListMember	*Marketing List Contact*	The customer contacts and prospects (marketing list contacts) associated with this list.
LockedFlag	boolean	Indicates whether this treatment is locked. A locked treatment cannot be updated.
MemberCount	long	The number of list members for this list.
NodeIndent	string	Node indent.
NumberOfContacts	long	The number of contacts.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
Owner	string	The party name of the owner of this marketing list.
OwnerId	long	The resource identifier of the owner.
OwnerResourceOrgId	long	The identifier of the owner's resource organization.
OwnerTreeCode	string	The owner's organization tree code.
OwnerTreeStructureCode	string	The owner's organization tree structure code.
ParCallListId	long	The identifier of the parent call list.

Name	Type	Description
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyUsage	string	Indicates the party usage associated with the party record represented by the marketing list member.
PurchaseAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount paid for purchase of this marketing list. This attribute pertains to purchased list only.
PurchaseCurrencyCode	string	The purchase currency code.
PurchaseDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The purchase date.
RegionId	decimal	The region identifier on the list.
SegmentTypeCode	string	The segment type code indicating the type of audience this record holds. For example, list, segment, and segment tree.
SourceOutId	long	The identifier of the source.
StatusCode	string	The pre-defined code used to indicate the status.
SubTypeCode	string	The code indicating the type of the list. For example, imported, internal, subscription list, and seed list.
TargetUsageCount	long	The target usage count.
TeamId	long	The identifier of the resource team.
TeamName	string	The name of the resource team associated with this marketing list.

Marketing List Contact

The individual contacts that are selected in a marketing list.

QName: {http://xmlns.oracle.com/apps/marketing/coreMarketing/lists/listService/}MktListMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Marketing List*
Handled by	*Marketing List Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CallListId	long	The call list contact id.
CallListMemberId	long	The call list contact id. • Primary Key
ContactId	long	The identifier of the contact person.
ContactPointId	long	The unique primary key identifier for the contact point.
ContactPointId1	long	The unique identifier for a contact point.
ContactPointType	string	The type of the contact point.
ContactPointType1	string	The type of the contact point, such as phone or e-mail.
ContactRelationshipId	long	The identifier of the contact relationship record in Trading Community Architecture (TCA).
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Customer	string	The identifier of the customer party associated with this list member.

Name	Type	Description
EmailAddress	string	The email address associated with the record.
EmailFormat	string	Indicates the preferred format for e-mail addressed to this address. For example, HTML or ASCII.
EmailRestrictions	string	Indicates whether the email address of the marketing list member has any contact restrictions.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdatedBy	string	The user who last updated the record.
ObjectId	long	The identifier of the object.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUsage	string	The party usage recorded for this party in the customer master.
PartyUsageCode	string	The usage context of a party's contact point.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PhoneAreaCode	string	The area code prefix for the phone number.

Name	Type	Description
PhoneCallingCalendar	string	The name or code for a calling calendar used with this telephone number. This attribute is no longer used.
PhoneCountryCode	string	The country code prefix for the phone number.
PhoneExtension	string	The additional number addressed after initial connection to an internal telephone system.
PhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound, or outbound.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PhoneRestrictions	string	Indicates whether there are any contact restrictions on the phone number associated with this list member.
RelationshipId	long	The relationship identifier for the record.
RelationshipId1	long	Relationship identifier for this list member. This identifier represents the relation between the customer and the contact.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Marketing Response Service

Service to operate on marketing responses. The supported operations are create, update, delete, and search.

getMktRmResponse

A web service method that queries a single record of Oracle Fusion Marketing Response Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
responseId	long	A required input parameter of the getMktRmResponse web service method. It is the row ID of the response record you want to query for.

Response Payload

Element Name	Type	Description
result	*Marketing Response*	The return value of the getMktRmResponse web service method. It includes the full set of attributes and child entities of the record.

createMktRmResponse

A web service method that creates Oracle Fusion Marketing Response Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
mktRmResponse	*Marketing Response*	A required input parameter of the createMktRmResponse web service method. The input object includes the attribute values that the response record is created with.

Response Payload

Element Name	Type	Description
result	*Marketing Response*	The return value of the createMktRmResponse web service method. It includes the full set of attributes and child entities of the record.

updateMktRmResponse

A web service method that updates an Oracle Fusion Marketing Response Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
mktRmResponse	*Marketing Response*	A required parameter of the updateMktRmResponse web service method. The record matching the ID specified in this input response is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Marketing Response*	The return value of the updateMktRmResponse web service method. It includes the full set of attributes and child entities of the record.

deleteMktRmResponse

A web service method that delete an Oracle Fusion Marketing Response Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
mktRmResponse	*Marketing Response*	A required input parameter of the deleteMktRmResponse web service method. The record matching the input attribute values specified in the response are deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteMktRmResponse.

findMktRmResponse

A web service method that queries a single record or set of records of fusion marketing response by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the find response web service method. The filter criteria are the cumulative set of attribute criteria that identifies records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findMktRmResponse.

Response Payload

Element Name	Type	Description
result	*Marketing Response*	The return value of the find response web service method. It includes the full set of attributes of records queried.

processMktRmResponse

Performs a create, update, delete, or merge operation on a list of Marketing Response rows. The specified operation is applied to all objects in the given list.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	The parameter indicates what action shall be performed, such as create, update, merge, or delete.
mktRmResponse	*Marketing Response*	A list of Marketing Responses to be processed.

Element Name	Type	Description
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The parameter controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Marketing Response*	The parameter returns a list of Marketing Responses that are successfully processed.

getDfltObjAttrHints

Retrieves user interface hints, such as the service data object label and Object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

A web service method that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

A web service method to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MKT_MANAGE_DIRECT_MAIL_MARKETING_CAMPAIGN_EXECUTION_PRIV	Manage Direct Mail Marketing Campaign Execution	Privilege to manage Direct Mail Marketing campaign execution
All Operations	MKL_IMPORT_SALES_LEAD_PRIV	Import Sales Lead	Allows importing sales leads. A sales lead is a prospect or existing customer who has interest or the

Operation Name	Privilege Code	Privilege Name	Privilege Description
			potential for interest in a product or service being sold.
All Operations	MKT_MANAGE_MARKETING_TREATMENT_PRIV	Manage Marketing Treatment	For internal use only. Allows web services management of marketing treatments.
All Operations	MKT_MANAGE_SALES_CAMPAIGN_PRIV	Manage Sales Campaign	For internal use only. Allows web services management of sales campaigns.
All Operations	ZCA_SET_UP_FILE_IMPORT_ACTIVITY_PRIV	Set Up File Import Activity	Allows creating and maintaining import activities that contain process criteria, file mapping, and schedule to import external files containing business objects, such as customers and contacts, into staging tables.
All Operations	MKL_VIEW_SALES_LEAD_PRIV	View Sales Lead	Allows viewing sales leads. A sales lead is a prospect or existing customer who has interest or the potential for interest in a product or service being sold.
All Operations	MKT_MANAGE_MARKETING_STAGE_EXECUTION_PRIV	Manage Marketing Stage Execution	For internal use only. Allows web services management of marketing campaign stage execution.
All Operations	MKT_MANAGE_MARKETING_IMPORT_PRIV	Manage Marketing Import	For internal use only. Allows web services management of marketing import.
All Operations	MKT_MANAGE_MARKETING_RESPONSE_PRIV	Manage Marketing Response	For internal use only. Allows web services management of marketing responses.
All Operations	MKT_VIEW_MARKETING_CAMPAIGN_PRIV	View Marketing Campaign	Allows viewing simple campaigns and the plans, design, execution, and results of complex marketing campaigns.
All Operations	MKT_CREATE_MARKETING_RESPONSE_PRIV	Create Marketing Response	Allows creating responses to marketing campaigns.

Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AddressExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the location is no longer valid.
AddressLinesPhonetic	string	The phonetic or Kana representation of the Kanji address lines that are used in Japan.
AddressStyle	string	Style of the address.
Addressee	string	The information of the addressee.
City	string	The name of the city.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
ContactPreferenceExistFlag	boolean	Indicator to specify if the contact is primary contact for the party.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
Country	string	The name of the country.
Country1	string	The attribute country1 is not used.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DateValidated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address was last validated.
DoNotValidateFlag	boolean	Indicator to specify that a particular location is not eligible for address validation irrespective of the current validation.
Eft	*Electronic File Transfer*	The electronic file transfer information for the party.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
FormattedAddress	string	The formatted read-only address.
FormattedLocaleAddress	string	The formatted read-only local address.
FormattedMultilineAddress	string	The formatted multi line address of the party site.
GlobalLocationNumber	string	The global location number that uniquely identifies each location in a trading partners enterprise.
HouseType	string	Indicates the building type.
IdentifyingAddressFlag	boolean	Indicator to specify the identifying address for the party. Y stands for the indentifying site and N stands for sites that are not the indentifying site.

Name	Type	Description
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
Language	string	The operating language for the party site.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Latitude	decimal	The latitude of the party address.
LocationDirections	string	Directions to the location.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
LocationLanguage	string	The operating language for the locations.
Longitude	decimal	The longitude of the party address.
Mailstop	string	A user-defined code to indicate a mail drop point within the organization.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was last queried.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.

Name	Type	Description
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary address of the contact irrespective of the context. Y stands for primary address and N stands for all others.
PartyId	long	The unique identifier of the contact party.
PartyNameDba	string	Stores the doing-business_as (DBA) party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameDivision	string	Stores the division party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameLegal	string	Stores the legal party name for a party site. This column is used to store FSIO related legal party name attribute.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
PartySiteInformation	*Trading Community Address Additional Information*	The party address information.
PartySiteName	string	The user-defined name for the site.
PartySiteNumber	string	The party site number of the address.
PartySiteType	string	Stores the party site type and is based on the lookup. Currently this is either null or one-time.
PartySiteUse	*Trading Community Address Purpose*	The information of the party address usage.
PartyUsageCode	string	The usage context of a party's contact point.
Phone	*Phone*	The phone information for the entity.
Position	string	The primary direction such as north or east that is used to access the location.
PostalCode	string	The postal code element of the address.
PostalPlus4Code	string	The four digit extension to the United States postal ZIP code.

Name	Type	Description
Province	string	The name of the province.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
State	string	The name of the state.
Status	string	The status of the record.
Telex	*Telex*	The Telex information associated with the party.
UsageCode	string	The usage code is not used.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
ValidationStatusCode	string	The standardized status code describing the results of the validation.
Web	*Web*	The web information related to the record.

Contact Preference

The contact preference of the trading community member. For example, do not call Joe Smith between 10 a.m. and 12 noon on weekdays.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}ContactPreference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*

Relationship Type	Object or Service

Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactLevelTable	string	The table that stores the contact level of the contact preference, and uses the SUBJECT_TABLE lookup. The list of accepted values are HZ_PARTIES, HZ_PARTIES_SITES, or HZ_CONTACT_POINTS.
ContactLevelTableId	long	The foreign key to the table specified in CONTACT_LEVEL_TABLE column. The list of accepted values are PARTY_ID from HZ_PARTIES table, CONTACT_POINT_ID from HZ_CONTACT_POINTS table, or PARTY_SITE_ID from HZ_PARTY_SITES table.
ContactPreferenceId	long	The unique identifier for the contact preference. • Primary Key
ContactType	string	The contact party type that defines whether the contact is a sales account, a prospect, a contact, or any other user-defined party type. The default value is CUSTOMER. A list of accepted values is defined in the lookup CONTACT_TYPE.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.

Name	Type	Description
LastUpdatedBy	string	The user who last updated the record.
MaximumNoOfInteractUOMCode	string	The period of time during which the maximum number of interactions applies. Uses the MAX_NO_OF_INTERACT_UOM_CODE lookup.
MaximumNoOfInteractions	decimal	The number of times you can use this contact point. The period of time that this number applies is stored in the MAX_NO_OF_INTERACT_UOM_CODE column.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PreferenceCode	string	Indicates whether to use a particular contact method. The list of accepted values are defined in the PREFERENCE_CODE lookup.
PreferenceEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes inactive.
PreferenceEndTimeHR	int	The hour part of time when the contact preference becomes inactive. The time is recorded in the 24 hour format.
PreferenceEndTimeMi	int	The minutes part of the time when the contact preference becomes inactive.
PreferenceStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes active.
PreferenceStartTimeHR	int	The hour part of time when the contact preference becomes active. The time is recorded in the 24 hour format.
PreferenceStartTimeMi	int	The minutes part of the time when the contact preference becomes active.
PreferenceTopicType	string	The appropriate subjects to send the party that the preference is created for. The list of accepted values are defined in the PREFERENCE_TOPIC_TYPE lookup.

Name	Type	Description
PreferenceTopicTypeCode	string	The code of the preference topic type.
PreferenceTopicTypeId	long	The unique identifier of the preference topic type.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
RequestedBy	string	Indicates if the permission or restriction was created internally or requested by the party. The list of accepted values are defined in the REQUESTED_BY lookup.
Status	string	The status of the record.

Marketing Response

The entity created based on the reaction of the targeted audience to the marketing message and is used to judge the positive or negative outcome of a marketing campaign.

QName: {http://xmlns.oracle.com/apps/marketing/response/responseService/}MktRmResponse

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Phone*
Contains	*Marketing Response Product*
Contains	*Marketing Response Survey*
Contains	*Address*
Handled by	*Marketing Response Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountId	long	The identifier of the account.
AttachmentEntityName	string	The entity name of the attachment to this response.
BUId	long	The identifier of the business unit.
CallListId	long	The identifier of the associated list.
Campaign	string	The name of the campaign associated with the response.
CampaignId	long	The unique identifier for the campaign.
CampaignMediaId	long	The identifier of the campaign media.
CampaignName	string	The name of the associated campaign.
Channel	string	The response channel.
ContactAddress	string	The address of the contact on this response.
ContactFaxNumber	string	The fax number of the contact on this response.
ContactId	long	The identifier of the contact.
ContactName	string	The contact name of the primary contact on the response.
ContactPhoneNumber	string	The phone number of the contact on this response.
ContactPointId	long	The unique primary key identifier for the contact point.
ContactPointType	string	The type of the contact point.
ContactRelationshipId	long	The identifier of the contact relationship record in Trading Community Architecture (TCA).

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CustomerId	long	The unique identifier of the customer.
CustomerName	string	The name of the customer.
DescriptionText	string	The description of+D1061 the marketing response.
DestinationName	string	The name of the destination.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
EventRegistrationId	long	The identifier of the event registration which resulted in this response.
FaxType	string	The type of fax.
FormattedPhoneNumber	string	The formatted phone number.
FwdCntctRelshpId	long	The identifier of the forwarding contact relationship. Reference to the party relationship record of the forwarding contact.
FwdContactId	long	The identifier of the forwarding contact.
HyperlinkName	string	The name of the hyperlink.
HyperlinkURL	string	The URL associated with the response.
HzStatusActive	string	Indicates if the TCA record is active.
IPAddressCode	string	The internal IP address code.
ImportTaskId	long	The identifier of the import task associated with this response, if imported.

Name	Type	Description
InteractionId	long	The identifier of the interaction.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LeadId	long	The identifier of the lead.
LoadNumber	long	The Load Number corresponding to Campaign Load.
MessageActivationNumber	string	Represents one or more device addresses to receive incoming SMS messages.
MessageContent	string	The message content of the SMS message.
MessageIdentifier	string	The unique identifier for the SMS message as assigned by the User Messaging Service module.
MktProdAssoc1	*Marketing Response Product*	The reference to Marketing Product.
MktRmResponseSvyLog1	*Marketing Response Survey*	The reference to Marketing Response Survey log.
Name	string	The name of the response.
ObjectType	string	The object Type on the response.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
Offer	string	The offer associated with the response.
OpportunityId	long	The identifier of the opportunity.
OutcomeCode	string	The Response Outcome code.

Name	Type	Description
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartySite	*Address*	The reference to Party Site.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
Phone	*Phone*	The phone information for the entity.
PhoneType	string	The phone type of the associated contact point.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
ReferDomain	string	The Web domain of the referrer. For example, yahoo.com, facebook.com, and so on.
ReferKeywords	string	The keywords or hash tags tagged to the post that the visitor/referrer is responding to.
ReferSourceCode	string	The originating marketing source code for the referrer.
ReferTabStream	string	The name of the tab or stream in Virtue.
ReferWebOfferId	long	The reference to the web marketing offer pertaining to the referrer.
ReplyDeliveryMethodCode	string	The internal code of the delivery method of the reply.
ReplyEmailAddress	string	The email address on the reply.
ReplyFaxPhoneNumber	string	The Fax number on the reply.
ReplyMailAddress	string	The mailing address on the reply.

Name	Type	Description
ReplyMailCity	string	The city on the mailing address on the reply.
ReplyMailCountry	string	The country on the mailing address on the reply.
ReplyMailCounty	string	The county on the mailing address on the reply.
ReplyMailProvince	string	The province on the mailing address on the reply.
ReplyMailState	string	The state on the mailing address on the reply.
ReplyMailZipCode	string	The Zip code on the mailing address on the reply.
ReplyPhoneNumber	string	The phone number on the reply.
ReplyPriorityCode	string	The response priority recorded on the reply.
ResponseDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The response date.
ResponseId	long	The primary identifier of the response. • Primary Key
ResponseMethod	string	The response method on the response.
ResponseNumber	string	The unique alternate identifier for the marketing response.
ResponseTypeCode	string	The response type code.
ResponseURL	string	The URL of the marketing response.
Score	decimal	The score recorded on the response.
SourceCode	string	The source code recorded on the response.
SourceCodeId	decimal	The identifier of the source code recorded on the response.
StageExecutionId	long	The unique identifier of a specific execution of a marketing campaign stage.

Name	Type	Description
StageMemberId	long	The identifier of the stage member.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
StatusCode	string	The pre-defined code used to indicate the status.
SubjectText	string	The subject text of the response.
SubscribeDirectMailCode	string	The subscription Direct Mail Code.
SubscribeEmailCode	string	The subscription Email Code.
SubscribeFaxCode	string	The subscription Fax Code.
SubscribePhoneCode	string	The subscription Subscribe Phone Code.
Text	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The detailed text of the response.
TreatmentId	long	The identifier of the treatment.
TreatmentName	string	The name of the treatment associated with the response.
TreatmentName1	string	The name of the treatment associated with the response.
URLId	long	The identifier of the URL of the marketing response.

Electronic File Transfer

The electronic funds transfer information of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Eft

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key

Name	Type	Description
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EFTPrintingProgramId	long	The printing program identifier.
EFTSWIFTCode	string	The EFT swift code information.
EFTTransmissionProgramId	long	The transmission program identifier.
EFTUserNumber	string	The number that identifies you as a user of electronic funds transfer service for your bank or clearing organization.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

E-Mail

The e-mail address associated with a trading community member. For example, john.doe@oracle.com.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Email

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Relationship Type	Object or Service
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmailAddress	string	The email address associated with the record.
EmailFormat	string	The preferred format for e-mail addressed to this address such as HTML or ASCII. A list of accepted values is defined using the lookup EMAIL_FORMAT.
EmailInformation	*Trading Community Contact Point Additional Information*	The additional information about the e-mail.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary e-mail of the associated object. If the value is True, then this is the primary e-mail. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.

Name	Type	Description
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Instant Messaging

The instant messaging information of a trading community member, such as the AOL identifier or Yahoo Messenger information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}InstantMessaging

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*

Relationship Type	Object or Service
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
InstantMessagingAddress	string	The instant messaging information address.
InstantMessagingInformation	*Trading Community Contact Point Additional Information*	The instant messaging information related to the record.
InstantMessengerType	string	The type of the instant messenger type.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary instant messaging Id of the associated object. If the value is True, then this is the primary instant messaging Id. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.

Name	Type	Description
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Marketing Response Product

The product associated with a marketing response.

QName: {http://xmlns.oracle.com/apps/marketing/response/responseService/}MktProdAssoc

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Marketing Response*
Handled by	*Marketing Response Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Amount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount of the response product.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
Description	string	The free text description of the record.
Detail	string	The detailed text of the response product association.
EstimatedUnitPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated unit price for the product associated with the treatment.
InventoryItemId	long	The inventory item identifier associated with the product associated with this treatment.
InventoryOrgId	long	The identifier of the inventory organization.
ItemDescription	string	The description of the inventory item associated with the product associated with this treatment.
ItemName	string	The name of the inventory item associated with the product associated with this treatment.
ItemProductNumber	string	The product number of the inventory item.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationId	long	The identifier of the organization.
PrimaryFlag	boolean	Indicates whether this product is a primary product for this treatment.
ProductAssociationId	long	The identifier of the product association. • Primary Key
ProductDescription	string	Descriptive text about the product associated with the response.
ProductGroup1Id	long	Identifier of the product group. • Primary Key
ProductGroupDescriptionText	string	Descriptive text about the product group associated with the response.
ProductGroupId	long	Identifier of the product group.
ProductGroupName	string	Name of the product group.
ProductName	string	Name of the product if this record represents a product.
ProductType	string	The Product Type associated with the response.
Quantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The product quantity.
ResponseId	long	The identifier of the response this product is associated.
UOMCode	string	The unit of Measure Code for the response product.

Marketing Response Survey

The survey, including questions and answers, associated with a marketing response.

QName: {http://xmlns.oracle.com/apps/marketing/response/responseService/}MktRmResponseSvyLog

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Marketing Response*
Handled by	*Marketing Response Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AnswerText	string	The answer text in the response survey log.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
QuestionText	string	The text of the question in the response survey log.

Name	Type	Description
ResponseId	long	The identifier of the response to which this response log belongs.
ResponseLogId	long	The identifier of the response survey log record. • Primary Key

Phone

The phone number associated with a trading community member. For example, the phone number for Oracle Corporation is 650-506-6000.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Phone

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Marketing Response*
Contained by	*Partner*
Contained by	*Household*
Contained by	*Contact Address*
Contained by	*Trading Community Organization Details*
Contained by	*Address*

Relationship Type	Object or Service
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FormattedPhoneNumber	string	The formatted phone number.
LastContactDtTime	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date and time of last contact placed to this contact point.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.

Name	Type	Description
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PagerTypeCode	string	The PAGER_TYPE_CODE column stores the lookup code for the type of pager. The type of pager determines how the page is received. For example, tone, number, alphanumeric or two-way alphanumeric.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PhoneAreaCode	string	The area code prefix for the phone number.
PhoneCallingCalendar	string	The name or code for a calling calendar used with this telephone number. This attribute is no longer used in Fusion applications.
PhoneCountryCode	string	The country code prefix for the phone number.
PhoneExtension	string	The additional number addressed after initial connection to an internal telephone system.
PhoneInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community phone.
PhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound, or outbound.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RawPhoneNumber	string	The unformatted telephone number.

Name	Type	Description
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TimezoneCode	string	The foreign key to FND_TIMEZONES_B.TIMEZONE_CODE.
TransposedPhoneNumber	string	This column stores the concatenation of PHONE_COUNTRY_CODE, PHONE_AREA_CODE, and PHONE_NUMBER in reverse order. For example, if PHONE_COUNTRY_CODE=1, PHONE_AREA_CODE=650 and PHONE_NUMBER=5065747, this column stores 74756050561. This column is used for building an index to search for any combination of the above three columns.

Source System Reference

The name of external source system where the trading community information is imported from.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}OriginalSystemReference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Original System Mapping Identifier Additional Information*
Contained by	*Location Details*
Contained by	*Household*
Contained by	*Contact Preference*

Relationship Type	Object or Service
Contained by	*Classification Assignment*

Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OldOrigSystemReference	string	The old source system reference that is being replaced.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OrigSystemReferenceId	long	The unique identifier for original system reference. • Primary Key
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.

Name	Type	Description
PartyId	long	The unique identifier of the contact party.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
SourceSystemRefInformation	*Trading Community Original System Mapping Identifier Additional Information*	The source system reference information.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Telex

The telex number information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Telex

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*

Relationship Type	Object or Service
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary telex of the associated object. If the value is True, then this is the primary telex. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.

Name	Type	Description
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TelexNumber	string	The telex reference number (usually a telephone number) of the organization.

Trading Community Address Additional Information

The address information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/partySite/}PartySiteInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contact Address*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*

Relationship Type	Object or Service
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BeginDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date at the start of the date range within which the row is active.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
IntegrationKey	string	The integration key is not used.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PartySiteUseId	long	The unique identifier of the party site used. • Primary Key
PrimaryPerType	string	Indicates if this is the primary use for the site. Y stands for the primary site and N stands for all other sites.
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
SiteUseType	string	The site use type associated with the address.
Status	string	The status of the record.

Trading Community Contact Point Additional Information

The contact point for a trading community member like phone or e-mail. For example 650-506-6000 is the phone number for Oracle Corporation, john.doe@example.com is the e-mail address for John Doe.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/contactPoint/}ContactPointInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*E-Mail*
Contained by	*Instant Messaging*

Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N stands for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.

Name	Type	Description
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
URL	string	The destination URL associated with a specific Google AdWords ad.
WebInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community Web.
WebType	string	The prefix class to a Web address. Typically, this is either FTP or HTTP.

Marketing Source Code Service

Service to operate on marketing source codes. The supported operations are create, update, delete, and search.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/marketing/coreMarketing/sourcecode/sourceService/applicationModule/}SourceCodeService

Service WSDL URL: https://servername/crmService/SourceCodeService?WSDL

Logical Business Objects

- CRM : Marketing : Marketing Source Code

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Marketing Source Code*

Operations

- *computeSourceCode*
- *getSourceCode*
- *createSourceCode*
- *updateSourceCode*
- *findSourceCodeByStageId*
- *findAllSourceCodes*
- *findSourceCodeByAll*
- *findBySourceCode*
- *findSourceCodeByAllocId*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

computeSourceCode

A web service method that queries a single record of Oracle Fusion Marketing Source Code Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
pSourceCodeId	string	A required input parameter of the computeSourceCode web service method. It is the row ID of the record that would be used to compute the source code.

Response Payload

Element Name	Type	Description
result	string	The return value of the computeSourceCode web service method. It includes the full set of attributes of the record.

getSourceCode

A web service method that queries a single record of an Oracle Fusion Marketing Source Code Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
sourceCodeId	long	A required input parameter of the getSourceCode web service method. It is the row ID of the source code record you want to query for.

Response Payload

Element Name	Type	Description
result	*Marketing Source Code*	The return value of the getSourceCode web service method. It includes the full set of attributes and child entities of the record.

createSourceCode

A web service method that creates Oracle Fusion Marketing Source Code Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
sourceCode	*Marketing Source Code*	A required input parameter of the createSourceCode web service method. The input object includes the attribute values that the source code record is created with.

Response Payload

Element Name	Type	Description
result	*Marketing Source Code*	The return value of the createSourceCode web service method. It includes the full set of attributes of the record.

updateSourceCode

A web service method that updates an Oracle Fusion Marketing Source Code Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
sourceCode	*Marketing Source Code*	A required parameter of the updateSourceCode web service method. The records matching the ID specified in this input source code is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Marketing Source Code*	The return value of the updateSourceCode web service method. It includes the full set of attributes of the record.

findSourceCodeByStageId

A web service method that queries a single record or set of records of Oracle Fusion Marketing Source Code Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findSourceCodeByStageId web service method. The filter criteria are a cumulative set of attribute criteria that identifies source code records.
bindStageId	string	An input parameter of the findSourceCodeByStageId web service method.

