Account

An organization account and its profile information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}OrganizationProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Organization Profile Additional Information*
Contained by	*Sales Account*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*

Relationship Type	Object or Service
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Alias	string	The organization alias name.
AnalysisFy	string	The fiscal year that the financial information is based on.
BankCode	string	Identifies the bank in several countries, typically for regulatory purposes.
BankOrBranchNumber	string	Stores bank number for banks and branch number for bank branches. Primarily stores ABA number for US bank branches.
BranchCode	string	Identifies the bank branch in several countries, typically for regulatory purposes.
BranchFlag	boolean	Indicates if this is a branch location. If the value is True, then this is a branch location.
BusinessReport	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	Dun and Bradstreet business information report.
BusinessScope	string	The physical class of business in which a business participates. For example, local, national, or international.

Name	Type	Description
CeoName	string	The name of the chief executive officer. It is the denormalized value of the CEO_NAME in HZ_ORGANIZATION_PROFILES.
CeoTitle	string	The formal title of the chief executive officer.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
Comments	string	The comments for the record.
CongDistCode	string	The U.S. Congressional district code for the account.
ContentSourceNumber	string	The content source number is not used.
ControlYr	decimal	The year when current ownership gained control of the organization.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CorporationClass	string	The taxation classification for corporation entities such as Chapter S in the US.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CurrentFiscalYearPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its current fiscal year.

Name	Type	Description
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DataCloudStatus	string	Specifies the enrichment status of the person.
DbRating	string	The Dun & Bradstreet credit rating.
Disadv8aInd	string	Indicates whether the organization is considered disadvantaged by the US government under Title 8A. If the value is Yes, the organization is considered disadvantaged under Title 8A. The default value is No.
DisplayedDUNSPartyIdentifier	long	Dun and Bradstreet does not maintain data for the branch offices of companies that are located beyond North America. Data is only maintained for the company headquarters. If the data pertains only to company headquarters, the headquarters PARTY_ID is stored. If the data pertains to a branch office, the branch PARTY_ID is stored.
DoNotConfuseWith	string	Indicates existence of similarly named businesses.
DomesticUltimateDUNSNumberC	string	DUNS Number for the Domestic Ultimate, which is the highest family member in the same country as the business entity. A subject can be its own Domestic Ultimate.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveLatestChange	string	The effective latest change is not used.
EffectiveSequence	int	The effective sequence is not used.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
EmployeesAtPrimaryAddress	string	The number of employees at the referenced address.
EmployeesAtPrimaryAddressEstimation	string	Indicates the calculation of employees at the primary address as estimated.

Name	Type	Description
EmployeesAtPrimaryAddressMinimum	string	Indicates the calculation of employees at the primary address as minimum.
EmployeesAtPrimaryAddressText	string	The number of employees at the referenced address that cannot be mapped to a number.
EmployeesTotal	decimal	The total number of employees.
EnquiryDUNS	string	The identifier used to query the Dun and Bradstreet data. If a location is a branch, then in some countries the headquarters DUNS number is used to do the query. Otherwise it is the same as the DUNS number.
ExportInd	string	Indicates whether the organization is an exporter. If the value is Y, then the organization is an exporter. The default value is N.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
GlobalUltimateDUNSNumberC	string	DUNS Number for the Global Ultimate, which is the highest family member in the same country as the business entity as you proceed further on this branch of the tree. A case can be its own ultimate.
GrowthStrategyDescription	string	The description of the growth strategy.
HQBranchIndicator	string	The status of this site, such as HQ, a branch, or a single location. A list of accepted values are defined in the lookup type HQ_BRANCH_IND.
HomeCountry	string	The home country associated with the party.
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.

Name	Type	Description
ImportInd	string	Indicates whether the organization is an importer. If the value is Y, then the organization is an importer. The default value is N.
IncorpYear	int	The year that the business was formally incorporated.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LaborSurplusInd	string	Indicates whether the organization operates in an area with a labor surplus. If the value is Y, then the organization operates in an area with a labor surplus. The default value is N.
LastEnrichmentDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was last enriched in DaaS.
LastSourceUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated by the source system.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdateSourceSystem	string	The source system that last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LegalStatus	string	The legal structure of the organization such as partnership, corporation, and so on.
LineOfBusiness	string	The type of business activities performed at this site.
LocalActivityCode	string	The local activity classification code.
LocalActivityCodeType	string	The local activity classification code type identifier.

Name	Type	Description
LocalBusIdenType	string	The most common business identifiers in a country such as Chamber of Commerce Number in Italy, Government Registration Number in Taiwan. A list of accepted values are defined in the lookup type LOCAL_BUS_IDEN_TYPE.
LocalBusIdentifier	string	The primary identifier assigned to a businesses by a government agency such as Chamber of Commerce, or other authority. It is often used by countries other than USA.
MinorityOwnedInd	string	Indicates whether the organization is primarily owned by ethnic or racial minorities. If the value is Y, then the organization is owned by ethnic or racial minorities. The default value is N.
MinorityOwnedType	string	The type of minority-owned firm.
MissionStatement	string	The corporate charter of organization in user-defined text format.
NextFyPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its next fiscal year.
OobInd	string	Indicates whether the organization is out of business. If the value is Y, then the organization is out of business. The default value is N.
OrgInformation	*Trading Community Organization Profile Additional Information*	The information of the organization.
OrganizationName	string	The name of the party when the party type is Organization.
OrganizationProfileId	long	The unique identifier of the organization profile. • Primary Key
OrganizationSize	string	Size of an organization based on revenue, number of employees, and so on.
OrganizationType	string	Not used in Fusion V1.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.

Name	Type	Description
ParentDUNSNumberC	string	Parent is a corporation that owns more than 50 percent capital stock of another corporation. The parent company can also be a subsidiary of another corporation. If the parent also has branches, then it is headquarters and also parent company. Headquarters is a business establishment that has branches or divisions reporting to it, and is financially responsible for those branches or divisions. If the headquarters has more than 50 percent of capital stock owned by another corporation, then it is also a subsidiary. If it owns more than 50 percent of capital stock of another corporation, then it is also a parent.
ParentSubInd	string	Indicates whether the organization is a parent or subsidiary.
PartyId	long	The unique identifier of the contact party.
PartyNumber	string	The unique identification number for the party.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PreferredContactEmailAddress	string	The e-mail address of the primary contact person of the organization.
PreferredContactFormattedPhoneNumber	string	The formatted phone number of the primary contact person of the organization.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactName	string	The name of the primary contact person of the organization.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.

Name	Type	Description
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryAddressCity	string	The city of the identifying address.
PrimaryAddressCountry	string	The country listed in the TERRITORY_CODE column of the FND_TERRITORY table for the identifying address.
PrimaryAddressCounty	string	The county of the Identifying address.
PrimaryAddressLine1	string	The first line of the identifying address.
PrimaryAddressLine2	string	The second line of the Identifying address.
PrimaryAddressLine3	string	The third line of the Identifying address.
PrimaryAddressLine4	string	The fourth line of the Identifying address.
PrimaryAddressPostalCode	string	The postal code of the identifying address.
PrimaryAddressProvince	string	The province of the identifying address.
PrimaryAddressState	string	The state of the Identifying address.
PrimaryEmailAddress	string	The e-mail address of the organization.
PrimaryEmailId	long	The primary e-mail contact point ID of the organization.
PrimaryFormattedPhoneNumber	string	The primary telephone number formatted in the local format of the organization.
PrimaryLanguage	string	The standard name for a language.
PrimaryPhoneAreaCode	string	The area code within a country code.

Name	Type	Description
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneId	long	The primary contact point phone ID of the organization.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURL	string	The primary uniform resource locator.
PrimaryWebId	long	The unique identifier of the primary uniform resource locator.
PrincipalName	string	The Name of the highest ranking person in the company.
PrincipalTitle	string	The title of the highest ranking person in the organization.
Pronunciation	string	The pronunciation of the organization.
PublicPrivateOwnershipFlag	boolean	Indicator to specify if the organization is privately owned. Y stands for a privately owned organization and N stands for a publicly owned organization.
RegistrationType	string	Indicates the registration type of the organization.
RentOwnInd	string	Indicates if this account owns or rents the place of business. A list of valid values for rent, own, and lease are defined in the lookup OWN_RENT_IND.
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
SICCode	string	The standard industry classification (SIC) code.
SICCodeType	string	The version of the standard industry classification (SIC) code.
SeblUserKeyLoc	string	The location of the account, optional part of the user primary key.
SmallBusInd	string	Indicates whether the organization is considered as a small business. If the value is Y, then the organization is considered as a small business. The default value is N.
Status	string	The status of the record.
StockSymbol	string	The corporate stock symbol such as ORCL.
SuffixOverriddenFlag	boolean	Indicator to specify that the attribute has Y if the suffix is overridden by user and N otherwise. Default value is N.
ThirdPartyFlag	boolean	Indicator that tracks if a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. Y stands for a third party relationship, N stands for a direct relationship. If Oracle Service is installed, the third party field in the Customers window is required.
TotalEmployeesEstimatedIndicator	string	Indicates if the employee total is estimated. The accepted values are defined in the lookup type TOTAL_EMP_EST_IND.
TotalEmployeesInd	string	Indicates if subsidiaries are included in the calculation of total employees. The accepted values are defined in the lookup type TOTAL_EMPLOYEES_INDICATOR.
TotalEmployeesMinimumIndicator	string	Indicates if the number is a minimum, maximum, or average number of total employees. The accepted values are defined in the lookup type TOTAL_EMP_MIN_IND.
TotalEmployeesText	string	The total number of employees in text format.
TotalPaymentAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total number of payment experiences.

Name	Type	Description
TradingPartnerIdentifier	string	One column to store the FSIO related trading partner codes. It stores alpha numeric values and also addresses the Fed vs. Non-Fed attribute requirement.
UniqueNameAlias	string	The name as identified by the users to internally recognize the organization.
UniqueNameSuffix	string	Identifies system generated or manually overridden suffix.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
WomanOwnedInd	string	Indicates whether the organization is primarily owned by women. If the value is Y, then the organization is primarily owned by women. The default value is N.
YearEstablished	int	The year when the organization began doing business.

Additional Account Name

An additional name of an organization, such as a legal name or a DBA name.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}AdditionalOrganizationName

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Relationship Type	Object or Service
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPreferredFlag	boolean	Indicator to specify the preferred additional name for the organization.
PartyId	long	The unique identifier of the contact party.

Name	Type	Description
PartyName	string	The name of the party.
PartyNameId	long	The unique identifier of the party name. It is primary Key and system generated. • Primary Key
PartyNameType	string	The type of the name. It is a value defined by the additional party name and identifier type entity. The party type must be consistent with the party type that the PARTY_NAME_TYPE can be applied to.
PreferredFlag	boolean	Indicator to specify the name as preferred name for this party within the name type. Possible values are Y and N. Default value is N.
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
TransliterationLang	string	Used to identify the language for the name. It is validated against FND_LANGUAGES.LANGUAGE_CODE. Default value is the Session Language.

Additional Identifier

An additional identifier of a trading community member, such as driver's license number or passport number.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}AdditionalPartyId

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Country	string	The name of the country.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.

Name	Type	Description
ExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The expiration date for the identifier. It may be NULL, and does not apply to all types of identifiers.
IssueDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date in which the Identifier was issued. It may be NULL and does not apply to all types of identifiers.
IssuingAuthorityName	string	The issuing authority name.
IssuingAuthorityPartyId	long	The unique identifier of the issuing authority.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party.
PartyIdentifierId	long	The unique identifier of the party identifier. • Primary Key
PartyIdentifierType	string	Indicates the type for the current identifier. The list of accepted values are defined in the lookup TYPE_CODE of HZ_NAME_AND_ID_TYPE_B. The party type should be consistent with the party type that the PARTY_IDENTIFIER_TYPE can be applied to.
PartyIdentifierType1	string	Indicates the type for the current identifier. The list of accepted values are defined in the lookup TYPE_CODE of HZ_NAME_AND_ID_TYPE_B. The party type should be consistent with the party type that the PARTY_IDENTIFIER_TYPE can be applied to.
PartyIdentifierValue	string	The value of the party identifier.
PartyName	string	The name of the party.
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
StateProvince	string	The province of the address.
StatusCode	string	The pre-defined code used to indicate the status.

Address

An address of a trading community member, such as Oracle Corporation is located at 500 Oracle Parkway, Redwood Shores, CA.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartySite

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Address1	string	The first line of the address.
Address2	string	The second line of the address.

Name	Type	Description
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AddressExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the location is no longer valid.
AddressLinesPhonetic	string	The phonetic or Kana representation of the Kanji address lines that are used in Japan.
AddressStyle	string	Style of the address.
Addressee	string	The information of the addressee.
City	string	The name of the city.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
ContactPreferenceExistFlag	boolean	Indicator to specify if the contact is primary contact for the party.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
Country	string	The name of the country.
Country1	string	The attribute country1 is not used.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.

Name	Type	Description
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DateValidated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address was last validated.
DoNotValidateFlag	boolean	Indicator to specify that a particular location is not eligible for address validation irrespective of the current validation.
Eft	*Electronic File Transfer*	The electronic file transfer information for the party.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
FormattedAddress	string	The formatted read-only address.
FormattedLocaleAddress	string	The formatted read-only local address.
FormattedMultilineAddress	string	The formatted multi line address of the party site.
GlobalLocationNumber	string	The global location number that uniquely identifies each location in a trading partners enterprise.
HouseType	string	Indicates the building type.
IdentifyingAddressFlag	boolean	Indicator to specify the identifying address for the party. Y stands for the indentifying site and N stands for sites that are not the indentifying site.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.

Name	Type	Description
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
Language	string	The operating language for the party site.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Latitude	decimal	The latitude of the party address.
LocationDirections	string	Directions to the location.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
LocationLanguage	string	The operating language for the locations.
Longitude	decimal	The longitude of the party address.
Mailstop	string	A user-defined code to indicate a mail drop point within the organization.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was last queried.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary address of the contact irrespective of the context. Y stands for primary address and N stands for all others.

Name	Type	Description
PartyId	long	The unique identifier of the contact party.
PartyNameDba	string	Stores the doing-business_as (DBA) party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameDivision	string	Stores the division party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameLegal	string	Stores the legal party name for a party site. This column is used to store FSIO related legal party name attribute.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
PartySiteInformation	*Trading Community Address Additional Information*	The party address information.
PartySiteName	string	The user-defined name for the site.
PartySiteNumber	string	The party site number of the address.
PartySiteType	string	Stores the party site type and is based on the lookup. Currently this is either null or one-time.
PartySiteUse	*Trading Community Address Purpose*	The information of the party address usage.
PartyUsageCode	string	The usage context of a party's contact point.
Phone	*Phone*	The phone information for the entity.
Position	string	The primary direction such as north or east that is used to access the location.
PostalCode	string	The postal code element of the address.
PostalPlus4Code	string	The four digit extension to the United States postal ZIP code.
Province	string	The name of the province.

Name	Type	Description
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
State	string	The name of the state.
Status	string	The status of the record.
Telex	*Telex*	The Telex information associated with the party.
UsageCode	string	The usage code is not used.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
ValidationStatusCode	string	The standardized status code describing the results of the validation.
Web	*Web*	The web information related to the record.

Certification

The certification information of a trading community member, such as a full ISO 9001 registered firm.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}Certification

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CertificationId	long	The unique identifier for certification. • Primary Key
CertificationName	string	The name of the certification such as ISO9000 and GMP001.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrentStatus	string	The name for the status of the certification. For example, applied for, granted, or expired.
ExpiresOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the certification expires.

Name	Type	Description
Grade	string	The level or grade of certification provided by the ISSUED_BY_AUTHORITY. For example, founding member, gold, fully certified, and partially certified.
IssuedByAuthority	string	The name of the certifying authority.
IssuedOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the certification was issued.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
PartyId	long	The unique identifier of the contact party.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Classification Assignment

The classification code assigned to a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}CodeAssignment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*

Handled by	*Sales Party Resource Service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ClassCategory	string	The name of the classification category.

Name	Type	Description
ClassCode	string	The code of the classification.
CodeAssignmentId	long	The unique identifier of the assignment of an industrial classification code to an object. It is primary key and system generated. • Primary Key
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableKey1	string	The first column of the alphanumeric or multi-part foreign key.
OwnerTableKey2	string	The second column of the alphanumeric or multi-part foreign key.
OwnerTableKey3	string	The third column of the alphanumeric or multi-part foreign key.

Name	Type	Description
OwnerTableKey4	string	The fourth column of the alphanumeric or multi-part foreign key.
OwnerTableKey5	string	The fifth column of the alphanumeric or multi-part foreign key.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PrimaryFlag	boolean	Indicator that specifies if this is the primary class code of a class category for the organization. Y stands for the primary class code and N stands for all others.
Rank	decimal	Ranks classes if multiple classes are assigned to a party.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Contact Preference

The contact preference of the trading community member. For example, do not call Joe Smith between 10 a.m. and 12 noon on weekdays.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}ContactPreference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactLevelTable	string	The table that stores the contact level of the contact preference, and uses the SUBJECT_TABLE lookup. The list of accepted values are HZ_PARTIES, HZ_PARTIES_SITES, or HZ_CONTACT_POINTS.
ContactLevelTableId	long	The foreign key to the table specified in CONTACT_LEVEL_TABLE column. The list of accepted values are PARTY_ID from HZ_PARTIES table, CONTACT_POINT_ID from HZ_CONTACT_POINTS table, or PARTY_SITE_ID from HZ_PARTY_SITES table.
ContactPreferenceId	long	The unique identifier for the contact preference. • Primary Key
ContactType	string	The contact party type that defines whether the contact is a sales account, a prospect, a contact, or any other user-defined party type. The default value is CUSTOMER. A list of accepted values is defined in the lookup CONTACT_TYPE.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
MaximumNoOfInteractUOMCode	string	The period of time during which the maximum number of interactions applies. Uses the MAX_NO_OF_INTERACT_UOM_CODE lookup.
MaximumNoOfInteractions	decimal	The number of times you can use this contact point. The period of time that this number applies is stored in the MAX_NO_OF_INTERACT_UOM_CODE column.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PreferenceCode	string	Indicates whether to use a particular contact method. The list of accepted values are defined in the PREFERENCE_CODE lookup.
PreferenceEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes inactive.
PreferenceEndTimeHR	int	The hour part of time when the contact preference becomes inactive. The time is recorded in the 24 hour format.
PreferenceEndTimeMi	int	The minutes part of the time when the contact preference becomes inactive.
PreferenceStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes active.
PreferenceStartTimeHR	int	The hour part of time when the contact preference becomes active. The time is recorded in the 24 hour format.
PreferenceStartTimeMi	int	The minutes part of the time when the contact preference becomes active.
PreferenceTopicType	string	The appropriate subjects to send the party that the preference is created for. The list of accepted values are defined in the PREFERENCE_TOPIC_TYPE lookup.
PreferenceTopicTypeCode	string	The code of the preference topic type.

Name	Type	Description
PreferenceTopicTypeId	long	The unique identifier of the preference topic type.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
RequestedBy	string	Indicates if the permission or restriction was created internally or requested by the party. The list of accepted values are defined in the REQUESTED_BY lookup.
Status	string	The status of the record.

Credit Rating

The trading community member's credit rating information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}CreditRating

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AverageHighCredit	decimal	The average of all the high credit experiences.
BankruptcyInd	string	Indicates if open bankruptcy exists. Y stands for any open bankruptcy that exists and N stands for no open bankruptcy.
BusinessDiscontinued	string	The business discontinued at the listed location. Prompts reader to contact D and B customer service center if any business is operating.
ClaimsInd	string	Indicates if open claims, legal claims, liens, protested bills, or any equivalent information exists. Y stands for availability of information and N stands for no information.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRatingId	long	The unique identifier of the credit rating. • Primary Key
CreditRiskScoreExplain	string	Explains numeric credit risk score that estimates the risk of delinquent payment over the next 12 months.

Name	Type	Description
CreditScore	string	Indicates the risk of delinquent payments.
CreditScoreAge	decimal	Indicates the age of the credit score expressed in months.
CreditScoreClass	decimal	The date when the credit score was calculated.
CreditScoreCommentary	string	The lookup for explanation codes in the CREDIT_SCORE column.
CreditScoreCommentary10	string	Indicates comments about the credit score.
CreditScoreCommentary2	string	Indicates comments about the credit score.
CreditScoreCommentary3	string	Indicates comments about the credit score.
CreditScoreCommentary4	string	Indicates comments about the credit score.
CreditScoreCommentary5	string	Indicates comments about the credit score.
CreditScoreCommentary6	string	Indicates comments about the credit score.
CreditScoreCommentary7	string	Indicates comments about the credit score.
CreditScoreCommentary8	string	Indicates comments about the credit score.
CreditScoreCommentary9	string	Indicates comments about the credit score.
CreditScoreDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the credit score was calculated.
CreditScoreIncdDefault	decimal	Indicates the probability expressed as a percentage of delinquency for a score range or class.
CreditScoreNatlPercentile	decimal	Indicates the relative credit rating of a business compared to all businesses whose credit ratings are included in the local country database.
CreditScoreOverrideCode	string	Indicates why no score was calculated or why score is equal to zero in the US.

Name	Type	Description
CriminalProceedingInd	string	Indicates if criminal proceedings exist. Y stands for availability of information and N stands for no information.
DebarmentInd	string	Indicates whether the company is debarred from doing business with government agencies. Y stands for company debarred and N stands for not debarred.
DebarmentsCount	decimal	The count of filings by government agencies in the United States that prohibit the party from entering into contracts or transactions with those agencies.
DebarmentsDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date of the most recent filing to prohibit the party from entering into contracts or transactions with a government agency in the United States.
DelqPmtPctgForAllFirms	decimal	Specifies a delinquency percentage for all firms.
DelqPmtRngPrcnt	decimal	Specifies a delinquency percentage for credit score range.
Description	string	The free text description of the record.
DetHistoryInd	string	The code that indicates if detrimental information exists for the party and whether complete details exist on management and party. Y stands for availability of information and N stands for no information.
DisasterInd	string	Indicates if information exists about disasters such as fires, hurricanes, and so on. Y stands for availability of information and N stands for no information.
FailureScore	string	For US, the failure risk class, 1 through 5. For Canada , the stability score that indicates risk of business closure, 1 through 10. For Australia, the percentile failure score.
FailureScoreAge	decimal	The failure score age in months.
FailureScoreClass	decimal	1 through 5 to indicate risk of financial stress for a customer account. 1 for a business with greatest risk and 5 for a business with least risk.
FailureScoreCommentary	string	The comments related to failure score.

Name	Type	Description
FailureScoreCommentary10	string	The comments related to failure score.
FailureScoreCommentary2	string	The comments related to failure score.
FailureScoreCommentary3	string	The comments related to failure score.
FailureScoreCommentary4	string	The comments related to failure score.
FailureScoreCommentary5	string	The comments related to failure score.
FailureScoreCommentary6	string	The comments related to failure score.
FailureScoreCommentary7	string	The comments related to failure score.
FailureScoreCommentary8	string	The comments related to failure score.
FailureScoreCommentary9	string	The comments related to failure score.
FailureScoreDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the failure score was calculated.
FailureScoreIncdDefault	decimal	Probability, in percentage, of failure for score range of class.
FailureScoreNatnlPercentile	decimal	The national percentile that reflects the relative ranking of a company among all scored companies in the local country database.
FailureScoreOverrideCode	string	In Europe, code for the reason for variance between the D and B rating and the failure score. In the US, code for the reason why no score was calculated, or why the score is zero.
FinclEmbtInd	string	Indicates if open bankruptcy, receivership liquidation, or any equivalent information exists. Y stands for availability of information and N stands for no information.
FinclLglEventInd	string	Indicates if special events such as financial embarrassment and legal filings exist. Y stands for availability of information and N stands for no information.
GlobalFailureScore	string	The global score for the risk of business default.

Name	Type	Description
HighCredit	decimal	Maximum credit ever extended to the organization.
HighRngDelqScr	decimal	Specifies the high end of the range of the commercial credit score.
JudgementInd	string	Indicates if open judgments exist. Y stands for any open judgment that exists and N stands for no open judgments.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LienInd	string	Indicates if open liens exist. Y stands for any open lien that exists and N stands for no open liens.
LowRngDelqScr	decimal	Specifies the low end of the range of the commercial credit score.
MaximumCreditCurrencyCode	string	The currency used to denominate the MAXIMUM_CREDIT_RECOMMENDATION column.
MaximumCreditRecommendationAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Maximum credit limit recommended for the currency specified in the MAXIMUM_CREDIT_CURRENCY_CODE column.
NegvPmtExpl	string	The conditional comment generated when negative payments are present.
NoTradeInd	string	Indicates that no trade experiences exist. Y stands for any trade experience that exists and N stands for no trade experience.
NumberParentBankruptcyConversions	decimal	The number of bankruptcy conversions by the parent.
NumberParentBankruptcyFiling	decimal	The number of bankruptcies filed by the parent.
NumberSpecialEvent	decimal	The number of occurrences of the special events.

Name	Type	Description
NumberTradeExperiences	decimal	The number of trade experiences.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OprgSpecificationEvntInd	string	Indicates if information exists about operational changes such as name changes, management changes, change of control, moves, and so on. Y stands for availability of information and N stands for no information.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OtherSpecificationEvntInd	string	Indicates if special events exist that are not otherwise specified.
ParentHQBankruptcyInd	string	Indicates if parent (P) or headquarters (H) are entered into bankruptcy.
PartyId	long	The unique identifier of the contact party.
PaydexComment	string	Additional paydex information.
PaydexFirmComment	string	Comment on the paydex score for the organization.
PaydexFirmDays	string	The number of days used in the paydex score.
PaydexIndustryComment	string	Comment on the paydex score for the industry.
PaydexIndustryDays	string	The number of days used in the paydex score for the industry.
PaydexNorm	string	Median or average Paydex score for the industry.
PaydexScore	string	Paydex score for the previous 12 months payment history.
PaydexThreeMonthsAgo	string	Paydex score three months ago.
PrntBkcyChapterConv	string	The change of bankruptcy type.

Name	Type	Description
PrntBkcyConvDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the bankruptcy converted from one type to another.
PrntBkcyFilgChapter	decimal	The chapter number of the bankruptcy filed by the parent under the US uniform commercial code.
PrntBkcyFilgDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The bankruptcy filing date of the parent.
PrntBkcyFilgType	string	The type of bankruptcy filed by the parent.
PubRecExpl	string	The conditional comment generated if suits, liens, and judgments exist.
RatedAsOfDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the rating was acquired.
Rating	string	The rating number or code of the rating company.
RatingOrganization	string	The name of the credit rating organization.
RequestId	long	A system-generated read-only attribute used by the application framework.
SecuredFlngInd	string	Indicates if open secured filings such as UCC filings, secured charges or mortgages pledging, or any equivalent information exists. Y stands for availability of information and N stands for no information.
SlowTradeExpl	string	The conditional comment generated when paydex score indicates that slow trade experiences are present.
SpecialEventComment	string	The comment generated if special event section exists.
SpecialEventText	string	The narrative of the special event.
SpecialEventUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the special event was updated.
Status	string	The status of the record.

Name	Type	Description
SuitInd	string	Indicates if open suits exist. Y stands for any open suit that exists and N stands for no open suits.

Customer Contact Profile

The person who functions as a contact for an organization.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}OrganizationContact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Organization Contact Additional Information*
Contains	*Customer Contact Responsibility*
Contains	*Source System Reference*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
ContactFormattedAddress	string	The formatted version of the contact address.
ContactFormattedMultilineAddress	string	The formatted multiline version of the contact address.
ContactName	string	The name of the contact.
ContactNumber	string	The user-defined identification number for this contact.
ContactPartyId	long	The unique identifier of the contact.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CustomerEmailAddress	string	The e-mail address of the customer this contact person belongs to.
CustomerName	string	The name of the customer.

Name	Type	Description
CustomerPartyId	long	The unique identifier of the customer this contact person belongs to.
CustomerPartyNumber	string	The alternate unique identifier of the customer this contact person belongs to.
CustomerUniqueName	string	The unique name of the customer. For an Organization, the value is a concatenation of unique_name_alias and suffix. For a Person, the value is a concatenation of person_name and suffix.
DecisionMakerFlag	boolean	Indicates if this contact is a decision maker. If the value is True, then the contact is a decision maker.
Department	string	The free form text used to name the department for the contact.
DepartmentCode	string	The department code for the contact. A list of accepted values is defined in the lookup DEPARTMENT_TYPE.
EmailAddress	string	The email address associated with the record.
FormattedAddress	string	The formatted address information.
FormattedPhoneNumber	string	The formatted phone number.
JobTitle	string	The free form text for job title.
JobTitleCode	string	The code given to the job title.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
OrgContactId	long	The unique identifier of the organization contact. • Primary Key
OrgContactInformation	*Trading Community Organization Contact Additional Information*	The information of the organization contact.
OrganizationContactRole	*Customer Contact Responsibility*	The role of the contact in the organization.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyRelationshipId	long	The unique identifier of the relationship of the party.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PartySiteName	string	The address associated with the party site.
PersonAcademicTitle	string	The part of the person's title that denotes the academic qualification, such as Dr. Jane Smith.
PersonCertReasonCode	string	The reason for the organization's current certification level assignment. A list of accepted values is defined using the lookup HZ_PARTY_CERT_REASON.
PersonCertificationLevel	string	The certification level of a organization. A list of accepted values is defined in the lookup HZ_PARTY_CERT_LEVEL.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLanguageName	string	The language name associated with the person.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.

Name	Type	Description
PersonLastNamePrefix	string	The prefix for the last name of a person, such as fon, van. For example, if a person's name is Hans Van, the last name of the person is captured using this attribute.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	The place in a family structure. For example, in "Tom Jones III", the "III".
PersonPreNameAdjunct	string	The preferred name adjacency of a resource.
PersonPreviousLastName	string	The previous last name of a person.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PreferredContactFlag	boolean	Indicates if this contact person is primary contact for the customer.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PrimaryCustomerFlag	boolean	Indicates if this customer is primary customer for the contact.
Rank	string	The rank associated with this customer contact.
ReferenceUseFlag	boolean	Indicates if this contact can be used as a reference. If the value is Y, then the contact can be used as a reference.
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
SalesAffinityCode	string	The affinity of a contact to the deploying organization. A list of accepted values is defined in the lookup HZ_SLS_CNTCT_AFFINITY_CODE.
SalesAffinityComments	string	The comments about the contact's affinity to the deploying organization.
SalesBuyingRoleCode	string	The roles played by a contact in the buying process, for example, decision maker or supporting role. A list of accepted values is defined in the lookup HZ_SLS_CNTCT_BUY_ROLE_CODE.
SalesInfluenceLevelCode	string	The influence of the contact has on the deploying organization. A list of accepted values are defined in the lookup HZ_SLS_CNTCT_INFLUENCE_LVL_CD.
Salutation	string	The size of the household this person is a part of.
WebUrl	string	The web URL of contact point.

Customer Contact Responsibility

The role or responsibility of an organization contact.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}OrganizationContactRole

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Customer Contact Profile*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*

Relationship Type	Object or Service
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgContactId	long	The organization contact identifier. Foreign key to the HZ_ORG_CONTACTS table.

Name	Type	Description
OrgContactRoleId	long	The unique contact role identifier. It is primary key and system generated. • Primary Key
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PrimaryContactPerRoleType	string	Indicates if the contact is the primary contact for the role. Y stands for primary contact and N stands for a contact that is not the primary contact for the role type. The default value is N.
PrimaryFlag	boolean	Indicator that specifies if this is the primary role for the contact. Y stands for primary role and N stands for a non-primary role for the contact. The default value is N.
RequestId	long	A system-generated read-only attribute used by the application framework.
RoleLevel	string	The role level of the contact. For example, executive, department head, or middle manager.
RoleType	string	The role performed by a contact.
Status	string	The status of the record.

Electronic Data Interchange

The electronic data interchange information associated with a trading community member. For example, the details of standard codes and payment methods that are to be used for data interchange.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Edi

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EDIEceTpLocationCode	string	The trading partner location code for EDI Gateway.
EDIIdNumber	string	The EDI trading partner number for the supplier site.
EDIPaymentFormat	string	Indicates type of information being transmitted with the funds if using EDI_PAYMENT_METHOD ACH. The list of accepted values are CCD, CCP, CHZ, CTX, PPD, and PPP.
EDIPaymentMethod	string	Indicates how a payment is to be made through EDI. The list of accepted values are ACH and BOP.
EDIRemittanceInstruction	string	Indicates who will send the remittance advice. The list of accepted values are Banks or Payables systems.
EDIRemittanceMethod	string	Indicates how remittance advice are sent to the supplier.
EDITpHeaderId	long	The unique identifier of the EDI transaction header.
EDITransactionHandling	string	The ANSI standard code for EDI transaction type.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary EDI of the associated object. If the value is True, then this is the primary EDI. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Electronic File Transfer

The electronic funds transfer information of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Eft

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*

Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Relationship Type	Object or Service
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EFTPrintingProgramId	long	The printing program identifier.
EFTSWIFTCode	string	The EFT swift code information.
EFTTransmissionProgramId	long	The transmission program identifier.
EFTUserNumber	string	The number that identifies you as a user of electronic funds transfer service for your bank or clearing organization.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

E-Mail

The e-mail address associated with a trading community member. For example, john.doe@oracle.com.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Email

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*

Relationship Type	Object or Service
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmailAddress	string	The email address associated with the record.
EmailFormat	string	The preferred format for e-mail addressed to this address such as HTML or ASCII. A list of accepted values is defined using the lookup EMAIL_FORMAT.
EmailInformation	*Trading Community Contact Point Additional Information*	The additional information about the e-mail.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary e-mail of the associated object. If the value is True, then this is the primary e-mail. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.

Name	Type	Description
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

E-Mail Domain

The domain of the e-mail address associated with a trading community member. For example, ABC Corporation has CORP and BUSINESS e-mail domains.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}EmailDomain

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*

Relationship Type	Object or Service
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DomainName	string	The actual or non-reversed domain name of the organization for display purpose.
EmailDomainId	long	The sequence generated unique identifier. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
Status	string	The status of the record.
TransposedDomain	string	The reversed domain name for the purposes of searching.

Expertise

The expertise of a partner.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerExpertise

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extends	*Partner Generic List of Values*
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ExpertiseCode	string	The expertise code of the partner expertise.
ExpertiseName	string	The expertise name of the partner expertise.

Partner Generic List of Values

The generic list of multiple values used for certifications and expertise.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerProfileMultivalueLov

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Partner Certification*
Extended by	*Expertise*
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
LookupCode	string	The value from a multi-value list of values category that applies to the profile.
LookupType	string	The list of values code that defines the category to which the list of values belong. This value indicates the profile field to which the value belongs.
PartnerMultivalLovId	long	The unique identifier of the list of values code selected for a specific multi-value field in the partner profile. • Primary Key
PartyId	long	The unique identifier of the contact party.

Financial Number

The financial report numbers of a trading community member, such as assets, liabilities, and cash balance.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}FinancialNumber

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Financial Report*

Relationship Type	Object or Service
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
FinancialNumber	decimal	The value for the financial number. For example, the FINANCIAL_NUMBER_NAME column could have a numerical value of 3,000,000,000 for annual sales.
FinancialNumberCurrency	string	The ISO currency code for the financial number.
FinancialNumberId	long	The unique identifier of the financial number. • Primary Key
FinancialNumberName	string	A text field that lets you assign a descriptive name to a financial report item. For example, gross annual sales, profit, and net annual sales. A user-defined lookup.
FinancialReportId	long	The unique identifier of the financial report.

Name	Type	Description
FinancialUnitsApplied	decimal	The order of magnitude (tens, hundreds, thousands, and so on) used for the FINANCIAL_NUMBER column.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ProjectedActualCode	string	Indicates if the projected amount is projected or actual. The list of accepted values are P and A. The default value is A.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Financial Profile

The financial details of a trading community member, such as bank account information that was obtained as part of a credit evaluation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}FinancialProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*

Relationship Type	Object or Service
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessAuthorityDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when access to the information in the account was granted.
AccessAuthorityGranted	string	Indicates whether access to information in a financial account was granted. If the value is True, then the access has been granted.
BalanceAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The reported balance on an account. The balance can be a positive number, negative number, or zero.
BalanceVerifiedOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the account balance was verified.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
FinancialAccountNumber	string	The alternate unique identifier of the financial account.

Name	Type	Description
FinancialAccountType	string	The short name that classifies the financial accounts. For example, savings, checking, home loan, personal loan, trading, and so on.
FinancialOrgType	string	The classification of financial organizations. For example, bank, savings and loan, private lender, building society and so on.
FinancialOrganizationName	string	The name of the financial organization that holds the account.
FinancialProfileId	long	The unique identifier of the party's financial profile. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Financial Report

The financial report information of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}FinancialReport

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Financial Number*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AuditInd	string	Indicates if the financial reports are audited. If the value is True, then the financial reports have been audited.
ConsolidatedInd	string	Indicates if the financial reports are consolidated. If the value is C, then the reports are consolidated.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DateReportIssued	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the financial report was published.
DocumentReference	string	The unique reference number such as passport number or naturalization reference number associated with DOCUMENT_TYPE.
EstimatedInd	string	Indicates whether the financial reports provide estimated data. If the value is True, then the financial reports provide the data.
FinalInd	string	Indicates whether the financial reports are the final closing statements for a business that has ceased operations. If the value is True, then the reports are final closing statements.
FinancialNumber	*Financial Number*	The number that indicates a financial value like annual sales.
FinancialReportId	long	The unique identifier for a financial report. • Primary Key
FiscalInd	string	Indicates whether the financial reports cover a fiscal twelve-month accounting period. If the value is Y, then the financial report covers a twelve-month fiscal period.
ForecastInd	string	Indicates whether the financial reports display forecasts or future projections. If the value is Y, then the financial report displays forecasts.
IssuedPeriod	string	The period covered by the financial report. For example, fiscal year 1999, 1998, and so on.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OpeningInd	string	Indicates whether the financial reports are the opening statements for a business. If the value is Y, then the financial statements are opening statements.

Name	Type	Description
PartyId	long	The unique identifier of the contact party.
ProformaInd	string	Indicates if the financial reports are pro forma numbers. If the value is Y, then the financial reports are pro forma numbers.
QualifiedInd	string	Indicates whether the financial reports include qualifying remarks from auditors about the fairness and accuracy of the numbers. If the value is Y, then the report is qualified by auditors.
ReportEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The end date of the report, used instead of Issued Period.
ReportStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The start date of the report, used instead of Issued Period.
RequestId	long	A system-generated read-only attribute used by the application framework.
RequiringAuthority	string	The name of the primary organization that requires this financial report. For example, auditors, the Federal Trade Commission, or the Internal Revenue Service.
RestatedInd	string	Indicates whether the financial reports include data that was corrected after the original financial reports. If the value is Y, then the report has been corrected.
SignedByPrincipalsInd	string	Indicates whether the financial reports were signed by the principals of the organization. If the value is Y, then the reports are signed.
Status	string	The status of the record.
TrialBalanceInd	string	Indicates whether the financial reports include trial balance numbers. If the value is Y, then the financial report includes trial balance numbers.
TypeOfFinancialReport	string	A name for the financial report. For example, 10K report, Annual Report, or Shareholder's Special Report.
UnbalancedInd	string	Indicates whether the financial reports include balance sheet accounts that do not balance. If the value is Y, then report includes unbalanced balance sheet accounts.

Name	Type	Description
WhUdpateId	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the record was entered or changed in a data warehouse.

Industries Served

The industries in which a partner operates.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerIndustryServed

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extends	*Partner Dimension Member*
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ClassificationCategory	string	The classification category of the industry served.
ClassificationCode	string	The classification code of the industry served.
ClassificationName	string	The classification name of the industry served.

Partner Dimension Member

A generic list of multiple values used for territory dimensions.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerDimensionMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Industries Served*
Extended by	*Focus Areas*
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributePk1	string	This is the ATTRIBUTE PK1 column.
AttributePk2	string	This is the ATTRIBUTE PK1 column.
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DimSubtypeCode	string	A specific type of item within the dimension code. For example, for the products dimension, product items and product categories are there.

Name	Type	Description
DimensionCode	string	The dimension of the item being stored. For example, geography.
DimensionMemberName	string	The name of the dimension member.
DimensionMemberNameBackup	string	The name of the dimension member to which this record refers to. This is stored in case the dimension member was removed and the user still requires the name of the item that was removed.
IntegrationId	string	The reference to the actual dimension member item.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OwnerId	long	The unique identifier of the entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
OwnerType	string	The type of entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
PartitionTypeCode	string	The type of partition in which the data is stored.
PartnerDimMembersId	long	This column is the private key of the table. • Primary Key
TerrDimMemberId	long	The key data for the territory dimension.
TerrDimPartitionId	long	The primary key.

Name	Type	Description
TypeCode	string	The type of the partition.

Instant Messaging

The instant messaging information of a trading community member, such as the AOL identifier or Yahoo Messenger information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}InstantMessaging

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Relationship Type	Object or Service
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.

Name	Type	Description
InstantMessagingAddress	string	The instant messaging information address.
InstantMessagingInformation	*Trading Community Contact Point Additional Information*	The instant messaging information related to the record.
InstantMessengerType	string	The type of the instant messenger type.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary instant messaging Id of the associated object. If the value is True, then this is the primary instant messaging Id. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party

Name	Type	Description
		or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Location Details

The details about a geographical or physical location. For example, 500 Oracle Parkway, Redwood Shores, CA 94065.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/locationService/}Location

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Location Profile Additional Information*
Contains	*Location Locale*
Contains	*Source System Reference*
Contains	*Location Profile*
Handled by	*Trading Community Location*

Relationship Type	Object or Service
Handled by	*Company and User Registration*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AddrElementAttribute1	string	The additional address element to support flexible address format.
AddrElementAttribute2	string	The additional address element to support flexible address format.
AddrElementAttribute3	string	The additional address element to support flexible address format.
AddrElementAttribute4	string	The additional address element to support flexible address format.
AddrElementAttribute5	string	The additional address element to support flexible address format.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AddressEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address becomes effective.
AddressExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address is no longer active.
AddressLinesPhonetic	string	The phonetic or kana representation of the Kanji address lines (used in Japan).
AddressStyle	string	The context value for Flexible Address Format descriptive flex field. Do not use this column, join to the FND_TERRITORIES table via

Name	Type	Description
		COUNTRY = TERRITORY_CODE to retrieve the address style for the country.
Building	string	The specific building name or number at a given address.
City	string	The name of the city.
CliiCode	string	Common Language Location Identifier (CLLI) code.
Comments	string	The comments for the record.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DateValidated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address was last validated.
Description	string	The free text description of the record.
Distance	decimal	The distance from the input location.
DoNotValidateFlag	boolean	Indicates that a particular location should not validated, regardless of the current validation status code. If the value is Yes, then the location is not validated. The default is No.
EffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the location becomes valid.
FaLocationId	long	Foreign key to the FA_LOCATIONS table.
FloorNumber	string	The floor number of the address.
GeometryStatusCode	string	The spatial data integration status for given location.

Name	Type	Description
HouseType	string	Indicates the building type for the building in the address. A list of valid values are defined in the lookup HZ_HOUSE_TYPE.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
Language	string	The language used in the location.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Latitude	decimal	The latitude information for the address. The latitude information for the location is used for spatial proximity and containment purposes.
LocationDirections	string	The directions to the address location.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table. • Primary Key
LocationInformation	*Trading Community Location Profile Additional Information*	The detailed information about the location.
LocationLocale	*Location Locale*	The location or address information in the local language.
LocationProfile	*Location Profile*	The profile information of the location.
Longitude	decimal	The longitude information for the address. The longitude information for the location is used for spatial proximity and containment purposes.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
Position	string	The primary direction such as North or East that is used to access the location.
PostalCode	string	The postal code element of the address.
PostalPlus4Code	string	The four-digit extension to the United States Postal ZIP code for the address.
Province	string	The name of the province.
RequestId	long	A system-generated read-only attribute used by the application framework.
SalesTaxGeocode	string	The US Sales Tax Jurisdiction code. This provides a Jurisdiction Code (also called as Geocode) defined by either Vertex or Taxware. This value is passed as a ship-to location jurisdiction code to the tax partner API.
SalesTaxInsideCityLimits	string	Indicates if the location is inside the boundary of a city. Used to calculate state and local taxes in the United States. If the value is 1, then the location is within city limits.
ShortDescription	string	The short description of the location.
State	string	The name of the state.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
TimezoneCode	string	The code of the time zone for the location.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.

Name	Type	Description
ValidationStatusCode	string	A standardized status code describing the results of the validation. The value is internally set by system during address cleansing.

Location Locale

The details about a location or address in the local language.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/locationService/}LocationLocale

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Location Details*
Handled by	*Trading Community Location*
Handled by	*Company and User Registration*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AddrElementAttribute1	string	The additional address element to support flexible address format.
AddrElementAttribute2	string	The additional address element to support flexible address format.
AddrElementAttribute3	string	The additional address element to support flexible address format.
AddrElementAttribute4	string	The additional address element to support flexible address format.

Name	Type	Description
AddrElementAttribute5	string	The additional address element to support flexible address format.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
Building	string	The specific building name or number at a given address in the local language.
City	string	The name of the city.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
FloorNumber	string	The floor number of the address in the local language.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PostalCode	string	The postal code element of the address.

Name	Type	Description
PostalPlus4Code	string	The four-digit extension to the United States Postal ZIP code for the address.
Province	string	The name of the province.
State	string	The name of the state.
TransliterationLang	string	The language used to define the address elements of the location. The list of accepted values are defined in the FND_LANGUAGES.LANGUAGE_COD lookup.

Location Profile

The profile information of a location.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/locationService/}LocationProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Location Details*
Handled by	*Trading Community Location*
Handled by	*Company and User Registration*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AddrElementAttribute1	string	The additional address element to support flexible address format.

Name	Type	Description
AddrElementAttribute2	string	The additional address element to support flexible address format.
AddrElementAttribute3	string	The additional address element to support flexible address format.
AddrElementAttribute4	string	The additional address element to support flexible address format.
AddrElementAttribute5	string	The additional address element to support flexible address format.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
Building	string	The specific building name or number at a given address.
City	string	The name of the city.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DateValidated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address was last validated.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveLatestChange	string	Indicates whether the row has the latest change in the day. If the value is True, then this row has the latest change in the day.

Name	Type	Description
EffectiveSequence	int	The order of the different changes made during the day. The lowest value represents the earliest change in the day.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
FloorNumber	string	The floor number of the address.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
LocationProfileId	long	The unique Identifier for a location profile. • Primary Key
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PostalCode	string	The postal code element of the address.
Province	string	The name of the province.
RequestId	long	A system-generated read-only attribute used by the application framework.
State	string	The name of the state.
ValidationSstFlag	boolean	Indicates if the location information has been validated. If the value is Y, then the location has been validated.
ValidationStatusCode	string	A standardized status code describing the results of the validation. The value is internally set by system during address cleansing.

Partner

The set of partner profile attributes used to provide values while creating or changing a partner account.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}Partner

Logical Business Objects

- CRM : Partner Management : Partner

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountDirectorId	long	The unique identifier of a valid employee resource who owns and manages the partner sales account.
Address1	string	The first line of the address.
AnalysisFy	string	The fiscal year that the financial information is based on.
AnnualRevenue	decimal	The partner's annual revenue. This field is maintained by the channel manager and partner administrator.
Auxiliary1ClassCode	string	The auxiliary Class Code 1 for a classification.

Name	Type	Description
Auxiliary1CodeAssignmentId	long	The unique identifier of the assignment of the auxiliary Class Code 1.
Auxiliary1EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 1 is no longer active.
Auxiliary1StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 1 becomes effective.
Auxiliary2ClassCode	string	The auxiliary Class Code 2 for a classification.
Auxiliary2CodeAssignmentId	long	The unique identifier of the assignment of the auxiliary Class Code 2.
Auxiliary2EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 2 is no longer active.
Auxiliary2StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 2 becomes effective.
Auxiliary3ClassCode	string	The auxiliary Class Code 3 for a classification.
Auxiliary3CodeAssignmentId	long	The unique identifier of the assignment of the auxiliary Class Code 3.
Auxiliary3EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 3 is no longer active.
Auxiliary3StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 3 becomes effective.
BusinessScope	string	The physical class of business in which a business participates. For example, local, national, or international.
CeoName	string	The name of the chief executive officer. It is the denormalized value of the CEO_NAME in HZ_ORGANIZATION_PROFILES.
CeoTitle	string	The formal title of the chief executive officer.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.

Name	Type	Description
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
City	string	The name of the city.
ClassificationTypes	*Classification Assignment*	The classification type of a partner.
CompanyNumber	string	The partner's company number that is an alternate unique identifier of the partner. This value is maintained by the channel manager and partner administrator.
ComplianceReviewedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the compliance review for the partner was last completed.
ComplianceStatus	string	Indicates whether the partner is compliant with vendor's criteria such as certifications, training, and so on. If the value is True, then the partner is compliant.
ControlYr	decimal	The year when current ownership gained control of the organization.
CorpCurrencyCode	string	Corporate currency
Country	string	The name of the country.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	Currency
CurrentFyPotentialRevenue	decimal	The estimated revenues that can be earned by the organization during its current fiscal year.
DUNSNumber	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DbRating	string	The Dun & Bradstreet credit rating.
Description	string	The free text description of the record.

Name	Type	Description
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
EligibleForPublicProfile	string	Indicates whether the partner is eligible to publish their public profile. If the value is True, then the partner can publish their public profile.
Email	*E-Mail*	The email address associated with the record.
EmployeesTotal	decimal	The total number of employees.
ExportInd	string	Indicates whether the organization is an exporter. If the value is Y, then the organization is an exporter. The default value is N.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
FormattedAddress	string	The formatted address information.
FormattedPhoneNumber	string	The formatted phone number.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
GeoNameReferenceId	long	The unique name reference identifier.
GeographyId	long	The geography ID for the geography served by the partner.
HomeCountry	string	The home country associated with the party.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
IncorpYear	int	The year that the business was formally incorporated.

Name	Type	Description
IndustryClassCode	string	The Industry classification code. The classification codes are defined for every classification category as specified in IndustryCodeType attribute.
IndustryCodeAssignmentId	long	The unique identifier of the assignment of an industrial classification code.
IndustryCodeEndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the industry class code is no longer valid.
IndustryCodeStartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the industry class code applies to the industry.
IsSelfRegisteredPartner	string	Indicates whether the partner registered through the self-service user interface.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LastTerritoryAssignedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the territory was last assigned.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LegalStatus	string	The legal structure of the organization such as partnership, corporation, and so on.
LineOfBusiness	string	The type of business activities performed at this site.
Location	string	The location information of the partner.
LockTerritoryAssignment	string	Indicates if the automatic territory assignment can be set. If the value is True, then the automatic territory assignment cannot remove the sales account team resource. The default value is False.

Name	Type	Description
MinorityOwnedInd	string	Indicates whether the organization is primarily owned by ethnic or racial minorities. If the value is Y, then the organization is owned by ethnic or racial minorities. The default value is N.
MinorityOwnedType	string	The type of minority-owned firm.
NextFyPotentialRevenue	decimal	The estimated revenues that can be earned by the organization during its next fiscal year.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OpportunitiesWonPriorYear	decimal	Opportunities that the partner sales representatives closed and won in the prior fiscal year.
OpportunitiesWonYTD	decimal	Opportunities that the partner sales representatives closed and won in the current fiscal year-to-date.
OrgTypeClassCode	string	The classification code for the organization type.
OrgTypeCodeAssignmentId	long	The unique identifier of the assignment of an industrial classification code to an organization type.
OrgTypeCodeEndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the organization type class code is no longer valid.
OrgTypeCodeStartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the class code applies to the organization type.
OrganizationName	string	The name of the party when the party type is Organization.
OrganizationProfileId	long	The unique identifier of the organization profile.
OrganizationSize	string	The size of the organization based on its revenue, number of employees, and so on.
OrigSystem	string	The source system name.

Name	Type	Description
OrigSystemReference	string	The identifier for the record from the original system.
OrigSystemReferenceId	long	The unique identifier for original system reference.
OwnerName	string	The name of a valid employee resource that owns and manages the partner account.
OwnerPersonPartyId	long	The unique identifier of a valid employee resource who owns and manages the partner account.
ParentPartnerPartyId	long	A foreign key reference to the TCA party records that represents the Partner's parent company.
ParentPartnerPartyNumber	string	Candidate for public surrogate key field and serves as a user-entered identifier for the Partner's Parent company.
ParentPk1Value	string	Attribute Deprecated, use Attribute ParentPartnerPartyId instead
PartnerAccountId	long	The unique identifier of the partner account resource team member.
PartnerAccountResourceToAccountP	*Partner Account Team*	The list of account resources for the partner account.
PartnerCertificationP	*Partner Certification*	The list of certifications for partner.
PartnerDimensionMemberPVO	*Partner Dimension Member*	The list of dimension members for the partner.
PartnerEmailPVO	*Partner E-Mail*	The list of e-mails for the partner.
PartnerExpertise	*Expertise*	The list of expertise for the partner.
PartnerFaxPVO	*Partner Phone*	The list of fax for the partner.
PartnerGeography	*Geographies Served*	The list of geographies served by the partner.
PartnerIndustry	*Industries Served*	The list of industries served by the partner.
PartnerLevel	string	The relative tier of the partner.

Name	Type	Description
PartnerMember	*Partner Members*	The list of members for a partner.
PartnerMemberPVO	*Partner Public Contact*	The public contact information of the partner.
PartnerPhonePVO	*Partner Phone*	The list of phones of the partner.
PartnerProductSpeciality	*Focus Areas*	The list of product specialties of the partner.
PartnerProfileMultivalueLovP	*Partner Generic List of Values*	The list of partner profile values for the partner.
PartnerSummary	string	The description of the partner company.
PartnerTypeDimensionMemberP	*Partner Type*	The list of partner type dimensions for the partner.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartySite	*Address*	The party site associated with the partner.
Phone	*Phone*	The phone information for the entity.
PostalCode	string	The postal code element of the address.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PrefferedContactId	long	The unique identifier of the preferred contact person for the partner.
PrefferedContactName	string	The name of the preferred contact person for the partner.

Name	Type	Description
PrimaryPhoneContactPointId	long	The unique identifier of the primary phone contact point.
PrimaryURLContactPointId	long	The unique identifier of the primary URL contact point.
PrincipalName	string	The Name of the highest ranking person in the company.
PrincipalTitle	string	The title of the highest ranking person in the organization.
ProfileObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
Province	string	The name of the province.
PublicAddressId	long	The partner company address displayed in Partner Finder.
PublicContactId	long	The partner contact name displayed in Partner Finder.
PublicEmailId	long	The e-mail displayed in Partner Finder.
PublicFaxId	long	The fax number displayed in in Partner Finder.
PublicPhoneId	long	The phone displayed in Partner Finder.
PublicPrivateOwnershipFlag	boolean	Indicates whether the organization is publically or privately owned. If the value is Y, then the organization is a privately owned organization. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
PublicStatus	string	Status of approval of public profile.
RangeEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The end date in the import range.
RangeStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The start date in the import range.

Name	Type	Description
ReassignTerritory	string	Indicates whether this partner needs territory reassignment.
RegistrationType	string	Indicates the registration type of the partner.
SmallBusInd	string	Indicates whether the organization is considered as a small business. If the value is Y, then the organization is considered as a small business. The default value is N.
SolutionOverview	string	The overview description of partner solutions.
State	string	The name of the state.
Status	string	The status of the record.
StockSymbol	string	The corporate stock symbol of the organization as listed in stock exchanges.
Synergy	string	The description of the value of the partnership between the Vendor and Partner.
TierId	long	The unique identifier for a tier to which a partner applies.
TotalEmployeesInd	string	Indicates if subsidiaries are included in the calculation of total employees. The accepted values are defined in the lookup type TOTAL_EMPLOYEES_INDICATOR.
TotalEmployeesText	string	The total number of employees in text format.
TreeCode	string	The unique code of the partner organization tree.
TreeStructureCode	string	The unique code for the partner organization tree structure.
URL	string	The destination URL associated with a specific Google AdWords ad.
UniqueNameSuffix	string	The suffix used to generate the attribute PartyUniqueName. The suffix is concatenated to the Organization Name attribute to generate the PartyUniqueName. The primary address is defaulted as the suffix.

Name	Type	Description
Web	*Web*	The web information related to the record.
YearEstablished	int	The year when the organization began doing business.

Partner Account Team

The person assigned to a partner account team.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerAccountResource

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevelCode	string	The type of access granted to the resource as well as managers of the organizations.
AssignmentTypeCode	string	The code indicating how the resource is assigned to the sales account team.
CreatedBy	string	Who column: indicates the date and time of the creation of the row.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who created the row.
EmailAddress	string	The email address associated with the record.
FormattedPhoneNumber	string	The formatted phone number.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the user who last updated the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
MemberFunctionCode	string	The code indicating the role of a sales team member in the resource team such as Integrator, Executive Sponsor, and Technical Account Manager. A list of accepted values is defined in the lookup FND_LOOKUPS.
OrganizationName	string	The name of the party when the party type is Organization.
OrganizationRole	string	The role of the partner in the organization.
PartnerAccountId	long	The unique identifier of the partner account resource team.
PartnerAccountResourceId	long	The unique identifier of the member of the partner account resource team. • Primary Key
PartnerPartyId	long	The PartyId of Partner whose Account Team includes this resource.
ResourceId	long	The unique identifier of the resource.
ResourceName	string	The name of the resource associated with the partner account team.
TerritoryName	string	The name of the territory for the partner account.

Partner Certification

The list of certifications that a partner has achieved.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerCertification

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extends	*Partner Generic List of Values*
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CertificationCode	string	The code for the certification.
CertificationName	string	The name of this certification.
LookupCode1	string	The key information for the certification.
LookupType1	string	The key information for the certification.
Meaning	string	The name of this certification.

Partner Generic List of Values

The generic list of multiple values used for certifications and expertise.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerProfileMultivalueLov

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Partner Certification*
Extended by	*Expertise*
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.

Name	Type	Description
LookupCode	string	The value from a multi-value list of values category that applies to the profile.
LookupType	string	The list of values code that defines the category to which the list of values belong. This value indicates the profile field to which the value belongs.
PartnerMultivalLovId	long	The unique identifier of the list of values code selected for a specific multi-value field in the partner profile. • Primary Key
PartyId	long	The unique identifier of the contact party.

Partner Dimension Member

A generic list of multiple values used for territory dimensions.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerDimensionMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Industries Served*
Extended by	*Focus Areas*
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributePk1	string	This is the ATTRIBUTE PK1 column.
AttributePk2	string	This is the ATTRIBUTE PK1 column.
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DimSubtypeCode	string	A specific type of item within the dimension code. For example, for the products dimension, product items and product categories are there.
DimensionCode	string	The dimension of the item being stored. For example, geography.
DimensionMemberName	string	The name of the dimension member.
DimensionMemberNameBackup	string	The name of the dimension member to which this record refers to. This is stored in case the dimension member was removed and the user still requires the name of the item that was removed.
IntegrationId	string	The reference to the actual dimension member item.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
OwnerId	long	The unique identifier of the entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
OwnerType	string	The type of entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
PartitionTypeCode	string	The type of partition in which the data is stored.
PartnerDimMembersId	long	This column is the private key of the table. • Primary Key
TerrDimMemberId	long	The key data for the territory dimension.
TerrDimPartitionId	long	The primary key.
TypeCode	string	The type of the partition.

Partner E-Mail

The e-mail address of the partner.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerPublicEmail

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActualContentSource	string	The information regarding the source of the contact point.
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPointValue	string	The key information for the contact point.
CreatedByModule	string	The module that created the record.
EmailAddress	string	The email address associated with the record.
EmailFormat	string	The information on how to interpret the e-mail address.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
OrigSystemReference	string	The identifier for the record from the original system.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
Primary2Flag	boolean	Indicator to specify that the contact point is the primary point of contact.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact

Name	Type	Description
		point is the primary contact point. A party or site can have only one contact point with value Y.
RelationshipId	long	The relationship identifier for the record.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Focus Areas

The focus areas or product specialties of the partner.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerProductSpeciality

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extends	*Partner Dimension Member*
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ProductId	string	The unique identifier of the product for product specialties.
ProductName	string	The name of the product for product specialties.

Partner Dimension Member

A generic list of multiple values used for territory dimensions.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerDimensionMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Industries Served*
Extended by	*Focus Areas*
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributePk1	string	This is the ATTRIBUTE PK1 column.
AttributePk2	string	This is the ATTRIBUTE PK1 column.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DimSubtypeCode	string	A specific type of item within the dimension code. For example, for the products dimension, product items and product categories are there.
DimensionCode	string	The dimension of the item being stored. For example, geography.
DimensionMemberName	string	The name of the dimension member.
DimensionMemberNameBackup	string	The name of the dimension member to which this record refers to. This is stored in case the dimension member was removed and the user still requires the name of the item that was removed.
IntegrationId	string	The reference to the actual dimension member item.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OwnerId	long	The unique identifier of the entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
OwnerType	string	The type of entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.

Name	Type	Description
PartitionTypeCode	string	The type of partition in which the data is stored.
PartnerDimMembersId	long	This column is the private key of the table. • Primary Key
TerrDimMemberId	long	The key data for the territory dimension.
TerrDimPartitionId	long	The primary key.
TypeCode	string	The type of the partition.

Partner Generic List of Values

The generic list of multiple values used for certifications and expertise.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerProfileMultivalueLov

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Partner Certification*
Extended by	*Expertise*
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
LookupCode	string	The value from a multi-value list of values category that applies to the profile.
LookupType	string	The list of values code that defines the category to which the list of values belong. This value indicates the profile field to which the value belongs.
PartnerMultivalLovId	long	The unique identifier of the list of values code selected for a specific multi-value field in the partner profile. • Primary Key
PartyId	long	The unique identifier of the contact party.

Geographies Served

The geographies in which a partner operates.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerGeographyServed

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributePk1	string	This is the ATTRIBUTE PK1 column.
AttributePk2	string	This is the ATTRIBUTE PK1 column.
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DimSubtypeCode	string	A specific type of item within the dimension code. For example, for the products dimension there could be product items and product categories.
DimensionCode	string	The dimension of the item being stored. For example, geography.
DimensionMemberName	string	Name of dimension member.
DimensionMemberNameBackup	string	The name of the dimension remember this record refers to. This is stored in case the dimension member was removed and the user still needs to know the name of the item that was removed.
GeographyId	string	The geography ID of the geography served.
GeographyName	string	The geography name of the geography served.

Name	Type	Description
IntegrationId	string	The reference to the actual dimension member item.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
OwnerId	long	The identifier of the entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
OwnerType	string	The type of entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
PartitionTypeCode	string	The type of partition in which the data is stored.
PartnerDimMembersId	long	This column is the private key of this table. • Primary Key
TerrDimMemberId	long	Key data for the territory dimension.
TerrDimPartitionId	long	Primary key.
TypeCode	string	Type of the partition.

Partner Members

The partner members for a partner.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalPartyId	*Additional Identifier*	The additional identifier associated with the organization or person.
AdditionalPersonName	*Additional Contact Name*	The additional name of the person.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.

Name	Type	Description
Address4	string	The fourth line of the address.
CategoryCode	string	The code of the category to which the person belongs. A list of accepted values is defined in the lookup type CUSTOMER_CATEGORY.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
Certification	*Certification*	The certification information for the person.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
Citizenship	*Citizenship*	The citizenship information of a person.
City	string	The name of the city.
CodeAssignment	*Classification Assignment*	The classification code assigned to the person.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRating	*Credit Rating*	The credit rating of the person.
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was born.
Education	*Education*	The education information of the person.

Name	Type	Description
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EmailDomain	*E-Mail Domain*	The domain name of the email address.
EmploymentHistory	*Employment History*	The employment history information of a person.
FinancialProfile	*Financial Profile*	The financial profile information of a person.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
Gender	string	The gender of the person, such as male, female, and unknown. A list of accepted values is defined in the lookup HZ_GENDER.
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LanguageName	string	The standard name for the language.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaritalStatus	string	The marital status of the person. A list of accepted values is defined in the lookup MARITAL_STATUS.
MissionStatement	string	The corporate charter of organization in user-defined text format.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartyPreference	*Preference*	The preference mentioned in the person details.
PartySite	*Contact Address*	The party site associated with the person.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the person.
PersonAcademicTitle	string	The part of the person's title that denotes the academic qualification, such as Dr. Jane Smith.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.

Name	Type	Description
PersonInterest	*Contact Interest*	The interest information associated with a person.
PersonLanguage	*Contact Language*	The language information associated with a person.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	The prefix for the last name of a person, such as fon, van. For example, if a person's name is Hans Van, the last name of the person is captured using this attribute.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	The place in a family structure. For example, in "Tom Jones III", the "III".
PersonPreNameAdjunct	string	The preferred name adjacency of a resource.
PersonPreviousLastName	string	The previous last name of a person.
PersonProfile	*Contact*	The profile information of the person.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
Phone	*Phone*	The phone information for the entity.
PostalCode	string	The postal code element of the address.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.

Name	Type	Description
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryEmailContactPTId	long	The unique identifier of the primary e-mail.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneContactPTId	long	The unique identifier of the primary phone contact point.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURLContactPTId	long	The unique identifier of the primary URL contact point.
Province	string	The name of the province.

Name	Type	Description
Relationship	*Relationship*	The relationship information of the person.
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The Standard Industry Classification (SIC) code.
SICCodeType	string	The version of Standard Industry Classification (SIC) code.
Salutation	string	The size of the household this person is a part of.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
SourceSystemUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the source system information was last updated.
State	string	The name of the state.
Status	string	The status of the record.
ThirdPartyFlag	boolean	Indicates whether a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. If the value is Y, then the party is a third party relationship. If Oracle Service is installed, the Third Party field in the Customers window is mandatory.
URL	string	The destination URL associated with a specific Google AdWords ad.
UserGUID	string	The "light weight" user Global Unique Id. Light Weight users defined in the Extended Security (XS) System.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
Web	*Web*	The web information related to the record.

Partner Phone

The phone number for a contact point.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerPublicPhone

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActualContentSource	string	The information regarding the source of the contact point.
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPointValue	string	The key information for the contact point.
CreatedByModule	string	The module that created the record.

Name	Type	Description
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FormattedPhoneNumber	string	The formatted phone number.
LastContactDtTime	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The last time when the contact point was contacted.
OrigSystemReference	string	The identifier for the record from the original system.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PagerTypeCode	string	The type of pager for the phone number.
PartyUsageCode	string	The usage context of a party's contact point.
PhoneAreaCode	string	The area code prefix for the phone number.
PhoneCallingCalendar	string	The information on proper calling times.
PhoneCountryCode	string	The country code prefix for the phone number.
PhoneExtension	string	The extension of the phone number.
PhoneLineType	string	The type of phone line.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
RawPhoneNumber	string	The unformatted phone number.