Element Name	Type	Description
		The stage ID forms part of the filter criteria that identifies source code records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findSourceCodeByStageId.

Response Payload

Element Name	Type	Description
result	*Marketing Source Code*	The return value of the findSourceCodeByStageId web service method. It includes the full set of attributes of the record.

findAllSourceCodes

A web service method that queries all Source code rows that has Active_Flag=Y and Campaign Execution Status Code != NEW in Oracle Fusion Marketing Source Code Object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findAllSourceCodes web service method. The filter criteria are a cumulative set of attribute criteria that identifies source code records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findAllSourceCodes.

Response Payload

Element Name	Type	Description
result	*Marketing Source Code*	The return value of the findSAllourceCodes web service method. It includes the full set of attributes of the record.

findSourceCodeByAll

A web service method that queries a single record or set of records of Oracle Fusion Marketing Source Code Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findSourceCodeByAll web service method. The filter criteria are a cumulative set of attribute criteria that identifies source code records.
bindCampaignId	string	A selectively required input parameter of the findSourceCodeByAll web service method. The campaign ID forms part of the filter criteria that identifies source code records.
bindStageId	string	A selectively required input parameter of the findSourceCodeByAll web service method. The stage ID forms part of the filter criteria that identifies source code records.
bindTreatmentId	string	A selectively required input parameter of the findSourceCodeByAll web service method. The treatment ID forms a part of the filter criteria that identifies source code records.
bindCalllstId	string	A selectively required input parameter of the findSourceCodeByAll web service method. The list ID forms part of the filter criteria that identifies source code records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findSourceCodeByAll.

Response Payload

Element Name	Type	Description
result	*Marketing Source Code*	The return value of the findSourceCodeByAll web service method. It includes the list of records that are queried for.

findBySourceCode

A web service method that queries a single record or set of records of Oracle Fusion Marketing Source Code Object by source codes.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findBySourceCode web service method. The filter criteria are a cumulative set of attribute criteria that identifies records.
bindSourceCode	string	A required input parameter of the findBySourceCode web service method. The source code forms part of the filter criteria that identifies records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findBySourceCode.

Response Payload

Element Name	Type	Description
result	*Marketing Source Code*	The return value of the findBySourceCode web service method. It includes the list of records that are queried for.

findSourceCodeByAllocId

A web service method that queries a single record or set of records of Oracle Fusion Marketing Source Code Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findSourceCodeByAllocId web service method. The filter criteria are a cumulative set of attribute criteria that identifies records.
bindAllocId	long	An input parameter of the findSourceCodeByStageId web service method. The alloc ID forms part of the filter criteria that identifies source code records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not applicable for the method findSourceCodeByAllocId.

Response Payload

Element Name	Type	Description
result	*Marketing Source Code*	The return value of the findSourceCodeByAllocId web service method. It includes the list of records that are queried for.

getDfltObjAttrHints

A web service method to retrieve user interface hints, such as the service data object label and Object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

A web service method that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition was last updated. The parameter is present in ISO 8601 format.

getEntityList

A web service method to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the Object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MKT_MANAGE_MARKETING_SOURCE_CODE_PRIV	Manage Marketing Source Code	For internal use only. Allows web services management of marketing source codes.
All Operations	MKT_MANAGE_SALES_CAMPAIGN_PRIV	Manage Sales Campaign	For internal use only. Allows web services management of sales campaigns.
All Operations	MKT_VIEW_MARKETING_SOURCE_CODE_PRIV	View Marketing Source Code	Allows viewing marketing source codes that represent a combination of treatment, segment or list, and marketing campaign.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MKT_MANAGE_SALES_CAMPAIGN_PRIV	ORA_MKT_PERSONAL_CAMPAIGN_MANAGEMENT_DUTY	Personal Campaign Management	Manages secured personal campaigns used to promote products or events to specific customers.
MKT_VIEW_MARKETING_SOURCE_CODE_PRIV	ORA_MKL_SALES_LEAD_QUALIFIER_JOB	Sales Lead Qualifier	Identifies, generates and qualifies sales leads and ensures that they are successfully closed within established time objectives. Includes the ability to deliver reports, ensure a healthy sales pipeline volume, help shorten sales cycles, shape lead generation strategies, and provide effective guidance to the rest of the lead qualification team. Other supporting roles include territory development, event and webinar strategies.
MKT_VIEW_MARKETING_SOURCE_CODE_PRIV	ORA_MKT_MARKETING_BUDGET_UTILIZATION_DUTY	MDF Utilization	Creates and manages MDF requests and claims for marketing activities.
MKT_VIEW_MARKETING_SOURCE_CODE_PRIV	ORA_MKT_MARKETING_BUDGET_MAINTENANCE_DUTY	MDF Budget Maintenance	Manages MDF budgets including import, export, and viewing budget fund requests and claims that use budgeted funds for marketing activities.
MKT_VIEW_MARKETING_SOURCE_CODE_PRIV	ORA_MKT_MARKETING_FUND_REQUEST_AND_CLAIM_PROCESSING_DUTY	Marketing Fund Request and Claim Processing	Reviews and approves budget fund requests and claims to use budgeted funds for marketing activities. Includes reviewing and exporting budget information.
MKT_MANAGE_MARKETING_SOURCE_CODE_PRIV	ORA_MKT_MARKETING_CAMPAIGN_MANAGEMENT_DUTY	Marketing Campaign Management	Manages secured marketing campaigns from planning to design and execution. Defines and maintains secured marketing treatments, lists, segments, and content.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_MKL_SALES_LEAD_QUALIFIER_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_MKL_SALES_LEAD_QUALIFIER_JOB	ORA_MKL_LEAD_REGISTRATION_PROCESSING_DUTY	Lead Registration Processing	Reviews, accepts, and rejects sales lead registrations. Includes the

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
			ability to view sales lead details and update internal attributes.
ORA_MKT_MARKETING_BUDGET_MAINTENANCE_DUTY	ORA_MKT_MARKETING_BUDGET_UTILIZATION_DUTY	MDF Utilization	Creates and manages MDF requests and claims for marketing activities.
ORA_MKL_SALES_LEAD_QUALIFIER_JOB	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
ORA_MKL_SALES_LEAD_QUALIFIER_JOB	ORA_HZ_RESOURCE_ABSTRACT	Resource	Identifies the person as front office personnel.
ORA_MKL_SALES_LEAD_QUALIFIER_JOB	ORA_MKL_SALES_LEAD_QUALIFICATION_DUTY	Sales Lead Qualification	Qualifies sales leads to determine the sales readiness of the lead.
ORA_MKL_SALES_LEAD_QUALIFIER_JOB	ORA_ZCM_SALES_PARTY_ADMINISTRATION_DUTY	Sales Party Administration	Manages named sales accounts, sales account import scheduler and the flagging of existing accounts. Additional duties include managing sales parties, functional setups, customer center objects, and relationship information inquiries.

Marketing Source Code

The unique identifier representing a marketing campaign and the underlying treatment and segment or list used within each execution. The source code is used to track responses and leads generated by each marketing campaign execution, which helps gauge the effectiveness of each initiative.

QName: {http://xmlns.oracle.com/apps/marketing/coreMarketing/sourcecode/sourceService/}SourceCode

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Marketing Campaign*
Handled by	*Marketing Source Code Service*

Relationship Type	Object or Service
Handled by	*Marketing Campaign Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveFlag	boolean	Indicates the activity status of the marketing source code as Active or Inactive.
ActivityChannel	string	The channel associated with the source code.
ActivityEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The end date of the source code.
ActivityName	string	The name of the marketing activity associated with the source code.
ActivityStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The start date of the marketing activity associated with this source code.
ActivityStatusCode	string	Indicates the status of the marketing activity associated with this source code.
ActivityType	string	Indicates the type of the marketing activity associated with this source code.
AllocationId	long	Stage allocation identifier identifying the marketing activity associated with this source code.
CallListId	long	The primary identifier of the list or segment associated with this source code.
CallLstName	string	The name of the list or segment associated with this source code.
CampaignId	long	The unique identifier for the campaign.
CampaignName	string	The name of the campaign associated with this source code.
CampaignUsage	string	The campaign usage associated with source code.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EventId	long	The identifier of the event associated with this source code.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
SearchCampaignId	long	The identifier of the search marketing campaign. This is the foreign key to the search marketing campaign represented by this source code.
SourceCode	string	The source code that represents this record.
SourceCodeId	long	The primary key identifier associated with this record. • Primary Key
StageId	long	The identifier of the campaign stage associated with the marketing activity this source code represents.
StageName	string	The name of the campaign stage associated with this source code.
StageTreatmentId	long	The treatment identifier associated with the marketing activity associated with this source code.
TreatmentId	long	The identifier of the treatment associated with this source code.

Marketing Treatment Service

Service to operate on marketing treatments. The supported operations are create, update, delete, and search.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/oracle/apps/marketing/coreMarketing/treatments/treatmentPublicService/}TreatmentPublicService

Service WSDL URL: https://servername/crmService/TreatmentPublicService?WSDL

getDlvProfile

A web service method that queries a single record of an Oracle Fusion Marketing Delivery Profile Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
supplierProfileId	long	A required input parameter of the getDlvProfile web service method. It is the row ID of the delivery profile record you want to query for.

Response Payload

Element Name	Type	Description
result	*Delivery Profile of a Marketing Supplier*	The return value of the getDlvProfile web service method. It includes the full set of attributes of the record.

createDlvProfile

A web service method that creates Oracle Fusion Marketing Delivery Profile Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
dlvProfile	*Delivery Profile of a Marketing Supplier*	A required input parameter of the createDivProfile web service method. The input Object includes the attribute values that the delivery profile record is created with.

Response Payload

Element Name	Type	Description
result	*Delivery Profile of a Marketing Supplier*	The return value of the createDivProfile web service method. It includes the full set of attributes of the record.

updateDlvProfile

A web service method that updates an Oracle Fusion Marketing Delivery Profile Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
dlvProfile	*Delivery Profile of a Marketing Supplier*	A required parameter of the updateDivProfile web service method. The record matching the ID specified in this input delivery profile is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Delivery Profile of a Marketing Supplier*	The return value of the updateDivProfile web service method. It includes the full set of attributes of the record.

deleteDlvProfile

A web service method that delete an Oracle Fusion Marketing Delivery Profile Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
dlvProfile	*Delivery Profile of a Marketing Supplier*	A required input parameter of the deleteDivProfile web service method. The record matching the input attribute values specified in the delivery profile are deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteDlvProfile.

getTreatment

A web service method that queries a single record of an Oracle Fusion Marketing Treatment Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
treatmentId	long	A required input parameter of the getTreatment web service method. It is the row ID of the treatment record you want to query for.

Response Payload

Element Name	Type	Description
result	*Marketing Treatment*	The return value of the getTreatment web service method. It includes the full set of attributes of the record.

createTreatment

A web service method that creates Oracle Fusion Marketing Treatment Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
treatment	*Marketing Treatment*	A required input parameter of the createTreatment web service method. The input object includes the attribute values that the treatment record is created with.

Response Payload

Element Name	Type	Description
result	*Marketing Treatment*	The return value of the createTreatment web service method. It includes the full set of attributes and child entities of the record.

updateTreatment

A web service method that updates an Oracle Fusion Marketing Treatment Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
treatment	*Marketing Treatment*	An input parameter of the updateTreatment web service method. The record matching the ID specified in this input treatment is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Marketing Treatment*	The return value of the updateTreatment web service method. It includes the full set of attributes of the record.

deleteTreatment

A web service method that delete an Oracle Fusion Marketing Treatment Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
treatment	*Marketing Treatment*	A required input parameter of the deleteTreatment web service method. The record matching the input attribute values specified in the treatment are deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteTreatment.

getDfltObjAttrHints

A web service method to retrieve user interface hints, such as the service data object label and Object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

A web service method that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition was last updated. The parameter is present in ISO 8601 format.

getEntityList

A web service method to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the Object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MKT_CREATE_MARKETING_TREATMENT_PRIV	Create Marketing Treatment	Allows creating marketing treatments that provide channel specific marketing promotions, message, and fulfillment instructions for campaigns.
All Operations	MKT_MANAGE_MARKETING_TREATMENT_PRIV	Manage Marketing Treatment	For internal use only. Allows web services management of marketing treatments.
All Operations	MKT_VIEW_MARKETING_TREATMENT_PRIV	View Marketing Treatment	Allows viewing marketing treatments that provide channel specific marketing promotions, message, and fulfillment instructions for campaigns.
All Operations	MKT_CREATE_SALES_CAMPAIGN_PRIV	Create Sales Campaign	Allows creating sales campaigns and tracking of customer responses. A sales campaign is an e-mail promoting products or events to specific customers, that can include personalized information and links where the customer can respond.
All Operations	MKT_UPDATE_SALES_CAMPAIGN_PRIV	Update Sales Campaign	Allows updating sales campaigns and tracking of customer responses. A sales campaign is an e-mail promoting products or events to specific customers,

Operation Name	Privilege Code	Privilege Name	Privilege Description
			that can include personalized information and links where the customer can respond.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MKT_VIEW_MARKETING_TREATMENT_PRIV	ORA_MKL_SALES_LEAD_QUALIFIER_JOB	Sales Lead Qualifier	Identifies, generates and qualifies sales leads and ensures that they are successfully closed within established time objectives. Includes the ability to deliver reports, ensure a healthy sales pipeline volume, help shorten sales cycles, shape lead generation strategies, and provide effective guidance to the rest of the lead qualification team. Other supporting roles include territory development, event and webinar strategies.
MKT_VIEW_MARKETING_TREATMENT_PRIV	ORA_MKT_MARKETING_ANALYSIS_DUTY	Marketing Analysis	Analyzes marketing effectiveness across the enterprise by viewing detailed marketing campaign, list, segment, and treatment information from the audience and campaign work areas.
MKT_VIEW_MARKETING_TREATMENT_PRIV	ORA_MKT_MARKETING_CAMPAIGN_MANAGEMENT_DUTY	Marketing Campaign Management	Manages secured marketing campaigns from planning to design and execution. Defines and maintains secured marketing treatments, lists, segments, and content.
MKT_UPDATE_SALES_CAMPAIGN_PRIV	ORA_MKT_PERSONAL_CAMPAIGN_MANAGEMENT_DUTY	Personal Campaign Management	Manages secured personal campaigns used to promote products or events to specific customers.
MKT_MANAGE_MARKETING_TREATMENT_PRIV	ORA_MKT_MARKETING_CAMPAIGN_MANAGEMENT_DUTY	Marketing Campaign Management	Manages secured marketing campaigns from planning to design and execution. Defines and maintains secured marketing treatments, lists, segments, and content.
MKT_CREATE_MARKETING_TREATMENT_PRIV	ORA_MKT_MARKETING_CAMPAIGN_MANAGEMENT_DUTY	Marketing Campaign Management	Manages secured marketing campaigns from planning to design and execution. Defines and maintains secured marketing

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			treatments, lists, segments, and content.
MKT_CREATE_SALES_CAMPAIGN_PRIV	ORA_MKT_PERSONAL_CAMPAIGN_MANAGEMENT_DUTY	Personal Campaign Management	Manages secured personal campaigns used to promote products or events to specific customers.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_MKL_SALES_LEAD_QUALIFIER_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_MKL_SALES_LEAD_QUALIFIER_JOB	ORA_MKL_LEAD_REGISTRATION_PROCESSING_DUTY	Lead Registration Processing	Reviews, accepts, and rejects sales lead registrations. Includes the ability to view sales lead details and update internal attributes.
ORA_MKL_SALES_LEAD_QUALIFIER_JOB	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
ORA_MKL_SALES_LEAD_QUALIFIER_JOB	ORA_HZ_RESOURCE_ABSTRACT	Resource	Identifies the person as front office personnel.
ORA_MKL_SALES_LEAD_QUALIFIER_JOB	ORA_MKL_SALES_LEAD_QUALIFICATION_DUTY	Sales Lead Qualification	Qualifies sales leads to determine the sales readiness of the lead.
ORA_MKL_SALES_LEAD_QUALIFIER_JOB	ORA_ZCM_SALES_PARTY_ADMINISTRATION_DUTY	Sales Party Administration	Manages named sales accounts, sales account import scheduler and the flagging of existing accounts. Additional duties include managing sales parties, functional setups, customer center objects, and relationship information inquiries.

Delivery Profile Parameter of a Marketing Supplier

The attributes pertaining to each distribution channel associated with each third party supplier.

QName: {http://xmlns.oracle.com/apps/marketing/coreMarketing/treatments/model/}DlvPrfParam

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Delivery Profile of a Marketing Supplier*
Handled by	*Marketing Treatment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DelvPrfParamNumber	string	The alternate key associated with this record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ParamId	long	The primary indicator associated with this record. • Primary Key
ParamName	string	The name associated with this parameter.
ParamValue	string	The value associated with this parameter.

Name	Type	Description
SeededFlag	boolean	Indicates whether this record is included out of the box.
SupplierProfileId	long	The primary indicator of the delivery profile.

Delivery Profile of a Marketing Supplier

The distribution preference details for a third party supplier.

QName: {http://xmlns.oracle.com/apps/marketing/coreMarketing/treatments/treatmentService/}DlvProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Delivery Profile Parameter of a Marketing Supplier*
Handled by	*Marketing Treatment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveFlag	boolean	Indicates the activity status of the record as Active or Inactive.
BatchSize	long	The batch size to be used for packaging the data for this specific marketing supplier.
CapacityRepeatFrequency	long	The repeat frequency specified by marketing supplier to handle marketing fulfillment for a specific channel.
CapacityRepeatUnitCode	string	The unit of measure associated with the repeat frequency specified by marketing supplier to handle marketing fulfillment for a specific channel.

Name	Type	Description
ChannelType	string	The type of channel for which this delivery profile is created.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DlvPrfParam	*Delivery Profile Parameter of a Marketing Supplier*	To be deleted.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FolderPath	string	The location/folder of merge fields in the BI server.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
NextScheduleDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the next date when marketing fulfillment is scheduled with this specific Marketing Support delivery profile.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ProfileName	string	The name of the profile.
RequestId	long	A system-generated read-only attribute used by the application framework.
SeededFlag	boolean	Indicates whether this record is included out of the box.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.

Name	Type	Description
SupplierDescription	string	The description of this record.
SupplierProfileId	long	The primary indicator of the delivery profile. • Primary Key
SupplierProfileNumber	string	The alternate key associated with this record.
SupplierProfileStatus	string	The status associated with this delivery profile.
SupportedChannelType	string	The list of supported channel types associated with this marketing supplier delivery profile.
TotalCapacity	decimal	Indicates the capacity of this marketing supplier to handle marketing fulfillment for a specific channel.
VendorId	long	The identifier of the marketing supplier associated with this delivery profile.

Marketing Treatment

The marketing message that is delivered to the audience targeted within a campaign.

QName: {http://xmlns.oracle.com/apps/marketing/coreMarketing/treatments/model/}Treatment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Marketing Treatment Product*
Handled by	*Marketing Treatment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveFlag	boolean	Indicates the activity status of the marketing treatment as Active or Inactive.
ActivityDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the treatment was made active.
ApprovalStatusCode	string	Indicates the approval status code associated with this treatment.
AttachmentEntityName	string	The name of the attachment associated with this treatment.
BUId	long	The identifier of the business unit associated with this record.
CampaignUsage	string	The campaign usage associated with this treatment.
ChannelCode	string	The channel associated with this treatment.
ChannelType	string	The channel type of the treatment.
CharacterSet	string	The character set associated with this treatment.
ClickCount	long	The click count for this treatment template record.
ConfirmInTreatmentId	long	The treatment designated to use in an opt-in process flow.
ConfirmOutTreatmentId	long	The treatment designated to use in a double opt-in process flow as a treatment to confirm the opt-in choice.
ContentThumbnailURL	string	The URL associated with the thumbnail image of this treatment.
ConversionCurrencyCode	string	The currency code of the currency being converted to.
ConversionRateType	string	The currency conversion rate type that is used to derive the exchange rate for converting the user-entered currency to CRM Corporate currency.

Name	Type	Description
CreateInteractionFlag	boolean	Indicates whether the interactions must be created for outbound send operation of this treatment.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DelvProfileId	long	The row ID of the delivery profile record.
EmailBcc	string	Blind copy email address value for email treatment.
EmailCc	string	Copy email address value for email treatment.
EmailFrom	string	The from address to include in email treatment.
EmailReplyTo	string	The reply to email address to include in email treatment.
EmailSubject	string	The subject line for the email treatment.
ExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The expiration date associated with this treatment.
FolderPath	string	The folder path where the treatment content is placed in Oracle Universal Content Management application.
HTMLContentItemId	string	The identifier of the content item associated with the HTML content for this treatment.
HTMLFooterId	long	Identifier of the HTML version of the footer associated with this treatment.
HTMLHeaderId	long	Identifier of the HTML version of the header associated with this treatment.
HTMLTemplateId	long	Identifier of the HTML version of the template for this treatment.

Name	Type	Description
InboundPriority	string	The inbound priority associated with the treatment.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LastUsedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The most recent date when this treatment was used for a campaign.
Locale	string	The locale associated with this treatment.
LockedFlag	boolean	Indicates whether this treatment is locked. A locked treatment cannot be updated.
LookupCode	string	To be deleted.
LookupType	string	To be deleted.
Meaning	string	To be deleted.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was last queried.
OpenCount	long	Indicates the number of times this treatment's content was opened by end users.
Owner	string	The owner associated with the treatment.
OwnerId	long	The resource identifier associated with the owner of the treatment.

Name	Type	Description
OwnerResourceOrgId	long	The resource organization identifier associated with the owner of the treatment.
OwnerTreeCode	string	The resource organization hierarchy tree code associated with the resource organization which the owner of the treatment belongs to.
OwnerTreeStructureCode	string	The resource organization hierarchy tree structure code associated with the resource organization to which the owner of the treatment belongs.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PrimaryOrgId	long	The primary organization of the treatment.
Rating	long	The rating associated with this treatment.
ResponseChannel	string	The response channel associated with this treatment. Indicates the channel through which the responses are expected.
SeedListId	long	The identifier of the seed list associated with this treatment. Seed list includes test data.
SubscriberListId	long	The identifier of the subscription list associated with this treatment.
SupplierId	long	The identifier of the delivery profile associated with this treatment.
Team	string	To be deleted.
TeamId	long	The resource team associated with this treatment.
TemplateFlag	boolean	Indicates whether this record is a treatment template.
TemplateName	string	The name of the treatment template used to create this treatment.
TextContentItemId	string	The identifier of the text content item associated with this treatment.

Name	Type	Description
TextFooterId	long	The identifier of the text version of the footer associated with this treatment.
TextHeaderId	long	The identifier of the text version of the header associated with this treatment.
TextTemplateId	long	The identifier of the text version of the template for this treatment.
TrackUrlsFlag	boolean	Indicates whether the tracking of URLs within treatment content is enabled or disabled.
TreatmentCode	string	The code associated with this treatment.
TreatmentDescriptionText	string	The description of this treatment.
TreatmentId	long	The primary identifier of this record. • Primary Key
TreatmentLanguage	string	The language of the treatment.
TreatmentName	string	The name of the treatment.
TreatmentName1	string	The name of the treatment.
TreatmentNumber	string	The number associated with this treatment.
TreatmentType	string	The type of the treatment.
TrmtItemAssoc	*Marketing Treatment Product*	To be deleted.
VendorId	long	The identifier of the marketing supplier associated with this treatment.
VendorName	string	The name of the marketing supplier associated with this treatment.

Marketing Treatment Product

The products associated with a marketing treatment.

QName: {http://xmlns.oracle.com/apps/marketing/coreMarketing/treatments/treatmentService/}TrmtItemAssoc

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Marketing Treatment*
Handled by	*Marketing Treatment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttachmentEntityName	string	The entity name used by attachments that is used to categorize when uploading to stellant.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
Description	string	The free text description of the record.
InventoryItemId	long	The identifier of the inventory item associated with the product associated with this treatment.
InventoryOrgId	long	The identifier of the inventory item organization associated with the product associated with this treatment.
ItemId	long	The identifier of the inventory item.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
LongDescription	string	A long description of the product associated with the treatment.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationId	long	The identifier of the inventory organization.
PrimaryFlag	boolean	Indicates whether this product is a primary product for this treatment.
PrimaryProduct	string	The name of the primary product for this treatment.
ProdAssocId	long	The primary identifier of the association to the Product. • Primary Key
ProdGroupId	long	The identifier of the product group.
ProdGroupId1	long	The identifier of the product group. • Primary Key
ProdGroupName	string	The name of the product group if this record represents a product group.
Product	string	The name of the product if this record represents a product.
ProductDescription	string	The description of the product if this record represents a product.
ProductGroupDescriptionText	string	The description of the product group.
ProductName	string	The name of product or product group. It is the product name if this record represents a product. It is the product group name if this record represents a product group.
ProductType	string	Indicates if this record represents a product or a product group.

Name	Type	Description
TreatmentId	long	The treatment identifier associated with the product associated with the treatment as a foreign key.
UOMCode	string	The attribute that captures the unit of measure for product.

Name

The service used to return the object metadata information.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmCommon/metadata/publicService/}MetadataPublicService

Service WSDL URL: https://servername/crmService/MetadataPublicService?WSDL

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Name*
Handles	*Name*
Handles	*Name*
Handles	*Name*
Handles	*Name*

Operations

- *getObjectDefinitions*

getObjectDefinitions

The method which returns the object description.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
Group	*Object Request*	The list of objects to the MetadataPublic service which contains group name and object names.