Name	Type	Description
RelationshipId	long	The relationship identifier for the record.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TransposedPhoneNumber	string	The transposed phone number.

Partner Public Contact

The point of contact used for the public profile.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerPublicContact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Address1	string	The first line of the address.

Name	Type	Description
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AnalysisFy	string	The fiscal year that the financial information is based on.
CategoryCode	string	The user-defined category. The lookup type is CUSTOMER_CATEGORY.
CeoName	string	The name of the chief executive officer. It is the denormalized value of the CEO_NAME in HZ_ORGANIZATION_PROFILES.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
City	string	The name of the city.
Comments1	string	The denormalization of the COMMENTS in HZ_GROUP_PROFILES.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy1	string	The user who created the account record.
CreatedByModule1	string	The module that created the account record.
CreationDate1	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyFyPotentialRevenue	decimal	The potential revenue of the organization in this fiscal year.
DUNSNumber	string	DUNS_NUMBER in VARCHAR format. Column value is not restricted to nine digit DUNS number.

Name	Type	Description
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The denormalization of the DATE_OF_BIRTH in HZ_PERSON_PROFILES.
EmailAddress	string	The email address associated with the record.
EmployeesTotal	decimal	The total number of employees.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
FormattedAddress	string	The formatted address of the contact.
FormattedPhoneNumber	string	The formatted phone number.
Gender	string	The denormalization of the GENDER in HZ_PERSON_PROFILES.
GroupType	string	The lookup for the group type.
HQBranchInd	string	The status of the site. Identifies if the location is the headquarters, a branch, or a single location.
HomeCountry	string	The home country associated with the party.
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LanguageName	string	The standard name for a language.
LastUpdateDate1	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin1	string	The login of the user who last updated the record.
LastUpdatedBy1	string	The user who last updated the record.

Name	Type	Description
MaritalStatus	string	The denormalization of the MARITAL_STATUS in HZ_PERSON_PROFILES.
MissionStatement	string	The corporate charter of the organization.
NextFyPotentialRevenue	decimal	The potential revenue of the organization for the next fiscal year.
OrigSystemReference	string	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PersonAcademicTitle	string	An academic title that is part of the name of a person, such as Dr. John Smith.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	Used to specify the last name prefix such as fon, van, and so on for a person. It is used in the same way the new field PERSON_LAST_NAME_PREFIX in HZ_PERSON_PROFILES is used. Corresponds to the field Last Name Prefix in HL7.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	Indicates the place in a family structure. For example, in Tom Jones III, III is the suffix.

Name	Type	Description
PersonPreNameAdjunct	string	The salutary introduction such as Mr. or Herr.
PersonPreviousLastName	string	The previous last or surname of the person.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PostalCode	string	The postal code element of the address.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryEmailContactPTId	long	The key to primary e-mail contact point.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneContactPTId	long	The key to the primary contact point.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.

Name	Type	Description
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURLContactPTId	long	The key to the primary URL contact point.
Province	string	The name of the province.
SICCode	string	The standard industry classification (SIC) code.
SICCodeType	string	The version of standard industry classification (SIC) code.
Salutation	string	The phrase used to address a party in any correspondence.
State	string	The name of the state.
Status1	string	The party status indicator.
TradingPartnerIdentifier	string	One column to store the FSIO related trading partner codes. This column stores alpha numeric values. The column also addresses Fed vs. Non-Fed attribute requirement.
URL	string	The destination URL associated with a specific Google AdWords ad.
UserGUID	string	Stores the light weight user Global Unique ID. Light weight users are defined in the Extended Security (XS) system. Foreign key to FND_USER.
YearEstablished	int	The year when the organization began doing business.

Partner Type

The information about the partner type.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerTypeDimensionMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributePk1	string	This is the ATTRIBUTE PK1 column.
AttributePk2	string	This is the ATTRIBUTE PK2 column.
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DimSubtypeCode	string	This attribute is not used.
DimensionCode	string	This will contain the string 'SChnl' to indicate Partner Type.

Name	Type	Description
DimensionMemberName	string	Name of dimension member.
DimensionMemberNameBackup	string	The name of the dimension remember this record refers to. This is stored in case the dimension member was removed and the user still needs to know the name of the item that was removed.
IntegrationId	string	The reference to the actual dimension member item.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
OwnerId	long	Partner Party Id of the Partner.
OwnerType	string	The type of entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
PartitionTypeCode	string	The type of partition in which the data is stored.
PartnerDimMembersId	long	This column is the private key of this table. • Primary Key
PartnerTypeCode	string	The partner type code for partner.
PartnerTypeName	string	The name of the partner type, such as Value Added Reseller.
TerrDimMemberId	long	Key data for the territory dimension.
TerrDimPartitionId	long	Primary key.

Name	Type	Description
TypeCode	string	Type of the partition.

Phone

The phone number associated with a trading community member. For example, the phone number for Oracle Corporation is 650-506-6000.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Phone

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Marketing Response*
Contained by	*Partner*
Contained by	*Household*
Contained by	*Contact Address*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*

Relationship Type	Object or Service
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FormattedPhoneNumber	string	The formatted phone number.
LastContactDtTime	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date and time of last contact placed to this contact point.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.

Name	Type	Description
PagerTypeCode	string	The PAGER_TYPE_CODE column stores the lookup code for the type of pager. The type of pager determines how the page is received. For example, tone, number, alphanumeric or two-way alphanumeric.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PhoneAreaCode	string	The area code prefix for the phone number.
PhoneCallingCalendar	string	The name or code for a calling calendar used with this telephone number. This attribute is no longer used in Fusion applications.
PhoneCountryCode	string	The country code prefix for the phone number.
PhoneExtension	string	The additional number addressed after initial connection to an internal telephone system.
PhoneInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community phone.
PhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound, or outbound.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RawPhoneNumber	string	The unformatted telephone number.
RelationshipId	long	The relationship identifier for the record.

Name	Type	Description
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TimezoneCode	string	The foreign key to FND_TIMEZONES_B.TIMEZONE_CODE.
TransposedPhoneNumber	string	This column stores the concatenation of PHONE_COUNTRY_CODE, PHONE_AREA_CODE, and PHONE_NUMBER in reverse order. For example, if PHONE_COUNTRY_CODE=1, PHONE_AREA_CODE=650 and PHONE_NUMBER=5065747, this column stores 74756050561. This column is used for building an index to search for any combination of the above three columns.

Preference

The preferences of a trading community member. For example, a member may prefer that the transaction currency is the US dollar.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartyPreference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*

Relationship Type	Object or Service
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalValue1	string	The additional preference value.
AdditionalValue2	string	The additional preference value.
AdditionalValue3	string	The additional preference value.
AdditionalValue4	string	The additional preference value.
AdditionalValue5	string	The additional preference value.
Category	string	A preference category is used to logically group one or more preference codes in a particular user interface. The combination of CATEGORY and PREFERENCE_CODE identifies a preference.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Module	string	The program that creates the preference. For example, TCA MOBILE CUSTOMER DIRECTORY.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PartyPreferenceId	long	The unique identifier of the party preference. • Primary Key
PreferenceCode	string	A preference code determines if a preference is a single value or a multiple value preference. The preference code is validated by the HZ_PREFERENCE lookup. The combination of CATEGORY and PREFERENCE_CODE identifies a preference.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
ValueDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The preference value when the data type is DATE.
ValueName	string	A user-defined alias for a preference value.
ValueNumber	decimal	The preference value when the data type is NUMBER.
ValueVarchar2	string	The preference value when the data type is VARCHAR2.

Relationship

The relationship between two trading community members. For example, John Doe is the spouse of Jane Doe or Michael Smith is a contact of Oracle Corporation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}Relationship

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Phone*
Contains	*Address*
Contains	*Instant Messaging*
Contains	*Web*
Contains	*Usage Assignment*
Contains	*Trading Community Relationship Additional Information*
Contains	*Customer Contact Profile*
Contains	*Source System Reference*
Contains	*Email*
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*

Relationship Type	Object or Service
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalInformation1	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type. For operating unit and legal entity to bank relationships, column stores communication agreement ID, which identifies agreement between payer and bank on type of EDIFACT documents that can be sent for processing payments.
AdditionalInformation10	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation11	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation12	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation13	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation14	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.

Name	Type	Description
AdditionalInformation15	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation16	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation17	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation18	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation19	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation2	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation20	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation21	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation22	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation23	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation24	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation25	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.

Name	Type	Description
AdditionalInformation26	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation27	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation28	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation29	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation3	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation30	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation4	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation5	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation6	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation7	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation8	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation9	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
Comments	string	The comments for the record.

Name	Type	Description
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DirectionCode	string	The code of the relationship direction. The list of accepted values are defined in the lookup DIRECTION_CODE.
Email	*E-Mail*	The email address associated with the record.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectEmailAddress	string	The e-mail address of the object party in the relationship.
ObjectId	long	The unique identifier of the object party in this relationship.
ObjectPartyName	string	The name of the object party in this relationship.

Name	Type	Description
ObjectTableName	string	The source table name of the object party in this relationship.
ObjectType	string	The object type of the relationship.
ObjectUsageCode	string	The usage code of object party in the relationship.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationContact	*Customer Contact Profile*	The organization contact information.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyName	string	The name of the party.
PartySite	*Address*	The party site associated with the relationship.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the relationship.
PercentageOwnership	decimal	The percentage of the child entity owned by the parent entity.
Phone	*Phone*	The phone information for the entity.
PreferredContactFlag	boolean	Indicates if this contact person is primary contact for the customer.
PrimaryCustomerFlag	boolean	Indicates if this customer is primary customer for the contact.
RelationshipCode	string	The code for a forward or a backward relationship. A list of accepted relationship values is defined in the lookup PARTY_ RELATIONS_TYPE.
RelationshipId	long	The relationship identifier for the record.
RelationshipInformation	*Trading Community Relationship Additional Information*	The relationship type information.

Name	Type	Description
RelationshipRecId	long	The unique identifier of the contact's relationship record. • Primary Key
RelationshipType	string	The relationship type name. For example, CUSTOMER_SUPPLIER. A list of valid relationship types is defined in the lookup HZ_RELATIONSHIP_TYPE.
RequestId	long	A system-generated read-only attribute used by the application framework.
Role	string	The role between the subject and object party in this relationship.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
SubjectEmailAddress	string	The e-mail address of the subject party in relationship.
SubjectId	long	The unique identifier of the subject in this relationship.
SubjectPartyUsageAssignment	*Usage Assignment*	The usage assignment of the subject party in the relationship.
SubjectTableName	string	The source table of the subject.
SubjectType	string	The subject type of the relationship.
SubjectUsageCode	string	The usage code of subject party in the relationship.
Web	*Web*	The web information related to the record.

Source System Reference

The name of external source system where the trading community information is imported from.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}OriginalSystemReference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Original System Mapping Identifier Additional Information*

Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OldOrigSystemReference	string	The old source system reference that is being replaced.

Name	Type	Description
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OrigSystemReferenceId	long	The unique identifier for original system reference. • Primary Key
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
SourceSystemRefInformation	*Trading Community Original System Mapping Identifier Additional Information*	The source system reference information.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Telex

The telex number information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Telex

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*

Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key

Name	Type	Description
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary telex of the associated object. If the value is True, then this is the primary telex. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.

Name	Type	Description
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TelexNumber	string	The telex reference number (usually a telephone number) of the organization.

Trading Community Address Additional Information

The address information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/partySite/}PartySiteInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contact Address*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*

Relationship Type	Object or Service
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BeginDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date at the start of the date range within which the row is active.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
IntegrationKey	string	The integration key is not used.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.

Name	Type	Description
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PartySiteUseId	long	The unique identifier of the party site used. • Primary Key
PrimaryPerType	string	Indicates if this is the primary use for the site. Y stands for the primary site and N stands for all other sites.
RequestId	long	A system-generated read-only attribute used by the application framework.
SiteUseType	string	The site use type associated with the address.
Status	string	The status of the record.

Trading Community Contact Point Additional Information

The contact point for a trading community member like phone or e-mail. For example 650-506-6000 is the phone number for Oracle Corporation, john.doe@example.com is the e-mail address for John Doe.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/contactPoint/}ContactPointInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*E-Mail*
Contained by	*Instant Messaging*
Contained by	*Phone*
Contained by	*Web*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*

Relationship Type	Object or Service
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*

Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointType	string	The type of the contact point.
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Location Profile Additional Information

The physical location information of a trading community member. For example 300 Oracle Parkway, Redwood Shore, CA.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/location/}LocationInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Location Details*
Handled by	*Trading Community Location*
Handled by	*Company and User Registration*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Organization Contact Additional Information

The additional information about the organization contact.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/orgContact/}OrganizationContactInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Customer Contact Profile*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
OrgContactId	long	The unique identifier of the organization contact. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Organization Details

The information about an organization.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}OrganizationParty

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Credit Rating*

Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalOrganizationName	*Additional Account Name*	The additional name associated with the organization.
AdditionalPartyId	*Additional Identifier*	The additional identifier associated with the organization or person.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AnalysisFy	string	The fiscal year that the financial information is based on.
CategoryCode	string	The code of the category to which the person belongs. A list of accepted values is defined in the lookup type CUSTOMER_CATEGORY.
CeoName	string	The name of the chief executive officer. It is the denormalized value of the CEO_NAME in HZ_ORGANIZATION_PROFILES.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
Certification	*Certification*	The certification information associated with the organization.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
City	string	The name of the city.
CodeAssignment	*Classification Assignment*	The classification code assigned to the organization.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.

Name	Type	Description
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRating	*Credit Rating*	The credit rating for the organization.
CurrentFiscalYearPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its current fiscal year.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
Edi	*Electronic Data Interchange*	The electronic data interchange information for the organization.
Eft	*Electronic File Transfer*	The electronic file transfer information for the organization.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EmailDomain	*E-Mail Domain*	The domain name of the email address.
EmployeesTotal	decimal	The total number of employees.
FinancialProfile	*Financial Profile*	The financial profile information of the organization.
FinancialReport	*Financial Report*	The financial report information of the organization.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services

Name	Type	Description
		Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
GroupType	string	The type of the group.
HQBranchIndicator	string	The status of this site, such as HQ, a branch, or a single location. A list of accepted values are defined in the lookup type HQ_BRANCH_IND.
HomeCountry	string	The home country associated with the party.
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LanguageName	string	The standard name for the language.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MissionStatement	string	The corporate charter of organization in user-defined text format.
NextFyPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its next fiscal year.

Name	Type	Description
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationProfile	*Account*	The information about the partner organization.
OrganizationSize	string	The size of the organization based on its revenue, number of employees, and so on.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartyPreference	*Preference*	The preference mentioned in the organization details.
PartySite	*Address*	The party site associated with the organization.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the organization.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
Phone	*Phone*	The phone information for the entity.

Name	Type	Description
PostalCode	string	The postal code element of the address.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryEmailContactPointId	long	The unique identifier of the primary e-mail.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneContactPointId	long	The unique identifier of the primary phone contact point.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.

Name	Type	Description
PrimaryURLContactPointId	long	The unique identifier of the primary URL contact point.
PrincipalName	string	The Name of the highest ranking person in the company.
Province	string	The name of the province.
Relationship	*Relationship*	The relationship information of the organization.
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The Standard Industry Classification (SIC) code.
SICCodeType	string	The version of Standard Industry Classification (SIC) code.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
SourceSystemUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the source system information was last updated.
State	string	The name of the state.
Status	string	The status of the record.
Telex	*Telex*	The telex information of the organization.
ThirdPartyFlag	boolean	Indicates whether a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. If the value is Y, then the party is a third party relationship. If Oracle Service is installed, the Third Party field in the Customers window is mandatory.
TradingPartnerIdentifier	string	The FSIO related trading partner codes.
URL	string	The destination URL associated with a specific Google AdWords ad.

Name	Type	Description
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
Web	*Web*	The web information related to the record.
YearEstablished	int	The year when the organization began doing business.

Trading Community Organization Profile Additional Information

The additional profile information about an organization, such as the organization type.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/organization/}OrganizationInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Cloud Account*
Contained by	*Account*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
OrganizationProfileId	long	The unique identifier of the organization profile. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Original System Mapping Identifier Additional Information

The unique identifier for the trading community party, associated with the address, from the external source system reference.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/sourceSystemRef/}SourceSystemRefInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Source System Reference*
Handled by	*Sales Reference Customer*
Handled by	*Trading Community Location*
Handled by	*Trading Community Customer Account*
Handled by	*Sales Party*
Handled by	*Company and User Registration*

Relationship Type	Object or Service
Handled by	*Sales Competitor Service*
Handled by	*Source Information Technology System Reference*
Handled by	*Trading Community Person Information*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Marketing Response Service*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
OrigSystemRefId	long	Sequentially generated identifier. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Relationship Additional Information

The relationship between two trading community members. For example, John Doe is the spouse of Jane Doe or Michael Smith is a contact of Oracle Corporation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/relationship/}RelationshipInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
RelationshipRecId	long	The unique identifier of the contact's relationship record. • Primary Key

Name	Type	Description
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Usage Assignment

The party usage assigned to a trading community member. For example, John Doe is a contact of ABC Corporation and XYZ Corporation is a supplier.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartyUsageAssignment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Trading Community Party Usage Assignment Service*
Handled by	*Trading Community Party Information*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*

Relationship Type	Object or Service
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OwnerTableId	long	The unique identifier for a record in the owner table.

Name	Type	Description
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
PartyUsageCode	string	The usage context of a party's contact point.
PartyUsgAssignmentId	long	The unique identifier of the party usage assignment. • Primary Key
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.

Web

The Web information associated with a trading community member. For example, Oracle's address on the Web is www.oracle.com.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Web

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*

Relationship Type	Object or Service
Contained by	*Household*

Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key

Name	Type	Description
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N stands for all others.

Name	Type	Description
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
URL	string	The destination URL associated with a specific Google AdWords ad.
WebInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community Web.
WebType	string	The prefix class to a Web address. Typically, this is either FTP or HTTP.

Price Books

Service to operate on price books. The supported operations are create, update, get, find, and delete. A price book is used by a order capture organization to store the price catalog of items.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/orderCapture/priceBook/priceBookService/}PriceBookService

Service WSDL URL: https://servername/crmService/PriceBookService?WSDL

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Price Book Line*

Price Book Line

The price catalog of items for a particular price book. This is used by an order capture organization.

QName: {http://xmlns.oracle.com/apps/orderCapture/priceBook/priceBookService/}PriceBookItem

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Price Books*

Sales Account Resource Service

The service used to create, update, get, or find sales account resources.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesAccountResourceService/}SalesAccountResourceService

Service WSDL URL: https://servername/crmService/SalesAccountResourceService?WSDL

Logical Business Objects

- CRM : Customer Center : Sales Party

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Sales Account Resource*

Operations

- *getSalesAccountResource*
- *createSalesAccountResource*
- *updateSalesAccountResource*
- *deleteSalesAccountResource*
- *findSalesAccountResource*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

getSalesAccountResource

The get operation for sales account resource details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
sAccountResourceId	long	The sales account resource identifier.

Response Payload

Element Name	Type	Description
result	*Sales Account Resource*	The operation that returns sales account resource details that matches the inbound key attributes.

Element Name	Type	Description

createSalesAccountResource

The operation to create sales account resource details for a sales account.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountResource	*Sales Account Resource*	The locale to use when evaluating locale-based user interface hints. The locale name is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	*Sales Account Resource*	The result of the operation including the successfully created sales account resource details and any warnings or informational messages.

updateSalesAccountResource

The operation to update sales account resource details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountResource	*Sales Account Resource*	Sales Account Resource Details to be updated

Response Payload

Element Name	Type	Description
result	*Sales Account Resource*	The result of the operation includes the successfully updated sales account resource details or a list of warnings or informational messages, or both.

deleteSalesAccountResource

The operation that deletes sales account resource details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountResource	*Sales Account Resource*	Sales Account Resource Details to be deleted

Response Payload

Element Name	Type	Description
result	void	A list of warnings or informational messages encountered when deleting the object.

findSalesAccountResource

The find operation for sales account resource details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*Sales Account Resource*	The result of the operation including the list of sales account resource details that satisfy the inbound criteria and any warnings or informational messages encountered during the invocation.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The locale name is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getSalesAccountResource	ZCM_MANAGE_SALES_ACCOUNT_TEAM_PRIV	Manage Sales Account Team	Allows managing and maintaining the sales account teams.
updateSalesAccountResource	ZCM_MANAGE_SALES_ACCOUNT_TEAM_PRIV	Manage Sales Account Team	Allows managing and maintaining the sales account teams.
deleteSalesAccountResource	ZCM_MANAGE_SALES_ACCOUNT_TEAM_PRIV	Manage Sales Account Team	Allows managing and maintaining the sales account teams.

createSalesAccountResource	ZCM_MANAGE_SALES_ACCOUNT_TEAM_PRIV	Manage Sales Account Team	Allows managing and maintaining the sales account teams.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCM_MANAGE_SALES_ACCOUNT_TEAM_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCM_MANAGE_SALES_ACCOUNT_TEAM_PRIV	ORA_ZCM_PARTNER_SALES_PARTY_MANAGEMENT_DUTY	Partner Sales Party Management	Manages creation and maintenance of sales organizations and consumers for partners. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts. This role has limited access to customers and contacts.
ZCM_MANAGE_SALES_ACCOUNT_TEAM_PRIV	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	ORA_OKC_ALL_BUSINESS_UNITS_CONTRACT_INQUIRY_DUTY_CRM	Contract View Access Across All Contracts	Views all contracts across an enterprise.
ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	ORA_ZCM_SALES_PARTY_REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.

Sales Account Resource

An object representing a resource party that is assigned to a sales account team and has a defined access role for the sales account.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesPartiesService/}SalesAccountResource

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Party*
Contained by	*Sales Account*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Sales Account Resource Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevelCode	string	The access level determines the type of access granted to the resource as well as managers of the organizations. The possible values are contained in the ZCA_ACCESS_LEVEL lookup.
AccountDirectorId	long	The party identifier for the resource designated as the sales account owner.
AssignmentTypeCode	string	The code indicating how the resource is assigned to the sales account team. The possible values are contained in the ZCA_ASSIGNMENT_TYPE lookup.
Attribute1	string	The segment of the user descriptive flex field.
Attribute10	string	The segment of the user descriptive flex field.
Attribute11	string	The segment of the user descriptive flex field.
Attribute12	string	The segment of the user descriptive flex field.
Attribute13	string	The segment of the user descriptive flex field.

Name	Type	Description
Attribute14	string	The segment of the user descriptive flex field.
Attribute15	string	The segment of the user descriptive flex field.
Attribute2	string	The segment of the user descriptive flex field.
Attribute3	string	The segment of the user descriptive flex field.
Attribute4	string	The segment of the user descriptive flex field.
Attribute5	string	The segment of the user descriptive flex field.
Attribute6	string	The segment of the user descriptive flex field.
Attribute7	string	The segment of the user descriptive flex field.
Attribute8	string	The segment of the user descriptive flex field.
Attribute9	string	The segment of the user descriptive flex field.
AttributeCategory	string	The structure definition of the user descriptive flex field.
AttributeDate1	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The segment of the user descriptive flex field.
AttributeDate2	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The segment of the user descriptive flex field.
AttributeDate3	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The segment of the user descriptive flex field.
AttributeDate4	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The segment of the user descriptive flex field.
AttributeDate5	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The segment of the user descriptive flex field.
AttributeNumber1	decimal	The segment of the user descriptive flex field.
AttributeNumber2	decimal	The segment of the user descriptive flex field.
AttributeNumber3	decimal	The segment of the user descriptive flex field.

Name	Type	Description
AttributeNumber4	decimal	The segment of the user descriptive flex field.
AttributeNumber5	decimal	The segment of the user descriptive flex field.
CpdrfLastUpd	string	The standard replication column.
CpdrfVerPillar	int	The standard replication column.
CpdrfVerSor	int	The standard replication column.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
EmailAddress	string	The email address associated with the record.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
FormattedPhoneNumber	string	The formatted phone number.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LockAssignmentBooleanFlag	boolean	Indicates whether the sales account resource is enabled for locked assignment, which means the sales account resource cannot be removed from the team at future territory assignments.
LockAssignmentFlag	boolean	The flag indicates automatic territory assignment cannot remove the sales account team resource when this flag is Y'. When a sales account team member is added manually, this flag is defaulted to Y'.

Name	Type	Description
ManagerPartyId	long	The party identifier for the manager.
MemberFunctionCode	string	The lookup code indicating a sales account resource's role on the resource team such as Integrator, Executive Sponsor and Technical Account Manager. The code lookup is stored in FND_LOOKUPS.
Name	string	The name of the organization for the resource.
Name1	string	The name of the territory.
NamedAccountFlag	boolean	The indicator for whether a sales account is a named sales account.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was last queried.
ObjectVersionNumber2	int	The number to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
OrgTreeCode	string	The code for the organization hierarchy tree. Managers and administrators of sales account resource gain access through this hierarchy.
OrgTreeStructureCode	string	The structure code for the organization hierarchy tree. Managers/Administrators of parent member organizations will gain access through this hierarchy.
OrganizationId	long	The identifier for the organization the sales account resource belongs.
OwnerResourceId	long	The identifier for the sales account owner.

Name	Type	Description
PartyName	string	The name of the party.
PartyName1	string	The party name of the manager.
PrTerritoryId	long	The territory the sales account team resource belongs to.
ReportsToFlag	boolean	The indicator showing a resource reports to another resource in the same account team.
ResourceId	long	The unique identifier of the resource.
ResourceOrgId	long	The resource organization identifier.
ResourcePartyId	long	The party identifier for the resource.
ResourcePrimaryOrgId	long	The resource primary organization identifier.
ResourcePrimaryOrgName	string	The resource primary organization name.
RoleName	string	The list of all roles for the resources in the organization.
SAccountResourceId	long	The surrogate primary key for the member of the sales account resource team. • Primary Key
SalesAccountId	long	The identifier for the sales account.
SalesAccountPartyId	long	The unique identifier for the sales account.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
TerritoryVersionId	long	The territory version is a primary key.
TypeCode	string	The type code for the territory of which the resource is member of.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Sales Account Service

The service used for multiple sales account. You can use the Sales Party service to create sales account for 1:1 relationships. A service used to create, update, get, or find sales accounts for a party.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesPartiesService/}SalesAccountsService

Service WSDL URL: https://servername/crmService/SalesAccountsService?WSDL

getSalesAccount

The get operation for sales account details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountId	long	Updates a set of records of an Oracle Fusion Customer custom object.

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	*Sales Account*	The operation to return sales account details that matches the inbound key attributes.

createSalesAccount

The operation to create sales account details for a party.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccount	*Sales Account*	The operation to create sales account contact.

Response Payload

Element Name	Type	Description
result	*Sales Account*	The result of the operation including the successfully created sales account details and any warnings or informational messages.

updateSalesAccount

The operation to update sales account.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccount	*Sales Account*	The operation to update sales account details.

Response Payload

Element Name	Type	Description
result	*Sales Account*	The result of the operation includes the successfully updated sales account details or a list of warnings or informational messages, or both.

deleteSalesAccount

The operation that deletes sales account details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccount	*Sales Account*	The operation to delete sales account contact.

Response Payload

Element Name	Type	Description
result	void	A list of warnings or informational messages encountered when deleting the object.

mergeSalesAccount

The merge operation for sales account details. It will perform an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccount	*Sales Account*	The operation to merge sales account contact.

Response Payload

Element Name	Type	Description
result	*Sales Account*	The result of the operation including the successfully merged sales account details and any warnings or informational messages.

Element Name	Type	Description

findSalesAccount

The find operation for sales account details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*Sales Account*	The result of the operation including the list of sales account details that satisfy the inbound criteria and any warnings or informational messages encountered during the invocation.

findAccountsOfParty

The find operation for sales account details filtered by party identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
BindPartyId	long	The find operation for party identifier.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*Sales Account*	The result of the operation including the list of sales account details that satisfy the inbound criteria and any warnings or informational messages encountered during the invocation.

getSalesAccountTerritory

The get operation for sales account territory details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
sAccountTerritoryId	long	The sales account territory identifier.

Response Payload

Element Name	Type	Description
result	*Sales Account Territory*	The operation that returns sales account territory details that matches the inbound key attributes.

createSalesAccountTerritory

The operation to create sales account territory details for a sales account.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountTerritory	*Sales Account Territory*	A required input parameter of the createEntity web service method. Includes the attribute values that the records will be created with.

Response Payload

Element Name	Type	Description
result	*Sales Account Territory*	The result of the operation including the successfully created sales account territory details and any warnings or informational messages.

updateSalesAccountTerritory

The operation to update sales account territory details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountTerritory	*Sales Account Territory*	Sales Account Territory Details to be updated

Response Payload

Element Name	Type	Description
result	*Sales Account Territory*	The result of the operation includes the successfully updated sales account territory details or a list of warnings or informational messages, or both.

deleteSalesAccountTerritory

The operation that deletes sales account territory details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountTerritory	*Sales Account Territory*	A required input parameter of the deleteEntity web service method. All records matching the input attribute values specified in this input object are deleted.

Response Payload

Element Name	Type	Description
result	void	A list of warnings or informational messages encountered when deleting the object.

mergeSalesAccountTerritory

The merge operation for sales account territory details. It will perform an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountTerritory	*Sales Account Territory*	The required input parameter of the updateEntity web service method. The object includes only the IDs and the attribute values you want to update. Records with the matching IDs will be updated with the attribute values in the object.

Response Payload

Element Name	Type	Description
result	*Sales Account Territory*	The result of the operation including the successfully merged sales account territory details and any warnings or informational messages.

findSalesAccountTerritory

The find operation for sales account territory details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*Sales Account Territory*	The result of the operation including the list of sales account territory details that satisfy the inbound criteria and any warnings or informational messages encountered during the invocation.

getSalesAccountContacts

The get operation for sales account contact details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
sAccountContactId	long	The sales account contact identifier.

Response Payload

Element Name	Type	Description
result	*Sales Account Contact*	The operation returns sales account contact details that matches the inbound key attributes.

createSalesAccountContacts

The operation to create contact details for a sales account.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountContacts	*Sales Account Contact*	Queries by ID a single record of an Oracle Fusion Customer custom object.

Response Payload

Element Name	Type	Description
result	*Sales Account Contact*	The result of the operation including the successfully created sales account contact details and any warnings or informational messages.

updateSalesAccountContacts

The operation to update sales account contact details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountContacts	*Sales Account Contact*	Retrieves the list of service data objects defined on this service.

Response Payload

Element Name	Type	Description
result	*Sales Account Contact*	The result of the operation includes the successfully updated sales account contact details or a list of warnings or informational messages, or both.

deleteSalesAccountContacts

The operation that deletes sales account contact details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountContacts	*Sales Account Contact*	Retrieves a set of records of an Oracle Fusion Customer custom object.

Response Payload

Element Name	Type	Description
result	void	A list of warnings or informational messages encountered when deleting the object.

mergeSalesAccountContacts

The merge operation for sales account contact details. It will perform an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountContacts	*Sales Account Contact*	Retrieves the date and time when the schema files referenced in the service definition last changed.

Response Payload

Element Name	Type	Description
result	*Sales Account Contact*	The result of the operation including the successfully merged sales account contacts and any warnings or informational messages.

findSalesAccountContacts

The find operation for sales account contact details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*Sales Account Contact*	The result of the operation including the list of sales account contacts that satisfy the inbound criteria and any warnings or informational messages encountered during the invocation.

getSalesAccountContactPoints

The get operation for sales account contact point details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
sAccountContactPointId	long	The operation to get sales account contact point identifier.

Response Payload

Element Name	Type	Description
result	*Sales Account Contact Point*	The operation to return sales account contact point details that matches the inbound key attributes.

createSalesAccountContactPoints

The operation to create contact point details for a sales account.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountContactPoints	*Sales Account Contact Point*	Sales Account Contact Points Details to be created

Response Payload

Element Name	Type	Description
result	*Sales Account Contact Point*	The result of the operation including the successfully created sales account

Element Name	Type	Description
		contact points details and any warnings or informational messages.

updateSalesAccountContactPoints

The operation to update sales account contact point details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountContactPoints	*Sales Account Contact Point*	Deletes a set of records of an Oracle Fusion Customer custom object.

Response Payload

Element Name	Type	Description
result	*Sales Account Contact Point*	The result of the operation includes the successfully updated sales account contact point details or a list of warnings or informational messages, or both.

deleteSalesAccountContactPoints

The operation that deletes sales account contact points details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountContactPoints	*Sales Account Contact Point*	Sales Account Contact Point Details to be deleted

Response Payload

Element Name	Type	Description
result	void	A list of warnings or informational messages encountered when deleting the object.

mergeSalesAccountContactPoints

The merge operation for sales account contact points details. It will perform an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountContactPoints	*Sales Account Contact Point*	Creates records of an Oracle Fusion Customer custom object.

Response Payload

Element Name	Type	Description
result	*Sales Account Contact Point*	The result of the operation including the successfully merged sales account contact points details and any warnings or informational messages.

findSalesAccountContactPoints

The find operation for sales account contact points details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*Sales Account Contact Point*	The result of the operation including the list of sales account contact points details that satisfy the inbound criteria and any warnings or informational messages encountered during the invocation.

Element Name	Type	Description

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The locale name is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
updateSalesAccountContactPoints	ZCM_UPDATE_SALES_ACCOUNT_CONTACT_PRIV	Update Sales Account Contact	Allows updating a sales account contact
findAccountsOfParty	ZCM_CREATE_SALES_ACCOUNT_PRIV	Create Sales Account	Allows creating a sales account
mergeSalesAccountContacts	ZCM_UPDATE_SALES_ACCOUNT_CONTACT_PRIV	Update Sales Account Contact	Allows updating a sales account contact
deleteSalesAccount	ZCM_CREATE_SALES_ACCOUNT_PRIV	Create Sales Account	Allows creating a sales account
createSalesAccountContacts	ZCM_CREATE_SALES_ACCOUNT_CONTACT_PRIV	Create Sales Account Contact	Allows creating a sales account contact
mergeSalesAccountContactPoints	ZCM_UPDATE_SALES_ACCOUNT_CONTACT_PRIV	Update Sales Account Contact	Allows updating a sales account contact
updateSalesAccountContacts	ZCM_UPDATE_SALES_ACCOUNT_CONTACT_PRIV	Update Sales Account Contact	Allows updating a sales account contact

Operation Name	Privilege Code	Privilege Name	Privilege Description
findSalesAccount	ZCM_CREATE_SALES_ACCOUNT_PRIV	Create Sales Account	Allows creating a sales account
getSalesAccountContactPoints	ZCM_VIEW_SALES_ACCOUNT_CONTACT_PRIV	View Sales Account Contact	Allows viewing a sales account contact
updateSalesAccount	ZCM_UPDATE_SALES_ACCOUNT_PRIV	Update Sales Account	Allows update of the sales account
updateSalesAccount	ZCM_CREATE_SALES_ACCOUNT_PRIV	Create Sales Account	Allows creating a sales account
createSalesAccount	ZCM_CREATE_SALES_ACCOUNT_PRIV	Create Sales Account	Allows creating a sales account
deleteSalesAccountContacts	ZCM_DELETE_SALES_ACCOUNT_CONTACT_PRIV	Delete Sales Account Contact	Allows deleting a sales account contact
getSalesAccountContacts	ZCM_VIEW_SALES_ACCOUNT_CONTACT_PRIV	View Sales Account Contact	Allows viewing a sales account contact
mergeSalesAccount	ZCM_UPDATE_SALES_ACCOUNT_PRIV	Update Sales Account	Allows update of the sales account
mergeSalesAccount	ZCM_CREATE_SALES_ACCOUNT_PRIV	Create Sales Account	Allows creating a sales account
deleteSalesAccountContactPoints	ZCM_DELETE_SALES_ACCOUNT_CONTACT_PRIV	Delete Sales Account Contact	Allows deleting a sales account contact
findSalesAccountContacts	ZCM_VIEW_SALES_ACCOUNT_CONTACT_PRIV	View Sales Account Contact	Allows viewing a sales account contact
findSalesAccountContactPoints	ZCM_VIEW_SALES_ACCOUNT_CONTACT_PRIV	View Sales Account Contact	Allows viewing a sales account contact
createSalesAccountContactPoints	ZCM_CREATE_SALES_ACCOUNT_CONTACT_PRIV	Create Sales Account Contact	Allows creating a sales account contact
getSalesAccount	ZCM_CREATE_SALES_ACCOUNT_PRIV	Create Sales Account	Allows creating a sales account

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description

Account

An organization account and its profile information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}OrganizationProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Organization Profile Additional Information*
Contained by	*Sales Account*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Alias	string	The organization alias name.
AnalysisFy	string	The fiscal year that the financial information is based on.
BankCode	string	Identifies the bank in several countries, typically for regulatory purposes.
BankOrBranchNumber	string	Stores bank number for banks and branch number for bank branches. Primarily stores ABA number for US bank branches.
BranchCode	string	Identifies the bank branch in several countries, typically for regulatory purposes.
BranchFlag	boolean	Indicates if this is a branch location. If the value is True, then this is a branch location.
BusinessReport	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	Dun and Bradstreet business information report.
BusinessScope	string	The physical class of business in which a business participates. For example, local, national, or international.
CeoName	string	The name of the chief executive officer. It is the denormalized value of the CEO_NAME in HZ_ORGANIZATION_PROFILES.
CeoTitle	string	The formal title of the chief executive officer.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
Comments	string	The comments for the record.
CongDistCode	string	The U.S. Congressional district code for the account.
ContentSourceNumber	string	The content source number is not used.

Name	Type	Description
ControlYr	decimal	The year when current ownership gained control of the organization.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CorporationClass	string	The taxation classification for corporation entities such as Chapter S in the US.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CurrentFiscalYearPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its current fiscal year.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DataCloudStatus	string	Specifies the enrichment status of the person.
DbRating	string	The Dun & Bradstreet credit rating.
Disadv8aInd	string	Indicates whether the organization is considered disadvantaged by the US government under Title 8A. If the value is Yes, the organization is considered disadvantaged under Title 8A. The default value is No.
DisplayedDUNSPartyIdentifier	long	Dun and Bradstreet does not maintain data for the branch offices of companies that are located beyond North America. Data is only maintained for the company headquarters. If the data pertains only to company headquarters, the headquarters PARTY_ID is stored. If the data pertains to a branch office, the branch PARTY_ID is stored.

Name	Type	Description
DoNotConfuseWith	string	Indicates existence of similarly named businesses.
DomesticUltimateDUNSNumberC	string	DUNS Number for the Domestic Ultimate, which is the highest family member in the same country as the business entity. A subject can be its own Domestic Ultimate.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveLatestChange	string	The effective latest change is not used.
EffectiveSequence	int	The effective sequence is not used.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
EmployeesAtPrimaryAddress	string	The number of employees at the referenced address.
EmployeesAtPrimaryAddressEstimation	string	Indicates the calculation of employees at the primary address as estimated.
EmployeesAtPrimaryAddressMinimum	string	Indicates the calculation of employees at the primary address as minimum.
EmployeesAtPrimaryAddressText	string	The number of employees at the referenced address that cannot be mapped to a number.
EmployeesTotal	decimal	The total number of employees.
EnquiryDUNS	string	The identifier used to query the Dun and Bradstreet data. If a location is a branch, then in some countries the headquarters DUNS number is used to do the query. Otherwise it is the same as the DUNS number.
ExportInd	string	Indicates whether the organization is an exporter. If the value is Y, then the organization is an exporter. The default value is N.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services

Name	Type	Description
		Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
GlobalUltimateDUNSNumberC	string	DUNS Number for the Global Ultimate, which is the highest family member in the same country as the business entity as you proceed further on this branch of the tree. A case can be its own ultimate.
GrowthStrategyDescription	string	The description of the growth strategy.
HQBranchIndicator	string	The status of this site, such as HQ, a branch, or a single location. A list of accepted values are defined in the lookup type HQ_BRANCH_IND.
HomeCountry	string	The home country associated with the party.
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
ImportInd	string	Indicates whether the organization is an importer. If the value is Y, then the organization is an importer. The default value is N.
IncorpYear	int	The year that the business was formally incorporated.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LaborSurplusInd	string	Indicates whether the organization operates in an area with a labor surplus. If the value is Y, then the organization operates in an area with a labor surplus. The default value is N.
LastEnrichmentDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was last enriched in DaaS.

Name	Type	Description
LastSourceUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated by the source system.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdateSourceSystem	string	The source system that last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LegalStatus	string	The legal structure of the organization such as partnership, corporation, and so on.
LineOfBusiness	string	The type of business activities performed at this site.
LocalActivityCode	string	The local activity classification code.
LocalActivityCodeType	string	The local activity classification code type identifier.
LocalBusIdenType	string	The most common business identifiers in a country such as Chamber of Commerce Number in Italy, Government Registration Number in Taiwan. A list of accepted values are defined in the lookup type LOCAL_BUS_IDEN_TYPE.
LocalBusIdentifier	string	The primary identifier assigned to a businesses by a government agency such as Chamber of Commerce, or other authority. It is often used by countries other than USA.
MinorityOwnedInd	string	Indicates whether the organization is primarily owned by ethnic or racial minorities. If the value is Y, then the organization is owned by ethnic or racial minorities. The default value is N.
MinorityOwnedType	string	The type of minority-owned firm.
MissionStatement	string	The corporate charter of organization in user-defined text format.
NextFyPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its next fiscal year.

Name	Type	Description
OobInd	string	Indicates whether the organization is out of business. If the value is Y, then the organization is out of business. The default value is N.
OrgInformation	*Trading Community Organization Profile Additional Information*	The information of the organization.
OrganizationName	string	The name of the party when the party type is Organization.
OrganizationProfileId	long	The unique identifier of the organization profile. • Primary Key
OrganizationSize	string	Size of an organization based on revenue, number of employees, and so on.
OrganizationType	string	Not used in Fusion V1.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
ParentDUNSNumberC	string	Parent is a corporation that owns more than 50 percent capital stock of another corporation. The parent company can also be a subsidiary of another corporation. If the parent also has branches, then it is headquarters and also parent company. Headquarters is a business establishment that has branches or divisions reporting to it, and is financially responsible for those branches or divisions. If the headquarters has more than 50 percent of capital stock owned by another corporation, then it is also a subsidiary. If it owns more than 50 percent of capital stock of another corporation, then it is also a parent.
ParentSubInd	string	Indicates whether the organization is a parent or subsidiary.
PartyId	long	The unique identifier of the contact party.
PartyNumber	string	The unique identification number for the party.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix.

Name	Type	Description
		For Person, it is concatenation of person_name and suffix.
PreferredContactEmailAddress	string	The e-mail address of the primary contact person of the organization.
PreferredContactFormattedPhoneNumber	string	The formatted phone number of the primary contact person of the organization.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactName	string	The name of the primary contact person of the organization.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryAddressCity	string	The city of the identifying address.
PrimaryAddressCountry	string	The country listed in the TERRITORY_CODE column of the FND_TERRITORY table for the identifying address.
PrimaryAddressCounty	string	The county of the Identifying address.
PrimaryAddressLine1	string	The first line of the identifying address.
PrimaryAddressLine2	string	The second line of the Identifying address.
PrimaryAddressLine3	string	The third line of the Identifying address.

Name	Type	Description
PrimaryAddressLine4	string	The fourth line of the Identifying address.
PrimaryAddressPostalCode	string	The postal code of the identifying address.
PrimaryAddressProvince	string	The province of the identifying address.
PrimaryAddressState	string	The state of the Identifying address.
PrimaryEmailAddress	string	The e-mail address of the organization.
PrimaryEmailId	long	The primary e-mail contact point ID of the organization.
PrimaryFormattedPhoneNumber	string	The primary telephone number formatted in the local format of the organization.
PrimaryLanguage	string	The standard name for a language.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneId	long	The primary contact point phone ID of the organization.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURL	string	The primary uniform resource locator.
PrimaryWebId	long	The unique identifier of the primary uniform resource locator.

Name	Type	Description
PrincipalName	string	The Name of the highest ranking person in the company.
PrincipalTitle	string	The title of the highest ranking person in the organization.
Pronunciation	string	The pronunciation of the organization.
PublicPrivateOwnershipFlag	boolean	Indicator to specify if the organization is privately owned. Y stands for a privately owned organization and N stands for a publicly owned organization.
RegistrationType	string	Indicates the registration type of the organization.
RentOwnInd	string	Indicates if this account owns or rents the place of business. A list of valid values for rent, own, and lease are defined in the lookup OWN_RENT_IND.
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The standard industry classification (SIC) code.
SICCodeType	string	The version of the standard industry classification (SIC) code.
SeblUserKeyLoc	string	The location of the account, optional part of the user primary key.
SmallBusInd	string	Indicates whether the organization is considered as a small business. If the value is Y, then the organization is considered as a small business. The default value is N.
Status	string	The status of the record.
StockSymbol	string	The corporate stock symbol such as ORCL.
SuffixOverriddenFlag	boolean	Indicator to specify that the attribute has Y if the suffix is overridden by user and N otherwise. Default value is N.
ThirdPartyFlag	boolean	Indicator that tracks if a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. Y

Name	Type	Description
		stands for a third party relationship, N stands for a direct relationship. If Oracle Service is installed, the third party field in the Customers window is required.
TotalEmployeesEstimatedIndicator	string	Indicates if the employee total is estimated. The accepted values are defined in the lookup type TOTAL_EMP_EST_IND.
TotalEmployeesInd	string	Indicates if subsidiaries are included in the calculation of total employees. The accepted values are defined in the lookup type TOTAL_EMPLOYEES_INDICATOR.
TotalEmployeesMinimumIndicator	string	Indicates if the number is a minimum, maximum, or average number of total employees. The accepted values are defined in the lookup type TOTAL_EMP_MIN_IND.
TotalEmployeesText	string	The total number of employees in text format.
TotalPaymentAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total number of payment experiences.
TradingPartnerIdentifier	string	One column to store the FSIO related trading partner codes. It stores alpha numeric values and also addresses the Fed vs. Non-Fed attribute requirement.
UniqueNameAlias	string	The name as identified by the users to internally recognize the organization.
UniqueNameSuffix	string	Identifies system generated or manually overridden suffix.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
WomanOwnedInd	string	Indicates whether the organization is primarily owned by women. If the value is Y, then the organization is primarily owned by women. The default value is N.
YearEstablished	int	The year when the organization began doing business.

Additional Account Name

An additional name of an organization, such as a legal name or a DBA name.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}AdditionalOrganizationName

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPreferredFlag	boolean	Indicator to specify the preferred additional name for the organization.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNameId	long	The unique identifier of the party name. It is primary Key and system generated. • Primary Key
PartyNameType	string	The type of the name. It is a value defined by the additional party name and identifier type entity. The party type must be consistent with the party type that the PARTY_NAME_TYPE can be applied to.
PreferredFlag	boolean	Indicator to specify the name as preferred name for this party within the name type. Possible values are Y and N. Default value is N.
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.

Name	Type	Description
TransliterationLang	string	Used to identify the language for the name. It is validated against FND_LANGUAGES.LANGUAGE_CODE. Default value is the Session Language.

Additional Contact Name

An additional name of a person, such as the maiden name or alias.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}AdditionalPersonName

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.

Name	Type	Description
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPreferredFlag	boolean	Indicator to specify the preferred additional name of a person.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNameId	long	The unique identifier of the party name ID. It is primary key and system generated. • Primary Key
PartyNameType	string	The type of the name. It is a value defined by the additional party name and identifier type entity. The party type must be consistent with the party type that the PARTY_NAME_TYPE can be applied to.
PersonAcademicTitle	string	Used to specify the academic title for a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field degree in HL7.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_

Name	Type	Description
		PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	Used to specify the last name prefix such as fon, van, and so on for a person. It is used in the same way the new field PERSON_LAST_NAME_PREFIX in HZ_PERSON_PROFILES is used. It corresponds to the field Last Name Prefix in HL7.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	Used to specify the name suffix such as junior, senior, the third, and so on for a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Suffix in HL7.
PersonPreNameAdjunct	string	Used to specify the name prefix such as Mr., Ms, Dr, and so on for a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Prefix in HL7. It is validated against lookup CONTACT_TITLE.
PersonPreviousLastName	string	Used to specify the previous last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It has no mapping in HL7.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PreferredFlag	boolean	Indicator to specify the name as preferred name for the party within the name type. Possible values are Y and N. Default value is N.
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
TransliterationLang	string	Used to specify the language used for the name. It is validated against FND_LANGUAGES.LANGUAGE_CODE. Default value is the Session Language.

Additional Household Name

An additional name associated with a group. For example, the phonetic name of a group.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/groupService/}AdditionalGroupName

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Household*

Handled by	*Sales Party*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.

Name	Type	Description
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OverallPreferredFlag	boolean	Identify the name as preferred name for this party within this name type. Possible values are 'Y' and 'N'. Default is 'N'.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNameId	long	Unique Identifier of Party Name. • Primary Key
PartyNameType	string	The type of party name.
PreferredFlag	boolean	The flag which Identifies the name as preferred name for this party within this name type. Possible values are 'Y' and 'N'. Default is 'N'.
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
TransliterationLang	string	Used to capture the language used for the name.

Additional Identifier

An additional identifier of a trading community member, such as driver's license number or passport number.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}AdditionalPartyId

Relationships

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Country	string	The name of the country.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
ExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The expiration date for the identifier. It may be NULL, and does not apply to all types of identifiers.
IssueDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date in which the Identifier was issued. It may be NULL and does not apply to all types of identifiers.
IssuingAuthorityName	string	The issuing authority name.
IssuingAuthorityPartyId	long	The unique identifier of the issuing authority.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party.
PartyIdentifierId	long	The unique identifier of the party identifier. • Primary Key
PartyIdentifierType	string	Indicates the type for the current identifier. The list of accepted values are defined in the lookup TYPE_CODE of HZ_NAME_AND_ID_TYPE_B. The party type should be consistent with the party type that the PARTY_IDENTIFIER_TYPE can be applied to.
PartyIdentifierType1	string	Indicates the type for the current identifier. The list of accepted values are defined in the lookup TYPE_CODE of HZ_NAME_AND_ID_TYPE_B. The party type should be consistent with the party type that the PARTY_IDENTIFIER_TYPE can be applied to.
PartyIdentifierValue	string	The value of the party identifier.
PartyName	string	The name of the party.
RequestId	long	A system-generated read-only attribute used by the application framework.
StateProvince	string	The province of the address.
StatusCode	string	The pre-defined code used to indicate the status.

Address

An address of a trading community member, such as Oracle Corporation is located at 500 Oracle Parkway, Redwood Shores, CA.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartySite

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Phone*
Contains	*Trading Community Address Purpose*
Contains	*Instant Messaging*
Contains	*Web*
Contains	*Telex*
Contains	*Source System Reference*
Contains	*Contact Preference*

Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AddressExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the location is no longer valid.
AddressLinesPhonetic	string	The phonetic or Kana representation of the Kanji address lines that are used in Japan.
AddressStyle	string	Style of the address.
Addressee	string	The information of the addressee.
City	string	The name of the city.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.

Name	Type	Description
ContactPreferenceExistFlag	boolean	Indicator to specify if the contact is primary contact for the party.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
Country	string	The name of the country.
Country1	string	The attribute country1 is not used.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DateValidated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address was last validated.
DoNotValidateFlag	boolean	Indicator to specify that a particular location is not eligible for address validation irrespective of the current validation.
Eft	*Electronic File Transfer*	The electronic file transfer information for the party.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.

Name	Type	Description
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
FormattedAddress	string	The formatted read-only address.
FormattedLocaleAddress	string	The formatted read-only local address.
FormattedMultilineAddress	string	The formatted multi line address of the party site.
GlobalLocationNumber	string	The global location number that uniquely identifies each location in a trading partners enterprise.
HouseType	string	Indicates the building type.
IdentifyingAddressFlag	boolean	Indicator to specify the identifying address for the party. Y stands for the indentifying site and N stands for sites that are not the indentifying site.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
Language	string	The operating language for the party site.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Latitude	decimal	The latitude of the party address.
LocationDirections	string	Directions to the location.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
LocationLanguage	string	The operating language for the locations.

Name	Type	Description
Longitude	decimal	The longitude of the party address.
Mailstop	string	A user-defined code to indicate a mail drop point within the organization.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was last queried.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary address of the contact irrespective of the context. Y stands for primary address and N stands for all others.
PartyId	long	The unique identifier of the contact party.
PartyNameDba	string	Stores the doing-business_as (DBA) party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameDivision	string	Stores the division party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameLegal	string	Stores the legal party name for a party site. This column is used to store FSIO related legal party name attribute.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
PartySiteInformation	*Trading Community Address Additional Information*	The party address information.
PartySiteName	string	The user-defined name for the site.

Name	Type	Description
PartySiteNumber	string	The party site number of the address.
PartySiteType	string	Stores the party site type and is based on the lookup. Currently this is either null or one-time.
PartySiteUse	*Trading Community Address Purpose*	The information of the party address usage.
PartyUsageCode	string	The usage context of a party's contact point.
Phone	*Phone*	The phone information for the entity.
Position	string	The primary direction such as north or east that is used to access the location.
PostalCode	string	The postal code element of the address.
PostalPlus4Code	string	The four digit extension to the United States postal ZIP code.
Province	string	The name of the province.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
State	string	The name of the state.
Status	string	The status of the record.
Telex	*Telex*	The Telex information associated with the party.
UsageCode	string	The usage code is not used.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
ValidationStatusCode	string	The standardized status code describing the results of the validation.

Name	Type	Description
Web	*Web*	The web information related to the record.

Asset

Assets represents the products owned by customers. Anything tangible or intangible that is capable of being owned or controlled to produce value. For example: Tangible Items - Computers, engines, machine parts, and so on. Intangible items - Software, Services, Licenses and agreements.

QName: {http://xmlns.oracle.com/apps/crmCommon/assetImport/publicModel/assetImportService/}Asset

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Account*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AssetAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The cost amount of the asset in the transaction currency.
AssetDescription	string	The description field of the asset.
AssetGroup	string	The name of the asset group.
AssetId	long	The unique identifier of the asset. • Primary Key
AssetName	string	The name that describes the asset.

Name	Type	Description
AssetNumber	string	The number that identifies the asset.
AssetOrigSystem	string	A source system code that identifies the original source system of the asset.
AssetOrigSystemReference	string	A source system reference that identifies the unique ID of the asset in user's legacy or external system.
AssetTag	string	The tag number associated with the asset.
AttributeCategory	string	Standard column used in Fusion tables.
BatchId	long	The batch ID for importing process.
CompetitiveAsset	string	Indicates if the asset belongs to a competitor.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CrmConvRate	string	CRM currency convert rate.
CrmCorpCurrencyCode	string	The corporate currency code.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CustomerId	long	The unique ID for the existing customer party record in the Oracle Fusion destination table.
CustomerPartyNumber	string	
DeleteFlag	boolean	Indicates whether the record can be deleted or not.

Name	Type	Description
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
EnteredCurrencyCode	string	The code that represents the currency for the asset amounts.
ExchangeRate	decimal	The currency exchange rate.
IBAssetId	long	Unique ID of the associated Install Base asset record.
IBAssetSyncedVersionNumber	int	Last synced Version Number of the Install Base Asset
InstallDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date the asset was installed.
InterfaceRowId	long	The interface table row's unique ID.
InventoryItemId	long	The unique ID for the existing sales catalog product (item) record in the Oracle Fusion destination table.
InventoryOrgId	long	Item organization Id as created by Fusion CRM.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Manufacturer	string	The name of the manufacturer.
Model	string	The name of the model.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyType	string	

Name	Type	Description
PartyUniqueName	string	
PrContactPartyId	long	The party identifier of the asset's primary contact.
PrContactPartyNumber	string	
ProdGroupId	long	The product group ID in sales catalog.
Product	string	The name of the product.
ProductType	string	
PurchaseDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date the asset was purchased.
Quantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The quantity purchased.
RequestId	long	A system-generated read-only attribute used by the application framework.
ResourceOwnerId	long	The identifier of the asset's resource owner.
ResourceOwnerPartyNumber	string	
SerialNumber	string	The asset's serial number.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
StatusCode	string	The pre-defined code used to indicate the status.
UOMCode	string	The unit of measure.
Version	string	The version of the asset product.
Year	string	The year of manufacture or the nominal model year of the asset product.

Certification

The certification information of a trading community member, such as a full ISO 9001 registered firm.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}Certification

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CertificationId	long	The unique identifier for certification. • Primary Key
CertificationName	string	The name of the certification such as ISO9000 and GMP001.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrentStatus	string	The name for the status of the certification. For example, applied for, granted, or expired.
ExpiresOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the certification expires.
Grade	string	The level or grade of certification provided by the ISSUED_BY_AUTHORITY. For example, founding member, gold, fully certified, and partially certified.
IssuedByAuthority	string	The name of the certifying authority.
IssuedOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the certification was issued.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
PartyId	long	The unique identifier of the contact party.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Citizenship

The citizenship information about a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}Citizenship

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BirthOrSelected	string	Indicates if the citizenship was granted by being born in the country or by naturalization.
CitizenshipId	long	The unique citizenship identifier of a person. • Primary Key
CountryCode	string	The ISO code of the country from which a person claims citizenship.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DateDisowned	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when an individual renounced citizenship. This is usually a self-declared date that might not match a legal effective date.
DateRecognized	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the country granted citizenship to the individual. For a native-born person, this date is typically the person's date of birth.
DocumentReference	string	The unique reference number such as passport number or naturalization reference number associated with DOCUMENT_TYPE.
DocumentType	string	The class of document that confirms citizenship. For example, a passport, or naturalization papers.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
PartyId	long	The unique identifier of the contact party.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Classification Assignment

The classification code assigned to a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}CodeAssignment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*
Contained by	*Sales Competitor*
Contained by	*Household*
Contained by	*Trading Community Organization Details*

Handled by	*Sales Party Territory service*
Handled by	*Sales Party Resource Service*

Relationship Type	Object or Service
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ClassCategory	string	The name of the classification category.
ClassCode	string	The code of the classification.
CodeAssignmentId	long	The unique identifier of the assignment of an industrial classification code to an object. It is primary key and system generated. • Primary Key
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.

Name	Type	Description
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableKey1	string	The first column of the alphanumeric or multi-part foreign key.
OwnerTableKey2	string	The second column of the alphanumeric or multi-part foreign key.
OwnerTableKey3	string	The third column of the alphanumeric or multi-part foreign key.
OwnerTableKey4	string	The fourth column of the alphanumeric or multi-part foreign key.
OwnerTableKey5	string	The fifth column of the alphanumeric or multi-part foreign key.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PrimaryFlag	boolean	Indicator that specifies if this is the primary class code of a class category for the organization. Y stands for the primary class code and N stands for all others.
Rank	decimal	Ranks classes if multiple classes are assigned to a party.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Contact

The profile information of the trading community person. The profile includes information such as marital status and additional name.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}PersonProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Person Profile Additional Information*
Contained by	*Trading Community Person Details*
Contained by	*Sales Account*
Contained by	*Loyalty Member*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Loyalty Member Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Alias	string	Person alias name.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.

Name	Type	Description
Comments	string	The comments for the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DataCloudStatus	string	The enrichment status of the person.
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was born.
DateOfDeath	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person died.
DeceasedFlag	boolean	Y or N indicates whether the person is deceased or not.
DeclaredEthnicity	string	The declared ethnicity of the person.
Department	string	The free form text used to name the department.
DepartmentCode	string	The list of values for possible department codes.
Distance	decimal	The distance from the input location.
DoNotCallFlag	boolean	Indicator to specify if the user can send mail to the person or not.
DoNotContactFlag	boolean	Indicator to specify if the user can contact the person through phone, e-mail, or mail or not.

Name	Type	Description
DoNotEmailFlag	boolean	Indicator to specify if the user can send e-mail to the person or not.
DoNotMailFlag	boolean	Indicator to specify if the user can send mail to the person or not.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveLatestChange	string	The date effective entity. Y indicates that this row represents the latest change in the day.
EffectiveSequence	int	The date effective entity. Indicates the order of different changes made during a day. The lowest value represents the earliest change in the day.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
FavoriteContactFlag	boolean	Indicator to specify if the person is key contact.
Gender	string	The gender details such as male, female, or unknown of the person.
HeadOfHouseholdFlag	boolean	The head of household indicator is not used.
HouseholdIncomeAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The household income amount is not used.
HouseholdSize	decimal	The household size is not used.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
JobTitle	string	The free form text for the job title.
JobTitleCode	string	The code given to the job title.

Name	Type	Description
LastContactDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the contact was last contacted.
LastEnrichmentDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was last enriched in DaaS.
LastKnownGPS	string	The geophysical location that is, GPS point last reported for the person.
LastSourceUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated by the source application.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdateSourceSystem	string	The source application that last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaritalStatus	string	The marital status of the person.
MaritalStatusEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the marital status of the person changed.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party.
PartyNumber	string	The unique identification number for the party.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PersonAcademicTitle	string	The academic title that is part of the name of a person such as Dr. Jane Smith.

Name	Type	Description
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonInformation	*Trading Community Person Profile Additional Information*	The information of the person.
PersonInitials	string	The Initials of the name.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	Used to identify the Last name prefix such as fon, van and so on for a person. It is used in the same way the new field PERSON_LAST_NAME_PREFIX in HZ_PERSON_PROFILES is used. Corresponds to the field, Last Name Prefix in HL7.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonName	string	The combination of title, first, middle, last, and suffix names.
PersonNameSuffix	string	Indicates the place in a family structure. For example, III in Tom Jones III.
PersonPreNameAdjunct	string	Salutary introduction such as Mr., Herr, and so on.
PersonPreviousLastName	string	The previous last or surname of the person.
PersonProfileId	long	The unique identifier of the person profile. • Primary Key
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.

Name	Type	Description
PersonalIncomeAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated gross annual income of the person.
PlaceOfBirth	string	The place where the person was born, including city and country.
PreferredContactEmail	string	The preferred contact e-mail of the person.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactName	string	The preferred contact name of the person.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredContactPhone	string	The preferred contact phone of the person.
PreferredContactURL	string	The preferred contact uniform resource locator of the person.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryAddressCity	string	The city of the identifying address.
PrimaryAddressCountry	string	The country listed in the TERRITORY_CODE column of the FND_TERRITORY table for the identifying address.
PrimaryAddressCounty	string	The county of the identifying address.

Name	Type	Description
PrimaryAddressLatitude	decimal	The primary address latitude information for the location for spatial proximity and containment purposes.
PrimaryAddressLine1	string	The first line of the identifying address.
PrimaryAddressLine2	string	The second line of the identifying address.
PrimaryAddressLine3	string	The third line of the identifying address.
PrimaryAddressLine4	string	The fourth line of the identifying address.
PrimaryAddressLocationId	long	The primary address location ID.
PrimaryAddressLongitude	decimal	The primary address longitude information for the location for spatial proximity and containment purposes.
PrimaryAddressPostalCode	string	The postal code of the identifying address.
PrimaryAddressProvince	string	The province of the identifying address.
PrimaryAddressState	string	The state of the identifying address.
PrimaryCustomerId	long	The customer party identifier of a primary customer for a given person. There should be a valid relationship between the person and the customer.
PrimaryCustomerName	string	The customer party name of a primary customer for a given person. There should be a valid relationship between the person and the customer.
PrimaryCustomerRelationshipId	long	The unique identifier of the primary customer relationship.
PrimaryEmailAddress	string	The e-mail address of the person.
PrimaryEmailId	long	The primary contact point e-mail ID of the person.
PrimaryFormattedAddress	string	The primary formatted address of the person.
PrimaryFormattedPhoneNumber	string	The primary telephone number formatted in the local format of the person.

Name	Type	Description
PrimaryLanguage	string	The standard name for a language.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneId	long	The primary contact point phone ID of the person.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURL	string	The uniform resource locator.
PrimaryWebId	long	The unique identifier of the primary uniform resource locator.
Pronunciation	string	The person pronunciation.
RentOwnInd	string	Indicates if the person rents or owns his or her residence. Lookup values include rent, own, lease, and so on.
RequestId	long	A system-generated read-only attribute used by the application framework.
SalesAffinityCode	string	The affinity of a person towards the deploying organization.
SalesBuyingRoleCode	string	The role of a person in the buying process.
Salutation	string	The phrase used to address a party in any correspondence.

Name	Type	Description
Status	string	The status of the record.
SuffixOverriddenFlag	boolean	This attribute has Y if the suffix is overridden by user and N if not. Default value is N.
UniqueNameSuffix	string	Identifies system generated or manually overridden suffix.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.

Contact Address

The address of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PersonPartySite

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Phone*
Contains	*Trading Community Address Purpose*
Contains	*Contact Preference*
Contains	*Source System Reference*
Contains	*Trading Community Address Additional Information*
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*

Relationship Type	Object or Service
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Addressee	string	The information of the addressee in the contact address.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
GlobalLocationNumber	string	The global location number that uniquely identifies each location in a trading partners enterprise.
IdentifyingAddressFlag	boolean	Indicates whether this is the identifying address for the party. If the value is Y, then this is the identifying address for the party.
Language	string	The language used in the contact's location.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
Mailstop	string	A user-defined code to indicate a mail drop point within their organization.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary address of the associated object. If the value is True, then this is the primary address. The default value is False.
PartyId	long	The unique identifier of the contact party.
PartyNameDba	string	The doing-business_as (DBA) party name for a party site.
PartyNameDivision	string	The division of the party name for a party site.
PartyNameLegal	string	The legal party name for a party site.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
PartySiteName	string	The address associated with the party site.
PartySiteNumber	string	The alternate identifier of the party site.

Name	Type	Description
PartySiteType	string	The type of the party site.
PartySiteUse	*Trading Community Address Purpose*	Indicates the use of the party site.
PartyUsageCode	string	The usage context of a party's contact point.
PersonPartySiteInformation	*Trading Community Address Additional Information*	The party site information of the person.
Phone	*Phone*	The phone information for the entity.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Contact Interest

The interests of the trading community member, such as baseball, sports car, or painting.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}PersonInterest

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*

Relationship Type	Object or Service
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
InterestName	string	A text field that lets you assign a descriptive name to an interest. For example, pets, dogs, baseball, or sports car racing.
InterestTypeCode	string	A code to classify interests for evaluation.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LevelOfInterest	string	The user-defined level number or name to rate the amount of interest in the activity. For example, high, medium, or low.
LevelOfParticipation	string	The user-defined level number or name to indicate if the person participates and to what extent.

Name	Type	Description
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PersonInterestId	long	The unique identifier of interests of the person. • Primary Key
RequestId	long	A system-generated read-only attribute used by the application framework.
Since	{http://xmlns.oracle.com/adf/svc/types/}date-Date	An approximate date from which the person was involved with the activity.
SportIndicator	string	Indicates if the activity is a sport. Y stands for sports and N stands for non-sport activities.
Status	string	The status of the record.
SubInterestTypeCode	string	A code to classify subinterests of the interest type code.
Team	string	Any team the person likes to watch or play for.