Response Payload

Element Name	Type	Description
result	*Object Response*	The operation returns the list of objects requested with description in response.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	ZCA_RUN_FILE_IMPORT_SCHEDULER_PRIV	Run File Import Scheduler	Allows scheduling and monitoring the process that schedules file import activities.
All Operations	ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	Set Up File Import Object and Mapping	Allows reviewing and registering business objects, such as sales leads and opportunities, intended for import from external files. Also allows creating and maintaining maps of external source file columns to target staging table columns for use in importing those business objects, such as sales leads, customers, contacts, and sales catalogs.
All Operations	ZCA_SET_UP_FILE_IMPORT_ACTIVITY_PRIV	Set Up File Import Activity	Allows creating and maintaining import activities that contain process criteria, file mapping, and schedule to import external files containing business objects, such as customers and contacts, into staging tables.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Master Data Management Application Administrator	Administers the installation and maintenance of customer data management application and foundation model.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_OKC_CUSTOMER_CONTRACT_MANAGER_JOB	Customer Contract Manager	Manages a team of customer contract administrators.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_ZBS_SALES_ADMINISTRATOR_JOB	Sales Administrator	Manages sales department and personnel. Performs ongoing administrative tasks, corrects erroneous data, and configures the application according to business needs.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_ZPM_CHANNEL_PARTNER_PORTAL_ADMINISTRATOR_JOB	Channel Partner Portal Administrator	Maintains customer-specific changes of all partner portal pages, external, internal, and anonymous pages.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_PSC_ADMINISTER_PROPERTY_SETUP_DUTY_CRM	PSC Property Setup Administration	Allows the agency user to administer property setup.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_ZCH_TRADING_COMMUNITY_DATA_STEWARD_JOB	Customer Data Steward	Performs customer data management activities including data import, cleansing, duplicate identification, and duplicate resolution.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_CN_INCENTIVE_COMPENSATION_ASSIGNMENT_ADMISTRATION_DUTY_CRM	Incentive Compensation Participant Assignments	Create and maintain the assignments of analyst to participant, participants and roles to compensation and payment plans as well as pay groups
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Customer Relationship Management Application Administrator	Individual responsible for customer relationship management application administration. Collaborates with customer relationship management application users to maintain consistent financial application setup, rules, and access.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_MKL_SALES_LEAD_PROCESSING_DUTY	Sales Lead Processing	Processes sales leads including managing, importing, and assigning sales lead activities.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_QSC_SALES_CATALOG_ADMINISTRATOR_JOB	Sales Catalog Administrator	Sets up and maintains sales catalogs for leads, opportunities, quotes and orders. Sets up and maintains rollup catalog for the purpose of forecasting, territory

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			management, and other purposes. Also associates products, promotions, and competitor products to catalogs, and defines eligibility rules. Also manages the bulk export and import of all product group-related objects.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_MKT_MARKETING_MAINTENANCE_DUTY	Marketing Maintenance	Creates and maintains setup for marketing campaigns, responses, segments, lists, and treatments across the enterprise. Additional duties include file import management for the import of marketing campaign responses.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_OKC_ENTERPRISE_CONTRACT_MANAGER_JOB	Enterprise Contract Manager	Manages a team of enterprise contract administrators.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_ZPM_CHANNEL_OPERATIONS_MANAGER_JOB	Channel Operations Manager	Maintains and manages partner transactional data.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_CN_INCENTIVE_COMPENSATION_ADMINISTRATOR_JOB	Incentive Compensation Application Administrator	Set up incentive compensation application
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_ZPM_CHANNEL_ADMINISTRATOR_JOB	Channel Administrator	Executes Oracle Partnership Management setup tasks.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_SVC_HELPDESK_ADMINISTRATION	HR Help Desk Administration	Manage all aspects of the HCM help desk service requests. In addition can manage queues and administer the HCM help desk service application, including setup.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_ZCH_DATA_STEWARD_MANAGER_JOB	Data Steward Manager	Manages customer data stewards and has additional privileges including assigning requests.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_LOY_ADMINISTRATOR_DUTY	Loyalty Administrator	Manages the provisioning , setup and configuration of Loyalty Application.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_CJM_CHANNEL_INTEGRATION_SPECIALIST_DUTY_CRM	Channel Integration Specialist	Manages import of transactional data from external applications into Channel Revenue Management.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_OKC_SUPPLIER_CONTRACT_MANAGER_JOB	Supplier Contract Manager	Manages a team of supplier contract administrators.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_CPQ_ADMINISTRATOR_JOB	CPQ Administrator	Individual responsible for implementing and managing the CPQ application. Can set up users, quoting processes, product catalog, and product pricing. Can also tailor the application as required by the business.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_POZ_DATAFOX_INTEL_ADMINISTRATION_DUTY_CRM	DataFox Administration for Supplier Intelligence	Manages setup for Power Supplier Intelligence with Oracle DataFox Smart Data feature. Not applicable outside of this feature and should be granted only to a user responsible for configuring this setup. This duty role has been obsoleted as part of the deprecation of the feature Manage Supplier Risk with DataFox Supplier Intelligence feature.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_ZCM_SALES_PARTY_ADMINISTRATION_DUTY	Sales Party Administration	Manages named sales accounts, sales account import scheduler and the flagging of existing accounts. Additional duties include managing sales parties, functional setups, customer center objects, and relationship information inquiries.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_SVC_HR_SR_ADMINISTRATION	HR Service Request Administration	Manages all aspects of Next Gen HR service requests. In addition, can manage queues and administer the Next Gen HR Help Desk service application, including setup.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_MKT_MARKETING_OPERATIONS_MANAGER_JOB	Marketing Operations Manager	Manages the operations for marketing and leads. Develops tactical campaigns to carry out marketing strategies and communicate offers to customer segments using multiple marketing channels. Monitors campaign interactions, captures campaign responses, and manages sales leads to fill the sales pipeline. Creates and maintains the setup for marketing campaigns, responses, segments, lists, and treatments.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_SVC_INTERNAL_HELPDESK_ADMINISTRATION	Internal Service Request Administration	Manages all aspects of Internal service requests. In addition, can manage queues and administer

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			the Internal Help Desk service application, including setup.
ZCA_SET_UP_FILE_IMPORT_OBJECT_AND_MAPPING_PRIV	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ZCA_SET_UP_FILE_IMPORT_ACTIVITY_PRIV	ORA_OSS_SUBSCRIPTION_SETUP_DUTY	Subscription Setup	Handles the setup required for subscriptions.
ZCA_SET_UP_FILE_IMPORT_ACTIVITY_PRIV	ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Master Data Management Application Administrator	Administers the installation and maintenance of customer data management application and foundation model.
ZCA_SET_UP_FILE_IMPORT_ACTIVITY_PRIV	ORA_ZPM_CHANNEL_SALES_MANAGER_JOB	Channel Sales Manager	Manages the indirect sales pipeline by routing leads to partners, reviewing lead registrations, approving or rejecting registrations, and forecasting sales.

getPartnerEngagementTypeMap

An operation to get opportunity defaults for partner-registered lead.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partEngmtTypeMapId	long	The opportunity defaults for partner-registered lead identifier.

Response Payload

Element Name	Type	Description
result	*Partner Opportunity Configuration*	The opportunity default for partner-registered lead that matches the inbound key attributes.

createPartnerEngagementTypeMap

An operation to create opportunity defaults for partner-registered lead.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerEngagementTypeMap	*Partner Opportunity Configuration*	The opportunity defaults for partner-registered lead to be created.

Response Payload

Element Name	Type	Description
result	*Partner Opportunity Configuration*	The created opportunity defaults for partner-registered lead.

updatePartnerEngagementTypeMap

An operation to update opportunity defaults for partner-registered lead.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerEngagementTypeMap	*Partner Opportunity Configuration*	The opportunity for partner-registered lead to be updated.

Response Payload

Element Name	Type	Description
result	*Partner Opportunity Configuration*	The updated opportunity defaults for partner-registered lead.

deletePartnerEngagementTypeMap

An operation to delete opportunity defaults for partner-registered lead.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerEngagementTypeMap	*Partner Opportunity Configuration*	The opportunity to be deleted for the method deletePartnerEngagementTypeMap.

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	void	An operation to delete opportunity defaults for partner-registered lead.

mergePartnerEngagementTypeMap

A merge operation for opportunity defaults for partner-registered lead. It performs an update if the object exists or an insert if the object does not already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerEngagementTypeMap	*Partner Opportunity Configuration*	The opportunity for partner-registered lead to be merged.

Response Payload

Element Name	Type	Description
result	*Partner Opportunity Configuration*	A merged opportunity defaults for partner-registered lead.

findPartnerEngagementTypeMap

An operation to find opportunity defaults for partner-registered lead.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause), the fetch size, and so on.

Element Name	Type	Description
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findPartnerEngagementTypeMap.

Response Payload

Element Name	Type	Description
result	*Partner Opportunity Configuration*	A list of opportunity defaults for partner-registered lead that satisfies the inbound criteria.

processPartnerEngagementTypeMap

An operation to bulk load opportunity defaults for partner-registered lead.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	The parameter indicates what action shall be performed, such as create, update, merge, or delete.
partnerEngagementTypeMap	*Partner Opportunity Configuration*	A list of opportunity defaults for partner-registered lead to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The parameter which controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Partner Opportunity Configuration*	A list of opportunity defaults for partner-registered lead that is successfully processed.

processCSPartnerEngagementTypeMap

An operation to apply the changes back to the data source for opportunity defaults for partner-registered lead.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object that is used to represent the changes that have been made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The parameter which controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The result of the operation including a list of created or updated data objects, and all warning and informational messages.

getRevenueCredTmplSet

The credit allocation template setup feature has been deprecated. Hence this operation is deprecated. Get operation for credit allocation template.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
revnCredTmplSetId	long	The set identifier for credit allocation template.

Response Payload

Element Name	Type	Description
result	*Credit Allocation Template*	The parameter returns the credit allocation template that matches the inbound key attributes.

createRevenueCredTmplSet

The credit allocation template setup feature has been deprecated. Hence this operation is deprecated. Create operation for credit allocation template.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
revenueCredTmplSet	*Credit Allocation Template*	The credit allocation template to be created.

Response Payload

Element Name	Type	Description
result	*Credit Allocation Template*	The parameter returns the created credit allocation template.

updateRevenueCredTmplSet

The credit allocation template setup feature has been deprecated. Hence this operation is deprecated. Update operation for credit allocation template.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
revenueCredTmplSet	*Credit Allocation Template*	The credit allocation template to be updated.

Response Payload

Element Name	Type	Description
result	*Credit Allocation Template*	The parameter returns the updated credit allocation template.

deleteRevenueCredTmplSet

The credit allocation template setup feature has been deprecated. Hence this operation is deprecated. Delete operation for credit allocation template.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
revenueCredTmplSet	*Credit Allocation Template*	The credit allocation template to be deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter returns the deleted credit allocation template.

mergeRevenueCredTmplSet

The credit allocation template setup feature has been deprecated. Hence this operation is deprecated. Merge operation for credit allocation template. It performs an update if the object exists or an insert if the object does not already exist.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
revenueCredTmplSet	*Credit Allocation Template*	The credit allocation template to be merged.

Response Payload

Element Name	Type	Description
result	*Credit Allocation Template*	The parameter returns the merged credit allocation template.

findRevenueCredTmplSet

The credit allocation template setup feature has been deprecated. Hence this operation is deprecated. Find operation for credit allocation template.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findRevenueCredTmplSet.

Response Payload

Element Name	Type	Description
result	*Credit Allocation Template*	The parameter returns a list of credit allocation templates that satisfies the inbound criteria.

processRevenueCredTmplSet

The credit allocation template setup feature has been deprecated. Hence this operation is deprecated. Bulk load operation for credit allocation template.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
changeOperation	string	The parameter indicates what action shall be performed, such as create, update, merge, or delete.
revenueCredTmplSet	*Credit Allocation Template*	A list of credit allocation templates to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The parameter to control the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Credit Allocation Template*	The parameter returns a list of credit allocation templates that is successfully processed.

processCSRevenueCredTmplSet

The credit allocation template setup feature has been deprecated. Hence this operation is deprecated. An operation to apply the changes back to the data source for credit allocation template.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object that is used to represent the changes that have been made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The parameter to control your bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The parameter returns the result of the operation including a list of created or updated data objects, and all warning and informational messages.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
deletePartnerEngagementTypeMap	MOO_SET_UP_OPPORTUNITY_PRIV	Set Up Opportunity	Allows setup of opportunity application features, such as sales methods, sales coach, credit allocation templates, profiles, lookups, flexfields, and assignment rules, among others.

Credit Allocation Template

The template containing information on how credit allocations should be assigned for an opportunity revenue line.

QName: {http://xmlns.oracle.com/apps/sales/opptyMgmt/revenues/revenueService/}RevenueCredTmplSet

Logical Business Objects

- CRM : Opportunity Management : Opportunity

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Credit Allocation Template Version*
Contains	*Credit Allocation Template Translation SDO*
Handled by	*Opportunity Configuration*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CalculatedStatus	string	Status evaluated based on the effective start date and effective end date for the credit allocation template.
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DescriptionText	string	The text describing the credit allocation template set.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Name	string	The name of the credit allocation template.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was last queried.
RevenueCredTmplSetTranslation	*Credit Allocation Template Translation*	The attribute for list of translated credit allocation templates.
RevenueCredTmplSetVer	*Credit Allocation Template Version*	The credit allocation template version.
RevnCredTmplSetId	long	Set identifier of the credit allocation template. • Primary Key
RevnCredTmplSetNumber	string	The alternate key for the credit allocation template.
RevnCredTmplSetVerId	long	The credit allocation template version identifier.

Name	Type	Description
SetId	long	The set identifier for the credit allocation template.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.
VersionCreatedDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The creation date of the template version.
VersionExpiredDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The expiration date of the template version.
VersionNumber	long	The credit allocation template version number.

Credit Allocation Template Details

The details of a credit allocation template which include the type of credit to be allocated, the credit amount or percentage, the credit recipient, and the forecast territory.

QName: {http://xmlns.oracle.com/apps/sales/opptyMgmt/revenues/revenueService/}RevenueCredAllocTmpl

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CredAllocPercent	long	The percentage of credit to be allocated.
CredAllocTypeCd	string	The attribute describes whether the credit allocation is an ad hoc amount or a percentage proportional to the line revenue amount.
CredPrTerrSrc	string	The source for deriving the forecast territory of the credit allocation.
CredPrTerrType	string	The territory type of the forecast territory of the credit allocation.
CredType	string	The type of sales credit - revenue or nonrevenue.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
RcptResourceSrc	string	The source for deriving the credit recipient.
RcptResourceTerrResourceFunc	string	The function of the credit recipient on the territory.
RcptResourceTerrType	string	The territory type of the credit recipient's territory.
RevnCredAllocTmplId	long	The credit allocation template identifier.

Name	Type	Description
		• Primary Key
RevnCredAllocTmplNumber	string	The alternate key for the credit allocation template.
RevnCredTmplSetVerId	long	The credit allocation template version identifier.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Credit Allocation Template Translation

The credit allocation templates containing information on how credit allocations should be assigned for an opportunity revenue line.

QName: {http://xmlns.oracle.com/apps/sales/opptyMgmt/revenues/revenueService/}RevenueCredTmplSetTranslation

Relationships

doAutoAssignmentAsynchronously

A web service method which is called from auto assignment composite to assign a specific opportunity automatically when the opportunity is created or updated. WARNING: The operation is renamed in the newer version of this service planned in the upcoming release.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
optyId	string	The unique opportunity identifier for the method doAutoAssignmentAsynchronously.

Response Payload

Element Name	Type	Description
result	void	The parameter returns the method which is called from auto assignment composite to assign a specific opportunity automatically when the opportunity is created or updated.

isSalesAccountUsedInOpportunity

A web service method to determine if a given sales account has any opportunties.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountId	long	The parameter which provides the sales account party identifier.

Response Payload

Element Name	Type	Description
result	boolean	The parameter returns whether the sales account is associated with any opportunities.

checkConstraint

This operation is an internal operation and is not superseded by any another operation.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
deleteEntities	*Item External Reference*	The input parameter for the internal operation checkConstraint.

Response Payload

Element Name	Type	Description
result	*Item External Reference*	The return for the internal operation checkConstraint.

createAttachment

A web service method to create attachments associated to an opportunity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
attachmentRows	*Common Attachment*	The parameter which provides the list of attachments to be created.
commitData	string	The flag to indicate whether or not to commit transaction for this operation.

Response Payload

Element Name	Type	Description
result	string	The parameter returns the success or failure status of the operation.

copyAttachment

A web service method to copy attachments associated to an opportunity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
attachmentRows	*Common Attachment*	The parameter which provides the list of attachments to be copied.
commitData	string	The flag to indicate whether or not to commit transaction for this operation.

Response Payload

Element Name	Type	Description
result	string	The parameter returns the success or failure status of the operation.

deleteAttachment

A web service method to delete attachments associated to an opportunity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
deleteParams	*Common Attachment*	The parameter based on which deletion of attachment would trigger.
commitData	string	The flag to indicate whether or not to commit transaction for this operation.

Response Payload

Element Name	Type	Description
result	string	The parameter returns the success or failure status of the operation.

getAttachmentContent

A web service method to get attachment associated with an opportunity with file content if applicable.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
getParameters	*Common Attachment*	The parameter based on which attachment to be fetched would trigger.

Response Payload

Element Name	Type	Description
result	*Common Attachment*	The parameter returns the attachment with file content, if applicable.

getAttachmentsListWithoutContent

A web service method to get list of all the attachment associated with an opportunity without any file content.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
getParameters	*Common Attachment*	The parameter based on which list of attachments to be fetched would trigger.

Response Payload

Element Name	Type	Description
result	*Common Attachment*	The parameter returns the list of all the attachments without any file content.

deleteAllRevenuesInOpportunity

A web service method which deletes all revenue lines of an opportunity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
optyId	long	The unique opportunity identifier for the method deleteAllRevenuesInOpportunity.

Response Payload

Element Name	Type	Description
result	void	The parameter deletes all revenue lines of an opportunity.

getOpportunity

A web service method which queries a single opportunity record by primary key.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
optyId	long	The system generated unique identifier for this opportunity.

Response Payload

Element Name	Type	Description
result	*Opportunity*	The parameter returns the opportunity that matches the inbound key attributes.

createOpportunity

A web service method which creates a single opportunity record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
opportunity	*Opportunity*	The parameter for the opportunity to be created.

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	*Opportunity*	The parameter returns the created opportunity.

updateOpportunity

A web service method which updates a single opportunity record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
opportunity	*Opportunity*	The parameter for the opportunity to be updated.

Response Payload

Element Name	Type	Description
result	*Opportunity*	The parameter returns the updated opportunity.

deleteOpportunity

A web service method which delete a single opportunity record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
opportunity	*Opportunity*	The parameter for the opportunity to be deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter delete a single opportunity record.

mergeOpportunity

A web service method which updates a single opportunity record if one exists, or else, create a new one.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
opportunity	*Opportunity*	The parameter for the opportunity to be merged.

Response Payload

Element Name	Type	Description
result	*Opportunity*	The parameter returns the merged opportunity.

findOpportunity

A web service method which queries a group of opportunities based on filter criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not currently used for the method findOppurtunity.

Response Payload

Element Name	Type	Description
result	*Opportunity*	The parameter returns a list of opportunities that satisfies the inbound criteria.

processOpportunity

A web service method which performs a create, update, delete, or merge operation on a list of opportunity rows. The specified operation is applied to all objects in the given list.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	The parameter indicates what action shall be performed, such as create, update, merge, or delete.
opportunity	*Opportunity*	The parameter which provides a list of opportunities to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The parameter which controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound contains only the key attributes or the full object.

Response Payload

Element Name	Type	Description
result	*Opportunity*	The parameter return a list of opportunities that are successfully processed.

processCSOpportunity

Performs a create, update, or delete operation on a list of opportunity rows. Different operations may be applied to different objects, depending on what is specified in the ChangeSummary object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object that is used to represent the changes that have been made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The parameter which controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The parameter returns the result of the operation including a list of created or updated data objects, and all warning and informational messages.

deleteOpportunityCompetitor

A web service method which delete an opportunity competitor.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
opportunityCompetitorVO	*Opportunity Competitor*	The parameter which provides the opportunity competitor to be deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter delete an opportunity competitor.

deleteOpportunityContact

A web service method which delete an opportunity contact.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
opportunityContactVO	*Opportunity Contact*	The parameter which provides the opportunity contact to be deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter delete an opportunity contact.

deleteOpportunityLead

A web service method which delete an opportunity lead.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
opportunityLeadVO	*Opportunity Lead*	The parameter which provides the opportunity lead to be deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter delete an opportunity lead.

deleteOpportunityReference

A web service method which delete an opportunity reference.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
opportunityReferenceVO	*Opportunity Reference*	The parameter which provides the opportunity reference to be deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter delete an opportunity reference.

deleteOpportunityResource

A web service method which delete an opportunity resource.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
opportunityResourceVO	*Opportunity Team Member*	The parameter which provides the opportunity resource to be deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter delete an opportunity resource.

deleteOpportunityMktResponse

A web service method which delete an opportunity response.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
opportunityResponseVO	*Opportunity Response*	The parameter which provides the opportunity response to be deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter delete an opportunity response.

deleteOpportunityRevenue

A web service method which delete an opportunity revenue.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
opportunityRevenueVO	*Opportunity Revenue*	The parameter which provides the opportunity revenue to be deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter delete an opportunity revenue.

processOpportunityRevenue

Performs a Create, Update, Delete, or Merge operation on a list of Opportunity Revenue rows. The specified operation is applied to all objects in the given list.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action shall be performed, such as Create, Update, Merge, or Delete.
opportunityRevenueVO	*Opportunity Revenue*	A list of opportunity revenues to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk upload behavior, such as whether the valid data will be committed if there are other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Opportunity Revenue*	A list of opportunity revenues that are successfully processed.

Element Name	Type	Description

deleteOpportunitySource

A web service method which delete an opportunity source.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
opportunitySourceVO	*Opportunity Source*	The parameter which provides the opportunity source to be deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter delete an opportunity source.

deleteOpportunityPartner

Deletes an Opportunity Partner.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
opportunityPartnerVO	*Opportunity Partner*	Opportunity partner to be deleted.

Response Payload

Element Name	Type	Description
result	void	

getDfltObjAttrHints

A web service method of Get operation for opportunity that returns control hints defined on a service view and its attributes.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

A web service method that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	The parameter returns the list of service view instances.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
deleteOpportunityResource	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
findOpportunity	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
deleteOpportunityLead	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
processOpportunityRevenue	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
deleteOpportunityPartner	MOO_MANAGE_OPPORTUNITY_PARTNERS_PRIV	Manage Opportunity Partners	Allows adding or removing of partners on the opportunity.
deleteOpportunityContact	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.

Operation Name	Privilege Code	Privilege Name	Privilege Description
updateOpportunity	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
checkConstraint	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
getOpportunity	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
deleteOpportunityReference	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
deleteAttachment	MOO_DELETE_OPPORTUNITY_PRIV	Delete Opportunity	Allows deleting of opportunities.
getDfltObjAttrHints	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
createAttachment	MOO_CREATE_OPPORTUNITY_PRIV	Create Opportunity	Allows creating of opportunities.
deleteOpportunityRevenue	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
doAutoAssignmentAsynchronously	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.

Operation Name	Privilege Code	Privilege Name	Privilege Description
deleteOpportunity	MOO_DELETE_OPPORTUNITY_PRIV	Delete Opportunity	Allows deleting of opportunities.
processOpportunity	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
mergeOpportunity	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
isSalesAccountUsedInOpportunity	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
getEntityList	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
deleteOpportunityMktResponse	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
deleteOpportunityCompetitor	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
copyAttachment	MOO_CREATE_OPPORTUNITY_PRIV	Create Opportunity	Allows creating of opportunities.
getAttachmentContent	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently

Appointment Transient Assignee

A participant in an appointment and each instance of a recurring appointment. The participant is an internal resource.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activitiesService/}TransientAssignee

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Appointment Transient*
Handled by	*Sales Reference Customer*
Handled by	*Appointment Service*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivityAssigneeId	long	The unique identifier for the appointment resource participant. • Primary Key
ActivityId	long	The unique identifier of the activity.
AppointmentResponseCd	string	The response to an appointment invitation such as Accepted, Rejected, and Tentatively Accepted.
AssigneeId	long	The identifier of the party corresponding to resource participating at the appointment.
AssigneeRsrcOrgId	long	The identifier of the organization to which the resource belongs.
OwnerFlag	boolean	The attribute that indicates that the appointment resource participant is also the appointment owner.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
ShowTimeAsCd	string	The attribute to show a resource time as Busy or Available on a calendar.

Appointment Transient Category

A category that the appointment and its instances belong to, such as a phone call or demonstration.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activitiesService/}TransientCategory

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Appointment Transient*
Handled by	*Sales Reference Customer*
Handled by	*Appointment Service*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivityCategoryId	long	The unique identifier for the Appointment Category table. • Primary Key
ActivityId	long	The unique identifier of the activity.
CategoryCd	string	The attribute for lookup code for category.

Appointment Transient Contact

A contact participant in an appointment and each instance of a recurring appointment.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activitiesService/}TransientContact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Appointment Transient*

Relationship Type	Object or Service
Handled by	*Sales Reference Customer*
Handled by	*Appointment Service*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivityContactId	long	The identifier of the row in the intersection table between Appointment and Contact. • Primary Key
ActivityId	long	The unique identifier of the activity.
ContactId	long	The Party id of the contact.
ContactRelationshipId	long	The identifier of the contact relationship record in Trading Community Architecture (TCA).
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.

Name	Type	Description
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.

Appointment Transient Note

A note for an appointment and each instance of a recurring appointment.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activitiesService/}TransientNote

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Appointment Transient*
Handled by	*Sales Reference Customer*
Handled by	*Appointment Service*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
NoteId	long	The unique identifier of the note. • Primary Key
NoteTxt	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The description of the note.
NoteTypeCode	string	The lookup code for the type of the note associated to the appointment, such as, General, Reference, or Special.

Name	Type	Description
PartyId	string	The unique identifier of the contact party.
PartyName	string	The name of the party.
SourceObjectCode	string	Indicates that the object associated to the appointment is a Note.
SourceObjectId	long	The Note id associated to the appointment.
VisibilityCode	string	The Lookup code for note visibility, such as private, internal or external.

Appointment Transient

A individual appointment or an instance of a recurring appointment. For example, monthly lunchtime sales meetings or a client visit.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activitiesService/}TransientAppointment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Appointment Transient Category SDO*
Contains	*Appointment Transient Note SDO*
Contains	*Appointment Transient Assignee SDO*
Contains	*Appointment Transient Contact*
Contained by	*Opportunity*
Contained by	*Reference*
Handled by	*Sales Reference Customer*
Handled by	*Appointment Service*

Relationship Type	Object or Service
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivityDescription	string	The description of the appointment.
ActivityId	long	The unique identifier of the activity. • Primary Key
ActivityLocationTxt	string	The location of the appointment.
ActivityName	string	The subject of the appointment.
AlarmFlag	boolean	Indicates whether a reminder alarm should start prior to the appointment.
AllDayFlag	boolean	Indicates the appointment is an all-day appointment.
AppointmentAssignee	*Appointment Transient Assignee*	Not used in V1.0 for appointment.
AppointmentContact	*Appointment Transient Contact*	The contact populated on the appointment using its party id.
AppointmentNote	*Appointment Transient Note*	The appointment note.
ApptAlarmTmMinimumNumber	long	Specifies how long the Alarm Notice Time should be in minutes.
AsgnDenormFlag	boolean	Not used in V1.0 for appointment.
AsgnManualFlag	boolean	Not used in V1.0 for appointment.
AsgnSystemFlag	boolean	Not used in V1.0 for appointment.
CategoryCodeTransient	string	The lookup code corresponding to the category set on the appointment.

Name	Type	Description
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CustomerId	long	The identifier of the customer on the appointment.
CustomerName	string	The name of the customer on the appointment.
CustomerPartyType	string	The customer type of the customer assigned to the appointment.
DoNotRouteFlag	boolean	Not used in V1.0 for appointment.
EditMode	string	Not used in V1.0 for appointment.
FuseParticipants	string	Internal Attribute. Do not use.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LockAsgnFlag	boolean	Not used in V1.0 for appointment.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
Owner	string	The name of the appointment owner.
OwnerId	long	The Party Id of the appointment owner.
OwnerRsrcOrgId	long	The identifier corresponding to the organization to which the appointment owner belongs.

Name	Type	Description
PartyId	long	The unique identifier of the contact party.
PartyId1	long	The name of the party.
PartyName	string	The name of the party.
PartyName1	string	The name of the party.
PlannedDurationNumber	decimal	Not used in V1.0 for appointment.
PlannedDurationUOMCd	string	Not used in V1.0 for appointment.
PlannedEndDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The appointment end date and time.
PlannedStartDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The appointment start date and time.
RecurApptId	long	The identifier of the appointment record describing recurrence.
RecurDay	long	The week days the appointment can be recurring on.
RecurEndDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Specifies a specific date when recurrence stops.
RecurExceptionFlag	boolean	Indicates that this is an exception in a recurrence series.
RecurFlag	boolean	Indicates that the appointment is recurring.
RecurFreqNumber	long	Recurrence frequency, such as, Every x Days, Every x Weeks, Every x Months, Every x Years.
RecurFriFlag	boolean	Indicates in weekly recurrence patterns that appointments occur on Friday.
RecurMonFlag	boolean	Indicates in weekly recurrence patterns that appointments occur on Monday.
RecurMonth	string	In yearly recurrence, indicates the month appointments occur in.

Name	Type	Description
RecurOccursNumber	long	The number of recurrence instances.
RecurOrigInstDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The first date and time an appointment occurs in a recurring series.
RecurPattern	string	Indicates recurrence patterns such as Third Week of Every Month.
RecurReplaceCd	string	Not used in V1.0 for appointment.
RecurSatFlag	boolean	Indicates in weekly recurrence patterns that appointments occur on Saturday.
RecurSunFlag	boolean	Indicates in weekly recurrence patterns that appointments occur on Sunday.
RecurThuFlag	boolean	Indicates in weekly recurrence patterns that appointments occur on Thursday.
RecurTueFlag	boolean	Indicates in weekly recurrence patterns that appointments occur on Tuesday.
RecurTypeCd	string	Indicates the type of recurrence such as Daily, Weekly, Monthly, Yearly.
RecurWedFlag	boolean	Indicates in weekly recurrence patterns that appointments occur on Wednesday.
RecurWeekDayCd	string	Indicates if the appointment should occur every day including weekends or just on week days, applicable for daily recurring appointments.
ReferenceCustomerId	long	The identifier corresponding to the reference customer set on the appointment.
ReferenceCustomerName	string	The reference customer name set on the appointment.
Response	string	The response of the participant, such as Accepted, Rejected, Tentatively Accepted.
ShowTimeAs	string	Indicates how the time between the appointment start and end date-time shows on a participant's calendar, such as Busy.
SourceObjectCd	string	Indicates the object type the appointment is related to.

Name	Type	Description
SourceObjectCodeMeaningTransient	string	The code indicating the type of business object associated with the appointment, examples: LEAD or OPPORTUNITY.
SourceObjectId	long	The object identifier to which the appointment is related.
TemplateFlag	boolean	Not used in V1.0 for appointment.
TemplateId	long	Not used in V1.0 for appointment.
TransientCategory	*Appointment Transient Category*	The category of an appointment.
VisibilityCd	string	Not used in V1.0 for appointment.

Category Summary Revenue

The summarized revenue amount for a given revenue category within an opportunity revenue line set.

QName: {http://xmlns.oracle.com/oracle/apps/sales/opptyMgmt/revenues/revenueService/}CategorySummaryRevenue

The following table describes attributes in the service data object.

Name	Type	Description
BUOrgId	long	The business unit identifier.
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CrmCategorySummaryRevenue	decimal	The category summary revenue in corporate currency.
CrmConversionRate	decimal	The rate is used for the conversion of the revenue amount to the CRM common currency to facilitate the computation of the revenue forecast metrics. This is the amount that one currency can be exchanged for, at a specific point of time.
CrmConversionRateType	string	The rate type is used for the conversion of the revenue amount to the crm common currency for Revenue Forecast Metrics, if the currency of the revenue line is different. This is usually spot, user defined or corporate.
CrmCurcyCode	string	The CRM common currency code.
EffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The estimated close date for the category summary revenue line.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OptyId	long	The unique identifier of the opportunity.

Name	Type	Description
PrimaryFlag	boolean	The attribute that indicates whether the revenue record is a summary revenue line.
RevnAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The attribute for revenue amount.
RevnAmountCurcyCode	string	The currency that the amount on this revenue line is based on.
RevnCategoryCode	string	The revenue category used in Revenue Line Set functionality.
RevnId	long	The attribute for revenue identifier. • Primary Key
RevnLineTypeCode	string	This denotes the type of revenue line like opportunity Summary Revenue, Standard Revenue and so on.
RevnNumber	string	The attribute for revenue number.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Common Attachment

The attachment that can include documents, files, or web site links associated with appointments, interactions or tasks.

QName: {http://xmlns.oracle.com/apps/crmCommon/objects/objectsService/}CommonAttachments

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Appointment Service*
Handled by	*Customer Interaction*
Handled by	*Activity Service*

Relationship Type	Object or Service
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttachedDocumentId	long	The identifier of the document attachment.
Attachment	string	The title or name of the attachment.
CategoryName	string	The name of the attachment category.
DatatypeCode	string	The code value of the data type.
Description	string	The free text description of the record.
DmFolderPath	string	The folder path of the attachment.
DmNode	decimal	The attachment node.
DmRepository	string	The attachment repository.
DmType	string	The type of attachment.
DmVersionNumber	string	The version number of the attachment.
DocumentAttributes	string	The attributes of the document attachment.
DocumentEntityId	long	The identifier of document entity.
DownloadStatus	string	The download status of attachment.
EntityAttributes	string	The entity attributes of the attachment.
EntityName	string	The name of the entity attachment.
FileName	string	The name of the file attachment.
FileURL	string	The URL of the file attachment.

Name	Type	Description
Pk1Value	string	Value of primary key 1.
Pk2Value	string	Value of primary key 2.
Pk3Value	string	Value of primary key 3.
Pk4Value	string	Value of primary key 4.
Pk5Value	string	Value of primary key 5.
TableName	string	The table name of attachment.
Title	string	The attachment title.
URL	string	The destination URL associated with a specific Google AdWords ad.
UploadedFile	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The uploaded attachment file.
UploadedFileContentType	string	The content type of file attachment.
UploadedFileLength	long	The length of file attachment.
UploadedFileName	string	The name of the file attachment.
UploadedText	string	The attachment text.
UsageType	string	The usage type of the attachment.
VersionControlIcon	string	The attachment version control.

Item Deletion External Error

The list of errors returned if an external transaction, such as an open inventory transaction or an open sales order, includes a reference to an item that is marked for deletion.

QName: {http://xmlns.oracle.com/apps/scm/productModel/deleteGroups/publicModel/}DeleteError

Logical Business Objects

- SCM : Product Model : Item Delete Group

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Item External Reference*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
DeleteEntitySequenceId	long	The unique identifier of table delete entities. • Primary Key
DeleteErrorType	int	A value which indicates the type of error, which could be a functional error or a system error.
ErrorCode	string	The code of the error message logged against a delete entity.
ErrorMessage	string	The actual message logged against a delete entity.
ErrorSequenceNumber	long	A numeric value used to indicate the sequence number for a particular error. • Primary Key
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ProgramName	string	A legacy attribute that indicates the program or the application that last updated the database record.

Item External Reference

The reference to an item from an external transaction, such as a sales order or an inventory transaction.

QName: {http://xmlns.oracle.com/apps/scm/productModel/deleteGroups/publicModel/}DeleteEntity

Logical Business Objects

- SCM : Product Model : Item Delete Group

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Item Deletion External Error*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
DeleteDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date in which the entity was submitted for deletion.
DeleteEntitySequenceId	long	The unique identifier of table delete entities. • Primary Key
DeleteEntityType	int	A numeric value which indicates the type of delete entity, for example, an item, a structure or a change order.
DeleteErrorVO	*Item Deletion External Error*	The SDO object used to populate errors pertaining to a delete entity.
DeleteGroupSequenceId	long	The unique identifier of a Delete Group to which an entity to be deleted has been added.
DeleteStatusType	int	A numeric value which indicates the status of a delete entity, for example, 1 indicates

Name	Type	Description
		unprocessed, 4 indicates successfully deleted, and so on.
EntitySequenceNumber	long	The sequence number of an entity within a delete group. This may be used to group similar entities together for processing.
Pk1Value	long	A numeric value which, with the combination of Pk2Value, Pk3Value, Pk4Value and Pk5Value may form a unique key for an entity, for example, for an Item Type delete entity. This is the inventory item identifier.
Pk2Value	long	A numeric value which, with the combination of Pk1Value, Pk3Value, Pk4Value and Pk5Value may form a unique key for an entity, for example, for an Item Type delete entity. This is the organization identifier.
Pk3Value	long	A numeric value which, with the combination of Pk1Value, Pk2Value, Pk4Value and Pk5Value may form a unique key for an entity, for example, for an Item Supplier Type delete entity. This is the supplier identifier.
Pk4Value	long	A numeric value which, with the combination of Pk1Value, Pk2Value, Pk3Value and Pk5Value may form a unique key for an entity, for example, for an Item Supplier Site Type delete entity. This is the supplier site identifier.
Pk5Value	long	A numeric value which, with the combination of Pk1Value, Pk2Value, Pk3Value and Pk5Value may form a unique key for an entity, for example, for a Structure type delete entity. This is the inventory item identifier.

Note

The object that captures comments, information, or instructions for an Oracle Fusion Applications business object.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/noteService}Note

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Relationship Type	Object or Service
Handled by	*Sales Cloud Household*
Handled by	*Partner Program Enrollment Service*
Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactRelationshipId	long	The identifier of the contact relationship record in Trading Community Architecture (TCA).
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreatorPartyId	long	This is the party identifier for the note creator.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DeleteFlag	boolean	Indicates whether the user has access to delete the note.
Dff	*Note Descriptive Flexfields*	The descriptive flex field segment.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record

Name	Type	Description
NoteAttributeCategory	string	The contextual flex field for development usage.
NoteAttributeUid1	string	The flex field for development usage.
NoteAttributeUid2	string	The flex field for development usage.
NoteAttributeUid3	string	The flex field for development usage.
NoteAttributeUid4	string	The flex field for development usage.
NoteAttributeUid5	string	The flex field for development usage.
NoteId	long	The unique identifier of the note. • Primary Key
NoteNumber	string	The alternate unique identifier of the note. A user key that is system generated or from an external system.
NoteTitle	string	The title of the note entered by the user.
NoteTxt	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	This is the column that stores the actual note text.
NoteTypeCode	string	This is the note type code for categorization of note.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
SourceObjectCode	string	This is the source_object_code for the source object as defined in OBJECTS Metadata.
SourceObjectId	string	This is the source_object_Uid for the source object such as Activities, Opportunities, and so on defined in OBJECTS metadata.
UpdateFlag	boolean	Indicates whether the user can update the note.
VisibilityCode	string	This is the attribute to specify the visibility level of the note.

Note Descriptive Flexfields

The descriptive flex field that captures additional information for notes, such as a priority or status.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/flex/noteDff/}NoteDFF

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Note*
Handled by	*Business Plan Service*
Handled by	*Sales Reference Customer*
Handled by	*Appointment Service*
Handled by	*Sales Cloud Contact*
Handled by	*Sales Objective*

Handled by	*Opportunity Service*
Handled by	*Sales Competitor Service*
Handled by	*Sales Cloud Household*
Handled by	*Partner Program Enrollment Service*
Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
NoteId	long	The unique identifier of the note. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Opportunity

The object used by a sales organization to track information about a potential sale such as the sales account, key contacts, product interests, and potential revenues.

QName: {http://xmlns.oracle.com/apps/sales/opptyMgmt/opportunities/opportunityService/}Opportunity

Logical Business Objects

- CRM : Opportunity Management : Opportunity

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Opportunity Deal*
Contains	*Opportunity Team Member*
Contains	*Opportunity Reference*
Contains	*Opportunity Revenue Territory*
Contains	*Opportunity Lead*
Contains	*Category Summary Revenue*
Contains	*Revenue Line Set*
Contains	*Opportunity Competitor*

Relationship Type	Object or Service
Contains	*Opportunity Response*
Contains	*Opportunity Recurring Revenue*
Contains	*Appointment Transient*

Contains	*Opportunity Split Revenue*
Contains	*Opportunity Revenue*
Contains	*Opportunity Source*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountNumber	string	The account number of the opportunity sales account.
Appointment	*Appointment Transient*	The appointments associated with the opportunity.
AssetId	long	Identifier of the asset of the opportunity.
AssetNumber	string	Asset number of the asset of the opportunity.
AssetProduct	string	The associated Asset's Product name
AssetSerialNumber	string	The associated Asset's Serial number

Name	Type	Description
AverageDaysAtStage	long	The average days an opportunity remains in the current sales stage.
BdgtAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The budget amount from the sales account.
BudgetAvailableDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the budget will be available.
BudgetedFlag	boolean	The attribute that indicates if the opportunity sales account has its budget approved for the potential purchase.
CategorySummaryRevenue	*Category Summary Revenue*	The category summary revenue for revenue line set enabled opportunity.
ChampionFlag	boolean	The attribute that indicates if this opportunity has a key internal sponsor.
ChildRevenue	*Opportunity Revenue*	The revenue items on the opportunity.
City	string	The name of the city.
Comments	string	The comments for the record.
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
ConsumerFirstName	string	The First Name of the Target Party for the opportunity.
ConsumerLastName	string	The Last Name of the Target Party for the opportunity.
Country	string	The name of the country.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CrmConversionRate	decimal	The rate is used for the conversion of the revenue amount to the CRM common currency to facilitate the computation of the revenue forecast metrics. This is the amount that one

Name	Type	Description
		currency can be exchanged for, at a specific point of time.
CrmRevenue	decimal	The opportunity revenue amount converted to the corporate currency.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CurrentFyPotentialRevenue	decimal	Do not use this attribute.
CustomerAccountId	long	The customer account associated with the opportunity.
DUNSNumber	string	The D-U-N-S number of the sales account.
DealHorizonCode	string	The attribute that indicates how long it may take to close the deal. This field refers to the lookup type MOO_SETID_DEAL_HORIZION.
DealHorizonCodeSetId	long	The set identifier for the Deal Horizon of this opportunity.
DecisionLevelCode	string	The attribute that indicates the decision level at the opportunity sales account to commit. This field refers to the lookup type MOO_SETID_DECISION_LEVEL.
DecisionLevelCodeSetId	long	The set identifier for the Decision Level of this opportunity.
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
Description	string	The free text description of the record.
DescriptionText	string	The attribute for sales objective of the opportunity.
DownsideAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The worst case amount.
EffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}dateDate	The estimated close date for the opportunity.
EmailAddress	string	The email address associated with the record.

Name	Type	Description
EmployeesTotal	decimal	The total number of employees.
ExpectAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The expected revenue amount.
FormattedAddress	string	Do not use this attribute.
IBAssetId	long	Identifier of the installed base asset of the opportunity.
IBAssetNumber	string	Asset number of the installed base asset of the opportunity.
IBAssetSerialNumber	string	The associated installed base Asset's Serial number
KeyContactId	long	The identifier of the primary contact.
LastAssignedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the opportunity is last assigned.
LastAssignedTimestamp	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The timestamp when the opportunity is last assigned.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LineOfBusinessCode	string	The line of business that is responsible for the opportunity.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
LookupCategory	string	The status category of the opportunity.
LookupValuesId	long	The attribute for lookup value identifier for the opportunity status.
MaximumDaysInStage	long	The attribute for maximum days the opportunity can be in the sales stage prior to considering it stalled.

Name	Type	Description
Name	string	The name of the opportunity.
Note	*Note*	The notes associated with the opportunity.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was last queried.
OpportunityCompetitor2	*Opportunity Competitor*	The attribute containing all competitors associated with the opportunity, including both primary and non-primary competitors.
OpportunityCompetitor3	*Opportunity Competitor*	The non-primary competitors associated with the opportunity.
OpportunityContact	*Opportunity Contact*	The contacts associated with the opportunity.
OpportunityDeal	*Opportunity Deal*	The deal registrations associated to the opportunity.
OpportunityLead	*Opportunity Lead*	The attribute for leads associated to the opportunity.
OpportunityReference	*Opportunity Reference*	The references associated with the opportunity.
OpportunityResource	*Opportunity Team Member*	The resources on the opportunity team.
OpportunityResponse	*Opportunity Response*	The attribute for marketing responses associated with the opportunity.
OpportunitySource1	*Opportunity Source*	The attribute for marketing sources associated to the opportunity.
OpportunitySubscription	*Opportunity Subscription*	Opportunity Subscription aggregates all revenue subscriptions to opportunity level.
OpportunityTypeCode	string	Display the different types of opportunity such as new, renewal and expansion.

Name	Type	Description
OptyCreatedBy	string	The attribute that replicates WHO column CREATED_BY for functional use.
OptyCreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The attribute that replicates WHO column creation_date for functional use.
OptyId	long	The unique identifier of the opportunity. • Primary Key
OptyLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The attribute that replicates WHO column last_update_date for functional use.
OptyLastUpdatedBy	string	The attribute that replicates WHO column last_updated_by for functional use.
OptyNumber	string	The number of the opportunity.
OwnerResourcePartyId	long	The identifier of the opportunity owner.
PartyName	string	The name of the party.
PartyName1	string	The name of the opportunity owner.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUniqueName1	string	The unique name of the primary opportunity competitor.
PhaseCd	string	The phase of the opportunity sales stage.
PhonePreferenceExistsFlag	boolean	The attribute that indicates if the contact has specified a phone preference.
PostalCode	string	The postal code element of the address.
PrConRelationshipId	long	The relationship identifier of the primary contact on the opportunity.

Name	Type	Description
PrSrcNumber	string	The primary marketing source or campaign that generated this opportunity.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PrimaryCompetitorId	long	The identifier of the primary competitor of this opportunity.
PrimaryContactEmailAddress	string	The e-mail address of the primary contact.
PrimaryContactFirstName	string	The first name of the primary contact for the opportunity.
PrimaryContactFormattedPhoneNumber	string	The formatted phone number for the primary contact on the opportunity.
PrimaryContactLastName	string	The last name of the primary contact for the opportunity.
PrimaryContactPartyId	long	The party identifier of the primary contact.
PrimaryContactPartyName	string	The name of the primary contact.
PrimaryOrganizationId	long	The identifier of the business unit to which this opportunity belongs.
PrimaryOrganizationName	string	The name of the business unit to which this opportunity belongs.
PrimaryPartnerId	long	The party identifier of primary partner.
PrimaryPartnerOrgPartyName	string	The attribute for name of primary partner assigned to the opportunity.
PrimaryRevenueId	long	The identifier for the summary revenue line for the opportunity. The summary revenue line stores the total revenue amount of an opportunity.
PrimarySubscriptionId	long	The unique identifier for the primary subscription of an opportunity.

Name	Type	Description
PrimarySubscriptionNumber	string	The alternate identifier for primary subscription of the opportunity.
QuotaFactor	decimal	The quote factor of the opportunity sales stage.
QuotedFlag	boolean	Indicates that a quote has been created for this Opportunity.
RcmndWinProb	decimal	The recommended win probability for an opportunity in the sales stage.
ReasonWonLostCode	string	The win or loss reason for the opportunity. Valid values from the MOO_SETID_WIN_LOSS_REASON lookup type.
ReasonWonLostCodeSetId	long	The set identifier for the win or loss reason for the opportunity.
RecurringRevenue	*Opportunity Recurring Revenue*	The revenues that span over a period of time and are sourced from the same product on the opportunity.
Registered	string	The attribute that indicates the deal registration status.
RegistrationStatus	string	The registration type used for the partner-created opportunity or deal.
RegistrationType	string	The registration type used for the partner-created opportunity or deal.
RenewalProcess	string	The renewal process can be manual, do not renew or automatic renewal.
Revenue	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The attribute for revenue amount.
RevenueLineSet	*Revenue Line Set*	The revenue line set associated with the opportunity.
RevenuePartnerPrimary	*Opportunity Partner*	The partners associated to the opportunity.
RevenueTerritory	*Opportunity Revenue Territory*	The territories assigned to the opportunity.
RevenueType	string	Do not use this attribute.

Name	Type	Description
RevnId	long	The attribute for revenue identifier.
RevnLineSetEnabledFlag	boolean	The attribute that indicates whether the sales method on the opportunity is revenue line set enabled.
RiskLevelCode	string	The attribute that indicates the risk level for the opportunity. This field refers to the lookup type MOO_SETID_RISK_LEVEL.
RiskLevelCodeSetId	long	The set identifier for risk-level of an opportunity.
SalesAccountId	long	The identifier of the opportunity sales account.
SalesAccountUniqueName	string	The name of the sales account.
SalesChannelCd	string	The attribute that indicates the sales channel for the opportunity.
SalesMethod	string	The attribute for sales method of the opportunity.
SalesMethodEOObjVerNumber	int	The object version number of the sales method associated to the opportunity.
SalesMethodId	long	The sales method identifier for this opportunity. This indicates the sales process used.
SalesStage	string	The sales stage of the opportunity.
SalesStageEOObjVerNumber	int	The object version number of the sales stage associated to the opportunity.
SalesStageId	long	The identifier of the sales stage of the opportunity.
SplitRevenue	*Opportunity Split Revenue*	The revenue or nonrevenue credit allocated to resources who have contributed to the selling effort for the opportunity.
StageStatusCd	string	The default status for the opportunity sales stage.
State	string	The name of the state.

Name	Type	Description
StatusCode	string	The pre-defined code used to indicate the status.
StatusCodeSetId	long	The set identifier for the Status of this opportunity.
StgOrder	decimal	The order of the opportunity's sales stage within the sales method.
StrategicLevelCode	string	The attribute that indicates the level of the strategic value to work with the opportunity sales account. This field refers to the lookup type MOO_SETID_STRATEGIC_VALUE.
StrategicLevelCodeSetId	long	The set identifier for strategic value of an opportunity.
TargetPartyId	long	The party identifier of the opportunity sales account.
TargetPartyName	string	The name of the sales account.
TargetPartyPrimaryAddressCountry	string	Country of the primary account's primary address.
UpdateFlag	boolean	This flag controls if the user has access to update the record.
UpsideAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The best case amount.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.
WinProb	decimal	The win-probability percentage.

Opportunity Competitor

The organization that competes with the deploying organization in the sales opportunity.

QName: {http://xmlns.oracle.com/apps/sales/opptyMgmt/opportunities/opportunityService/}OpportunityCompetitor

Logical Business Objects

- CRM : Opportunity Management : Opportunity

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Opportunity*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AnnualRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The competitor company's annual revenue.
CmptPartyId	long	Party ID with competitor party usage.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The estimated close date for the opportunity.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Name	string	The name of the opportunity.

Name	Type	Description
Name1	string	The name of the opportunity.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was last queried.
ObjectVersionNumber2	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
OptyCompetitorId	long	The identifier of the opportunity's competitor. • Primary Key
OptyId	long	The unique identifier of the opportunity.
PartyName	string	The name of the party.
PartyName1	string	The name of the party.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUniqueName1	string	The unique name of the opportunity competitor.
PrimaryContactPartyName	string	The attribute for the name of primary contact.
PrimaryFlg	string	The flag identifying the primary competitor for the opportunity.
RevnAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The revenue amount.
RevnAmountCurcyCode	string	The currency that the amount on this revenue line is based on.

Name	Type	Description
SalesAccountId	long	The identifier of the opportunity sales account.
SalesAccountUniqueName	string	The name of the sales account.
StgId	long	The current sales stage identifier for opportunity.
ThreatLevelCode	string	Threat level code. Out of the box values are Low, Medium and High. This field refers to the ZBS lookup type for Competitor Threat Level.
WinProb	decimal	The win-probability percentage.

Opportunity Contact

The contact associated with the opportunity who is involved in the purchase.

QName: {http://xmlns.oracle.com/apps/sales/opptyMgmt/opportunities/opportunityService/}OpportunityContact

Logical Business Objects

- CRM : Opportunity Management : Opportunity

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Opportunity*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AffinityLvlCd	string	The affinity level for an opportunity contact. Valid values from the HZ_SLS_CNTCT_ AFFINITY_CODE lookup type.
Comments	string	The comments for the record.
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
ContactPartyNumber	string	The party number of the opportunity contact.
ContactPointId	long	The unique primary key identifier for the contact point.
ContactPointId1	long	The unique identifier for a contact point.
ContactPointType	string	The type of the contact point.
ContactPointType1	string	The type of the contact point. For example, phone, e-mail, and so on.
ContactedFlg	string	Indicates if there was a previous communication with the contact regarding this opportunity.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/ types/}dateTime-Timestamp	The date when the record was created.
DoNotContactFlag	boolean	Indicates whether the contact can be contacted through phone, e-mail, and mail.
EmailAddress	string	The email address associated with the record.
EmailPreferenceExistsFlag	boolean	Indicates if the contact has specified an email preference.
FormattedAddress	string	The formatted address of the opportunity contact.
FormattedMultilineAddress	string	The formatted multi-line address for the opportunity contact.
FormattedPhoneNumber	string	The formatted phone number.

Name	Type	Description
InfluenceLvlCd	string	The influence level of the opportunity contact. Valid values from the HZ_SLS_CNTCT_ INFLUENCE_LVL_CD lookup type.
JobTitle	string	The job title of the opportunity contact.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/ types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
ObjectId	long	The identifier of the object in the contact's relationship record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was last queried.
OptyConId	long	The identifier of the opportunity contact. • Primary Key
OptyId	long	The unique identifier of the opportunity.
OrgContactId	long	The identifier of the organization contact.
OrganizationPartyId	long	The party identifier of the contact's organization.
OrganizationPartyName	string	The name of the contact's organization.
PERPartyId	long	The party identifier of the opportunity contact.

Name	Type	Description
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PersonCentricJobTitle	string	The job title of the contact person.
PhonePreferenceExistsFlag	boolean	Indicates if the contact has specified a phone preference.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PrimaryFlg	string	Indicates whether the contact is the primary contact for the opportunity.
RawPhoneNumber	string	Unformatted telephone number.
RelationshipCode	string	Forward or a backward relationship code that describes the contact's relationship record.
RelationshipId	long	The relationship identifier for the record.
RelationshipRecId	long	The identifier of the contact's relationship record.
RoleCd	string	Role played by contact on the opportunity. Valid values from the HZ_SLS_CNTCT_BUY_ROLE_CODE lookup type.
SalesAffinityCode	string	Contact's affinity towards the deploying organization.
SalesBuyingRoleCode	string	Contact's role in the buying process.
SalesInfluenceLevelCode	string	Contact's level of influence in the buying process.
SubjectId	long	The identifier of the subject in the contact's relationship record.

Name	Type	Description
TargetPartyId	long	The Party identifier of the opportunity sales account.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Opportunity Deal

The deal registrations associated with the opportunity.