Contact Language

The languages known information of a trading community member. For example, Mary Smith can speak both Spanish and English but can only read and write English.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PersonLanguage

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*

Relationship Type	Object or Service
Handled by	*Trading Community Group*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LanguageName	string	The standard name for a language. For example, Spanish, Mandarin, or American English. Foreign key to the FND_LANGUAGES table.
LanguageUseReferenceId	long	The unique identifier of the language use reference. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
NativeLanguageFlag	boolean	Indicator to specify if the language is the declared native language of a person. Y stands for a declared native language and N stands for all other languages.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PrimaryLanguageIndicator	string	Indicates if this is the primary language used by a person in day-to-day transactions. Y stands for the primary language and N stands for other languages.
ReadsLevel	string	The user-defined level number or name to indicate the ability to read a language.
RequestId	long	A system-generated read-only attribute used by the application framework.
SpeaksLevel	string	The user-defined level number or name to indicate the ability to speak a language.
SpokenComprehensionLevel	string	The code to indicate comprehension of a spoken language.
Status	string	The status of the record.
WritesLevel	string	The user-defined level number or name to indicate the ability to write in a language.

Contact Preference

The contact preference of the trading community member. For example, do not call Joe Smith between 10 a.m. and 12 noon on weekdays.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}ContactPreference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*
Contained by	*Electronic Data Interchange*
Contained by	*E-Mail*
Contained by	*Instant Messaging*
Contained by	*Household*
Contained by	*Phone*

Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*

Relationship Type	Object or Service
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactLevelTable	string	The table that stores the contact level of the contact preference, and uses the SUBJECT_TABLE lookup. The list of accepted values are HZ_PARTIES, HZ_PARTIES_SITES, or HZ_CONTACT_POINTS.
ContactLevelTableId	long	The foreign key to the table specified in CONTACT_LEVEL_TABLE column. The list of accepted values are PARTY_ID from HZ_PARTIES table, CONTACT_POINT_ID from HZ_CONTACT_POINTS table, or PARTY_SITE_ID from HZ_PARTY_SITES table.
ContactPreferenceId	long	The unique identifier for the contact preference. • Primary Key
ContactType	string	The contact party type that defines whether the contact is a sales account, a prospect, a contact, or any other user-defined party type. The default value is CUSTOMER. A list of accepted values is defined in the lookup CONTACT_TYPE.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaximumNoOfInteractUOMCode	string	The period of time during which the maximum number of interactions applies. Uses the MAX_NO_OF_INTERACT_UOM_CODE lookup.
MaximumNoOfInteractions	decimal	The number of times you can use this contact point. The period of time that this number applies is stored in the MAX_NO_OF_INTERACT_UOM_CODE column.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PreferenceCode	string	Indicates whether to use a particular contact method. The list of accepted values are defined in the PREFERENCE_CODE lookup.
PreferenceEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes inactive.
PreferenceEndTimeHR	int	The hour part of time when the contact preference becomes inactive. The time is recorded in the 24 hour format.
PreferenceEndTimeMi	int	The minutes part of the time when the contact preference becomes inactive.
PreferenceStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes active.
PreferenceStartTimeHR	int	The hour part of time when the contact preference becomes active. The time is recorded in the 24 hour format.

Name	Type	Description
PreferenceStartTimeMi	int	The minutes part of the time when the contact preference becomes active.
PreferenceTopicType	string	The appropriate subjects to send the party that the preference is created for. The list of accepted values are defined in the PREFERENCE_TOPIC_TYPE lookup.
PreferenceTopicTypeCode	string	The code of the preference topic type.
PreferenceTopicTypeId	long	The unique identifier of the preference topic type.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
RequestedBy	string	Indicates if the permission or restriction was created internally or requested by the party. The list of accepted values are defined in the REQUESTED_BY lookup.
Status	string	The status of the record.

Credit Rating

The trading community member's credit rating information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}CreditRating

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*

Relationship Type	Object or Service
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AverageHighCredit	decimal	The average of all the high credit experiences.
BankruptcyInd	string	Indicates if open bankruptcy exists. Y stands for any open bankruptcy that exists and N stands for no open bankruptcy.
BusinessDiscontinued	string	The business discontinued at the listed location. Prompts reader to contact D and B customer service center if any business is operating.
ClaimsInd	string	Indicates if open claims, legal claims, liens, protested bills, or any equivalent information exists. Y stands for availability of information and N stands for no information.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRatingId	long	The unique identifier of the credit rating. • Primary Key
CreditRiskScoreExplain	string	Explains numeric credit risk score that estimates the risk of delinquent payment over the next 12 months.
CreditScore	string	Indicates the risk of delinquent payments.
CreditScoreAge	decimal	Indicates the age of the credit score expressed in months.
CreditScoreClass	decimal	The date when the credit score was calculated.
CreditScoreCommentary	string	The lookup for explanation codes in the CREDIT_SCORE column.
CreditScoreCommentary10	string	Indicates comments about the credit score.
CreditScoreCommentary2	string	Indicates comments about the credit score.
CreditScoreCommentary3	string	Indicates comments about the credit score.
CreditScoreCommentary4	string	Indicates comments about the credit score.
CreditScoreCommentary5	string	Indicates comments about the credit score.
CreditScoreCommentary6	string	Indicates comments about the credit score.
CreditScoreCommentary7	string	Indicates comments about the credit score.
CreditScoreCommentary8	string	Indicates comments about the credit score.
CreditScoreCommentary9	string	Indicates comments about the credit score.
CreditScoreDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the credit score was calculated.

Name	Type	Description
CreditScoreIncdDefault	decimal	Indicates the probability expressed as a percentage of delinquency for a score range or class.
CreditScoreNatlPercentile	decimal	Indicates the relative credit rating of a business compared to all businesses whose credit ratings are included in the local country database.
CreditScoreOverrideCode	string	Indicates why no score was calculated or why score is equal to zero in the US.
CriminalProceedingInd	string	Indicates if criminal proceedings exist. Y stands for availability of information and N stands for no information.
DebarmentInd	string	Indicates whether the company is debarred from doing business with government agencies. Y stands for company debarred and N stands for not debarred.
DebarmentsCount	decimal	The count of filings by government agencies in the United States that prohibit the party from entering into contracts or transactions with those agencies.
DebarmentsDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date of the most recent filing to prohibit the party from entering into contracts or transactions with a government agency in the United States.
DelqPmtPctgForAllFirms	decimal	Specifies a delinquency percentage for all firms.
DelqPmtRngPrcnt	decimal	Specifies a delinquency percentage for credit score range.
Description	string	The free text description of the record.
DetHistoryInd	string	The code that indicates if detrimental information exists for the party and whether complete details exist on management and party. Y stands for availability of information and N stands for no information.
DisasterInd	string	Indicates if information exists about disasters such as fires, hurricanes, and so on. Y stands for availability of information and N stands for no information.
FailureScore	string	For US, the failure risk class, 1 through 5. For Canada , the stability score that indicates risk of

Name	Type	Description
		business closure, 1 through 10. For Australia, the percentile failure score.
FailureScoreAge	decimal	The failure score age in months.
FailureScoreClass	decimal	1 through 5 to indicate risk of financial stress for a customer account. 1 for a business with greatest risk and 5 for a business with least risk.
FailureScoreCommentary	string	The comments related to failure score.
FailureScoreCommentary10	string	The comments related to failure score.
FailureScoreCommentary2	string	The comments related to failure score.
FailureScoreCommentary3	string	The comments related to failure score.
FailureScoreCommentary4	string	The comments related to failure score.
FailureScoreCommentary5	string	The comments related to failure score.
FailureScoreCommentary6	string	The comments related to failure score.
FailureScoreCommentary7	string	The comments related to failure score.
FailureScoreCommentary8	string	The comments related to failure score.
FailureScoreCommentary9	string	The comments related to failure score.
FailureScoreDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the failure score was calculated.
FailureScoreIncdDefault	decimal	Probability, in percentage, of failure for score range of class.
FailureScoreNatnlPercentile	decimal	The national percentile that reflects the relative ranking of a company among all scored companies in the local country database.
FailureScoreOverrideCode	string	In Europe, code for the reason for variance between the D and B rating and the failure score. In the US, code for the reason why no score was calculated, or why the score is zero.
FinclEmbtInd	string	Indicates if open bankruptcy, receivership liquidation, or any equivalent information

Name	Type	Description
		exists. Y stands for availability of information and N stands for no information.
FinclLglEventInd	string	Indicates if special events such as financial embarrassment and legal filings exist. Y stands for availability of information and N stands for no information.
GlobalFailureScore	string	The global score for the risk of business default.
HighCredit	decimal	Maximum credit ever extended to the organization.
HighRngDelqScr	decimal	Specifies the high end of the range of the commercial credit score.
JudgementInd	string	Indicates if open judgments exist. Y stands for any open judgment that exists and N stands for no open judgments.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LienInd	string	Indicates if open liens exist. Y stands for any open lien that exists and N stands for no open liens.
LowRngDelqScr	decimal	Specifies the low end of the range of the commercial credit score.
MaximumCreditCurrencyCode	string	The currency used to denominate the MAXIMUM_CREDIT_RECOMMENDATION column.
MaximumCreditRecommendationAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Maximum credit limit recommended for the currency specified in the MAXIMUM_CREDIT_CURRENCY_CODE column.
NegvPmtExpl	string	The conditional comment generated when negative payments are present.
NoTradeInd	string	Indicates that no trade experiences exist. Y stands for any trade experience that exists and N stands for no trade experience.

Name	Type	Description
NumberParentBankruptcyConversions	decimal	The number of bankruptcy conversions by the parent.
NumberParentBankruptcyFiling	decimal	The number of bankruptcies filed by the parent.
NumberSpecialEvent	decimal	The number of occurrences of the special events.
NumberTradeExperiences	decimal	The number of trade experiences.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OprgSpecificationEvntInd	string	Indicates if information exists about operational changes such as name changes, management changes, change of control, moves, and so on. Y stands for availability of information and N stands for no information.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OtherSpecificationEvntInd	string	Indicates if special events exist that are not otherwise specified.
ParentHQBankruptcyInd	string	Indicates if parent (P) or headquarters (H) are entered into bankruptcy.
PartyId	long	The unique identifier of the contact party.
PaydexComment	string	Additional paydex information.
PaydexFirmComment	string	Comment on the paydex score for the organization.
PaydexFirmDays	string	The number of days used in the paydex score.
PaydexIndustryComment	string	Comment on the paydex score for the industry.
PaydexIndustryDays	string	The number of days used in the paydex score for the industry.

Name	Type	Description
PaydexNorm	string	Median or average Paydex score for the industry.
PaydexScore	string	Paydex score for the previous 12 months payment history.
PaydexThreeMonthsAgo	string	Paydex score three months ago.
PrntBkcyChapterConv	string	The change of bankruptcy type.
PrntBkcyConvDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the bankruptcy converted from one type to another.
PrntBkcyFilgChapter	decimal	The chapter number of the bankruptcy filed by the parent under the US uniform commercial code.
PrntBkcyFilgDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The bankruptcy filing date of the parent.
PrntBkcyFilgType	string	The type of bankruptcy filed by the parent.
PubRecExpl	string	The conditional comment generated if suits, liens, and judgments exist.
RatedAsOfDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the rating was acquired.
Rating	string	The rating number or code of the rating company.
RatingOrganization	string	The name of the credit rating organization.
RequestId	long	A system-generated read-only attribute used by the application framework.
SecuredFlngInd	string	Indicates if open secured filings such as UCC filings, secured charges or mortgages pledging, or any equivalent information exists. Y stands for availability of information and N stands for no information.
SlowTradeExpl	string	The conditional comment generated when paydex score indicates that slow trade experiences are present.

Name	Type	Description
SpecialEventComment	string	The comment generated if special event section exists.
SpecialEventText	string	The narrative of the special event.
SpecialEventUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the special event was updated.
Status	string	The status of the record.
SuitInd	string	Indicates if open suits exist. Y stands for any open suit that exists and N stands for no open suits.

Customer Contact Profile

The person who functions as a contact for an organization.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}OrganizationContact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Organization Contact Additional Information*
Contains	*Customer Contact Responsibility*
Contains	*Source System Reference*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Relationship Type	Object or Service
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
ContactFormattedAddress	string	The formatted version of the contact address.
ContactFormattedMultilineAddress	string	The formatted multiline version of the contact address.
ContactName	string	The name of the contact.
ContactNumber	string	The user-defined identification number for this contact.
ContactPartyId	long	The unique identifier of the contact.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CustomerEmailAddress	string	The e-mail address of the customer this contact person belongs to.
CustomerName	string	The name of the customer.
CustomerPartyId	long	The unique identifier of the customer this contact person belongs to.
CustomerPartyNumber	string	The alternate unique identifier of the customer this contact person belongs to.
CustomerUniqueName	string	The unique name of the customer. For an Organization, the value is a concatenation of unique_name_alias and suffix. For a Person, the value is a concatenation of person_name and suffix.
DecisionMakerFlag	boolean	Indicates if this contact is a decision maker. If the value is True, then the contact is a decision maker.
Department	string	The free form text used to name the department for the contact.
DepartmentCode	string	The department code for the contact. A list of accepted values is defined in the lookup DEPARTMENT_TYPE.
EmailAddress	string	The email address associated with the record.
FormattedAddress	string	The formatted address information.
FormattedPhoneNumber	string	The formatted phone number.
JobTitle	string	The free form text for job title.
JobTitleCode	string	The code given to the job title.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgContactId	long	The unique identifier of the organization contact. • Primary Key
OrgContactInformation	*Trading Community Organization Contact Additional Information*	The information of the organization contact.
OrganizationContactRole	*Customer Contact Responsibility*	The role of the contact in the organization.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyRelationshipId	long	The unique identifier of the relationship of the party.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PartySiteName	string	The address associated with the party site.
PersonAcademicTitle	string	The part of the person's title that denotes the academic qualification, such as Dr. Jane Smith.
PersonCertReasonCode	string	The reason for the organization's current certification level assignment. A list of accepted values is defined using the lookup HZ_PARTY_CERT_REASON.
PersonCertificationLevel	string	The certification level of a organization. A list of accepted values is defined in the lookup HZ_PARTY_CERT_LEVEL.

Name	Type	Description
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLanguageName	string	The language name associated with the person.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	The prefix for the last name of a person, such as fon, van. For example, if a person's name is Hans Van, the last name of the person is captured using this attribute.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	The place in a family structure. For example, in "Tom Jones III", the "III".
PersonPreNameAdjunct	string	The preferred name adjacency of a resource.
PersonPreviousLastName	string	The previous last name of a person.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PreferredContactFlag	boolean	Indicates if this contact person is primary contact for the customer.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.

Name	Type	Description
PrimaryCustomerFlag	boolean	Indicates if this customer is primary customer for the contact.
Rank	string	The rank associated with this customer contact.
ReferenceUseFlag	boolean	Indicates if this contact can be used as a reference. If the value is Y, then the contact can be used as a reference.
RequestId	long	A system-generated read-only attribute used by the application framework.
SalesAffinityCode	string	The affinity of a contact to the deploying organization. A list of accepted values is defined in the lookup HZ_SLS_CNTCT_AFFINITY_CODE.
SalesAffinityComments	string	The comments about the contact's affinity to the deploying organization.
SalesBuyingRoleCode	string	The roles played by a contact in the buying process, for example, decision maker or supporting role. A list of accepted values is defined in the lookup HZ_SLS_CNTCT_BUY_ROLE_CODE.
SalesInfluenceLevelCode	string	The influence of the contact has on the deploying organization. A list of accepted values are defined in the lookup HZ_SLS_CNTCT_INFLUENCE_LVL_CD.
Salutation	string	The size of the household this person is a part of.
WebUrl	string	The web URL of contact point.

Customer Contact Responsibility

The role or responsibility of an organization contact.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}OrganizationContactRole

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Customer Contact Profile*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgContactId	long	The organization contact identifier. Foreign key to the HZ_ORG_CONTACTS table.
OrgContactRoleId	long	The unique contact role identifier. It is primary key and system generated. • Primary Key
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PrimaryContactPerRoleType	string	Indicates if the contact is the primary contact for the role. Y stands for primary contact and N stands for a contact that is not the primary contact for the role type. The default value is N.
PrimaryFlag	boolean	Indicator that specifies if this is the primary role for the contact. Y stands for primary role and N stands for a non-primary role for the contact. The default value is N.
RequestId	long	A system-generated read-only attribute used by the application framework.
RoleLevel	string	The role level of the contact. For example, executive, department head, or middle manager.
RoleType	string	The role performed by a contact.
Status	string	The status of the record.

E-Mail

The e-mail address associated with a trading community member. For example, john.doe@oracle.com.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Email

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*

Relationship Type	Object or Service
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmailAddress	string	The email address associated with the record.
EmailFormat	string	The preferred format for e-mail addressed to this address such as HTML or ASCII. A list of accepted values is defined using the lookup EMAIL_FORMAT.
EmailInformation	*Trading Community Contact Point Additional Information*	The additional information about the e-mail.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary e-mail of the associated object. If the value is True, then this is the primary e-mail. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.

Name	Type	Description
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

E-Mail Domain

The domain of the e-mail address associated with a trading community member. For example, ABC Corporation has CORP and BUSINESS e-mail domains.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}EmailDomain

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*

Relationship Type	Object or Service
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DomainName	string	The actual or non-reversed domain name of the organization for display purpose.
EmailDomainId	long	The sequence generated unique identifier. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
Status	string	The status of the record.

Name	Type	Description
TransposedDomain	string	The reversed domain name for the purposes of searching.

Education

The trading community person's education information. For example, a person may have attended the University of California from 1995 to 1999 and received an undergraduate degree in Computer Science with a GPA of 4.0.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}Education

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CourseMajor	string	The primary area of study.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DegreeReceived	string	The abbreviation for the degree. For example, BA, BSc, MBA, MSc, PhD, and Gd (graduate diploma).
EducationId	long	The unique identifier of the education record. • Primary Key
LastDateAttended	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The year and month when a person last attended the educational institution.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
PartyId	long	The unique identifier of the contact party.
RequestId	long	A system-generated read-only attribute used by the application framework.
SchoolAttendedName	string	The name of the school.
SchoolPartyId	long	The party identifier of the school.
StartDateAttended	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the attendance of a person starts.
Status	string	The status of the record.
TypeOfSchool	string	The classification of the educational organization. For example, high school, college, university, or professional school. Note that the classification of schools varies among different cultures.

Electronic Data Interchange

The electronic data interchange information associated with a trading community member. For example, the details of standard codes and payment methods that are to be used for data interchange.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Edi

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key

Name	Type	Description
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EDIEceTpLocationCode	string	The trading partner location code for EDI Gateway.
EDIIdNumber	string	The EDI trading partner number for the supplier site.
EDIPaymentFormat	string	Indicates type of information being transmitted with the funds if using EDI_PAYMENT_METHOD ACH. The list of accepted values are CCD, CCP, CHZ, CTX, PPD, and PPP.
EDIPaymentMethod	string	Indicates how a payment is to be made through EDI. The list of accepted values are ACH and BOP.
EDIRemittanceInstruction	string	Indicates who will send the remittance advice. The list of accepted values are Banks or Payables systems.
EDIRemittanceMethod	string	Indicates how remittance advice are sent to the supplier.
EDITpHeaderId	long	The unique identifier of the EDI transaction header.
EDITransactionHandling	string	The ANSI standard code for EDI transaction type.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary EDI of the associated object. If the value is True, then this is the primary EDI. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.

Name	Type	Description
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Electronic File Transfer

The electronic funds transfer information of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Eft

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*

Relationship Type	Object or Service
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EFTPrintingProgramId	long	The printing program identifier.
EFTSWIFTCode	string	The EFT swift code information.
EFTTransmissionProgramId	long	The transmission program identifier.

Name	Type	Description
EFTUserNumber	string	The number that identifies you as a user of electronic funds transfer service for your bank or clearing organization.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or

Name	Type	Description
		site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Employment History

The employment history information of a trading community member. For example, John Doe was a Vice President at Business World from 2001 to 2007 and President at World of Business from 2007 to 2009.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}EmploymentHistory

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Work Class*
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*

Relationship Type	Object or Service
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BeginDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the employment officially began.
Branch	string	The military branch code.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmployedAsTitle	string	Job position title assigned by an employer.
EmployedAsTitleCode	string	The code for the job title. If title cannot be represented by a code, then the EMPLOYED_AS_TITLE column must be used.
EmployedByDivisionName	string	The common name of a division or an organization at which the person was employed.
EmployedByNameCompany	string	The name of the organization at which the person was employed. Note that the name must not include the division name.
EmployedByPartyId	long	The party identifier of the employer for situations in which the employer is represented as a party.
EmploymentHistoryId	long	The unique employment history identifier. • Primary Key

Name	Type	Description
EmploymentTypeCode	string	Indicates whether the employment is part-time or full-time.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FacultyPositionFlag	boolean	Indicator Y or N to specify whether the position is a faculty position or not.
FractionOfTenure	decimal	The fraction of tenure.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MilitaryRank	string	The rank of the person in the branch.
PartyId	long	The unique identifier of the contact party.
ReasonForLeaving	string	The free format text that describes the reason for leaving.
RequestId	long	A system-generated read-only attribute used by the application framework.
Responsibility	string	Job responsibility of the person.
Served	string	Indicates where the person performed military service.
Station	string	Indicates the station name.
Status	string	The status of the record.
SupervisorName	string	The full name of the manager of the person.
TenureCode	string	The type of tenure for faculty positions.
WeeklyWorkHours	decimal	The usual number of hours worked per week.

Name	Type	Description
WorkClass	*Work Class*	The custom-defined classification information about job title and work experience of a person.

Financial Number

The financial report numbers of a trading community member, such as assets, liabilities, and cash balance.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}FinancialNumber

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Financial Report*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.

Name	Type	Description
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
FinancialNumber	decimal	The value for the financial number. For example, the FINANCIAL_NUMBER_NAME column could have a numerical value of 3,000, 000,000 for annual sales.
FinancialNumberCurrency	string	The ISO currency code for the financial number.
FinancialNumberId	long	The unique identifier of the financial number. • Primary Key
FinancialNumberName	string	A text field that lets you assign a descriptive name to a financial report item. For example, gross annual sales, profit, and net annual sales. A user-defined lookup.
FinancialReportId	long	The unique identifier of the financial report.
FinancialUnitsApplied	decimal	The order of magnitude (tens, hundreds, thousands, and so on) used for the FINANCIAL_NUMBER column.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ProjectedActualCode	string	Indicates if the projected amount is projected or actual. The list of accepted values are P and A. The default value is A.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Financial Profile

The financial details of a trading community member, such as bank account information that was obtained as part of a credit evaluation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}FinancialProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessAuthorityDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when access to the information in the account was granted.
AccessAuthorityGranted	string	Indicates whether access to information in a financial account was granted. If the value is True, then the access has been granted.
BalanceAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The reported balance on an account. The balance can be a positive number, negative number, or zero.
BalanceVerifiedOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the account balance was verified.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
FinancialAccountNumber	string	The alternate unique identifier of the financial account.
FinancialAccountType	string	The short name that classifies the financial accounts. For example, savings, checking, home loan, personal loan, trading, and so on.
FinancialOrgType	string	The classification of financial organizations. For example, bank, savings and loan, private lender, building society and so on.
FinancialOrganizationName	string	The name of the financial organization that holds the account.
FinancialProfileId	long	The unique identifier of the party's financial profile. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the

Name	Type	Description
		start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Financial Report

The financial report information of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}FinancialReport

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Financial Number*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*

Relationship Type	Object or Service
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AuditInd	string	Indicates if the financial reports are audited. If the value is True, then the financial reports have been audited.
ConsolidatedInd	string	Indicates if the financial reports are consolidated. If the value is C, then the reports are consolidated.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DateReportIssued	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the financial report was published.
DocumentReference	string	The unique reference number such as passport number or naturalization reference number associated with DOCUMENT_TYPE.
EstimatedInd	string	Indicates whether the financial reports provide estimated data. If the value is True, then the financial reports provide the data.
FinalInd	string	Indicates whether the financial reports are the final closing statements for a business that has ceased operations. If the value is True, then the reports are final closing statements.
FinancialNumber	*Financial Number*	The number that indicates a financial value like annual sales.
FinancialReportId	long	The unique identifier for a financial report. • Primary Key

Name	Type	Description
FiscalInd	string	Indicates whether the financial reports cover a fiscal twelve-month accounting period. If the value is Y, then the financial report covers a twelve-month fiscal period.
ForecastInd	string	Indicates whether the financial reports display forecasts or future projections. If the value is Y, then the financial report displays forecasts.
IssuedPeriod	string	The period covered by the financial report. For example, fiscal year 1999, 1998, and so on.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OpeningInd	string	Indicates whether the financial reports are the opening statements for a business. If the value is Y, then the financial statements are opening statements.
PartyId	long	The unique identifier of the contact party.
ProformaInd	string	Indicates if the financial reports are pro forma numbers. If the value is Y, then the financial reports are pro forma numbers.
QualifiedInd	string	Indicates whether the financial reports include qualifying remarks from auditors about the fairness and accuracy of the numbers. If the value is Y, then the report is qualified by auditors.
ReportEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The end date of the report, used instead of Issued Period.
ReportStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The start date of the report, used instead of Issued Period.
RequestId	long	A system-generated read-only attribute used by the application framework.
RequiringAuthority	string	The name of the primary organization that requires this financial report. For example,

Name	Type	Description
		auditors, the Federal Trade Commission, or the Internal Revenue Service.
RestatedInd	string	Indicates whether the financial reports include data that was corrected after the original financial reports. If the value is Y, then the report has been corrected.
SignedByPrincipalsInd	string	Indicates whether the financial reports were signed by the principals of the organization. If the value is Y, then the reports are signed.
Status	string	The status of the record.
TrialBalanceInd	string	Indicates whether the financial reports include trial balance numbers. If the value is Y, then the financial report includes trial balance numbers.
TypeOfFinancialReport	string	A name for the financial report. For example, 10K report, Annual Report, or Shareholder's Special Report.
UnbalancedInd	string	Indicates whether the financial reports include balance sheet accounts that do not balance. If the value is Y, then report includes unbalanced balance sheet accounts.
WhUdpateId	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the record was entered or changed in a data warehouse.

Household

The trading community group information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/groupService/}Group

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Additional Household Name*
Contains	*Classification Assignment*

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Relationship*
Contains	*Financial Profile*
Contains	*Web*
Contains	*Contact Preference*
Contains	*Phone*
Contains	*Contact Language*
Contains	*Certification*
Contains	*Usage Assignment*
Contains	*Additional Identifier*
Contains	*E-Mail Domain*
Contains	*Instant Messaging*
Contains	*E-Mail*
Contains	*Address*
Contains	*Preference*
Contained by	*Sales Party*
Contained by	*Sales Party Resource*
Contained by	*My Sales Account*
Contained by	*Sales Account*
Contained by	*Sales Party Territory*
Handled by	*Trading Community Group*

Relationship Type	Object or Service
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalGroupName	*Additional Household Name*	Additional name associated with the group.
AdditionalPartyId	*Additional Identifier*	Additional Identifier for the group.
AnnualExpenses	long	Household annual expenses.
AnnualIncome	long	The value for annual income.
AverageAge	long	Household average age.
Certification	*Certification*	Certification information associated with the group.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
CertificationReasonCode	string	Reason for group party's current certification level assignment. HZ_PARTY_CERT_REASON lookup type.
Child0to6Number	long	The number of children between 0 and 6 years.
Child13to18Number	long	The number of children between 13 and 18 years.
Child7to12Number	long	The number of children between 7 and 12 years.

Name	Type	Description
CodeAssignment	*Classification Assignment*	Classification code assigned to the group.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DependentsNumber	long	The number of dependents.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveLatestChange	string	Not Used.
EffectiveSequence	int	Not Used.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
Email	*E-Mail*	The email address associated with the record.
EmailDomain	*E-Mail Domain*	Email domain information for the group.
FinancialProfile	*Financial Profile*	Financial Profile information of the group.
GroupName	string	Name of this group.

Name	Type	Description
GroupSize	long	Size of the group.
GroupType	string	The party type can only be person, organization, group.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MedianAge	long	The age of the median.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyNumber	string	The unique identification number for the party.
PartyPreference	*Preference*	Preference information of the group.
PartySite	*Address*	Address information associated with the group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUsageAssignment	*Usage Assignment*	Party usage assigned to the group.
PersonLanguage	*Contact Language*	Language information associated with a group.
Phone	*Phone*	The phone information for the entity.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.

Name	Type	Description
PreferredContactPersonEmail	string	The E-Mail of the preferred contact person.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredContactPersonName	string	The name of the preferred contact person.
PreferredContactPersonPhone	string	The phone number of the preferred contact person.
PreferredContactPersonURL	string	The URL of the preferred contact person.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryAddressCity	string	The city of the primary address.
PrimaryAddressCountry	string	The country for the primary address.
PrimaryAddressCounty	string	The country of the primary address.
PrimaryAddressLine1	string	Line one of the primary address.
PrimaryAddressLine2	string	Line two of the primary address.
PrimaryAddressLine3	string	Line three of the primary address.
PrimaryAddressLine4	string	Line four of the primary address.
PrimaryAddressLocationId	long	The unique identification number for the primary address location.

Name	Type	Description
PrimaryAddressPartySiteId	long	The unique identifier for the primary address party site.
PrimaryAddressPostalCode	string	The postal code of the primary address.
PrimaryAddressProvince	string	The province of the primary address.
PrimaryAddressState	string	The state of the primary address.
PrimaryEmail	string	Primary E-Mail Address of the Group.
PrimaryEmailId	long	Primary E-Mail ID.
PrimaryFormattedAddress	string	Primary formatted address for the group.
PrimaryFormattedMultilineAddress	string	Primary formatted multiline address for the group.
PrimaryFormattedPhoneNumber	string	Primary formatted phone number for the group.
PrimaryLanguage	string	Standard name for a primary language.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneId	long	The unique identification number for the primary phone.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.

Name	Type	Description
PrimaryURL	string	Primary URL.
PrimaryWebId	long	Primary Web ID.
ProfileCreatedBy	string	The user who created the row.
ProfileCreatedByModule	string	The module that created the profile.
ProfileCreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time of the creation of the row.
ProfileLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time of the last update of the row.
ProfileLastUpdateLogin	string	The session login associated to the user who last updated the row.
ProfileLastUpdatedBy	string	The user who last updated the row.
Relationship	*Relationship*	Relationship information for the group.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.
SuffixOverriddenFlag	boolean	This will have Y if the suffix is overridden by user N if not.
UniqueNameSuffix	string	System generated or manually overridden suffix.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
WealthAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Household wealth amount or net worth.
Web	*Web*	The web information related to the record.

Instant Messaging

The instant messaging information of a trading community member, such as the AOL identifier or Yahoo Messenger information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}InstantMessaging

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*

Relationship Type	Object or Service
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
InstantMessagingAddress	string	The instant messaging information address.
InstantMessagingInformation	*Trading Community Contact Point Additional Information*	The instant messaging information related to the record.

Name	Type	Description
InstantMessengerType	string	The type of the instant messenger type.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary instant messaging Id of the associated object. If the value is True, then this is the primary instant messaging Id. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.

Name	Type	Description
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Phone

The phone number associated with a trading community member. For example, the phone number for Oracle Corporation is 650-506-6000.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Phone

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Marketing Response*
Contained by	*Partner*
Contained by	*Household*

Relationship Type	Object or Service

Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key

Name	Type	Description
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FormattedPhoneNumber	string	The formatted phone number.
LastContactDtTime	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date and time of last contact placed to this contact point.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.

Name	Type	Description
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PagerTypeCode	string	The PAGER_TYPE_CODE column stores the lookup code for the type of pager. The type of pager determines how the page is received. For example, tone, number, alphanumeric or two-way alphanumeric.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PhoneAreaCode	string	The area code prefix for the phone number.
PhoneCallingCalendar	string	The name or code for a calling calendar used with this telephone number. This attribute is no longer used in Fusion applications.
PhoneCountryCode	string	The country code prefix for the phone number.
PhoneExtension	string	The additional number addressed after initial connection to an internal telephone system.
PhoneInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community phone.
PhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound, or outbound.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.

Name	Type	Description
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RawPhoneNumber	string	The unformatted telephone number.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TimezoneCode	string	The foreign key to FND_TIMEZONES_B.TIMEZONE_CODE.
TransposedPhoneNumber	string	This column stores the concatenation of PHONE_COUNTRY_CODE, PHONE_AREA_CODE, and PHONE_NUMBER in reverse order. For example, if PHONE_COUNTRY_CODE=1, PHONE_AREA_CODE=650 and PHONE_NUMBER=5065747, this column stores 74756050561. This column is used for building an index to search for any combination of the above three columns.

Preference

The preferences of a trading community member. For example, a member may prefer that the transaction currency is the US dollar.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartyPreference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*

Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalValue1	string	The additional preference value.
AdditionalValue2	string	The additional preference value.
AdditionalValue3	string	The additional preference value.
AdditionalValue4	string	The additional preference value.
AdditionalValue5	string	The additional preference value.
Category	string	A preference category is used to logically group one or more preference codes in a

Name	Type	Description
		particular user interface. The combination of CATEGORY and PREFERENCE_CODE identifies a preference.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Module	string	The program that creates the preference. For example, TCA MOBILE CUSTOMER DIRECTORY.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PartyPreferenceId	long	The unique identifier of the party preference. • Primary Key
PreferenceCode	string	A preference code determines if a preference is a single value or a multiple value preference. The preference code is validated by the HZ_PREFERENCE lookup. The combination of CATEGORY and PREFERENCE_CODE identifies a preference.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
ValueDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The preference value when the data type is DATE.
ValueName	string	A user-defined alias for a preference value.

Name	Type	Description
ValueNumber	decimal	The preference value when the data type is NUMBER.
ValueVarchar2	string	The preference value when the data type is VARCHAR2.

Relationship

The relationship between two trading community members. For example, John Doe is the spouse of Jane Doe or Michael Smith is a contact of Oracle Corporation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}Relationship

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Phone*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalInformation1	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type. For operating unit and legal entity to bank relationships, column stores communication agreement ID, which identifies agreement between payer and bank on type of EDIFACT documents that can be sent for processing payments.
AdditionalInformation10	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation11	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation12	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.

Name	Type	Description
AdditionalInformation13	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation14	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation15	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation16	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation17	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation18	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation19	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation2	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation20	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation21	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation22	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation23	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.

Name	Type	Description
AdditionalInformation24	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation25	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation26	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation27	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation28	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation29	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation3	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation30	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation4	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation5	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation6	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation7	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.

Name	Type	Description
AdditionalInformation8	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation9	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
Comments	string	The comments for the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DirectionCode	string	The code of the relationship direction. The list of accepted values are defined in the lookup DIRECTION_CODE.
Email	*E-Mail*	The email address associated with the record.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.

Name	Type	Description
LastUpdatedBy	string	The user who last updated the record.
ObjectEmailAddress	string	The e-mail address of the object party in the relationship.
ObjectId	long	The unique identifier of the object party in this relationship.
ObjectPartyName	string	The name of the object party in this relationship.
ObjectTableName	string	The source table name of the object party in this relationship.
ObjectType	string	The object type of the relationship.
ObjectUsageCode	string	The usage code of object party in the relationship.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationContact	*Customer Contact Profile*	The organization contact information.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyName	string	The name of the party.
PartySite	*Address*	The party site associated with the relationship.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the relationship.
PercentageOwnership	decimal	The percentage of the child entity owned by the parent entity.
Phone	*Phone*	The phone information for the entity.
PreferredContactFlag	boolean	Indicates if this contact person is primary contact for the customer.
PrimaryCustomerFlag	boolean	Indicates if this customer is primary customer for the contact.

Name	Type	Description
RelationshipCode	string	The code for a forward or a backward relationship. A list of accepted relationship values is defined in the lookup PARTY_ RELATIONS_TYPE.
RelationshipId	long	The relationship identifier for the record.
RelationshipInformation	*Trading Community Relationship Additional Information*	The relationship type information.
RelationshipRecId	long	The unique identifier of the contact's relationship record. • Primary Key
RelationshipType	string	The relationship type name. For example, CUSTOMER_SUPPLIER. A list of valid relationship types is defined in the lookup HZ_ RELATIONSHIP_TYPE.
RequestId	long	A system-generated read-only attribute used by the application framework.
Role	string	The role between the subject and object party in this relationship.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
SubjectEmailAddress	string	The e-mail address of the subject party in relationship.
SubjectId	long	The unique identifier of the subject in this relationship.
SubjectPartyUsageAssignment	*Usage Assignment*	The usage assignment of the subject party in the relationship.
SubjectTableName	string	The source table of the subject.
SubjectType	string	The subject type of the relationship.
SubjectUsageCode	string	The usage code of subject party in the relationship.

Name	Type	Description
Web	*Web*	The web information related to the record.

Sales Account

An object used to store sales account profile attributes. A sales account is a sales party with usage as sales account.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesPartiesService/}SalesAccount

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Account*
Contains	*Sales Account Territory*
Contains	*Asset*
Contains	*Household*
Contains	*Trading Community Organization Details*
Contains	*Sales Account Contact Point SDO*
Contains	*Sales Account Resource*
Contains	*Contact*
Contains	*Trading Community Person Details*
Contains	*Sales Account Contact*
Contained by	*Sales Party*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountDirectorId	long	The identifier for the sales account owner.
Asset	*Asset*	Represents the products owned by customer.
AssgnExceptionFlag	boolean	The indicator shows whether the sales account has the required dimensions to allow the assignment manager to assign territories to the sales account.
AttributeCategory	string	A segment of the user descriptive flex field.
ClassCategory	string	The label displaying the classification category.
ClassCategory1	string	The label displaying the classification category.
ClassCode	string	The label displaying the classification code.
CodeAssignmentId	long	The label displaying the classification code assignment identifier for a sales party.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CpdrfLastUpd	string	The standard replication column.
CpdrfVerPillar	int	The standard replication column.
CpdrfVerSor	int	The standard replication column.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DeleteCustomerKey	string	The label for a transient attribute for delete operations in a web services call. If set to Y in WS payload, then sales account profile, its party usage, contact relationships, hierarchies and TCA party will be deleted. If set to N in the payload, then only sales account profile will be deleted.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
ExistingFlag	boolean	The indicator shows whether there is an existing selling or billing relationship with the sales account.
ExistingFlgLastUpdDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the existing flag was last modified.
Group	*Household*	The group associated to the sales account.
InternalStatus	string	The label displaying the internal status of a sales account to track if its active or inactive. Values for InternalStatus are active and inactive.
LastAssignedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date indicates when the sales account territory assignment was last run by assignment manager.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Meaning	string	The label displaying the classification category meaning.
NamedAccountFlag	boolean	The indicator shows whether a sales account is a named sales account.

Name	Type	Description
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationD	*Account*	The organization associated to the sales account.
OrganizationParty	*Trading Community Organization Details*	The organization associated to the sales account.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUniqueName1	string	The label displaying the unique name of a sales party.
PersonD	*Contact*	The person associated to the sales account.
PersonParty	*Trading Community Person Details*	The person associated to the sales account.
PrimaryFlag	boolean	The label indicating whether an account is designated primary for a sales party with multiple sales accounts. Values for PrimaryFlag are yes and no.
Rating	int	Indicates the user's favorite rating for the sales account. Users can select a number between 1 to 5 to set or update the favorite rating for the sales account.
SalesAccountContactPoints	*Sales Account Contact Point*	The contact points associated to the sales account.
SalesAccountContacts	*Sales Account Contact*	The contacts associated to the sales account.

Name	Type	Description
SalesAccountId	long	The label displaying the internal identifier of a sales party. • Primary Key
SalesAccountName	string	Indicates the name of the sales account.
SalesAccountNameSuffix	string	The suffix of the sales account name.
SalesAccountResource	*Sales Account Resource*	The resources associated to the sales account.
SalesAccountStatus	string	The status value reflecting the current state of the sales account. Values for status are active and inactive.
SalesAccountTerritory	*Sales Account Territory*	The territories associated to the sales account.
SalesAccountType	string	Type of account, contact or household. For example, customer or prospect.
SalesAccountUniqueName	string	Indicates the sales account unique name.
SellToPartySiteId	long	Indicates the party site id which has usage as SELL_TO.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.
Status1	string	The label displaying the status of a sales account. Sample values for status are active and inactive.
UpdateRating	int	Indicates the user's favorite rating for the sales account. Users can pass a number between 1 to 5 to query sales accounts for which they have given one-star favorite rating to 5-star favorite rating.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.
UserSalesAccountId	long	Identifier of the user who has marked this customer account as a favorite.
ViewApplicationId	long	The label displaying view application.

Name	Type	Description

Sales Account Contact

These are contacts associated with the account.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesPartiesService/}SalesAccountContacts

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Account*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AffinityLvlCd	string	The LOV that shows the affinity the contact has with the deployment company. Valid values are Favorable, negative, neutral, somewhat favorable, and somewhat negative.
BuyingRoleCd	string	Indicates the buying role of the contact. LOV with valid values as Does not matter, Key decision maker, Secondary decision maker, and Supporting role.
Comments	string	The comments for the record.
CpdrfLastUpd	string	The standard replication column.
CpdrfVerPillar	int	The standard replication column.
CpdrfVerSor	int	The standard replication column.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
InfluenceLvlCd	string	Indicates the influence level of the contact. LOV with valid values as Influence Circle, None, and Political Structure.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PersonPartyId	long	Indicates the person party id of this relationship.
PrimaryFlag	boolean	Indicates account contact as primary.
RelationshipId	long	The relationship identifier for the record.
SAccountContactId	long	Indicates the account contact identifier. • Primary Key
SalesAccountId	long	Indicates the account which is related to the contact.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Sales Account Contact Point

These are contact points associated with the account.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesPartiesService/}SalesAccountContactPoints

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Account*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point.
CpdrfLastUpd	string	The standard replication column.
CpdrfVerPillar	int	The standard replication column.
CpdrfVerSor	int	The standard replication column.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PrimaryFlag	boolean	Indicates contact point as primary. Note, multiple contact points for an account can be marked as primary, as long as they are not of the same type. For example, an account can have a primary email and a primary phone number.
SAccountContactPointId	long	Indicates account contact point identifier. • Primary Key
SalesAccountId	long	Indicates account which is related to the contact point.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Sales Account Resource

An object representing a resource party that is assigned to a sales account team and has a defined access role for the sales account.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesPartiesService/}SalesAccountResource

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Party*

Relationship Type	Object or Service
Contained by	*Sales Account*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Sales Account Resource Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevelCode	string	The access level determines the type of access granted to the resource as well as managers of the organizations. The possible values are contained in the ZCA_ACCESS_LEVEL lookup.
AccountDirectorId	long	The party identifier for the resource designated as the sales account owner.
AssignmentTypeCode	string	The code indicating how the resource is assigned to the sales account team. The possible values are contained in the ZCA_ASSIGNMENT_TYPE lookup.
Attribute1	string	The segment of the user descriptive flex field.
Attribute10	string	The segment of the user descriptive flex field.
Attribute11	string	The segment of the user descriptive flex field.
Attribute12	string	The segment of the user descriptive flex field.
Attribute13	string	The segment of the user descriptive flex field.
Attribute14	string	The segment of the user descriptive flex field.
Attribute15	string	The segment of the user descriptive flex field.
Attribute2	string	The segment of the user descriptive flex field.
Attribute3	string	The segment of the user descriptive flex field.

Name	Type	Description
Attribute4	string	The segment of the user descriptive flex field.
Attribute5	string	The segment of the user descriptive flex field.
Attribute6	string	The segment of the user descriptive flex field.
Attribute7	string	The segment of the user descriptive flex field.
Attribute8	string	The segment of the user descriptive flex field.
Attribute9	string	The segment of the user descriptive flex field.
AttributeCategory	string	The structure definition of the user descriptive flex field.
AttributeDate1	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The segment of the user descriptive flex field.
AttributeDate2	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The segment of the user descriptive flex field.
AttributeDate3	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The segment of the user descriptive flex field.
AttributeDate4	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The segment of the user descriptive flex field.
AttributeDate5	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The segment of the user descriptive flex field.
AttributeNumber1	decimal	The segment of the user descriptive flex field.
AttributeNumber2	decimal	The segment of the user descriptive flex field.
AttributeNumber3	decimal	The segment of the user descriptive flex field.
AttributeNumber4	decimal	The segment of the user descriptive flex field.
AttributeNumber5	decimal	The segment of the user descriptive flex field.
CpdrfLastUpd	string	The standard replication column.
CpdrfVerPillar	int	The standard replication column.

Name	Type	Description
CpdrfVerSor	int	The standard replication column.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
EmailAddress	string	The email address associated with the record.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
FormattedPhoneNumber	string	The formatted phone number.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LockAssignmentBooleanFlag	boolean	Indicates whether the sales account resource is enabled for locked assignment, which means the sales account resource cannot be removed from the team at future territory assignments.
LockAssignmentFlag	boolean	The flag indicates automatic territory assignment cannot remove the sales account team resource when this flag is Y'. When a sales account team member is added manually, this flag is defaulted to Y'.
ManagerPartyId	long	The party identifier for the manager.
MemberFunctionCode	string	The lookup code indicating a sales account resource's role on the resource team such as Integrator, Executive Sponsor and Technical Account Manager. The code lookup is stored in FND_LOOKUPS.

Name	Type	Description
Name	string	The name of the organization for the resource.
Name1	string	The name of the territory.
NamedAccountFlag	boolean	The indicator for whether a sales account is a named sales account.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was last queried.
ObjectVersionNumber2	int	The number to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
OrgTreeCode	string	The code for the organization hierarchy tree. Managers and administrators of sales account resource gain access through this hierarchy.
OrgTreeStructureCode	string	The structure code for the organization hierarchy tree. Managers/Administrators of parent member organizations will gain access through this hierarchy.
OrganizationId	long	The identifier for the organization the sales account resource belongs.
OwnerResourceId	long	The identifier for the sales account owner.
PartyName	string	The name of the party.
PartyName1	string	The party name of the manager.
PrTerritoryId	long	The territory the sales account team resource belongs to.

Name	Type	Description
ReportsToFlag	boolean	The indicator showing a resource reports to another resource in the same account team.
ResourceId	long	The unique identifier of the resource.
ResourceOrgId	long	The resource organization identifier.
ResourcePartyId	long	The party identifier for the resource.
ResourcePrimaryOrgId	long	The resource primary organization identifier.
ResourcePrimaryOrgName	string	The resource primary organization name.
RoleName	string	The list of all roles for the resources in the organization.
SAccountResourceId	long	The surrogate primary key for the member of the sales account resource team. • Primary Key
SalesAccountId	long	The identifier for the sales account.
SalesAccountPartyId	long	The unique identifier for the sales account.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
TerritoryVersionId	long	The territory version is a primary key.
TypeCode	string	The type code for the territory of which the resource is member of.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Sales Account Territory

An object representing sales account territory attributes for territory assigned to the sales account.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesPartiesService/}SalesAccountTerritory

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Party*
Contained by	*My Sales Account*
Contained by	*Sales Account*
Handled by	*Sales Account Territory Service*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Name	string	The territory name.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.

Name	Type	Description
PartyName	string	The name of the party.
SAccountTerritoryId	long	The sales account territory identifier. • Primary Key
SalesAccountId	long	The sales account identifier.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
StatusCode	string	The pre-defined code used to indicate the status.
TerritoryId	long	The territory identifier.
TerritoryVersionId	long	The territory version identifier.
TypeCode	string	The type code of the sales account territory.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Source System Reference

The name of external source system where the trading community information is imported from.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}OriginalSystemReference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OldOrigSystemReference	string	The old source system reference that is being replaced.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OrigSystemReferenceId	long	The unique identifier for original system reference. • Primary Key
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.

Name	Type	Description
PartyId	long	The unique identifier of the contact party.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
SourceSystemRefInformation	*Trading Community Original System Mapping Identifier Additional Information*	The source system reference information.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Telex

The telex number information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Telex

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*

Relationship Type	Object or Service

Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary telex of the associated object. If the value is True, then this is the primary telex. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.

Name	Type	Description
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TelexNumber	string	The telex reference number (usually a telephone number) of the organization.

Trading Community Address Additional Information

The address information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/partySite/}PartySiteInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contact Address*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*

Relationship Type	Object or Service
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Address Purpose

The purpose of an address, such as Business, Home, or Ship To.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartySiteUse

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Contact Address*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BeginDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date at the start of the date range within which the row is active.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
IntegrationKey	string	The integration key is not used.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PartySiteUseId	long	The unique identifier of the party site used. • Primary Key
PrimaryPerType	string	Indicates if this is the primary use for the site. Y stands for the primary site and N stands for all other sites.
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
SiteUseType	string	The site use type associated with the address.
Status	string	The status of the record.

Trading Community Contact Point Additional Information

The contact point for a trading community member like phone or e-mail. For example 650-506-6000 is the phone number for Oracle Corporation, john.doe@example.com is the e-mail address for John Doe.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/contactPoint/}ContactPointInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalOrganizationName	*Additional Account Name*	The additional name associated with the organization.
AdditionalPartyId	*Additional Identifier*	The additional identifier associated with the organization or person.

Name	Type	Description
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AnalysisFy	string	The fiscal year that the financial information is based on.
CategoryCode	string	The code of the category to which the person belongs. A list of accepted values is defined in the lookup type CUSTOMER_CATEGORY.
CeoName	string	The name of the chief executive officer. It is the denormalized value of the CEO_NAME in HZ_ORGANIZATION_PROFILES.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
Certification	*Certification*	The certification information associated with the organization.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
City	string	The name of the city.
CodeAssignment	*Classification Assignment*	The classification code assigned to the organization.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRating	*Credit Rating*	The credit rating for the organization.
CurrentFiscalYearPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its current fiscal year.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
Edi	*Electronic Data Interchange*	The electronic data interchange information for the organization.
Eft	*Electronic File Transfer*	The electronic file transfer information for the organization.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EmailDomain	*E-Mail Domain*	The domain name of the email address.
EmployeesTotal	decimal	The total number of employees.
FinancialProfile	*Financial Profile*	The financial profile information of the organization.
FinancialReport	*Financial Report*	The financial report information of the organization.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.

Name	Type	Description
GroupType	string	The type of the group.
HQBranchIndicator	string	The status of this site, such as HQ, a branch, or a single location. A list of accepted values are defined in the lookup type HQ_BRANCH_IND.
HomeCountry	string	The home country associated with the party.
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LanguageName	string	The standard name for the language.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MissionStatement	string	The corporate charter of organization in user-defined text format.
NextFyPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its next fiscal year.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
OrganizationProfile	*Account*	The information about the partner organization.
OrganizationSize	string	The size of the organization based on its revenue, number of employees, and so on.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartyPreference	*Preference*	The preference mentioned in the organization details.
PartySite	*Address*	The party site associated with the organization.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the organization.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
Phone	*Phone*	The phone information for the entity.
PostalCode	string	The postal code element of the address.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.

Name	Type	Description
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryEmailContactPointId	long	The unique identifier of the primary e-mail.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneContactPointId	long	The unique identifier of the primary phone contact point.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURLContactPointId	long	The unique identifier of the primary URL contact point.
PrincipalName	string	The Name of the highest ranking person in the company.

Name	Type	Description
Province	string	The name of the province.
Relationship	*Relationship*	The relationship information of the organization.
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The Standard Industry Classification (SIC) code.
SICCodeType	string	The version of Standard Industry Classification (SIC) code.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
SourceSystemUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the source system information was last updated.
State	string	The name of the state.
Status	string	The status of the record.
Telex	*Telex*	The telex information of the organization.
ThirdPartyFlag	boolean	Indicates whether a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. If the value is Y, then the party is a third party relationship. If Oracle Service is installed, the Third Party field in the Customers window is mandatory.
TradingPartnerIdentifier	string	The FSIO related trading partner codes.
URL	string	The destination URL associated with a specific Google AdWords ad.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
Web	*Web*	The web information related to the record.

Name	Type	Description
YearEstablished	int	The year when the organization began doing business.

Trading Community Organization Profile Additional Information

The additional profile information about an organization, such as the organization type.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/organization/}OrganizationInformation

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalPartyId	*Additional Identifier*	The additional identifier associated with the organization or person.

Name	Type	Description
AdditionalPersonName	*Additional Contact Name*	The additional name of the person.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
CategoryCode	string	The code of the category to which the person belongs. A list of accepted values is defined in the lookup type CUSTOMER_CATEGORY.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
Certification	*Certification*	The certification information for the person.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
Citizenship	*Citizenship*	The citizenship information of a person.
City	string	The name of the city.
CodeAssignment	*Classification Assignment*	The classification code assigned to the person.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRating	*Credit Rating*	The credit rating of the person.
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was born.
Education	*Education*	The education information of the person.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EmailDomain	*E-Mail Domain*	The domain name of the email address.
EmploymentHistory	*Employment History*	The employment history information of a person.
FinancialProfile	*Financial Profile*	The financial profile information of a person.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
Gender	string	The gender of the person, such as male, female, and unknown. A list of accepted values is defined in the lookup HZ_GENDER.
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.

Name	Type	Description
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LanguageName	string	The standard name for the language.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaritalStatus	string	The marital status of the person. A list of accepted values is defined in the lookup MARITAL_STATUS.
MissionStatement	string	The corporate charter of organization in user-defined text format.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartyPreference	*Preference*	The preference mentioned in the person details.
PartySite	*Contact Address*	The party site associated with the person.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.

Name	Type	Description
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the person.
PersonAcademicTitle	string	The part of the person's title that denotes the academic qualification, such as Dr. Jane Smith.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonInterest	*Contact Interest*	The interest information associated with a person.
PersonLanguage	*Contact Language*	The language information associated with a person.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	The prefix for the last name of a person, such as fon, van. For example, if a person's name is Hans Van, the last name of the person is captured using this attribute.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	The place in a family structure. For example, in "Tom Jones III", the "III".
PersonPreNameAdjunct	string	The preferred name adjacency of a resource.
PersonPreviousLastName	string	The previous last name of a person.
PersonProfile	*Contact*	The profile information of the person.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_ PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.

Name	Type	Description
Phone	*Phone*	The phone information for the entity.
PostalCode	string	The postal code element of the address.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryEmailContactPTId	long	The unique identifier of the primary e-mail.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneContactPTId	long	The unique identifier of the primary phone contact point.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.

Name	Type	Description
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURLContactPTId	long	The unique identifier of the primary URL contact point.
Province	string	The name of the province.
Relationship	*Relationship*	The relationship information of the person.
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The Standard Industry Classification (SIC) code.
SICCodeType	string	The version of Standard Industry Classification (SIC) code.
Salutation	string	The size of the household this person is a part of.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
SourceSystemUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the source system information was last updated.
State	string	The name of the state.
Status	string	The status of the record.
ThirdPartyFlag	boolean	Indicates whether a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. If the value is Y, then the party is a third party relationship. If Oracle Service is installed, the Third Party field in the Customers window is mandatory.
URL	string	The destination URL associated with a specific Google AdWords ad.

Name	Type	Description
UserGUID	string	The "light weight" user Global Unique Id. Light Weight users defined in the Extended Security (XS) System.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
Web	*Web*	The web information related to the record.

Trading Community Person Profile Additional Information

The additional information about a trading community person.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/person/}PersonInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contact*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Loyalty Member Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
PersonProfileId	long	The unique identifier of the person profile. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Relationship Additional Information

The relationship between two trading community members. For example, John Doe is the spouse of Jane Doe or Michael Smith is a contact of Oracle Corporation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/relationship/}RelationshipInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
RelationshipRecId	long	The unique identifier of the contact's relationship record. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Usage Assignment

The party usage assigned to a trading community member. For example, John Doe is a contact of ABC Corporation and XYZ Corporation is a supplier.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartyUsageAssignment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Trading Community Party Usage Assignment Service*

Relationship Type	Object or Service
Handled by	*Trading Community Party Information*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
PartyUsageCode	string	The usage context of a party's contact point.
PartyUsgAssignmentId	long	The unique identifier of the party usage assignment. • Primary Key
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.

Web

The Web information associated with a trading community member. For example, Oracle's address on the Web is www.oracle.com.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Web

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N stands for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
URL	string	The destination URL associated with a specific Google AdWords ad.
WebInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community Web.

Name	Type	Description
WebType	string	The prefix class to a Web address. Typically, this is either FTP or HTTP.

Work Class

The custom-defined classification of information about a person's job title and work experience.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}WorkClass

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Employment History*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmploymentHistoryId	long	The foreign key to the HZ_EMPLOYMENT_HISTORY table.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LevelOfExperience	string	The user-defined rating for the level of experience in the class of work. For example, journeyman, trainee, or exposure.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.
WorkClassId	long	The unique identifier for the class of work. • Primary Key
WorkClassName	string	The user-determined classification for work. For example, bricklayer, doctor, lawyer, programmer, or minister of health.

Sales Account Territory Service

A service to create, update, get, or find sales account territories.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesAccountTerritoryService/}SalesAccountTerritoryService

Service WSDL URL: https://servername/crmService/SalesAccountTerritoryService?WSDL

Logical Business Objects

- CRM : Customer Center : Sales Party

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Sales Account Territory*

Operations

- *getSalesAccountTerritory*
- *createSalesAccountTerritory*
- *deleteSalesAccountTerritory*
- *mergeSalesAccountTerritory*
- *findSalesAccountTerritory*
- *findSalesAccountTerritoryHierarchy*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

getSalesAccountTerritory

Retrieves a specific sales account territory details record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
sAccountTerritoryId	long	Identifier of the sales account territory.

Response Payload

Element Name	Type	Description
result	*Sales Account Territory*	The sales account territory details that matches the inbound key attributes.

createSalesAccountTerritory

Creates a sales account territory details for a sales account.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountTerritory	*Sales Account Territory*	Sales account territory details to be created.

Response Payload

Element Name	Type	Description
result	*Sales Account Territory*	Result of the operation includes the successfully created sales account territory details and/or a list of warnings or informational messages.

deleteSalesAccountTerritory

Deletes operation for sales account territory details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountTerritory	*Sales Account Territory*	Sales account territory details to be deleted.

Response Payload

Element Name	Type	Description
result	void	A list of warnings or informational messages encountered when deleting the object.

mergeSalesAccountTerritory

Merges operation for sales account territory details. It will perform an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountTerritory	*Sales Account Territory*	Sales account territory details to be merged.

Response Payload

Element Name	Type	Description
result	*Sales Account Territory*	Result of the operation includes the successfully merged sales account territory details and/or a list of warnings or informational messages.

findSalesAccountTerritory

Finds operation for sales account territory details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, etc.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Method not currently used.

Response Payload

Element Name	Type	Description
result	*Sales Account Territory*	Result of the operation including a list of sales account territory details that satisfy the inbound criteria and any warnings or informational messages encountered during the invocation.

findSalesAccountTerritoryHierarchy

Finds operation for sales account details filtered by Territory Id. Get a list of accounts directly associated to this territory and its descendent territories. Get the complete account data object. This is a composite service.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, etc.
BindTerritoryId	long	Territory identifier.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Method not currently used.

Response Payload

Element Name	Type	Description
result	*Sales Account Territory*	Result of the operation including a list of sales account territory details that satisfy the inbound criteria and any warnings or informational messages encountered during the invocation.

getDfltObjAttrHints

Retrieves user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

Gets the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
createSalesAccountTerritory	ZCM_MANAGE_SALES_ACCOUNT_TEAM_PRIV	Manage Sales Account Team	Allows managing and maintaining the sales account teams.
deleteSalesAccountTerritory	ZCM_MANAGE_SALES_ACCOUNT_TEAM_PRIV	Manage Sales Account Team	Allows managing and maintaining the sales account teams.

Operation Name	Privilege Code	Privilege Name	Privilege Description
findSalesAccountTerritory	ZCM_MANAGE_SALES_ACCOUNT_TEAM_PRIV	Manage Sales Account Team	Allows managing and maintaining the sales account teams.
mergeSalesAccountTerritory	ZCM_MANAGE_SALES_ACCOUNT_TEAM_PRIV	Manage Sales Account Team	Allows managing and maintaining the sales account teams.
getSalesAccountTerritory	ZCM_MANAGE_SALES_ACCOUNT_TEAM_PRIV	Manage Sales Account Team	Allows managing and maintaining the sales account teams.
findSalesAccountTerritoryHierarchy	ZCM_MANAGE_SALES_ACCOUNT_TEAM_PRIV	Manage Sales Account Team	Allows managing and maintaining the sales account teams.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCM_MANAGE_SALES_ACCOUNT_TEAM_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
ZCM_MANAGE_SALES_ACCOUNT_TEAM_PRIV	ORA_ZCM_PARTNER_SALES_PARTY_MANAGEMENT_DUTY	Partner Sales Party Management	Manages creation and maintenance of sales organizations and consumers for partners. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts. This role has limited access to customers and contacts.
ZCM_MANAGE_SALES_ACCOUNT_TEAM_PRIV	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	ORA_OKC_ALL_BUSINESS_UNITS_CONTRACT_INQUIRY_DUTY_CRM	Contract View Access Across All Contracts	Views all contracts across an enterprise.
ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	ORA_ZCM_SALES_PARTY_REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.

Sales Account Territory

An object representing sales account territory attributes for territory assigned to the sales account.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesPartiesService/}SalesAccountTerritory

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Party*
Contained by	*My Sales Account*
Contained by	*Sales Account*
Handled by	*Sales Account Territory Service*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Name	string	The territory name.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
SAccountTerritoryId	long	The sales account territory identifier. • Primary Key
SalesAccountId	long	The sales account identifier.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
StatusCode	string	The pre-defined code used to indicate the status.
TerritoryId	long	The territory identifier.
TerritoryVersionId	long	The territory version identifier.
TypeCode	string	The type code of the sales account territory.

Name	Type	Description
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Sales Campaign

Service to enable the launching of a sales campaign.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/marketing/salesCampaigns/salesCampaignSevice/}SalesCampaignService

Service WSDL URL: https://servername/crmService/SalesCampaignService?WSDL

Logical Business Objects

- CRM : Marketing : Sales Campaign

Operations

- *launchAndExecuteSalesCampaignService*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

launchAndExecuteSalesCampaignService

A web service method that creates Oracle Fusion Sales Campaign Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
customerIds	long	A required input parameter of the launchAndExecuteSalesCampaignService web service method. The Customer ID's are associated to the new sales campaign record created.
inventoryItemIds	long	A required input parameter of the launchAndExecuteSalesCampaignService web service method. The Inventory ID's are associated to the new sales campaign record created.

Element Name	Type	Description
inventoryOrgIds	long	A required input parameter of the launchAndExecuteSalesCampaignService web service method. The Organization ID's are associated to the new sales campaign record created.
productGroupIds	long	A required input parameter of the launchAndExecuteSalesCampaignService web service method. The Product Group ID's are associated to the new sales campaign record created.

Response Payload

Element Name	Type	Description
result	long	The parameter is not applicable for the method launchAndExecuteSalesCampaignService.

getDfltObjAttrHints

A web service method to retrieve user interface hints, such as the service data object label and Object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

Element Name	Type	Description

getServiceLastUpdateTime

Returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

A web service method to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MKT_MANAGE_SALES_CAMPAIGN_PRIV	Manage Sales Campaign	For internal use only. Allows web services management of sales campaigns.

Operation Name	Privilege Code	Privilege Name	Privilege Description

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MKT_MANAGE_SALES_CAMPAIGN_PRIV	ORA_MKT_PERSONAL_CAMPAIGN_MANAGEMENT_DUTY	Personal Campaign Management	Manages secured personal campaigns used to promote products or events to specific customers.

Sales Catalog

Service to retrieve sales catalog hierarchy and content.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/orderCapture/salesCatalog/browse/salesCatalogService/}SalesCatalogRuntimeService

Service WSDL URL: https://servername/crmService/SalesCatalogRuntimeService?WSDL

Logical Business Objects

- CRM : Sales Catalog : Product Group

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Service Schema*
Handles	*Catalog Product Groups*
Handles	*Catalog Products*
Handles	*Selectable Product Group*

Operations

- *getCatalog*
- *getAllProductGroups*
- *getCatalogCategories*
- *getCategoryProducts*
- *getUsageCatalog*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

getCatalog

A web service method to retrieve catalog information.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
usageCode	string	The parameter of the usage code for the method getCatalog.
usageModeCode	string	The parameter of the usage mode code for the method getCatalog.
runEligibilityFlag	boolean	A flag to indicate whether to run eligibility check.
minimumProductGroupId	long	The result includes a set of product groups with product group ID bigger or equal to this parameter. Usually you supply it with the last product group ID in last call, in other words the highest product group ID in last call. This is provided for supporting page navigation.
maximumSizeToReturn	int	The parameter which limits the number of product groups returned. This is provided for supporting page navigation.
contextProviderName	string	The parameter used to choose the context provider mapping to be done for the input context rows.
contextRows	*Service Schema*	The parameter has a list of rows; each row specifies the definition of a single attribute within the context provider.

Response Payload

Element Name	Type	Description
result	*Selectable Product Group*	The parameter returns a list of Product Groups.

getAllProductGroups

A web service method to get all product groups.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
usageCode	string	The parameter of the usage code for the method getAllProductGroups.
usageModeCode	string	The parameter of the usage mode code for the method getAllProductGroups.
runEligibilityFlag	boolean	A flag to indicate whether to run eligibility check.
minimumProductGroupId	long	The result includes a set of product groups with product group ID bigger or equal to this parameter. Usually you supply it with the last product group ID in last call, in other words the highest product group ID in last call. This is provided for supporting page navigation.
maximumSizeToReturn	int	The parameter which limits the number of product groups returned. This is provided for supporting page navigation.
contextProviderName	string	The parameter used to choose the context provider mapping to be done for the input context rows.
contextRows	*Service Schema*	The parameter has a list of rows; each row specifies the definition of a single attribute within the context provider.

Response Payload

Element Name	Type	Description
result	*Descendant Product Group*	The parameter returns a list of Product Groups.

getCatalogCategories

A web service method to get categories under a given catalog.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
usageCode	string	The parameter of the usage code for the method getCatalogCategories.
usageModeCode	string	The parameter of the usage mode code for the method getCatalogCategories.
runEligibilityFlag	boolean	A flag to indicate whether to run eligibility check.
ancestorProductGroupId	long	The Parent Product Group ID for the method getCatalogCategories.
minimumDepth	int	The parameter which limits the returned Product Group to be at least specified level away from the starting Product Group.
maximumDepth	int	The parameter which limits the returned Product Group to have specified limit as maximum level away from the starting Product Group.
minimumPathId	long	The result includes a set of Product Groups with path ID, which is persistent identifier for the path, bigger or equal to this parameter. Usually you supply it with the last path ID in last call, in other words the highest path ID in last call. This is provided for supporting page navigation.
maximumSizeToReturn	int	The parameter which limits the number of Product Groups returned. This is provided for supporting page navigation.
contextProviderName	string	The parameter which is used to choose the context provider mapping to be done for the input context rows.

Element Name	Type	Description
contextRows	*Service Schema*	The parameter which has a list of rows, each row specifies the definition of a single attribute within the context provider.