QName: {http://xmlns.oracle.com/apps/sales/opptyMgmt/opportunities/opportunityService/}OpportunityDeal

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Opportunity*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ApprovedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The approval date of the deal.
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DealExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The expiration date of the deal.

Name	Type	Description
DealId	long	The opportunity deal identifier.
DealName	string	The name of the deal.
DealNumber	string	The opportunity deal number.
DealSize	decimal	Deal Size
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OptyDealId	long	The opportunity deal identifier. • Primary Key
OptyId	long	The unique identifier of the opportunity.
PartnerId	long	The unique identifier of the partner.
PartyName	string	The name of the party.
StatusCode	string	The pre-defined code used to indicate the status.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Opportunity Lead

The lead from which the opportunity originates.

QName: {http://xmlns.oracle.com/apps/sales/opptyMgmt/opportunities/opportunityService/}OpportunityLead

Logical Business Objects

- CRM : Opportunity Management : Opportunity

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Opportunity*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
ContactName	string	Name associated with the primary lead contact.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CustomerId	long	Customer Id. It is a reference to the customer record in the TCA schema.
CustomerName	string	Name of the customer.
DealEstimatedCloseDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The estimated close date of the deal registration.
DealExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The expiration date of the lead registration.
DealPartProgramId	long	The partner program on the lead registration.

Name	Type	Description
DealSize	decimal	Deal Size.
DealType	string	The attribute for deal type.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LeadAging	int	Lead age in days
LeadId	long	Lead identifier.
LeadName	string	Lead name.
LeadNumber	string	The attribute for the lead number.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OptyId	long	The unique identifier of the opportunity.
OptyLeadId	long	The opportunity lead identifier. • Primary Key
PartnerTypeCd	string	The type of partner on the lead registration.
PrDealPartOrgPartyId	long	The party organization identifier of the partner on the lead registration.
PrDealPartResourcePartyId	long	The identifier of the primary partner resource on the lead registration.
PrimaryContactId	long	Identifer of the sales lead contact marked as a primary lead contact.
Rank	string	Lead Rank.
RankMeaning	string	Meaning associated with specific lead rank.

Name	Type	Description
RegistrationNumber	string	The attribute for lead registration number.
StatusCode	string	Lead Status Code.
StatusCodeMeaning	string	Meaning associated with the codes defined to indicate lead status.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Opportunity Partner

The partner that is contributing to the selling effort for an opportunity revenue line.

QName: {http://xmlns.oracle.com/apps/sales/opptyMgmt/revenues/revenueService/}RevenuePartner

Logical Business Objects

- CRM : Opportunity Management : Sales Revenue

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Opportunity*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
DealEstCloseDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The estimated close date of the deal registration.
DealExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The expiration date of the deal registration.
DealType	string	The type of deal registration.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OptyId	long	The unique identifier of the opportunity.
PartOrgEmailAddress	string	The email address of the Partner Organization.
PartOrgFormattedPhoneNumber	string	The phone number of the Partner Organization.
PartOrgPartyId	long	The party identifier of the partner organization associated to the revenue.
PartProgramId	long	The identifier of the partner program of the partner in the context of this opportunity.
PartTypeCd	string	The partner type for the partner in the context of this opportunity.
PartnerPartyNumber	string	The party number of the Partner Party associated to the Opportunity.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyName1	string	The name of the party.
PrPartResourcePartyId	long	The identifier of the primary partner resource.
PreferredContactEmail	string	Email of the Partner's Primary contact.

Name	Type	Description
PreferredContactName	string	Name of the Partner's Primary contact.
PreferredContactPhone	string	Phone Number of the Partner's Primary contact.
RegistrationNumber	string	The registration number of the deal registration.
RegistrationStatus	string	The registration status of the Partner Created Opportunity/Deal.
RevnId	long	Identifier of the summary revenue for this opportunity.
RevnPartOrgPartyId	long	Identifier for the partners associated to the opportunity. • Primary Key
RevnPartnerNumber	string	The label displaying the association between a revenue line and an opportunity partner.

Opportunity Recurring Revenue

The revenues that span over a period of time sourced from the same product on an opportunity.

QName: {http://xmlns.oracle.com/apps/sales/opptyMgmt/revenues/revenueService/}RecurringRevenue

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Opportunity Split Revenue*
Contained by	*Opportunity*
Contained by	*Opportunity Revenue*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	An additional currency enabled field on the revenue object to store any custom numeric value.
AdditionalNumber	decimal	An additional numeric field on the revenue object to store any custom numeric value.
AdditionalText1	string	An additional Text field on the revenue object to store any custom text.
AdditionalText2	string	An additional Text field on the revenue object to store any custom text.
BUOrgId	long	The business unit identifier.
Comments	string	The comments for the record.
CommitFlag	boolean	The attribute that indicates if this revenue line should be used for forecasting.
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
ConversionRate	decimal	This rate is used for the conversion of the revenue amount to the opportunity summary currency, if the currency of the revenue line is different from that of the opportunity. This is the amount that one currency can be exchanged for, at a specific point of time.
ConversionRateType	string	The currency conversion rate type that is used to derive the exchange rate for converting the user-entered currency to CRM Corporate currency.
CostAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The cost amount.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
CustomerAccountId	long	The customer account identifier.
DownsideAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The worst case amount.
EffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The estimated close date for this revenue - defaulted from opportunity's close date.
ExpectAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The expected revenue amount.
ExpectDlvryDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The expected delivery date. This column is used by opportunity products only.
ForecastOverrideCode	string	The forecast override code that takes values of always, never, or criteria.
InventoryItemId	long	The product inventory item identifier.
InventoryOrgId	long	The product inventory organization identifier.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MarginAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The attribute for margin amount.
NonRecurringRevenue	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Non-Recurring Revenue Amount (Net)
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OptyId	long	The unique identifier of the opportunity.
OwnerResourceOrgId	long	The identifier for resource organization of the revenue owner.

Name	Type	Description
PrCmptPartyId	long	The primary competitor party identifier.
PrimaryFlag	boolean	The attribute that indicates whether the revenue record is a summary revenue line.
ProdGroupId	long	The product group identifier.
Quantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The quantity of the product.
RecurEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The recurrence end date.
RecurFrequencyCode	string	The frequency for the recurrence.
RecurNumberPeriods	int	The number of periods for creating the recurrence.
RecurParentRevnId	long	The attribute that indicates the parent revenue identifier for the recurrence.
RecurQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The recurrence quantity.
RecurRevenue	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The recurring revenue amount on the revenue line
RecurRevnAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The revenue amount for the recurrence.
RecurStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The recurrence start date.
RecurTypeCode	string	The recurring type code.
ResourcePartyId	long	The identifier for revenue owner, inherited from the parent record.
RevnAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The attribute for revenue amount.
RevnAmountCurcyCode	string	The currency that the amount on this revenue line is based on.
RevnId	long	The attribute for revenue identifier. • Primary Key

Name	Type	Description
RevnNumber	string	The editable revenue number, which is defaulted from REVN_ID. Must be unique and cannot be NULL.
SalesAccountId	long	The identifier of the opportunity sales account.
SalesCreditTypeCode	string	The quote or non-quota sales credit type.
SplitParentRevnId	long	The attribute for split parent revenue identifier.
SplitPercent	decimal	The attribute for split percent.
SplitRevenue	*Opportunity Split Revenue*	The revenue or nonrevenue credit amount allocated to the resource who has contributed to the selling effort for an opportunity revenue line.
SplitTypeCode	string	The attribute for split type code.
StatusCode	string	The pre-defined code used to indicate the status.
StatusCodeSetId	long	The set identifier for the status of this revenue.
TargetPartyId	long	The party identifier of the opportunity sales account.
TypeCode	string	The attribute that indicates revenue type for this revenue.
TypeCodeSetId	long	The set identifier for the revenue type of this opportunity.
UOMCode	string	The attribute for unit of measure code for product.
UnitPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The attribute for unit price of product.
UpsideAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The best case amount.
UsageRevenue	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The usage revenue amount on the revenue line

Name	Type	Description
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.
WinProb	decimal	The win-probability percentage.

Opportunity Reference

The past customer who is being used as a reference on the opportunity.

QName: {http://xmlns.oracle.com/apps/sales/opptyMgmt/opportunities/opportunityService/}OpportunityReference

Logical Business Objects

- CRM : Opportunity Management : Opportunity

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Opportunity*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
Comments1	string	The comments for the opportunity reference.
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CustomerContactRelationId	long	The customer contact relationship identifier.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
EffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The estimated close date for the opportunity.
EmailAddress	string	The email address associated with the record.
IntContactPartyId	long	The Party identifier of the internal contact for the opportunity reference.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Name	string	The sales stage of the opportunity.
Name1	string	The name of the opportunity.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OptyId	long	The unique identifier of the opportunity.
OptyReferenceId	long	The identifier of the opportunity's references. • Primary Key
PartyName	string	The name of the party.
PartyName1	string	The name of the party.
PartyName2	string	The name of the party.

Name	Type	Description
PartyNumber	string	The unique identification number for the party.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUniqueName1	string	This is the derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, this is concatenation of person_name and suffix.
ReferencePartyId	long	The Party identifier with the reference party usage.
ReferenceRankNumber	string	The ranking for this reference.
RevnAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The revenue amount.
RevnAmountCurcyCode	string	The currency on which the revenue line is based.
SalesAccountId	long	The identifier of the opportunity sales account.
SalesAccountUniqueName	string	The name of the sales account.
StatusCode	string	The pre-defined code used to indicate the status.
StgId	long	The sales stage of the opportunity.
TargetPartyId	long	The Party identifier of the opportunity sales account.
TargetPartyName	string	The name of the opportunity sales account.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.
WinProb	decimal	The win probability percent.

Opportunity Response

The response from which the opportunity originates.

QName: {http://xmlns.oracle.com/apps/sales/opptyMgmt/opportunities/opportunityService/}OpportunityResponse

Logical Business Objects

- CRM : Opportunity Management : Opportunity

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Opportunity*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row

Name	Type	Description
		is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OptyId	long	The unique identifier of the opportunity.
OptyResponseId	long	The opportunity response identifier. • Primary Key
ResponseNumber	string	The attribute for response number.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Opportunity Revenue

The revenue line associated with the opportunity representing the projected revenue expected from selling a product.

QName: {http://xmlns.oracle.com/apps/sales/opptyMgmt/revenues/revenueService/}Revenue

Logical Business Objects

- CRM : Opportunity Management : Opportunity

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Opportunity Recurring Revenue*
Contains	*Opportunity Revenue Territory*
Contains	*Opportunity Split Revenue*
Contained by	*Opportunity*
Contained by	*Revenue Line Set*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActualCloseDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the revenue line was closed.
AdditionalAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	An additional currency enabled field on the revenue object to store any custom numeric value.
AdditionalNumber	decimal	An additional numeric field on the revenue object to store any custom numeric value.
AdditionalText1	string	An additional text field on the revenue object to store any custom text.
AdditionalText2	string	An additional text field on the revenue object to store any custom text.
AmountAggregatedForScheduleFlag	boolean	The aggregated amount based on the set schedule.
AssetId	long	Identifier of the asset of the opportunity.
AttachmentEntityName	string	The entity name used to retrieve attachment associated with the product.
BUOrgId	long	The identifier of the business unit.
ChildSplitRevenue	*Opportunity Split Revenue*	Split revenues
CloseReasonCode	string	The win/loss reason for this revenue item.
CloseReasonCodeSetId	long	The set identifier for the Win/Loss reason of this revenue.
Comments	string	The comments for the record.
CommitFlag	boolean	Indicates if this revenue line should be used for forecasting.
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.

Name	Type	Description
ContractEndDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The end date of the contract for the quote
ContractStartDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The start date of the contract for the quote
ConversionRate	decimal	The rate used to convert the revenue amount to the opportunity summary currency, if the currency of the revenue line is different from that of the opportunity. This is the amount that one currency can be exchanged for, at a specific point of time.
ConversionRateType	string	The currency conversion rate type that is used to derive the exchange rate for converting the user-entered currency to CRM Corporate currency.
CostAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The cost amount.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRcptPartOrgPartyId	long	The identifier of the partner organization to which the credit recipient belongs.
CrmConversionRate	decimal	This rate is used to convert the revenue amount to the CRM common currency for the Revenue Forecast Metrics, if the currency of the revenue line is different. This is the amount that one currency can be exchanged for, at a specific point of time.
CrmConversionRateType	string	This rate type used to convert the revenue amount to the CRM common currency for Revenue Forecast Metrics, if the currency of the revenue line is different. It is usually spot, user-defined, or corporate.
CrmCurcyCode	string	The CRM common currency code.
CustomerAccountId	long	The identifier of the customer account.
Description	string	The free text description of the record.
Discount	decimal	The percentage of discount.

Name	Type	Description
DownsideAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The worst case amount.
EffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The estimated close date for this revenue; defaulted from opportunity's close date.
ExpectAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The expected revenue amount.
ExpectDlvryDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The expected delivery date. This column is used by Opportunity products only.
ExternalAssetKey	string	The asset key from an external system.
ExternalParentAssetKey	string	The root asset key of the parent from an external system.
ExternalRootAssetKey	string	The root asset key obtained from an external system.
ForecastOverrideCode	string	The code for Forecast Override. The values include, ALWAYS, NEVER, or CRITERIA.
InventoryItemId	long	The identifier of the product inventory item.
InventoryOrgId	long	The identifier of the inventory organization.
ItemNumber	string	The item number of the product associated with the revenue.
ItemNumberInternal	string	The item number of the product associated with the revenue.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MarginAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The margin amount.

Name	Type	Description
MonthlyRecurringRevenue	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The monthly recurring revenue on the revenue line
MonthlyUsageRevenue	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The monthly usage revenue on the revenue line
Name	string	The name of the opportunity.
Name1	string	The name of the territory.
NonRecurringRevenue	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Non-Recurring Revenue Amount (Net)
NqSplitAllocTypeCode	string	The non-quota split allocation type code. Values supported are Adhoc amount or Proportional to Revenue.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OptyId	long	The unique identifier of the opportunity.
OptyLeadId	long	The identifier of the lead associated with the opportunity.
OptyNumber	string	The opportunity number. This is a public surrogate key.
OrganizationId	long	The inventory organization identifier to which the product belongs.
OwnerDealExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The owner deal expiration date.
OwnerDealProtectedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The owner deal protected date.
OwnerLockAsgnFlag	boolean	Indicates whether the revenue owner assignment should be locked.
OwnerOrgTreeCode	string	The owner organization tree code.
OwnerOrgTreeStructCode	string	The owner organization tree structure code.

Name	Type	Description
OwnerResourceOrgId	long	The identifier for resource organization of the revenue owner.
ParentRevnId	long	The identifier of the parent revenue line. It is used for Lineset functionality.
PartEngagementTypeCd	string	The type of partner engagement.
PartOrgPartyId	long	The identifier of the partner organization associated to the revenue.
PartOrgPartyName	string	The name of the partner organization associated to the revenue.
PartyName	string	The name of the party.
PartyName1	string	The name of the party.
PartyName2	string	The name of the party.
PartyUniqueName1	string	The unique name for the primary revenue competitor.
PrCmptPartyId	long	Primary competitor party id.
PrPartOrgPartyId	long	The Primary Revenue Partner Organization Party.
PrTerritoryUpdatedById	long	The identifier of the user who last updated the forecast territory.
PrTerritoryUpdatedByPartyName	string	The user who last updated the forecast territory.
PrTerritoryVersionId	long	The primary territory for this revenue item.
PriceTypeCode	string	The type of pricing associated with the revenue line
PrimaryFlag	boolean	Indicates whether the revenue record is a summary revenue.
ProdGroupId	long	The identifier of the product group.
ProdGroupModelConfigAttributes	string	Model Configuration Attributes associated with the Product Group in Revenue Line.

Name	Type	Description
ProdGroupModelFamily	string	The model family associated with the product group.
ProdGroupModelLine	string	The model line associated with the product group.
ProdGroupModelName	string	Model Name associated with the Product Group in Revenue Line.
ProdGroupName	string	The name of the product group associated with the revenue.
ProdGroupQuotableFlag	boolean	Indicates if a product group is quotable.
ProductConfigurableFlag	boolean	Indicates that a product allows configuration.
ProductModelConfigAttributes	string	Model Configuration Attributes associated with the Product in Revenue Line.
ProductModelFamily	string	The model family associated with the product.
ProductModelLine	string	The model line associated with the product.
ProductModelName	string	Model Name associated with the Product in Revenue Line.
ProductType	string	The type of product on the revenue line (item or product group).
Quantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The product quantity.
RecurAdditionalAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The additional amount value for the recurrence.
RecurAdditionalNumber	decimal	The additional number value for the recurrence.
RecurDownsideAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The downside amount for the recurrence.
RecurEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The recurrence end date.
RecurExpectAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The expected revenue amount for the recurrence.

Name	Type	Description
RecurFrequencyCode	string	The frequency for the recurrence.
RecurNumberPeriods	int	The number of periods for creating the recurrence.
RecurParentRevnId	long	Indicates the parent revenue identifier for the recurrence.
RecurPeriodOrEndDateCode	string	Indicates if a date is specified or a number of periods is specified to end the recurrence.
RecurQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The recurrence quantity.
RecurRevenue	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The recurring revenue amount on the revenue line
RecurRevnAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The revenue amount for the recurrence.
RecurStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The recurrence start date.
RecurTypeCode	string	The recurring type code.
RecurUnitPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The unit price for the recurrence.
RecurUpsideAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The upside amount for the recurrence.
RecurringRevenue	*Opportunity Recurring Revenue*	The recurring revenue child occurrences.
ResourcePartyId	long	The identifier for revenue owner.
RevenueTerritory	*Opportunity Revenue Territory*	The territories assigned to the revenue.
RevenueTypeCategory	string	The Revenue category type on the opportunity revenue line.
RevnAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The revenue amount.
RevnAmountCurcyCode	string	The currency on which the revenue line is based.

Name	Type	Description
RevnCategoryCode	string	Revenue category used in Revenue Line Set functionality.
RevnCreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The functional creation date for the revenue item.
RevnId	long	The revenue identifier. • Primary Key
RevnLineTypeCode	string	The type of revenue line like Opportunity Summary Revenue, Standard Revenue and so on.
RevnNumber	string	User editable revenue number. Defaulted from REVN_ID. Needs to be unique, cannot be NULL.
RevnSequenceNumber	int	The Revenue Sequence Number.
SalesAccountId	long	The identifier of the opportunity sales account.
SalesAccountUniqueName	string	The name of the sales account.
SalesChannelCd	string	The sales channel code.
SalesCreditTypeCode	string	Quota or Non-quota sales credit type.
ScheduleAction	string	Transient attribute. Web services need to pass a value to indicate the action to be taken on Recurring Schedule - create, delete, extend, replace.
ScheduleNonRecurringAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The nonrecurring amount based on the set schedule.
ScheduleRecurringAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The recurring amount based on the set schedule.
ScheduleUsageAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The usage amount based on the set schedule.
SplitParentRevnId	long	The identifier of the split parent revenue.
SplitPercent	decimal	The split percentage.

Name	Type	Description
SplitRevenue	*Opportunity Split Revenue*	The split revenues.
SplitRevenueNonQuota	*Opportunity Split Revenue*	The non-revenue credits associated with the revenue record.
SplitRevenueNonQuotaOtherSplits	*Opportunity Split Revenue*	The non-revenue sales credits, excluding the record with the maximum percentage.
SplitRevenueOtherSplits	*Opportunity Split Revenue*	The revenue sales credits, excluding the record with the maximum percentage.
SplitTypeCode	string	Indicates whether the split is revenue or non-revenue.
StatusCode	string	The pre-defined code used to indicate the status.
StatusCodeSetId	long	The set id for the status of this revenue.
SubscriptionId	long	The unique identifier of the subscription.
SubscriptionLineId	long	The unique identifier of the subscription line within a subscription.
TargetPartyId	long	The Party identifier of the opportunity sales account.
TypeCode	string	Indicates the revenue type for this revenue.
TypeCodeSetId	long	The Set identifier for the revenue type of this opportunity.
UOMCode	string	The unit of measure code for product.
UnitPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The unit price for product.
UpsideAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The best case amount.
UsageRevenue	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The usage revenue amount on the revenue line
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Name	Type	Description
ViewCriterialdentifier	string	Indicates when a View Criteria is seeded rather than a custom one.
WinProb	decimal	The win probability percent.

Opportunity Revenue Territory

The territories assigned to an opportunity revenue line.

QName: {http://xmlns.oracle.com/apps/sales/opptyMgmt/revenues/revenueService/}RevenueTerritory

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Opportunity*
Contained by	*Opportunity Revenue*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AssignmentType	string	Identifies how the territory resource was assigned.
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective. • Primary Key
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective. • Primary Key
ForecastParticipationCode	string	The type of forecast this territory participates in (Revenue, Nonrevenue, Revenue and Nonrevenue, or Nonforecasting).
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Name	string	The name of the territory.
Name1	string	The resource organization of the territory resource.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
RevnId	long	Revenue identifier.
RevnTerrId	long	Revenue territory identifier. • Primary Key
RoleId	long	Resource role identifier of the territory resource.
RoleName	string	Resource role of the territory resource.
TerritoryId	long	The Territory identifier.

Name	Type	Description
TerritoryVersionId	long	The Territory version identifier.
TypeCode	string	Identifies the type of the assigned territory.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Opportunity Source

The marketing source from which the opportunity originates.

QName: {http://xmlns.oracle.com/apps/sales/opptyMgmt/opportunities/opportunityService/}OpportunitySource

Logical Business Objects

- CRM : Opportunity Management : Opportunity

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Opportunity*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OptyId	long	The unique identifier of the opportunity.
OptySrcId	long	The opportunity source identifier. • Primary Key
SrcNumber	string	The source of the marketing event. For example: a campaign, new product line, a marketing seminar, and so on. This is a required attribute.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Opportunity Split Revenue

The revenue or nonrevenue credit allocated to the resource who has contributed to the selling effort for an opportunity revenue line.

QName: {http://xmlns.oracle.com/apps/sales/opptyMgmt/revenues/revenueService/}SplitRevenue

Logical Business Objects

- CRM : Opportunity Management : Opportunity

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Opportunity*
Contained by	*Opportunity Recurring Revenue*
Contained by	*Opportunity Revenue*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AssignmentType	string	Indicates how the territory was added to the revenue line; manually selected or automatically assigned.
BUOrgId	long	The identifier of the business unit.
CloseReasonCode	string	The win/loss reason the revenue line.
CloseReasonCodeSetId	long	The set identifier for the Win/Loss reason of this revenue.
Comments	string	The comments for the record.
CommitFlag	boolean	Indicates if this revenue line should be used for forecasting.
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
ConversionRate	decimal	The rate used to convert the revenue amount to the opportunity summary currency, if the currency of the revenue line is different from that of the opportunity. This is the amount that one currency can be exchanged for, at a specific point of time.
ConversionRateType	string	The currency conversion rate type that is used to derive the exchange rate for converting the user-entered currency to CRM Corporate currency.

Name	Type	Description
CostAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The cost amount. Not currently used in Fusion.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRcptPartOrgPartyId	long	The identifier of the partner organization to which the credit recipient belongs.
CreditRcptPartOrgPartyName	string	The name of the partner organization to which the credit recipient belongs.
CustomerAccountId	long	The identifier of the customer account.
DownsideAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The worst case amount.
EffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The estimated close date for this revenue line; defaulted from opportunity's close date.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
ExpectAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The expected revenue amount.
ExpectDlvryDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The expected delivery date for the product. Not currently used in Fusion.
ForecastOverrideCode	string	Determines if the revenue line should always be forecasted, never be forecasted, or forecasted only when the forecast criteria is met.
InventoryItemId	long	The identifier of the product inventory.
InventoryOrgId	long	The identifier of the inventory organization.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MarginAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The margin amount. Not currently used in Fusion.
Name	string	The name of the resource organization of the credit recipient.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was last queried.
OptyId	long	The unique identifier of the opportunity.
OwnerDealExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The deal expiration date of the credit recipient.
OwnerDealProtectedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The deal protected date of the credit recipient.
OwnerLockAsgnFlag	boolean	Indicates if the credit recipients of the revenue line should be locked from re-assignment by the system.
OwnerOrgTreeCode	string	The resource organization tree code for the credit recipient.
OwnerOrgTreeStructCode	string	The resource organization tree structure code for the credit recipient.
OwnerResourceOrgId	long	The resource organization identifier of the credit recipient.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.

Name	Type	Description
PrCmptPartyId	long	Primary competitor identifier.
PrTerritoryUpdatedById	long	The user who last updated the forecast territory.
PrTerritoryUpdatedByPartyName	string	The name of the user who last updated the forecast territory.
PrTerritoryVersionId	long	The Forecast territory version identifier.
PrimaryFlag	boolean	Indicates whether the revenue record is a summary revenue line.
ProdGroupId	long	The identifier of the product group.
Quantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The product quantity.
RecurEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	End date of the recurrence.
RecurFrequencyCode	string	The frequency for the recurrence.
RecurNumberPeriods	int	The number of periods for the recurrence.
RecurParentRevnId	long	Indicates the parent revenue identifier for the recurrence.
RecurQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The recurring quantity. This is the quantity for each recurrence.
RecurRevnAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The recurring revenue amount. This is the revenue amount for each recurrence.
RecurStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The start date of the recurrence.
RecurTypeCode	string	Indicates the type of revenue line, whether it is a parent recurring line, a child recurring line, or a non-recurring line.
ResourcePartyId	long	The resource identifier of the credit recipient.
RevnAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The revenue amount.

Name	Type	Description
RevnAmountCurcyCode	string	The currency on which the revenue line is based.
RevnId	long	The unique identifier of the revenue. • Primary Key
RevnNumber	string	Unique number for the revenue line. Initially defaulted from the revenue identifier.
SalesAccountId	long	The identifier of the opportunity sales account.
SalesCreditTypeCode	string	Indicates the type of sales credit - revenue or nonrevenue.
SplitParentRevnId	long	The identifier of the customer account.
SplitPercent	decimal	The split percentage.
SplitTypeCode	string	The sales credit type of this credit split - Revenue or Nonrevenue.
StatusCode	string	The pre-defined code used to indicate the status.
StatusCodeSetId	long	The set identifier for the status of this revenue.
TargetPartyId	long	The Party identifier of the opportunity sales account.
TypeCode	string	Indicates the revenue type for this revenue line.
TypeCodeSetId	long	The Set identifier for the revenue type of this opportunity.
UOMCode	string	The unit of measure code for the product.
UnitPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The unit price for the product.
UpsideAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The best case amount.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Name	Type	Description
WinProb	decimal	The win probability percent.

Opportunity Subscription

Opportunity Subscription aggregates all revenue subscriptions to opportunity level.

QName: {http://xmlns.oracle.com/apps/sales/opptyMgmt/opportunities/opportunityService/}OpportunitySubscription

Logical Business Objects

- CRM : Opportunity Management : Opportunity

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Opportunity*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CorpCurrencyCode	string	Corporate currency code for extensibility.
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
CurcyConvRateType	string	Currency conversion rate type for extensibility.
Currency	string	The currency associated with the subscription.