Response Payload

Element Name	Type	Description
result	*Descendant Product Group*	The parameter returns the list of Product Groups.

getCategoryProducts

A web service method to get products under given category.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
usageCode	string	The parameter of the usage code for the method getCategoryProducts.
usageModeCode	string	The parameter of the usage mode code for the method getCategoryProducts.
runEligibilityFlag	boolean	A flag to indicate whether to run eligibility check.
ancestorProductGroupId	long	The Parent Product Group ID for the method getCategoryProducts.
minimumDepth	int	The parameter which limits the returned Product Group to be at least specified level away from the starting Product Group.
maximumDepth	int	The parameter which limits the returned Product Group to have specified limit as maximum level away from the starting Product Group.
minimumPathId	long	The result includes a set of Product Groups with path ID, which is persistent identifier for the path, bigger or equal to this parameter. Usually you supply it with the last path ID in last call, in other words the highest path ID in last call. This is provided for supporting page navigation.

Element Name	Type	Description
minimumItemId	long	The result includes a set of products with Inventory Item identifier bigger or equal to this parameter. Usually you supply it with the last Inventory Item identifier in last call, in other words the highest Inventory Item identifier in last call. This is provided for supporting page navigation.
maximumSizeToReturn	int	The parameter which limits the number of Product Groups returned. This is provided for supporting page navigation.
contextProviderName	string	The parameter which is used to choose the context provider mapping to be done for the input context rows.
contextRows	*Service Schema*	The parameter which has a list of rows, each row specifies the definition of a single attribute within the context provider.

Response Payload

Element Name	Type	Description
result	*Descendant Product*	The parameter returns the list of Products.

getUsageCatalog

A web service method to get catalog under given usage.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
usageCode	string	The parameter of the usage code for the method getUsageCatalog.
usageModeCode	string	The parameter of the usage mode code for the method getUsageCatalog.
runEligibilityFlag	boolean	A flag to indicate whether to run eligibility check.

Element Name	Type	Description
minimumProductGroupId	long	The result includes a set of Product Groups with product group ID bigger or equal to this parameter. Usually you supply it with the last product group ID in last call, in other words the highest product group ID in last call. This is provided for supporting page navigation.
maximumSizeToReturn	int	The parameter which limits the number of Product Groups returned. This is provided for supporting page navigation.
contextProviderName	string	The parameter which is used to choose the context provider mapping to be done for the input context rows.
contextRows	*Service Schema*	The parameter which has a list of rows, each row specifies the definition of a single attribute within the context provider.

Response Payload

Element Name	Type	Description
result	*Selectable Product Group*	The parameter returns the list of Product Groups.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	QSC_MANAGE_PRODUCT_GROUPS_PRIV	Manage Product Groups	Allows management of product groups and their attributes, lookups, mapping, profile options, templates and usages.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
QSC_MANAGE_PRODUCT_GROUPS_PRIV	ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Customer Relationship Management Application Administrator	Individual responsible for customer relationship management application administration. Collaborates with customer relationship management application users to maintain consistent financial application setup, rules, and access.
QSC_MANAGE_PRODUCT_GROUPS_PRIV	ORA_QSC_SALES_CATALOG_ADMINISTRATOR_JOB	Sales Catalog Administrator	Sets up and maintains sales catalogs for leads, opportunities, quotes and orders. Sets up and maintains rollup catalog for the purpose of forecasting, territory management, and other purposes. Also associates products, promotions, and competitor products to catalogs, and defines eligibility rules. Also manages the bulk export and import of all product group-related objects.

ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HRS_SOCIAL_CONNECTION_PARTNER_DUTY_CRM	Social Connection Partner	Performs all Oracle Fusion Social Connection partner duties.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_AMENDMENT_DUTY	Subscription Amendment	Amends approved subscriptions. This includes initiating an amendment, reverting the subscription to the previous signed version, updating all allowable attributes, and submitting the amendment for approval.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_AUTHORING_DUTY	Subscription Authoring	Authors subscriptions
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SEARCH_VIEW_DUTY	Subscription Search and View Access	Searches and views subscriptions for the assigned business units.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SETUP_DUTY	Subscription Setup	Handles the setup required for subscriptions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SPECIALIST_JOB	Subscription Specialist	Individual responsible for managing subscriptions, establishing recurring and usage billing processes, initiating manual discounts and invoice adjustments, and handling billing discrepancies and disputes.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_ENTERPRISE_ADMINISTRATION_DUTY	Territory Management Enterprise Administration	Manages sales territories and territory proposals. Additional duties include territory management setup and quota management administration.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	Territory Management Setup	Manages sales territory setup, including lookups, profile options, flexfields, and dimension data. Runs dimension synchronization, and visibility jobs. Additional duties include quota management setup.
ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	ORA_MOT_TERRITORY_MANAGEMENT_T2P_MIGRATION_DUTY	Territory Management T2P Migration	Manages sales territory export and import. Provides users with the ability to export territory data from a test environment and import into production.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_CUSTOMER_ACCOUNT_ADMINISTRATION_DUTY	Trading Community Customer Account Administration	Grants privileges to setup customer account information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DATA_QUALITY_ADMIN_DUTY	Trading Community Data Quality Administration	Configures, reviews, and edits predefined data quality server configurations and the predefined matching, synchronization, and cleansing configurations.
ORA_MKT_MARKETING_OPERATIONS_MANAGER_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZPM_CHANNEL_PARTNER_PORTAL_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZPM_CHANNEL_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZPM_CHANNEL_PARTNER_PORTAL_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZPM_CHANNEL_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_PERSON_ADMINISTRATION_DUTY	Trading Community Person Administration	Grants privileges to setup person information.

Descendant Product Group

The descendant product group view object.

QName: {http://xmlns.oracle.com/apps/orderCapture/salesCatalog/browse/salesCatalogService/}DescendantProductGroup

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extends	*Product Group*
Handled by	*Sales Catalog*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Depth	long	The difference in level from the first product group to the last Product Group in the path.

Name	Type	Description
EligibilityReason	string	The text showing the reason why product group is not eligible.
EligibilityStatus	string	The flag to indicate the status of the eligibility engine for Product Groups.
InternalName	string	The internal name of the product group.
ParentProductGroupId	long	The product group identifier for the penultimate node in the path.
PathId	long	The persistent identifier for the path.
ProductGroupDenormId	long	The product group denorm identifier. • Primary Key
ProductGroupDescription	string	The translated name of the product group used for runtime display.
ProductGroupId	long	The product group identifier.
ProductGroupName	string	The translated name of the product group used for runtime display.
ReferenceNumber	string	The identifier used for integration with external systems.

Product Group Details

The base public view object for product group details. A product group is a business object that groups related products, so that you can work with them together. You can use product groups to create a multilevel hierarchy that can be used as a sales catalog, a rollup hierarchy, or a promotion catalog.

QName: {http://xmlns.oracle.com/apps/orderCapture/salesCatalog/browse/salesCatalogService/}ProductGroupDetailBaseP

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Selectable Product Group*
Extended by	*Descendant Product Group*

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveFlag	string	Indicates whether the product group is active or not.
AdminProdGrpName	string	
AllowDuplicateContentFlag	string	Indicates whether a duplicate product or product group can be allowed in this product group hierarchy.
AllowSelectionFlag	string	
EndDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FilterByTerritory	string	
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	
ObjectParam	string	
ProdGroupId3	long	
ProdGrpDetailsId	long	The identifier of the product group details. • Primary Key
RevenueCategoryCode	string	The code for the revenue category for the product group.
RevenueRoleCode	string	The code for the revenue role for the product group.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.

Name	Type	Description
UsageRootFlag	string	Indicates whether the product group can be assigned and displayed as a root product group in the context of an application usage type.

Descendant Product

The descendant product view object.

QName: {http://xmlns.oracle.com/apps/orderCapture/salesCatalog/browse/salesCatalogService/}DescendantProduct

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Sales Catalog*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
Depth	long	The difference in level from the first product group to the last Product Group in the path.
Description	string	The free text description of the record.
EligibilityReason	string	The text showing the reason why product is not eligible.
EligibilityStatus	string	The flag to indicate the status of the eligibility engine for products.
InventoryItemId	long	The inventory item identifier. References an item. • Primary Key

Name	Type	Description
ItemNumber	string	The inventory item number for the item.
ListPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The unitized list price for this product charge, after segment discount. This value is provided by the pricing engine.
OrganizationId	long	The inventory organization identifier for the item. • Primary Key
ParentProductGroupId	long	The product group identifier for the penultimate node in the path.
PathId	long	The persistent identifier for the path.
PrimaryUOMCode	string	The unit of measure of the product.
ProductGroupDenormId	long	The product group denorm identifier. • Primary Key
ProductGroupId	long	The product group identifier.
YourPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The price of the product shown in the catalog.

Selectable Product Group

The object that groups related products, so that you can work with them together.

QName: {http://xmlns.oracle.com/apps/orderCapture/salesCatalog/browse/salesCatalogService/}ProductGroup

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extends	*Product Group*
Handled by	*Sales Catalog*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
EligibilityReason	string	The text showing the reason why product group is not eligible.
EligibilityStatus	string	The flag to indicate the status of the eligibility engine for Product Groups.

RevenueRoleCode	string	The code for the revenue role for the product group.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
UsageRootFlag	string	Indicates whether the product group can be assigned and displayed as a root product group in the context of an application usage type.

Service Schema

The object used to pass context provider details to the service. A row of this VO specify the definition of a single attribute within the context provider.

QName: {http://xmlns.oracle.com/apps/orderCapture/salesCatalog/browse/salesCatalogService/}ServiceContext

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Sales Catalog*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributeName	string	For attribute represented by ServiceContextVO row, specify the attribute name within entity.
AttributeValue	string	For attribute represented by ServiceContextVO row, specify the attribute value as string within entity.
EntityName	string	For attribute represented by ServiceContextVO row, specify the parent entity name of the attribute from context provider.
RecordKey	string	For attribute represented by ServiceContextVO row, specify the unique key for the parent entities from context provider.

Sales Cloud Account

The service to create, update, find, and delete organization accounts. Organization accounts contain the following information: organization profile, sales profile, contact information (primary address, phone, fax, email and URL), industry classification and account hierarchy.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/accountService/}AccountService

Service WSDL URL: https://servername/crmService/SalesPartiesAccountService?WSDL

Logical Business Objects

- CRM : Trading Community Model : Account

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Note Descriptive Flexfields*
Handles	*Sales Cloud Primary Address*
Handles	*Sales Team Member*
Handles	*Trading Community Organization Profile Additional Information*
Handles	*Note*
Handles	*Account*

Operations

- *getAccount*
- *createAccount*
- *updateAccount*
- *deleteAccount*
- *mergeAccount*
- *findAccount*
- *processAccount*
- *processCSAccount*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

getAccount

Retrieves the account based on the primary key identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
PartyId	long	The identifier for a party.

Response Payload

Element Name	Type	Description
result	*Sales Cloud Account*	Account that matches the inbound key attributes.

createAccount

Creates an organization account and its primary address (optional).

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
account	*Sales Cloud Account*	Account to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/crmCommon/salesParties/accountService/}AccountResult	Created account.

updateAccount

Updates an account and primary address. When updating the primary address information it is not necessary to include the primary or alternate keys for the primary address. There is a one-to-one correspondence between the account and primary address. If the alternate keys SourceSystem and SourceSystemReferenceValue in the primary address are specified and they do not match the values in the existing primary address, then a new SourceSystem/SourceSystemReferenceValue gets created for the existing primary address.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
account	*Sales Cloud Account*	Account to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/crmCommon/salesParties/accountService/}AccountResult	Updated account.

deleteAccount

Deletes an account and the relationship between the account and address objects indicating the address is a primary address. The address object cannot be deleted using this operation. To delete the address, use the sales cloud address service.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
account	*Sales Cloud Account*	Account to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	Not applicable.

mergeAccount

Performs a merge on the account. It will perform an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
account	*Sales Cloud Account*	Account to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/crmCommon/salesParties/accountService/}AccountResult	Merged account.

findAccount

Finds a list of accounts based matching the supplied criteria pertaining to the object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, etc.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Method not currently used.

Response Payload

Element Name	Type	Description
result	*Sales Cloud Account*	A list of accounts that satisfy the inbound criteria.

processAccount

Performs a create, update, delete or Merge a list of account rows. The specified operation is applied to all objects in the given list.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action shall be performed, such as create, update, merge, or delete.
account	*Sales Cloud Account*	A list of accounts to be processed.

Element Name	Type	Description
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Control your bulk upload behavior, such as whether the valid data will be committed if there are other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Sales Cloud Account*	A list of Account that are successfully processed.

processCSAccount

Performs a create, update, or delete operation on a list of account rows. Different operations may be applied to different objects, depending on what is specified in the ChangeSummary object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object that is used to represent the changes that have been made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Control your bulk upload behavior, such as whether the valid data will be committed if there are other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	Result of the operation including a list of created/updated data objects, and all warning and informational messages.

getDfltObjAttrHints

Retrieves user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

Gets the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
findAccount	ZCM_VIEW_SALES_ORGANIZATION_PRIV	View Sales Organization	Allows viewing of the sales organization.
updateAccount	ZCM_UPDATE_SALES_ORGANIZATION_PRIV	Update Sales Organization	Allows updating the sales organization.
createAccount	ZCM_CREATE_SALES_ORGANIZATION_PRIV	Create Sales Organization	Allows creating a sales organization.
mergeAccount	ZCM_UPDATE_SALES_ORGANIZATION_PRIV	Update Sales Organization	Allows updating the sales organization.
getAccount	ZCM_VIEW_SALES_ORGANIZATION_PRIV	View Sales Organization	Allows viewing of the sales organization.
processAccount	ZCM_DELETE_SALES_ORGANIZATION_PRIV	Delete Sales Organization	Allows deletion of Sales Organizations.
processAccount	ZCM_UPDATE_SALES_ORGANIZATION_PRIV	Update Sales Organization	Allows updating the sales organization.
processAccount	ZCM_CREATE_SALES_ORGANIZATION_PRIV	Create Sales Organization	Allows creating a sales organization.
processCSAccount	ZCM_DELETE_SALES_ORGANIZATION_PRIV	Delete Sales Organization	Allows deletion of Sales Organizations.

Operation Name	Privilege Code	Privilege Name	Privilege Description
processCSAccount	ZCM_UPDATE_SALES_ ORGANIZATION_PRIV	Update Sales Organization	Allows updating the sales organization.
processCSAccount	ZCM_CREATE_SALES_ ORGANIZATION_PRIV	Create Sales Organization	Allows creating a sales organization.
deleteAccount	ZCM_DELETE_SALES_ ORGANIZATION_PRIV	Delete Sales Organization	Allows deletion of Sales Organizations.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCM_VIEW_SALES_ ORGANIZATION_PRIV	ORA_ZCM_SR_SALES_PARTY_ MANAGEMENT	Service Sales Party Management	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request management capabilities.
ZCM_VIEW_SALES_ ORGANIZATION_PRIV	ORA_SVC_CASE_ADMINISTRATOR	Case Administrator	Administers all aspects of Case Management.
ZCM_VIEW_SALES_ ORGANIZATION_PRIV	ORA_SVC_HR_SR_MANAGEMENT	HR Service Request Management	Manages all aspects of the Next Gen HR Help Desk Service Request object.
ZCM_VIEW_SALES_ ORGANIZATION_PRIV	ORA_ZCM_MKTG_SALES_PARTY_ MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
ZCM_VIEW_SALES_ ORGANIZATION_PRIV	ORA_SVC_INTERNAL_HELPDESK_ ANALYSIS	Internal Service Request Analysis	Manages a group of Internal Help Desk agents. Can view Internal service requests, activities, and attachments. Monitors metrics and overall resource balancing, critical service requests, service level agreements.
ZCM_VIEW_SALES_ ORGANIZATION_PRIV	ORA_SVC_CASE_EXECUTION	Case Execution	Assists clients who are applying for benefits, opens cases and manages all tasks associated to the case, processes clients applications, evaluate clients needs for benefits, counsels benefits recipients, performs assessments of clients strengths and needs to develop benefit plans, performs follow-up with clients to ensure they are working on their tasks.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCM_VIEW_SALES_ ORGANIZATION_PRIV	ORA_SVC_HR_SR_ANALYSIS	HR Service Request Analysis	Manages a group of Next Gen HR Help Desk agents. Can view Next Gen HR service requests, activities, and attachments. Monitors metrics and overall resource balancing, critical service requests, service level agreements.

Sales Cloud Account

An account for a customer or prospect. This object is an aggregation of primary account profile, and contact information, and references a single primary address.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/accountService/}Account

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Sales Cloud Primary Address*
Contains	*Sales Team Member*
Contains	*Trading Community Organization Profile Additional Information*
Contains	*Note*
Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountScore	long	Score assigned based on custom criteria by the user.
AccountScoringTier	string	Tier assigned based on custom criteria by the user.
AddressElementAttribute1	string	Additional address element to support flexible address format
AddressElementAttribute2	string	Additional address element to support flexible address format
AddressElementAttribute3	string	Additional address element to support flexible address format
AddressElementAttribute4	string	Additional address element to support flexible address format

Name	Type	Description
AddressElementAttribute5	string	Additional address element to support flexible address format
AddressLine1	string	First line of address.
AddressLine2	string	Second line of address.
AddressLine3	string	Third line of address.
AddressLine4	string	Fourth line of address.
AddressLinesPhonetic	string	The phonetic or Kana representation of the Kanji address lines (used in Japan).
AddressNumber	string	Alternate unique identifier for the address. One of AddressId, AddressNumber or SourceSystem and SourceSystemReferenceValue keys is used to identify the address record during update. If not specified, then it is automatically generated. Prefix defined as in profile option ZCA_PUID_PREFIX concatenated with an internally generated unique sequence number.
AddressType	string	Additional information as type of address like BillTo, ShipTo.
AnalysisFiscalYear	string	The fiscal year used as the source for financial information.
AssignmentExceptionFlag	boolean	Indicates whether the sales account had the required dimensions to allow assignment manager to assign territories to the sales account. If the value is True, then the sales account has the dimensions. The default value is False.

TotalEmployeesMinimumIndicator	string	Indicates if the employee number is a minimum, maximum, or average of the total number of employees. The accepted values are defined in the lookup type TOTAL_EMP_MIN_IND.
TotalEmployeesText	string	The total number of employees in text format.
TotalPaymentAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount of payment collected from the organization.
Type	string	The account type that defines if the account is a sales account or a prospect or any other party type. The accepted values are defined in the lookup type ZCA_ACCOUNT_TYPE. It is defaulted to ZCA_CUSTOMER if no value is provided.
URL	string	The destination URL associated with a specific Google AdWords ad.
UniqueNameSuffix	string	The suffix used to generate the attribute, PartyUniqueName. The suffix is concatenated to the OrganizationName attribute to generate the PartyUniqueName. The primary address is defaulted as the suffix.

Name	Type	Description
UpdateFlag	boolean	Indicates whether the user has access to update the record.
WomanOwnedIndicator	string	Indicates whether the organization is primarily owned by women. If the value is Y, then the organization is primarily owned by women. The default value is N.
YearEstablished	int	The year when the organization began doing business.
YearIncorporated	int	The year when the business was formally incorporated.

Note

The object that captures comments, information, or instructions for an Oracle Fusion Applications business object.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/noteService}Note

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Note Descriptive Flexfields*
Contained by	*Objective*
Contained by	*Opportunity*
Contained by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactRelationshipId	long	The identifier of the contact relationship record in Trading Community Architecture (TCA).

Name	Type	Description
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreatorPartyId	long	This is the party identifier for the note creator.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DeleteFlag	boolean	Indicates whether the user has access to delete the note.
Dff	*Note Descriptive Flexfields*	The descriptive flex field segment.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record
NoteAttributeCategory	string	The contextual flex field for development usage.
NoteAttributeUid1	string	The flex field for development usage.
NoteAttributeUid2	string	The flex field for development usage.
NoteAttributeUid3	string	The flex field for development usage.
NoteAttributeUid4	string	The flex field for development usage.
NoteAttributeUid5	string	The flex field for development usage.
NoteId	long	The unique identifier of the note.

Name	Type	Description
		• Primary Key
NoteNumber	string	The alternate unique identifier of the note. A user key that is system generated or from an external system.
NoteTitle	string	The title of the note entered by the user.
NoteTxt	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	This is the column that stores the actual note text.
NoteTypeCode	string	This is the note type code for categorization of note.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
SourceObjectCode	string	This is the source_object_code for the source object as defined in OBJECTS Metadata.
SourceObjectId	string	This is the source_object_Uid for the source object such as Activities, Opportunities, and so on defined in OBJECTS metadata.
UpdateFlag	boolean	Indicates whether the user can update the note.
VisibilityCode	string	This is the attribute to specify the visibility level of the note.

Note Descriptive Flexfields

The descriptive flex field that captures additional information for notes, such as a priority or status.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/flex/noteDff/}NoteDFF

Relationships

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
NoteId	long	The unique identifier of the note. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Sales Cloud Primary Address

An object that includes attributes used to store values while creating or updating a primary address. A primary address is the default communication address of an entity irrespective of the address purpose.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/commonService/}PrimaryAddress

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Cloud Account*
Contained by	*Sales Cloud Household*
Contained by	*Sales Cloud Contact*
Handled by	*Sales Cloud Contact*
Handled by	*Sales Cloud Household*
Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AddressElementAttribute1	string	Additional address element to support flexible address format.
AddressElementAttribute2	string	Additional address element to support flexible address format.
AddressElementAttribute3	string	Additional address element to support flexible address format.
AddressElementAttribute4	string	Additional address element to support flexible address format.

Name	Type	Description
AddressElementAttribute5	string	Additional address element to support flexible address format.
AddressId	long	First line for address. • Primary Key
AddressLine1	string	Second line for address.
AddressLine2	string	Third line for address.
AddressLine3	string	Fourth line for address.
AddressLine4	string	Address internal unique identifier that is internally generated during create. One of AddressId, AddressNumber or SourceSystem and SourceSystemReferenceValue keys is used to identify the address record during update.
AddressLinesPhonetic	string	Phonetic or Kana representation of the Kanji address lines (used in Japan).
AddressNumber	string	Alternate unique identifier for the address. One of AddressId, AddressNumber or SourceSystem and SourceSystemReferenceValue keys is used to identify the address record during update. If not specified, then it is automatically generated. Prefix defined as in profile option ZCA_PUID_PREFIX concatenated with an internally generated unique sequence number.
Building	string	Specific building name or number at a given address.
City	string	The name of the city.
Comments	string	The comments for the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DateValidated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date the address was last validated.
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
Description	string	The free text description of the record.
FloorNumber	string	Specific floor number at a given address or in a particular building when building number is provided.
FormattedAddress	string	Formatted address information.
FormattedMultiLineAddress	string	Formatted multiple line address information.
HouseType	string	Indicates the building type. A list of valid values is defined in the lookup HZ_HOUSE_TYPE. Review and update the codes using the Setup and Maintenance work area, Manage Standard Lookups task.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Latitude	decimal	Used to store latitude information for the location for spatial proximity and containment purposes.
LocationDirections	string	Directions to the location.

Name	Type	Description
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
Longitude	decimal	Used to store longitude Information for the location for spatial proximity and containment purposes.
Mailstop	string	A user-defined code to indicate a mail drop point within their organization.
PartyId	long	The unique identifier of the contact party.
PostalCode	string	The postal code element of the address.
PostalPlus4Code	string	Four digit extension to the United States Postal ZIP code.
Province	string	The name of the province.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
State	string	The name of the state.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
ValidationStatusCode	string	Standardized status code describing the results of the validation.

Sales Team Member

An object representing a resource party that is assigned to a sales account team and has a defined access role for the sales account.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/commonService/}SalesTeamMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Cloud Account*
Contained by	*Sales Cloud Household*
Contained by	*Sales Cloud Contact*
Handled by	*Sales Cloud Contact*
Handled by	*Sales Cloud Household*
Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevelCode	string	The access level determines the type of access granted to the resource as well as managers of the organizations. The possible values are contained in the ZCA_ACCESS_LEVEL lookup.
AssignmentTypeCode	string	The code indicating how the resource is assigned to the sales account team. The possible values are contained in the ZCA_ASSIGNMENT_TYPE lookup.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
LockAssignmentFlag	boolean	The flag indicates automatic territory assignment cannot remove the sales account team resource when this flag is 'Y'. When a sales account team member is added manually, this flag is defaulted to 'Y'.
MemberFunctionCode	string	The lookup code indicating a sales account resource's role on the resource team such as Integrator, Executive Sponsor and Technical Account Manager. The code lookup is stored in FND_LOOKUPS.
ResourceEmailAddress	string	Unique identifier for the resource.
ResourceId	long	The unique identifier of the resource.
ResourceName	string	The name of the sales team member.
ResourceOrgName	string	The name of the resource organization of the sales team member.
ResourcePartyNumber	string	Unique identifier for the resource.
ResourcePhoneNumber	string	The formatted primary phone number of the sales team member.
ResourceRoleName	string	The list of roles for a sales team member.
SalesProfileId	long	The identifier for the sales account.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
TeamMemberId	long	The surrogate primary key for the member of the sales account resource team. • Primary Key
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Trading Community Organization Profile Additional Information

The additional profile information about an organization, such as the organization type.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/organization/}OrganizationInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Cloud Account*
Contained by	*Account*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
OrganizationProfileId	long	The unique identifier of the organization profile. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Sales Cloud Address

Service to operate on the address entity in Oracle Sales Cloud. It exposes the key attributes of an address and provides operations to define and manage the address. This service is used to manage addresses in relation to a customer or prospect entity of type account, contact, or household. It is also used to manage multiple address purposes for a given address.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/addressService/}AddressService

Service WSDL URL: https://servername/crmService/SalesPartiesAddressService?WSDL

Logical Business Objects

- CRM : Trading Community Model : Account
- CRM : Trading Community Model : Account
- CRM : Trading Community Model : Account

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Address*
Handles	*Address Purpose*

Operations

- *getAddress*
- *createAddress*
- *updateAddress*
- *deleteAddress*
- *mergeAddress*
- *findAddress*
- *processAddress*
- *processCSAddress*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*

- *getEntityList*

getAddress

Retrieves the address based on the primary key identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
AddressId	long	Party site identifier.

Response Payload

Element Name	Type	Description
result	*Sales Cloud Address*	Address that matches the inbound key attributes.

createAddress

An operation to create an address.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
address	*Sales Cloud Address*	Address to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/crmCommon/salesParties/addressService/}AddressResult	Created address.

updateAddress

Updates an address. The address is identified by either providing the primary or alternate keys of the Address.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
address	*Sales Cloud Address*	Address to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/crmCommon/salesParties/addressService/}AddressResult	Updated address.

deleteAddress

Deletes an address.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
address	*Sales Cloud Address*	Address to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	Not applicable.

mergeAddress

Performs a merge on the address It will perform an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
address	*Sales Cloud Address*	Address to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/crmCommon/salesParties/addressService/}AddressResult	Merged address.

findAddress

Finds a list of addresses matching the supplied criteria pertaining to the object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, etc.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Method not currently used.

Response Payload

Element Name	Type	Description
result	*Sales Cloud Address*	A list of Address that satisfy the inbound criteria.

processAddress

Performs a create, update, delete, or merge operation on a list of address rows. The specified operation is applied to all objects in the given list.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action shall be performed, such as create, update, merge, or delete.
address	*Sales Cloud Address*	A list of addresses to be processed.

Element Name	Type	Description
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Control your bulk upload behavior, such as whether the valid data will be committed if there are other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Sales Cloud Address*	A list of Addresses that are successfully processed.

processCSAddress

Performs a create, update, or delete operation on a list of address rows. Different operations may be applied to different objects, depending on what is specified in the ChangeSummary object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object that is used to represent the changes that have been made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Control your bulk upload behavior, such as whether the valid data will be committed if there are other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	Result of the operation including a list of created/updated data objects, and all warning and informational messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

Gets the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
mergeAddress	ZCM_UPDATE_SALES_GROUP_PRIV	Update Sales Group	Allows updating a sales group
mergeAddress	ZCM_UPDATE_CONSUMER_PRIV	Update Consumer	Allows reviewing and updating the consumer information.
mergeAddress	ZCM_UPDATE_SALES_PARTY_CONTACT_PRIV	Update Sales Party Contact	Allows updating the sales party contacts.
mergeAddress	ZCM_UPDATE_SALES_ORGANIZATION_PRIV	Update Sales Organization	Allows updating the sales organization.
updateAddress	ZCM_UPDATE_SALES_GROUP_PRIV	Update Sales Group	Allows updating a sales group
updateAddress	ZCM_UPDATE_CONSUMER_PRIV	Update Consumer	Allows reviewing and updating the consumer information.
updateAddress	ZCM_UPDATE_SALES_PARTY_CONTACT_PRIV	Update Sales Party Contact	Allows updating the sales party contacts.
updateAddress	ZCM_UPDATE_SALES_ORGANIZATION_PRIV	Update Sales Organization	Allows updating the sales organization.
findAddress	ZCM_VIEW_SALES_GROUP_PRIV	View Sales Group	Allows viewing a sales group
findAddress	ZCM_VIEW_CONSUMER_PRIV	View Consumer	Allows viewing of consumers.

Operation Name	Privilege Code	Privilege Name	Privilege Description
findAddress	ZCM_VIEW_SALES_PARTY_CONTACT_PRIV	View Sales Party Contact	Allows viewing of sales party contact information.
findAddress	ZCM_VIEW_SALES_ORGANIZATION_PRIV	View Sales Organization	Allows viewing of the sales organization.
createAddress	ZCM_UPDATE_SALES_GROUP_PRIV	Update Sales Group	Allows updating a sales group
createAddress	ZCM_UPDATE_CONSUMER_PRIV	Update Consumer	Allows reviewing and updating the consumer information.
createAddress	ZCM_UPDATE_SALES_PARTY_CONTACT_PRIV	Update Sales Party Contact	Allows updating the sales party contacts.
createAddress	ZCM_UPDATE_SALES_ORGANIZATION_PRIV	Update Sales Organization	Allows updating the sales organization.
deleteAddress	ZCM_UPDATE_SALES_GROUP_PRIV	Update Sales Group	Allows updating a sales group
deleteAddress	ZCM_UPDATE_CONSUMER_PRIV	Update Consumer	Allows reviewing and updating the consumer information.
deleteAddress	ZCM_UPDATE_SALES_PARTY_CONTACT_PRIV	Update Sales Party Contact	Allows updating the sales party contacts.
deleteAddress	ZCM_UPDATE_SALES_ORGANIZATION_PRIV	Update Sales Organization	Allows updating the sales organization.
processCSAddress	ZCM_UPDATE_SALES_GROUP_PRIV	Update Sales Group	Allows updating a sales group
processCSAddress	ZCM_UPDATE_CONSUMER_PRIV	Update Consumer	Allows reviewing and updating the consumer information.
processCSAddress	ZCM_UPDATE_SALES_PARTY_CONTACT_PRIV	Update Sales Party Contact	Allows updating the sales party contacts.
processCSAddress	ZCM_UPDATE_SALES_ORGANIZATION_PRIV	Update Sales Organization	Allows updating the sales organization.
processAddress	ZCM_UPDATE_SALES_GROUP_PRIV	Update Sales Group	Allows updating a sales group

Operation Name	Privilege Code	Privilege Name	Privilege Description
processAddress	ZCM_UPDATE_CONSUMER_PRIV	Update Consumer	Allows reviewing and updating the consumer information.
processAddress	ZCM_UPDATE_SALES_PARTY_CONTACT_PRIV	Update Sales Party Contact	Allows updating the sales party contacts.
processAddress	ZCM_UPDATE_SALES_ORGANIZATION_PRIV	Update Sales Organization	Allows updating the sales organization.
getAddress	ZCM_VIEW_SALES_GROUP_PRIV	View Sales Group	Allows viewing a sales group
getAddress	ZCM_VIEW_CONSUMER_PRIV	View Consumer	Allows viewing of consumers.
getAddress	ZCM_VIEW_SALES_PARTY_CONTACT_PRIV	View Sales Party Contact	Allows viewing of sales party contact information.
getAddress	ZCM_VIEW_SALES_ORGANIZATION_PRIV	View Sales Organization	Allows viewing of the sales organization.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCM_VIEW_SALES_ORGANIZATION_PRIV	ORA_ZCM_SR_SALES_PARTY_MANAGEMENT	Service Sales Party Management	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request management capabilities.
ZCM_VIEW_SALES_ORGANIZATION_PRIV	ORA_SVC_CASE_ADMINISTRATOR	Case Administrator	Administers all aspects of Case Management.
ZCM_VIEW_SALES_ORGANIZATION_PRIV	ORA_SVC_HR_SR_MANAGEMENT	HR Service Request Management	Manages all aspects of the Next Gen HR Help Desk Service Request object.
ZCM_VIEW_SALES_ORGANIZATION_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
ZCM_VIEW_SALES_ORGANIZATION_PRIV	ORA_SVC_INTERNAL_HELPDESK_ANALYSIS	Internal Service Request Analysis	Manages a group of Internal Help Desk agents. Can view Internal service requests, activities, and attachments. Monitors metrics and overall resource balancing,

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			critical service requests, service level agreements.
ZCM_VIEW_SALES_ ORGANIZATION_PRIV	ORA_SVC_CASE_EXECUTION	Case Execution	Assists clients who are applying for benefits, opens cases and manages all tasks associated to the case, processes clients applications, evaluate clients needs for benefits, counsels benefits recipients, performs assessments of clients strengths and needs to develop benefit plans, performs follow-up with clients to ensure they are working on their tasks.
ZCM_VIEW_SALES_ ORGANIZATION_PRIV	ORA_SVC_HR_SR_ANALYSIS	HR Service Request Analysis	Manages a group of Next Gen HR Help Desk agents. Can view Next Gen HR service requests, activities, and attachments. Monitors metrics and overall resource balancing, critical service requests, service level agreements.
ZCM_VIEW_SALES_ ORGANIZATION_PRIV	ORA_SVC_CASE_SUPERVISION	Case Supervision	Supervises and manages caseworkers, assists caseworkers with any complex issues, handles case approvals and escalations, coordinates care and benefits with external service providers, assigns or reassigns cases to caseworkers, conducts evaluations of benefits programs and provides feedback.
ZCM_VIEW_SALES_ ORGANIZATION_PRIV	ORA_SVC_INTERNAL_HELPDESK_ SR_MANAGEMENT	Internal Service Request Management	Manages all aspects of the Internal Help Desk Service Request object.
ZCM_VIEW_SALES_ ORGANIZATION_PRIV	ORA_ZCH_CDM_ADMIN_DUTY	Customer Data Management Administration	Administers customer data management.
ZCM_VIEW_SALES_ ORGANIZATION_PRIV	ORA_ZCM_SALES_PARTY_ REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ZCM_VIEW_SALES_ ORGANIZATION_PRIV	ORA_SVC_HR_SR_ ADMINISTRATION	HR Service Request Administration	Manages all aspects of Next Gen HR service requests. In addition, can manage queues and administer the Next Gen HR Help Desk service application, including setup.
ZCM_VIEW_SALES_ ORGANIZATION_PRIV	ORA_SVC_INTERNAL_HELPDESK_ ADMINISTRATION	Internal Service Request Administration	Manages all aspects of Internal service requests. In addition, can

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			manage queues and administer the Internal Help Desk service application, including setup.
ZCM_VIEW_SALES_ ORGANIZATION_PRIV	ORA_ZCM_PARTNER_SALES_ PARTY_MANAGEMENT_DUTY	Partner Sales Party Management	Manages creation and maintenance of sales organizations and consumers for partners. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts. This role has limited access to customers and contacts.
ZCM_VIEW_CONSUMER_PRIV	ORA_ZCM_SR_SALES_PARTY_ MANAGEMENT	Service Sales Party Management	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request management capabilities.
ZCM_VIEW_CONSUMER_PRIV	ORA_ZCM_MKTG_SALES_PARTY_ MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
ZCM_VIEW_CONSUMER_PRIV	ORA_ZCM_SALES_PARTY_ REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ZCM_VIEW_CONSUMER_PRIV	ORA_ZCM_PARTNER_SALES_ PARTY_MANAGEMENT_DUTY	Partner Sales Party Management	Manages creation and maintenance of sales organizations and consumers for partners. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts. This role has limited access to customers and contacts.
ZCM_UPDATE_SALES_ ORGANIZATION_PRIV	ORA_ZCM_SR_SALES_PARTY_ MANAGEMENT	Service Sales Party Management	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request management capabilities.
ZCM_UPDATE_SALES_ ORGANIZATION_PRIV	ORA_UER_UTILITIES_CUSTOMER_ SERVICE_MANAGER_JOB	Utilities Customer Service Manager	Individual responsible for managing Utilities Customer Service Representatives for a utilities customer service function.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCM_UPDATE_SALES_ORGANIZATION_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
ZCM_UPDATE_SALES_ORGANIZATION_PRIV	ORA_ZCH_CDM_ADMIN_DUTY	Customer Data Management Administration	Administers customer data management.
ZCM_UPDATE_SALES_ORGANIZATION_PRIV	ORA_UER_UTILITIES_CUSTOMER_SERVICE_REPRESENTATIVE_JOB	Utilities Customer Service Representative	Individual responsible for answering customer inquiries and resolving customer problems for a utilities customer service function.
ZCM_UPDATE_SALES_ORGANIZATION_PRIV	ORA_UER_UTILITIES_CUSTOMER_SERVICE_ADMINISTRATOR_JOB	Utilities Customer Service Administrator	Individual responsible for the day-to-day administrative support for a utilities customer service function.
ZCM_UPDATE_SALES_ORGANIZATION_PRIV	ORA_ZCM_PARTNER_SALES_PARTY_MANAGEMENT_DUTY	Partner Sales Party Management	Manages creation and maintenance of sales organizations and consumers for partners. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts. This role has limited access to customers and contacts.
ZCM_UPDATE_SALES_ORGANIZATION_PRIV	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.

Sales Cloud Address

An object that includes attributes used to store values while creating or updating an address. An address represents the location information of an account, contact or household.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/addressService/}Address

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Address Purpose*
Handled by	*Sales Cloud Address*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AddrElementAttribute1	string	The additional address element to support flexible address format.
AddrElementAttribute2	string	The additional address element to support flexible address format.
AddrElementAttribute3	string	The additional address element to support flexible address format.
AddrElementAttribute4	string	The additional address element to support flexible address format.

Name	Type	Description
AddrElementAttribute5	string	The additional address element to support flexible address format.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AddressId	long	The unique address identifier that is internally generated during create. One of AddressId, AddressNumber, or SourceSystem and SourceSystemReferenceValue keys is used to identify the address record during update. • Primary Key
AddressLinesPhonetic	string	The phonetic or Kana representation of the Kanji address lines (used in Japan).
AddressNumber	string	The alternate unique identifier for the address. One of AddressId, AddressNumber, or SourceSystem and SourceSystemReferenceValue keys is used to identify the address record during update. If not specified, then it is automatically generated. The prefix is the profile option ZCA_PUID_PREFIX concatenated with an internally generated unique sequence number.
AddressPurpose	*Sales Cloud Address Purpose*	The reference to the address purpose child entity associated with the address.
Building	string	The specific building name or number at a given address.
City	string	The name of the city.
CliiCode	string	The Common Language Location Identifier (CLLI) code.
Comments	string	The comments for the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.

Name	Type	Description
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DateValidated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date on which the address was last validated.
Description	string	The free text description of the record.
DoNotMailFlag	boolean	Indicates whether the address should be used for mailing or not.
EffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The effective date for the address.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
FloorNumber	string	The specific floor number at a given address when the building number is provided.
FormattedAddress	string	The formatted address information.
FormattedMultilineAddress	string	The formatted multiple line address information.
HouseType	string	Indicates the building type. A list of valid values is defined in the lookup HZ_HOUSE_TYPE. Review and update the codes using the Manage Standard Lookups task in the Setup and Maintenance work area.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Latitude	decimal	The latitude information for the location for spatial proximity and containment purposes.
LocationDirections	string	The directions to the location.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table. • Primary Key
Longitude	decimal	The longitude information for the location for spatial proximity and containment purposes.
Mailstop	string	A user-defined code to indicate the mail drop point within the organization.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PartyNumber	string	The unique identification number for the party.
PartySourceSystem	string	The name of the external source system of the account, contact, or household with which the address is associated. It is part of the alternate key for the account, contact, or household record (along with PartySourceSystemReferenceValue). One of PartyId, PartyNumber, or PartySourceSystem and PartySourceSystemReferenceValue keys is required to identify the account, contact, or household record. The value for this attribute should be predefined in the lookup type HZ_ORIG_SYSTEMS_VL using the setup task Manage Trading Community Source Systems.
PartySourceSystemReferenceValue	string	The identifier for the account, contact, or household from the external source system with which the address is associated.

Name	Type	Description
		It is part of the alternate key (along with PartySourceSystem). One of PartyId, PartyNumber, or PartySourceSystem and PartySourceSystemReferenceValue keys is required to identify the account, contact, or household record.
PostalCode	string	The postal code element of the address.
PostalPlus4Code	string	The four digit extension to the United States Postal ZIP code.
PrimaryFlag	boolean	Indicates if this is the primary address of the associated object. If the value is Y, then the address is a primary address.
Province	string	The name of the province.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
State	string	The name of the state.
Status	string	The status of the record.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
ValidationStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the validation starts. It is internally set by the system during address cleansing.
ValidationStatusCode	string	The standardized status code that describes the results of the validation.

Sales Cloud Address Purpose

An object that includes attributes used to store values while creating or updating the address purpose. The address purpose describes the use of an address. For example, shipping address or billing address.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/addressService/}AddressPurpose

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Cloud Address*
Handled by	*Sales Cloud Address*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AddressPurposeId	long	The unique internal identifier used for identifying the address purpose record in case of an update. The identifier is internally generated during record creation. • Primary Key
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
Purpose	string	The use or purpose of the address e.g. billing, shipping, and so on. A list of valid values is defined in the lookup PARTY_SITE_USE_CODE. Review and update the codes using the Manage Standard Lookups task in the Setup and Maintenance work area.

Sales Cloud Contact

The service used to create, update, retrieve, and delete contacts. A contact could be either a buying customer in a B2C scenario or contact of an account in a B2B scenario. A contact could also be a member of a household or a standalone contact defined within the application. Almost all frequently used operations involving a contact excluding relationships and additional address are covered by this service.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/contactService/}ContactService

Service WSDL URL: https://servername/crmService/ContactService?WSDL

Logical Business Objects

- CRM : Trading Community Model : Contact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Note Descriptive Flexfields*
Handles	*Primary Address SDO*
Handles	*Sales Team Member*
Handles	*Note*
Handles	*Contact*

Operations

- *getContact*
- *createContact*

- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

getContact

An operation to retrieve the contact based on the primary key identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
PartyId	long	The get operation for party identifier.

Response Payload

Element Name	Type	Description
result	*Sales Cloud Contact*	The operation to return contact that matches the inbound key attributes.

createContact

An operation to create a contact and its primary address (optional).

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contact	*Sales Cloud Contact*	The operation for the contact to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/crmCommon/salesParties/contactService/}ContactResult	The operation that returns create contact.

updateContact

An operation to update a contact and primary address. When updating the primary address information, it is not necessary to include the primary or alternate keys for the primary address. There is a one-to-one correspondence between the contact and primary address. If the alternate keys SourceSystem and SourceSystemReferenceValue in the primary address are specified and they do not match the values in the existing primary address, then a new SourceSystem/SourceSystemReferenceValue gets created for the existing primary address.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contact	*Sales Cloud Contact*	The operation for the contacts to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/crmCommon/salesParties/contactService/}ContactResult	The operation that returns the updated contact.

deleteContact

An operation to delete a contact and the relationship between the contact and address objects indicating the address is a primary address. The address object cannot be deleted using this operation. To delete the address, use the Sales Cloud Address service.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contact	*Sales Cloud Contact*	The operation for the contact to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	Not applicable.

mergeContact

An operation to perform a merge on the contact. It will perform an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contact	*Sales Cloud Contact*	The operation for the contact to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/crmCommon/salesParties/contactService/}ContactResult	The operation returns merged contact.

findContact

An operation to find a list of contacts based matching the supplied criteria pertaining to the object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*Sales Cloud Contact*	A list of contacts that satisfy the inbound criteria.

processContact

The operation that performs a create, update, delete, or merge operation on a list of contact rows. The specified operation is applied to all objects in the given list.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	The operation that indicates what action, such as create, update, merge, or delete, will be performed.
contact	*Sales Cloud Contact*	A list of contacts to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The operation to control your bulk upload behavior, such as whether the valid data will

Element Name	Type	Description
		be committed if there are other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Sales Cloud Contact*	A list of contacts that are successfully processed.

processCSContact

The operation that performs create, update, or delete on a list of contact rows. Different operations may be applied to different objects, depending on what is specified in the change summary object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object that is used to represent the changes that have been made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The operation to control your bulk upload behavior, such as whether the valid data will be committed if there are other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The result of the operation including a list of created or updated data objects, and all warning and informational messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The locale name is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
findContact	ZCM_VIEW_CONSUMER_PRIV	View Consumer	Allows viewing of consumers.
findContact	ZCM_VIEW_SALES_PARTY_CONTACT_PRIV	View Sales Party Contact	Allows viewing of sales party contact information.
updateContact	ZCM_UPDATE_CONSUMER_PRIV	Update Consumer	Allows reviewing and updating the consumer information.
updateContact	ZCM_UPDATE_SALES_PARTY_CONTACT_PRIV	Update Sales Party Contact	Allows updating the sales party contacts.
processContact	ZCM_UPDATE_CONSUMER_PRIV	Update Consumer	Allows reviewing and updating the consumer information.
processContact	ZCM_DELETE_SALES_PARTY_CONTACT_PRIV	Delete Sales Party Contact	Allows deleting sales party contacts.
processContact	ZCM_CREATE_CONSUMER_PRIV	Create Consumer	Allows creating a consumer.
processContact	ZCM_CREATE_SALES_PARTY_CONTACT_PRIV	Create Sales Party Contact	Allows creating a sales party contact.
processContact	ZCM_DELETE_CONSUMER_PRIV	Delete Consumer	Allows deleting consumers.
processContact	ZCM_UPDATE_SALES_PARTY_CONTACT_PRIV	Update Sales Party Contact	Allows updating the sales party contacts.
processCSContact	ZCM_UPDATE_CONSUMER_PRIV	Update Consumer	Allows reviewing and updating the consumer information.

Operation Name	Privilege Code	Privilege Name	Privilege Description
processCSContact	ZCM_DELETE_SALES_PARTY_CONTACT_PRIV	Delete Sales Party Contact	Allows deleting sales party contacts.
processCSContact	ZCM_CREATE_CONSUMER_PRIV	Create Consumer	Allows creating a consumer.
processCSContact	ZCM_CREATE_SALES_PARTY_CONTACT_PRIV	Create Sales Party Contact	Allows creating a sales party contact.
processCSContact	ZCM_DELETE_CONSUMER_PRIV	Delete Consumer	Allows deleting consumers.
processCSContact	ZCM_UPDATE_SALES_PARTY_CONTACT_PRIV	Update Sales Party Contact	Allows updating the sales party contacts.
createContact	ZCM_CREATE_CONSUMER_PRIV	Create Consumer	Allows creating a consumer.
createContact	ZCM_CREATE_SALES_PARTY_CONTACT_PRIV	Create Sales Party Contact	Allows creating a sales party contact.
getContact	ZCM_VIEW_CONSUMER_PRIV	View Consumer	Allows viewing of consumers.
getContact	ZCM_VIEW_SALES_PARTY_CONTACT_PRIV	View Sales Party Contact	Allows viewing of sales party contact information.
mergeContact	ZCM_UPDATE_CONSUMER_PRIV	Update Consumer	Allows reviewing and updating the consumer information.
mergeContact	ZCM_UPDATE_SALES_PARTY_CONTACT_PRIV	Update Sales Party Contact	Allows updating the sales party contacts.
deleteContact	ZCM_DELETE_SALES_PARTY_CONTACT_PRIV	Delete Sales Party Contact	Allows deleting sales party contacts.
deleteContact	ZCM_DELETE_CONSUMER_PRIV	Delete Consumer	Allows deleting consumers.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCM_CREATE_SALES_PARTY_CONTACT_PRIV	ORA_ZCM_SR_SALES_PARTY_MANAGEMENT	Service Sales Party Management	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request management capabilities.
ZCM_CREATE_SALES_PARTY_CONTACT_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.

ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.

Sales Cloud Contact

An object that includes attributes used to store values while creating or updating a contact. A contact is a person who either has a relationship to other objects like contact and household or is a standalone customer or prospect. This object is an aggregation of person profile, contact information, and references a single primary address.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/contactService/}Contact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Sales Cloud Primary Address*
Contains	*Sales Team Member*
Contains	*Note*
Handled by	*Sales Cloud Contact*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AcademicTitle	string	The part of the person's title that denotes the academic qualification, such as Dr. Jane Smith.
AccountName	string	The name of the sales account that this contact belongs to.
AccountPartyId	long	The unique identifier of sales account that this contact belongs to. To specify the account for a contact, you can provide an Account's party ID, PartyNumber, SourceSystem, or SourceSystemReference.
AccountPartyNumber	string	The party number of the sales account that this contact belongs to. To specify the account for a contact, you can provide an Account's party ID, PartyNumber, SourceSystem, or SourceSystemReference.
AccountSourceSystem	string	The Source System code of the sales account that this contact belongs to. To specify the account for a contact, you can provide an Account's party ID, PartyNumber, SourceSystem, or SourceSystemReference.
AccountSourceSystemReferenceValue	string	The Source System Reference value of the sales account that this contact belongs to. To specify the account for a contact, you can

Name	Type	Description
		provide an Account's party ID, PartyNumber, SourceSystem, or SourceSystemReference.
AddressElementAttribute1	string	Additional address element to support flexible address format
AddressElementAttribute2	string	Additional address element to support flexible address format
AddressElementAttribute3	string	Additional address element to support flexible address format
AddressElementAttribute4	string	Additional address element to support flexible address format
AddressElementAttribute5	string	Additional address element to support flexible address format
AddressLine1	string	First line of address.
AddressLine2	string	Second line of address.
AddressLine3	string	Third line of address.
AddressLine4	string	Fourth line of address.
AddressLinesPhonetic	string	The phonetic or Kana representation of the Kanji address lines (used in Japan).
AddressNumber	string	Alternate unique identifier for the address. One of AddressId, AddressNumber or SourceSystem and SourceSystemReferenceValue keys is used to identify the address record during update. If not specified, then it is automatically generated. Prefix defined as in profile option ZCA_PUID_PREFIX concatenated with an internally generated unique sequence number.
AddressType	string	Additional information as type of address like BillTo, ShipTo.
AssignmentExceptionFlag	boolean	Indicates whether the sales account has the required dimensions to allow assignment manager to assign territories to the sales account. If the value is True, then the sales account has the required dimensions. The default value is False.

Name	Type	Description
Building	string	Specific building name or number at a given address.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
CertificationReasonCode	string	The reason for the contact's current certification level assignment. A list of accepted values are defined using the lookup HZ_PARTY_CERT_REASON. Review and update the value for this attribute using the Setup and Maintenance work area, Manage Trading Community Common Lookups task.
City	string	The city element of address.
ClassificationCategory	string	A valid classification category code for the contact. This is defined by an admin and is marked as primary.
ClassificationCode	string	A valid classification code corresponding to the classification category, which is marked as primary.
Comments	string	The comments for the record.
ContactIsPrimaryForAccount	string	The preferred contact for the account.
ContactName	string	The derived name of the contact.
ContactRole	string	Specifies the role of the contact.
ContactUniqueName	string	The unique contact name displayed on contact related screens. The default value for ContactUniqueName is the concatenation of attributes ContactName and UniqueNameSuffix. If the attribute UniqueNameSuffix is nil, then the ContactName is concatenated with a system generated number.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
Country	string	Country code of the address.
County	string	County element of address.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DataCloudStatus	string	The enrichment status of the contact record from Data cloud. A list of accepted values are defined in the lookup DATA_CLOUD_STATUS. Review and update the value for this attribute using the Setup and Maintenance work area, Manage Standard Lookups task.
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was born.
DateOfDeath	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date when the person died.
DeceasedFlag	boolean	Indicates whether the person deceased or not. If the value is True, then the person is deceased. The default value is False.
DeclaredEthnicity	string	The declared ethnicity of the person.
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
Department	string	The free form text used to name the department for the contact.
DepartmentCode	string	The department code for the contact. A list of accepted values is defined in the lookup DEPARTMENT_TYPE. Review and update the value for this attribute using the Setup and Maintenance work area, Manage Contact Lookups task.
DoNotCallFlag	boolean	Indicates if the user can call the person or not. If the value is True, then the user must not call

Name	Type	Description
		the person. The default value is False. A list of accepted values is defined using the lookup YES_NO. Review and update the value for this attribute using the Setup and Maintenance work area, Manage Common Lookups task.
DoNotContactFlag	boolean	Indicates if the user can contact the person or not by phone, email, or mail. If the value is True, then the user must not contact the person. The default is False. A list of accepted values is defined using the lookup YES_NO. Review and update the value for this attribute using the Setup and Maintenance work area, Manage Common Lookups task.
DoNotEmailFlag	boolean	Indicates if the user can email the person or not. If the value is True, then the user must not contact the person by e-mail. The default is False. A list of accepted values is defined using the lookup YES_NO. Review and update the value for this attribute using the Setup and Maintenance work area, Manage Common Lookups task.
DoNotMailFlag	boolean	Indicates if the user can send mail to the person or not. If the value is True, then the user must not contact the person by mail. The default is False. A list of accepted values is defined using the lookup YES_NO. Review and update the value for this attribute using the Setup and Maintenance work area, Manage Common Lookups task.
EmailAddress	string	The email address associated with the record.
EmailFormat	string	The preferred format for email addressed to this address such as HTML or ASCII. A list of accepted values is defined using the lookup EMAIL_FORMAT. Review and update the value for this attribute using the Setup and Maintenance work area, Manage Standard Lookups task.
ExistingCustomerFlag	boolean	Indicates whether there is an existing selling or billing relationship with the sales account. If the value is true, then there is an existing relationship with the sales account. The default value is False. Such relationships are defined by the existence of a Sell_To or Bill_To address.
ExistingCustomerFlagLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the ExistingCustomerFlag was last modified. It is internally populated by the application.

Name	Type	Description
FavoriteContactFlag	boolean	Indicates whether the person is a key contact. If the value is True, then person is a key contact. The default value is False.
FaxAreaCode	string	The area code.
FaxCountryCode	string	The international country code for a telephone number, such as 33 for France.
FaxExtension	string	The additional number addressed after initial connection to an internal telephone system.
FaxNumber	string	A telephone number formatted in the local format without the area code, country code, or extension.
FirstName	string	The first name of the person.
FloorNumber	string	Specific floor number at a given address or in a particular building when building number is provided
FormattedFaxNumber	string	The formatted fax number information.
FormattedHomePhoneNumber	string	Formatted mobile phone number information.
FormattedMobileNumber	string	Formatted work phone number information.
FormattedWorkPhoneNumber	string	The formatted work phone number information.
Gender	string	The gender of the person, such as male, female, and unknown. A list of accepted values are defined in the lookup HZ_GENDER. Review and update the value for this attribute using the Setup and Maintenance work area, Manage Standard Lookups task.
HeadOfHouseholdFlag	boolean	Indicates if the person is the head of the household. If the value is True, then the person is the head of the household. The default value is False.
HomePhoneAreaCode	string	The area code within a country code.
HomePhoneCountryCode	string	The international country code for a telephone number, such as 33 for France.

Name	Type	Description
HomePhoneNumber	string	The home phone number formatted in the local format without the area code, country code, or extension.
HouseholdIncomeAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The income of the household that this person is a part of.
HouseholdSize	decimal	The size of the household that this person is a part of.
Initials	string	The initials of the contact's name.
JobTitle	string	The free form text for job title.
JobTitleCode	string	Code given to the job title.
LastAssignmentDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the sales account territory assignment was last run by assignment manager.
LastAssignmentDateTime	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the sales account territory assignment was last run by assignment manager.
LastContactDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the contact was last contacted.
LastEnrichmentDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact record was last enriched with data from external sources by using Data-as-a-Service.
LastName	string	The last name of the person.
LastNamePrefix	string	The prefix for the last name of a person, such as fon, van. For example, if a person's name is Hans Van, the last name of the person is captured using this attribute.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
Mailstop	string	A user-defined code to indicate a mail drop point within their organization
MaritalStatus	string	The marital status of the person. A list of accepted values is defined in the lookup MARITAL_STATUS. Review and update the value for this attribute using the Setup and Maintenance work area, Manage Standard Lookups task.
MaritalStatusEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person's marital status was changed.
MiddleName	string	The middle name of the person.
MobileAreaCode	string	The area code for the contact's mobile phone.
MobileCountryCode	string	The international country code for a contact's mobile phone number, such as 33 for France.
MobileExtension	string	The additional number addressed after initial connection to an internal telephone system.
MobileNumber	string	The mobile phone number formatted in the local format. The number should not include area code, country code, or extension.
MyBusinessContact	string	Indicates if searching on business contact belongs to login user. If the value is True, then the business contact belongs to login user. The default value is False.
NameSuffix	string	The place in a family structure. For example, in "Tom Jones III", the "III".
NamedFlag	boolean	Indicates whether a sales account is a named sales account. If the value is True, then the sales account is a named sales account. The default value is False.
Note	*Note*	The note about the contact.
OwnerEmailAddress	string	The email address of a valid employee resource who owns and manages the sales account. To assign an owner to the sales account, user can provide one of the following attributes pertaining to the owner: PartyID, PartyNumber or E-mail Address. This is provided if user wants to change the owner of the contact or create contact with a different owner than the

Name	Type	Description
		login user. If provided, then OwnerPartyID, OwnerPartyNumber, and OwnerEmailAddress are honored in this order to determine the owner for the contact.
OwnerName	string	The name of the sales account owner.
OwnerPartyId	long	The unique identifier of a valid employee resource who owns and manages the sales account. The owner is a valid employee resource defined within Sales Cloud. To assign an owner to the sales account, user can provide one of the following attributes pertaining to the owner: PartyID, PartyNumber, or E-mail Address. This is provided if user wants to change the owner of the contact or create contact with a different owner than the login user. If provided, then OwnerPartyID, OwnerPartyNumber, and OwnerEmailAddress are honored in this order to determine the owner for the contact. During create, if none of the OwnerPartyID, OwnerPartyNumber, or OwnerEmailAddress is provided, then the contact is assigned by default to the login user. The login user's partyID is used to populate OwnerPartyID.
OwnerPartyNumber	string	The party number of a valid employee resource who owns and manages the sales account. To assign an owner to the sales account, user can provide one of the following attributes pertaining to the owner: PartyID, PartyNumber, or E-mail Address. This is provided if user wants to change the owner of the contact or create contact with a different owner than the login user. If provided, then OwnerPartyID, OwnerPartyNumber, and OwnerEmailAddress are honored in this order to determine the owner for the contact.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyNumber	string	The unique identification number for the party.
PartyStatus	string	The status of the contact. A list of valid values are defined in the lookup HZ_STATUS. Review and update the value for this attribute using the Setup and Maintenance work area, Manage Standard Lookups task.
PersonalIncomeAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated gross annual income of the person.

Name	Type	Description
PlaceOfBirth	string	The place where the person was born, such as city or country.
PostalCode	string	Postal code as defined by the formal countrywide postal system
PostalPlus4Code	string	Four digit extension to the United States Postal ZIP code.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreviousLastName	string	The previous last name or surname of the person.
PrimaryAddress	*Sales Cloud Primary Address*	The primary address of the contact.
Province	string	Province element of address.
RawFaxNumber	string	The unformatted fax number information.
RawHomePhoneNumber	string	Unformatted home phone number information.
RawMobileNumber	string	The unformatted mobile phone number information.
RawWorkPhoneNumber	string	The unformatted work phone number information.
RecordSet	string	The search results displayed under the selected record set.
RegistrationStatus	string	Specifies the registration status of the contact.
RentOrOwnIndicator	string	Indicates if this contact owns or rents his or her residence. A list of valid values for rent, own, and lease is defined in the lookup OWN_RENT_IND. Review and update the value for this attribute using the Setup and Maintenance work area, Manage Standard Lookups task.

Name	Type	Description
SalesAffinityCode	string	The affinity of a contact to the deploying organization. A list of accepted values are defined in the lookup HZ_SLS_CNTCT_AFFINITY_CODE. Review and update the value for this attribute using the Setup and Maintenance work area, Manage Contact Lookups task.
SalesBuyingRoleCode	string	The roles played by a contact in the buying process, for example, decision maker or supporting role. A list of accepted values is defined in the lookup HZ_SLS_CNTCT_BUY_ROLE_CODE. Review and update the values for this attribute using the Setup and Maintenance work area, Manage Contact Lookups task.
SalesProfileStatus	string	A valid user defined status of the sales account.
SalesTeamMember	*Sales Team Member*	The unique alternate identifier of the sales team member.
Salutation	string	The phrase used to address a contact party in any correspondence.
SalutoryIntroduction	string	The title or a salutary introduction for a contact, such as Mr., Herr, and so on. A list of accepted values is defined in the lookup CONTACT_TITLE. Review and update the value for this attribute using the Setup and Maintenance work area, Manage Standard Lookups task.
SecondLastName	string	The second last name for a person. A list of accepted values is defined in the lookup HZ_PERSON_PROFILES. Review and update the value for this attribute using the Setup and Maintenance work area, Manage Standard Lookups task.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
State	string	State element of address.
TaxpayerIdentificationNumber	string	The taxpayer identification number, which is often a unique identifier of the contact. These typical values are the taxpayer Id in USA or the fiscal code, or the NIF in Europe.

Name	Type	Description
TimezoneCode	string	Time zone of a contact to know preferred time to call or email.
Title	string	A professional or family title, such as Don or The Right Honorable.
Type	string	The contact party type that defines whether the contact is a sales account, a prospect, a contact or any other user-defined party type. The default value is ZCA_CUSTOMER. A list of accepted values is defined in the lookup ZCA_CONTACT_TYPE. Review and update the value for this attribute using the Setup and Maintenance work area, Manage Standard Lookups task.
UniqueNameSuffix	string	The system generated or manually overridden suffix. The suffix is used to generate the PartyUniqueName attribute and is concatenated to the ContactName attribute to generate the PartyUniqueName. The primary address is defaulted as the suffix.
UpdateFlag	boolean	This flag controls if the user has access to update the record.
WorkPhoneAreaCode	string	The area code for the contact's work phone.
WorkPhoneCountryCode	string	The international country code for a contact's work phone number, such as 33 for France.
WorkPhoneExtension	string	The additional number addressed after initial connection to an internal telephone system.
WorkPhoneNumber	string	The work phone number formatted in the local format without the area code, country code, or extension.

Note

The object that captures comments, information, or instructions for an Oracle Fusion Applications business object.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/noteService}Note

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactRelationshipId	long	The identifier of the contact relationship record in Trading Community Architecture (TCA).
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreatorPartyId	long	This is the party identifier for the note creator.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DeleteFlag	boolean	Indicates whether the user has access to delete the note.
Dff	*Note Descriptive Flexfields*	The descriptive flex field segment.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record

Name	Type	Description
NoteAttributeCategory	string	The contextual flex field for development usage.
NoteAttributeUid1	string	The flex field for development usage.
NoteAttributeUid2	string	The flex field for development usage.
NoteAttributeUid3	string	The flex field for development usage.
NoteAttributeUid4	string	The flex field for development usage.
NoteAttributeUid5	string	The flex field for development usage.
NoteId	long	The unique identifier of the note. • Primary Key
NoteNumber	string	The alternate unique identifier of the note. A user key that is system generated or from an external system.
NoteTitle	string	The title of the note entered by the user.
NoteTxt	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	This is the column that stores the actual note text.
NoteTypeCode	string	This is the note type code for categorization of note.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
SourceObjectCode	string	This is the source_object_code for the source object as defined in OBJECTS Metadata.
SourceObjectId	string	This is the source_object_Uid for the source object such as Activities, Opportunities, and so on defined in OBJECTS metadata.
UpdateFlag	boolean	Indicates whether the user can update the note.
VisibilityCode	string	This is the attribute to specify the visibility level of the note.

Note Descriptive Flexfields

The descriptive flex field that captures additional information for notes, such as a priority or status.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/flex/noteDff/}NoteDFF

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Note*
Handled by	*Business Plan Service*
Handled by	*Sales Reference Customer*
Handled by	*Appointment Service*
Handled by	*Sales Cloud Contact*
Handled by	*Sales Objective*
Handled by	*Sales Lead Service Version 2*
Handled by	*Activity Service*
Handled by	*Opportunity Service*
Handled by	*Sales Competitor Service*
Handled by	*Sales Cloud Household*
Handled by	*Partner Program Enrollment Service*
Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
NoteId	long	The unique identifier of the note. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Sales Cloud Primary Address

An object that includes attributes used to store values while creating or updating a primary address. A primary address is the default communication address of an entity irrespective of the address purpose.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/commonService/}PrimaryAddress

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Cloud Account*
Contained by	*Sales Cloud Household*
Contained by	*Sales Cloud Contact*
Handled by	*Sales Cloud Contact*
Handled by	*Sales Cloud Household*
Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AddressElementAttribute1	string	Additional address element to support flexible address format.
AddressElementAttribute2	string	Additional address element to support flexible address format.
AddressElementAttribute3	string	Additional address element to support flexible address format.
AddressElementAttribute4	string	Additional address element to support flexible address format.
AddressElementAttribute5	string	Additional address element to support flexible address format.
AddressId	long	First line for address. • Primary Key
AddressLine1	string	Second line for address.
AddressLine2	string	Third line for address.
AddressLine3	string	Fourth line for address.
AddressLine4	string	Address internal unique identifier that is internally generated during create. One of AddressId, AddressNumber or SourceSystem and SourceSystemReferenceValue keys is used to identify the address record during update.
AddressLinesPhonetic	string	Phonetic or Kana representation of the Kanji address lines (used in Japan).
AddressNumber	string	Alternate unique identifier for the address. One of AddressId, AddressNumber or SourceSystem and SourceSystemReferenceValue keys is used to identify the address record during update. If not specified, then it is automatically generated. Prefix defined as in profile option ZCA_PUID_PREFIX concatenated with an internally generated unique sequence number.
Building	string	Specific building name or number at a given address.
City	string	The name of the city.
Comments	string	The comments for the record.

Name	Type	Description
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DateValidated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date the address was last validated.
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
Description	string	The free text description of the record.
FloorNumber	string	Specific floor number at a given address or in a particular building when building number is provided.
FormattedAddress	string	Formatted address information.
FormattedMultiLineAddress	string	Formatted multiple line address information.
HouseType	string	Indicates the building type. A list of valid values is defined in the lookup HZ_HOUSE_TYPE. Review and update the codes using the Setup and Maintenance work area, Manage Standard Lookups task.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Latitude	decimal	Used to store latitude information for the location for spatial proximity and containment purposes.
LocationDirections	string	Directions to the location.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
Longitude	decimal	Used to store longitude Information for the location for spatial proximity and containment purposes.
Mailstop	string	A user-defined code to indicate a mail drop point within their organization.
PartyId	long	The unique identifier of the contact party.
PostalCode	string	The postal code element of the address.
PostalPlus4Code	string	Four digit extension to the United States Postal ZIP code.
Province	string	The name of the province.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
State	string	The name of the state.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
ValidationStatusCode	string	Standardized status code describing the results of the validation.

Sales Team Member

An object representing a resource party that is assigned to a sales account team and has a defined access role for the sales account.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/commonService/}SalesTeamMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Cloud Account*
Contained by	*Sales Cloud Household*
Contained by	*Sales Cloud Contact*
Handled by	*Sales Cloud Contact*
Handled by	*Sales Cloud Household*
Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevelCode	string	The access level determines the type of access granted to the resource as well as managers of the organizations. The possible values are contained in the ZCA_ACCESS_LEVEL lookup.
AssignmentTypeCode	string	The code indicating how the resource is assigned to the sales account team. The possible values are contained in the ZCA_ ASSIGNMENT_TYPE lookup.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/ types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LockAssignmentFlag	boolean	The flag indicates automatic territory assignment cannot remove the sales account team resource when this flag is Y'. When a sales account team member is added manually, this flag is defaulted to Y'.
MemberFunctionCode	string	The lookup code indicating a sales account resource's role on the resource team such as Integrator, Executive Sponsor and Technical Account Manager. The code lookup is stored in FND_LOOKUPS.
ResourceEmailAddress	string	Unique identifier for the resource.
ResourceId	long	The unique identifier of the resource.
ResourceName	string	The name of the sales team member.
ResourceOrgName	string	The name of the resource organization of the sales team member.
ResourcePartyNumber	string	Unique identifier for the resource.
ResourcePhoneNumber	string	The formatted primary phone number of the sales team member.
ResourceRoleName	string	The list of roles for a sales team member.
SalesProfileId	long	The identifier for the sales account.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
TeamMemberId	long	The surrogate primary key for the member of the sales account resource team.

Name	Type	Description
		• Primary Key
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Sales Cloud Customer Classification

The service used to maintain classifications for a party that already exists.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/customerClassificationService/}CustomerClassificationService

Service WSDL URL: https://servername/crmService/CustomerClassificationService?WSDL

Logical Business Objects

- CRM : Trading Community Model : Account
- CRM : Trading Community Model : Account
- CRM : Trading Community Model : Account

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Classification*

Operations

- *getCustomerClassification*
- *createCustomerClassification*
- *updateCustomerClassification*
- *deleteCustomerClassification*
- *mergeCustomerClassification*
- *findCustomerClassification*
- *processCustomerClassification*
- *processCSCustomerClassification*

- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

getCustomerClassification

The operation retrieves the customer classification details based on the primary key identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
codeAssignmentId	long	The operation for code assignment identifier.

Response Payload

Element Name	Type	Description
result	*Sales Cloud Customer Classification*	The customer classification that matches the inbound key attributes.

createCustomerClassification

The operation creates a new classification association.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
customerClassification	*Sales Cloud Customer Classification*	The customer classification to be associated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/crmCommon/salesParties/customerClassificationService/}CustomerClassif	The customer classification which is created.

updateCustomerClassification

Updates a customer classification. The customer classification is identified by providing the primary key of the customer classification.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
customerClassification	*Sales Cloud Customer Classification*	Customer classification to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/crmCommon/salesParties/customerClassificationService/}CustomerClassif	The customer classification which is updated.

deleteCustomerClassification

Removes a classification from a customer.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
customerClassification	*Sales Cloud Customer Classification*	Customer classification to be removed.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	Not applicable.

mergeCustomerClassification

Performs a merge on the customer classification. It will perform an update if the object exists or an insert if the object doesn't exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
customerClassification	*Sales Cloud Customer Classification*	Customer classification to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/crmCommon/salesParties/customerClassificationService/}CustomerClassif	The customer classification which is merged.

findCustomerClassification

Finds a list of customer classifications matching the supplied criteria pertaining to the object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, etc.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This method is not currently used.

Response Payload

Element Name	Type	Description
result	*Sales Cloud Customer Classification*	A list of customer classification that satisfy the inbound criteria.

processCustomerClassification

Performs a create, update, delete, or merge operation on a list of customer classification rows. It performs the specified operation on the customer classification.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action shall be performed, such as create, update, merge, or delete.
customerClassification	*Sales Cloud Customer Classification*	A list of customer classifications to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Control your bulk upload behavior, such as whether the valid data will be committed if there are other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Sales Cloud Customer Classification*	A list of customer classifications that are successfully processed.

processCSCustomerClassification

Performs a create, update, delete, or merge operation on a list of customer classification rows. The operation and objects depend on the ChangeSummary object specified.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object that is used to represent the changes that have been made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Control your bulk upload behavior, such as whether the valid data will be committed if there are other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	Result of the operation including a list of created or updated data objects, and all warning and informational messages.

Element Name	Type	Description

getDfltObjAttrHints

Retrieves the user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, which is an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

Gets a list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
processCustomerClassification	ZCM_MANAGE_SALES_PARTY_CLASSIFICATIONS_PRIV	Manage Sales Party Classifications	Allows creation and maintenance of sales party classification.
getCustomerClassification	ZCM_VIEW_SALES_PARTY_CLASSIFICATIONS_PRIV	View Sales Party Classifications	Allows viewing of sales party classifications.
processCSCustomerClassification	ZCM_MANAGE_SALES_PARTY_CLASSIFICATIONS_PRIV	Manage Sales Party Classifications	Allows creation and maintenance of sales party classification.
createCustomerClassification	ZCM_MANAGE_SALES_PARTY_CLASSIFICATIONS_PRIV	Manage Sales Party Classifications	Allows creation and maintenance of sales party classification.
findCustomerClassification	ZCM_VIEW_SALES_PARTY_CLASSIFICATIONS_PRIV	View Sales Party Classifications	Allows viewing of sales party classifications.
deleteCustomerClassification	ZCM_MANAGE_SALES_PARTY_CLASSIFICATIONS_PRIV	Manage Sales Party Classifications	Allows creation and maintenance of sales party classification.
updateCustomerClassification	ZCM_MANAGE_SALES_PARTY_CLASSIFICATIONS_PRIV	Manage Sales Party Classifications	Allows creation and maintenance of sales party classification.

Operation Name	Privilege Code	Privilege Name	Privilege Description
mergeCustomerClassification	ZCM_MANAGE_SALES_PARTY_CLASSIFICATIONS_PRIV	Manage Sales Party Classifications	Allows creation and maintenance of sales party classification.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCM_MANAGE_SALES_PARTY_CLASSIFICATIONS_PRIV	ORA_ZCM_SR_SALES_PARTY_MANAGEMENT	Service Sales Party Management	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request management capabilities.
ZCM_MANAGE_SALES_PARTY_CLASSIFICATIONS_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
ZCM_MANAGE_SALES_PARTY_CLASSIFICATIONS_PRIV	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ZCM_VIEW_SALES_PARTY_CLASSIFICATIONS_PRIV	ORA_ZCM_SR_SALES_PARTY_MANAGEMENT	Service Sales Party Management	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request management capabilities.
ZCM_VIEW_SALES_PARTY_CLASSIFICATIONS_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
ZCM_VIEW_SALES_PARTY_CLASSIFICATIONS_PRIV	ORA_ZCM_SALES_PARTY_REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCM_SALES_PARTY_REVIEW_DUTY	ORA_OKC_ALL_BUSINESS_UNITS_CONTRACT_INQUIRY_DUTY_CRM	Contract View Access Across All Contracts	Views all contracts across an enterprise.
ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	ORA_OKC_ALL_BUSINESS_UNITS_CONTRACT_INQUIRY_DUTY_CRM	Contract View Access Across All Contracts	Views all contracts across an enterprise.
ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	ORA_ZCM_SALES_PARTY_REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.

Sales Cloud Customer Classification

An object that includes attributes used to store values while creating or updating a code assignment. A code assignment represents the classification category and classification code information of an account, contact, or household.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/customerClassificationService/}CustomerClassification

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Sales Cloud Customer Classification*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ClassCategory	string	Name of the classification category.

Name	Type	Description
ClassCode	string	A valid classification code corresponding to the classification category.
CodeAssignmentId	long	The unique identifier for the customer classification assignment. • Primary Key
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
IsAuxClassificationFlag	boolean	Indicates whether the classification category is a custom group classification category.
IsIndustryFlag	boolean	Indicates whether the classification category is an industry group classification category.
IsOrgTypeFlag	boolean	Indicates whether the classification category is an organization type classification category.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
PartyId	long	The unique identifier of the contact party.
PartyNumber	string	The unique identification number for the party.
PartySourceSystem	string	The name of the external source system of the account, contact, or household with which the classification category and classification code is associated.
PartySourceSystemReferenceValue	string	The identifier from external source system for the account, contact, or household with which

Name	Type	Description
		the classification category and classification code is associated.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PrimaryFlag	boolean	Indicator to show if the current code is the primary classification code.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Sales Cloud Household

The service used to create, update, retrieve, and delete households.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/householdService/}HouseholdService

Service WSDL URL: https://servername/crmService/HouseholdService?WSDL

Logical Business Objects

- CRM : Trading Community Model : Household

getHousehold

Retrieves the household based on the primary key identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
PartyId	long	Party identifier.

Response Payload

Element Name	Type	Description
result	*Sales Cloud Household*	Household that matches the inbound key attributes.

createHousehold

Creates a household and its primary address (optional).

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
household	*Sales Cloud Household*	Household to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/crmCommon/salesParties/householdService/}HouseholdResult	Created household.

updateHousehold

Updates a household and primary address. When updating the primary address information it is not necessary to include the primary or alternate keys for the primary address. There is a one-to-one correspondence between the account and primary address. If the alternate keys SourceSystem and SourceSystemReferenceValue in the primary address are specified and they do not match the values in the existing primary address, then a new SourceSystem/SourceSystemReferenceValue gets created for the existing primary address.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
household	*Sales Cloud Household*	Household to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/crmCommon/salesParties/householdService/}HouseholdResult	Updated household.

deleteHousehold

Deletes a household and the relationship between the household and address objects indicating the address is a primary address. The address object cannot be deleted using this operation. To delete the address, use the Sales Cloud Address service.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
household	*Sales Cloud Household*	Household to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	Not applicable.

mergeHousehold

Performs a merge on the household. It will perform an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
household	*Sales Cloud Household*	Household to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/crmCommon/salesParties/householdService/}HouseholdResult	Merged household.

findHousehold

Finds a list of households based on matching the supplied criteria pertaining to the object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, etc.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Method not currently used.

Response Payload

Element Name	Type	Description
result	*Sales Cloud Household*	A list of household that satisfy the inbound criteria.

processHousehold

Performs a create, update, delete, or merge operation on a list of household rows. The specified operation is applied to all objects in the given list.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action shall be performed, such as create, update, merge, or delete.
household	*Sales Cloud Household*	A list of households to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Control your bulk upload behavior, such as whether the valid data will be committed if there are other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Sales Cloud Household*	A list of household that are successfully processed.

processCSHousehold

Performs a create, update, or delete operation on a list of household rows. Different operations may be applied to different objects, depending on what is specified in the ChangeSummary object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object that is used to represent the changes that have been made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Control your bulk upload behavior, such as whether the valid data will be committed if there are other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	Result of the operation including a list of created/updated data objects, and all warning and informational messages.

getDfltObjAttrHints

Retrieves user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

Gets the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getHousehold	ZCM_VIEW_SALES_GROUP_PRIV	View Sales Group	Allows viewing a sales group
mergeHousehold	ZCM_UPDATE_SALES_GROUP_PRIV	Update Sales Group	Allows updating a sales group
deleteHousehold	ZCM_DELETE_SALES_GROUP_PRIV	Delete Sales Group	Allows deleting sales groups.
processCSHousehold	ZCM_UPDATE_SALES_GROUP_PRIV	Update Sales Group	Allows updating a sales group
processCSHousehold	ZCM_CREATE_SALES_GROUP_PRIV	Create Sales Group	Allows creating a sales group
processCSHousehold	ZCM_DELETE_SALES_GROUP_PRIV	Delete Sales Group	Allows deleting sales groups.
processHousehold	ZCM_UPDATE_SALES_GROUP_PRIV	Update Sales Group	Allows updating a sales group
processHousehold	ZCM_CREATE_SALES_GROUP_PRIV	Create Sales Group	Allows creating a sales group
processHousehold	ZCM_DELETE_SALES_GROUP_PRIV	Delete Sales Group	Allows deleting sales groups.
findHousehold	ZCM_VIEW_SALES_GROUP_PRIV	View Sales Group	Allows viewing a sales group
createHousehold	ZCM_CREATE_SALES_GROUP_PRIV	Create Sales Group	Allows creating a sales group
updateHousehold	ZCM_UPDATE_SALES_GROUP_PRIV	Update Sales Group	Allows updating a sales group

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCM_UPDATE_SALES_GROUP_PRIV	ORA_ZCM_SR_SALES_PARTY_MANAGEMENT	Service Sales Party Management	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request management capabilities.
ZCM_UPDATE_SALES_GROUP_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
ZCM_UPDATE_SALES_GROUP_PRIV	ORA_ZCM_PARTNER_SALES_PARTY_MANAGEMENT_DUTY	Partner Sales Party Management	Manages creation and maintenance of sales organizations and consumers for partners. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts. This role has limited access to customers and contacts.
ZCM_UPDATE_SALES_GROUP_PRIV	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ZCM_DELETE_SALES_GROUP_PRIV	ORA_ZCM_SALES_PARTY_ADMINISTRATION_DUTY	Sales Party Administration	Manages named sales accounts, sales account import scheduler and the flagging of existing accounts. Additional duties include managing sales parties, functional setups, customer center objects, and relationship information inquiries.
ZCM_CREATE_SALES_GROUP_PRIV	ORA_ZCM_SR_SALES_PARTY_MANAGEMENT	Service Sales Party Management	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request management capabilities.
ZCM_CREATE_SALES_GROUP_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
ZCM_CREATE_SALES_GROUP_PRIV	ORA_ZCM_PARTNER_SALES_PARTY_MANAGEMENT_DUTY	Partner Sales Party Management	Manages creation and maintenance of sales organizations and consumers for partners. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts. This role

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			has limited access to customers and contacts.
ZCM_CREATE_SALES_GROUP_PRIV	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ZCM_VIEW_SALES_GROUP_PRIV	ORA_ZCM_SR_SALES_PARTY_MANAGEMENT	Service Sales Party Management	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request management capabilities.
ZCM_VIEW_SALES_GROUP_PRIV	ORA_SVC_CASE_SUPERVISION	Case Supervision	Supervises and manages caseworkers, assists caseworkers with any complex issues, handles case approvals and escalations, coordinates care and benefits with external service providers, assigns or reassigns cases to caseworkers, conducts evaluations of benefits programs and provides feedback.
ZCM_VIEW_SALES_GROUP_PRIV	ORA_SVC_CASE_ADMINISTRATOR	Case Administrator	Administers all aspects of Case Management.
ZCM_VIEW_SALES_GROUP_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
ZCM_VIEW_SALES_GROUP_PRIV	ORA_ZCM_SALES_PARTY_REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ZCM_VIEW_SALES_GROUP_PRIV	ORA_SVC_CASE_EXECUTION	Case Execution	Assists clients who are applying for benefits, opens cases and manages all tasks associated to the case, processes clients applications, evaluate clients needs for benefits, counsels benefits recipients, performs assessments of clients strengths and needs to develop benefit plans, performs follow-

			up with clients to ensure they are working on their tasks.
ZCM_VIEW_SALES_GROUP_PRIV	ORA_ZCM_PARTNER_SALES_PARTY_MANAGEMENT_DUTY	Partner Sales Party Management	Manages creation and maintenance of sales organizations and consumers for partners. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts. This role has limited access to customers and contacts.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCM_SALES_PARTY_REVIEW_DUTY	ORA_OKC_ALL_BUSINESS_UNITS_CONTRACT_INQUIRY_DUTY_CRM	Contract View Access Across All Contracts	Views all contracts across an enterprise.
ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	ORA_OKC_ALL_BUSINESS_UNITS_CONTRACT_INQUIRY_DUTY_CRM	Contract View Access Across All Contracts	Views all contracts across an enterprise.
ORA_ZCM_SALES_PARTY_ADMINISTRATION_DUTY	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	ORA_ZCM_SALES_PARTY_REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ORA_ZCM_SALES_PARTY_ADMINISTRATION_DUTY	ORA_DATA_QUALITY_ADMIN_DUTY	Trading Community Data Quality Administration	Configures, reviews, and edits predefined data quality server configurations and the predefined matching, synchronization, and cleansing configurations.
ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCM_SALES_PARTY_ADMINISTRATION_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.

Sales Cloud Household

An object that includes attributes used to store values while creating or updating a household. A household is a group that has a relationship with either an account or a contact.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/householdService/}Household

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Sales Cloud Primary Address*
Contains	*Sales Team Member*
Contains	*Note*
Handled by	*Sales Cloud Household*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AddressElementAttribute1	string	Additional address element to support flexible address format
AddressElementAttribute2	string	Additional address element to support flexible address format
AddressElementAttribute3	string	Additional address element to support flexible address format

Name	Type	Description
AddressElementAttribute4	string	Additional address element to support flexible address format
AddressElementAttribute5	string	Additional address element to support flexible address format
AddressLine1	string	First line of address.
AddressLine2	string	Second line of address.
AddressLine3	string	Third line of address.
AddressLine4	string	Fourth line of address.
AddressLinesPhonetic	string	Phonetic or Kana representation of the Kanji address lines (used in Japan)
AddressNumber	string	Alternate unique identifier for the address. One of AddressId, AddressNumber or SourceSystem and SourceSystemReferenceValue keys is used to identify the address record during update. If not specified, then it is automatically generated. Prefix defined as in profile option ZCA_PUID_PREFIX concatenated with an internally generated unique sequence number.
AddressType	string	Additional information as type of address like BillTo, ShipTo.
AnnualIncome	long	The annual income of the household. If not provided, then the value is NULL.
AssignmentExceptionFlag	boolean	Indicates whether the sales account had the required dimensions to allow assignment manager to assign territories to the sales account. Possible values are True or False.
AverageAge	long	The average age of the members of the household.
Building	string	Specific building name or number at a given address.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.

Name	Type	Description
CertificationReasonCode	string	The reason for the household current certification level assignment. A list of valid certification reason codes are defined using the lookup HZ_PARTY_CERT_REASON. Review and update the codes using the Setup and Maintenance task, Manage Trading Community Common Lookups.
Child0to6Number	long	The number of children in the household less than 6 years of age.
Child13to18Number	long	The number of children in the household between the age of 13 and 18.
Child7to12Number	long	The number of children in the household between the age of 7 and 12.
City	string	The city element of address.
ClassificationCategory	string	A valid classification category code for the household which will be marked as primary and is defined by an admin.
ClassificationCode	string	A valid classification code corresponding to the classification category and which will be marked as primary.
Comments	string	The comments for the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
Country	string	Country code of the address.
County	string	County element of address.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.

Name	Type	Description
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
DependentsNumber	long	The number of dependents in the household.
EmailAddress	string	The email address associated with the record.
EmailFormat	string	Indicates the preferred format for email, such as HTML or ASCII.
ExistingCustomerFlag	boolean	Indicates whether there is an existing selling or billing relationship with the sales account. If the value is True, then there is an existing relationship with the sales account. The default value is False.
ExistingCustomerFlagLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the ExistingCustomerFlag was last modified. It is internally populated by the application.
FavoriteHouseholdFlag	boolean	Indicator to determine if a household is a favorite.
FloorNumber	string	The specific floor number at a given address or in a particular building when the building number is provided.
FormattedPhoneNumber	string	The formatted phone number.
HouseholdName	string	The unique identification number for this party. Data stored in this attribute comes from PARTY_NUMBER in HZ_PARTIES.
HouseholdSize	long	The size of the household or group.
LastAssignmentDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the sales account territory assignment was last run by assignment manager.
LastAssignmentDateTime	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time during which the sales account territory assignment was last run by assignment manager.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Mailstop	string	A user-defined code to indicate a mail drop point within their organization
MedianAge	long	The median age of the members of the household.
NamedFlag	boolean	Indicates whether a sales account is a named sales account. Possible values are True or False. If the value is True, then the sales account is a named sales account.
Note	*Note*	The note about the household.
OwnerEmailAddress	string	The email address of valid employee resource that owns and manages the sales account. To assign an owner to the sales account, you can either provide owner's party ID, PartyNumber, or Email Address.
OwnerName	string	The name of a valid employee resource who owns and manages the sales account.
OwnerPartyId	long	The unique identifier of a valid employee resource who owns and manages the sales account. To assign an owner to the sales account, you must provide either owner's party identifier, party number, or email address.
OwnerPartyNumber	string	Party number of a valid employee resource who owns and manages the sales account. To assign an owner to the sales account, you can either provide owner's party ID, PartyNumber, or Email Address.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyNumber	string	The unique identification number for the party.
PartyStatus	string	The status of the household. This is an internal column and you are not expected to pass in a value. A list of valid statuses are defined in the lookup HZ_STATUS. Review and update

Name	Type	Description
		the codes using the Setup and Maintenance task, Manage Trading Community Common Lookups.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PhoneAreaCode	string	The area code prefix for the phone number.
PhoneCountryCode	string	The country code prefix for the phone number.
PhoneExtension	string	The additional number addressed after initial connection to an internal telephone system.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PostalCode	string	The postal code as defined by the formal countrywide postal system.
PostalPlus4Code	string	Four digit extension to the United States Postal ZIP code.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PrimaryAddress	*Sales Cloud Primary Address*	The primary address of the household. Address attributes of the household are grouped under a PrimaryAddress entity for clarity.
PrimaryContactEmail	string	The email address of the primary contact.
PrimaryContactName	string	The name of the primary contact.
PrimaryContactPartyId	long	The unique identifier of the primary contact. To specify the contact for a household, you can provide Contact's party ID, PartyNumber, or a combination of SourceSystem and SourceSystemReference.

Name	Type	Description
PrimaryContactPartyNumber	string	The party number of the primary contact. To specify the contact for a household, you can either provide Contact's party ID, PartyNumber, or a combination of SourceSystem and SourceSystemReference.
PrimaryContactPhone	string	The phone number of the primary contact.
PrimaryContactSourceSystem	string	The source system of the primary contact. To specify the contact for a household, you can either provide Contact's party ID, PartyNumber, or a combination of SourceSystem and SourceSystemReference.
PrimaryContactSourceSystemReferenceValue	string	The source system reference of the primary contact. To specify the contact for a household, you can either provide Contact's party ID, PartyNumber, or a combination of SourceSystem and SourceSystemReference.
Province	string	The province element of address.
RawPhoneNumber	string	The unformatted phone number information.
RecordSet	string	The selected record set under which the search results are displayed.
SalesProfileStatus	string	A valid user-defined status of the sales account that this household belongs to.
SalesTeamMember	*Sales Team Member*	The sales team member who is associated to a sales account.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
State	string	The state element of address.
Type	string	The household party type that defines whether the household is a sales account or a prospect or any other user-defined party type as specified using the lookup type ZCA_ HOUSEHOLD _TYPE. It is defaulted to ZCA_CUSTOMER if no value is provided. Possible values are CUSTOMER or PROSPECT. A list of valid values is defined in the lookup ZCA_HOUSEHOLD_TYPE. Review and update

Name	Type	Description
		the codes using the Setup and Maintenance work area, Manage Standard Lookups task.
UniqueNameSuffix	string	The suffix used to generate the attribute PartyUniqueName. The suffix is concatenated to the householdName attribute to generate the PartyUniqueName. The primary address is defaulted as the suffix.
UpdateFlag	boolean	This flag controls if the user has access to update the record.
WealthAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The household's wealth amount or net worth. The value is NULL if not given.

Note

The object that captures comments, information, or instructions for an Oracle Fusion Applications business object.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/noteService}Note

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Note Descriptive Flexfields*
Contained by	*Objective*
Contained by	*Opportunity*
Contained by	*Sales Cloud Account*

Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactRelationshipId	long	The identifier of the contact relationship record in Trading Community Architecture (TCA).

Name	Type	Description
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreatorPartyId	long	This is the party identifier for the note creator.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DeleteFlag	boolean	Indicates whether the user has access to delete the note.
Dff	*Note Descriptive Flexfields*	The descriptive flex field segment.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record
NoteAttributeCategory	string	The contextual flex field for development usage.
NoteAttributeUid1	string	The flex field for development usage.
NoteAttributeUid2	string	The flex field for development usage.
NoteAttributeUid3	string	The flex field for development usage.
NoteAttributeUid4	string	The flex field for development usage.
NoteAttributeUid5	string	The flex field for development usage.
NoteId	long	The unique identifier of the note.

Name	Type	Description
		• Primary Key
NoteNumber	string	The alternate unique identifier of the note. A user key that is system generated or from an external system.
NoteTitle	string	The title of the note entered by the user.
NoteTxt	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	This is the column that stores the actual note text.
NoteTypeCode	string	This is the note type code for categorization of note.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
SourceObjectCode	string	This is the source_object_code for the source object as defined in OBJECTS Metadata.
SourceObjectId	string	This is the source_object_Uid for the source object such as Activities, Opportunities, and so on defined in OBJECTS metadata.
UpdateFlag	boolean	Indicates whether the user can update the note.
VisibilityCode	string	This is the attribute to specify the visibility level of the note.

Note Descriptive Flexfields

The descriptive flex field that captures additional information for notes, such as a priority or status.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/flex/noteDff/}NoteDFF

Relationships

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
NoteId	long	The unique identifier of the note. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Sales Cloud Primary Address

An object that includes attributes used to store values while creating or updating a primary address. A primary address is the default communication address of an entity irrespective of the address purpose.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/commonService/}PrimaryAddress

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Cloud Account*
Contained by	*Sales Cloud Household*
Contained by	*Sales Cloud Contact*
Handled by	*Sales Cloud Contact*
Handled by	*Sales Cloud Household*
Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AddressElementAttribute1	string	Additional address element to support flexible address format.
AddressElementAttribute2	string	Additional address element to support flexible address format.
AddressElementAttribute3	string	Additional address element to support flexible address format.
AddressElementAttribute4	string	Additional address element to support flexible address format.

Name	Type	Description
AddressElementAttribute5	string	Additional address element to support flexible address format.
AddressId	long	First line for address. • Primary Key
AddressLine1	string	Second line for address.
AddressLine2	string	Third line for address.
AddressLine3	string	Fourth line for address.
AddressLine4	string	Address internal unique identifier that is internally generated during create. One of AddressId, AddressNumber or SourceSystem and SourceSystemReferenceValue keys is used to identify the address record during update.
AddressLinesPhonetic	string	Phonetic or Kana representation of the Kanji address lines (used in Japan).
AddressNumber	string	Alternate unique identifier for the address. One of AddressId, AddressNumber or SourceSystem and SourceSystemReferenceValue keys is used to identify the address record during update. If not specified, then it is automatically generated. Prefix defined as in profile option ZCA_PUID_PREFIX concatenated with an internally generated unique sequence number.
Building	string	Specific building name or number at a given address.
City	string	The name of the city.
Comments	string	The comments for the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DateValidated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date the address was last validated.
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
Description	string	The free text description of the record.
FloorNumber	string	Specific floor number at a given address or in a particular building when building number is provided.
FormattedAddress	string	Formatted address information.
FormattedMultiLineAddress	string	Formatted multiple line address information.
HouseType	string	Indicates the building type. A list of valid values is defined in the lookup HZ_HOUSE_TYPE. Review and update the codes using the Setup and Maintenance work area, Manage Standard Lookups task.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Latitude	decimal	Used to store latitude information for the location for spatial proximity and containment purposes.
LocationDirections	string	Directions to the location.

Name	Type	Description
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
Longitude	decimal	Used to store longitude Information for the location for spatial proximity and containment purposes.
Mailstop	string	A user-defined code to indicate a mail drop point within their organization.
PartyId	long	The unique identifier of the contact party.
PostalCode	string	The postal code element of the address.
PostalPlus4Code	string	Four digit extension to the United States Postal ZIP code.
Province	string	The name of the province.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
State	string	The name of the state.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
ValidationStatusCode	string	Standardized status code describing the results of the validation.

Sales Team Member

An object representing a resource party that is assigned to a sales account team and has a defined access role for the sales account.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/commonService/}SalesTeamMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Cloud Account*
Contained by	*Sales Cloud Household*
Contained by	*Sales Cloud Contact*
Handled by	*Sales Cloud Contact*
Handled by	*Sales Cloud Household*
Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevelCode	string	The access level determines the type of access granted to the resource as well as managers of the organizations. The possible values are contained in the ZCA_ACCESS_LEVEL lookup.
AssignmentTypeCode	string	The code indicating how the resource is assigned to the sales account team. The possible values are contained in the ZCA_ASSIGNMENT_TYPE lookup.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
LockAssignmentFlag	boolean	The flag indicates automatic territory assignment cannot remove the sales account team resource when this flag is 'Y'. When a sales account team member is added manually, this flag is defaulted to 'Y'.
MemberFunctionCode	string	The lookup code indicating a sales account resource's role on the resource team such as Integrator, Executive Sponsor and Technical Account Manager. The code lookup is stored in FND_LOOKUPS.
ResourceEmailAddress	string	Unique identifier for the resource.
ResourceId	long	The unique identifier of the resource.
ResourceName	string	The name of the sales team member.
ResourceOrgName	string	The name of the resource organization of the sales team member.
ResourcePartyNumber	string	Unique identifier for the resource.
ResourcePhoneNumber	string	The formatted primary phone number of the sales team member.
ResourceRoleName	string	The list of roles for a sales team member.
SalesProfileId	long	The identifier for the sales account.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
TeamMemberId	long	The surrogate primary key for the member of the sales account resource team. • Primary Key
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Sales Cloud Relationship

The service used to create, update, retrieve, and delete relationships. Accounts, contacts and household could have various types of predefined relationships within Oracle Sales Cloud. A contact can have a contact relationship with an account or household while it could also be a member of a household. Other such relationships could exist between two contacts or between two accounts or households. This service is used to manage all such relationships between two parties.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/relationshipService/}RelationshipService

Service WSDL URL: https://servername/crmService/SalesPartiesRelationshipService?WSDL

Logical Business Objects

- CRM : Trading Community Model : Account

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Relationship*

Operations

- *createRelationship*
- *updateRelationship*
- *deleteRelationship*
- *mergeRelationship*
- *findRelationship*
- *processRelationship*
- *processCSRelationship*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

createRelationship

An operation to create a relationship.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
relationship	*Sales Cloud Relationship*	The operation for the relationship to be created.

Response Payload

Element Name	Type	Description
result	*Sales Cloud Relationship*	The operation that returns create relationship.

updateRelationship

The operation to update relationship.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
relationship	*Sales Cloud Relationship*	The operation to update relationship.

Response Payload

Element Name	Type	Description
result	*Sales Cloud Relationship*	The parameter that returns updated relationship.

deleteRelationship

The operation that deletes a relationship.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
relationship	*Sales Cloud Relationship*	The operation for the relationship to be deleted.

Response Payload

Element Name	Type	Description
result	void	Not applicable.

mergeRelationship

The merge operation for relationship. It will perform an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
relationship	*Sales Cloud Relationship*	The operation for the relationship to be merged.

Response Payload

Element Name	Type	Description
result	*Sales Cloud Relationship*	The operation returns merged relationship.

findRelationship

An operation to find a list of relationships based matching the supplied criteria pertaining to the object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.

Element Name	Type	Description
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*Sales Cloud Relationship*	A list of relationship that satisfy the inbound criteria.

processRelationship

The operation that performs a create, update, delete, or merge operation on a list of relationship rows. The specified operation is applied to all objects in the given list.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	The operation that indicates what action, such as create, update, merge, or delete, will be performed.
relationship	*Sales Cloud Relationship*	The list of relationships to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The operation to control your bulk upload behavior. For example, whether the valid data will be committed if there are other invalid data in the same batch and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Sales Cloud Relationship*	The operation that returns the list of relationships that are successfully processed.

processCSRelationship

The operation that performs create, update, or delete on a list of relationship rows. Different operations may be applied to different objects, depending on what is specified in the change summary object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object that is used to represent the changes that have been made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The operation to control your bulk upload behavior. For example, whether the valid data will be committed if there are other invalid data in the same batch and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The result of the operation including a list of created or updated data objects, and all warning and informational messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The locale name is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
findRelationship	ZCM_VIEW_SALES_PARTY_RELATIONSHIP_PRIV	View Sales Party Relationship	Allows viewing a sales party relationships to other parties.
processCSRelationship	ZCM_DELETE_SALES_PARTY_RELATIONSHIP_PRIV	Delete Sales Party Relationship	Allows deleting sales party relationships to other parties.
processCSRelationship	ZCM_CREATE_SALES_PARTY_RELATIONSHIP_PRIV	Create Sales Party Relationship	Allows creating sales party relationships to other parties.
processCSRelationship	ZCM_UPDATE_SALES_PARTY_RELATIONSHIP_PRIV	Update Sales Party Relationship	Allows updating a sales party relationships to other parties.
deleteRelationship	ZCM_DELETE_SALES_PARTY_RELATIONSHIP_PRIV	Delete Sales Party Relationship	Allows deleting sales party relationships to other parties.
updateRelationship	ZCM_UPDATE_SALES_PARTY_RELATIONSHIP_PRIV	Update Sales Party Relationship	Allows updating a sales party relationships to other parties.
createRelationship	ZCM_CREATE_SALES_PARTY_RELATIONSHIP_PRIV	Create Sales Party Relationship	Allows creating sales party relationships to other parties.
mergeRelationship	ZCM_UPDATE_SALES_PARTY_RELATIONSHIP_PRIV	Update Sales Party Relationship	Allows updating a sales party relationships to other parties.
processRelationship	ZCM_DELETE_SALES_PARTY_RELATIONSHIP_PRIV	Delete Sales Party Relationship	Allows deleting sales party relationships to other parties.
processRelationship	ZCM_CREATE_SALES_PARTY_RELATIONSHIP_PRIV	Create Sales Party Relationship	Allows creating sales party relationships to other parties.
processRelationship	ZCM_UPDATE_SALES_PARTY_RELATIONSHIP_PRIV	Update Sales Party Relationship	Allows updating a sales party relationships to other parties.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCM_VIEW_SALES_PARTY_RELATIONSHIP_PRIV	ORA_ZCM_SR_SALES_PARTY_MANAGEMENT	Service Sales Party Management	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request management capabilities.
ZCM_VIEW_SALES_PARTY_RELATIONSHIP_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			of appointments, interactions, and customer contacts.
ZCM_VIEW_SALES_PARTY_RELATIONSHIP_PRIV	ORA_ZCM_SALES_PARTY_REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ZCM_CREATE_SALES_PARTY_RELATIONSHIP_PRIV	ORA_ZCM_SR_SALES_PARTY_MANAGEMENT	Service Sales Party Management	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request management capabilities.
ZCM_CREATE_SALES_PARTY_RELATIONSHIP_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
ZCM_CREATE_SALES_PARTY_RELATIONSHIP_PRIV	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ZCM_UPDATE_SALES_PARTY_RELATIONSHIP_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
ZCM_UPDATE_SALES_PARTY_RELATIONSHIP_PRIV	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ZCM_DELETE_SALES_PARTY_RELATIONSHIP_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			of appointments, interactions, and customer contacts.
ZCM_DELETE_SALES_PARTY_RELATIONSHIP_PRIV	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCM_SALES_PARTY_REVIEW_DUTY	ORA_OKC_ALL_BUSINESS_UNITS_CONTRACT_INQUIRY_DUTY_CRM	Contract View Access Across All Contracts	Views all contracts across an enterprise.
ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	ORA_OKC_ALL_BUSINESS_UNITS_CONTRACT_INQUIRY_DUTY_CRM	Contract View Access Across All Contracts	Views all contracts across an enterprise.
ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	ORA_ZCM_SALES_PARTY_REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.

Sales Cloud Relationship

An object that includes attributes used to store values while creating or updating a relationship. This object stores attributes that defines and categorizes a relationship between 2 entities such as account, contact and household.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/relationshipService/}Relationship

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Sales Cloud Relationship*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectPartyId	long	The primary key identifier of the object in this relationship. Either one of ObjectPartyId, ObjectPartyNumber, and combination of ObjectSourceSystem and ObjectSourceSystemReferenceValue, is used to identify the object party of the relationship.
ObjectPartyNumber	string	The unique identification number for the object party of the relationship. One of ObjectPartyId, ObjectPartyNumber, and a combination of ObjectSourceSystem and ObjectSourceSystemReferenceValue, is used to identify the object party of the relationship.

Name	Type	Description
ObjectSourceSystem	string	The name of external source system for the object party in the relationship, which are defined by an admin as part of system setup. One of ObjectPartyId, ObjectPartyNumber, and a combination of ObjectSourceSystem and ObjectSourceSystemReferenceValue, is used to identify the object party of the relationship. The value for this attribute should be predefined in the lookup type HZ_ORIG_SYSTEMS_VL using the setup task, Manage Trading Community Source Systems.
ObjectSourceSystemReferenceValue	string	The identifier for the object party in the relationship from external source system. One of ObjectPartyId, ObjectPartyNumber, and a combination of ObjectSourceSystem and ObjectSourceSystemReferenceValue, is used to identify the object party of the relationship.
RelationshipCode	string	Indicates whether this is a forward or a backward relationship code. A list of valid relationship codes is defined in the lookup PARTY_RELATIONS_TYPE. Review and update the codes using the Setup and Maintenance task, Manage Relationship Lookups.
RelationshipSourceSystem	string	The name of external source system for the relationship, which is defined by an admin as part of the system setup.
RelationshipSourceSystemReferenceValue	string	The identifier for the relationship with the external source system.
RelationshipType	string	The relationship type name. For example, CUSTOMER_SUPPLIER. A list of valid relationship types is defined in the lookup HZ_RELATIONSHIP_TYPE. Review and update the codes using the Setup and Maintenance task, Manage Relationship Lookups.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
SubjectPartyId	long	The primary key identifier of the subject in this relationship. Either one of SubjectPartyId, SubjectPartyNumber, and a combination of SubjectSourceSystem and SubjectSourceSystemReferenceValue, is used to identify the subject party of the relationship.

Name	Type	Description
SubjectPartyNumber	string	The alternate key identifier for the subject party of the relationship. One of SubjectPartyId, SubjectPartyNumber, and a combination of SubjectSourceSystem and SubjectSourceSystemReferenceValue, is used to identify the subject party of the relationship.
SubjectSourceSystem	string	The name of external source system for the subject party in the relationship, which are defined by an admin as part of system setup. One of SubjectPartyId, SubjectPartyNumber, and a combination of SubjectSourceSystem and SubjectSourceSystemReferenceValue, is used to identify the subject party of the relationship. The value for this attribute should be predefined in the lookup type HZ_ORIG_SYSTEMS_VL using the setup task, Manage Trading Community Source Systems.
SubjectSourceSystemReferenceValue	string	The identifier for the subject party in the relationship from external source system. One of SubjectPartyId, SubjectPartyNumber, and a combination of SubjectSourceSystem and SubjectSourceSystemReferenceValue, is used to identify the subject party of the relationship.

Sales Competitor Service

Service to operate on competitors. The supported operations are create, update, get, and find. Competitors are organizations that compete with the deploying organizations in sales situations.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/sales/baseSales/competitors/competitorService/}CompetitorService

Service WSDL URL: https://servername/crmService/CompetitorService?WSDL

getCompetitor

A web service method of Get operation for Sales Competitor.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyId	long	The system generated identifier for this Competitor Party.

Response Payload

Element Name	Type	Description
result	*Sales Competitor*	The parameter returns the Sales Competitor that matches the inbound key attributes.

createCompetitor

Create operation for Sales Competitor, PartyId is a mandatory attribute.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
competitor	*Sales Competitor*	The parameter for the Sales Competitor to be created for the method createCompetitor.

Response Payload

Element Name	Type	Description
result	*Sales Competitor*	The parameter returns the created Sales Competitor.

updateCompetitor

A web service method of Update operation for Sales Competitor.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
competitor	*Sales Competitor*	The parameter for the Sales Competitor to be updated.

Response Payload

Element Name	Type	Description
result	*Sales Competitor*	The parameter returns the updated Sales Competitor.

Element Name	Type	Description

deleteCompetitor

A web service method of Delete operation for Sales Competitor.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
competitor	*Sales Competitor*	The parameter for the Sales Competitor to be deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter returns the deleted Sales Competitor.

mergeCompetitor

A web service method of Merge operation for Sales Competitor. It performs an update if the object exists or an insert if the object does not already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
competitor	*Sales Competitor*	The parameter for the Sales Competitor to be merged.

Response Payload

Element Name	Type	Description
result	*Sales Competitor*	The parameter returns the merged Sales Competitor.

findCompetitor

A web service method of Find operation for Sales Competitor.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findCompetitor.

Response Payload

Element Name	Type	Description
result	*Sales Competitor*	The parameter returns a list of Sales Competitor that satisfies the inbound criteria.

processCompetitor

A web service method of Bulk load operation for Sales Competitor.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	The parameter indicates what action shall be performed, such as create, update, merge, or delete.
competitor	*Sales Competitor*	The parameter provides a list of Sales Competitors to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The parameter which controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound contains only the key attributes or the full object.

Response Payload

Element Name	Type	Description
result	*Sales Competitor*	The parameter returns a list of Sales Competitor that is successfully processed.

processCSCompetitor

An operation to apply the changes back to the data source for Sales Competitor.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object that is used to represent the changes that have been made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The parameter which controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound contains only the key attributes or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The parameter returns the result of the operation including a list of created/updated data objects, and all warning and informational messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create,

Element Name	Type	Description
		update, merge, and delete operations can be performed on the object. A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getEntityList	ZBS_MANAGE_SALES_COMPETITOR_PRIV	Manage Sales Competitor	Allows management of competitors in the application.
getCompetitor	ZBS_VIEW_SALES_COMPETITOR_PRIV	View Sales Competitor	Allows viewing of pages displaying sales competitor information, such as the competitor profile.
deleteCompetitor	ZBS_MANAGE_SALES_COMPETITOR_PRIV	Manage Sales Competitor	Allows management of competitors in the application.
processCompetitor	ZBS_VIEW_SALES_COMPETITOR_PRIV	View Sales Competitor	Allows viewing of pages displaying sales competitor information, such as the competitor profile.
mergeCompetitor	ZBS_MANAGE_SALES_COMPETITOR_PRIV	Manage Sales Competitor	Allows management of competitors in the application.
updateCompetitor	ZBS_MANAGE_SALES_COMPETITOR_PRIV	Manage Sales Competitor	Allows management of competitors in the application.
processCSCompetitor	ZBS_VIEW_SALES_COMPETITOR_PRIV	View Sales Competitor	Allows viewing of pages displaying sales competitor information, such as the competitor profile.

Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ORA_ZBS_SALES_RESTRICTED_USER_JOB	ORA_ZCM_SALES_PARTY_MANAGEMENT_READ_ONLY_DUTY	Sales Party Management Read Only	Read Only role for Sales Party Management Duty.
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_ZCM_SALES_PARTY_REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_AVAILABILITY_MANAGEMENT	Service Availability Management	Manage the service availability data including reading and writing the availability of a service.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_PROFILE_ADMINISTRATION	Service Profile Administration	Manages all aspects of the Service Profile object, including deleting a service profile.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZPM_CHANNEL_SALES_MANAGER_JOB	ORA_SVC_SR_CHANNEL_USER	Service Request Channel User	Manages all aspects of the Service Request related to partner accounts
ORA_ZPM_CHANNEL_ACCOUNT_MANAGER_JOB	ORA_SVC_SR_CHANNEL_USER	Service Request Channel User	Manages all aspects of the Service Request related to partner accounts
ORA_ZBS_SALES_VP_JOB	ORA_SVC_SR_CONTRIBUTOR	Service Request Contributor	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request Management capabilities. Would not be able to respond to customer, assign SR to a user or change the status of a SR.
ORA_ZBS_SALES_MANAGER_JOB	ORA_SVC_SR_CONTRIBUTOR	Service Request Contributor	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request Management capabilities. Would not be able to respond to customer, assign SR to a user or change the status of a SR.
ORA_ZBS_SALES_RESTRICTED_USER_JOB	ORA_SVC_SR_CONTRIBUTOR	Service Request Contributor	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request Management capabilities. Would not be able to respond to customer, assign SR to a user or change the status of a SR.
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_SVC_SR_CONTRIBUTOR	Service Request Contributor	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request Management capabilities. Would not be able to respond to customer, assign SR to a user or change the status of a SR.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_STATUS_COMPUTATION	Service Status Computation	Perform actions required to determine the availability of a service.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_ZCM_SETUP_CUSTOMER_CENTER_DUTY	Setup Customer Center	Manages customer center set up, sales party creation and their related objects, such as appointments, assessments, interactions, notes and tasks.
ORA_ZPM_CHANNEL_SALES_MANAGER_JOB	ORA_HRS_SOCIAL_CONNECTION_PARTNER_DUTY_CRM	Social Connection Partner	Performs all Oracle Fusion Social Connection partner duties.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZPM_CHANNEL_SALES_DIRECTOR_JOB	ORA_HRS_SOCIAL_CONNECTION_PARTNER_DUTY_CRM	Social Connection Partner	Performs all Oracle Fusion Social Connection partner duties.
ORA_ZPM_CHANNEL_ACCOUNT_MANAGER_JOB	ORA_HRS_SOCIAL_CONNECTION_PARTNER_DUTY_CRM	Social Connection Partner	Performs all Oracle Fusion Social Connection partner duties.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_AMENDMENT_DUTY	Subscription Amendment	Amends approved subscriptions. This includes initiating an amendment, reverting the subscription to the previous signed version, updating all allowable attributes, and submitting the amendment for approval.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_AUTHORING_DUTY	Subscription Authoring	Authors subscriptions
ORA_ZBS_SALES_VP_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
ORA_ZBS_SALES_MANAGER_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SEARCH_VIEW_DUTY	Subscription Search and View Access	Searches and views subscriptions for the assigned business units.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SETUP_DUTY	Subscription Setup	Handles the setup required for subscriptions.
ORA_ZBS_SALES_VP_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.
ORA_ZBS_SALES_MANAGER_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZPM_CHANNEL_SALES_MANAGER_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.
ORA_ZPM_CHANNEL_SALES_DIRECTOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.
ORA_ZPM_CHANNEL_ACCOUNT_MANAGER_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_ENTERPRISE_ADMINISTRATION_DUTY	Territory Management Enterprise Administration	Manages sales territories and territory proposals. Additional duties include territory management setup and quota management administration.
ORA_ZBS_SALES_RESTRICTED_USER_JOB	ORA_MOT_TERRITORY_MANAGEMENT_READ_ONLY_DUTY	Territory Management Read Only	Read Only role for Territory Management Duty.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZBS_SALES_VP_JOB	ORA_ZCA_VIEW_CX_AI_AGENTS	View CX AI Agents	This role allows at run-time UI to access agent meta data
ORA_ZBS_SALES_MANAGER_JOB	ORA_ZCA_VIEW_CX_AI_AGENTS	View CX AI Agents	This role allows at run-time UI to access agent meta data
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_ZCA_VIEW_CX_AI_AGENTS	View CX AI Agents	This role allows at run-time UI to access agent meta data

Classification Assignment

The classification code assigned to a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}CodeAssignment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Partner*
Contained by	*Sales Competitor*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Reference*

Handled by	*Sales Party Resource Service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ClassCategory	string	The name of the classification category.
ClassCode	string	The code of the classification.
CodeAssignmentId	long	The unique identifier of the assignment of an industrial classification code to an object. It is primary key and system generated. • Primary Key
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableKey1	string	The first column of the alphanumeric or multi-part foreign key.

Name	Type	Description
OwnerTableKey2	string	The second column of the alphanumeric or multi-part foreign key.
OwnerTableKey3	string	The third column of the alphanumeric or multi-part foreign key.
OwnerTableKey4	string	The fourth column of the alphanumeric or multi-part foreign key.
OwnerTableKey5	string	The fifth column of the alphanumeric or multi-part foreign key.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PrimaryFlag	boolean	Indicator that specifies if this is the primary class code of a class category for the organization. Y stands for the primary class code and N stands for all others.
Rank	decimal	Ranks classes if multiple classes are assigned to a party.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Note

The object that captures comments, information, or instructions for an Oracle Fusion Applications business object.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/noteService}Note

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Note Descriptive Flexfields*

Handled by	*Sales Cloud Household*
Handled by	*Partner Program Enrollment Service*
Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactRelationshipId	long	The identifier of the contact relationship record in Trading Community Architecture (TCA).
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreatorPartyId	long	This is the party identifier for the note creator.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DeleteFlag	boolean	Indicates whether the user has access to delete the note.
Dff	*Note Descriptive Flexfields*	The descriptive flex field segment.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record

Name	Type	Description
NoteAttributeCategory	string	The contextual flex field for development usage.
NoteAttributeUid1	string	The flex field for development usage.
NoteAttributeUid2	string	The flex field for development usage.
NoteAttributeUid3	string	The flex field for development usage.
NoteAttributeUid4	string	The flex field for development usage.
NoteAttributeUid5	string	The flex field for development usage.
NoteId	long	The unique identifier of the note. • Primary Key
NoteNumber	string	The alternate unique identifier of the note. A user key that is system generated or from an external system.
NoteTitle	string	The title of the note entered by the user.
NoteTxt	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	This is the column that stores the actual note text.
NoteTypeCode	string	This is the note type code for categorization of note.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
SourceObjectCode	string	This is the source_object_code for the source object as defined in OBJECTS Metadata.
SourceObjectId	string	This is the source_object_Uid for the source object such as Activities, Opportunities, and so on defined in OBJECTS metadata.
UpdateFlag	boolean	Indicates whether the user can update the note.
VisibilityCode	string	This is the attribute to specify the visibility level of the note.

Note Descriptive Flexfields

The descriptive flex field that captures additional information for notes, such as a priority or status.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/flex/noteDff/}NoteDFF

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Note*
Handled by	*Business Plan Service*
Handled by	*Sales Reference Customer*
Handled by	*Appointment Service*
Handled by	*Sales Cloud Contact*
Handled by	*Sales Objective*
Handled by	*Sales Lead Service Version 2*
Handled by	*Activity Service*
Handled by	*Opportunity Service*
Handled by	*Sales Competitor Service*
Handled by	*Sales Cloud Household*
Handled by	*Partner Program Enrollment Service*
Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
NoteId	long	The unique identifier of the note. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Sales Competitor

The competitor is an organization that competes with the deploying organization in sales situations. This includes additional competitor attributes such as SWOT, products sold by competitors and their mappings to the deploying organization's products, details of win/loss reasons, and associations to competitive literature.

QName: {http://xmlns.oracle.com/apps/sales/baseSales/competitors/competitorService/}Competitor

Logical Business Objects

- CRM : Sales : Sales Competitor

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Sales Competitor SWOT*
Contains	*Classification Assignment*
Contains	*Note*
Handled by	*Sales Competitor Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AnnualRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The attribute that indicates the competitor company's annual revenue.
CodeAssignment	*Classification Assignment*	The classification code assigned to a trading community member.
CompetitorSwotVO	*Sales Competitor SWOT*	The strengths, weaknesses, opportunities, and threats of a competitor.
Country	string	The name of the country.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DeleteFlag	boolean	Indicates whether the logged in user has access to delete the Competitor. It will always be false since Competitors cannot be deleted.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
NoteVO	*Note*	A note data object that captures comments, information, or instructions for an Oracle Fusion Applications business object.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.

Name	Type	Description
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
RssViewerURL	string	The URL for the competitor RSS viewer.
SICCode	string	The standard industry classification (SIC) code.
StatusCode	string	The pre-defined code used to indicate the status.
ThreatLevelCode	string	The level of threat the competitor provides when competing against the competitor for a deal.
TradingPartnerIdentifier	string	The column to store the FSIO related trading partner codes. This column will store alpha numeric values. This column will also take care of the "Fed vs. Non-Fed" attribute requirement.
URL	string	The destination URL associated with a specific Google AdWords ad.
UpdateFlag	boolean	Indicates whether the logged in user has access to update the Competitor. It will be true or false based on the user's Data Security privileges.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Sales Competitor SWOT

The strengths, weaknesses, opportunities, and threats of a competitor.

QName: {http://xmlns.oracle.com/apps/sales/baseSales/competitors/competitorService/}CompetitorSwot

Logical Business Objects

- CRM : Sales : Sales Competitor

Relationships

ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OldOrigSystemReference	string	The old source system reference that is being replaced.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OrigSystemReferenceId	long	The unique identifier for original system reference. • Primary Key

Name	Type	Description
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
SourceSystemRefInformation	*Trading Community Original System Mapping Identifier Additional Information*	The source system reference information.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Trading Community Original System Mapping Identifier Additional Information

The unique identifier for the trading community party, associated with the address, from the external source system reference.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/sourceSystemRef/}SourceSystemRefInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Source System Reference*
Handled by	*Sales Reference Customer*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
OrigSystemRefId	long	Sequentially generated identifier. • Primary Key

Name	Type	Description
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Sales Custom Business Object (Deprecated)

Service to operate on custom business objects created in the Oracle Fusion Sales application. The supported operations are create, update, delete, and find. A custom business object stores extended information for an Oracle Fusion business object, for example, related orders for a sales opportunity.

Life Cycle Status: Deprecated. This service is deprecated and replaced by .

QName: {http://xmlns.oracle.com/apps/sales/custExtn/extnService/}SalesCustomObjectService

Service WSDL URL: https://servername/crmService/SalesCustomObjectService?WSDL

Logical Business Objects

- CRM : Opportunity Management : Opportunity

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Next version is	*Custom Business Object*

Operations

- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*
- *createEntity*
- *getEntity*
- *updateEntity*
- *deleteEntity*
- *findEntity*

- *mergeEntity*
- *processEntity*

getDfltObjAttrHints

Retrieves user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

Retrieves the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

createEntity

Creates records of an Oracle Fusion lead management custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	A required input parameter of the createEntity web service method. Includes the attribute values that the records will be created with.
objectName	string	A required input parameter of the createEntity web service method. Use the API name of the custom object you want to create.

Response Payload

Element Name	Type	Description
result	anyType	The return value of the createEntity web service method. Includes the full set of attributes and child entities of the record.

getEntity

Queries by ID a single record of an Oracle Fusion lead management custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
keyValue	string	A required input parameter of the getEntity web service method. Includes the row ID of the record you want to query for.
objectName	string	A required input parameter of the getEntity web service method. Use the API name of the custom object you want to query for.

Response Payload

Element Name	Type	Description
result	anyType	The return value of the getEntity web service method. Includes the full set of attributes and child entities of the record.

updateEntity

Updates a set of records of an Oracle Fusion lead management custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	A required input parameter of the updateEntity method. All records matching the IDs specified in this input object are updated with the corresponding input attribute values also specified.
objectName	string	A required input parameter of the updateEntity web service method. Use the API name of the custom object you want to update.

Response Payload

Element Name	Type	Description
result	anyType	

deleteEntity

Deletes a set of records of an Oracle Fusion lead management custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	A required input parameter of the deleteEntity web service method. All records matching the input attribute values specified in this input object are deleted.
objectName	string	A required input parameter of the deleteEntity web service method. Use the API name of the custom object you want to delete.

Response Payload

Element Name	Type	Description
result	void	

findEntity

Queries for a set of records of an Oracle Fusion lead management custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findEntity web service method. Includes optional search criteria, sort filter, and attributes to be excluded when returning the set of records. Also includes the option to return any of the custom object's child entities,
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Not applicable
objectName	string	A required input parameter of the findEntity web service method. Use the API name of the custom object you want to query for.

Response Payload

Element Name	Type	Description
result	anyType	The return value of the findEntity web service method. Includes the full set of attributes and child entities of the records.

mergeEntity

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	
objectName	string	

Response Payload

Element Name	Type	Description
result	anyType	

processEntity

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	
object	anyType	
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	
objectName	string	

Response Payload

Element Name	Type	Description
result	anyType	

Custom Business Object

A service to create, update, delete, or find custom business objects created in the Oracle Fusion CRM application. A custom business object stores extended information for an Oracle Fusion business object.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/custom/extnService/}CustomReferenceService

Service WSDL URL: https://servername/crmService/CustomReferenceService?WSDL

Logical Business Objects

- CRM : CRM Application Composer : CRM Extensible Object

Operations

- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*
- *invokeObjectFunction*
- *createEntity*
- *getEntity*
- *updateEntity*
- *deleteEntity*
- *findEntity*
- *mergeEntity*
- *processEntity*

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create,

Element Name	Type	Description
		update, merge, and delete operations can be performed on the object.

invokeObjectFunction

invoke custom object row function.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
row	anyType	DataObject used to invoke the script
viewName	string	Custom Object type name
scriptName	string	row function name
params	anyType	row function parameters

Response Payload

Element Name	Type	Description
result	anyType	DataObject

createEntity

Create operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject created for the custom object.

getEntity

Get operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
keyValue	string	A list of key values for identifying the custom object.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject identified by the keyValue.

updateEntity

Update operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be updated. The DataObject must include key fields for identifying the updated record, as well as the fields to be updated.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject updated for the custom object.

deleteEntity

Delete operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be deleted. The DataObject must include key fields for identifying the deleted record.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	void	DataObject that is deleted.

findEntity

Find operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	List of DataObjects identified by the findCriteria.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Search control.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObjects found

mergeEntity

merge with existing custom object if exist, create new object if does not exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be merged. The DataObject must include key fields for identifying the record, as well as the fields to be merged.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject result from the merge

processEntity

batch process for custom object operation

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Operation name
object	anyType	DataObjects to be batch processed
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	process control
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject result list

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
processEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea
getEntityList	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
updateEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea
getEntity	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
deleteEntity	ZCX_DELETE_CUSTOM_OBJECT_PRIV	DELETE custom object resources (WorkArea)	PermissionSet to DELETE for custom object WorkArea
findEntity	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
getDfltObjAttrHints	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
createEntity	ZCX_CREATE_CUSTOM_OBJECT_PRIV	CREATE custom object resources (WorkArea)	PermissionSet to CREATE for custom object WorkArea
getServiceLastUpdateTime	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
mergeEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea

Sales Forecast

Service to operate on forecast items. The supported operations are create, update, get, and delete. Forecast items are snapshots of revenues predicted to close within the forecast period.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/sales/salesForecasting/forecasts/forecastService/}ForecastIntegService

Service WSDL URL: https://servername/crmService/ForecastIntegService?WSDL

Logical Business Objects

- CRM : Sales Forecasting
- CRM : Sales Forecasting

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Forecast Item*
Handles	*Forecast Territory Details*

Operations

- *createItem*
- *deleteItem*
- *getForecastItemDetail*
- *updateForecastItemDetail*
- *findForecastItemDetail*
- *getTerritoryForecast*
- *updateTerritoryForecast*
- *findTerritoryForecast*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

createItem

A web service method to create a forecast item from a revenue item.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
revnId	long	The ID of the revenue which needs to be converted to a forecast item.

Response Payload

Element Name	Type	Description
result	void	The parameter returns the created forecast item for the method createItem.

deleteItem

A web service method which deletes a forecast item.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
itemId	long	The ForecastItemId is passed as an input to delete a forecast item.

Response Payload

Element Name	Type	Description
result	void	The parameter returns the deleted forecast item for the method deleteItem.

getForecastItemDetail

A web service method which returns a forecast item object for a given forecast item ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
forecastItemId	long	The ForecastItemId is passed as input to get details on a forecast item.

Response Payload

Element Name	Type	Description
result	*Forecast Item*	The parameter returns a forecast item detail object for the method getForecastItemDetail.

updateForecastItemDetail

Updates the forecast item and synchronizes the underlying revenue attributes.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
forecastItemDetail	*Forecast Item*	The ForecastItemDetail object is passed as input to update a forecast item.

Response Payload

Element Name	Type	Description
result	*Forecast Item*	The parameter returns a forecast item detail object.

findForecastItemDetail

Finds a particular record or set of records based on the criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The parameter to set the criteria to find the set of records.

Element Name	Type	Description
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The filtering condition to separate out the set of records.

Response Payload

Element Name	Type	Description
result	*Forecast Item*	The parameter returns the type of item object for the method findForecastItemDetail.

getTerritoryForecast

A web service method which obtains territory forecast details based on key information.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
forecastParticipantId	long	The system generated unique participant identifier to get territory forecast details.

Response Payload

Element Name	Type	Description
result	*Forecast Territory Details*	The parameter returns the territory forecast details for the method getTerritoryForecast.

updateTerritoryForecast

A web service method to update territory forecast details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
territoryForecast	*Forecast Territory Details*	The input parameter to update territory forecast details.

Response Payload

Element Name	Type	Description
result	*Forecast Territory Details*	The parameter returns the updated territory forecast details for the method updateTerritoryForecast.

findTerritoryForecast

A web service method to find territory forecast based on a set of criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The parameter to set the find criteria for territory forecast.
BindParticipantId	long	The parameter to find territory forecast based on participant ID criteria.
BindFcstHeaderId	long	The parameter to find territory forecast based on header ID criteria.
BindForecastName	string	The parameter to find territory forecast based on forecast name criteria.
BindTerritoryId	long	The parameter to find territory forecast based on territory ID criteria.
BindTerritoryVersionId	long	The parameter to find territory forecast based on territory version ID criteria.
BindOwnerResourceId	string	The parameter to find territory forecast based on owner resource ID criteria.
BindForecastType	string	The parameter to find territory forecast based on forecast type criteria.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The filtering condition to separate out the set of records.

Response Payload

Element Name	Type	Description
result	*Forecast Territory Details*	The parameter returns the output list of values from find service.

getDfltObjAttrHints

Retrieves user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

Gets the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
updateForecastItemDetail	ZSF_MANAGE_SALES_FORECAST_PARTICIPANT_PRIV	Manage Sales Forecast Participant	Allows viewing and submitting of all sales forecasts. Also includes the ability to submit and reject all child territories.
getForecastItemDetail	ZSF_MANAGE_SALES_FORECAST_PARTICIPANT_PRIV	Manage Sales Forecast Participant	Allows viewing and submitting of all sales forecasts. Also includes the ability to submit and reject all child territories.
deleteItem	ZSF_MANAGE_SALES_FORECAST_PARTICIPANT_PRIV	Manage Sales Forecast Participant	Allows viewing and submitting of all sales forecasts. Also includes the ability to submit and reject all child territories.
createItem	ZSF_MANAGE_SALES_FORECAST_PARTICIPANT_PRIV	Manage Sales Forecast Participant	Allows viewing and submitting of all sales forecasts. Also includes the ability to submit and reject all child territories.
updateTerritoryForecast	ZSF_MANAGE_SALES_FORECAST_PARTICIPANT_PRIV	Manage Sales Forecast Participant	Allows viewing and submitting of all sales forecasts. Also includes the ability to submit and reject all child territories.

Operation Name	Privilege Code	Privilege Name	Privilege Description
getTerritoryForecast	ZSF_MANAGE_SALES_FORECAST_PARTICIPANT_PRIV	Manage Sales Forecast Participant	Allows viewing and submitting of all sales forecasts. Also includes the ability to submit and reject all child territories.
findTerritoryForecast	ZSF_MANAGE_SALES_FORECAST_PARTICIPANT_PRIV	Manage Sales Forecast Participant	Allows viewing and submitting of all sales forecasts. Also includes the ability to submit and reject all child territories.
findForecastItemDetail	ZSF_MANAGE_SALES_FORECAST_PARTICIPANT_PRIV	Manage Sales Forecast Participant	Allows viewing and submitting of all sales forecasts. Also includes the ability to submit and reject all child territories.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZSF_MANAGE_SALES_FORECAST_PARTICIPANT_PRIV	ORA_ZBS_SALES_RESTRICTED_USER_JOB	Sales Restricted User	Has the same scope of visibility as the Sales Manager role to application data but can only view or read most of that data. The ability to create, update or delete data is restricted to notes, activities, attachments and reports.
ZSF_MANAGE_SALES_FORECAST_PARTICIPANT_PRIV	ORA_ZSF_SALES_FORECASTING_DUTY	Sales Forecasting	Manages sales forecasts, sales forecast items, sales forecast adjustments, and sales forecast item adjustments. Additional duties include exporting forecast information.
ZSF_MANAGE_SALES_FORECAST_PARTICIPANT_PRIV	ORA_ZSF_SALES_FORECASTING_MANAGEMENT_DUTY	Sales Forecasting Management	Manages sales forecasts, sales forecast items, sales forecast adjustments, and sales forecast item adjustments. Additional duties include exporting forecast information and managing subordinates forecasts.
ZSF_MANAGE_SALES_FORECAST_PARTICIPANT_PRIV	ORA_ZSF_SALES_FORECASTING_DELEGATED_MANAGEMENT_DUTY	Sales Forecasting Delegated Management	Manages sales forecasts, sales forecast items, sales forecast adjustments, and sales forecast item adjustments. Additional duties include exporting forecast information and managing forecasts on behalf of other users.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZBS_SALES_RESTRICTED_USER_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_ZBS_SALES_RESTRICTED_USER_JOB	ORA_MKL_LEAD_REGISTRATION_PROCESSING_READ_ONLY_DUTY	Lead Registration Processing Read Only	Read Only role for Lead Registration Processing Duty.
ORA_ZBS_SALES_RESTRICTED_USER_JOB	ORA_MOO_OPPORTUNITY_SALES_MANAGER_READ_ONLY_DUTY	Opportunity Sales Manager Read Only	Read Only role for Opportunity Sales Manager Duty.
ORA_ZBS_SALES_RESTRICTED_USER_JOB	ORA_MOO_OPPORTUNITY_SALES_REPRESENTATIVE_READ_ONLY_DUTY	Opportunity Sales Representative Read Only	Read Only role for Opportunity Sales Representative Duty.
ORA_ZBS_SALES_RESTRICTED_USER_JOB	ORA_MOO_OPPORTUNITY_TERRITORY_RESOURCE_READ_ONLY_DUTY	Opportunity Territory Resource Read Only	Read Only role for Opportunity Territory Resource Duty.
ORA_ZBS_SALES_RESTRICTED_USER_JOB	ORA_MKT_PERSONAL_CAMPAIGN_MANAGEMENT_READ_ONLY_DUTY	Personal Campaign Management Read Only	Read Only role for Personal Campaign Management Duty.
ORA_ZBS_SALES_RESTRICTED_USER_JOB	ORA_ZSP_PRODUCT_RECOMMENDATION_ANALYSIS_READ_ONLY_DUTY	Product Recommendation Analysis Read Only	Read Only role for Product Recommendation Analysis Duty
ORA_ZBS_SALES_RESTRICTED_USER_JOB	ORA_ZSF_SALES_FORECASTING_MANAGEMENT_READ_ONLY_DUTY	Sales Forecasting Management Read Only	Read Only role for Sales Forecasting Management Duty.
ORA_ZBS_SALES_RESTRICTED_USER_JOB	ORA_MKL_SALES_LEAD_FOLLOW_UP_MANAGEMENT_READ_ONLY_DUTY	Sales Lead Follow Up Management Read Only	Read Only role for Sales Lead Follow Up Management Duty.
ORA_ZBS_SALES_RESTRICTED_USER_JOB	ORA_MKL_SALES_LEAD_FOLLOW_UP_READ_ONLY_DUTY	Sales Lead Follow Up Read Only	Read Only role for Sales Lead Follow Up Duty
ORA_ZBS_SALES_RESTRICTED_USER_JOB	ORA_ZCM_SALES_PARTY_MANAGEMENT_READ_ONLY_DUTY	Sales Party Management Read Only	Read Only role for Sales Party Management Duty.
ORA_ZBS_SALES_RESTRICTED_USER_JOB	ORA_SVC_SR_CONTRIBUTOR	Service Request Contributor	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request Management capabilities. Would not be able to respond to customer,

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
			assign SR to a user or change the status of a SR.
ORA_ZBS_SALES_RESTRICTED_USER_JOB	ORA_MOT_TERRITORY_MANAGEMENT_READ_ONLY_DUTY	Territory Management Read Only	Read Only role for Territory Management Duty.