Name	Type	Description
CurrencyCode	string	Currency code for the extensibility.
DeleteFlag	boolean	This flag controls if the user has access to delete the record.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The end date of the subscription.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the session login associated to the user who last updated the row.
LastUpdatedBy	string	Who column: indicates the user who last updated the row.
NetPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total contract value of the subscription.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
OptyId	long	Parent Opportunity
OptySubscriptionId	long	Primary Key, the unique internal identifier of the row. • Primary Key
OptySubscriptionNumber	string	The unique number to associate a subscription with an opportunity.
PrimaryFlag	boolean	Indicates if a subscription is the Primary Subscription associated with the opportunity.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The start date of the subscription.
Status	string	The current status of the subscription.
SubscriptionId	long	A subscription associated with opportunity.

Name	Type	Description
SubscriptionId1	long	Displays the unique identifier of a subscription.
SubscriptionNumber	string	The number assigned to the line within a subscription by the system or the customer.
SubscriptionPeriod	string	The duration of the subscription.
UpdateFlag	boolean	This flag controls if the user has access to update the record.

Opportunity Team Member

The employee of the deploying organization who is assisting with the sales opportunity.

QName: {http://xmlns.oracle.com/apps/sales/opptyMgmt/opportunities/opportunityService/}OpportunityResource

Logical Business Objects

- CRM : Opportunity Management : Opportunity

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Opportunity*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevelCode	string	Access level determines the type of access granted to the opportunity team member, manager, and administrator of the organizations in the hierarchy.

Name	Type	Description
AsgnTerritoryVersionId	long	Version identifier of the territory for the resource that got assigned to the opportunity through territory-based assignment.
AssignmentType	string	Indicates how the resource was added to opportunity team. Ad-Hoc indicates that the resource was either added manually or through rule-based assignment. Territory indicates that the resource was added using territory-based assignment.
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DealExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The end date of the deal protection period of an opportunity team member. The date is set for members of territories that are removed from the opportunity because of territory re-alignment.
DealProtected	string	Indicates whether the resource is under deal protection.
DealProtectedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The start date of the deal protection period of an opportunity team member. The date is set for the members of territories that are removed from opportunity because of territory re-alignment.
EmailAddress	string	The email address associated with the record.
FormattedPhoneNumber	string	The formatted phone number.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
LockAssignmentFlag	boolean	Flag to prevent an opportunity team member from being removed from the team by automatic assignment.
MemberFunctionCode	string	The role of the team member on the opportunity, such as Integrator, Executive Sponsor, Technical Account Manager, and so on.
MgrResourceId	long	The resource identifier of the opportunity team member's manager.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OptyId	long	The unique identifier of the opportunity.
OptyResourceId	long	The identifier of the opportunity team member. • Primary Key
OptyResourceNumber	string	Displays the association between an opportunity and a resource (typically an opportunity sales team member).
OrgTreeCode	string	The tree which depicts the organization hierarchy. Managers/Admins of parent resource organizations of the opportunity team member gain access through this hierarchy.
OrgTreeStructureCode	string	The tree structure of the organization hierarchy. Managers/Admins of parent resource organizations of the opportunity team member gain access through this hierarchy.
OrganizationId	long	The resource organization identifier of the opportunity team member.
OrganizationName	string	The name of the party when the party type is Organization.
OwnerFlag	boolean	Indicates if the opportunity team member is also the owner of the opportunity.
PartnerOrgId	long	The party identifier of the partner organization that the partner resource belongs to.

Name	Type	Description
PartnerPartyName	string	The name of the partner organization that the partner resource belongs to.
PartyName	string	The name of the party.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
ResourceId	long	The unique identifier of the resource.
ResourceOrgId	long	The resource organization identifier of the opportunity team member.
ResourcePartyNumber	string	The resource party number of the opportunity team member.
RoleName	string	Role of the opportunity team member in the resource organization.
TerritoryName	string	The name of the territory of the opportunity team member.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Revenue Line Set

The collection of revenue lines representing a product offering on an opportunity.

QName: {http://xmlns.oracle.com/oracle/apps/sales/opptyMgmt/revenues/revenueService/}RevenueLineSet

Logical Business Objects

- CRM : Opportunity Management : Sales Revenue

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Opportunity Revenue*
Contained by	*Opportunity*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BUOrgId	long	The business unit identifier.
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CustomerAccountId	long	The customer's billing account identifier.
CustomerPartyId	long	The party identifier of the sales account.
EffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The estimated close date for the revenue line set.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OptyId	long	The unique identifier of the opportunity.
OwnerOrgTreeCode	string	The resource organization tree code for the revenue line set owner.
OwnerOrgTreeStructCode	string	The resource organization tree structure code for the revenue line set owner.
OwnerResourceId	long	The resource party identifier of the revenue line set owner.
OwnerResourceOrgId	long	The resource organization identifier of the revenue line set owner.
ProdGroupId	long	The product group identifier.
ProdGroupName	string	The name of the product group associated with the revenue.
Revenue	*Opportunity Revenue*	The revenue line set members associated with the revenue line set.
RevnAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The attribute for revenue amount.
RevnAmountCurcyCode	string	The currency that the amount on this revenue line is based on.
RevnId	long	The revenue line set identifier. • Primary Key
RevnLineTypeCode	string	This denotes the type of revenue line such as Summary Revenue or Standard Revenue.
RevnSequenceNumber	int	The attribute for revenue sequence number.
SalesAccountId	long	The identifier of the opportunity sales account.
StatusCode	string	The pre-defined code used to indicate the status.

Name	Type	Description
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Partner Program Enrollment Service

Service to operate on program enrollments. The supported operations are create, get, submit, renew, and terminate. Partner enrollment into a program and the enrollment lifecycle is supported via the operations provided in this service.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerProgram/enrollment/partnerProgramEnrollmentService/}PartnerProgramEnrollmentService

Service WSDL URL: https://servername/crmService/PartnerProgramEnrollmentService?WSDL

Logical Business Objects

expireProgramEnrollment

A web service method that supports expiring a program enrollment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
enrollmentId	long	The system generated unique identifier for enrollment of the method expireProgramEnrollment.

Response Payload

Element Name	Type	Description
result	void	The parameter is not used for the method expireProgramEnrollment.

renewProgramEnrollment

A web service method which renews an existing program enrollment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
enrollmentIdForRenew	long	The system generated unique identifier for an existing enrollment.

Response Payload

Element Name	Type	Description
result	long	The parameter is not used for the method renewProgramEnrollment.

submitProgramEnrollment

A web service method which submits an enrollment request for a program.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
enrollmentId	long	The system generated unique identifier for enrollment.
acceptance	string	The parameter gives the acceptance status which are ONLINE, OFFLINE or ONANDOFF.

Response Payload

Element Name	Type	Description
result	void	The parameter is not used for the method submitProgramEnrollment.

terminateProgramEnrollment

A web service method which requests a termination of an enrollment in a given program.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
enrollmentId	long	The system generated unique identifier for enrollment.

Response Payload

Element Name	Type	Description
result	void	The parameter is not used for the method terminateProgramEnrollment.

deleteParticipants

A web service method which deletes participants of an enrollment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
participants	*Program Enrollment Participants*	The participant object for the method deleteParticipants.

Response Payload

Element Name	Type	Description
result	void	The parameter is not used for the method deleteParticipants.

getProgramEnrollment

A web service method which gets details of a program enrollment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
programEnrollmentId	long	The system generated unique identifier for enrollment.

Response Payload

Element Name	Type	Description
result	*Program Enrollments*	The parameter returns a partner program enrollment matching the criteria.

createProgramEnrollment

A web service method which creates program enrollment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
programEnrollment	*Program Enrollments*	The Program Enrollment SDO which needs to be created.

Response Payload

Element Name	Type	Description
result	*Program Enrollments*	The parameter returns the created enrollment for the method createProgramEnrollment.

updateProgramEnrollment

Updates program enrollment which may be in draft or submitted status.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
programEnrollment	*Program Enrollments*	The Program Enrollment SDO which needs to be updated.

Response Payload

Element Name	Type	Description
result	*Program Enrollments*	The parameter returns the updated enrollment for the method updateProgramEnrollment.

mergeProgramEnrollment

A web service method which merges one or more program enrollments.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
programEnrollment	*Program Enrollments*	The program enrollment SDO which needs to be merged.

Response Payload

Element Name	Type	Description
result	*Program Enrollments*	The parameter returns the merged enrollment for the method mergeProgramEnrollment.

findProgramEnrollment

Searches for partner program enrollment based on various attributes of partner program or enrollment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The list of attributes that can be used for searching.

Element Name	Type	Description
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The filtering condition to separate out the set of records.

Response Payload

Element Name	Type	Description
result	*Program Enrollments*	The parameter returns the partner program enrollments matching the criteria.

deleteNote

A web service method to delete a note associated to a program enrollment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
note	*Note*	The note object which needs to be deleted for the method deleteNote.

Response Payload

Element Name	Type	Description
result	void	The parameter is not used for the method deleteNote.

getDfltObjAttrHints

Retrieves user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create,

Element Name	Type	Description
		update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
terminateProgramEnrollment	ZPM_MANAGE_PARTNER_PROGRAM_ENROLLMENT_PRIV	Manage Partner Program Enrollment	Allows management of partner program enrollment in the partner work area.
mergeProgramEnrollment	ZPM_APPLY_PARTNER_PROGRAM_PRIV	Apply Partner Program	Allows enrolling into a partner program.
findProgramEnrollment	ZPM_APPLY_PARTNER_PROGRAM_PRIV	Apply Partner Program	Allows enrolling into a partner program.
getEntityList	ZPM_APPLY_PARTNER_PROGRAM_PRIV	Apply Partner Program	Allows enrolling into a partner program.
getEntityList	ZPM_MANAGE_PARTNER_PROGRAM_ENROLLMENT_PRIV	Manage Partner Program Enrollment	Allows management of partner program enrollment in the partner work area.
deleteParticipants	ZPM_APPLY_PARTNER_PROGRAM_PRIV	Apply Partner Program	Allows enrolling into a partner program.
deleteNote	ZPM_APPLY_PARTNER_PROGRAM_PRIV	Apply Partner Program	Allows enrolling into a partner program.
deleteNote	ZPM_MANAGE_PARTNER_PROGRAM_ENROLLMENT_PRIV	Manage Partner Program Enrollment	Allows management of partner program enrollment in the partner work area.
createProgramEnrollment	ZPM_APPLY_PARTNER_PROGRAM_PRIV	Apply Partner Program	Allows enrolling into a partner program.
renewProgramEnrollment	ZPM_APPLY_PARTNER_PROGRAM_PRIV	Apply Partner Program	Allows enrolling into a partner program.
getProgramEnrollment	ZPM_APPLY_PARTNER_PROGRAM_PRIV	Apply Partner Program	Allows enrolling into a partner program.

Operation Name	Privilege Code	Privilege Name	Privilege Description
updateProgramEnrollment	ZPM_APPLY_PARTNER_PROGRAM_PRIV	Apply Partner Program	Allows enrolling into a partner program.
getDfltObjAttrHints	ZPM_APPLY_PARTNER_PROGRAM_PRIV	Apply Partner Program	Allows enrolling into a partner program.
getDfltObjAttrHints	ZPM_MANAGE_PARTNER_PROGRAM_ENROLLMENT_PRIV	Manage Partner Program Enrollment	Allows management of partner program enrollment in the partner work area.
submitProgramEnrollment	ZPM_APPLY_PARTNER_PROGRAM_PRIV	Apply Partner Program	Allows enrolling into a partner program.
getServiceLastUpdateTime	ZPM_APPLY_PARTNER_PROGRAM_PRIV	Apply Partner Program	Allows enrolling into a partner program.
getServiceLastUpdateTime	ZPM_MANAGE_PARTNER_PROGRAM_ENROLLMENT_PRIV	Manage Partner Program Enrollment	Allows management of partner program enrollment in the partner work area.
expireProgramEnrollment	ZPM_MANAGE_PARTNER_PROGRAM_ENROLLMENT_PRIV	Manage Partner Program Enrollment	Allows management of partner program enrollment in the partner work area.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AddressExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the location is no longer valid.
AddressLinesPhonetic	string	The phonetic or Kana representation of the Kanji address lines that are used in Japan.
AddressStyle	string	Style of the address.
Addressee	string	The information of the addressee.
City	string	The name of the city.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
ContactPreferenceExistFlag	boolean	Indicator to specify if the contact is primary contact for the party.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
Country	string	The name of the country.

Name	Type	Description
Country1	string	The attribute country1 is not used.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DateValidated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address was last validated.
DoNotValidateFlag	boolean	Indicator to specify that a particular location is not eligible for address validation irrespective of the current validation.
Eft	*Electronic File Transfer*	The electronic file transfer information for the party.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
FormattedAddress	string	The formatted read-only address.
FormattedLocaleAddress	string	The formatted read-only local address.
FormattedMultilineAddress	string	The formatted multi line address of the party site.

Name	Type	Description
GlobalLocationNumber	string	The global location number that uniquely identifies each location in a trading partners enterprise.
HouseType	string	Indicates the building type.
IdentifyingAddressFlag	boolean	Indicator to specify the identifying address for the party. Y stands for the indentifying site and N stands for sites that are not the indentifying site.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
Language	string	The operating language for the party site.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Latitude	decimal	The latitude of the party address.
LocationDirections	string	Directions to the location.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
LocationLanguage	string	The operating language for the locations.
Longitude	decimal	The longitude of the party address.
Mailstop	string	A user-defined code to indicate a mail drop point within the organization.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction

Name	Type	Description
		to detect whether another session has updated the row since it was last queried.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary address of the contact irrespective of the context. Y stands for primary address and N stands for all others.
PartyId	long	The unique identifier of the contact party.
PartyNameDba	string	Stores the doing-business_as (DBA) party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameDivision	string	Stores the division party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameLegal	string	Stores the legal party name for a party site. This column is used to store FSIO related legal party name attribute.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
PartySiteInformation	*Trading Community Address Additional Information*	The party address information.
PartySiteName	string	The user-defined name for the site.
PartySiteNumber	string	The party site number of the address.
PartySiteType	string	Stores the party site type and is based on the lookup. Currently this is either null or one-time.
PartySiteUse	*Trading Community Address Purpose*	The information of the party address usage.
PartyUsageCode	string	The usage context of a party's contact point.

Name	Type	Description
Phone	*Phone*	The phone information for the entity.
Position	string	The primary direction such as north or east that is used to access the location.
PostalCode	string	The postal code element of the address.
PostalPlus4Code	string	The four digit extension to the United States postal ZIP code.
Province	string	The name of the province.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
State	string	The name of the state.
Status	string	The status of the record.
Telex	*Telex*	The Telex information associated with the party.
UsageCode	string	The usage code is not used.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
ValidationStatusCode	string	The standardized status code describing the results of the validation.
Web	*Web*	The web information related to the record.

Classification Assignment

The classification code assigned to a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}CodeAssignment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Relationship Type	Object or Service
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ClassCategory	string	The name of the classification category.
ClassCode	string	The code of the classification.
CodeAssignmentId	long	The unique identifier of the assignment of an industrial classification code to an object. It is primary key and system generated. • Primary Key
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.

Name	Type	Description
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableKey1	string	The first column of the alphanumeric or multi-part foreign key.
OwnerTableKey2	string	The second column of the alphanumeric or multi-part foreign key.
OwnerTableKey3	string	The third column of the alphanumeric or multi-part foreign key.
OwnerTableKey4	string	The fourth column of the alphanumeric or multi-part foreign key.
OwnerTableKey5	string	The fifth column of the alphanumeric or multi-part foreign key.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PrimaryFlag	boolean	Indicator that specifies if this is the primary class code of a class category for the organization. Y stands for the primary class code and N stands for all others.
Rank	decimal	Ranks classes if multiple classes are assigned to a party.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Contact Preference

The contact preference of the trading community member. For example, do not call Joe Smith between 10 a.m. and 12 noon on weekdays.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}ContactPreference

Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactLevelTable	string	The table that stores the contact level of the contact preference, and uses the SUBJECT_TABLE lookup. The list of accepted values are HZ_PARTIES, HZ_PARTIES_SITES, or HZ_CONTACT_POINTS.
ContactLevelTableId	long	The foreign key to the table specified in CONTACT_LEVEL_TABLE column. The list of accepted values are PARTY_ID from HZ_PARTIES table, CONTACT_POINT_ID from HZ_CONTACT_POINTS table, or PARTY_SITE_ID from HZ_PARTY_SITES table.
ContactPreferenceId	long	The unique identifier for the contact preference. • Primary Key
ContactType	string	The contact party type that defines whether the contact is a sales account, a prospect, a contact, or any other user-defined party type. The default value is CUSTOMER. A list of accepted values is defined in the lookup CONTACT_TYPE.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaximumNoOfInteractUOMCode	string	The period of time during which the maximum number of interactions applies. Uses the MAX_NO_OF_INTERACT_UOM_CODE lookup.
MaximumNoOfInteractions	decimal	The number of times you can use this contact point. The period of time that this number applies is stored in the MAX_NO_OF_INTERACT_UOM_CODE column.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PreferenceCode	string	Indicates whether to use a particular contact method. The list of accepted values are defined in the PREFERENCE_CODE lookup.
PreferenceEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes inactive.
PreferenceEndTimeHR	int	The hour part of time when the contact preference becomes inactive. The time is recorded in the 24 hour format.
PreferenceEndTimeMi	int	The minutes part of the time when the contact preference becomes inactive.
PreferenceStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes active.
PreferenceStartTimeHR	int	The hour part of time when the contact preference becomes active. The time is recorded in the 24 hour format.

Name	Type	Description
PreferenceStartTimeMi	int	The minutes part of the time when the contact preference becomes active.
PreferenceTopicType	string	The appropriate subjects to send the party that the preference is created for. The list of accepted values are defined in the PREFERENCE_TOPIC_TYPE lookup.
PreferenceTopicTypeCode	string	The code of the preference topic type.
PreferenceTopicTypeId	long	The unique identifier of the preference topic type.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
RequestedBy	string	Indicates if the permission or restriction was created internally or requested by the party. The list of accepted values are defined in the REQUESTED_BY lookup.
Status	string	The status of the record.

Electronic File Transfer

The electronic funds transfer information of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Eft

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*

Relationship Type	Object or Service
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Handled by	*Trading Community Group*

Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.

Name	Type	Description
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EFTPrintingProgramId	long	The printing program identifier.
EFTSWIFTCode	string	The EFT swift code information.
EFTTransmissionProgramId	long	The transmission program identifier.
EFTUserNumber	string	The number that identifies you as a user of electronic funds transfer service for your bank or clearing organization.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.

Name	Type	Description
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

E-Mail

The e-mail address associated with a trading community member. For example, john.doe@oracle.com.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Email

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*
Contained by	*Household*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmailAddress	string	The email address associated with the record.
EmailFormat	string	The preferred format for e-mail addressed to this address such as HTML or ASCII. A list of accepted values is defined using the lookup EMAIL_FORMAT.
EmailInformation	*Trading Community Contact Point Additional Information*	The additional information about the e-mail.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row

Name	Type	Description
		is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary e-mail of the associated object. If the value is True, then this is the primary e-mail. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.

Name	Type	Description
Status	string	The status of the record.

Expertise

The expertise of a partner.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerExpertise

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extends	*Partner Generic List of Values*
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ExpertiseCode	string	The expertise code of the partner expertise.
ExpertiseName	string	The expertise name of the partner expertise.

Partner Generic List of Values

The generic list of multiple values used for certifications and expertise.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerProfileMultivalueLov

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Partner Certification*
Extended by	*Expertise*
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
LookupCode	string	The value from a multi-value list of values category that applies to the profile.

Name	Type	Description
LookupType	string	The list of values code that defines the category to which the list of values belong. This value indicates the profile field to which the value belongs.
PartnerMultivalLovId	long	The unique identifier of the list of values code selected for a specific multi-value field in the partner profile. • Primary Key
PartyId	long	The unique identifier of the contact party.

Industries Served

The industries in which a partner operates.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerIndustryServed

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extends	*Partner Dimension Member*
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ClassificationCategory	string	The classification category of the industry served.
ClassificationCode	string	The classification code of the industry served.
ClassificationName	string	The classification name of the industry served.

Partner Dimension Member

A generic list of multiple values used for territory dimensions.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerDimensionMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Industries Served*
Extended by	*Focus Areas*
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributePk1	string	This is the ATTRIBUTE PK1 column.
AttributePk2	string	This is the ATTRIBUTE PK1 column.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DimSubtypeCode	string	A specific type of item within the dimension code. For example, for the products dimension, product items and product categories are there.
DimensionCode	string	The dimension of the item being stored. For example, geography.
DimensionMemberName	string	The name of the dimension member.
DimensionMemberNameBackup	string	The name of the dimension member to which this record refers to. This is stored in case the dimension member was removed and the user still requires the name of the item that was removed.
IntegrationId	string	The reference to the actual dimension member item.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OwnerId	long	The unique identifier of the entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
OwnerType	string	The type of entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.

Name	Type	Description
PartitionTypeCode	string	The type of partition in which the data is stored.
PartnerDimMembersId	long	This column is the private key of the table. • Primary Key
TerrDimMemberId	long	The key data for the territory dimension.
TerrDimPartitionId	long	The primary key.
TypeCode	string	The type of the partition.

Instant Messaging

The instant messaging information of a trading community member, such as the AOL identifier or Yahoo Messenger information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}InstantMessaging

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*

Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
InstantMessagingAddress	string	The instant messaging information address.
InstantMessagingInformation	*Trading Community Contact Point Additional Information*	The instant messaging information related to the record.
InstantMessengerType	string	The type of the instant messenger type.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary instant messaging Id of the associated object. If the value is True, then this is the primary instant messaging Id. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.

Name	Type	Description
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Note

The object that captures comments, information, or instructions for an Oracle Fusion Applications business object.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/noteService}Note

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Note Descriptive Flexfields*

Handled by	*Partner Program Enrollment Service*
Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactRelationshipId	long	The identifier of the contact relationship record in Trading Community Architecture (TCA).
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreatorPartyId	long	This is the party identifier for the note creator.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DeleteFlag	boolean	Indicates whether the user has access to delete the note.
Dff	*Note Descriptive Flexfields*	The descriptive flex field segment.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record

Name	Type	Description
NoteAttributeCategory	string	The contextual flex field for development usage.
NoteAttributeUid1	string	The flex field for development usage.
NoteAttributeUid2	string	The flex field for development usage.
NoteAttributeUid3	string	The flex field for development usage.
NoteAttributeUid4	string	The flex field for development usage.
NoteAttributeUid5	string	The flex field for development usage.
NoteId	long	The unique identifier of the note. • Primary Key
NoteNumber	string	The alternate unique identifier of the note. A user key that is system generated or from an external system.
NoteTitle	string	The title of the note entered by the user.
NoteTxt	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	This is the column that stores the actual note text.
NoteTypeCode	string	This is the note type code for categorization of note.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
SourceObjectCode	string	This is the source_object_code for the source object as defined in OBJECTS Metadata.
SourceObjectId	string	This is the source_object_Uid for the source object such as Activities, Opportunities, and so on defined in OBJECTS metadata.
UpdateFlag	boolean	Indicates whether the user can update the note.
VisibilityCode	string	This is the attribute to specify the visibility level of the note.

Note Descriptive Flexfields

The descriptive flex field that captures additional information for notes, such as a priority or status.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/flex/noteDff/}NoteDFF

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountDirectorId	long	The unique identifier of a valid employee resource who owns and manages the partner sales account.

Name	Type	Description
Address1	string	The first line of the address.
AnalysisFy	string	The fiscal year that the financial information is based on.
AnnualRevenue	decimal	The partner's annual revenue. This field is maintained by the channel manager and partner administrator.
Auxiliary1ClassCode	string	The auxiliary Class Code 1 for a classification.
Auxiliary1CodeAssignmentId	long	The unique identifier of the assignment of the auxiliary Class Code 1.
Auxiliary1EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 1 is no longer active.
Auxiliary1StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 1 becomes effective.
Auxiliary2ClassCode	string	The auxiliary Class Code 2 for a classification.
Auxiliary2CodeAssignmentId	long	The unique identifier of the assignment of the auxiliary Class Code 2.
Auxiliary2EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 2 is no longer active.
Auxiliary2StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 2 becomes effective.
Auxiliary3ClassCode	string	The auxiliary Class Code 3 for a classification.
Auxiliary3CodeAssignmentId	long	The unique identifier of the assignment of the auxiliary Class Code 3.
Auxiliary3EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 3 is no longer active.
Auxiliary3StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 3 becomes effective.
BusinessScope	string	The physical class of business in which a business participates. For example, local, national, or international.

Name	Type	Description
CeoName	string	The name of the chief executive officer. It is the denormalized value of the CEO_NAME in HZ_ORGANIZATION_PROFILES.
CeoTitle	string	The formal title of the chief executive officer.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
City	string	The name of the city.
ClassificationTypes	*Classification Assignment*	The classification type of a partner.
CompanyNumber	string	The partner's company number that is an alternate unique identifier of the partner. This value is maintained by the channel manager and partner administrator.
ComplianceReviewedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the compliance review for the partner was last completed.
ComplianceStatus	string	Indicates whether the partner is compliant with vendor's criteria such as certifications, training, and so on. If the value is True, then the partner is compliant.
ControlYr	decimal	The year when current ownership gained control of the organization.
CorpCurrencyCode	string	Corporate currency
Country	string	The name of the country.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	Currency
CurrentFyPotentialRevenue	decimal	The estimated revenues that can be earned by the organization during its current fiscal year.

Name	Type	Description
DUNSNumber	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DbRating	string	The Dun & Bradstreet credit rating.
Description	string	The free text description of the record.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
EligibleForPublicProfile	string	Indicates whether the partner is eligible to publish their public profile. If the value is True, then the partner can publish their public profile.
Email	*E-Mail*	The email address associated with the record.
EmployeesTotal	decimal	The total number of employees.
ExportInd	string	Indicates whether the organization is an exporter. If the value is Y, then the organization is an exporter. The default value is N.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
FormattedAddress	string	The formatted address information.
FormattedPhoneNumber	string	The formatted phone number.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
GeoNameReferenceId	long	The unique name reference identifier.
GeographyId	long	The geography ID for the geography served by the partner.

Name	Type	Description
HomeCountry	string	The home country associated with the party.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
IncorpYear	int	The year that the business was formally incorporated.
IndustryClassCode	string	The Industry classification code. The classification codes are defined for every classification category as specified in IndustryCodeType attribute.
IndustryCodeAssignmentId	long	The unique identifier of the assignment of an industrial classification code.
IndustryCodeEndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the industry class code is no longer valid.
IndustryCodeStartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the industry class code applies to the industry.
IsSelfRegisteredPartner	string	Indicates whether the partner registered through the self-service user interface.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LastTerritoryAssignedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the territory was last assigned.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LegalStatus	string	The legal structure of the organization such as partnership, corporation, and so on.
LineOfBusiness	string	The type of business activities performed at this site.