Forecast Item

The forecast item of the forecast territory.

QName: {http://xmlns.oracle.com/apps/sales/salesForecasting/forecasts/forecastService/}ForecastItemDetail

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Sales Forecast*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdjustPeriodId	long	The adjust period ID if there is a adjustment tied to the item.
AdjustedForecast	decimal	The adjusted forecast.
AdjustedQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The adjusted quantity value.
BUOrgId	long	The organization ID of the business unit.
BestCaseAdjustedForecast	decimal	The best case adjusted forecast.
Category	string	Forecast item category denotes whether the forecast item is of type renewal or new.

Name	Type	Description
CloseDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The close date.
CorporateCurrencyCode	string	A corporate currency code set in profile.
CorporateCurrencyRate	decimal	The currency rate in corporate currency.
CorporateUnadjustedDownsideAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The worst case amount in corporate currency.
CorporateUnadjustedRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The revenue amount in corporate currency.
CorporateUnadjustedUpsideAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Best Case amount in corporate currency.
CurrentStageId	long	The current sales stage ID.
CustomerPartyId	long	The customer associated with the revenue.
DownsideAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The worst case amount.
EffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The effective date of the revenue.
ForecastHeaderId	long	The ID that represents a forecast header record key.
ForecastItemId	long	The primary key for a ForecastItem record. • Primary Key
ForecastOverrideCode	string	The forecast override code for criteria.
InventoryItemId	long	The item Id of the product.
InventoryOrgId	long	The inventory organization ID from product schema.
OpportunityId	long	The ID of opportunity that the underlying revenue belongs to.
OpportunityName	string	The name of an opportunity.

Name	Type	Description
OpportunityNumber	string	The opportunity number associated to the opportunity.
OpportunityStatusCode	string	The status of opportunity.
OwnerName	string	The owner name.
OwnerResourceId	long	The ID associated with the revenue owner.
OwnerResourceOrgId	long	The organization ID of revenue owner.
PartEngagementTypeCode	string	A partner engagement type code.
PartnerPartOrgPartyId	long	The party ID of the partner's organization.
PartnerSourceNumber	string	The source number of partner.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PrimaryTerritoryId	long	Primary territory ID of the revenue.
PrimaryTerritoryVersionId	long	Primary territory Version ID of the revenue.
ProductGroupId	long	The group that the product belongs to.
ProductName	string	The product name.
Quantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	Quantity of product making up the revenue.
RecommendedRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The recommended revenue amount.
RecommendedWinProbability	decimal	The likelihood to bug product.
RecurTypeCode	string	A recurring type code.
RevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The revenue amount from the revenue Item.
RevenueAmountCurrencyCode	string	Entered currency code for revenue.

Name	Type	Description
RevenueExpectAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The expected revenue amount.
RevenueId	long	The ID of the revenue that the item belongs to.
RevenueNumber	string	The revenue number of the revenue.
RevenueStatusCode	string	The status of revenue.
RevenueTerritoryId	long	The Territory ID of the revenue.
RevenueTypeCode	string	A type of revenue.
SalesChannelCode	string	A code for sales channel, DIRECT or INDIRECT.
SalesCreditTypeCode	string	The code associated with the sales credit type.
SplitTypeCode	string	The split type code.
StatusCodeSetId	long	The StatusCodeSetId of revenue.
TypeCodeSetId	long	The TypeCodeSetId of the revenue.
UOMCode	string	Unit of measure code.
UnadjustedQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The unadjusted quantity value.
UnitPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	A unit price of revenue.
UpdateFlag	boolean	The flag that controls if the user has access to update the record.
UpsideAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The best case amount.
WinProbability	decimal	The win probability for the revenue.
WorstCaseAdjustedForecast	decimal	The worst case adjusted forecast.

Forecast Territory Details

The information about the forecast territory.

QName: {http://xmlns.oracle.com/apps/sales/salesForecasting/forecasts/forecastService/}TerritoryForecast

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Sales Forecast*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdjustedBestCase	decimal	The adjusted best case value.
AdjustedForecast	decimal	The adjusted forecast value.
AdjustedQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The adjusted quantity value.
AdjustedWorstCase	decimal	The adjusted worst case vale.
CorporateUnadjustedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The corporate unadjusted amount attribute.
DueDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The due date attribute.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
ForecastHeaderId	long	The header ID attribute associated with the forecast.
ForecastName	string	The forecast name attribute.

Name	Type	Description
ForecastParticipantId	long	The participant ID attribute. • Primary Key
ForecastParticipationCode	string	The forecast participation attribute.
ForecastType	string	The forecast type attribute.
HeaderStatusCode	string	The status code of the header.
Meaning	string	The meaning attribute.
OwnerResourceId	long	The owner resource ID attribute.
ParentTerritoryOwnerResourceId	long	The parent territory owner resource id attribute.
PseudoTerritoryFlag	boolean	The manager territory flag.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
StatusCode	string	The pre-defined code used to indicate the status.
SubmittedBy	string	The submitted by attribute.
SubmittedOn	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The submitted on attribute.
TerritoryHierarchyFreezeDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date attribute associated with the territory hierarchy freeze date.
TerritoryId	long	The territory ID attribute.
TerritoryLevel	decimal	The territory level.
TerritoryName	string	The territory name attribute.
TerritoryVersionId	long	The territory version ID attribute.
UnadjustedQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The unadjusted quantity value.

Name	Type	Description
UpdateFlag	boolean	The flag that controls if the user has access to update the record.

Sales Lead Custom Business Object (Deprecated)

Service to operate on custom business objects created in the Oracle Fusion Lead Management application. The supported operations are create, update, delete, and find. A custom business object stores the extended information for an Oracle Fusion business object, for example, related orders for a sales lead.

Life Cycle Status: Deprecated. This service is deprecated and replaced by .

QName: {http://xmlns.oracle.com/apps/marketing/leadMgmt/custExtn/extnService/}LeadsCustomObjectService

Service WSDL URL: https://servername/crmService/LeadsCustomObjectService?WSDL

Logical Business Objects

- CRM : Lead Management : Sales Lead

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Next version is	*Custom Business Object*

Operations

- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*
- *createEntity*
- *getEntity*
- *updateEntity*
- *deleteEntity*
- *findEntity*
- *mergeEntity*
- *processEntity*

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

createEntity

A web service method that creates records of an Oracle Fusion Lead Management custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	A required input parameter of the createEntity web service method. Includes the attribute values that the records will be created with.
objectName	string	A required input parameter of the createEntity web service method. Use the API name of the custom object you want to create.

Response Payload

Element Name	Type	Description
result	anyType	The return value of the createEntity web service method. Includes the full set of attributes and child entities of the record.

getEntity

A web service method that queries by ID a single record of an Oracle Fusion Lead Management custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
keyValue	string	A required input parameter of the getEntity web service method. Includes the row ID of the record you want to query for.
objectName	string	A required input parameter of the getEntity web service method. Use the API name of the custom object you want to query for.

Response Payload

Element Name	Type	Description
result	anyType	The return value of the getEntity web service method. Includes the full set of attributes and child entities of the record.

updateEntity

A web service method that updates a set of records of an Oracle Fusion Lead Management custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	A required input parameter of the updateEntity method. All records matching the IDs specified in this input object are updated with the corresponding input attribute values also specified.
objectName	string	A required input parameter of the updateEntity web service method. Use the API name of the custom object you want to update.

Response Payload

Element Name	Type	Description
result	anyType	

deleteEntity

A web service method that deletes a set of records of an Oracle Fusion Lead Management custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	A required input parameter of the deleteEntity web service method. All records matching the input attribute values specified in this input object are deleted.
objectName	string	A required input parameter of the deleteEntity web service method. Use the API name of the custom object you want to delete.

Response Payload

Element Name	Type	Description
result	void	

findEntity

A web service method that queries for a set of records of an Oracle Fusion Lead Management custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findEntity web service method. Includes optional search criteria, sort filter, and attributes to be excluded when returning the set of records. Also includes the option to return any of the custom object's child entities.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Not applicable.
objectName	string	A required input parameter of the findEntity web service method. Use the API name of the custom object you want to query for.

Response Payload

Element Name	Type	Description
result	anyType	The return value of the findEntity web service method. Includes the full set of attributes and child entities of the records.

mergeEntity

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	
objectName	string	

Response Payload

Element Name	Type	Description
result	anyType	

processEntity

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	
object	anyType	
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	
objectName	string	

Response Payload

Element Name	Type	Description
result	anyType	

Custom Business Object

A service to create, update, delete, or find custom business objects created in the Oracle Fusion CRM application. A custom business object stores extended information for an Oracle Fusion business object.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/custom/extnService/}CustomReferenceService

Service WSDL URL: https://servername/crmService/CustomReferenceService?WSDL

Logical Business Objects

- CRM : CRM Application Composer : CRM Extensible Object

Operations

- *processEntity*

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value

Element Name	Type	Description
		of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

invokeObjectFunction

invoke custom object row function.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
row	anyType	DataObject used to invoke the script
viewName	string	Custom Object type name
scriptName	string	row function name
params	anyType	row function parameters

Response Payload

Element Name	Type	Description
result	anyType	DataObject

createEntity

Create operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject created for the custom object.

getEntity

Get operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
keyValue	string	A list of key values for identifying the custom object.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject identified by the keyValue.

updateEntity

Update operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be updated. The DataObject must include key fields for identifying the updated record, as well as the fields to be updated.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject updated for the custom object.

deleteEntity

Delete operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be deleted. The DataObject must include key fields for identifying the deleted record.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	void	DataObject that is deleted.

findEntity

Find operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	List of DataObjects identified by the findCriteria.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Search control.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObjects found

mergeEntity

merge with existing custom object if exist, create new object if does not exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be merged. The DataObject must include key fields for identifying the record, as well as the fields to be merged.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject result from the merge

processEntity

batch process for custom object operation

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Operation name
object	anyType	DataObjects to be batch processed
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	process control
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject result list

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
processEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea
getEntityList	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
updateEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea
getEntity	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
deleteEntity	ZCX_DELETE_CUSTOM_OBJECT_PRIV	DELETE custom object resources (WorkArea)	PermissionSet to DELETE for custom object WorkArea
findEntity	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
getDfltObjAttrHints	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
createEntity	ZCX_CREATE_CUSTOM_OBJECT_PRIV	CREATE custom object resources (WorkArea)	PermissionSet to CREATE for custom object WorkArea
getServiceLastUpdateTime	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
mergeEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea

Sales Lead Service Version 1 (Deprecated)

Service to operate on leads. The supported operations are create, update, delete, and search.
WARNING: This service has been deprecated and is being replaced with Sales Lead Service Version 2 (oracle.apps.marketing.leadMgmt.leads.leadService.SalesLeadService).

Life Cycle Status: Deprecated. This service is deprecated and replaced by .

assignLead

A web service method that assigns sales team to the lead.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	An input parameter of the assignLead web service method that identifies the lead record by ID.

Response Payload

Element Name	Type	Description
result	string	The return value of the assignLead web service method.

convertLeadToOpportunity

A web service method that converts a Lead record to an opportunity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required parameter of the convertLeadToOpportunity web service method. The lead record matching the ID input is used as source for the opportunity.

Response Payload

Element Name	Type	Description
result	string	The return value of the convertLeadToOppportunity web service method. It includes the full set of attributes of the opportunity record.

qualifyLead

A web service method that qualifies a lead based on qualification rules.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	An input parameter of the qualifyLead web service method that identifies the lead record by ID.

Response Payload

Element Name	Type	Description
result	string	The return value of the qualifyLead web service method.

rankLead

Assigns a pre-defined rank on the lead based on ranking rules.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	An input parameter of the rankLead web service method that identifies the lead record by ID.

Response Payload

Element Name	Type	Description
result	string	The return value of the rankLead web service method.

scoreLead

A web service method that scores an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required input parameter of the scoreLead web service method. It is the ID of the lead record that would need to be scored.

Response Payload

Element Name	Type	Description
result	string	The return value of the scoreLead web service method.

getLead

A web service method that queries a single record of Oracle Fusion Lead Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required input parameter of the getLead web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	*Service Lead Service Data Object*	The return value of the getLead web service method. It includes the full set of attributes of record.

createLead

A web service method that creates Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
serviceLead1	*Service Lead Service Data Object*	A required input parameter of the createLead web service method. The input object include the attribute values that the lead record is created with.

Response Payload

Element Name	Type	Description
result	*Service Lead Service Data Object*	The return value of the createLead web service method. It includes the full set of attributes of the record.

updateLead

A web service method that updates an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
serviceLead1	*Service Lead Service Data Object*	A required parameter of the updateLead web service method. The record matching the ID specified in this input lead contact is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Service Lead Service Data Object*	The return value of the updateLead web service method. It includes the full set of attributes of the record.

deleteLead

A web service method that deletes an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
serviceLead1	*Service Lead Service Data Object*	A required input parameter of the deleteLead web service method. The record matching the input attribute values specified in the lead is deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteLead.

findLead

A web service method that queries a single record or set of records of Oracle Fusion Lead Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLead web service method. The filter criteria is the cumulative set of attribute criteria that will identify records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findLead.

Response Payload

Element Name	Type	Description
result	*Service Lead Service Data Object*	The return value of the findLead web service method. It includes the full set of attributes of records queried.

getLeadContact

A web service method that queries a single record of Oracle Fusion Lead Contact Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadMemberId	long	A required input parameter of the getLeadContact web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	*Sales Lead Contacts*	The return value of the getLeadContact web service method. It includes the full set of attributes of record.

createLeadContact

A web service method that create Oracle Fusion Lead Contact Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadContacts	*Sales Lead Contacts*	A required input parameter of the createLeadContact web service method. It includes the attribute values that the record is created with.

Response Payload

Element Name	Type	Description
result	*Sales Lead Contacts*	The return value of the createLeadContact web service method. It includes the full set of attributes of the record.

updateLeadContact

A web service method that updates an Oracle Fusion Lead Contact Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadContacts	*Sales Lead Contacts*	A required parameter of the updateLeadContact web service method. The record matching the ID specified in this input lead contact is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Sales Lead Contacts*	The return value of the updateLeadContact web service method. It includes the full set of attributes of the record.

deleteLeadContact

A web service method that deletes an Oracle Fusion Lead Contact Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadContacts	*Sales Lead Contacts*	A required input parameter of the deleteLeadContact web service method. The lead contact record matching the input attribute values specified are deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteLeadContact.

findLeadContact

A web service method that queries a single record or set of records of Oracle Fusion Lead Contact Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLeadContact web service method. The filter criteria is the cumulative set of attribute criteria that identifies records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findLeadContact.

Response Payload

Element Name	Type	Description
result	*Sales Lead Contacts*	The return value of the findLeadContact web service method. It includes the full set of attributes of records queried.

getLeadProduct

A web service method that queries a single record of Oracle Fusion Lead Product Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadProductId	long	A required input parameter of the getLeadProduct web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	*Sales Lead Products*	The return value of the getLeadProduct web service method. It includes the full set of attributes of record.

createLeadProduct

A web service method that create Oracle Fusion Lead Product Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadProducts	*Sales Lead Products*	The return value of the createLeadProduct web service method. It includes the full set of attributes of the record.

Response Payload

Element Name	Type	Description
result	*Sales Lead Products*	A required input parameter of the createLeadProduct web service method. The input object includes the attribute values that the record will be created with.

updateLeadProduct

A web service method that updates an Oracle Fusion Lead Product Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadProducts	*Sales Lead Products*	A required parameter of the updateLeadProduct web service method. The record matching the ID specified in this input lead product is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Sales Lead Products*	The return value of the updateLeadProduct web service method. It includes the full set of attributes of the record.

deleteLeadProduct

A web service method that deletes an Oracle Fusion Lead Product Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadProducts	*Sales Lead Products*	A required input parameter of the deleteLeadProduct web service method. The record matching the input attribute values specified in the lead product are deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteLeadProduct.

findLeadProduct

A web service method that queries a single record or set of records of Oracle Fusion Lead Product Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLeadResource web service method. The filter criteria is a cumulative set of attribute criteria that will identify records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findLeadProduct.

Response Payload

Element Name	Type	Description
result	*Sales Lead Products*	The return value of the findLeadProduct web service method. It includes the full set of attributes of records queried.

getLeadResource

A web service method that queries a single record of Oracle Fusion Lead Resource Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadResourceId	long	A required input parameter of the getLeadResource web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	*Sales Lead Resources*	The return value of the getLeadResource web service method. It includes the full set of attributes of record.

createLeadResource

A web service method that create Oracle Fusion Lead Resource Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadResources	*Sales Lead Resources*	A required input parameter of the createLeadResource web service method. The input object It includes the attribute values that the record are created with.

Response Payload

Element Name	Type	Description
result	*Sales Lead Resources*	The return value of the createLeadResource web service method. It includes the full set of attributes of the record.

updateLeadResource

A web service method that updates an Oracle Fusion Lead Resource Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadResources	*Sales Lead Resources*	A required parameter of the updateLeadResource web service method. The record matching the ID specified in this input lead resource is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Sales Lead Resources*	The return value of the updateLeadResource web service method. It includes the full set of attributes of the record.

deleteLeadResource

A web service method that deletes an Oracle Fusion Lead Resource Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadResources	*Sales Lead Resources*	A required input parameter of the deleteLeadResource web service method. The record matching the input attribute values specified in the Lead Resource is deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteLeadResource.

findLeadResource

A web service method that queries a single record or set of records of Oracle Fusion Lead Resource Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLeadResource web service method. The filter criteria is a cumulative set of attribute criteria that identifies the records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findLeadResource.

Response Payload

Element Name	Type	Description
result	*Sales Lead Resources*	The return value of the findLeadResource web service method. It includes the full set of attributes of records queried.

getDfltObjAttrHints

Retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition was last updated. The parameter is present in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MKL_VIEW_SALES_LEAD_PRIV	View Sales Lead	Allows viewing sales leads. A sales lead is a prospect or existing customer who has interest or the potential for interest in a product or service being sold.
All Operations	MKL_MANAGE_SALES_LEAD_PRIV	Manage Sales Lead	Allows web services management of sales leads including modifying lead attributes and accepting or rejecting sales leads.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MKL_VIEW_SALES_LEAD_PRIV	ORA_MKL_SALES_LEAD_FOLLOW_UP_MANAGEMENT_READ_ONLY_DUTY	Sales Lead Follow Up Management Read Only	Read Only role for Sales Lead Follow Up Management Duty.
MKL_VIEW_SALES_LEAD_PRIV	ORA_MKL_SALES_LEAD_FOLLOW_UP_READ_ONLY_DUTY	Sales Lead Follow Up Read Only	Read Only role for Sales Lead Follow Up Duty

Sales Lead Contacts

The contact associated with the sales lead.

QName: {http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/}MklLeadTcMembers

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Sales Lead Contacts*
Contained by	*Sales Lead*

Relationship Type	Object or Service
Contained by	*Service Lead Service Data Object*
Handled by	*Sales Lead Service Version 2*
Handled by	*Sales Lead Service Version 1*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Address1	string	The first line of the address.
Address2	string	The second line of the address.
City	string	The name of the city.
ContactDoNotCallFlag	boolean	The indicator set at person level for the sales lead contact.
ContactDoNotContactFlag	boolean	The indicator set at person level for the sales lead contact.
ContactDoNotEmailFlag	boolean	The indicator set at person level for the sales lead contact.
ContactDoNotMailFlag	boolean	The indicator set at person level for the sales lead contact.
ContactNumber	string	The contact number of the sales lead contact.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmailAddress	string	The email address associated with the record.
FormattedPhoneNumber	string	The formatted phone number.
JobTitle	string	The job title of the sales lead contact.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LeadId	long	The unique identifier of the sales lead for the sales lead contact.
LeadMemberId	long	The primary key for lead contact. • Primary Key
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgContactId	long	The organization contact identifier of the sales lead contact.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartyStatus	string	The status of the sales lead contact.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUsageCode	string	The usage context of a party's contact point.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonJobTitle	string	The person Job title of the sales lead contact.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.

Name	Type	Description
PersonProfileId	long	The person profile identifier of the sales lead contact.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PhoneAreaCode	string	The area code prefix for the phone number.
PhoneCountryCode	string	The country code prefix for the phone number.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PostalCode	string	The postal code element of the address.
PrimaryFlag	boolean	Indicates whether the lead contact is primary. Primary lead contact is also the lead owner.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
RelationshipId	long	The relationship identifier for the record.
Role	string	The role of lead contact in the context of the lead.
State	string	The name of the state.

Sales Lead Products

The product associated with a sales lead.

QName: {http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/}MklProdAssoc

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Sales Lead Products*
Contained by	*Sales Lead*
Contained by	*Service Lead Service Data Object*
Handled by	*Sales Lead Service Version 2*
Handled by	*Sales Lead Service Version 1*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Amount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount associated with the sales lead product.
AverageTimeToClose	decimal	Indicates average time to close for the sales lead product.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
Description	string	The free text description of the record.
EstimatedUnitPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated unit price for the lead product.
InventoryItemId	long	The inventory item identifier associated with the lead product.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdatedBy	string	The user who last updated the record.
LeadId	long	The unique identifier of the sales lead for the sales lead product.
LeadProductId	long	The primary key that represents the identifier of the current lead product. • Primary Key
LeadProductNumber	string	This is a public surrogate key for the table and is defaulted with a unique number. It cannot be null.
LongDescription	string	The long description of the sales lead product.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationId	long	The inventory organization identifier associated with the lead product.
PrimaryFlag	boolean	Indicates whether this product is a primary product for this lead.
ProductGroupDescription	string	The description of the product group.
ProductGroupId	long	The unique identifier of the product group.
ProductGroupName	string	The name of the product group if the record represents a product group.
ProductName	string	The name of product or product group. It is the same as the product name if the record represents a product. It is the same as the product group name if the record represents a product group.
ProductType	string	Indicates if the record represents a product or a product group.
Quantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The product quantity identified for the product on the lead.

Name	Type	Description
UOMCode	string	The unit of measure associated with the sales lead product line.

Sales Lead Resources

The resource associated with the sales lead.

QName: {http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/}MklLeadResources

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Sales Lead Resources*
Contained by	*Sales Lead*
Contained by	*Service Lead Service Data Object*
Handled by	*Sales Lead Service Version 2*
Handled by	*Sales Lead Service Version 1*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevelCode	string	Access level for the sale team member on the lead.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmailAddress	string	The email address associated with the record.

Name	Type	Description
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
FormattedPhoneNumber	string	The formatted phone number.
FunctionalRole	string	Indicates the role played by the sales team resource for handling the sales lead.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdatedBy	string	The user who last updated the record.
LeadId	long	The unique identifier of the sales lead for the sales lead resource.
LeadResourceId	long	The unique identifier of the sales lead resource. • Primary Key
ManagerName	string	The manager name of the resource.
ManagerPartyId	long	The party identifier of the manager of the resource in the organizational hierarchy.
Name	string	The name of the lead resource.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgTreeCode	string	The resource organization hierarchy code associated with the resource organization which is associated with the lead resource.
OrgTreeStructureCode	string	The resource organization hierarchy structure code associated with the resource organization hierarchy which is associated with the resource organization associated with the lead resource.
OrgTreeVersionId	string	The resource organization hierarchy version associated with the resource organization which is associated with the lead resource.

Name	Type	Description
PartnerContactFlag	boolean	The indicator to identify whether the resource is a partner contact.
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PrimaryFlag	boolean	Indicates whether the record represents the primary resource on the lead. Primary resource on the lead is the same as the lead owner.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
ResourceId	long	The unique identifier of the resource.
ResourceOrgId	long	The resource organization identifier associated with the lead resource.
ResourceUsername	string	The sign in name of the resource.
RoleName	string	The name of the role of the lead resource in the context of the sales lead.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.

Sales Lead Service Version 2

Service to convert, reject, and accept actions in addition to create, update, delete, and search for leads.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/}SalesLeadService

Service WSDL URL: https://servername/crmService/SalesLeadService?WSDL

assignLead

A web service method that assigns sales team to the lead.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	An input parameter of the assignLead web service method that identifies the lead record by ID.

Response Payload

Element Name	Type	Description
result	string	The return value of the assignLead web service method.

convertLeadToOpportunity

A web service method that converts a lead record to an opportunity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required parameter of the convertLeadToOpportunity web service method. The lead record matching the ID input is used as source for the opportunity.

Response Payload

Element Name	Type	Description
result	string	The return value of the convertLeadToOppportunity web service method. It includes the full set of attributes of the opportunity record.

qualifyLead

A web service method that qualifies a lead based on qualification rules.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	An input parameter of the qualifyLead web service method that identifies the lead record by ID.

Response Payload

Element Name	Type	Description
result	string	The return value of the qualifyLead web service method.

rankLead

A web service method that assigns a pre-defined rank on the lead based on ranking rules.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	An input parameter of the rankLead web service method that identifies the lead record by ID.

Response Payload

Element Name	Type	Description
result	string	The return value of the rankLead web service method.

Element Name	Type	Description

scoreLead

A web service method that scores an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required input parameter of the scoreLead web service method. It is the ID of the lead record that would need to be scored.

Response Payload

Element Name	Type	Description
result	string	The return value of the scoreLead web service method.

submitDeal

A web service method that submits an Oracle Fusion Lead Object record for registration.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required input parameter of the submitDeal web service method. It is the ID of the lead record to be registered.

Response Payload

Element Name	Type	Description
result	string	The return value of the submitDeal web service method.

reassignLead

A web service method that reassigns an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
mode	string	A required input parameter of the reassignLead web service method. Values: AUTOIMMEDIATE: Reassigns the lead immediately, AUTO: Flags the lead for reassignment to be picked-up next time assignment runs, MANUAL: only reassign the owners with the parameter value passed.
leadId	long	A required input parameter of the reassignLead web service method. It is the ID of the lead record that would need to be reassigned.
ownerId	long	An optional input parameter of the reassignLead web service method. It is required when the mode is MANUAL. It is the ID of the resource record to be set as the owner for the lead.
organizationId	long	An optional input parameter of the reassignLead web service method. It is used when the mode is MANUAL. It is the organization ID of the resource record to be set as the owner for the lead.
reason	string	An optional input parameter of the reassignLead web service method. It is the reason for reassignment.
comment	string	An optional input parameter of the reassignLead web service method. It is the comment recorded for the lead while being reassigned.

Response Payload

Element Name	Type	Description
result	string	The return value of the reassignLead web service method.

getSalesLeadProduct

A web service method that queries a single record of Oracle Fusion Lead Product Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadProductId	long	A required input parameter of the getLeadProduct web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	*Sales Lead Products*	The return value of the getLeadProduct web service method. It includes the full set of attributes of record.

createSalesLeadProduct

A web service method that creates Oracle Fusion Lead Product Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadProduct	*Sales Lead Products*	The return value of the createLeadProduct web service method. It includes the full set of attributes of the record.

Response Payload

Element Name	Type	Description
result	*Sales Lead Products*	A required input parameter of the createLeadProduct web service method. The input object includes the attribute values that the record is created with.

updateSalesLeadProduct

A web service method that updates an Oracle Fusion Lead Product Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadProduct	*Sales Lead Products*	A required parameter of the updateLeadProduct web service method. The record matching the ID specified in this input lead product is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Sales Lead Products*	The return value of the updateLeadProduct web service method. It includes the full set of attributes of the record.

deleteSalesLeadProduct

A web service method that deletes an Oracle Fusion Lead Product Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadProduct	*Sales Lead Products*	A required input parameter of the deleteLeadProduct web service method. The record matching the input attribute values specified in the lead product are deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteSalesLeadProduct.

findSalesLeadProduct

A web service method that queries a single record or set of records of Oracle Fusion Lead Product Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLeadResource web service method. The filter criteria is a cumulative set of attribute criteria that identifies record queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findSalesLeadProduct.

Response Payload

Element Name	Type	Description
result	*Sales Lead Products*	The return value of the findLeadProduct web service method. It includes the full set of attributes of records queried.

getSalesLeadResource

A web service method that queries a single record of Oracle Fusion Lead Resource Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadResourceId	long	A required input parameter of the getLeadResource web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	*Sales Lead Resources*	The return value of the getLeadResource web service method. It includes the full set of attributes of record.

createSalesLeadResource

A web service method that creates Oracle Fusion Lead Resource Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadResource	*Sales Lead Resources*	A required input parameter of the createLeadResource web service method. The input object includes the attribute values that the record is created with.

Response Payload

Element Name	Type	Description
result	*Sales Lead Resources*	The return value of the createLeadResource web service method. It includes the full set of attributes of the record.

updateSalesLeadResource

A web service method that updates an Oracle Fusion Lead Resource Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadResource	*Sales Lead Resources*	A required parameter of the updateLeadResource web service method. The record matching the ID specified in this input lead resource is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Sales Lead Resources*	The return value of the updateLeadResource web service method. It includes the full set of attributes of the record.

deleteSalesLeadResource

A web service method that deletes an Oracle Fusion Lead Resource Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadResource	*Sales Lead Resources*	A required input parameter of the deleteLeadResource web service method. The record matching the input attribute values specified in the Lead Resource is deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteSalesLeadResource.

findSalesLeadResource

A web service method that queries a single record or set of records of Oracle Fusion Lead Resource Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLeadResource web service method. The filter criteria is a cumulative set of attribute criteria that identifies records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findSalesLeadResource.

Response Payload

Element Name	Type	Description
result	*Sales Lead Resources*	The return value of the findLeadResource web service method. It includes the full set of attributes of records queried.

getSalesLead

A web service method that queries a single record of Oracle Fusion Lead Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required input parameter of the getLead web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	*Sales Lead*	The return value of the getLead web service method. It includes the full set of attributes of record.

createSalesLead

A web service method that creates Oracle Fusion Lead Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLead	*Sales Lead*	A required input parameter of the createLead web service method. The input object includes the attribute values that the lead record is created with.

Response Payload

Element Name	Type	Description
result	*Sales Lead*	The return value of the createLead web service method. It includes the full set of attributes of the record.

updateSalesLead

A web service method that updates an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLead	*Sales Lead*	A required parameter of the updateLead web service method. The record matching the ID specified in this input lead contact is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Sales Lead*	The return value of the updateLead web service method. It includes the full set of attributes of the record.

deleteSalesLead

A web service method that deletes an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLead	*Sales Lead*	A required input parameter of the deleteLead web service method. The record matching the input attribute values specified in the Lead is deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteSalesLead.

mergeSalesLead

A web service method that either creates a single record of Oracle Fusion Lead Object or updates a record by the given ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLead	*Sales Lead*	A required parameter of the mergeSalesLead web service method. The record matching the ID specified in this input is updated. If no ID is specified, the record is created instead.

Response Payload

Element Name	Type	Description
result	*Sales Lead*	The return value of the mergeLead web service method. It includes the full set of attributes of the record.

findSalesLead

A web service method that queries a single record or set of records of Oracle Fusion Lead Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLead web service method. The filter criteria is the cumulative set of attribute criteria that identifies records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findSalesLead.

Response Payload

Element Name	Type	Description
result	*Sales Lead*	The return value of the findLead web service method. It includes the full set of attributes of records queried.

Element Name	Type	Description

processSalesLead

A web service method that creates or updates Oracle Fusion Lead Object record in bulk.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	As a input parameter value either of create, merge or update needs to be passed.
salesLead	*Sales Lead*	A required parameter of the processLead web service method. The list of lead input records to be created or merged or updated.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	It has three parts. For the first parameter, value can be full which means full set of lead attributes to be returned, value of key means only lead ID values to be returned, value of none means no value returned. For the second parameter, similar to first parameter but related to exceptions. For the third mandatory parameter, indicates true or false for partial failure allowed or not.

Response Payload

Element Name	Type	Description
result	*Sales Lead*	The return value of the processLead web service method. It can be none or a list of only the lead IDs or a list of full set of lead records.

getSalesLeadContact

A web service method that queries a single record of Oracle Fusion Lead Contact Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadMemberId	long	A required input parameter of the getLeadContact web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	*Sales Lead Contacts*	The return value of the getLeadContact web service method. It includes the full set of attributes of record.

createSalesLeadContact

A web service method that creates Oracle Fusion Lead Contact Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadContact	*Sales Lead Contacts*	A required input parameter of the createLeadContact web service method. It includes the attribute values that the record is created with.

Response Payload

Element Name	Type	Description
result	*Sales Lead Contacts*	The return value of the createLeadContact web service method. It includes the full set of attributes of the record.

updateSalesLeadContact

A web service method that updates an Oracle Fusion Lead Contact Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadContact	*Sales Lead Contacts*	A required parameter of the updateLeadContact web service method. The record matching the ID specified in this input lead contact is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Sales Lead Contacts*	The return value of the updateLeadContact web service method. It includes the full set of attributes of the record.

deleteSalesLeadContact

A web service method that deletes an Oracle Fusion Lead Contact Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadContact	*Sales Lead Contacts*	A required input parameter of the deleteLeadContact web service method. The lead contact record matching the input attribute values specified are deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteSalesLeadContact.

findSalesLeadContact

A web service method that queries a single record or set of records of Oracle Fusion Lead Contact Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLeadContact web service method. The filter criteria is the cumulative set of attribute criteria that identifies records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findSalesLeadContact.

Response Payload

Element Name	Type	Description
result	*Sales Lead Contacts*	The return value of the findLeadContact web service method. It includes the full set of attributes of records queried.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition was last updated. The parameter is present in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MKL_VIEW_SALES_LEAD_PRIV	View Sales Lead	Allows viewing sales leads. A sales lead is a prospect or existing customer who has interest or the potential for interest in a product or service being sold.
All Operations	MKL_SET_UP_SALES_LEAD_PRIV	Set Up Sales Lead	Allows setting up common configuration settings, including

Operation Name	Privilege Code	Privilege Name	Privilege Description
			assignment manager, assessment templates, appointments, interactions, notes, tasks, standard lookup types, profile options and descriptive flexfields for sales leads.
All Operations	MKL_MANAGE_SALES_LEAD_PRIV	Manage Sales Lead	Allows web services management of sales leads including modifying lead attributes and accepting or rejecting sales leads.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MKL_VIEW_SALES_LEAD_PRIV	ORA_MKL_SALES_LEAD_FOLLOW_UP_MANAGEMENT_READ_ONLY_DUTY	Sales Lead Follow Up Management Read Only	Read Only role for Sales Lead Follow Up Management Duty.
MKL_VIEW_SALES_LEAD_PRIV	ORA_MKL_SALES_LEAD_FOLLOW_UP_READ_ONLY_DUTY	Sales Lead Follow Up Read Only	Read Only role for Sales Lead Follow Up Duty
MKL_VIEW_SALES_LEAD_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
MKL_VIEW_SALES_LEAD_PRIV	ORA_ZPM_CHANNEL_ADMINISTRATOR_JOB	Channel Administrator	Executes Oracle Partnership Management setup tasks.
MKL_VIEW_SALES_LEAD_PRIV	ORA_MKL_SALES_LEAD_QUALIFICATION_SUPERVISION_DUTY	Sales Lead Qualification Supervision	Qualifies sales leads to determine the sales readiness of all the leads in your reporting hierarchy.
MKL_VIEW_SALES_LEAD_PRIV	ORA_ZPM_CHANNEL_PARTNER_PORTAL_ADMINISTRATOR_JOB	Channel Partner Portal Administrator	Maintains customer-specific changes of all partner portal pages, external, internal, and anonymous pages.
MKL_VIEW_SALES_LEAD_PRIV	ORA_ZBS_SALES_REPRESENTATIVE_JOB	Sales Representative	Represents the business to sell its products. Maintains relationships with customers and contacts, builds pipeline, manages leads and opportunities and performs sales forecasting.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MKL_VIEW_SALES_LEAD_PRIV	ORA_MKL_SALES_LEAD_QUALIFIER_JOB	Sales Lead Qualifier	Identifies, generates and qualifies sales leads and ensures that they are successfully closed within established time objectives. Includes the ability to deliver reports, ensure a healthy sales pipeline volume, help shorten sales cycles, shape lead generation strategies, and provide effective guidance to the rest of the lead qualification team. Other supporting roles include territory development, event and webinar strategies.
MKL_VIEW_SALES_LEAD_PRIV	ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Customer Relationship Management Application Administrator	Individual responsible for customer relationship management application administration. Collaborates with customer relationship management application users to maintain consistent financial application setup, rules, and access.
MKL_VIEW_SALES_LEAD_PRIV	ORA_MKL_SALES_LEAD_FOLLOW_UP_DUTY	Sales Lead Follow Up	Processes sales lead for follow up actions including the qualification and conversion of sales lead to revenue opportunities.
MKL_VIEW_SALES_LEAD_PRIV	ORA_MKL_SALES_LEAD_QUALIFICATION_DUTY	Sales Lead Qualification	Qualifies sales leads to determine the sales readiness of the lead.
MKL_VIEW_SALES_LEAD_PRIV	ORA_MKL_SALES_LEAD_PROCESSING_DUTY	Sales Lead Processing	Processes sales leads including managing, importing, and assigning sales lead activities.
MKL_VIEW_SALES_LEAD_PRIV	ORA_ZPM_PARTNER_ADMINISTRATOR_JOB	Partner Administrator	Registers the partner organization and program enrollment for the partner company. Manages the creation and removal of partner users and the users' privileges.
MKL_VIEW_SALES_LEAD_PRIV	ORA_ZCM_SALES_PARTY_REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
MKL_VIEW_SALES_LEAD_PRIV	ORA_MKL_SALES_LEAD_FOLLOW_UP_MANAGEMENT_DUTY	Sales Lead Follow Up Management	Manages sales lead follow up marketing activities from qualification and assessment of leads to reassignment to sales for follow up sales activities including the conversion of sales lead to revenue opportunities.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MKL_VIEW_SALES_LEAD_PRIV	ORA_ZPM_CHANNEL_OPERATIONS_MANAGER_JOB	Channel Operations Manager	Maintains and manages partner transactional data.
MKL_VIEW_SALES_LEAD_PRIV	ORA_ZCM_PARTNER_SALES_PARTY_MANAGEMENT_DUTY	Partner Sales Party Management	Manages creation and maintenance of sales organizations and consumers for partners. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts. This role has limited access to customers and contacts.
MKL_VIEW_SALES_LEAD_PRIV	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
MKL_SET_UP_SALES_LEAD_PRIV	ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Customer Relationship Management Application Administrator	Individual responsible for customer relationship management application administration. Collaborates with customer relationship management application users to maintain consistent financial application setup, rules, and access.
MKL_SET_UP_SALES_LEAD_PRIV	ORA_MKT_MARKETING_OPERATIONS_MANAGER_JOB	Marketing Operations Manager	Manages the operations for marketing and leads. Develops tactical campaigns to carry out marketing strategies and communicate offers to customer segments using multiple marketing channels. Monitors campaign interactions, captures campaign responses, and manages sales leads to fill the sales pipeline. Creates and maintains the setup for marketing campaigns, responses, segments, lists, and treatments.

Service Lead Service Data Object

The transaction record created when a party has expressed an interest in a product or service. It represents a selling opportunity.

QName: {http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/}ServiceLead

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Sales Lead Resources*
Contains	*Sales Lead Products*
Contains	*Sales Lead Contact*
Handled by	*Sales Lead Service Version 1*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AcceptedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the lead was accepted.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
ApprovalDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the lead was approved. This is applicable to deals only.
ApprovalTaskId	string	The unique identifier of the approval task associated with the approval process for the lead. This is applicable to deals only.
ApproverId	long	The party identifier associated with the approver of the lead registration record.

Name	Type	Description
AssignmentStatusCode	string	Includes the current assignment related status for the lead. For example, whether the lead is assigned or unassigned.
BudgetAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The budget amount associated with the sales lead.
BudgetStatus	string	The budget status associated with the budget amount associated with the sales lead.
CampaignContactId	long	The campaign contact identifier associated with the sales lead.
ChannelType	string	Indicates the channel through which the lead contacted the company.
City	string	The name of the city.
ConvertedTimestamp	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates when the lead was converted to an opportunity.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CustomerId	long	The party identifier associated with the customer who is associated with the sales lead.
CustomerNeed	string	Indicates which needs the lead product serves for the lead customer.
DealAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The deal size associated with the sales lead.
DecisionMakerIdentifiedFlag	boolean	Indicates whether a decision maker is identified for the sales lead.
Description	string	The free text description of the record.

Name	Type	Description
EmailAddress	string	The email address associated with the record.
EstimatedCloseDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The estimated close date of the deal. This is a deal specific attribute.
ExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The expiration date associated with the sales lead.
FollowupTimestamp	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates when the sales lead must be followed up.
ImportTaskId	long	The unique identifier of the import task associated with the lead. This is applicable to imported leads only.
LastAssignmentDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the lead was last run through automated batch lead assignment process.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdatedBy	string	The user who last updated the record.
LeadAcceptedFlag	boolean	Indicates if the lead is accepted.
LeadId	long	The primary identifier of the sales lead. • Primary Key
LeadNumber	string	The unique identifier of the sales lead. It also acts as a public surrogate key.
MklLeadResources	*Sales Lead Resources*	Indicates the reference to lead resources (child).
MklLeadTcMembers	*Sales Lead Contacts*	Indicates the reference to lead contacts (child).
MklProdAssoc	*Sales Lead Products*	Indicates the reference to lead products (child).
Name	string	The name of the sales lead.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
OwnerId	long	The resource identifier for the lead owner resource.
OwnerPartyName	string	The name associated with the owner of the sales lead.
PartnerId	long	The unique identifier of the partner.
PartnerPartyName	string	The name associated with the primary partner of the sales lead. This is a deal specific attribute.
PartnerProgramId	long	A reference to the partner program in which the primary partner associated with the sales lead is enrolled. This is a deal specific attribute.
PartnerType	string	Indicates the type of the primary partner associated with the sales lead. This is a deal specific attribute.
PartnerTypeMeaning	string	The meaning of the type of primary partner associated with the sales lead. This is a deal specific attribute.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PostalCode	string	The postal code element of the address.
PrimaryContactId	long	The unique identifier of the sales lead contact marked as a primary lead contact.
PrimaryContactPartyName	string	The name associated with the primary lead contact.
PrimaryInventoryItemDescription	string	The description associated with the sales lead.
PrimaryInventoryItemId	long	The inventory item identifier associated with the primary lead product.
PrimaryInventoryOrgId	long	The inventory item organization identifier associated with primary lead product.
PrimaryProductDescription	string	The description of the primary lead product.

Name	Type	Description
PrimaryProductGroupId	long	The unique identifier of the primary product group associated with the lead.
ProductGroupName	string	The name associated with the primary lead product Group.
ProgramName	string	The name of the partner program in which the primary partner associated with the sales lead is enrolled. This is a deal specific attribute.
Project	string	The customer project identified for the sales lead.
QualificationScore	long	The qualification score associated with the lead. This score is computed by the assignment manager.
QualifiedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date when the sales lead was qualified.
Rank	string	The rank associated with the sales lead.
ReassignCommentText	string	Comments added to the lead during reassign operation.
ReassignReasonCode	string	The reason code specified by the user when the lead was reassigned.
RegistrationNumber	string	The registration number of the sales lead. This unique identifier is generated when the sales lead is approved. This is a deal specific attribute.
RegistrationStatus	string	The approval Status of the sales lead. This is a deal specific attribute.
RegistrationType	string	Indicates the registration type of the sales lead. This is a deal specific attribute.
RegistrationTypeMeaning	string	Indicates the meaning of the registration type of the sales lead. This is a deal specific attribute.
RejectByTerritoryId	long	The territory identifier associated with the territory to which the resources who rejected the lead belonged at the time of rejection.
RejectByTerritoryVersionId	long	The territory version identifier associated with the territory to which the resources who

Name	Type	Description
		rejected the lead belonged at the time of rejection.
RejectByUserId	long	The unique identifier of the sales representative who rejected the sales lead.
RejectComment	string	The comments provided by the sales representative who rejected the sales lead.
RejectReasonCode	string	Indicates the rejection reason code provided by the sales representative who rejected the sales lead.
RejectedCount	long	Indicates the number of times the sales lead was rejected by sales representatives.
RejectedTimestamp	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date and time when the sales lead was rejected by a sales representative.
RelationshipId	long	The relationship identifier for the record.
RetireComment	string	The comments recorded when the sales lead is moved to retired status.
RetireReasonCode	string	The reason code recorded when the sales lead is moved to retired status.
RetiredTimestamp	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date and time recorded when the sales lead is moved to retired status.
SalesChannel	string	Indicates the sales channel responsible for following up on the sales lead.
SalesChannelMeaning	string	The meaning of the sales channel associated with the sales lead.
Score	long	The score associated with the sales lead. The score is computed based on the scoring rules.
SourceCode	string	The marketing source code associated with the sales lead.
State	string	The name of the state.
StatusCode	string	The pre-defined code used to indicate the status.

Name	Type	Description
Timeframe	string	The time frame associated with the sales lead.
ToReassignFlag	boolean	Indicates whether the sales lead must be reassigned during the next batch assignment run.
ToRescoreFlag	boolean	Indicates whether the sales lead must be rescored during the next batch assignment run.
UniqueName	string	The unique name of the customer associated with the sales lead.

Sales Lead Service Version 2

Service to convert, reject, and accept actions in addition to create, update, delete, and search for leads.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/}SalesLeadService

Service WSDL URL: https://servername/crmService/SalesLeadService?WSDL

assignLead

A web service method that assigns sales team to the lead.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	An input parameter of the assignLead web service method that identifies the lead record by ID.

Response Payload

Element Name	Type	Description
result	string	The return value of the assignLead web service method.

convertLeadToOpportunity

A web service method that converts a lead record to an opportunity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required parameter of the convertLeadToOpportunity web service method. The lead record matching the ID input is used as source for the opportunity.

Response Payload

Element Name	Type	Description
result	string	The return value of the convertLeadToOppportunity web service method. It includes the full set of attributes of the opportunity record.

qualifyLead

A web service method that qualifies a lead based on qualification rules.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	An input parameter of the qualifyLead web service method that identifies the lead record by ID.

Response Payload

Element Name	Type	Description
result	string	The return value of the qualifyLead web service method.

rankLead

A web service method that assigns a pre-defined rank on the lead based on ranking rules.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	An input parameter of the rankLead web service method that identifies the lead record by ID.

Response Payload

Element Name	Type	Description
result	string	The return value of the rankLead web service method.

scoreLead

A web service method that scores an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required input parameter of the scoreLead web service method. It is the ID of the lead record that would need to be scored.

Response Payload

Element Name	Type	Description
result	string	The return value of the scoreLead web service method.

submitDeal

A web service method that submits an Oracle Fusion Lead Object record for registration.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required input parameter of the submitDeal web service method. It is the ID of the lead record to be registered.

Response Payload

Element Name	Type	Description
result	string	The return value of the submitDeal web service method.

reassignLead

A web service method that reassigns an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
mode	string	A required input parameter of the reassignLead web service method. Values: AUTOIMMEDIATE: Reassigns the lead immediately, AUTO: Flags the lead for reassignment to be picked-up next time assignment runs, MANUAL: only reassign the owners with the parameter value passed.
leadId	long	A required input parameter of the reassignLead web service method. It is the ID of the lead record that would need to be reassigned.
ownerId	long	An optional input parameter of the reassignLead web service method. It is required when the mode is MANUAL. It is the ID of the resource record to be set as the owner for the lead.
organizationId	long	An optional input parameter of the reassignLead web service method. It is used when the mode is MANUAL. It is the organization ID of the resource record to be set as the owner for the lead.
reason	string	An optional input parameter of the reassignLead web service method. It is the reason for reassignment.
comment	string	An optional input parameter of the reassignLead web service method. It is the comment recorded for the lead while being reassigned.

Response Payload

Element Name	Type	Description
result	string	The return value of the reassignLead web service method.

getSalesLeadProduct

A web service method that queries a single record of Oracle Fusion Lead Product Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadProductId	long	A required input parameter of the getLeadProduct web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	*Sales Lead Products*	The return value of the getLeadProduct web service method. It includes the full set of attributes of record.

createSalesLeadProduct

A web service method that creates Oracle Fusion Lead Product Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadProduct	*Sales Lead Products*	The return value of the createLeadProduct web service method. It includes the full set of attributes of the record.

Response Payload

Element Name	Type	Description
result	*Sales Lead Products*	A required input parameter of the createLeadProduct web service method. The input object includes the attribute values that the record is created with.

updateSalesLeadProduct

A web service method that updates an Oracle Fusion Lead Product Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadProduct	*Sales Lead Products*	A required parameter of the updateLeadProduct web service method. The record matching the ID specified in this input lead product is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Sales Lead Products*	The return value of the updateLeadProduct web service method. It includes the full set of attributes of the record.

deleteSalesLeadProduct

A web service method that deletes an Oracle Fusion Lead Product Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadProduct	*Sales Lead Products*	A required input parameter of the deleteLeadProduct web service method. The record matching the input attribute values specified in the lead product are deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteSalesLeadProduct.

findSalesLeadProduct

A web service method that queries a single record or set of records of Oracle Fusion Lead Product Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLeadResource web service method. The filter criteria is a cumulative set of attribute criteria that identifies record queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findSalesLeadProduct.

Response Payload

Element Name	Type	Description
result	*Sales Lead Products*	The return value of the findLeadProduct web service method. It includes the full set of attributes of records queried.

getSalesLeadResource

A web service method that queries a single record of Oracle Fusion Lead Resource Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadResourceId	long	A required input parameter of the getLeadResource web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	*Sales Lead Resources*	The return value of the getLeadResource web service method. It includes the full set of attributes of record.

createSalesLeadResource

A web service method that creates Oracle Fusion Lead Resource Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadResource	*Sales Lead Resources*	A required input parameter of the createLeadResource web service method. The input object includes the attribute values that the record is created with.

Response Payload

Element Name	Type	Description
result	*Sales Lead Resources*	The return value of the createLeadResource web service method. It includes the full set of attributes of the record.

updateSalesLeadResource

A web service method that updates an Oracle Fusion Lead Resource Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadResource	*Sales Lead Resources*	A required parameter of the updateLeadResource web service method. The record matching the ID specified in this input lead resource is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Sales Lead Resources*	The return value of the updateLeadResource web service method. It includes the full set of attributes of the record.

deleteSalesLeadResource

A web service method that deletes an Oracle Fusion Lead Resource Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadResource	*Sales Lead Resources*	A required input parameter of the deleteLeadResource web service method. The record matching the input attribute values specified in the Lead Resource is deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteSalesLeadResource.

findSalesLeadResource

A web service method that queries a single record or set of records of Oracle Fusion Lead Resource Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLeadResource web service method. The filter criteria is a cumulative set of attribute criteria that identifies records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findSalesLeadResource.

Response Payload

Element Name	Type	Description
result	*Sales Lead Resources*	The return value of the findLeadResource web service method. It includes the full set of attributes of records queried.

getSalesLead

A web service method that queries a single record of Oracle Fusion Lead Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required input parameter of the getLead web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	*Sales Lead*	The return value of the getLead web service method. It includes the full set of attributes of record.

createSalesLead

A web service method that creates Oracle Fusion Lead Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLead	*Sales Lead*	A required input parameter of the createLead web service method. The input object includes the attribute values that the lead record is created with.

Response Payload

Element Name	Type	Description
result	*Sales Lead*	The return value of the createLead web service method. It includes the full set of attributes of the record.

updateSalesLead

A web service method that updates an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLead	*Sales Lead*	A required parameter of the updateLead web service method. The record matching the ID specified in this input lead contact is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Sales Lead*	The return value of the updateLead web service method. It includes the full set of attributes of the record.

deleteSalesLead

A web service method that deletes an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLead	*Sales Lead*	A required input parameter of the deleteLead web service method. The record matching the input attribute values specified in the Lead is deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteSalesLead.

mergeSalesLead

A web service method that either creates a single record of Oracle Fusion Lead Object or updates a record by the given ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLead	*Sales Lead*	A required parameter of the mergeSalesLead web service method. The record matching the ID specified in this input is updated. If no ID is specified, the record is created instead.

Response Payload

Element Name	Type	Description
result	*Sales Lead*	The return value of the mergeLead web service method. It includes the full set of attributes of the record.

findSalesLead

A web service method that queries a single record or set of records of Oracle Fusion Lead Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLead web service method. The filter criteria is the cumulative set of attribute criteria that identifies records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findSalesLead.

Response Payload

Element Name	Type	Description
result	*Sales Lead*	The return value of the findLead web service method. It includes the full set of attributes of records queried.

processSalesLead

A web service method that creates or updates Oracle Fusion Lead Object record in bulk.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	As a input parameter value either of create, merge or update needs to be passed.
salesLead	*Sales Lead*	A required parameter of the processLead web service method. The list of lead input records to be created or merged or updated.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	It has three parts. For the first parameter, value can be full which means full set of lead attributes to be returned, value of key means only lead ID values to be returned, value of none means no value returned. For the second parameter, similar to first parameter but related to exceptions. For the third mandatory parameter, indicates true or false for partial failure allowed or not.

Response Payload

Element Name	Type	Description
result	*Sales Lead*	The return value of the processLead web service method. It can be none or a list of only the lead IDs or a list of full set of lead records.

getSalesLeadContact

A web service method that queries a single record of Oracle Fusion Lead Contact Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadMemberId	long	A required input parameter of the getLeadContact web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	*Sales Lead Contacts*	The return value of the getLeadContact web service method. It includes the full set of attributes of record.

createSalesLeadContact

A web service method that creates Oracle Fusion Lead Contact Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadContact	*Sales Lead Contacts*	A required input parameter of the createLeadContact web service method. It includes the attribute values that the record is created with.

Response Payload

Element Name	Type	Description
result	*Sales Lead Contacts*	The return value of the createLeadContact web service method. It includes the full set of attributes of the record.

updateSalesLeadContact

A web service method that updates an Oracle Fusion Lead Contact Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadContact	*Sales Lead Contacts*	A required parameter of the updateLeadContact web service method. The record matching the ID specified in this input lead contact is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Sales Lead Contacts*	The return value of the updateLeadContact web service method. It includes the full set of attributes of the record.

deleteSalesLeadContact

A web service method that deletes an Oracle Fusion Lead Contact Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadContact	*Sales Lead Contacts*	A required input parameter of the deleteLeadContact web service method. The lead contact record matching the input attribute values specified are deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteSalesLeadContact.

findSalesLeadContact

A web service method that queries a single record or set of records of Oracle Fusion Lead Contact Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLeadContact web service method. The filter criteria is the cumulative set of attribute criteria that identifies records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findSalesLeadContact.

Response Payload

Element Name	Type	Description
result	*Sales Lead Contacts*	The return value of the findLeadContact web service method. It includes the full set of attributes of records queried.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition was last updated. The parameter is present in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MKL_VIEW_SALES_LEAD_PRIV	View Sales Lead	Allows viewing sales leads. A sales lead is a prospect or existing customer who has interest or the potential for interest in a product or service being sold.
All Operations	MKL_SET_UP_SALES_LEAD_PRIV	Set Up Sales Lead	Allows setting up common configuration settings, including assignment manager, assessment templates, appointments, interactions, notes, tasks, standard lookup types, profile options and descriptive flexfields for sales leads.
All Operations	MKL_MANAGE_SALES_LEAD_PRIV	Manage Sales Lead	Allows web services management of sales leads including modifying

Operation Name	Privilege Code	Privilege Name	Privilege Description
			lead attributes and accepting or rejecting sales leads.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MKL_VIEW_SALES_LEAD_PRIV	ORA_MKL_SALES_LEAD_FOLLOW_UP_MANAGEMENT_READ_ONLY_DUTY	Sales Lead Follow Up Management Read Only	Read Only role for Sales Lead Follow Up Management Duty.

Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	ORA_ZCM_SALES_PARTY_REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_ZCM_SALES_PARTY_REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_AVAILABILITY_MANAGEMENT	Service Availability Management	Manage the service availability data including reading and writing the availability of a service.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_PROFILE_ADMINISTRATION	Service Profile Administration	Manages all aspects of the Service Profile object, including deleting a service profile.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
ORA_ZPM_CHANNEL_OPERATIONS_MANAGER_JOB	ORA_SVC_SR_CHANNEL_USER	Service Request Channel User	Manages all aspects of the Service Request related to partner accounts
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_SVC_SR_CONTRIBUTOR	Service Request Contributor	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request Management capabilities. Would not be able to respond to customer, assign SR to a user or change the status of a SR.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZPM_PARTNER_ADMINISTRATOR_JOB	ORA_SVC_SR_PARTNER_USER	Service Request Partner User	Individual from the partner organization requesting for support to resolve their questions and issues.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_STATUS_COMPUTATION	Service Status Computation	Perform actions required to determine the availability of a service.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_SETUP_CUSTOMER_CENTER_DUTY	Setup Customer Center	Manages customer center set up, sales party creation and their related objects, such as appointments, assessments, interactions, notes and tasks.
ORA_ZPM_PARTNER_ADMINISTRATOR_JOB	ORA_HRS_SOCIAL_CONNECTION_PARTNER_DUTY_CRM	Social Connection Partner	Performs all Oracle Fusion Social Connection partner duties.
ORA_ZPM_CHANNEL_PARTNER_PORTAL_ADMINISTRATOR_JOB	ORA_HRS_SOCIAL_CONNECTION_PARTNER_DUTY_CRM	Social Connection Partner	Performs all Oracle Fusion Social Connection partner duties.
ORA_ZPM_CHANNEL_OPERATIONS_MANAGER_JOB	ORA_HRS_SOCIAL_CONNECTION_PARTNER_DUTY_CRM	Social Connection Partner	Performs all Oracle Fusion Social Connection partner duties.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HRS_SOCIAL_CONNECTION_PARTNER_DUTY_CRM	Social Connection Partner	Performs all Oracle Fusion Social Connection partner duties.
ORA_ZPM_CHANNEL_ADMINISTRATOR_JOB	ORA_HRS_SOCIAL_CONNECTION_PARTNER_DUTY_CRM	Social Connection Partner	Performs all Oracle Fusion Social Connection partner duties.
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SPECIALIST_JOB	Subscription Specialist	Individual responsible for managing subscriptions, establishing recurring and usage billing processes, initiating manual discounts and invoice adjustments, and handling billing discrepancies and disputes.
ORA_ZPM_CHANNEL_OPERATIONS_MANAGER_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	Territory Management Setup	Manages sales territory setup, including lookups, profile options, flexfields, and dimension data. Runs dimension synchronization, and visibility jobs. Additional duties include quota management setup.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_CUSTOMER_ACCOUNT_ADMINISTRATION_DUTY	Trading Community Customer Account Administration	Grants privileges to setup customer account information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DATA_QUALITY_ADMIN_DUTY	Trading Community Data Quality Administration	Configures, reviews, and edits predefined data quality server configurations and the predefined matching, synchronization, and cleansing configurations.
ORA_ZPM_CHANNEL_PARTNER_PORTAL_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_MKL_SALES_LEAD_PROCESSING_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZPM_CHANNEL_OPERATIONS_MANAGER_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_MKT_MARKETING_OPERATIONS_MANAGER_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZPM_CHANNEL_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZPM_CHANNEL_PARTNER_PORTAL_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_MKL_SALES_LEAD_PROCESSING_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZPM_CHANNEL_OPERATIONS_MANAGER_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZPM_CHANNEL_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_PERSON_ADMINISTRATION_DUTY	Trading Community Person Administration	Grants privileges to setup person information.
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_ZCA_VIEW_CX_AI_AGENTS	View CX AI Agents	This role allows at run-time UI to access agent meta data

Note

The object that captures comments, information, or instructions for an Oracle Fusion Applications business object.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/noteService}Note

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Note Descriptive Flexfields*
Contained by	*Objective*
Contained by	*Opportunity*
Contained by	*Sales Cloud Account*
Contained by	*Sales Cloud Household*
Contained by	*Sales Cloud Contact*

Handled by	*Sales Competitor Service*

Relationship Type	Object or Service
Handled by	*Sales Cloud Household*
Handled by	*Partner Program Enrollment Service*
Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactRelationshipId	long	The identifier of the contact relationship record in Trading Community Architecture (TCA).
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreatorPartyId	long	This is the party identifier for the note creator.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DeleteFlag	boolean	Indicates whether the user has access to delete the note.
Dff	*Note Descriptive Flexfields*	The descriptive flex field segment.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record

Name	Type	Description
NoteAttributeCategory	string	The contextual flex field for development usage.
NoteAttributeUid1	string	The flex field for development usage.
NoteAttributeUid2	string	The flex field for development usage.
NoteAttributeUid3	string	The flex field for development usage.
NoteAttributeUid4	string	The flex field for development usage.
NoteAttributeUid5	string	The flex field for development usage.
NoteId	long	The unique identifier of the note. • Primary Key
NoteNumber	string	The alternate unique identifier of the note. A user key that is system generated or from an external system.
NoteTitle	string	The title of the note entered by the user.
NoteTxt	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	This is the column that stores the actual note text.
NoteTypeCode	string	This is the note type code for categorization of note.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
SourceObjectCode	string	This is the source_object_code for the source object as defined in OBJECTS Metadata.
SourceObjectId	string	This is the source_object_Uid for the source object such as Activities, Opportunities, and so on defined in OBJECTS metadata.
UpdateFlag	boolean	Indicates whether the user can update the note.
VisibilityCode	string	This is the attribute to specify the visibility level of the note.

Note Descriptive Flexfields

The descriptive flex field that captures additional information for notes, such as a priority or status.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/flex/noteDff/}NoteDFF

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Note*
Handled by	*Business Plan Service*
Handled by	*Sales Reference Customer*
Handled by	*Appointment Service*
Handled by	*Sales Cloud Contact*
Handled by	*Sales Objective*
Handled by	*Sales Lead Service Version 2*

Handled by	*Opportunity Service*
Handled by	*Sales Competitor Service*
Handled by	*Sales Cloud Household*
Handled by	*Partner Program Enrollment Service*
Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
NoteId	long	The unique identifier of the note. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Sales Lead

The transaction record created when a party has expressed an interest in a product or service. It represents a selling opportunity.

QName: {http://xmlns.oracle.com/oracle/apps/marketing/leadMgmt/leads/leadService/}MklLead

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Note*
Contains	*Sales Lead Resources*
Contains	*Sales Lead Products*
Contains	*Sales Lead Contacts*
Extended by	*Sales Lead*
Handled by	*Sales Lead Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AcceptedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the lead was accepted by a resource assigned to it.
AcceptedDateTime	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Date and time when the sales lead is accepted by a resource assigned to it.
AddrElementAttribute1	string	Additional address element to support flexible address format.
AddrElementAttribute2	string	Additional address element to support flexible address format.
AddrElementAttribute3	string	Additional address element to support flexible address format.
AddrElementAttribute4	string	Additional address element to support flexible address format.
AddrElementAttribute5	string	Additional address element to support flexible address format.
AddressLinesPhonetic	string	Phonetic or Kana representation of the Kanji address lines (used in Japan).
ApprovalDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when a partner registered lead is approved by internal channel manager.
ApprovalDateTime	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the sales lead was approved. This is applicable to deal registrations only.
ApprovalTaskId	string	The unique identifier of the approval task pertaining to a partner registered lead.
ApproverId	long	The party identifier associated with the approver of the lead registration record.
AssetId	long	Unique identifier for the Asset associated with the Sales Lead.
AssetNumber	string	Unique Number for the Asset associated with the Sales Lead.
AssetSerialNumber	string	Serial Number for the Asset associated with the Sales Lead.

Name	Type	Description
AssignmentStatusCdMeaning	string	Defines the current assignment related status for the lead that is, whether the lead is assigned or unassigned and so on.
AssignmentStatusCode	string	Includes the current assignment related status for the lead. For example, whether the lead is assigned or unassigned.
BranchCode	string	The branch code pertaining to an organization.
BudgetAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The budget amount associated with the sales lead.
BudgetCurrencyCode	string	The currency code associated with the budget amount associated with the sales lead.
BudgetStatus	string	The budget status associated with the budget amount associated with the sales lead.
BudgetStatusSetId	long	The identifier of the budget status list set.
Building	string	Specific building name or number at a given address.
BusinessUnitId	long	The business unit identifier associated with the business unit of the sales lead creator.
BusinessUnitName	string	The name of the business unit associated with the sales lead.
CampaignId	long	The unique identifier for the campaign.
CampaignName	string	The name of the campaign associated with the sales lead.
ChannelType	string	Indicates the channel through which the lead contacted the company.
ChannelTypeMeaning	string	Indicates the channel through which this lead contacted the company.
ChannelTypeSetId	long	The identifier of the channel type list set.
ClassCode1	string	The auxiliary dimension for the Account.
ClassCode2	string	The auxiliary dimension for the Account.

Name	Type	Description
ClassCode3	string	The auxiliary dimension for the Account.
ClassCode4	string	The auxiliary dimension for the Account.
ContactTimezoneCd	string	Preferred time zone of the contact pursued on the lead.
ConvCurrencyCode	string	The currency code used to convert the lead currency. This is typically the corporate currency.
ConvExchangeRate	decimal	The exchange rate used to convert the lead currency to the corporate currency.
ConvRateType	string	The rate type used to convert the lead currency to the corporate currency.
ConvertedDateTime	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the sales lead was converted to an opportunity.
ConvertedTimestamp	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates when the lead was converted to an opportunity.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreationDateFormatted	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date and time when the record is created.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CurrencyConversionDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The currency conversion date.
CurrencyMeaning	string	The currency code for the lead.
CustomerAddress1	string	The first line of the identifying address.
CustomerAddress2	string	The second line of the identifying address.
CustomerAddress3	string	The third line of the identifying address.