Name	Type	Description
Location	string	The location information of the partner.
LockTerritoryAssignment	string	Indicates if the automatic territory assignment can be set. If the value is True, then the automatic territory assignment cannot remove the sales account team resource. The default value is False.
MinorityOwnedInd	string	Indicates whether the organization is primarily owned by ethnic or racial minorities. If the value is Y, then the organization is owned by ethnic or racial minorities. The default value is N.
MinorityOwnedType	string	The type of minority-owned firm.
NextFyPotentialRevenue	decimal	The estimated revenues that can be earned by the organization during its next fiscal year.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OpportunitiesWonPriorYear	decimal	Opportunities that the partner sales representatives closed and won in the prior fiscal year.
OpportunitiesWonYTD	decimal	Opportunities that the partner sales representatives closed and won in the current fiscal year-to-date.
OrgTypeClassCode	string	The classification code for the organization type.
OrgTypeCodeAssignmentId	long	The unique identifier of the assignment of an industrial classification code to an organization type.
OrgTypeCodeEndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the organization type class code is no longer valid.
OrgTypeCodeStartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the class code applies to the organization type.
OrganizationName	string	The name of the party when the party type is Organization.

Name	Type	Description
OrganizationProfileId	long	The unique identifier of the organization profile.
OrganizationSize	string	The size of the organization based on its revenue, number of employees, and so on.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OrigSystemReferenceId	long	The unique identifier for original system reference.
OwnerName	string	The name of a valid employee resource that owns and manages the partner account.
OwnerPersonPartyId	long	The unique identifier of a valid employee resource who owns and manages the partner account.
ParentPartnerPartyId	long	A foreign key reference to the TCA party records that represents the Partner's parent company.
ParentPartnerPartyNumber	string	Candidate for public surrogate key field and serves as a user-entered identifier for the Partner's Parent company.
ParentPk1Value	string	Attribute Deprecated, use Attribute ParentPartnerPartyId instead
PartnerAccountId	long	The unique identifier of the partner account resource team member.
PartnerAccountResourceToAccountP	*Partner Account Team*	The list of account resources for the partner account.
PartnerCertificationP	*Partner Certification*	The list of certifications for partner.
PartnerDimensionMemberPVO	*Partner Dimension Member*	The list of dimension members for the partner.
PartnerEmailPVO	*Partner E-Mail*	The list of e-mails for the partner.
PartnerExpertise	*Expertise*	The list of expertise for the partner.

Name	Type	Description
PartnerFaxPVO	*Partner Phone*	The list of fax for the partner.
PartnerGeography	*Geographies Served*	The list of geographies served by the partner.
PartnerIndustry	*Industries Served*	The list of industries served by the partner.
PartnerLevel	string	The relative tier of the partner.
PartnerMember	*Partner Members*	The list of members for a partner.
PartnerMemberPVO	*Partner Public Contact*	The public contact information of the partner.
PartnerPhonePVO	*Partner Phone*	The list of phones of the partner.
PartnerProductSpeciality	*Focus Areas*	The list of product specialties of the partner.
PartnerProfileMultivalueLovP	*Partner Generic List of Values*	The list of partner profile values for the partner.
PartnerSummary	string	The description of the partner company.
PartnerTypeDimensionMemberP	*Partner Type*	The list of partner type dimensions for the partner.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartySite	*Address*	The party site associated with the partner.
Phone	*Phone*	The phone information for the entity.
PostalCode	string	The postal code element of the address.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_

Name	Type	Description
		PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PrefferedContactId	long	The unique identifier of the preferred contact person for the partner.
PrefferedContactName	string	The name of the preferred contact person for the partner.
PrimaryPhoneContactPointId	long	The unique identifier of the primary phone contact point.
PrimaryURLContactPointId	long	The unique identifier of the primary URL contact point.
PrincipalName	string	The Name of the highest ranking person in the company.
PrincipalTitle	string	The title of the highest ranking person in the organization.
ProfileObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
Province	string	The name of the province.
PublicAddressId	long	The partner company address displayed in Partner Finder.
PublicContactId	long	The partner contact name displayed in Partner Finder.
PublicEmailId	long	The e-mail displayed in Partner Finder.
PublicFaxId	long	The fax number displayed in in Partner Finder.
PublicPhoneId	long	The phone displayed in Partner Finder.
PublicPrivateOwnershipFlag	boolean	Indicates whether the organization is publically or privately owned. If the value is Y, then the organization is a privately owned organization. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.

Name	Type	Description
PublicStatus	string	Status of approval of public profile.
RangeEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The end date in the import range.
RangeStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The start date in the import range.
ReassignTerritory	string	Indicates whether this partner needs territory reassignment.
RegistrationType	string	Indicates the registration type of the partner.
SmallBusInd	string	Indicates whether the organization is considered as a small business. If the value is Y, then the organization is considered as a small business. The default value is N.
SolutionOverview	string	The overview description of partner solutions.
State	string	The name of the state.
Status	string	The status of the record.
StockSymbol	string	The corporate stock symbol of the organization as listed in stock exchanges.
Synergy	string	The description of the value of the partnership between the Vendor and Partner.
TierId	long	The unique identifier for a tier to which a partner applies.
TotalEmployeesInd	string	Indicates if subsidiaries are included in the calculation of total employees. The accepted values are defined in the lookup type TOTAL_EMPLOYEES_INDICATOR.
TotalEmployeesText	string	The total number of employees in text format.
TreeCode	string	The unique code of the partner organization tree.
TreeStructureCode	string	The unique code for the partner organization tree structure.

Name	Type	Description
URL	string	The destination URL associated with a specific Google AdWords ad.
UniqueNameSuffix	string	The suffix used to generate the attribute PartyUniqueName. The suffix is concatenated to the Organization Name attribute to generate the PartyUniqueName. The primary address is defaulted as the suffix.
Web	*Web*	The web information related to the record.
YearEstablished	int	The year when the organization began doing business.

Partner Account Team

The person assigned to a partner account team.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerAccountResource

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevelCode	string	The type of access granted to the resource as well as managers of the organizations.
AssignmentTypeCode	string	The code indicating how the resource is assigned to the sales account team.
CreatedBy	string	Who column: indicates the date and time of the creation of the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who created the row.
EmailAddress	string	The email address associated with the record.
FormattedPhoneNumber	string	The formatted phone number.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the user who last updated the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
MemberFunctionCode	string	The code indicating the role of a sales team member in the resource team such as Integrator, Executive Sponsor, and Technical Account Manager. A list of accepted values is defined in the lookup FND_LOOKUPS.
OrganizationName	string	The name of the party when the party type is Organization.
OrganizationRole	string	The role of the partner in the organization.
PartnerAccountId	long	The unique identifier of the partner account resource team.
PartnerAccountResourceId	long	The unique identifier of the member of the partner account resource team. • Primary Key
PartnerPartyId	long	The PartyId of Partner whose Account Team includes this resource.

Name	Type	Description
ResourceId	long	The unique identifier of the resource.
ResourceName	string	The name of the resource associated with the partner account team.
TerritoryName	string	The name of the territory for the partner account.

Partner Certification

The list of certifications that a partner has achieved.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerCertification

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extends	*Partner Generic List of Values*
Contained by	*Partner*

Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CertificationCode	string	The code for the certification.

Name	Type	Description
CertificationName	string	The name of this certification.
LookupCode1	string	The key information for the certification.
LookupType1	string	The key information for the certification.
Meaning	string	The name of this certification.

Partner Generic List of Values

The generic list of multiple values used for certifications and expertise.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerProfileMultivalueLov

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Partner Certification*
Extended by	*Expertise*
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
LookupCode	string	The value from a multi-value list of values category that applies to the profile.
LookupType	string	The list of values code that defines the category to which the list of values belong. This value indicates the profile field to which the value belongs.
PartnerMultivalLovId	long	The unique identifier of the list of values code selected for a specific multi-value field in the partner profile. • Primary Key
PartyId	long	The unique identifier of the contact party.

Partner Dimension Member

A generic list of multiple values used for territory dimensions.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerDimensionMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Industries Served*
Extended by	*Focus Areas*

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributePk1	string	This is the ATTRIBUTE PK1 column.
AttributePk2	string	This is the ATTRIBUTE PK1 column.
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DimSubtypeCode	string	A specific type of item within the dimension code. For example, for the products dimension, product items and product categories are there.
DimensionCode	string	The dimension of the item being stored. For example, geography.
DimensionMemberName	string	The name of the dimension member.
DimensionMemberNameBackup	string	The name of the dimension member to which this record refers to. This is stored in case the dimension member was removed and the user still requires the name of the item that was removed.
IntegrationId	string	The reference to the actual dimension member item.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OwnerId	long	The unique identifier of the entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
OwnerType	string	The type of entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
PartitionTypeCode	string	The type of partition in which the data is stored.
PartnerDimMembersId	long	This column is the private key of the table. • Primary Key
TerrDimMemberId	long	The key data for the territory dimension.
TerrDimPartitionId	long	The primary key.
TypeCode	string	The type of the partition.

Partner E-Mail

The e-mail address of the partner.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerPublicEmail

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActualContentSource	string	The information regarding the source of the contact point.
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPointValue	string	The key information for the contact point.
CreatedByModule	string	The module that created the record.
EmailAddress	string	The email address associated with the record.
EmailFormat	string	The information on how to interpret the e-mail address.

Name	Type	Description
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
OrigSystemReference	string	The identifier for the record from the original system.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
Primary2Flag	boolean	Indicator to specify that the contact point is the primary point of contact.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
RelationshipId	long	The relationship identifier for the record.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Focus Areas

The focus areas or product specialties of the partner.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerProductSpeciality

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extends	*Partner Dimension Member*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributePk1	string	This is the ATTRIBUTE PK1 column.
AttributePk2	string	This is the ATTRIBUTE PK1 column.
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DimSubtypeCode	string	A specific type of item within the dimension code. For example, for the products dimension, product items and product categories are there.
DimensionCode	string	The dimension of the item being stored. For example, geography.
DimensionMemberName	string	The name of the dimension member.
DimensionMemberNameBackup	string	The name of the dimension member to which this record refers to. This is stored in case the dimension member was removed and the user still requires the name of the item that was removed.
IntegrationId	string	The reference to the actual dimension member item.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.

Name	Type	Description
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OwnerId	long	The unique identifier of the entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
OwnerType	string	The type of entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
PartitionTypeCode	string	The type of partition in which the data is stored.
PartnerDimMembersId	long	This column is the private key of the table. • Primary Key
TerrDimMemberId	long	The key data for the territory dimension.
TerrDimPartitionId	long	The primary key.
TypeCode	string	The type of the partition.

Partner Generic List of Values

The generic list of multiple values used for certifications and expertise.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerProfileMultivalueLov

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
LookupCode	string	The value from a multi-value list of values category that applies to the profile.
LookupType	string	The list of values code that defines the category to which the list of values belong. This value indicates the profile field to which the value belongs.

Name	Type	Description
PartnerMultivalLovId	long	The unique identifier of the list of values code selected for a specific multi-value field in the partner profile. • Primary Key
PartyId	long	The unique identifier of the contact party.

Geographies Served

The geographies in which a partner operates.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerGeographyServed

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributePk1	string	This is the ATTRIBUTE PK1 column.
AttributePk2	string	This is the ATTRIBUTE PK1 column.
CreatedBy	string	Who column: indicates the user who created the row.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DimSubtypeCode	string	A specific type of item within the dimension code. For example, for the products dimension there could be product items and product categories.
DimensionCode	string	The dimension of the item being stored. For example, geography.
DimensionMemberName	string	Name of dimension member.
DimensionMemberNameBackup	string	The name of the dimension remember this record refers to. This is stored in case the dimension member was removed and the user still needs to know the name of the item that was removed.
GeographyId	string	The geography ID of the geography served.
GeographyName	string	The geography name of the geography served.
IntegrationId	string	The reference to the actual dimension member item.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
OwnerId	long	The identifier of the entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.

Name	Type	Description
OwnerType	string	The type of entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
PartitionTypeCode	string	The type of partition in which the data is stored.
PartnerDimMembersId	long	This column is the private key of this table. • Primary Key
TerrDimMemberId	long	Key data for the territory dimension.
TerrDimPartitionId	long	Primary key.
TypeCode	string	Type of the partition.

Partner Members

The partner members for a partner.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerMember

Relationships

Name	Type	Description
AdditionalPartyId	*Additional Identifier*	The additional identifier associated with the organization or person.
AdditionalPersonName	*Additional Contact Name*	The additional name of the person.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
CategoryCode	string	The code of the category to which the person belongs. A list of accepted values is defined in the lookup type CUSTOMER_CATEGORY.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
Certification	*Certification*	The certification information for the person.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
Citizenship	*Citizenship*	The citizenship information of a person.
City	string	The name of the city.
CodeAssignment	*Classification Assignment*	The classification code assigned to the person.
Comments	string	The comments for the record.

Name	Type	Description
ContactPreference	*Contact Preference*	The contact preference associated with the record.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRating	*Credit Rating*	The credit rating of the person.
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was born.
Education	*Education*	The education information of the person.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EmailDomain	*E-Mail Domain*	The domain name of the email address.
EmploymentHistory	*Employment History*	The employment history information of a person.
FinancialProfile	*Financial Profile*	The financial profile information of a person.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
Gender	string	The gender of the person, such as male, female, and unknown. A list of accepted values is defined in the lookup HZ_GENDER.

Name	Type	Description
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LanguageName	string	The standard name for the language.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaritalStatus	string	The marital status of the person. A list of accepted values is defined in the lookup MARITAL_STATUS.
MissionStatement	string	The corporate charter of organization in user-defined text format.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.

Name	Type	Description
PartyPreference	*Preference*	The preference mentioned in the person details.
PartySite	*Contact Address*	The party site associated with the person.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the person.
PersonAcademicTitle	string	The part of the person's title that denotes the academic qualification, such as Dr. Jane Smith.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonInterest	*Contact Interest*	The interest information associated with a person.
PersonLanguage	*Contact Language*	The language information associated with a person.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	The prefix for the last name of a person, such as fon, van. For example, if a person's name is Hans Van, the last name of the person is captured using this attribute.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	The place in a family structure. For example, in "Tom Jones III", the "III".
PersonPreNameAdjunct	string	The preferred name adjacency of a resource.

Name	Type	Description
PersonPreviousLastName	string	The previous last name of a person.
PersonProfile	*Contact*	The profile information of the person.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
Phone	*Phone*	The phone information for the entity.
PostalCode	string	The postal code element of the address.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryEmailContactPTId	long	The unique identifier of the primary e-mail.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneContactPTId	long	The unique identifier of the primary phone contact point.

Name	Type	Description
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURLContactPTId	long	The unique identifier of the primary URL contact point.
Province	string	The name of the province.
Relationship	*Relationship*	The relationship information of the person.
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The Standard Industry Classification (SIC) code.
SICCodeType	string	The version of Standard Industry Classification (SIC) code.
Salutation	string	The size of the household this person is a part of.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
SourceSystemUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the source system information was last updated.
State	string	The name of the state.

Name	Type	Description
Status	string	The status of the record.
ThirdPartyFlag	boolean	Indicates whether a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. If the value is Y, then the party is a third party relationship. If Oracle Service is installed, the Third Party field in the Customers window is mandatory.
URL	string	The destination URL associated with a specific Google AdWords ad.
UserGUID	string	The "light weight" user Global Unique Id. Light Weight users defined in the Extended Security (XS) System.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
Web	*Web*	The web information related to the record.

Partner Phone

The phone number for a contact point.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerPublicPhone

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActualContentSource	string	The information regarding the source of the contact point.
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPointValue	string	The key information for the contact point.
CreatedByModule	string	The module that created the record.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FormattedPhoneNumber	string	The formatted phone number.
LastContactDtTime	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The last time when the contact point was contacted.
OrigSystemReference	string	The identifier for the record from the original system.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PagerTypeCode	string	The type of pager for the phone number.
PartyUsageCode	string	The usage context of a party's contact point.
PhoneAreaCode	string	The area code prefix for the phone number.
PhoneCallingCalendar	string	The information on proper calling times.

Name	Type	Description
PhoneCountryCode	string	The country code prefix for the phone number.
PhoneExtension	string	The extension of the phone number.
PhoneLineType	string	The type of phone line.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
RawPhoneNumber	string	The unformatted phone number.
RelationshipId	long	The relationship identifier for the record.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TransposedPhoneNumber	string	The transposed phone number.

Partner Program Language Translation

The translation language of the partner program.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerProgram/management/partnerProgramService/}PartnerProgramsTranslation

Logical Business Objects

- CRM : Partner Management : Partner Program

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner Programs*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BenefitDescription	string	Translation of benefits description into different language.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EligibilityDescription	string	Translation of eligibility description into different language.
FeesAgreementDescription	string	Translation of agreement description into different language.
Language	string	Language that the translation is in. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MeasureDescription	string	The translation of objectives description into different language.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartnerProgramId	long	The unique identifier of a partner program.

Name	Type	Description
		• Primary Key
ProgramDescription	string	The text describing the program.
ProgramName	string	The name of the partner program.
QuestionDescription	string	Translation of question description into different language.
SourceLang	string	Source language for the program.

Partner Programs

The partner program information such as the name of the program, program description, validity period and so on. The programs have eligibility criteria, associated benefits and terms and conditions.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerProgram/management/partnerProgramService/}PartnerPrograms

Logical Business Objects

- CRM : Partner Management : Partner Program

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Partner Program Language Translation*
Contained by	*Program Enrollments*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ApprovalComments	string	The approval comments.
BenefitDescription	string	The text describing the benefits.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
EligibilityDescription	string	The text describing the eligibility criteria to enroll into program.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
EnrollmentApproverUser	string	An approver of the program enrollments.
FeesAgreementDescription	string	Text describing the agreement criteria.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdatedBy	string	The user who last updated the record.
MeasureDescription	string	The text to describe objectives listed for this program.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
PartnerProgramId	long	The Primary Key: Partner Program Id. • Primary Key
PartnerProgramsTranslation	*Partner Program Language Translation*	The translations of the partner program.
PrimaryContactId	long	A unique identifier of the contact person for the partner program. This is to identify who can be contacted for this program.
PrimaryContactName	string	A primary contact name.
ProductId	long	A unique identifier of product that is associated to the program.
ProductName	string	The name of the product.
ProductOrgId	long	A unique identifier of product organization that the product belongs to.
ProgramApproverId	long	A program approver ID.
ProgramApproverUser	string	An approver of the program.
ProgramDescription	string	The text describing the program.
ProgramManagerId	long	A unique identifier of the manager for the partner program. This is to identify who is managing this partner program.
ProgramName	string	The name of the partner program.
ProgramNumber	string	A unique number generated for each program.
ProgramTermAutoRenewal	string	A flag to identify if program enrollment can be auto renewed or not.
ProgramTermExpiryWarn	string	The duration from program term end date after which a renewal notification is sent. Possible values are 30 days, 60 days.
ProgramTermGracePeriod	string	The duration after expiry of the enrollment a renewal into the program can be accepted.
ProgramType	string	Type of various partner program. Possible values are reseller, go to market.

Name	Type	Description
QuestionDescription	string	The text to describe the set of questions to follow for this program.
ReadOnlyEndDate	string	The read only end date.
ReadOnlyProgramType	string	The read only program type.
ReadOnlyStartDate	string	The read only start date.
ReadOnlyStatusCode	string	The read only status code.
RemainingDays	string	The derived column: remaining days.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
UpdateFlag	boolean	An attribute to identify if a record is updateable.

Partner Public Contact

The point of contact used for the public profile.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerPublicContact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AnalysisFy	string	The fiscal year that the financial information is based on.
CategoryCode	string	The user-defined category. The lookup type is CUSTOMER_CATEGORY.
CeoName	string	The name of the chief executive officer. It is the denormalized value of the CEO_NAME in HZ_ORGANIZATION_PROFILES.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
City	string	The name of the city.
Comments1	string	The denormalization of the COMMENTS in HZ_GROUP_PROFILES.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy1	string	The user who created the account record.
CreatedByModule1	string	The module that created the account record.
CreationDate1	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
CurrencyFyPotentialRevenue	decimal	The potential revenue of the organization in this fiscal year.
DUNSNumber	string	DUNS_NUMBER in VARCHAR format. Column value is not restricted to nine digit DUNS number.
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The denormalization of the DATE_OF_BIRTH in HZ_PERSON_PROFILES.
EmailAddress	string	The email address associated with the record.
EmployeesTotal	decimal	The total number of employees.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
FormattedAddress	string	The formatted address of the contact.
FormattedPhoneNumber	string	The formatted phone number.
Gender	string	The denormalization of the GENDER in HZ_PERSON_PROFILES.
GroupType	string	The lookup for the group type.
HQBranchInd	string	The status of the site. Identifies if the location is the headquarters, a branch, or a single location.
HomeCountry	string	The home country associated with the party.
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LanguageName	string	The standard name for a language.

Name	Type	Description
LastUpdateDate1	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin1	string	The login of the user who last updated the record.
LastUpdatedBy1	string	The user who last updated the record.
MaritalStatus	string	The denormalization of the MARITAL_STATUS in HZ_PERSON_PROFILES.
MissionStatement	string	The corporate charter of the organization.
NextFyPotentialRevenue	decimal	The potential revenue of the organization for the next fiscal year.
OrigSystemReference	string	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PersonAcademicTitle	string	An academic title that is part of the name of a person, such as Dr. John Smith.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	Used to specify the last name prefix such as fon, van, and so on for a person. It is used in the same way the new field PERSON_LAST_NAME_PREFIX in HZ_PERSON_PROFILES is used. Corresponds to the field Last Name Prefix in HL7.

Name	Type	Description
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	Indicates the place in a family structure. For example, in Tom Jones III, III is the suffix.
PersonPreNameAdjunct	string	The salutary introduction such as Mr. or Herr.
PersonPreviousLastName	string	The previous last or surname of the person.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PostalCode	string	The postal code element of the address.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryEmailContactPTId	long	The key to primary e-mail contact point.
PrimaryPhoneAreaCode	string	The area code within a country code.

Name	Type	Description
PrimaryPhoneContactPTId	long	The key to the primary contact point.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURLContactPTId	long	The key to the primary URL contact point.
Province	string	The name of the province.
SICCode	string	The standard industry classification (SIC) code.
SICCodeType	string	The version of standard industry classification (SIC) code.
Salutation	string	The phrase used to address a party in any correspondence.
State	string	The name of the state.
Status1	string	The party status indicator.
TradingPartnerIdentifier	string	One column to store the FSIO related trading partner codes. This column stores alpha numeric values. The column also addresses Fed vs. Non-Fed attribute requirement.
URL	string	The destination URL associated with a specific Google AdWords ad.
UserGUID	string	Stores the light weight user Global Unique ID. Light weight users are defined in the Extended Security (XS) system. Foreign key to FND_USER.

Name	Type	Description
YearEstablished	int	The year when the organization began doing business.

Partner Type

The information about the partner type.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerTypeDimensionMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributePk1	string	This is the ATTRIBUTE PK1 column.
AttributePk2	string	This is the ATTRIBUTE PK2 column.
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.

Name	Type	Description
DimSubtypeCode	string	This attribute is not used.
DimensionCode	string	This will contain the string 'SChnl' to indicate Partner Type.
DimensionMemberName	string	Name of dimension member.
DimensionMemberNameBackup	string	The name of the dimension remember this record refers to. This is stored in case the dimension member was removed and the user still needs to know the name of the item that was removed.
IntegrationId	string	The reference to the actual dimension member item.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
OwnerId	long	Partner Party Id of the Partner.
OwnerType	string	The type of entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
PartitionTypeCode	string	The type of partition in which the data is stored.
PartnerDimMembersId	long	This column is the private key of this table. • Primary Key
PartnerTypeCode	string	The partner type code for partner.

Name	Type	Description
PartnerTypeName	string	The name of the partner type, such as Value Added Reseller.
TerrDimMemberId	long	Key data for the territory dimension.
TerrDimPartitionId	long	Primary key.
TypeCode	string	Type of the partition.

Phone

The phone number associated with a trading community member. For example, the phone number for Oracle Corporation is 650-506-6000.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Phone

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Marketing Response*
Contained by	*Partner*
Contained by	*Household*
Contained by	*Contact Address*
Contained by	*Trading Community Organization Details*

Relationship Type	Object or Service
Contained by	*Address*
Contained by	*Relationship*

Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.

Name	Type	Description
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FormattedPhoneNumber	string	The formatted phone number.
LastContactDtTime	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date and time of last contact placed to this contact point.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.

Name	Type	Description
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PagerTypeCode	string	The PAGER_TYPE_CODE column stores the lookup code for the type of pager. The type of pager determines how the page is received. For example, tone, number, alphanumeric or two-way alphanumeric.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PhoneAreaCode	string	The area code prefix for the phone number.
PhoneCallingCalendar	string	The name or code for a calling calendar used with this telephone number. This attribute is no longer used in Fusion applications.
PhoneCountryCode	string	The country code prefix for the phone number.
PhoneExtension	string	The additional number addressed after initial connection to an internal telephone system.
PhoneInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community phone.
PhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound, or outbound.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.

Name	Type	Description
RawPhoneNumber	string	The unformatted telephone number.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TimezoneCode	string	The foreign key to FND_TIMEZONES_B.TIMEZONE_CODE.
TransposedPhoneNumber	string	This column stores the concatenation of PHONE_COUNTRY_CODE, PHONE_AREA_CODE, and PHONE_NUMBER in reverse order. For example, if PHONE_COUNTRY_CODE=1, PHONE_AREA_CODE=650 and PHONE_NUMBER=5065747, this column stores 74756050561. This column is used for building an index to search for any combination of the above three columns.

Program Enrollment Participants

The partners enrolled in a specific partner program. A partner can enroll in multiple programs.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerProgram/enrollment/partnerProgramEnrollmentService/}ProgramEnrollmentParticipants

Logical Business Objects

- CRM : Partner Management : Partner Program Enrollment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Program Enrollments*

Relationship Type	Object or Service
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ParticipantPartyId	long	Party Id of the participant enrolled into a program.
PartyNumber	string	The unique identification number for the party.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PrgmEnrlmtPrtcptsId	long	Enrollment Participant Id - Primary Key. • Primary Key
ProgramEnrollmentId	long	Unique identifier of program enrollment.

Program Enrollments

The programs into which a partner is enrolled. A partner can enroll in multiple programs.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerProgram/enrollment/partnerProgramEnrollmentService/}ProgramEnrollments

Logical Business Objects

- CRM : Partner Management : Partner Program Enrollment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Note*
Contains	*Program Enrollment Participants*
Contains	*Partner Programs*
Contains	*Partner*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveEnrollment	string	The status of enrollment. Possible values are active or inactive.
ApprovalDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date on which enrollment is approved.
BusinessUnit	string	The Business Unit identifier.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.

Name	Type	Description
Country	string	The name of the country.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
EnrollmentApproverId	long	The numeric identifier for the Program Manager who has access to approve the enrollment.
EnrollmentLanguage	string	Language that the translation is in.
EnrollmentNumber	string	A unique number generated for each program enrollment.
EnrollmentParticipants	*Program Enrollment Participants*	A unique identifier of the partners enrolled into program.
EnrollmentStatus	string	Status of the enrollment. Possible values are draft, pending, approved, rejected, terminated, renewed.
ExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date on which enrollment is expiring.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdatedBy	string	The user who last updated the record.
Notes	*Note*	Notes associated with Program Enrollment.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
PartnerCompanyNumber	string	Public Unique Identifier of Partner company associated to the Program Enrollments.
PartnerParty	*Partner*	The Partner details.
PartnerPartyId	long	Unique identifier of a partner.
PartnerPartyName	string	The partner name.
PartnerProgram	*Partner Programs*	The partner program details for the enrollment.
PartnerProgramId	long	Unique identifier of a partner program.
ProgramDescription	string	Text describing the program.
ProgramEnrollmentId	long	Unique identifier of a partner program enrollment. • Primary Key
ProgramName	string	Name of the partner program.
ProgramNumber	string	A unique number generated for each program.
RemainingDays	string	Number of days left for expiry of the enrollment.
RenewedEnrollment	string	The status of enrollment which is of type renewal. Possible values are new or renewal.
RenewedFromId	long	Unique identifier of the enrollment from which the renewal enrollment is copied.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Term	string	Duration for which the enrollment is valid. Possible values are 1 year, 2 year, 3 year.
TerminationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date on which enrollment is terminated.

Source System Reference

The name of external source system where the trading community information is imported from.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}OriginalSystemReference

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OldOrigSystemReference	string	The old source system reference that is being replaced.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OrigSystemReferenceId	long	The unique identifier for original system reference. • Primary Key
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
SourceSystemRefInformation	*Trading Community Original System Mapping Identifier Additional Information*	The source system reference information.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Telex

The telex number information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Telex

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*

Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Relationship Type	Object or Service
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.

Name	Type	Description
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary telex of the associated object. If the value is True, then this is the primary telex. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TelexNumber	string	The telex reference number (usually a telephone number) of the organization.

Trading Community Address Additional Information

The address information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/partySite/}PartySiteInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contact Address*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Address Purpose

The purpose of an address, such as Business, Home, or Ship To.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartySiteUse

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Contact Address*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Relationship Type	Object or Service
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BeginDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date at the start of the date range within which the row is active.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
IntegrationKey	string	The integration key is not used.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PartySiteUseId	long	The unique identifier of the party site used. • Primary Key
PrimaryPerType	string	Indicates if this is the primary use for the site. Y stands for the primary site and N stands for all other sites.
RequestId	long	A system-generated read-only attribute used by the application framework.
SiteUseType	string	The site use type associated with the address.
Status	string	The status of the record.

Trading Community Contact Point Additional Information

The contact point for a trading community member like phone or e-mail. For example 650-506-6000 is the phone number for Oracle Corporation, john.doe@example.com is the e-mail address for John Doe.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/contactPoint/}ContactPointInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the

Name	Type	Description
		start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N stands for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Name	Type	Description
URL	string	The destination URL associated with a specific Google AdWords ad.
WebInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community Web.
WebType	string	The prefix class to a Web address. Typically, this is either FTP or HTTP.

Partner Public Profile Attachment

Service to operate on partner administrators for uploading attachments such as files and URLs while setting up a public profile. These documents become available for download from the partner public profile.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/partnerFinder/publicModel/}PartnerFinderAttachmentService

Service WSDL URL: https://servername/crmService/PartnerFinderAttachmentService?WSDL

Operations

- *getAttachmentStream*
- *getAttachmentURL*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

getAttachmentStream

Queries attachments for a given entity name, category name(s), title and organization party ID. It also returns a BlobDomain containing the document content stream.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
stEntityName	string	An attachment entity name to be queried. Must be ZPM_PARTNER_PROFILE.

Element Name	Type	Description
stCategoryName	string	An attachment category name to be queried. Must be either ZPM_PARTNER_FINDER_ATTACHMENT or ZPM_PARTNER_FINDER_LOGO.
stPk1Value	string	A string containing PARTY_ID of the organization, to be part of the attachments query.
stPk2Value	string	The string forms part of the attachments query. This value can be null.
stPk3Value	string	The string forms part of the attachments query. This value can be null.
stPk4Value	string	The string forms part of the attachments query. This value can be null.
stPk5Value	string	The string forms part of the attachments query. This value can be null.
Title	string	The file name of the attachment to be queried for the method getAttachmentStream.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The parameter returns a oracle.jbo.domain.BlobDomain object encapsulating the stream containing the document content.

getAttachmentURL

Queries the attachment for a given entity name, category name(s), and organization party ID. It also returns a URL to the document.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
stEntityName	string	An attachment entity name to be queried. Must be ZPM_PARTNER_PROFILE.

Element Name	Type	Description
stCategoryName	string	An attachment category name to be queried. Must be either ZPM_PARTNER_FINDER_ATTACHMENT or ZPM_PARTNER_FINDER_LOGO.
stPk1Value	string	A string containing PARTY_ID of the organization, to be part of the attachments query.
stPk2Value	string	The string forms part of the attachments query. This value can be null.
stPk3Value	string	The string forms part of the attachments query. This value can be null.
stPk4Value	string	The string forms part of the attachments query. This value can be null.
stPk5Value	string	The string forms part of the attachments query. This value can be null.

Response Payload

Element Name	Type	Description
result	string	The string containing URL of the document for the method getAttachmentURL.

getDfltObjAttrHints

Retrieves user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.

Element Name	Type	Description
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

Gets the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getAttachmentStream	ZPM_VIEW_PARTNER_DASHBOARD_PRIV	View Partner Dashboard	Allows viewing of the Partner dashboard.
getAttachmentStream	CRM_ANONYMOUS_SELFREGISTER_PRIV_PRIV	Create Self Service Partner Registration	Allows access to register Partner Company and also request for username
getAttachmentStream	ZPM_CREATE_PARTNER_USER_PRIV	Create Partner User	Allows provisioning of partner members to sign into the vendor partner network.
getAttachmentURL	ZPM_VIEW_PARTNER_DASHBOARD_PRIV	View Partner Dashboard	Allows viewing of the Partner dashboard.
getAttachmentURL	CRM_ANONYMOUS_SELFREGISTER_PRIV_PRIV	Create Self Service Partner Registration	Allows access to register Partner Company and also request for username
getAttachmentURL	ZPM_CREATE_PARTNER_USER_PRIV	Create Partner User	Allows provisioning of partner members to sign into the vendor partner network.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description

Partner Public Profile Search

Service to search partner public profile records by anonymous or authenticated users. This service uses Enterprise Crawl and Search Framework (ECSF) framework to search for the partner public profile records that are crawled and indexed by Oracle Secure Enterprise Search (SES) engine.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/partnerFinder/publicModel/}PartnerFinderService

Service WSDL URL: https://servername/crmService/PartnerFinderService?WSDL

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Partner Public Profile Search Filters*

Relationship Type	Object or Service
Handles	*Partner Public Profile Search Results*

Operations

- *doPartnerSearch*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

doPartnerSearch

Searches for partner public profile records. This operation takes search keywords, a partner public profile search filters SDO, start Index, the number of documents requested and the language as parameters and returns a partner public profile search results SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
keywords	string	The keyword to be used for searching partner public profile records.
partnerSearchFilterPVORowImplList	*Partner Public Profile Search Filters*	A list containing PartnerSearchFilter SDO objects that contain filters to be applied for the search.
filterConnector	string	The logical connectors to be applied on the keyword which can be ANY, ALL, NONE, or EXACT.
startIndex	int	The start index of the records to be returned in the search result. This is provided for supporting page navigation.
docsRequested	int	The number of partner public profile records requested. This is provided for supporting page navigation.
queryLang	string	The string containing language information for the method doPartnerSearch.

Response Payload

Element Name	Type	Description
result	*Partner Public Profile Search Results*	The parameter returns a partner public profile search results SDO.

getDfltObjAttrHints

Retrieves user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

Gets the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
doPartnerSearch	ZPM_VIEW_PARTNER_DASHBOARD_PRIV	View Partner Dashboard	Allows viewing of the Partner dashboard.
doPartnerSearch	CRM_ANONYMOUS_SELFREGISTER_PRIV_PRIV	Create Self Service Partner Registration	Allows access to register Partner Company and also request for username
doPartnerSearch	ZPM_CREATE_PARTNER_USER_PRIV	Create Partner User	Allows provisioning of partner members to sign into the vendor partner network.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZPM_CREATE_PARTNER_USER_PRIV	ORA_ZPM_PARTNER_ACCOUNT_MAINTENANCE_DUTY	Partner Account Maintenance	Maintains a partner account, including managing members and partner profile information. This role is for members of the partner account team and their management chain.

Partner Public Profile Search Filters

The object used to pass the filter criteria to the partner public profile search service.

QName: {http://xmlns.oracle.com/apps/partnerFinder/publicModel/publicView/}PartnerSearchFilterSDO

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Partner Public Profile Search*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
attributeName	string	The name of the Filter to be applied on the Search. It can be one of "COUNTRY", "STATE","CITY","POSTAL_CODE", "GEOGRAPHIESSERVED_XIENT_1", "PARTNEREXPERTISEMEANING_XIENT_1", "DIMENSION_MEMBER_NAME", "PRODUCTSPECIALITIES_XIENT_1", "PARTNER_LEVEL", "YEAR_ESTABLISHED". • Primary Key
attributeVal	string	A comma separated list of filter values.
operatorType	string	The operator type to be used with the filter. • Primary Key

Partner Public Profile Search Results

The object used to return results from the partner public profile search service.

QName: {http://xmlns.oracle.com/apps/partnerFinder/publicModel/}PartnerSearchResultElementSDO

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Partner Public Profile Search*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
description	string	A partner search result description.
lastModified	string	The partner public profile last modified date.
score	string	A partner search result score.
snippet	string	A partner search result snippet.

Name	Type	Description
title	string	A partner search result title.
url	string	A partner URL in a partner search result. • Primary Key

Partner Service

Service to operate on partner information using a partner identifier. The supported operations are get and update. A partner is defined as an external organization that works with a vendor as an agent or a reseller.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerService

getProfileOptionValue

A web service method which returns the profile option value for given profile option.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
profileOption	string	The parameter of the profile option category for the method getProfileOptionValue.

Response Payload

Element Name	Type	Description
result	string	The parameter returns the profile option value for the method getProfileOptionValue.

activatePartner

A web service method which activates the registered partner.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyId	long	The parameter for the party ID of a partner account.

Response Payload

Element Name	Type	Description
result	*Partner*	The parameter returns the result of the operation which includes the successfully updated partner and a list of warnings or informational messages.

approvePartner

A web service method which approves the prospective partner.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyId	long	A party id of a partner account for the method approvePartner.

Response Payload

Element Name	Type	Description
result	*Partner*	The result of the operation includes successfully updated partner and/or a list of warnings or informational messages.

terminatePartner

A web service method which terminates the registered partner.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyId	long	A party id of a partner account for the method terminatePartner.

Response Payload

Element Name	Type	Description
result	*Partner*	The result of the operation includes successfully updated partner and/or a list of warnings or informational messages.

provisionResourceAsUser

Provisions the resource as a user and creates LDAP request and roles.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerPartyId	long	The party ID of the partner for the method provisionResourceAsUser.
partnerMemberId	long	The party ID of the member for the method provisionResourceAsUser.
autoProvisionRoles	boolean	The parameter returns true if role provisioning is required.

Response Payload

Element Name	Type	Description
result	long	The parameter returns the partnerMemberId if resource creation is successful.

provisionPartnerMemberAsResource

A web service method which provisions the partner member as a resource.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerPartyId	long	The party ID of the partner for the method provisionPartnerMemberAsResource.
partnerMemberId	long	The party ID of the member for the method provisionPartnerMemberAsResource.

Element Name	Type	Description
roleName	string	The parameter for the role to be assigned to the member.
mgrId	long	The ID of the manager for the method provisionPartnerMemberAsResource.
orgName	string	The parameter is required when the role is a managerial role.

Response Payload

Element Name	Type	Description
result	long	The parameter returns the partnerMemberId if resource creation is successful.

getRootResourceIdForthePartner

A web service method which returns the root resource ID for a partner.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerPartyId	long	The party ID of the partner for the method getRootResourceIdForthePartner.

Response Payload

Element Name	Type	Description
result	long	The parameter returns the PartyId for the root resource.

deletePartnerWeb

A web service method which deletes web details for the partner.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerWeb	*Web*	A partner web object containing ContactPointId which needs to be deleted.

Response Payload

Element Name	Type	Description
result	void	The result of the operation includes a list of warnings or informational messages.

deletePartnerPhone

A web service method which deletes phone details for the partner.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerPhone	*Phone*	A partner phone object containing ContactPointId which needs to be deleted.

Response Payload

Element Name	Type	Description
result	void	The result of the operation includes a list of warnings or informational messages.

deletePartnerEmail

A web service method which deletes email details for the partner.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerEmail	*E-Mail*	A partner email object containing ContactPointId which needs to be deleted.

Response Payload

Element Name	Type	Description
result	void	The result of the operation includes list of warnings or informational messages.

convertToPartner

A web service method which converts existing organization to partner.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
orgPartyId	long	The organization party ID parameter is required for newly converted partner.

Response Payload

Element Name	Type	Description
result	*Partner*	The result of the operation includes successfully updated partner and/or a list of warnings or informational messages.

updateResourceManager

A web service method which updates the manager for the resource.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerPartyId	long	The party ID of the partner for the method updateResourceManager.
partnerMemberId	long	The party ID of the member for the method updateResourceManager.
managerPartyId	long	The party ID of the manager for the method updateResourceManager.

Response Payload

Element Name	Type	Description
result	long	The parameter returns the partnerMemberId if resource creation is successful.

updateResourceOrganization

A web service method which updates the organization for the resource if the user is a manager.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerPartyId	long	The party ID of the partner for the method updateResourceOrganization.
partnerMemberId	long	The party ID of the member for the method updateResourceOrganization.
orgName	string	The parameter provides the organization name for the method updateResourceOrganization.

Response Payload

Element Name	Type	Description
result	long	The parameter returns the partnerMemberId if resource creation is successful.

deletePartnerMember

A web service method which deletes a partner member for the partner.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerPartyId	long	The party ID of the partner for the method deletePartnerMember.

Element Name	Type	Description
partnerMemberId	long	The party ID of the member for the method deletePartnerMember.

Response Payload

Element Name	Type	Description
result	long	The parameter returns the partnerMemberId if resource creation is successful.

createPartner

A web service method which creates partner with primary location details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
orgParty	*Trading Community Organization Details*	An organization party object which contains organization details like Organization Name, Org Email, and so on.
primaryLocation	*Location Details*	A location object which contains address details of partner.
partner	*Partner*	A partner object which contains the partner profile attributes and their corresponding new values that the partner services use.

Response Payload

Element Name	Type	Description
result	*Partner*	The result of the operation includes successfully created partner and/or a list of warnings or informational messages.

makeContactPrimary

A web service method which makes the specified contact as primary for partner.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerPartyId	long	The party ID of the partner for the method makeContactPrimary.
partnerMemberId	long	The party ID of the member for the method makeContactPrimary.

Response Payload

Element Name	Type	Description
result	long	The parameter returns the party ID of the primary partner contact.

setPartnerAccountOwner

A web service method which sets the partner account owner for the partner.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerPartyId	long	The party ID of the partner for the method setPartnerAccountOwner.
resourceId	long	The resource ID of the partner contact for the method setPartnerAccountOwner.

Response Payload

Element Name	Type	Description
result	void	The parameter is not used for the method setPartnerAccountOwner.

getPartnerAdministratorUserName

Retrieves the administrator name for the partner.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerId	long	The ID of the partner for the method getPartnerAdministratorUserName.

Response Payload

Element Name	Type	Description
result	string	The user name of the partner administrators of the partner company.

raisePartnerPublicEvent

Raises partner public events based on the TCA Events like CreateOrganization, UpdateOrganization, or UpdatePerson.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyId	long	The party ID of either organization or person party record.
eventType	string	The parameter for the event type which can be CreateOrganization, UpdateOrganization, or UpdatePerson.

Response Payload

Element Name	Type	Description
result	void	The parameter is not used for the method raisePartnerPublicEvent.

provisionRootResource

Provision partner member as a root of the partner organization if no root exists for the partner

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerPartyId	long	PartyId of the partner
partnerMemberPartyId	long	partyId of the partner member
roleCode	string	Role Code to be assigned to the member

Response Payload

Element Name	Type	Description
result	long	partnerMemberPartyId if root resource creation is successful

getPartner

Queries partner profile information using a party ID of the partner account.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyId	long	A party ID of a partner account for the method getPartner.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerResult	The parameter returns the partner that matches the inbound key attributes.

updatePartner

Updates partner profile information. This operation takes a partner object that contains party ID of a partner account and new partner profile values to update.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partner	*Partner*	A partner object that contains party ID of a partner account that the partner service updates. This partner object also contains the partner profile attributes and their corresponding new values that the partner service uses for update.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerResult	The result of the operation includes successfully updated partner and/or a list of warnings or informational messages.

mergePartner

Updates partner profile information. This operation takes a partner object that contains party ID of a partner account and new partner profile values for update. You can add account resource, contact points like email, phone, web, partner dimensions like geography, industry served, product specialty, and so on.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partner	*Partner*	A partner object that contains party ID of a partner account that the partner service updates. This partner object also contains the partner profile attributes and their corresponding new values that the partner service uses for update.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerResult	The result of the operation includes successfully updated partner and/or a list of warnings or informational messages.

findPartner

Queries a group of partners based on filter criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The parameter contains the criteria based on which partner search is performed.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The filtering condition to separate out the set of records.

Response Payload

Element Name	Type	Description
result	*Partner*	Returns the list of partner matching the criteria.

deletePartnerGeographyServed

Deletes geography served dimension for the partner.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerGeographyServed	*Geographies Served*	A partner geography served dimension object containing ID of the geography dimension which needs to be deleted.

Response Payload

Element Name	Type	Description
result	void	The result of the operation includes a list of warnings or informational messages.

deletePartnerIndustryServed

Deletes industry served dimension for the partner.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerIndustryServed	*Industries Served*	A partner industry served dimension object for the partner which needs to be deleted.

Response Payload

Element Name	Type	Description
result	void	The result of the operation includes a list of warnings or informational messages.

deletePartnerProductSpeciality

Deletes product specialty dimension for the partner.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerProductSpeciality	*Focus Areas*	A partner product specialty object containing ID of the product dimension which needs to be deleted.

Response Payload

Element Name	Type	Description
result	void	The result of the operation includes a list of warnings or informational messages.

deletePartnerCertification

Deletes certification for the partner.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerCertification	*Partner Certification*	A partner certification object containing PartnerMultivalLovId which has to deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the operation includes a list of warnings or informational messages.

deletePartnerExpertises

Deletes expertise dimension for the partner.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerExpertises	*Expertise*	A partner expertise object containing party ID of partner for whom partner service creates expertise and expertise code like Computer Hardware and so on.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the operation includes a list of warnings or informational messages.

deletePartnerAccountResource

Deletes resource from partner account team.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerAccountResource	*Partner Account Team*	A partner account resource object containing PartnerAccountResourceId which has to deleted. Note: Account Director cannot be deleted from this service operation.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the operation includes a list of warnings or informational messages.

deletePartnerType

Deletes partner type dimension for the partner.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerType	*Partner Type*	The parameter has partner type dimension for the partner.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the operation includes a list of warnings or informational messages.

getPartnerContact

Use this operation to query Partner Contact information using a party id of the Person Record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyId	long	PartyId of Partner Contact Person Record
relationshipRecId	long	Relationship Record Id of Relationship Record Created Between Partner and Contact

Response Payload

Element Name	Type	Description
result	*Partner Members*	Partner Contact that matches the inbound key attributes.

Element Name	Type	Description

updatePartnerContact

Use this operation to update partner Contact information. This operation takes a partner Contact object that contains Party id of a partner Contact and new partner Contact Attribute values for update.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerContact	*Partner Members*	A partner Contact object that contains party id of a partner Contact. This partner Contact object also contains the Partner Contact attributes and their corresponding new values that the Partner Contact service uses for update.

Response Payload

Element Name	Type	Description
result	*Partner Members*	Result of the operation includes the successfully updated Partner Contact and/or a list of warnings or informational messages.

mergePartnerContact

Use this operation to update Partner Contact information. This operation takes a Partner Contact object that contains party id of a Partner Contact and new Partner Contact values for update.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partnerContact	*Partner Members*	A partner Contact object that contains party id of a Partner Contact. This partner Contact object also contains the Partner Contact attributes and their corresponding new values that the Partner Contact service uses for update.

Response Payload

Element Name	Type	Description
result	*Partner Members*	Result of the operation includes the successfully updated Partner Contact and/or a list of warnings or informational messages.

findPartnerContact

Queries a group of Partner Contacts based on filter criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	FindCriteria Object containing the Criteria based on which Partner Contact Serach is performed
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	FindControl object

Response Payload

Element Name	Type	Description
result	*Partner Members*	Returns List of Partner Contact matching the creteria.

getDfltObjAttrHints

Retrieves user interface hints, such as the service data object label and object attribute labels for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.

Element Name	Type	Description
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

Gets the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
deletePartnerExpertises	ZPM_EDIT_PARTNER_PROFILE_AS_PARTNER_FUNCTION_PRIV	Update Partner Profile as Partner Administrator Function	Allows function security for a Partner Administrator to maintain partner profile.
deletePartnerExpertises	ZPM_EDIT_PARTNER_PROFILE_PRIV	Update Partner Profile	Allows managing of partner profiles.
setPartnerAccountOwner	ZPM_EDIT_PARTNER_PROFILE_PRIV	Update Partner Profile	Allows managing of partner profiles.
getPartnerAdministratorUserName	ZPM_VIEW_PARTNER_PROFILE_PRIV	View Partner Profile	Allows viewing the partner profile.
getPartnerAdministratorUserName	ZPM_VIEW_PARTNER_PRIV	View Partner	Allows viewing a list of partners from the partner work area.
getPartnerContact	ZPM_EDIT_PARTNER_PROFILE_AS_PARTNER_FUNCTION_PRIV	Update Partner Profile as Partner Administrator Function	Allows function security for a Partner Administrator to maintain partner profile.
getPartnerContact	ZPM_VIEW_PARTNER_PROFILE_PRIV	View Partner Profile	Allows viewing the partner profile.
getPartnerContact	ZPM_EDIT_PARTNER_PROFILE_PRIV	Update Partner Profile	Allows managing of partner profiles.
getPartnerContact	ZPM_VIEW_PARTNER_PROFILE_AS_PARTNER_FUNCTION_PRIV	View Partner Profile as Partner Administrator Function	Allows function security to view the partner profile by a Partner Administrator.
deletePartnerType	ZPM_EDIT_PARTNER_PROFILE_PRIV	Update Partner Profile	Allows managing of partner profiles.
approvePartner	ZPM_EDIT_PARTNER_PROFILE_PRIV	Update Partner Profile	Allows managing of partner profiles.
mergePartnerContact	ZPM_EDIT_PARTNER_PROFILE_AS_PARTNER_FUNCTION_PRIV	Update Partner Profile as Partner Administrator Function	Allows function security for a Partner Administrator to maintain partner profile.

Operation Name	Privilege Code	Privilege Name	Privilege Description
mergePartnerContact	ZPM_EDIT_PARTNER_PROFILE_PRIV	Update Partner Profile	Allows managing of partner profiles.
findPartnerContact	ZPM_VIEW_PARTNER_PROFILE_PRIV	View Partner Profile	Allows viewing the partner profile.
findPartnerContact	ZPM_VIEW_PARTNER_PROFILE_AS_PARTNER_FUNCTION_PRIV	View Partner Profile as Partner Administrator Function	Allows function security to view the partner profile by a Partner Administrator.
mergePartner	ZPM_EDIT_PARTNER_PROFILE_AS_PARTNER_FUNCTION_PRIV	Update Partner Profile as Partner Administrator Function	Allows function security for a Partner Administrator to maintain partner profile.
mergePartner	ZPM_EDIT_PARTNER_PROFILE_PRIV	Update Partner Profile	Allows managing of partner profiles.
updatePartnerContact	ZPM_EDIT_PARTNER_PROFILE_AS_PARTNER_FUNCTION_PRIV	Update Partner Profile as Partner Administrator Function	Allows function security for a Partner Administrator to maintain partner profile.
updatePartnerContact	ZPM_EDIT_PARTNER_PROFILE_PRIV	Update Partner Profile	Allows managing of partner profiles.
deletePartnerAccountResource	ZPM_EDIT_PARTNER_PROFILE_PRIV	Update Partner Profile	Allows managing of partner profiles.
deletePartnerCertification	ZPM_EDIT_PARTNER_PROFILE_PRIV	Update Partner Profile	Allows managing of partner profiles.
deletePartnerProductSpeciality	ZPM_EDIT_PARTNER_PROFILE_AS_PARTNER_FUNCTION_PRIV	Update Partner Profile as Partner Administrator Function	Allows function security for a Partner Administrator to maintain partner profile.
deletePartnerProductSpeciality	ZPM_EDIT_PARTNER_PROFILE_PRIV	Update Partner Profile	Allows managing of partner profiles.
deletePartnerGeographyServed	ZPM_EDIT_PARTNER_PROFILE_AS_PARTNER_FUNCTION_PRIV	Update Partner Profile as Partner Administrator Function	Allows function security for a Partner Administrator to maintain partner profile.
deletePartnerGeographyServed	ZPM_EDIT_PARTNER_PROFILE_PRIV	Update Partner Profile	Allows managing of partner profiles.
getProfileOptionValue	ZPM_VIEW_PARTNER_PROFILE_PRIV	View Partner Profile	Allows viewing the partner profile.

Operation Name	Privilege Code	Privilege Name	Privilege Description
getProfileOptionValue	ZPM_VIEW_PARTNER_PRIV	View Partner	Allows viewing a list of partners from the partner work area.
deletePartnerWeb	ZPM_EDIT_PARTNER_PROFILE_AS_PARTNER_FUNCTION_PRIV	Update Partner Profile as Partner Administrator Function	Allows function security for a Partner Administrator to maintain partner profile.
deletePartnerWeb	ZPM_EDIT_PARTNER_PROFILE_PRIV	Update Partner Profile	Allows managing of partner profiles.
makeContactPrimary	ZPM_EDIT_PARTNER_PROFILE_AS_PARTNER_FUNCTION_PRIV	Update Partner Profile as Partner Administrator Function	Allows function security for a Partner Administrator to maintain partner profile.
makeContactPrimary	ZPM_EDIT_PARTNER_PROFILE_PRIV	Update Partner Profile	Allows managing of partner profiles.
provisionRootResource	ZPM_EDIT_PARTNER_PROFILE_AS_PARTNER_FUNCTION_PRIV	Update Partner Profile as Partner Administrator Function	Allows function security for a Partner Administrator to maintain partner profile.
provisionRootResource	ZPM_EDIT_PARTNER_PROFILE_PRIV	Update Partner Profile	Allows managing of partner profiles.