Name	Type	Description
CustomerAddress4	string	The fourth line of the identifying address.
CustomerCategoryCode	string	The category code for a customer.
CustomerCity	string	The city associated with the sale that is associated with the lead customer.
CustomerCountry	string	The country in which customer is located.
CustomerCurrencyFyPotentialRevenue	decimal	The potential annual revenues for a customer.
CustomerDoNotCallFlag	boolean	Indicates the Do not call flag set for sales lead customer (person).
CustomerDoNotContactFlag	boolean	Indicates the Do not contact flag set for sales lead customer (person).
CustomerDoNotEmailFlag	boolean	Indicates the do not email flag set for sales lead customer (person).
CustomerDoNotMailFlag	boolean	Indicates the do not mail flag set for sales lead customer (person).
CustomerEmployeesTotal	decimal	The total number of employees at a customer site.
CustomerId	long	The customer identifier. It is a reference to the customer record in the TCA schema.
CustomerIdenAddrLocationId	long	The address location identifier pertaining to a customer.
CustomerNeed	string	Indicates needs that the lead product serves for the lead customer.
CustomerPartyName	string	The name of the customer.
CustomerPartyType	string	The type of customer.
CustomerPartyUniqueName	string	The concatenation of customer name with postal code to make it unique.
CustomerPersonProfileId	long	The unique identifier of the sales lead customer (person) to get the dnc flags.

Name	Type	Description
CustomerPostalCode	string	The code in which customer is located.
CustomerPrimaryAddress	string	The primary address of the customer associated with the sales lead.
CustomerPrimaryEmailAddress	string	The primary email address of the customer associated with the sales lead.
CustomerPrimaryPhoneNumber	string	The primary formatted phone number of the customer associated with the sales lead.
CustomerRegistryId	string	The customer registry identifier.
CustomerSICCode	string	The industry code pertaining to the customer.
CustomerSellToAddress	string	The sell-to address of the customer associated with the sales lead.
CustomerState	string	The state in which customer is located.
CustomerStatus	string	The status of the customer associated with the sales lead.
CustomerURL	string	The URL address pertaining to the customer.
DaysUntilExpiration	int	The number of days prior to expiration of the partner registered lead.
DealAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount attributed to a lead.
DealTypeSetId	long	The identifier of the deal type list set.
DecisionMakerIdentifiedFlag	boolean	Indicates if the decision maker at customer site is identified.
DeleteFlag	boolean	This flag controls if the user has access to delete the record
Description	string	The free text description of the record.
Distance	decimal	Distance from the input location.

Name	Type	Description
EstimatedCloseDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The estimated close date for the deal once registered.
ExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The expiration date associated with the sales lead.
FloorNumber	string	Specific floor number at a given address or in a particular building when building number is provided.
FollowupTimestamp	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates when the sales lead must be followed up.
IBAssetId	long	Unique identifier for the IB Asset associated with the Sales Lead.
IBAssetNumber	string	Unique number for the IB Asset associated with the Sales Lead.
IBAssetSerialNumber	string	Unique serial number for the IB Asset associated with the Sales Lead.
ImportTaskId	long	The unique identifier of the import activity that resulted in the lead being created.
InventoryItemDescription	string	The description of the product added to a lead.
JobTitle	string	The job title of the primary contact on the sales lead.
LastAssignmentDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the lead was last reassigned.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateDateFormatted	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date and time of the last update of the row.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Latitude	decimal	Latitude information for the location.

Name	Type	Description
LeadAcceptedFlag	boolean	Indicates if the lead is accepted.
LeadAging	decimal	The number of days elapsed since the lead was created.
LeadCreatedBy	string	Functional WHO: Indicates the user who created this record.
LeadCreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Functional WHO: Indicates the date and time when this record is created.
LeadId	long	The partner type. Indicates the type of partner stamped on the lead. • Primary Key
LeadLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Functional WHO: Indicates the date and time of the last update of the row.
LeadLastUpdatedBy	string	Functional WHO: Indicates the user who last updated the row.
LeadNumber	string	User friendly unique identifier for the lead.
LeadOrigin	string	Origin of the Lead
LongDescription	string	The description of the item.
Longitude	decimal	Longitude information for the location.
MklLeadResources	*Sales Lead Resources*	The lead resource for sales lead.
MklLeadTcMembers1	*Sales Lead Contacts*	The lead contacts for sales lead.
MklProdAssoc1	*Sales Lead Products*	The lead products for sales lead.
Name	string	Lead Name used for identifying the lead.
Note	*Note*	Notes added to the sales lead.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
OrgContactId	long	The unique identifier for the primary sales lead contact of the sales lead.
OrganizationSize	string	The size of the organization.
OrganizationType	string	The type of the organization.
OwnerId	long	The party identifier associated with the owner of the sales lead.
OwnerPartyName	string	The name associated with the owner of the sales lead.
OwnerResourceOrgId	long	The unique identifier for the organization to which the lead owner belongs.
OwnerTreeCode	string	The tree code of the resource hierarchy to which the lead owner belongs.
OwnerTreeStructureCode	string	The tree structure code of the resource hierarchy to which the lead owner belongs.
OwnerTreeVersionId	string	The tree version identifier of the resource hierarchy to which the lead owner belongs.
PartnerId	long	The unique identifier of the partner.
PartnerPartyName	string	The name associated with the primary partner of the sales lead. This is a deal specific attribute.
PartnerProgramId	long	A reference to the partner program in which the primary partner associated with the sales lead is enrolled. This is a deal specific attribute.
PartnerProgramName	string	The name of the partner program in which the primary partner associated with the sales lead is enrolled. This is a deal specific attribute.
PartnerType	string	Indicates the type of the primary partner associated with the sales lead. This is a deal specific attribute.
PartnerTypeMeaning	string	The meaning of the type of primary partner associated with the sales lead. This is a deal specific attribute.

Name	Type	Description
PostalPlus4Code	string	Four digit extension to the United States Postal ZIP code.
PrimaryContactAddress1	string	The first line of address associated with the primary contact of the lead.
PrimaryContactAddress2	string	The second line of address associated with the primary contact of the lead.
PrimaryContactAddress3	string	The third line of address associated with the primary contact of the lead.
PrimaryContactAddress4	string	The fourth line of address associated with the primary contact of the lead.
PrimaryContactCity	string	The city where the primary contact of the lead is located.
PrimaryContactCountry	string	The country where the primary contact of the lead is located.
PrimaryContactCountryName	string	Full name associated with primary contact's country code.
PrimaryContactCounty	string	The county where the primary contact of the lead is located.
PrimaryContactDoNotCallFlag	boolean	Do not call flag set at person level for primary contact associated with sales lead.
PrimaryContactDoNotContactFlag	boolean	Do not contact flag set at person level for primary contact associated with sales lead.
PrimaryContactDoNotEmailFlag	boolean	The do not email flag set at person level for primary contact associated with sales lead.
PrimaryContactDoNotMailFlag	boolean	The do not mail flag set at person level for primary contact associated with sales lead.
PrimaryContactEmailAddress	string	The email address of the primary sales lead contact on the lead.
PrimaryContactFormattedPhoneNumber	string	The formatted version of the phone number for the primary contact on the sales lead.
PrimaryContactId	long	The unique identifier of the sales lead contact marked as a primary lead contact.

Name	Type	Description
PrimaryContactPartyName	string	The name associated with the primary lead contact.
PrimaryContactPartyStatus	string	Status of the primary contact associated with the sales lead.
PrimaryContactPartyType	string	The relationship type for the primary contact of the lead.
PrimaryContactPersonFirstName	string	The first name of the primary contact for a lead.
PrimaryContactPersonLastName	string	The last name of the primary contact for a lead.
PrimaryContactPersonMiddleName	string	The middle name of the primary contact for a lead.
PrimaryContactPersonProfileId	long	The unique identifier for the sales lead primary contact person row to get dnc flags.
PrimaryContactPostalCode	string	The zip code of the location where the primary contact of the lead is located.
PrimaryContactPrimaryAddress	string	The primary address of the primary contact associated with the sales lead.
PrimaryContactProvince	string	The province where the primary contact of the lead is located.
PrimaryContactRelationshipId	long	The unique identifier of the relationship that a primary contact has with the parent organization.
PrimaryContactSellToAddress	string	The sell-to address of the primary contact associated with the sales lead.
PrimaryContactState	string	The state where the primary contact of the lead is located.
PrimaryContactTitle	string	The title of the primary contact for a lead.
PrimaryContactURL	string	The URL address pertaining to the primary contact for a lead.
PrimaryInventoryItemId	long	The unique identifier of the primary product associated with a lead.

Name	Type	Description
PrimaryInventoryOrgId	long	The unique identifier of the organization to which the primary product associated with a lead belongs.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryProductGroupId	long	The unique identifier of the primary product group associated with a lead.
ProdNameOrGroupName	string	The name of the product associated with a lead.
ProductGroupDescription	string	The description of the product or product group associated with a lead.
ProductGroupName	string	The name of the product group associated with a lead.
ProgramName	string	The name of the partner program in which the primary partner associated with the sales lead is enrolled. This is a deal specific attribute.
Project	string	The customer project identified for the sales lead.
QualificationScore	long	The qualification score for a lead.
QualifiedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date when the sales lead was qualified.
QualifiedDateTime	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the sales lead was qualified.
Rank	string	The rank associated with the sales lead.
RankMeaning	string	The meaning associated with specific lead rank.
RankSetId	long	The identifier of the rank list set identifier.

Name	Type	Description
ReassignComment	string	The comment provided by a user while requesting the lead reassignment.
ReassignReasonCode	string	The predefined code used to indicate the reason for lead reassignment.
ReassignReasonCodeSetId	long	The reassign reason of the list set identifier.
RegistrationNumber	string	The registration number of the sales lead. This unique identifier is generated when the sales lead is approved. This is a deal specific attribute.
RegistrationStatus	string	The approval status of the sales lead. This is a deal specific attribute.
RegistrationStatusMeaning	string	The status of the approval request for the partner registered lead.
RegistrationType	string	Indicates the registration type of the sales lead. This is a deal specific attribute.
RegistrationTypeMeaning	string	Indicates the meaning of the registration type of the sales lead. This is a deal specific attribute.
RejectByTerritoryId	long	The unique identifier of the territory of the sales representative who rejected the sales lead.
RejectByTerritoryVersionId	long	The version identifier of the territory of the sales representative who rejected the sales lead.
RejectByUserId	long	The unique identifier of the sales representative who rejected the sales lead.
RejectComment	string	The comments provided by the sales representative who rejected the sales lead.
RejectReasonCdMeaning	string	The meaning associated with the codes for lead rejection reason.
RejectReasonCode	string	The predefined code used to indicate the reason for rejecting a lead.
RejectReasonCodeSetId	long	The identifier of the reject reason list set.
RejectedCount	long	The number of times a lead has been rejected by various users.

Name	Type	Description
RejectedDateTime	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the sales lead was rejected.
RejectedTimestamp	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date and time when a lead was rejected.
RetireComment	string	The comments recorded when the sales lead is moved to a retired status.
RetireReasonCdMeaning	string	The meaning associated with the codes for lead retirement reason.
RetireReasonCode	string	The predefined code used to indicate the reason for retiring a lead.
RetireReasonCodeSetId	long	The identifier of the retire reason list set.
RetiredDateTime	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the sales lead was moved to a retired status.
RetiredTimestamp	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date and time when a lead was retired.
SalesChannel	string	Indicates the sales channel responsible for following up on the sales lead.
SalesChannelMeaning	string	The meaning of the sales channel associated with the sales lead.
Score	long	The score associated with the sales lead. The score is computed based on the scoring rules.
SourceCode	string	The marketing source code associated with the sales lead.
StatusCdMeaning	string	The meaning associated with the codes defined to indicate lead status.
StatusCode	string	The pre-defined code used to indicate the status.
Timeframe	string	The time frame associated with the sales lead.
TimeframeSetId	long	The identifier of the time frame list set.

Name	Type	Description
ToReassignFlag	boolean	Identifies leads that are marked for reassignment.
ToRescoreFlag	boolean	Identifies leads that are marked for scoring.
UniqueName	string	The unique name is a concatenation of the lead name and the time stamp.
UpdateFlag	boolean	This flag controls if the user has access to update the record
WorkPhoneAreaCode	string	The work phone area code for the sales lead contact.
WorkPhoneCountryCode	string	The work phone country code for the sales lead contact.
WorkPhoneNumber	string	The work phone number for the sales lead contact.

Sales Lead Contacts

The contact associated with the sales lead.

QName: {http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/}MklLeadTcMembers

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Sales Lead Contacts*
Contained by	*Sales Lead*
Contained by	*Service Lead Service Data Object*
Handled by	*Sales Lead Service Version 2*
Handled by	*Sales Lead Service Version 1*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Address1	string	The first line of the address.
Address2	string	The second line of the address.
City	string	The name of the city.
ContactDoNotCallFlag	boolean	The indicator set at person level for the sales lead contact.
ContactDoNotContactFlag	boolean	The indicator set at person level for the sales lead contact.
ContactDoNotEmailFlag	boolean	The indicator set at person level for the sales lead contact.
ContactDoNotMailFlag	boolean	The indicator set at person level for the sales lead contact.
ContactNumber	string	The contact number of the sales lead contact.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmailAddress	string	The email address associated with the record.
FormattedPhoneNumber	string	The formatted phone number.
JobTitle	string	The job title of the sales lead contact.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
LeadId	long	The unique identifier of the sales lead for the sales lead contact.
LeadMemberId	long	The primary key for lead contact. • Primary Key
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgContactId	long	The organization contact identifier of the sales lead contact.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartyStatus	string	The status of the sales lead contact.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUsageCode	string	The usage context of a party's contact point.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonJobTitle	string	The person Job title of the sales lead contact.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonProfileId	long	The person profile identifier of the sales lead contact.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PhoneAreaCode	string	The area code prefix for the phone number.

Name	Type	Description
PhoneCountryCode	string	The country code prefix for the phone number.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PostalCode	string	The postal code element of the address.
PrimaryFlag	boolean	Indicates whether the lead contact is primary. Primary lead contact is also the lead owner.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
RelationshipId	long	The relationship identifier for the record.
Role	string	The role of lead contact in the context of the lead.
State	string	The name of the state.

Sales Lead Products

The product associated with a sales lead.

QName: {http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/}MklProdAssoc

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Sales Lead Products*

Relationship Type	Object or Service
Contained by	*Sales Lead*
Contained by	*Service Lead Service Data Object*
Handled by	*Sales Lead Service Version 2*
Handled by	*Sales Lead Service Version 1*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Amount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount associated with the sales lead product.
AverageTimeToClose	decimal	Indicates average time to close for the sales lead product.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
Description	string	The free text description of the record.
EstimatedUnitPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated unit price for the lead product.
InventoryItemId	long	The inventory item identifier associated with the lead product.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdatedBy	string	The user who last updated the record.
LeadId	long	The unique identifier of the sales lead for the sales lead product.

Name	Type	Description
LeadProductId	long	The primary key that represents the identifier of the current lead product. • Primary Key
LeadProductNumber	string	This is a public surrogate key for the table and is defaulted with a unique number. It cannot be null.
LongDescription	string	The long description of the sales lead product.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationId	long	The inventory organization identifier associated with the lead product.
PrimaryFlag	boolean	Indicates whether this product is a primary product for this lead.
ProductGroupDescription	string	The description of the product group.
ProductGroupId	long	The unique identifier of the product group.
ProductGroupName	string	The name of the product group if the record represents a product group.
ProductName	string	The name of product or product group. It is the same as the product name if the record represents a product. It is the same as the product group name if the record represents a product group.
ProductType	string	Indicates if the record represents a product or a product group.
Quantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The product quantity identified for the product on the lead.
UOMCode	string	The unit of measure associated with the sales lead product line.

Sales Lead Resources

The resource associated with the sales lead.

QName: {http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/}MklLeadResources

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Sales Lead Resources*
Contained by	*Sales Lead*
Contained by	*Service Lead Service Data Object*
Handled by	*Sales Lead Service Version 2*
Handled by	*Sales Lead Service Version 1*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevelCode	string	Access level for the sale team member on the lead.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmailAddress	string	The email address associated with the record.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
FormattedPhoneNumber	string	The formatted phone number.

Name	Type	Description
FunctionalRole	string	Indicates the role played by the sales team resource for handling the sales lead.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdatedBy	string	The user who last updated the record.
LeadId	long	The unique identifier of the sales lead for the sales lead resource.
LeadResourceId	long	The unique identifier of the sales lead resource. • Primary Key
ManagerName	string	The manager name of the resource.
ManagerPartyId	long	The party identifier of the manager of the resource in the organizational hierarchy.
Name	string	The name of the lead resource.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgTreeCode	string	The resource organization hierarchy code associated with the resource organization which is associated with the lead resource.
OrgTreeStructureCode	string	The resource organization hierarchy structure code associated with the resource organization hierarchy which is associated with the resource organization associated with the lead resource.
OrgTreeVersionId	string	The resource organization hierarchy version associated with the resource organization which is associated with the lead resource.
PartnerContactFlag	boolean	The indicator to identify whether the resource is a partner contact.
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.

Name	Type	Description
PrimaryFlag	boolean	Indicates whether the record represents the primary resource on the lead. Primary resource on the lead is the same as the lead owner.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
ResourceId	long	The unique identifier of the resource.
ResourceOrgId	long	The resource organization identifier associated with the lead resource.
ResourceUsername	string	The sign in name of the resource.
RoleName	string	The name of the role of the lead resource in the context of the sales lead.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.

Sales Lead Service Version 1

Service to operate on leads. The supported operations are create, update, delete, and search.
WARNING: This service has been deprecated and is being replaced with Sales Lead Service Version 2 (oracle.apps.marketing.leadMgmt.leads.leadService.SalesLeadService).

Life Cycle Status: Deprecated. This service is deprecated and replaced by .

assignLead

A web service method that assigns sales team to the lead.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	An input parameter of the assignLead web service method that identifies the lead record by ID.

Response Payload

Element Name	Type	Description
result	string	The return value of the assignLead web service method.

convertLeadToOpportunity

A web service method that converts a Lead record to an opportunity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required parameter of the convertLeadToOpportunity web service method. The lead record matching the ID input is used as source for the opportunity.

Response Payload

Element Name	Type	Description
result	string	The return value of the convertLeadToOppportunity web service method. It includes the full set of attributes of the opportunity record.

qualifyLead

A web service method that qualifies a lead based on qualification rules.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	An input parameter of the qualifyLead web service method that identifies the lead record by ID.

Response Payload

Element Name	Type	Description
result	string	The return value of the qualifyLead web service method.

rankLead

Assigns a pre-defined rank on the lead based on ranking rules.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	An input parameter of the rankLead web service method that identifies the lead record by ID.

Response Payload

Element Name	Type	Description
result	string	The return value of the rankLead web service method.

scoreLead

A web service method that scores an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required input parameter of the scoreLead web service method. It is the ID of the lead record that would need to be scored.

Response Payload

Element Name	Type	Description
result	string	The return value of the scoreLead web service method.

getLead

A web service method that queries a single record of Oracle Fusion Lead Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required input parameter of the getLead web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	*Service Lead Service Data Object*	The return value of the getLead web service method. It includes the full set of attributes of record.

createLead

A web service method that creates Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
serviceLead1	*Service Lead Service Data Object*	A required input parameter of the createLead web service method. The input object include the attribute values that the lead record is created with.

Response Payload

Element Name	Type	Description
result	*Service Lead Service Data Object*	The return value of the createLead web service method. It includes the full set of attributes of the record.

updateLead

A web service method that updates an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
serviceLead1	*Service Lead Service Data Object*	A required parameter of the updateLead web service method. The record matching the ID specified in this input lead contact is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Service Lead Service Data Object*	The return value of the updateLead web service method. It includes the full set of attributes of the record.

deleteLead

A web service method that deletes an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
serviceLead1	*Service Lead Service Data Object*	A required input parameter of the deleteLead web service method. The record matching the input attribute values specified in the lead is deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteLead.

findLead

A web service method that queries a single record or set of records of Oracle Fusion Lead Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLead web service method. The filter criteria is the cumulative set of attribute criteria that will identify records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findLead.

Response Payload

Element Name	Type	Description
result	*Service Lead Service Data Object*	The return value of the findLead web service method. It includes the full set of attributes of records queried.

getLeadContact

A web service method that queries a single record of Oracle Fusion Lead Contact Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadMemberId	long	A required input parameter of the getLeadContact web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	*Sales Lead Contacts*	The return value of the getLeadContact web service method. It includes the full set of attributes of record.

createLeadContact

A web service method that create Oracle Fusion Lead Contact Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadContacts	*Sales Lead Contacts*	A required input parameter of the createLeadContact web service method. It includes the attribute values that the record is created with.

Response Payload

Element Name	Type	Description
result	*Sales Lead Contacts*	The return value of the createLeadContact web service method. It includes the full set of attributes of the record.

updateLeadContact

A web service method that updates an Oracle Fusion Lead Contact Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadContacts	*Sales Lead Contacts*	A required parameter of the updateLeadContact web service method. The record matching the ID specified in this input lead contact is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Sales Lead Contacts*	The return value of the updateLeadContact web service method. It includes the full set of attributes of the record.

deleteLeadContact

A web service method that deletes an Oracle Fusion Lead Contact Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadContacts	*Sales Lead Contacts*	A required input parameter of the deleteLeadContact web service method. The lead contact record matching the input attribute values specified are deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteLeadContact.

findLeadContact

A web service method that queries a single record or set of records of Oracle Fusion Lead Contact Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLeadContact web service method. The filter criteria is the cumulative set of attribute criteria that identifies records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findLeadContact.

Response Payload

Element Name	Type	Description
result	*Sales Lead Contacts*	The return value of the findLeadContact web service method. It includes the full set of attributes of records queried.

getLeadProduct

A web service method that queries a single record of Oracle Fusion Lead Product Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadProductId	long	A required input parameter of the getLeadProduct web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	*Sales Lead Products*	The return value of the getLeadProduct web service method. It includes the full set of attributes of record.

createLeadProduct

A web service method that create Oracle Fusion Lead Product Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadProducts	*Sales Lead Products*	The return value of the createLeadProduct web service method. It includes the full set of attributes of the record.

Response Payload

Element Name	Type	Description
result	*Sales Lead Products*	A required input parameter of the createLeadProduct web service method. The input object includes the attribute values that the record will be created with.

updateLeadProduct

A web service method that updates an Oracle Fusion Lead Product Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadProducts	*Sales Lead Products*	A required parameter of the updateLeadProduct web service method. The record matching the ID specified in this input lead product is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Sales Lead Products*	The return value of the updateLeadProduct web service method. It includes the full set of attributes of the record.

deleteLeadProduct

A web service method that deletes an Oracle Fusion Lead Product Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadProducts	*Sales Lead Products*	A required input parameter of the deleteLeadProduct web service method. The record matching the input attribute values specified in the lead product are deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteLeadProduct.

findLeadProduct

A web service method that queries a single record or set of records of Oracle Fusion Lead Product Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLeadResource web service method. The filter criteria is a cumulative set of attribute criteria that will identify records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findLeadProduct.

Response Payload

Element Name	Type	Description
result	*Sales Lead Products*	The return value of the findLeadProduct web service method. It includes the full set of attributes of records queried.

getLeadResource

A web service method that queries a single record of Oracle Fusion Lead Resource Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadResourceId	long	A required input parameter of the getLeadResource web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	*Sales Lead Resources*	The return value of the getLeadResource web service method. It includes the full set of attributes of record.

createLeadResource

A web service method that create Oracle Fusion Lead Resource Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadResources	*Sales Lead Resources*	A required input parameter of the createLeadResource web service method. The input object It includes the attribute values that the record are created with.

Response Payload

Element Name	Type	Description
result	*Sales Lead Resources*	The return value of the createLeadResource web service method. It includes the full set of attributes of the record.

updateLeadResource

A web service method that updates an Oracle Fusion Lead Resource Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadResources	*Sales Lead Resources*	A required parameter of the updateLeadResource web service method. The record matching the ID specified in this input lead resource is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Sales Lead Resources*	The return value of the updateLeadResource web service method. It includes the full set of attributes of the record.

deleteLeadResource

A web service method that deletes an Oracle Fusion Lead Resource Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadResources	*Sales Lead Resources*	A required input parameter of the deleteLeadResource web service method. The record matching the input attribute values specified in the Lead Resource is deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteLeadResource.

findLeadResource

A web service method that queries a single record or set of records of Oracle Fusion Lead Resource Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLeadResource web service method. The filter criteria is a cumulative set of attribute criteria that identifies the records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findLeadResource.

Response Payload

Element Name	Type	Description
result	*Sales Lead Resources*	The return value of the findLeadResource web service method. It includes the full set of attributes of records queried.

getDfltObjAttrHints

Retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition was last updated. The parameter is present in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MKL_VIEW_SALES_LEAD_PRIV	View Sales Lead	Allows viewing sales leads. A sales lead is a prospect or existing customer who has interest or the potential for interest in a product or service being sold.
All Operations	MKL_MANAGE_SALES_LEAD_PRIV	Manage Sales Lead	Allows web services management of sales leads including modifying

Operation Name	Privilege Code	Privilege Name	Privilege Description
			lead attributes and accepting or rejecting sales leads.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MKL_VIEW_SALES_LEAD_PRIV	ORA_MKL_SALES_LEAD_FOLLOW_UP_MANAGEMENT_READ_ONLY_DUTY	Sales Lead Follow Up Management Read Only	Read Only role for Sales Lead Follow Up Management Duty.
MKL_VIEW_SALES_LEAD_PRIV	ORA_MKL_SALES_LEAD_FOLLOW_UP_READ_ONLY_DUTY	Sales Lead Follow Up Read Only	Read Only role for Sales Lead Follow Up Duty

assignLead

A web service method that assigns sales team to the lead.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	An input parameter of the assignLead web service method that identifies the lead record by ID.

Response Payload

Element Name	Type	Description
result	string	The return value of the assignLead web service method.

convertLeadToOpportunity

A web service method that converts a lead record to an opportunity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required parameter of the convertLeadToOpportunity web service method. The lead record matching the ID input is used as source for the opportunity.

Response Payload

Element Name	Type	Description
result	string	The return value of the convertLeadToOppportunity web service method. It includes the full set of attributes of the opportunity record.

qualifyLead

A web service method that qualifies a lead based on qualification rules.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	An input parameter of the qualifyLead web service method that identifies the lead record by ID.

Response Payload

Element Name	Type	Description
result	string	The return value of the qualifyLead web service method.

rankLead

A web service method that assigns a pre-defined rank on the lead based on ranking rules.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	An input parameter of the rankLead web service method that identifies the lead record by ID.

Response Payload

Element Name	Type	Description
result	string	The return value of the rankLead web service method.

reassignLead

A web service method that reassigns an Oracle Fusion Lead Object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
mode	string	A required input parameter of the reassignLead web service method. Values: IMDT_AUTO_ASSGMNT: Reassigns the lead immediately, AUTO_ASSGMNT: Flags the lead for reassignment to be picked-up next time assignment runs, MAN_ASSGMNT: only reassign the owners with the parameter value passed.
leadId	long	A required input parameter of the reassignLead web service method. It is the ID of the lead record that would need to be reassigned.
ownerId	long	An optional input parameter of the reassignLead web service method. It is required when the mode is MAN_ASSGMNT. It is the ID of the resource record to be set as the owner for the lead.
organizationId	long	An optional input parameter of the reassignLead web service method. It is used when the mode is MAN_ASSGMNT. It is the organization ID of the resource record to be set as the owner for the lead.
reason	string	An optional input parameter of the reassignLead web service method. It is the reason for reassignment.
comment	string	An optional input parameter of the reassignLead web service method. It is the comment recorded for the lead while being reassigned.

Response Payload

Element Name	Type	Description
result	string	The return value of the reassignLead web service method.

scoreLead

A web service method that scores an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required input parameter of the scoreLead web service method. It is the ID of the lead record that needs to be scored.

Response Payload

Element Name	Type	Description
result	string	The return value of the scoreLead web service method.

submitDeal

A web service method that submits an Oracle Fusion Lead Object record for registration.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required input parameter of the submitDeal web service method. It is the ID of the lead record to be registered.

Response Payload

Element Name	Type	Description
result	string	The return value of the submitDeal web service method.

acceptLead

A web service method that accepts an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required input parameter of the acceptLead web service method. It is the ID of the lead record that needs to be accepted.

Response Payload

Element Name	Type	Description
result	string	The return value of the reassignLead web service method.

rejectLead

A web service method that rejects an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required input parameter of the rejectLead web service method. It is the ID of the lead record that needs to be rejected.
rejectReason	string	An optional input parameter of the rejectLead web service method. It is the reason for rejecting the lead.
rejectComments	string	An optional input parameter of the rejectLead web service method. It is the comment recorded for the lead while getting rejected.

Response Payload

Element Name	Type	Description
result	string	The return value of the rejectLead web service method.

retireLead

A web service method that retires a lead.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	An input parameter of the retireLead web service method that identifies the lead record by ID.
retireReason	string	An optional input parameter of the retireLead web service method. It is the reason for retiring a lead.
retireComments	string	An optional input parameter of the retireLead web service method. It is the comment recorded for the lead while getting retired.

Response Payload

Element Name	Type	Description
result	string	The return value of the retireLead web service method.

getSalesLead

A web service method that queries a single record of Oracle Fusion Lead Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required input parameter of the getLead web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadServiceV3/}SalesLeadResult	The return value of the getLead web service method. It includes the full set of attributes of record.

createSalesLead

A web service method that creates Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLead	*Sales Lead*	A required input parameter of the createLead web service method. The input object includes the attribute values that the lead record will be created with.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadServiceV3/}SalesLeadResult	The return value of the createLead web service method. It includes the full set of attributes of the record.

updateSalesLead

A web service method that updates an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLead	*Sales Lead*	A required parameter of the updateLead web service method. The record matching the ID specified in this input lead contact is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadServiceV3/}SalesLeadResult	The return value of the updateLead web service method. It includes the full set of attributes of the record.

deleteSalesLead

A web service method that deletes an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLead	*Sales Lead*	A required input parameter of the deleteLead web service method. The record matching the input attribute values specified in the Lead is deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The parameter is not applicable for the method deleteSalesLead.

mergeSalesLead

A web service method that either creates a single record of Oracle Fusion Lead Object or updates a record by the given ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLead	*Sales Lead*	A required parameter of the mergeSalesLead web service method. The record matching the ID specified in this input is updated. If no ID is specified, the record is created instead.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadServiceV3/}SalesLeadResult	The return value of the mergeLead web service method. It includes the full set of attributes of the record.

findSalesLead

A web service method that queries a single record or set of records of Oracle Fusion Lead Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLead web service method. The filter criteria is the cumulative set of attribute criteria that identifies records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findSalesLead.

Response Payload

Element Name	Type	Description
result	*Sales Lead*	The return value of the findLead web service method. It includes the full set of attributes of records queried.

processSalesLead

A web service method that creates or updates Oracle Fusion Lead Object record in bulk.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	As a input parameter value either of create, merge or update needs to be passed.
salesLead	*Sales Lead*	A required parameter of the processLead web service method. The list of lead input records to be created or merged or updated.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	It has three parts. For the first parameter, value can be full which means full set of lead attributes to be returned, value of key means only lead ID values to be returned, value of none means no value returned. For the second parameter, similar to first parameter but related to exceptions. For the third mandatory

Element Name	Type	Description
		parameter, indicates true or false for partial failure allowed or not.

Response Payload

Element Name	Type	Description
result	*Sales Lead*	The return value of the processLead web service method. It can be none or a list of only the lead IDs or a list of full set of lead records.

getSalesLeadContact

A web service method that queries a single record of Oracle Fusion Lead Contact Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadMemberId	long	A required input parameter of the getLeadContact web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadServiceV3/}SalesLeadContactResult	The return value of the getLeadContact web service method. It includes the full set of attributes of record.

createSalesLeadContact

A web service method that creates Oracle Fusion Lead Contact Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadContact	*Sales Lead Contacts*	A required input parameter of the createLeadContact web service method. It

Element Name	Type	Description
		includes the attribute values that the record is created with.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadServiceV3/}SalesLeadContactResult	The return value of the createLeadContact web service method. It includes the full set of attributes of the record.

updateSalesLeadContact

A web service method that updates an Oracle Fusion Lead Contact Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadContact	*Sales Lead Contacts*	A required parameter of the updateLeadContact web service method. The record matching the ID specified in this input lead contact is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadServiceV3/}SalesLeadContactResult	The return value of the updateLeadContact web service method. It includes the full set of attributes of the record.

deleteSalesLeadContact

A web service method that deletes an Oracle Fusion Lead Contact Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadContact	*Sales Lead Contacts*	A required input parameter of the deleteLeadContact web service method. The lead contact record matching the input attribute values specified are deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The parameter is not applicable for the method deleteSalesLeadContact.

findSalesLeadContact

A web service method that queries a single record or set of records of Oracle Fusion Lead Contact Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLeadContact web service method. The filter criteria is the cumulative set of attribute criteria that identifies records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findSalesLeadContact.

Response Payload

Element Name	Type	Description
result	*Sales Lead Contacts*	The return value of the findLeadContact web service method. It includes the full set of attributes of records queried.

getSalesLeadProduct

A web service method that queries a single record of Oracle Fusion Lead Product Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadProductId	long	A required input parameter of the getLeadProduct web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadServiceV3/}SalesLeadProductResult	The return value of the getLeadProduct web service method. It includes the full set of attributes of record.

createSalesLeadProduct

A web service method that creates Oracle Fusion Lead Product Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadProduct	*Sales Lead Products*	The return value of the createLeadProduct web service method. It includes the full set of attributes of the record.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadServiceV3/}SalesLeadProductResult	A required input parameter of the createLeadProduct web service method. The input object includes the attribute values that the record is created with.

updateSalesLeadProduct

A web service method that updates an Oracle Fusion Lead Product Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadProduct	*Sales Lead Products*	A required parameter of the updateLeadProduct web service method. The record matching the ID specified in this input lead product is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadServiceV3/}SalesLeadProductResult	The return value of the updateLeadProduct web service method. It includes the full set of attributes of the record.

deleteSalesLeadProduct

A web service method that deletes an Oracle Fusion Lead Product Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadProduct	*Sales Lead Products*	A required input parameter of the deleteLeadProduct web service method. The record matching the input attribute values specified in the lead product are deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The parameter is not applicable for the method deleteSalesLeadProduct.

findSalesLeadProduct

A web service method that queries a single record or set of records of Oracle Fusion Lead Product Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLeadResource web service method. The filter criteria is a cumulative set of attribute criteria that identifies records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findSalesLeadProduct.

Response Payload

Element Name	Type	Description
result	*Sales Lead Products*	The return value of the findLeadProduct web service method. It includes the full set of attributes of records queried.

getSalesLeadResource

A web service method that queries a single record of Oracle Fusion Lead Resource Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadResourceId	long	A required input parameter of the getLeadResource web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadServiceV3/}SalesLeadResourceResult	The return value of the getLeadResource web service method. It includes the full set of attributes of record.

createSalesLeadResource

A web service method that creates Oracle Fusion Lead Resource Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadResource	*Sales Lead Resources*	A required input parameter of the createLeadResource web service method. The input object includes the attribute values that the record is created with.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadServiceV3/}SalesLeadResourceResult	The return value of the createLeadResource web service method. It includes the full set of attributes of the record.

updateSalesLeadResource

A web service method that updates an Oracle Fusion Lead Resource Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadResource	*Sales Lead Resources*	A required parameter of the updateLeadResource web service method. The record matching the ID specified in this input lead resource is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadServiceV3/}SalesLeadResourceResult	The return value of the updateLeadResource web service method. It includes the full set of attributes of the record.

deleteSalesLeadResource

A web service method that deletes an Oracle Fusion Lead Resource Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadResource	*Sales Lead Resources*	A required input parameter of the deleteLeadResource web service method. The record matching the input attribute values specified in the Lead Resource is deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The parameter is not applicable for the method deleteSalesLeadResource.

findSalesLeadResource

A web service method that queries a single record or set of records of Oracle Fusion Lead Resource Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLeadResource web service method. The filter criteria is a cumulative set of attribute criteria that identifies record queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findSalesLeadResource.

Response Payload

Element Name	Type	Description
result	*Sales Lead Resources*	The return value of the findLeadResource web service method. It includes the full set of attributes of records queried.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition was last updated. The parameter is present in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MKL_VIEW_SALES_LEAD_PRIV	View Sales Lead	Allows viewing sales leads. A sales lead is a prospect or existing customer who has interest or the potential for interest in a product or service being sold.
All Operations	MKL_SET_UP_SALES_LEAD_PRIV	Set Up Sales Lead	Allows setting up common configuration settings, including assignment manager, assessment templates, appointments, interactions, notes, tasks, standard lookup types, profile options and descriptive flexfields for sales leads.
All Operations	MKL_MANAGE_SALES_LEAD_PRIV	Manage Sales Lead	Allows web services management of sales leads including modifying lead attributes and accepting or rejecting sales leads.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MKL_VIEW_SALES_LEAD_PRIV	ORA_MKL_SALES_LEAD_FOLLOW_UP_MANAGEMENT_READ_ONLY_DUTY	Sales Lead Follow Up Management Read Only	Read Only role for Sales Lead Follow Up Management Duty.
MKL_VIEW_SALES_LEAD_PRIV	ORA_MKL_SALES_LEAD_FOLLOW_UP_READ_ONLY_DUTY	Sales Lead Follow Up Read Only	Read Only role for Sales Lead Follow Up Duty
MKL_VIEW_SALES_LEAD_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
MKL_VIEW_SALES_LEAD_PRIV	ORA_ZPM_CHANNEL_ADMINISTRATOR_JOB	Channel Administrator	Executes Oracle Partnership Management setup tasks.
MKL_VIEW_SALES_LEAD_PRIV	ORA_MKL_SALES_LEAD_QUALIFICATION_SUPERVISION_DUTY	Sales Lead Qualification Supervision	Qualifies sales leads to determine the sales readiness of all the leads in your reporting hierarchy.
MKL_VIEW_SALES_LEAD_PRIV	ORA_ZPM_CHANNEL_PARTNER_PORTAL_ADMINISTRATOR_JOB	Channel Partner Portal Administrator	Maintains customer-specific changes of all partner portal pages, external, internal, and anonymous pages.
MKL_VIEW_SALES_LEAD_PRIV	ORA_ZBS_SALES_REPRESENTATIVE_JOB	Sales Representative	Represents the business to sell its products. Maintains relationships with customers and contacts, builds pipeline, manages leads and opportunities and performs sales forecasting.
MKL_VIEW_SALES_LEAD_PRIV	ORA_MKL_SALES_LEAD_QUALIFIER_JOB	Sales Lead Qualifier	Identifies, generates and qualifies sales leads and ensures that they are successfully closed within established time objectives. Includes the ability to deliver reports, ensure a healthy sales pipeline volume, help shorten sales cycles, shape lead generation strategies, and provide effective guidance to the rest of the lead qualification team. Other supporting roles include territory development, event and webinar strategies.

Name	Type	Description
CustomerDoNotMailFlag	boolean	Indicates the do not mail flag set for sales lead customer (person).
CustomerEmployeesTotal	decimal	The total number of employees at a customer site.
CustomerId	long	The customer identifier. It is a reference to the customer record in the TCA schema.
CustomerIdenAddrLocationId	long	The address location identifier pertaining to a customer.
CustomerNeed	string	Indicates needs that the lead product serves for the lead customer.
CustomerPartyName	string	The name of the customer.
CustomerPartyType	string	The type of customer.
CustomerPartyUniqueName	string	The concatenation of customer name with postal code to make it unique.
CustomerPersonProfileId	long	The unique identifier of the sales lead customer (person) to get the dnc flags.
CustomerPostalCode	string	The code in which customer is located.
CustomerPrimaryAddress	string	The primary address of the customer associated with the sales lead.
CustomerPrimaryEmailAddress	string	The primary email address of the customer associated with the sales lead.
CustomerPrimaryPhoneNumber	string	The primary formatted phone number of the customer associated with the sales lead.
CustomerRegistryId	string	The customer registry identifier.
CustomerSICCode	string	The industry code pertaining to the customer.
CustomerSellToAddress	string	The sell-to address of the customer associated with the sales lead.
CustomerState	string	The state in which customer is located.

Name	Type	Description
CustomerStatus	string	The status of the customer associated with the sales lead.
CustomerURL	string	The URL address pertaining to the customer.
DaysUntilExpiration	int	The number of days prior to expiration of the partner registered lead.
DealAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount attributed to a lead.
DealTypeSetId	long	The identifier of the deal type list set.
DecisionMakerIdentifiedFlag	boolean	Indicates if the decision maker at customer site is identified.
DeleteFlag	boolean	This flag controls if the user has access to delete the record
Description	string	The free text description of the record.
Distance	decimal	Distance from the input location.
EstimatedCloseDate	{http://xmlns.oracle.com/adf/svc/types/}dateDate	The estimated close date for the deal once registered.
ExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}dateDate	The expiration date associated with the sales lead.
FloorNumber	string	Specific floor number at a given address or in a particular building when building number is provided.
FollowupTimestamp	{http://xmlns.oracle.com/adf/svc/types/}dateDate	Indicates when the sales lead must be followed up.
IBAssetId	long	Unique identifier for the IB Asset associated with the Sales Lead.
IBAssetNumber	string	Unique number for the IB Asset associated with the Sales Lead.
IBAssetSerialNumber	string	Unique serial number for the IB Asset associated with the Sales Lead.

Name	Type	Description
ImportTaskId	long	The unique identifier of the import activity that resulted in the lead being created.
InventoryItemDescription	string	The description of the product added to a lead.
JobTitle	string	The job title of the primary contact on the sales lead.
LastAssignmentDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the lead was last reassigned.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateDateFormatted	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date and time of the last update of the row.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Latitude	decimal	Latitude information for the location.
LeadAcceptedFlag	boolean	Indicates if the lead is accepted.
LeadAging	decimal	The number of days elapsed since the lead was created.
LeadCreatedBy	string	Functional WHO: Indicates the user who created this record.
LeadCreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Functional WHO: Indicates the date and time when this record is created.
LeadId	long	The partner type. Indicates the type of partner stamped on the lead. • Primary Key
LeadLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Functional WHO: Indicates the date and time of the last update of the row.
LeadLastUpdatedBy	string	Functional WHO: Indicates the user who last updated the row.
LeadNumber	string	User friendly unique identifier for the lead.

Name	Type	Description
LeadOrigin	string	Origin of the Lead
LongDescription	string	The description of the item.
Longitude	decimal	Longitude information for the location.
MklLeadResources	*Sales Lead Resources*	The lead resource for sales lead.
MklLeadTcMembers1	*Sales Lead Contacts*	The lead contacts for sales lead.
MklProdAssoc1	*Sales Lead Products*	The lead products for sales lead.
Name	string	Lead Name used for identifying the lead.
Note	*Note*	Notes added to the sales lead.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgContactId	long	The unique identifier for the primary sales lead contact of the sales lead.
OrganizationSize	string	The size of the organization.
OrganizationType	string	The type of the organization.
OwnerId	long	The party identifier associated with the owner of the sales lead.
OwnerPartyName	string	The name associated with the owner of the sales lead.
OwnerResourceOrgId	long	The unique identifier for the organization to which the lead owner belongs.
OwnerTreeCode	string	The tree code of the resource hierarchy to which the lead owner belongs.
OwnerTreeStructureCode	string	The tree structure code of the resource hierarchy to which the lead owner belongs.

Name	Type	Description
OwnerTreeVersionId	string	The tree version identifier of the resource hierarchy to which the lead owner belongs.
PartnerId	long	The unique identifier of the partner.
PartnerPartyName	string	The name associated with the primary partner of the sales lead. This is a deal specific attribute.
PartnerProgramId	long	A reference to the partner program in which the primary partner associated with the sales lead is enrolled. This is a deal specific attribute.
PartnerProgramName	string	The name of the partner program in which the primary partner associated with the sales lead is enrolled. This is a deal specific attribute.
PartnerType	string	Indicates the type of the primary partner associated with the sales lead. This is a deal specific attribute.
PartnerTypeMeaning	string	The meaning of the type of primary partner associated with the sales lead. This is a deal specific attribute.
PostalPlus4Code	string	Four digit extension to the United States Postal ZIP code.
PrimaryContactAddress1	string	The first line of address associated with the primary contact of the lead.
PrimaryContactAddress2	string	The second line of address associated with the primary contact of the lead.
PrimaryContactAddress3	string	The third line of address associated with the primary contact of the lead.
PrimaryContactAddress4	string	The fourth line of address associated with the primary contact of the lead.
PrimaryContactCity	string	The city where the primary contact of the lead is located.
PrimaryContactCountry	string	The country where the primary contact of the lead is located.
PrimaryContactCountryName	string	Full name associated with primary contact's country code.

Name	Type	Description
PrimaryContactCounty	string	The county where the primary contact of the lead is located.
PrimaryContactDoNotCallFlag	boolean	Do not call flag set at person level for primary contact associated with sales lead.
PrimaryContactDoNotContactFlag	boolean	Do not contact flag set at person level for primary contact associated with sales lead.
PrimaryContactDoNotEmailFlag	boolean	The do not email flag set at person level for primary contact associated with sales lead.
PrimaryContactDoNotMailFlag	boolean	The do not mail flag set at person level for primary contact associated with sales lead.
PrimaryContactEmailAddress	string	The email address of the primary sales lead contact on the lead.
PrimaryContactFormattedPhoneNumber	string	The formatted version of the phone number for the primary contact on the sales lead.
PrimaryContactId	long	The unique identifier of the sales lead contact marked as a primary lead contact.
PrimaryContactPartyName	string	The name associated with the primary lead contact.
PrimaryContactPartyStatus	string	Status of the primary contact associated with the sales lead.
PrimaryContactPartyType	string	The relationship type for the primary contact of the lead.
PrimaryContactPersonFirstName	string	The first name of the primary contact for a lead.
PrimaryContactPersonLastName	string	The last name of the primary contact for a lead.
PrimaryContactPersonMiddleName	string	The middle name of the primary contact for a lead.
PrimaryContactPersonProfileId	long	The unique identifier for the sales lead primary contact person row to get dnc flags.
PrimaryContactPostalCode	string	The zip code of the location where the primary contact of the lead is located.

Name	Type	Description
PrimaryContactPrimaryAddress	string	The primary address of the primary contact associated with the sales lead.
PrimaryContactProvince	string	The province where the primary contact of the lead is located.
PrimaryContactRelationshipId	long	The unique identifier of the relationship that a primary contact has with the parent organization.
PrimaryContactSellToAddress	string	The sell-to address of the primary contact associated with the sales lead.
PrimaryContactState	string	The state where the primary contact of the lead is located.
PrimaryContactTitle	string	The title of the primary contact for a lead.
PrimaryContactURL	string	The URL address pertaining to the primary contact for a lead.
PrimaryInventoryItemId	long	The unique identifier of the primary product associated with a lead.
PrimaryInventoryOrgId	long	The unique identifier of the organization to which the primary product associated with a lead belongs.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryProductGroupId	long	The unique identifier of the primary product group associated with a lead.
ProdNameOrGroupName	string	The name of the product associated with a lead.
ProductGroupDescription	string	The description of the product or product group associated with a lead.
ProductGroupName	string	The name of the product group associated with a lead.

Name	Type	Description
ProgramName	string	The name of the partner program in which the primary partner associated with the sales lead is enrolled. This is a deal specific attribute.
Project	string	The customer project identified for the sales lead.
QualificationScore	long	The qualification score for a lead.
QualifiedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date when the sales lead was qualified.
QualifiedDateTime	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the sales lead was qualified.
Rank	string	The rank associated with the sales lead.
RankMeaning	string	The meaning associated with specific lead rank.
RankSetId	long	The identifier of the rank list set identifier.
ReassignComment	string	The comment provided by a user while requesting the lead reassignment.
ReassignReasonCode	string	The predefined code used to indicate the reason for lead reassignment.
ReassignReasonCodeSetId	long	The reassign reason of the list set identifier.
RegistrationNumber	string	The registration number of the sales lead. This unique identifier is generated when the sales lead is approved. This is a deal specific attribute.
RegistrationStatus	string	The approval status of the sales lead. This is a deal specific attribute.
RegistrationStatusMeaning	string	The status of the approval request for the partner registered lead.
RegistrationType	string	Indicates the registration type of the sales lead. This is a deal specific attribute.
RegistrationTypeMeaning	string	Indicates the meaning of the registration type of the sales lead. This is a deal specific attribute.

Name	Type	Description
RejectByTerritoryId	long	The unique identifier of the territory of the sales representative who rejected the sales lead.
RejectByTerritoryVersionId	long	The version identifier of the territory of the sales representative who rejected the sales lead.
RejectByUserId	long	The unique identifier of the sales representative who rejected the sales lead.
RejectComment	string	The comments provided by the sales representative who rejected the sales lead.
RejectReasonCdMeaning	string	The meaning associated with the codes for lead rejection reason.
RejectReasonCode	string	The predefined code used to indicate the reason for rejecting a lead.
RejectReasonCodeSetId	long	The identifier of the reject reason list set.
RejectedCount	long	The number of times a lead has been rejected by various users.
RejectedDateTime	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the sales lead was rejected.
RejectedTimestamp	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date and time when a lead was rejected.
RetireComment	string	The comments recorded when the sales lead is moved to a retired status.
RetireReasonCdMeaning	string	The meaning associated with the codes for lead retirement reason.
RetireReasonCode	string	The predefined code used to indicate the reason for retiring a lead.
RetireReasonCodeSetId	long	The identifier of the retire reason list set.
RetiredDateTime	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the sales lead was moved to a retired status.
RetiredTimestamp	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date and time when a lead was retired.

Name	Type	Description
SalesChannel	string	Indicates the sales channel responsible for following up on the sales lead.
SalesChannelMeaning	string	The meaning of the sales channel associated with the sales lead.
Score	long	The score associated with the sales lead. The score is computed based on the scoring rules.
SourceCode	string	The marketing source code associated with the sales lead.
StatusCdMeaning	string	The meaning associated with the codes defined to indicate lead status.
StatusCode	string	The pre-defined code used to indicate the status.
Timeframe	string	The time frame associated with the sales lead.
TimeframeSetId	long	The identifier of the time frame list set.
ToReassignFlag	boolean	Identifies leads that are marked for reassignment.
ToRescoreFlag	boolean	Identifies leads that are marked for scoring.
UniqueName	string	The unique name is a concatenation of the lead name and the time stamp.
UpdateFlag	boolean	This flag controls if the user has access to update the record
WorkPhoneAreaCode	string	The work phone area code for the sales lead contact.
WorkPhoneCountryCode	string	The work phone country code for the sales lead contact.
WorkPhoneNumber	string	The work phone number for the sales lead contact.

Sales Lead Contacts

The contact associated with the sales lead.

QName: {http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadServiceV3/}SalesLeadContact

Logical Business Objects

- CRM : Lead Management : Sales Lead

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extends	*Sales Lead Contacts*
Handled by	*Sales Lead Service Version 3*

Sales Lead Contacts

The contact associated with the sales lead.

QName: {http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/}MklLeadTcMembers

Relationships

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Address1	string	The first line of the address.
Address2	string	The second line of the address.
City	string	The name of the city.
ContactDoNotCallFlag	boolean	The indicator set at person level for the sales lead contact.
ContactDoNotContactFlag	boolean	The indicator set at person level for the sales lead contact.
ContactDoNotEmailFlag	boolean	The indicator set at person level for the sales lead contact.
ContactDoNotMailFlag	boolean	The indicator set at person level for the sales lead contact.
ContactNumber	string	The contact number of the sales lead contact.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmailAddress	string	The email address associated with the record.
FormattedPhoneNumber	string	The formatted phone number.
JobTitle	string	The job title of the sales lead contact.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LeadId	long	The unique identifier of the sales lead for the sales lead contact.

Name	Type	Description
LeadMemberId	long	The primary key for lead contact. • Primary Key
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgContactId	long	The organization contact identifier of the sales lead contact.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartyStatus	string	The status of the sales lead contact.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUsageCode	string	The usage context of a party's contact point.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonJobTitle	string	The person Job title of the sales lead contact.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonProfileId	long	The person profile identifier of the sales lead contact.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PhoneAreaCode	string	The area code prefix for the phone number.

Name	Type	Description
PhoneCountryCode	string	The country code prefix for the phone number.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PostalCode	string	The postal code element of the address.
PrimaryFlag	boolean	Indicates whether the lead contact is primary. Primary lead contact is also the lead owner.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
RelationshipId	long	The relationship identifier for the record.
Role	string	The role of lead contact in the context of the lead.
State	string	The name of the state.

Sales Lead Products

The product associated with a sales lead.

QName: {http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadServiceV3/}SalesLeadProduct

Logical Business Objects

- CRM : Lead Management : Sales Lead

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Handled by	*Sales Lead Service Version 1*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Amount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount associated with the sales lead product.
AverageTimeToClose	decimal	Indicates average time to close for the sales lead product.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
Description	string	The free text description of the record.
EstimatedUnitPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated unit price for the lead product.
InventoryItemId	long	The inventory item identifier associated with the lead product.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdatedBy	string	The user who last updated the record.
LeadId	long	The unique identifier of the sales lead for the sales lead product.
LeadProductId	long	The primary key that represents the identifier of the current lead product. • Primary Key
LeadProductNumber	string	This is a public surrogate key for the table and is defaulted with a unique number. It cannot be null.
LongDescription	string	The long description of the sales lead product.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationId	long	The inventory organization identifier associated with the lead product.
PrimaryFlag	boolean	Indicates whether this product is a primary product for this lead.
ProductGroupDescription	string	The description of the product group.
ProductGroupId	long	The unique identifier of the product group.
ProductGroupName	string	The name of the product group if the record represents a product group.

Name	Type	Description
ProductName	string	The name of product or product group. It is the same as the product name if the record represents a product. It is the same as the product group name if the record represents a product group.
ProductType	string	Indicates if the record represents a product or a product group.
Quantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The product quantity identified for the product on the lead.
UOMCode	string	The unit of measure associated with the sales lead product line.

Sales Lead Resources

The resource associated with the sales lead.

QName: {http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadServiceV3/}SalesLeadResource

Logical Business Objects

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevelCode	string	Access level for the sale team member on the lead.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmailAddress	string	The email address associated with the record.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
FormattedPhoneNumber	string	The formatted phone number.
FunctionalRole	string	Indicates the role played by the sales team resource for handling the sales lead.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
LeadId	long	The unique identifier of the sales lead for the sales lead resource.
LeadResourceId	long	The unique identifier of the sales lead resource. • Primary Key
ManagerName	string	The manager name of the resource.
ManagerPartyId	long	The party identifier of the manager of the resource in the organizational hierarchy.
Name	string	The name of the lead resource.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgTreeCode	string	The resource organization hierarchy code associated with the resource organization which is associated with the lead resource.
OrgTreeStructureCode	string	The resource organization hierarchy structure code associated with the resource organization hierarchy which is associated with the resource organization associated with the lead resource.
OrgTreeVersionId	string	The resource organization hierarchy version associated with the resource organization which is associated with the lead resource.
PartnerContactFlag	boolean	The indicator to identify whether the resource is a partner contact.
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PrimaryFlag	boolean	Indicates whether the record represents the primary resource on the lead. Primary resource on the lead is the same as the lead owner.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
ResourceId	long	The unique identifier of the resource.

Name	Type	Description
ResourceOrgId	long	The resource organization identifier associated with the lead resource.
ResourceUsername	string	The sign in name of the resource.
RoleName	string	The name of the role of the lead resource in the context of the sales lead.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.

Sales Lead Service Version 2

Service to convert, reject, and accept actions in addition to create, update, delete, and search for leads.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/}SalesLeadService

Service WSDL URL: https://servername/crmService/SalesLeadService?WSDL

assignLead

A web service method that assigns sales team to the lead.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	An input parameter of the assignLead web service method that identifies the lead record by ID.

Response Payload

Element Name	Type	Description
result	string	The return value of the assignLead web service method.

convertLeadToOpportunity

A web service method that converts a lead record to an opportunity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required parameter of the convertLeadToOpportunity web service method. The lead record matching the ID input is used as source for the opportunity.

Response Payload

Element Name	Type	Description
result	string	The return value of the convertLeadToOppportunity web service method. It includes the full set of attributes of the opportunity record.

qualifyLead

A web service method that qualifies a lead based on qualification rules.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	An input parameter of the qualifyLead web service method that identifies the lead record by ID.

Response Payload

Element Name	Type	Description
result	string	The return value of the qualifyLead web service method.

rankLead

A web service method that assigns a pre-defined rank on the lead based on ranking rules.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	An input parameter of the rankLead web service method that identifies the lead record by ID.

Response Payload

Element Name	Type	Description
result	string	The return value of the rankLead web service method.

scoreLead

A web service method that scores an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required input parameter of the scoreLead web service method. It is the ID of the lead record that would need to be scored.

Response Payload

Element Name	Type	Description
result	string	The return value of the scoreLead web service method.

submitDeal

A web service method that submits an Oracle Fusion Lead Object record for registration.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required input parameter of the submitDeal web service method. It is the ID of the lead record to be registered.

Response Payload

Element Name	Type	Description
result	string	The return value of the submitDeal web service method.

reassignLead

A web service method that reassigns an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
mode	string	A required input parameter of the reassignLead web service method. Values: AUTOIMMEDIATE: Reassigns the lead immediately, AUTO: Flags the lead for reassignment to be picked-up next time assignment runs, MANUAL: only reassign the owners with the parameter value passed.
leadId	long	A required input parameter of the reassignLead web service method. It is the ID of the lead record that would need to be reassigned.
ownerId	long	An optional input parameter of the reassignLead web service method. It is required when the mode is MANUAL. It is the ID of the resource record to be set as the owner for the lead.
organizationId	long	An optional input parameter of the reassignLead web service method. It is used when the mode is MANUAL. It is the organization ID of the resource record to be set as the owner for the lead.
reason	string	An optional input parameter of the reassignLead web service method. It is the reason for reassignment.
comment	string	An optional input parameter of the reassignLead web service method. It is the comment recorded for the lead while being reassigned.

Response Payload

Element Name	Type	Description
result	string	The return value of the reassignLead web service method.

getSalesLeadProduct

A web service method that queries a single record of Oracle Fusion Lead Product Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadProductId	long	A required input parameter of the getLeadProduct web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	*Sales Lead Products*	The return value of the getLeadProduct web service method. It includes the full set of attributes of record.

createSalesLeadProduct

A web service method that creates Oracle Fusion Lead Product Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadProduct	*Sales Lead Products*	The return value of the createLeadProduct web service method. It includes the full set of attributes of the record.

Response Payload

Element Name	Type	Description
result	*Sales Lead Products*	A required input parameter of the createLeadProduct web service method. The input object includes the attribute values that the record is created with.

updateSalesLeadProduct

A web service method that updates an Oracle Fusion Lead Product Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadProduct	*Sales Lead Products*	A required parameter of the updateLeadProduct web service method. The record matching the ID specified in this input lead product is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Sales Lead Products*	The return value of the updateLeadProduct web service method. It includes the full set of attributes of the record.

deleteSalesLeadProduct

A web service method that deletes an Oracle Fusion Lead Product Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadProduct	*Sales Lead Products*	A required input parameter of the deleteLeadProduct web service method. The record matching the input attribute values specified in the lead product are deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteSalesLeadProduct.

findSalesLeadProduct

A web service method that queries a single record or set of records of Oracle Fusion Lead Product Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLeadResource web service method. The filter criteria is a cumulative set of attribute criteria that identifies record queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findSalesLeadProduct.

Response Payload

Element Name	Type	Description
result	*Sales Lead Products*	The return value of the findLeadProduct web service method. It includes the full set of attributes of records queried.

getSalesLeadResource

A web service method that queries a single record of Oracle Fusion Lead Resource Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadResourceId	long	A required input parameter of the getLeadResource web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	*Sales Lead Resources*	The return value of the getLeadResource web service method. It includes the full set of attributes of record.

createSalesLeadResource

A web service method that creates Oracle Fusion Lead Resource Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadResource	*Sales Lead Resources*	A required input parameter of the createLeadResource web service method. The input object includes the attribute values that the record is created with.

Response Payload

Element Name	Type	Description
result	*Sales Lead Resources*	The return value of the createLeadResource web service method. It includes the full set of attributes of the record.

updateSalesLeadResource

A web service method that updates an Oracle Fusion Lead Resource Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadResource	*Sales Lead Resources*	A required parameter of the updateLeadResource web service method. The record matching the ID specified in this input lead resource is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Sales Lead Resources*	The return value of the updateLeadResource web service method. It includes the full set of attributes of the record.

deleteSalesLeadResource

A web service method that deletes an Oracle Fusion Lead Resource Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadResource	*Sales Lead Resources*	A required input parameter of the deleteLeadResource web service method. The record matching the input attribute values specified in the Lead Resource is deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteSalesLeadResource.

findSalesLeadResource

A web service method that queries a single record or set of records of Oracle Fusion Lead Resource Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLeadResource web service method. The filter criteria is a cumulative set of attribute criteria that identifies records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findSalesLeadResource.

Response Payload

Element Name	Type	Description
result	*Sales Lead Resources*	The return value of the findLeadResource web service method. It includes the full set of attributes of records queried.

getSalesLead

A web service method that queries a single record of Oracle Fusion Lead Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadId	long	A required input parameter of the getLead web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	*Sales Lead*	The return value of the getLead web service method. It includes the full set of attributes of record.

createSalesLead

A web service method that creates Oracle Fusion Lead Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLead	*Sales Lead*	A required input parameter of the createLead web service method. The input object includes the attribute values that the lead record is created with.

Response Payload

Element Name	Type	Description
result	*Sales Lead*	The return value of the createLead web service method. It includes the full set of attributes of the record.

updateSalesLead

A web service method that updates an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLead	*Sales Lead*	A required parameter of the updateLead web service method. The record matching the ID specified in this input lead contact is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Sales Lead*	The return value of the updateLead web service method. It includes the full set of attributes of the record.

deleteSalesLead

A web service method that deletes an Oracle Fusion Lead Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLead	*Sales Lead*	A required input parameter of the deleteLead web service method. The record matching the input attribute values specified in the Lead is deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteSalesLead.

mergeSalesLead

A web service method that either creates a single record of Oracle Fusion Lead Object or updates a record by the given ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLead	*Sales Lead*	A required parameter of the mergeSalesLead web service method. The record matching the ID specified in this input is updated. If no ID is specified, the record is created instead.

Response Payload

Element Name	Type	Description
result	*Sales Lead*	The return value of the mergeLead web service method. It includes the full set of attributes of the record.

findSalesLead

A web service method that queries a single record or set of records of Oracle Fusion Lead Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLead web service method. The filter criteria is the cumulative set of attribute criteria that identifies records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findSalesLead.

Response Payload

Element Name	Type	Description
result	*Sales Lead*	The return value of the findLead web service method. It includes the full set of attributes of records queried.

processSalesLead

A web service method that creates or updates Oracle Fusion Lead Object record in bulk.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	As a input parameter value either of create, merge or update needs to be passed.
salesLead	*Sales Lead*	A required parameter of the processLead web service method. The list of lead input records to be created or merged or updated.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	It has three parts. For the first parameter, value can be full which means full set of lead attributes to be returned, value of key means only lead ID values to be returned, value of none means no value returned. For the second parameter, similar to first parameter but related to exceptions. For the third mandatory parameter, indicates true or false for partial failure allowed or not.

Response Payload

Element Name	Type	Description
result	*Sales Lead*	The return value of the processLead web service method. It can be none or a list of only the lead IDs or a list of full set of lead records.

getSalesLeadContact

A web service method that queries a single record of Oracle Fusion Lead Contact Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
leadMemberId	long	A required input parameter of the getLeadContact web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	*Sales Lead Contacts*	The return value of the getLeadContact web service method. It includes the full set of attributes of record.

createSalesLeadContact

A web service method that creates Oracle Fusion Lead Contact Object records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadContact	*Sales Lead Contacts*	A required input parameter of the createLeadContact web service method. It includes the attribute values that the record is created with.

Response Payload

Element Name	Type	Description
result	*Sales Lead Contacts*	The return value of the createLeadContact web service method. It includes the full set of attributes of the record.

updateSalesLeadContact

A web service method that updates an Oracle Fusion Lead Contact Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadContact	*Sales Lead Contacts*	A required parameter of the updateLeadContact web service method. The record matching the ID specified in this input lead contact is updated with the corresponding input attribute values also.

Response Payload

Element Name	Type	Description
result	*Sales Lead Contacts*	The return value of the updateLeadContact web service method. It includes the full set of attributes of the record.

deleteSalesLeadContact

A web service method that deletes an Oracle Fusion Lead Contact Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesLeadContact	*Sales Lead Contacts*	A required input parameter of the deleteLeadContact web service method. The lead contact record matching the input attribute values specified are deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method deleteSalesLeadContact.

findSalesLeadContact

A web service method that queries a single record or set of records of Oracle Fusion Lead Contact Object by criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findLeadContact web service method. The filter criteria is the cumulative set of attribute criteria that identifies records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findSalesLeadContact.

Response Payload

Element Name	Type	Description
result	*Sales Lead Contacts*	The return value of the findLeadContact web service method. It includes the full set of attributes of records queried.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition was last updated. The parameter is present in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MKL_VIEW_SALES_LEAD_PRIV	View Sales Lead	Allows viewing sales leads. A sales lead is a prospect or existing customer who has interest or the potential for interest in a product or service being sold.
All Operations	MKL_SET_UP_SALES_LEAD_PRIV	Set Up Sales Lead	Allows setting up common configuration settings, including assignment manager, assessment templates, appointments, interactions, notes, tasks, standard lookup types, profile options and descriptive flexfields for sales leads.
All Operations	MKL_MANAGE_SALES_LEAD_PRIV	Manage Sales Lead	Allows web services management of sales leads including modifying lead attributes and accepting or rejecting sales leads.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MKL_VIEW_SALES_LEAD_PRIV	ORA_MKL_SALES_LEAD_FOLLOW_UP_MANAGEMENT_READ_ONLY_DUTY	Sales Lead Follow Up Management Read Only	Read Only role for Sales Lead Follow Up Management Duty.
MKL_VIEW_SALES_LEAD_PRIV	ORA_MKL_SALES_LEAD_FOLLOW_UP_READ_ONLY_DUTY	Sales Lead Follow Up Read Only	Read Only role for Sales Lead Follow Up Duty

ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_ZCA_VIEW_CX_AI_AGENTS	View CX AI Agents	This role allows at run-time UI to access agent meta data

Sales Lookup

Service to configure setup data specific to sales usage.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/sales/baseSales/common/salesLookups/salesLookupService/}LookupValuesService

Service WSDL URL: https://servername/crmService/LookupValuesService?WSDL

Logical Business Objects

- CRM : Opportunity Management : Opportunity

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Sales Lookup SDO*
Handles	*Sales Lookup Translation SDO*

Operations

- *getLookupValuesByPrimaryBU*
- *getLookupValuesByBU*
- *getLookupValues*
- *createLookupValues*
- *updateLookupValues*
- *deleteLookupValues*
- *mergeLookupValues*
- *findLookupValues*
- *processLookupValues*
- *processCSLookupValues*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

getLookupValuesByPrimaryBU

Get operation for Sales Lookup SDO, marked by owner's Primary Business Unit.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	*Sales Lookup*	Returns a collection of filtered Sales Lookup Values for the Primary Business Unit of logged-in user.

getLookupValuesByBU

Get operation for Sales Method SDO, marked by passed Business Unit.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
buOrgId	long	The unique identifier for Business Unit for the method getLookupValuesByBU.

Response Payload

Element Name	Type	Description
result	*Sales Lookup*	The parameter returns a collection of filtered Sales Lookup Values for the supplied Business Unit.

getLookupValues

A web service method of Get operation for Sales Lookup SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
lookupValuesId	long	The unique Sales Lookup value identifier for the method getLookupValues.

Response Payload

Element Name	Type	Description
result	*Sales Lookup*	The parameter returns the Sales Lookup SDO that matches the inbound key attributes.

createLookupValues

A web service method of Create operation for Sales Lookup SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
lookupValues	*Sales Lookup*	The parameter for Sales Lookup SDO to be created for the method createLookupValues.

Response Payload

Element Name	Type	Description
result	*Sales Lookup*	The parameter returns the created Sales Lookup SDO.

updateLookupValues

A web service method of Update operation for Sales Lookup SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
lookupValues	*Sales Lookup*	The parameter for Sales Lookup SDO to be updated for the method updateLookupValues.

Response Payload

Element Name	Type	Description
result	*Sales Lookup*	The parameter returns the updated Sales Lookup SDO.

deleteLookupValues

A web service method of Delete operation for Sales Lookup SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
lookupValues	*Sales Lookup*	The parameter for Sales Lookup SDO to be deleted for the method deleteLookupValues.

Response Payload

Element Name	Type	Description
result	void	The parameter returns the deleted Sales Lookup SDO.

Element Name	Type	Description

mergeLookupValues

A web service method of Merge operation for Sales Lookup SDO. It performs an update if the object exists or an insert if the object does not already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
lookupValues	*Sales Lookup*	The parameter for Sales Lookup SDO to be merged for the method mergeLookupValues.

Response Payload

Element Name	Type	Description
result	*Sales Lookup*	The parameter returns the merged Sales Lookup SDO.

findLookupValues

A web service method of Find operation for Sales Lookup SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findLookupValues.

Response Payload

Element Name	Type	Description
result	*Sales Lookup*	The parameter returns a list of Sales Lookup SDO that satisfies the inbound criteria.

processLookupValues

A web service method of Bulk load operation for Sales Lookup SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	The parameter indicates what action shall be performed, such as create, update, merge, or delete.
lookupValues	*Sales Lookup*	The parameter which provides a list of Sales Lookup SDO to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The parameter which controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound contains only the key attributes or the full object.

Response Payload

Element Name	Type	Description
result	*Sales Lookup*	The parameter returns a list of Sales Lookup SDO that is successfully processed.

processCSLookupValues

An operation to apply the changes back to the data source for Sales Lookup SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object that is used to represent the changes that have been made.

Element Name	Type	Description
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The parameter which controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound contains only the key attributes or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The parameter returns the result of the operation including a list of created/updated data objects, and all warning and informational messages.

getDfltObjAttrHints

Get operation for Sales Lookup that returns control hints defined on a service view and its attributes.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The parameter returns the control hints for the method getDfltObjAttrHints.

getServiceLastUpdateTime

Get operation for Sales Lookup that returns the last modified time for the service schema files.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The parameter returns the last modified time for the method getServiceLastUpdateTime.

getEntityList

Get operation for Sales Lookups that returns the list of service view instances.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	The parameter returns the list of service view instances.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
createLookupValues	MOO_SET_UP_OPPORTUNITY_PRIV	Set Up Opportunity	Allows setup of opportunity application features, such as sales methods, sales coach, credit allocation templates, profiles, lookups, flexfields, and assignment rules, among others.
getLookupValues	MOO_SET_UP_OPPORTUNITY_PRIV	Set Up Opportunity	Allows setup of opportunity application features, such as sales methods, sales coach, credit allocation templates, profiles,

Operation Name	Privilege Code	Privilege Name	Privilege Description
			lookups, flexfields, and assignment rules, among others.
getLookupValues	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
mergeLookupValues	MOO_SET_UP_OPPORTUNITY_PRIV	Set Up Opportunity	Allows setup of opportunity application features, such as sales methods, sales coach, credit allocation templates, profiles, lookups, flexfields, and assignment rules, among others.
processLookupValues	MOO_SET_UP_OPPORTUNITY_PRIV	Set Up Opportunity	Allows setup of opportunity application features, such as sales methods, sales coach, credit allocation templates, profiles, lookups, flexfields, and assignment rules, among others.
processCSLookupValues	MOO_SET_UP_OPPORTUNITY_PRIV	Set Up Opportunity	Allows setup of opportunity application features, such as sales methods, sales coach, credit allocation templates, profiles, lookups, flexfields, and assignment rules, among others.
updateLookupValues	MOO_SET_UP_OPPORTUNITY_PRIV	Set Up Opportunity	Allows setup of opportunity application features, such as sales methods, sales coach, credit allocation templates, profiles, lookups, flexfields, and assignment rules, among others.
getLookupValuesByPrimaryBU	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
getLookupValuesByBU	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.

Sales Lookup

The configurable setup data defined specifically for sales usage.

QName: {http://xmlns.oracle.com/apps/sales/baseSales/common/salesLookups/salesLookupService/}LookupValues

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Sales Lookup Translation SDO*
Handled by	*Sales Lookup*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AppliesTo	string	The object for which the lookup value is applicable.
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
DisplaySequence	long	The order in which the status code is displayed.
EnabledFlag	boolean	The flag indicating whether the Lookup value is enabled.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LookupCategory	string	The attribute for lookup category associated with lookup value.
LookupCode	string	The attribute for lookup code associated with lookup value.

Name	Type	Description
LookupType	string	The attribute for lookup type associated with the lookup value.
LookupValuesId	long	The unique identifier for the Lookup Value. • Primary Key
LookupValuesTranslation	*Sales Lookup Translation*	The attribute for list of translated sales lookup values.
Meaning	string	The translated value of the lookup value.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
SetCode	string	The sales status lookup value's reference data set code.
SetId	long	The identifier for sales status lookup value's reference data set.
SetName	string	The identifier name of sales status lookup value's reference data set.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Sales Lookup Translation

The translated configurable setup data defined specifically for sales usage.

getSalesMethodByBU

A web service method of Get operation for Sales Method SDO, marked by passed business unit.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
buOrgId	long	The parameter for unique identifier for Business Unit.

Response Payload

Element Name	Type	Description
result	*Sales Method*	The parameter returns a collection of filtered Sales Methods for passed Business Unit.

getSalesMethodByPrimaryBU

A web service method of Get operation for Sales Method SDO, marked by owner's primary business unit.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	*Sales Method*	A collection of filtered Sales Methods for Primary BU of signed in user.

getSalesMethod

A web service method of Get operation for Get operation for Sales Method SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesMethodId	long	The system generated identifier for this Sales Method.

Response Payload

Element Name	Type	Description
result	*Sales Method*	The parameter returns Sales Method SDO that matches the inbound key attributes.

createSalesMethod

A web service method of Create operation for Sales Method SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesMethod	*Sales Method*	The parameter for Sales Method SDO to be created.

Response Payload

Element Name	Type	Description
result	*Sales Method*	The parameter returns the created Sales Method SDO.

Element Name	Type	Description

updateSalesMethod

A web service method of Update operation for Sales Method SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesMethod	*Sales Method*	The parameter for Sales Method SDO to be updated.

Response Payload

Element Name	Type	Description
result	*Sales Method*	The parameter returns the updated Sales Method SDO.

deleteSalesMethod

A web service method of Delete operation for Sales Method SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesMethod	*Sales Method*	The parameter for Sales Method SDO to be deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter returns the deleted Sales Method SDO.

mergeSalesMethod

A web service method of Merge operation for Sales Method SDO. It performs an update if the object exists or an insert if the object does not already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesMethod	*Sales Method*	The parameter for Sales Method SDO to be merged.

Response Payload

Element Name	Type	Description
result	*Sales Method*	The parameter returns the merged Sales Method SDO.

findSalesMethod

A web service method of Find operation for Sales Method SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The parameter is not currently used for the method findSalesMethod.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not currently used for the method findSalesMethod.

Response Payload

Element Name	Type	Description
result	*Sales Method*	The parameter is not currently used for the method findSalesMethod.

processSalesMethod

A web service method of Bulk load operation for Sales Method SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	The parameter which indicates what action shall be performed, such as create, update, merge, or delete.
salesMethod	*Sales Method*	The parameter with a list of Sales Method SDO to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The parameter to control the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Sales Method*	The parameter returns a list of Sales Method SDO that is successfully processed.

processCSSalesMethod

A web service method to apply the changes back to the data source for Sales Method SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object that is used to represent the changes that have been made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The parameter to control the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The parameter returns the result of the operation including a list of created/updated data objects, and all warning and informational messages.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
processSalesMethod	MOO_SET_UP_OPPORTUNITY_PRIV	Set Up Opportunity	Allows setup of opportunity application features, such as sales methods, sales coach, credit allocation templates, profiles, lookups, flexfields, and assignment rules, among others.
getSalesMethod	MOO_SET_UP_OPPORTUNITY_PRIV	Set Up Opportunity	Allows setup of opportunity application features, such as sales methods, sales coach, credit allocation templates, profiles, lookups, flexfields, and assignment rules, among others.
getSalesMethod	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
createSalesMethod	MOO_SET_UP_OPPORTUNITY_PRIV	Set Up Opportunity	Allows setup of opportunity application features, such as sales methods, sales coach, credit allocation templates, profiles, lookups, flexfields, and assignment rules, among others.

LastUpdatedBy	string	The user who last updated the record.
Name	string	The attribute for sales method name.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OpportunityType	string	Indicates if the type of opportunity is New, Renewal or an Expansion.
OptyCloseWindow	long	The sales method opportunity close window.
RevnLineSetEnabledFlag	boolean	The flag indicating whether Revenue Line Sets will be enabled when using this sales method.
SalesMethodId	long	The sales method unique identifier, primary key. • Primary Key

Name	Type	Description
SalesMethodNumber	string	A GUID-based column that has been created for being an Alternate Key for data migration.
SalesMethodTranslation	*Sales Method Translation*	The attribute for list of translated sales method data.
SalesStage	*Sales Stage*	The sales stage for a given sales method describes the progress of an opportunity in the sales cycle.
SetId	long	The sales method set identifier.
SetName	string	The sales method reference data set identifier.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Sales Method Translation

The translated approach used in the sales process, and encompasses every stage associated with the sales process, from prospecting to forecasting to closing opportunities.

QName: {http://xmlns.oracle.com/apps/sales/opptyMgmt/salesMethods/salesMethodService/}SalesMethodTranslation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Method*
Handled by	*Sales Method*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DescriptionText	string	The description of the sales method.
Language	string	The translated language for the translation service data object. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Name	string	The attribute for sales method name.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
SalesMethodId	long	The attribute for sales method identifier. • Primary Key
SourceLang	string	The source language for the sales method.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Sales Stage

The sales stage for a given sales method describes the progress of an opportunity in the sales cycle.

QName: {http://xmlns.oracle.com/apps/sales/opptyMgmt/salesMethods/salesMethodService/}SalesStage

Logical Business Objects

- CRM : Opportunity Management : Sales Method

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Process Steps*
Contains	*Sales Stage Assessment Template*
Contains	*Sales Stage Translation*
Contains	*Sales Stage Required Fields*
Contained by	*Sales Method*
Handled by	*Sales Method*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AverageDaysAtStage	long	The average days at sales stage.
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DeletedFlag	boolean	The flag indicating whether the sales stage has been deleted.
DescriptionText	string	The description of sales stage.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaximumDaysInStage	long	The maximum days of sales stage.
Name	string	The name of sales stage.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PhaseCd	string	The phase of sales stage.
QuotaFactor	decimal	The sales stage quota factor.
RcmndWinProb	decimal	The recommended win probability for sales stage.
SalesMethodId	long	The sales method identifier of the sales method to which the sales stage belongs.
SalesStageAssessmentTemplate1	*Sales Stage Assessment Template*	An object representing an assessment template tied to a sales stage of a particular sales method. A sales representative managing an opportunity in this particular stage is prompted to complete the assessment when he is about to move to the next stage in the lifecycle. sales stage assessment templates can be either mandatory or recommended.
SalesStageProcessSteps	*Process Steps*	A sequence of recommended steps tied to a particular sales stage which is used to guide the sales representative through the opportunity lifecycle.
SalesStageReqFields	*Sales Stage Required Fields*	A list of fields that are required to be entered for an opportunity prior to exiting the sales stage.
SalesStageTranslation	*Sales Stage Translation*	The attribute for list of translated sales stages.

Name	Type	Description
SetId	string	The set identifier for sales stage. The value is retrieved from the sales method set identifier.
StageNumber	string	A GUID-based column that has been created to be a part of the Alternate Key for data migration.
StageStatusCd	string	The status of the sales stage.
StgId	long	The unique identifier for sales stage. • Primary Key
StgOrder	decimal	The order of the opportunity's sales stage within the sales method.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Sales Stage Assessment Template

The assessment template tied to a sales stage of a particular sales method. A sales representative managing an opportunity in this particular stage is prompted to complete the assessment when he is about to move to the next stage in the lifecycle. Sales stage assessment templates can be either mandatory or recommended.

Name	string	The name of sales stage.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
SourceLang	string	The source language for the sales stage.
StgId	long	The identifier for sales stage. • Primary Key
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Sales Objective

Service to operate on sales objective business objects. It can be used by third-party applications to perform standard and custom operations on sales objective business objects.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmCommon/salesObjectives/salesObjectiveService/}SalesObjectiveService

Service WSDL URL: https://servername/crmService/SalesObjectiveService?WSDL

Logical Business Objects

- CRM : Common CRM : Sales Objective

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Objective*
Handles	*Note Descriptive Flexfields*
Handles	*Note*
Handles	*Objective Split*

Operations

- *deleteObjectiveSplits*
- *getObjective*
- *createObjective*
- *updateObjective*
- *deleteObjective*
- *mergeObjective*
- *findObjective*
- *deleteObjectiveSplit*
- *processObjectiveSplit*

deleteObjectiveSplits

A web service method to delete sales objective split.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
objectiveId	long	The parameter for the unique identifier of objective splits.

Response Payload

Element Name	Type	Description
result	void	This operation returns nothing for the method deleteObjectiveSplits.

getObjective

A web service method to query the attributes of an objective object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
objectiveId	long	The parameter for the unique identifier of objective.

Response Payload

Element Name	Type	Description
result	*Objective*	The parameter returns the objective object attributes.

createObjective

A web service method to create an objective and its child objects.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesObjective	*Objective*	The parameter of the Objective object for the method createObjective.

Response Payload

Element Name	Type	Description
result	*Objective*	The parameter returns the Objective object for the method createObjective.

Element Name	Type	Description

updateObjective

A web service method to update an objective and its child objects.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesObjective	*Objective*	The parameter of the Objective object for the method updateObjective.

Response Payload

Element Name	Type	Description
result	*Objective*	The parameter returns the Objective object for the method updateObjective.

deleteObjective

A web service method to delete an objective and its child objects.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesObjective	*Objective*	The parameter of the Objective object for the method deleteObjective.

Response Payload

Element Name	Type	Description
result	void	This operation returns nothing for the method deleteObjective.

mergeObjective

A web service method to merge an objective and its children.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesObjective	*Objective*	The parameter of the Objective object for the method mergeObjective.

Response Payload

Element Name	Type	Description
result	*Objective*	The parameter returns the Objective object for the method mergeObjective.

findObjective

A web service method to query for a list of objectives on objective object attributes.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The parameter for the criteria to retrieve records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter to control value of whether to retrieve translations.

Response Payload

Element Name	Type	Description
result	*Objective*	The parameter returns the list of objective objects.

deleteObjectiveSplit

Used to delete an objective split.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesObjectiveSplitsService	*Objective Split*	Objective Split Object.

Response Payload

Element Name	Type	Description
result	void	void

processObjectiveSplit

Used to process objective split.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Operation
salesObjectiveSplitsService	*Objective Split*	List of Objective split unique identifier
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	process information

Response Payload

Element Name	Type	Description
result	*Objective Split*	list of Objective split

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
deleteObjectiveSplits	ZCA_DELETE_SALES_OBJECTIVE_PRIV	Delete Sales Objective	Allows deleting sales objectives.
deleteObjectiveSplits	ZCA_UPDATE_SALES_OBJECTIVE_PRIV	Update Sales Objective	Allows updating sales objectives.
deleteObjective	ZCA_DELETE_SALES_OBJECTIVE_PRIV	Delete Sales Objective	Allows deleting sales objectives.
updateObjective	ZCA_UPDATE_SALES_OBJECTIVE_PRIV	Update Sales Objective	Allows updating sales objectives.
getObjective	ZCA_VIEW_SALES_OBJECTIVE_PRIV	View Sales Objective	Allows viewing sales objectives.
mergeObjective	ZCA_UPDATE_SALES_OBJECTIVE_PRIV	Update Sales Objective	Allows updating sales objectives.
processObjectiveSplit	ZCA_UPDATE_SALES_OBJECTIVE_PRIV	Update Sales Objective	Allows updating sales objectives.
deleteObjectiveSplit	ZCA_UPDATE_SALES_OBJECTIVE_PRIV	Update Sales Objective	Allows updating sales objectives.
findObjective	ZCA_VIEW_SALES_OBJECTIVE_PRIV	View Sales Objective	Allows viewing sales objectives.
createObjective	ZCA_CREATE_SALES_OBJECTIVE_PRIV	Create Sales Objective	Allows creating sales objectives.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description

Handled by	*Sales Cloud Household*

Relationship Type	Object or Service
Handled by	*Partner Program Enrollment Service*
Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactRelationshipId	long	The identifier of the contact relationship record in Trading Community Architecture (TCA).
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreatorPartyId	long	This is the party identifier for the note creator.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DeleteFlag	boolean	Indicates whether the user has access to delete the note.
Dff	*Note Descriptive Flexfields*	The descriptive flex field segment.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record

Name	Type	Description
NoteAttributeCategory	string	The contextual flex field for development usage.
NoteAttributeUid1	string	The flex field for development usage.
NoteAttributeUid2	string	The flex field for development usage.
NoteAttributeUid3	string	The flex field for development usage.
NoteAttributeUid4	string	The flex field for development usage.
NoteAttributeUid5	string	The flex field for development usage.
NoteId	long	The unique identifier of the note. • Primary Key
NoteNumber	string	The alternate unique identifier of the note. A user key that is system generated or from an external system.
NoteTitle	string	The title of the note entered by the user.
NoteTxt	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	This is the column that stores the actual note text.
NoteTypeCode	string	This is the note type code for categorization of note.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
SourceObjectCode	string	This is the source_object_code for the source object as defined in OBJECTS Metadata.
SourceObjectId	string	This is the source_object_Uid for the source object such as Activities, Opportunities, and so on defined in OBJECTS metadata.
UpdateFlag	boolean	Indicates whether the user can update the note.
VisibilityCode	string	This is the attribute to specify the visibility level of the note.

Note Descriptive Flexfields

The descriptive flex field that captures additional information for notes, such as a priority or status.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/flex/noteDff/}NoteDFF

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
NoteId	long	The unique identifier of the note. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Objective

The details of a sales objective, such as the description.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesObjectives/salesObjectiveService/}SalesObjective

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Note*
Contains	*Objective Split*
Handled by	*Sales Objective*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountId	long	Account unique identifier.
AccountNumber	string	Puid for the Account.
AccountPartyType	string	Type of the Account.
AccountPartyUniqueName	string	Unique Name of the Account.

Name	Type	Description
ActualValue	long	The actual numeric value.
BusinessPlanId	long	The identifier of the business plan that is a parent of the objective.
BusinessPlanName	string	The business plan name.
BusinessPlanNumber	string	The user-definable unique identifier of the business plan.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DeleteFlag	boolean	Access level indicator for delete
Description	string	The free text description of the record.
EndDisplayPeriodName	string	The objective end period display name.
EndPeriodName	string	The values for the appropriate period type based on the entries in the GL calendar.
GeographyId	long	Geography unique identifier.
GeographyKey	string	Geography public unique identifier.
GeographyName	string	Name of the Geography.
Name	string	The objective name.
Note	*Note*	The note associated with the sales objective.
ObjectiveId	long	The objective identifier. • Primary Key
ObjectiveNumber	string	The user-definable unique identifier of the objective.
ObjectiveTypeCode	string	The objective type code.
ObjectiveTypeName	string	The objective type name.

Name	Type	Description
OrigCreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The original creation date of the objective.
OwnerPartyName	string	
PeriodEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Period End Date
PeriodStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Period Start Date
PeriodTypeCode	string	The period type such as year, quarter, or period.
PeriodTypeName	string	The objective time period name derived from the lookup (ZCA_TIME_PERIODS) meaning.
ProductGroupId	long	Product Group unique identifier.
ProductGroupName	string	Name of the Product Group.
ProductGroupReferenceNumber	string	ProductGroup Reference Number.
SalesObjectiveSplits	*Objective Split*	The split associated with the sales objective.
StartDisplayPeriodName	string	The objective start period display name.
StartPeriodName	string	The values for the appropriate period type based on the entries in GL calendar.
TargetValue	long	The numeric value of the target.
UnitOfMeasureCode	string	The unit of measure.
UnitOfMeasureName	string	The unit of measure translatable name.
UpdateFlag	boolean	Access level indicator for update

Objective Split

The details of the sales objective split.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesObjectives/salesObjectiveService/}SalesObjectiveSplits

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Objective*
Handled by	*Sales Objective*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountId	long	The unique identifier of the account.
ActualValue	long	The numeric value.
DisplayPeriodName	string	The objective split period identifier.
GeographyId	long	The unique identifier of the geography.
ObjectiveId	long	The identifier of the objective that is a parent of the objective split.
ObjectiveSplitId	long	The objective split identifier. • Primary Key
PeriodType	string	The objective split period type identifier.
ProductId	long	The product group unique identifier.
TargetValue	long	The target numeric value.

Sales Order Service

The service to create, update, get, and delete quotes and orders.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmCommon/orders/salesOrdersService/}SalesOrderService

Service WSDL URL: https://servername/crmService/SalesOrderService?WSDL

Logical Business Objects

- CRM : Common CRM : Sales Transaction

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Quote and Order*

Operations

- *getSalesOrderHeader*
- *createSalesOrderHeader*
- *updateSalesOrderHeader*
- *deleteSalesOrderHeader*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

getSalesOrderHeader

The operation to get the sales order header.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
orderHeaderId	long	The unique identifier for the quote or order.

Response Payload

Element Name	Type	Description
result	*Sales Order*	The operation that returns sales order header service data object.

createSalesOrderHeader

The operation to create a new sales order header.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesOrderHeader	*Sales Order*	SalesOrderHeaderSDO

Response Payload

Element Name	Type	Description
result	*Sales Order*	The operation that returns sales order header service data object.

updateSalesOrderHeader

The operation to update an existing sales order header.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesOrderHeader	*Sales Order*	A required input parameter of the deleteEntity web service method. Use the API name of the custom object you want to delete.

Response Payload

Element Name	Type	Description
result	*Sales Order*	The service data object for update sales order header.

Element Name	Type	Description

deleteSalesOrderHeader

The operation that deletes existing sales order header.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesOrderHeader	*Sales Order*	A required input parameter of the createEntity web service method. Use the API name of the custom object you want to create.

Response Payload

Element Name	Type	Description
result	void	The operation returns void.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The locale name is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
updateSalesOrderHeader	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
deleteSalesOrderHeader	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
getSalesOrderHeader	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
createSalesOrderHeader	MOO_CREATE_OPPORTUNITY_PRIV	Create Opportunity	Allows creating of opportunities.

Privileges to Duty Roles Mapping

Sales Order

The name of the service data object used to integrate quotes and sales orders.

QName: {http://xmlns.oracle.com/apps/crmCommon/orders/salesOrdersService/}SalesOrderHeader

Logical Business Objects

- CRM : Common CRM : Sales Transaction

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Sales Order Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountBasedQuoteFlag	boolean	Indicates if this quote / order record is account based quote or not.
ActiveVersionFlag	boolean	The active version flag.
BUOrgId	long	The business unit (Internal Organization) to which this Quote / Order belongs.
ContractEndDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The latest end date for all the line items within the quote
ContractStartDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The earliest start date for all the items within the quote
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DeleteFlag	boolean	This flag controls if the user has access to delete the record
Description	string	The free text description of the record.
ExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The expiration date of the quote or order.
ExternalHostName	string	The name of the CPQ site
ExternalProcessName	string	The name of the process for a CPQ site
ExternalQuoteNumber	string	Identifier from source system that created this Quote
ExternalReferenceNumber	string	The identifier for the external quote/order.
ExternalSystemReferenceCode	string	The external reference(Third party) type for the quote or order. Big machines will pass BMQUOTE.
LastOptySyncDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The last opportunity sync date for the quote to identify the active version of the quote for the opportunity.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
Name	string	Stores the quote/order name.

Name	Type	Description
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OptyId	long	The unique identifier of the opportunity.
OrderHeaderId	long	The unique identifier for the quote or order. • Primary Key
OrderHeaderNumber	string	Order Header Number for the Quote or Order. This is a public surrogate key.
OrderTotal	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total amount.
Owner	string	The quote owner.
OwnerResourcePartyId	long	The resource identifier of the owner party
OwnerResourcePartyName	string	The party name of the owner
PlacedOnDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date on which the order was placed.
ProposalExistFlag	boolean	Identifies the associated proposal for the quote. Valid values are Y or N.
QuoteTypeCategory	string	If renewal process is set is this quote a renewal subscription or expansion to a subscription.
RenewalProcess	string	The renewal process that will be used to renew the Quotes and Orders
SalesAccountUniqueName	string	Name of the customer account
SoldContactPartyId	long	The customer contact party identifier.
SoldCustomerPartyId	long	The customer party identifier.
SoldCustomerPartyUniqueName	string	Customer Party Unique Name
SoldPartySiteId	long	The customer address identifier.

Name	Type	Description
Status	string	The status of the record.
TotalMonthlyRecurringRevenue	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total monthly recurring revenue for the quote
TotalMonthlyUsageRevenue	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total monthly usage revenue for the quote
TotalNonRecurringRevenue	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total nonrecurring revenue for the quote.
TotalRecurringRevenue	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total recurring revenue for the quote
TotalUsageRevenue	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total usage revenue for the quote
UpdateFlag	boolean	This flag controls if the user has access to update the record
VersionNumber	long	The version number of the quote/order.
WinStatusCode	string	The lookup code for lookup type=ORA_ZCA_WIN_STATUS.

Sales Party

The service used to create, update, get, or find a sales party. A sales party is a party with a usage of sales account, sales prospect, or legal entity.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesPartiesService/}SalesPartyService

Service WSDL URL: https://servername/crmService/SalesPartyService?WSDL

assignSalesAccountChkProfile

The operation that assigns the sales account after its created, updated or merged based on auto assignment profile options. This is automatically invoked at the end of createSalesParty, updateSalesParty, and mergeSalesAccount.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyId	long	An input parameter. Uses the party identifier.
operation	string	An input parameter. Uses values such as create, update, or merge.
saveFlag	boolean	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Response Payload

Element Name	Type	Description
result	void	The operation returns void.

updateExistingFlag

The operation sets existing sales account identifier for all sales accounts which have the specified party usage as defined in the existing sales account usage profile option value. This operation is an internal operation and is not superseded by another operation.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
startId	long	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.
endId	long	The operation to update the existing flag for ending party identifier.
schTime	long	The date and time when the service definition last changed in ISO 8601 format.

Response Payload

Element Name	Type	Description
result	void	The operation that returns the existing flag.

Element Name	Type	Description

createPartyUsage

A Web service method to set party usage for a given party.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyId	long	An input parameter. Includes the party identifier for which to set the party usage.
partyUsage	string	An input parameter. Includes the party usage you want to set.

Response Payload

Element Name	Type	Description
result	void	The operation returns void.

deleteSalesParty

The operation that deletes a sales party which may be a sales account or a sales prospect. This will inactivate the party and the sales account profile if it exists.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyId	long	An input parameter. Uses the party identifier of the sales party to be deleted.

Response Payload

Element Name	Type	Description
result	void	The operation returns void.

getSalesAccount

A Web service method to get sales account profile for a given sales account.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountId	long	The Sales Account Identifier.

Response Payload

Element Name	Type	Description
result	*Sales Account*	The return value is the sales account profile for the given party.

createSalesAccount

A Web service method that creates a sales account.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccount	*Sales Account*	An input parameter. Include the sales account to be created.

Response Payload

Element Name	Type	Description
result	*Sales Account*	The return value is the outcome of Web service method. For example, the outcome could be successfully created sales customer information.

updateSalesAccount

The Web service method that updates the specified sales account.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccount	*Sales Account*	The input parameter to update sales account.

Response Payload

Element Name	Type	Description
result	*Sales Account*	The return value is the outcome of the Web service method. For example, the outcome could be successfully updated sales account information.

mergeSalesAccount

A Web service method to merge sales account profiles. Includes performing an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccount	*Sales Account*	An input parameter. Include the sales account profile to be merged.

Response Payload

Element Name	Type	Description
result	*Sales Account*	The return value is the outcome of the Web service method. For example, the outcome could be merged sales account profiles.

findSalesAccount

A Web service method to find sales account profile for a given criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*Sales Account*	The return value includes a list of sales account profiles that satisfy the inbound criteria.

findSalesAccountMyFavoriteSalesAccountsVC

A Web service method to find a list of my favorite sales accounts. My favorite sales accounts are sales accounts for which update rating has been set.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
BindPartyUniqueName	string	The find operation for party unique name for which the list of resources is returned in the results.
BindOwner	string	The find operation for owner for which the list of resources is returned in the results.
BindPartyNumber	string	The find operation for party number for which the list of resources is returned in the results.
BindAddress1	string	The find operation for address for which the list of resources is returned in the results.
BindAddress2	string	The find operation for address for which the list of resources is returned in the results.
BindCity	string	The find operation for city for which the list of resources is returned in the results.

Element Name	Type	Description
BindState	string	The find operation for state for which the list of resources is returned in the results.
BindPostalCode	string	The find operation for postal code for which the list of resources is returned in the results.
BindCountry	string	The find operation for country for which the list of resources is returned in the results.
BindResourcePartyName	string	The find operation for resource party name for which the list of resources is returned in the results.
BindTerritory	string	The find operation for territory for which the list of resources is returned in the results.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*Sales Account*	The return value includes a list of sales account profiles that satisfy the inbound criteria.

createOrganizationParty

The operation is used internally in create sales party and can also be used independently to create parties like sales prospect.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
organizationParty	*Trading Community Organization Details*	An input parameter. Includes the trading community organization to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}OrganizationPartyResult	The return value is the outcome of the method. For example, the outcome could be successfully created Trading Community Organization details. The outcome could also be a list of warnings or informational messages.

mergeOrganizationParty

A Web service method to merge trading community organizations. Includes performing an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
organizationParty	*Trading Community Organization Details*	An input parameter. Includes the trading community organization to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}OrganizationPartyResult	The return value is the outcome of the method. For example, the outcome could be merged Trading Community Organization details. The outcome could also be a list of warnings or informational messages.

createPersonParty

A Web service method that creates a trading community person record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
personParty	*Trading Community Person Details*	A required input parameter. Includes the trading community person details.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}PersonResult	The return value is the newly created trading community person object, and any warning or informational messages if applicable.

mergePersonParty

A Web service method to merge trading community persons. Includes performing an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
personParty	*Trading Community Person Details*	An input parameter. Includes the trading community person to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}PersonResult	The return value is the outcome of the method. For example, the outcome could be merged Trading Community Person details. The outcome could also be a list of warnings or informational messages.

getSalesParty

The operation returns party information for the given party identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyId	long	An input parameter. Uses the party identifier for which to get the sales party service data object.
salesAccountId	long	Retrieves user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this

Element Name	Type	Description
		service to get the list of possible values for the viewName request payload element.

Response Payload

Element Name	Type	Description
result	*Sales Party*	The return value include the sales party service data object that matches the specified key attributes.

createSalesParty

This operation that creates a sales account or a sales prospect based on whether the address is passed and marked as a sell to address. The sales account or the sales prospect can be an organization or a person.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesParty	*Sales Party*	A required input parameter of the getEntity web service method. Use the API name of the custom object you want to query for.

Response Payload

Element Name	Type	Description
result	*Sales Party*	The return value includes the created sales party service data object.

updateSalesParty

The operation that updates sales party information for the given party identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesParty	*Sales Party*	A required input parameter of the findEntity web service method. Use the API name of the custom object you want to query for.

Response Payload

Element Name	Type	Description
result	*Sales Party*	The return value includes the updated sales party service data object.

findSalesParty

This method will return all parties that have a usage as defined in 'Eligible Customer' party usage filter rule and match the given search criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*Sales Party*	The return value includes a list of sales party service data objects that satisfy the specified criteria.

findSalesAccountResourceAccess

A Web service method to return the sales account resource access service data object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*Sales Account Resource Access*	The return value is a list of sales account resource access service data objects that match the findCriteria.

findSalesAccountResourceAccessResourceBySalesAccountVC

A Web service method that returns a list of resources that have access to the given sales account.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
BindSalesAccountId	long	The find operation for account identifier for which the list of resources is returned in the results.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*Sales Account Resource Access*	The return value of the findSalesAccountResourceAccessResourceBySalesAccoun Web service method. Includes the resources that have access to the sales account.

findSalesAccountResourceAccessSalesAccountByResourceVC

A Web service method that returns a list of sales accounts that a given resource has access to.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
BindResourceId	long	The find operation for resource identifier for which the list of resources is returned in the results.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*Sales Account Resource Access*	The return value of the findSalesAccountResourceAccessSalesAccountVC Web service method. Includes the resources that have access to the given sales account.

getSalesAccountResource

A Web service method that returns sales account resource service data object for a given sales account resource id.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
sAccountResourceId	long	A required input parameter. Use the surrogate primary key for the sales account resource team member.

Response Payload

Element Name	Type	Description
result	*Sales Account Resource*	The return value is a sales account resource service data object that matches the given sales account resource identifier.

createSalesAccountResource

The operation to add a member to the sales account team.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountResource	*Sales Account Resource*	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*Sales Account Resource*	The return value included the created sales account resource service data object.

updateSalesAccountResource

The operation to update sales account team member information such as lock assignment flag, access permission, and so on.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountResource	*Sales Account Resource*	A required input parameter of the getEntity Web service method. Includes the row ID of the record you want to query.

Response Payload

Element Name	Type	Description
result	*Sales Account Resource*	The return value is the updated sales account resource service data object.

Element Name	Type	Description

deleteSalesAccountResource

The operation that removes a member from the sales account team.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesAccountResource	*Sales Account Resource*	A required input parameter of the findEntity web service method. Includes optional search criteria, sort filter, and attributes to be excluded when returning the set of records. Also includes the option to return any of the custom object's child entities, as well as the set of search criteria to use on the child entities.

Response Payload

Element Name	Type	Description
result	void	The operation returns void.

findSalesAccountResource

The operation returns the list of members in the sales account team.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*Sales Account Resource*	The return value include a list of sales account resource service data objects that satisfy the specified criteria.

findMySalesAccount

A Web service method to find a list of my sales accounts. My sales accounts are sales accounts assigned to me or my subordinates, and sales accounts assigned to my territories or their descendent territories.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*My Sales Account*	The return value include a list of sales accounts data objects that satisfy the specified criteria.

findMySalesAccountMyTeamVC

A Web service method to find a list of my team's sales accounts. My team's sales accounts are sales accounts for which I am a member on the sales account team or sales account territory, my subordinate is a member on the sales account team, or my territory's descendent territories are assigned to the sales account.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*My Sales Account*	The return value include a list of my sales accounts data objects that satisfy the specified criteria.

findMySalesAccountMyVC

A Web service method to find a list of my sales accounts. My sales accounts are sales accounts for which I am a member on the sales account team or the sales account territory.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*My Sales Account*	The return value include a list of my sales accounts data objects that satisfy the specified criteria.

getAsset

Retrieves an asset.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
assetId	long	The asset identifier.

Response Payload

Element Name	Type	Description
result	*Asset*	The asset details for the specified asset identifier.

createAsset

Creates an asset.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
asset	*Asset*	The input payload for the asset to be created.

Response Payload

Element Name	Type	Description
result	*Asset*	The created asset.

updateAsset

Updates an asset.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
asset	*Asset*	The input payload for the asset to be updated.

Response Payload

Element Name	Type	Description
result	*Asset*	The updated asset.

deleteAsset

Deletes an asset.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
asset	*Asset*	The asset identifier.

Response Payload

Element Name	Type	Description
result	void	

findAsset

Retrieves assets based on a specified criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria for retrieving one or more assets.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used.

Response Payload

Element Name	Type	Description
result	*Asset*	The list of assets that match the specified criteria.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The locale name is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create,

Element Name	Type	Description
		update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
updateSalesAccountResource	ZCM_VIEW_SALES_ACCOUNT_TEAM_PRIV	View Sales Account Team	Allows viewing of the sales account team information.
findSalesAccountResource	ZCM_VIEW_SALES_ACCOUNT_TEAM_PRIV	View Sales Account Team	Allows viewing of the sales account team information.
findAsset	ZCM_VIEW_ASSETS_PRIV	View Assets	Allows view assets
createOrganizationParty	ZCM_CREATE_CONSUMER_PRIV	Create Consumer	Allows creating a consumer.
createOrganizationParty	ZCM_CREATE_SALES_ORGANIZATION_PRIV	Create Sales Organization	Allows creating a sales organization.
createAsset	ZCM_CREATE_ASSET_PRIV	Create Asset	Allows create new assets
findMySalesAccountMyVC	ZCM_VIEW_SALES_PARTY_PRIV	View Sales Party	Allows viewing of sales party information.
getSalesParty	ZCM_VIEW_SALES_PARTY_PRIV	View Sales Party	Allows viewing of sales party information.
mergeOrganizationParty	ZCM_UPDATE_CONSUMER_PRIV	Update Consumer	Allows reviewing and updating the consumer information.
mergeOrganizationParty	ZCM_UPDATE_SALES_ORGANIZATION_PRIV	Update Sales Organization	Allows updating the sales organization.
updateExistingFlag	ZCM_UPDATE_CONSUMER_PRIV	Update Consumer	Allows reviewing and updating the consumer information.
updateExistingFlag	ZCM_UPDATE_SALES_ORGANIZATION_PRIV	Update Sales Organization	Allows updating the sales organization.

Operation Name	Privilege Code	Privilege Name	Privilege Description
createSalesAccountResource	ZCM_VIEW_SALES_ACCOUNT_TEAM_PRIV	View Sales Account Team	Allows viewing of the sales account team information.
findSalesAccount	ZCM_VIEW_CONSUMER_PRIV	View Consumer	Allows viewing of consumers.
findSalesAccount	ZCM_VIEW_SALES_ORGANIZATION_PRIV	View Sales Organization	Allows viewing of the sales organization.
findMySalesAccountMyTeamVC	ZCM_VIEW_SALES_PARTY_PRIV	View Sales Party	Allows viewing of sales party information.
mergePersonParty	ZCM_UPDATE_CONSUMER_PRIV	Update Consumer	Allows reviewing and updating the consumer information.
mergePersonParty	ZCM_UPDATE_SALES_ORGANIZATION_PRIV	Update Sales Organization	Allows updating the sales organization.
createPersonParty	ZCM_CREATE_CONSUMER_PRIV	Create Consumer	Allows creating a consumer.
createPersonParty	ZCM_CREATE_SALES_ORGANIZATION_PRIV	Create Sales Organization	Allows creating a sales organization.
updateSalesAccount	ZCM_UPDATE_CONSUMER_PRIV	Update Consumer	Allows reviewing and updating the consumer information.
updateSalesAccount	ZCM_UPDATE_SALES_ORGANIZATION_PRIV	Update Sales Organization	Allows updating the sales organization.
createSalesAccount	ZCM_CREATE_CONSUMER_PRIV	Create Consumer	Allows creating a consumer.
createSalesAccount	ZCM_CREATE_SALES_ORGANIZATION_PRIV	Create Sales Organization	Allows creating a sales organization.
deleteSalesParty	ZCM_DELETE_SALES_ACCOUNT_PRIV	Delete Sales Account	Allows deleting sales accounts.
deleteSalesParty	ZCM_DELETE_SALES_ORGANIZATION_PRIV	Delete Sales Organization	Allows deletion of Sales Organizations.
deleteSalesParty	ZCM_DELETE_SALES_GROUP_PRIV	Delete Sales Group	Allows deleting sales groups.
deleteSalesParty	ZCM_DELETE_CONSUMER_PRIV	Delete Consumer	Allows deleting consumers.
assignSalesAccountChkProfile	ZCM_UPDATE_CONSUMER_PRIV	Update Consumer	Allows reviewing and updating the consumer information.

Operation Name	Privilege Code	Privilege Name	Privilege Description
assignSalesAccountChkProfile	ZCM_UPDATE_SALES_ ORGANIZATION_PRIV	Update Sales Organization	Allows updating the sales organization.
deleteSalesAccountResource	ZCM_VIEW_SALES_ACCOUNT_ TEAM_PRIV	View Sales Account Team	Allows viewing of the sales account team information.
findSalesAccountMyFavoriteSalesAc	ZCM_VIEW_SALES_PARTY_PRIV	View Sales Party	Allows viewing of sales party information.
mergeSalesAccount	ZCM_UPDATE_CONSUMER_PRIV	Update Consumer	Allows reviewing and updating the consumer information.
mergeSalesAccount	ZCM_UPDATE_SALES_ ORGANIZATION_PRIV	Update Sales Organization	Allows updating the sales organization.
deleteAsset	ZCM_DELETE_ASSET_PRIV	Delete Asset	Allows delete assets
createSalesParty	ZCM_CREATE_CONSUMER_PRIV	Create Consumer	Allows creating a consumer.
createSalesParty	ZCM_CREATE_SALES_ ORGANIZATION_PRIV	Create Sales Organization	Allows creating a sales organization.
updateAsset	ZCM_EDIT_ASSET_PRIV	Edit Asset	Allows edit existing assets
getAsset	ZCM_VIEW_ASSETS_PRIV	View Assets	Allows view assets
updateSalesParty	ZCM_UPDATE_CONSUMER_PRIV	Update Consumer	Allows reviewing and updating the consumer information.
updateSalesParty	ZCM_UPDATE_SALES_ ORGANIZATION_PRIV	Update Sales Organization	Allows updating the sales organization.
findSalesAccountResourceAccess	ZCM_VIEW_SALES_ACCOUNT_ TEAM_PRIV	View Sales Account Team	Allows viewing of the sales account team information.
findSalesParty	ZCM_VIEW_SALES_PARTY_PRIV	View Sales Party	Allows viewing of sales party information.
getSalesAccount	ZCM_VIEW_CONSUMER_PRIV	View Consumer	Allows viewing of consumers.
getSalesAccount	ZCM_VIEW_SALES_ ORGANIZATION_PRIV	View Sales Organization	Allows viewing of the sales organization.
createPartyUsage	ZCM_UPDATE_CONSUMER_PRIV	Update Consumer	Allows reviewing and updating the consumer information.

Operation Name	Privilege Code	Privilege Name	Privilege Description
createPartyUsage	ZCM_CREATE_CONSUMER_PRIV	Create Consumer	Allows creating a consumer.
createPartyUsage	ZCM_UPDATE_SALES_ ORGANIZATION_PRIV	Update Sales Organization	Allows updating the sales organization.
createPartyUsage	ZCM_CREATE_SALES_ ORGANIZATION_PRIV	Create Sales Organization	Allows creating a sales organization.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCM_VIEW_SALES_ ORGANIZATION_PRIV	ORA_ZCM_SR_SALES_PARTY_ MANAGEMENT	Service Sales Party Management	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request management capabilities.
ZCM_VIEW_SALES_ ORGANIZATION_PRIV	ORA_SVC_CASE_ADMINISTRATOR	Case Administrator	Administers all aspects of Case Management.

ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_UER_UTILITIES_CUSTOMER_SERVICE_ADMINISTRATOR_JOB	ORA_UER_UTILITIES_CONFIGURATION_ADMINISTRATOR	Utilities Configuration Administrator	Individual responsible for maintaining utilities industry configurations.

Account

An organization account and its profile information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}OrganizationProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Organization Profile Additional Information*
Contained by	*Sales Account*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Alias	string	The organization alias name.
AnalysisFy	string	The fiscal year that the financial information is based on.
BankCode	string	Identifies the bank in several countries, typically for regulatory purposes.
BankOrBranchNumber	string	Stores bank number for banks and branch number for bank branches. Primarily stores ABA number for US bank branches.

Name	Type	Description
BranchCode	string	Identifies the bank branch in several countries, typically for regulatory purposes.
BranchFlag	boolean	Indicates if this is a branch location. If the value is True, then this is a branch location.
BusinessReport	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	Dun and Bradstreet business information report.
BusinessScope	string	The physical class of business in which a business participates. For example, local, national, or international.
CeoName	string	The name of the chief executive officer. It is the denormalized value of the CEO_NAME in HZ_ORGANIZATION_PROFILES.
CeoTitle	string	The formal title of the chief executive officer.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
Comments	string	The comments for the record.
CongDistCode	string	The U.S. Congressional district code for the account.
ContentSourceNumber	string	The content source number is not used.
ControlYr	decimal	The year when current ownership gained control of the organization.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CorporationClass	string	The taxation classification for corporation entities such as Chapter S in the US.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CurrentFiscalYearPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its current fiscal year.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DataCloudStatus	string	Specifies the enrichment status of the person.
DbRating	string	The Dun & Bradstreet credit rating.
Disadv8aInd	string	Indicates whether the organization is considered disadvantaged by the US government under Title 8A. If the value is Yes, the organization is considered disadvantaged under Title 8A. The default value is No.
DisplayedDUNSPartyIdentifier	long	Dun and Bradstreet does not maintain data for the branch offices of companies that are located beyond North America. Data is only maintained for the company headquarters. If the data pertains only to company headquarters, the headquarters PARTY_ID is stored. If the data pertains to a branch office, the branch PARTY_ID is stored.
DoNotConfuseWith	string	Indicates existence of similarly named businesses.
DomesticUltimateDUNSNumberC	string	DUNS Number for the Domestic Ultimate, which is the highest family member in the same country as the business entity. A subject can be its own Domestic Ultimate.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveLatestChange	string	The effective latest change is not used.

Name	Type	Description
EffectiveSequence	int	The effective sequence is not used.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
EmployeesAtPrimaryAddress	string	The number of employees at the referenced address.
EmployeesAtPrimaryAddressEstimation	string	Indicates the calculation of employees at the primary address as estimated.
EmployeesAtPrimaryAddressMinimum	string	Indicates the calculation of employees at the primary address as minimum.
EmployeesAtPrimaryAddressText	string	The number of employees at the referenced address that cannot be mapped to a number.
EmployeesTotal	decimal	The total number of employees.
EnquiryDUNS	string	The identifier used to query the Dun and Bradstreet data. If a location is a branch, then in some countries the headquarters DUNS number is used to do the query. Otherwise it is the same as the DUNS number.
ExportInd	string	Indicates whether the organization is an exporter. If the value is Y, then the organization is an exporter. The default value is N.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
GlobalUltimateDUNSNumberC	string	DUNS Number for the Global Ultimate, which is the highest family member in the same country as the business entity as you proceed further on this branch of the tree. A case can be its own ultimate.
GrowthStrategyDescription	string	The description of the growth strategy.

Name	Type	Description
HQBranchIndicator	string	The status of this site, such as HQ, a branch, or a single location. A list of accepted values are defined in the lookup type HQ_BRANCH_IND.
HomeCountry	string	The home country associated with the party.
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
ImportInd	string	Indicates whether the organization is an importer. If the value is Y, then the organization is an importer. The default value is N.
IncorpYear	int	The year that the business was formally incorporated.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LaborSurplusInd	string	Indicates whether the organization operates in an area with a labor surplus. If the value is Y, then the organization operates in an area with a labor surplus. The default value is N.
LastEnrichmentDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was last enriched in DaaS.
LastSourceUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated by the source system.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdateSourceSystem	string	The source system that last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
LegalStatus	string	The legal structure of the organization such as partnership, corporation, and so on.
LineOfBusiness	string	The type of business activities performed at this site.
LocalActivityCode	string	The local activity classification code.
LocalActivityCodeType	string	The local activity classification code type identifier.
LocalBusIdenType	string	The most common business identifiers in a country such as Chamber of Commerce Number in Italy, Government Registration Number in Taiwan. A list of accepted values are defined in the lookup type LOCAL_BUS_IDEN_TYPE.
LocalBusIdentifier	string	The primary identifier assigned to a businesses by a government agency such as Chamber of Commerce, or other authority. It is often used by countries other than USA.
MinorityOwnedInd	string	Indicates whether the organization is primarily owned by ethnic or racial minorities. If the value is Y, then the organization is owned by ethnic or racial minorities. The default value is N.
MinorityOwnedType	string	The type of minority-owned firm.
MissionStatement	string	The corporate charter of organization in user-defined text format.
NextFyPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its next fiscal year.
OobInd	string	Indicates whether the organization is out of business. If the value is Y, then the organization is out of business. The default value is N.
OrgInformation	*Trading Community Organization Profile Additional Information*	The information of the organization.
OrganizationName	string	The name of the party when the party type is Organization.
OrganizationProfileId	long	The unique identifier of the organization profile.

Name	Type	Description
		• Primary Key
OrganizationSize	string	Size of an organization based on revenue, number of employees, and so on.
OrganizationType	string	Not used in Fusion V1.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
ParentDUNSNumberC	string	Parent is a corporation that owns more than 50 percent capital stock of another corporation. The parent company can also be a subsidiary of another corporation. If the parent also has branches, then it is headquarters and also parent company. Headquarters is a business establishment that has branches or divisions reporting to it, and is financially responsible for those branches or divisions. If the headquarters has more than 50 percent of capital stock owned by another corporation, then it is also a subsidiary. If it owns more than 50 percent of capital stock of another corporation, then it is also a parent.
ParentSubInd	string	Indicates whether the organization is a parent or subsidiary.
PartyId	long	The unique identifier of the contact party.
PartyNumber	string	The unique identification number for the party.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PreferredContactEmailAddress	string	The e-mail address of the primary contact person of the organization.
PreferredContactFormattedPhoneNumber	string	The formatted phone number of the primary contact person of the organization.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.

Name	Type	Description
PreferredContactName	string	The name of the primary contact person of the organization.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryAddressCity	string	The city of the identifying address.
PrimaryAddressCountry	string	The country listed in the TERRITORY_CODE column of the FND_TERRITORY table for the identifying address.
PrimaryAddressCounty	string	The county of the Identifying address.
PrimaryAddressLine1	string	The first line of the identifying address.
PrimaryAddressLine2	string	The second line of the Identifying address.
PrimaryAddressLine3	string	The third line of the Identifying address.
PrimaryAddressLine4	string	The fourth line of the Identifying address.
PrimaryAddressPostalCode	string	The postal code of the identifying address.
PrimaryAddressProvince	string	The province of the identifying address.
PrimaryAddressState	string	The state of the Identifying address.
PrimaryEmailAddress	string	The e-mail address of the organization.

Name	Type	Description
PrimaryEmailId	long	The primary e-mail contact point ID of the organization.
PrimaryFormattedPhoneNumber	string	The primary telephone number formatted in the local format of the organization.
PrimaryLanguage	string	The standard name for a language.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneId	long	The primary contact point phone ID of the organization.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURL	string	The primary uniform resource locator.
PrimaryWebId	long	The unique identifier of the primary uniform resource locator.
PrincipalName	string	The Name of the highest ranking person in the company.
PrincipalTitle	string	The title of the highest ranking person in the organization.
Pronunciation	string	The pronunciation of the organization.
PublicPrivateOwnershipFlag	boolean	Indicator to specify if the organization is privately owned. Y stands for a privately owned organization and N stands for a publicly owned organization.

Name	Type	Description
RegistrationType	string	Indicates the registration type of the organization.
RentOwnInd	string	Indicates if this account owns or rents the place of business. A list of valid values for rent, own, and lease are defined in the lookup OWN_RENT_IND.
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The standard industry classification (SIC) code.
SICCodeType	string	The version of the standard industry classification (SIC) code.
SeblUserKeyLoc	string	The location of the account, optional part of the user primary key.
SmallBusInd	string	Indicates whether the organization is considered as a small business. If the value is Y, then the organization is considered as a small business. The default value is N.
Status	string	The status of the record.
StockSymbol	string	The corporate stock symbol such as ORCL.
SuffixOverriddenFlag	boolean	Indicator to specify that the attribute has Y if the suffix is overridden by user and N otherwise. Default value is N.
ThirdPartyFlag	boolean	Indicator that tracks if a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. Y stands for a third party relationship, N stands for a direct relationship. If Oracle Service is installed, the third party field in the Customers window is required.
TotalEmployeesEstimatedIndicator	string	Indicates if the employee total is estimated. The accepted values are defined in the lookup type TOTAL_EMP_EST_IND.
TotalEmployeesInd	string	Indicates if subsidiaries are included in the calculation of total employees. The accepted values are defined in the lookup type TOTAL_EMPLOYEES_INDICATOR.

Name	Type	Description
TotalEmployeesMinimumIndicator	string	Indicates if the number is a minimum, maximum, or average number of total employees. The accepted values are defined in the lookup type TOTAL_EMP_MIN_IND.
TotalEmployeesText	string	The total number of employees in text format.
TotalPaymentAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total number of payment experiences.
TradingPartnerIdentifier	string	One column to store the FSIO related trading partner codes. It stores alpha numeric values and also addresses the Fed vs. Non-Fed attribute requirement.
UniqueNameAlias	string	The name as identified by the users to internally recognize the organization.
UniqueNameSuffix	string	Identifies system generated or manually overridden suffix.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
WomanOwnedInd	string	Indicates whether the organization is primarily owned by women. If the value is Y, then the organization is primarily owned by women. The default value is N.
YearEstablished	int	The year when the organization began doing business.

Additional Account Name

An additional name of an organization, such as a legal name or a DBA name.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}AdditionalOrganizationName

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OrigSystem	string	The source system name.

Name	Type	Description
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPreferredFlag	boolean	Indicator to specify the preferred additional name for the organization.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNameId	long	The unique identifier of the party name. It is primary Key and system generated. • Primary Key
PartyNameType	string	The type of the name. It is a value defined by the additional party name and identifier type entity. The party type must be consistent with the party type that the PARTY_NAME_TYPE can be applied to.
PreferredFlag	boolean	Indicator to specify the name as preferred name for this party within the name type. Possible values are Y and N. Default value is N.
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
TransliterationLang	string	Used to identify the language for the name. It is validated against FND_LANGUAGES.LANGUAGE_CODE. Default value is the Session Language.

Additional Contact Name

An additional name of a person, such as the maiden name or alias.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}AdditionalPersonName

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPreferredFlag	boolean	Indicator to specify the preferred additional name of a person.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNameId	long	The unique identifier of the party name ID. It is primary key and system generated. • Primary Key
PartyNameType	string	The type of the name. It is a value defined by the additional party name and identifier type entity. The party type must be consistent with the party type that the PARTY_NAME_TYPE can be applied to.
PersonAcademicTitle	string	Used to specify the academic title for a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field degree in HL7.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	Used to specify the last name prefix such as fon, van, and so on for a person. It is used in the same way the new field PERSON_LAST_NAME_PREFIX in HZ_PERSON_PROFILES is used. It corresponds to the field Last Name Prefix in HL7.

Name	Type	Description
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	Used to specify the name suffix such as junior, senior, the third, and so on for a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Suffix in HL7.
PersonPreNameAdjunct	string	Used to specify the name prefix such as Mr., Ms, Dr, and so on for a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Prefix in HL7. It is validated against lookup CONTACT_TITLE.
PersonPreviousLastName	string	Used to specify the previous last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It has no mapping in HL7.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PreferredFlag	boolean	Indicator to specify the name as preferred name for the party within the name type. Possible values are Y and N. Default value is N.
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
TransliterationLang	string	Used to specify the language used for the name. It is validated against FND_LANGUAGES.LANGUAGE_CODE. Default value is the Session Language.

Additional Household Name

An additional name associated with a group. For example, the phonetic name of a group.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/groupService/}AdditionalGroupName

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Household*
Handled by	*Trading Community Group*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OverallPreferredFlag	boolean	Identify the name as preferred name for this party within this name type. Possible values are 'Y' and 'N'. Default is 'N'.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNameId	long	Unique Identifier of Party Name. • Primary Key
PartyNameType	string	The type of party name.
PreferredFlag	boolean	The flag which Identifies the name as preferred name for this party within this name type. Possible values are 'Y' and 'N'. Default is 'N'.
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
TransliterationLang	string	Used to capture the language used for the name.

Additional Identifier

An additional identifier of a trading community member, such as driver's license number or passport number.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}AdditionalPartyId

Relationships

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Country	string	The name of the country.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
ExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The expiration date for the identifier. It may be NULL, and does not apply to all types of identifiers.
IssueDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date in which the Identifier was issued. It may be NULL and does not apply to all types of identifiers.
IssuingAuthorityName	string	The issuing authority name.
IssuingAuthorityPartyId	long	The unique identifier of the issuing authority.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party.
PartyIdentifierId	long	The unique identifier of the party identifier. • Primary Key
PartyIdentifierType	string	Indicates the type for the current identifier. The list of accepted values are defined in the lookup TYPE_CODE of HZ_NAME_AND_ID_TYPE_B. The party type should be consistent with the party type that the PARTY_IDENTIFIER_TYPE can be applied to.

Name	Type	Description
PartyIdentifierType1	string	Indicates the type for the current identifier. The list of accepted values are defined in the lookup TYPE_CODE of HZ_NAME_AND_ID_TYPE_B. The party type should be consistent with the party type that the PARTY_IDENTIFIER_TYPE can be applied to.
PartyIdentifierValue	string	The value of the party identifier.
PartyName	string	The name of the party.
RequestId	long	A system-generated read-only attribute used by the application framework.
StateProvince	string	The province of the address.
StatusCode	string	The pre-defined code used to indicate the status.

Address

An address of a trading community member, such as Oracle Corporation is located at 500 Oracle Parkway, Redwood Shores, CA.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartySite

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Phone*
Contains	*Trading Community Address Purpose*
Contains	*Instant Messaging*
Contains	*Web*
Contains	*Telex*
Contains	*Source System Reference*

Relationship Type	Object or Service
Contains	*Contact Preference*

Handled by	*Trading Community Person Information*

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AddressExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the location is no longer valid.
AddressLinesPhonetic	string	The phonetic or Kana representation of the Kanji address lines that are used in Japan.
AddressStyle	string	Style of the address.
Addressee	string	The information of the addressee.
City	string	The name of the city.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
ContactPreferenceExistFlag	boolean	Indicator to specify if the contact is primary contact for the party.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
Country	string	The name of the country.
Country1	string	The attribute country1 is not used.

Name	Type	Description
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DateValidated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address was last validated.
DoNotValidateFlag	boolean	Indicator to specify that a particular location is not eligible for address validation irrespective of the current validation.
Eft	*Electronic File Transfer*	The electronic file transfer information for the party.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
FormattedAddress	string	The formatted read-only address.
FormattedLocaleAddress	string	The formatted read-only local address.
FormattedMultilineAddress	string	The formatted multi line address of the party site.

Name	Type	Description
GlobalLocationNumber	string	The global location number that uniquely identifies each location in a trading partners enterprise.
HouseType	string	Indicates the building type.
IdentifyingAddressFlag	boolean	Indicator to specify the identifying address for the party. Y stands for the indentifying site and N stands for sites that are not the indentifying site.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
Language	string	The operating language for the party site.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Latitude	decimal	The latitude of the party address.
LocationDirections	string	Directions to the location.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
LocationLanguage	string	The operating language for the locations.
Longitude	decimal	The longitude of the party address.
Mailstop	string	A user-defined code to indicate a mail drop point within the organization.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction

Name	Type	Description
		to detect whether another session has updated the row since it was last queried.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary address of the contact irrespective of the context. Y stands for primary address and N stands for all others.
PartyId	long	The unique identifier of the contact party.
PartyNameDba	string	Stores the doing-business_as (DBA) party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameDivision	string	Stores the division party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameLegal	string	Stores the legal party name for a party site. This column is used to store FSIO related legal party name attribute.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
PartySiteInformation	*Trading Community Address Additional Information*	The party address information.
PartySiteName	string	The user-defined name for the site.
PartySiteNumber	string	The party site number of the address.
PartySiteType	string	Stores the party site type and is based on the lookup. Currently this is either null or one-time.
PartySiteUse	*Trading Community Address Purpose*	The information of the party address usage.
PartyUsageCode	string	The usage context of a party's contact point.

Name	Type	Description
Phone	*Phone*	The phone information for the entity.
Position	string	The primary direction such as north or east that is used to access the location.
PostalCode	string	The postal code element of the address.
PostalPlus4Code	string	The four digit extension to the United States postal ZIP code.
Province	string	The name of the province.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
State	string	The name of the state.
Status	string	The status of the record.
Telex	*Telex*	The Telex information associated with the party.
UsageCode	string	The usage code is not used.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
ValidationStatusCode	string	The standardized status code describing the results of the validation.
Web	*Web*	The web information related to the record.

Asset

Assets represents the products owned by customers. Anything tangible or intangible that is capable of being owned or controlled to produce value. For example: Tangible Items - Computers, engines, machine parts, and so on. Intangible items - Software, Services, Licenses and agreements.

QName: {http://xmlns.oracle.com/apps/crmCommon/assetImport/publicModel/assetImportService/}Asset

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Account*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AssetAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The cost amount of the asset in the transaction currency.
AssetDescription	string	The description field of the asset.
AssetGroup	string	The name of the asset group.
AssetId	long	The unique identifier of the asset. • Primary Key
AssetName	string	The name that describes the asset.
AssetNumber	string	The number that identifies the asset.
AssetOrigSystem	string	A source system code that identifies the original source system of the asset.

Name	Type	Description
AssetOrigSystemReference	string	A source system reference that identifies the unique ID of the asset in user's legacy or external system.
AssetTag	string	The tag number associated with the asset.
AttributeCategory	string	Standard column used in Fusion tables.
BatchId	long	The batch ID for importing process.
CompetitiveAsset	string	Indicates if the asset belongs to a competitor.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CrmConvRate	string	CRM currency convert rate.
CrmCorpCurrencyCode	string	The corporate currency code.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CustomerId	long	The unique ID for the existing customer party record in the Oracle Fusion destination table.
CustomerPartyNumber	string	
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
EnteredCurrencyCode	string	The code that represents the currency for the asset amounts.

Name	Type	Description
ExchangeRate	decimal	The currency exchange rate.
IBAssetId	long	Unique ID of the associated Install Base asset record.
IBAssetSyncedVersionNumber	int	Last synced Version Number of the Install Base Asset
InstallDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date the asset was installed.
InterfaceRowId	long	The interface table row's unique ID.
InventoryItemId	long	The unique ID for the existing sales catalog product (item) record in the Oracle Fusion destination table.
InventoryOrgId	long	Item organization Id as created by Fusion CRM.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Manufacturer	string	The name of the manufacturer.
Model	string	The name of the model.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyType	string	
PartyUniqueName	string	
PrContactPartyId	long	The party identifier of the asset's primary contact.
PrContactPartyNumber	string	

Name	Type	Description
ProdGroupId	long	The product group ID in sales catalog.
Product	string	The name of the product.
ProductType	string	
PurchaseDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date the asset was purchased.
Quantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The quantity purchased.
RequestId	long	A system-generated read-only attribute used by the application framework.
ResourceOwnerId	long	The identifier of the asset's resource owner.
ResourceOwnerPartyNumber	string	
SerialNumber	string	The asset's serial number.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
StatusCode	string	The pre-defined code used to indicate the status.
UOMCode	string	The unit of measure.
Version	string	The version of the asset product.
Year	string	The year of manufacture or the nominal model year of the asset product.

Certification

The certification information of a trading community member, such as a full ISO 9001 registered firm.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}Certification

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CertificationId	long	The unique identifier for certification. • Primary Key
CertificationName	string	The name of the certification such as ISO9000 and GMP001.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrentStatus	string	The name for the status of the certification. For example, applied for, granted, or expired.
ExpiresOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the certification expires.
Grade	string	The level or grade of certification provided by the ISSUED_BY_AUTHORITY. For example, founding member, gold, fully certified, and partially certified.
IssuedByAuthority	string	The name of the certifying authority.
IssuedOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the certification was issued.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
PartyId	long	The unique identifier of the contact party.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Citizenship

The citizenship information about a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}Citizenship

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BirthOrSelected	string	Indicates if the citizenship was granted by being born in the country or by naturalization.
CitizenshipId	long	The unique citizenship identifier of a person. • Primary Key
CountryCode	string	The ISO code of the country from which a person claims citizenship.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
DateDisowned	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when an individual renounced citizenship. This is usually a self-declared date that might not match a legal effective date.
DateRecognized	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the country granted citizenship to the individual. For a native-born person, this date is typically the person's date of birth.
DocumentReference	string	The unique reference number such as passport number or naturalization reference number associated with DOCUMENT_TYPE.
DocumentType	string	The class of document that confirms citizenship. For example, a passport, or naturalization papers.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
PartyId	long	The unique identifier of the contact party.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Classification Assignment

The classification code assigned to a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}CodeAssignment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*
Contained by	*Sales Competitor*
Contained by	*Household*
Contained by	*Trading Community Organization Details*

Handled by	*Sales Party Territory service*
Handled by	*Sales Party Resource Service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ClassCategory	string	The name of the classification category.
ClassCode	string	The code of the classification.
CodeAssignmentId	long	The unique identifier of the assignment of an industrial classification code to an object. It is primary key and system generated. • Primary Key
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableKey1	string	The first column of the alphanumeric or multi-part foreign key.

Name	Type	Description
OwnerTableKey2	string	The second column of the alphanumeric or multi-part foreign key.
OwnerTableKey3	string	The third column of the alphanumeric or multi-part foreign key.
OwnerTableKey4	string	The fourth column of the alphanumeric or multi-part foreign key.
OwnerTableKey5	string	The fifth column of the alphanumeric or multi-part foreign key.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PrimaryFlag	boolean	Indicator that specifies if this is the primary class code of a class category for the organization. Y stands for the primary class code and N stands for all others.
Rank	decimal	Ranks classes if multiple classes are assigned to a party.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Contact

The profile information of the trading community person. The profile includes information such as marital status and additional name.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}PersonProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Person Profile Additional Information*
Contained by	*Trading Community Person Details*
Contained by	*Sales Account*
Contained by	*Loyalty Member*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Loyalty Member Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Alias	string	Person alias name.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
Comments	string	The comments for the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DataCloudStatus	string	The enrichment status of the person.
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was born.
DateOfDeath	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person died.
DeceasedFlag	boolean	Y or N indicates whether the person is deceased or not.
DeclaredEthnicity	string	The declared ethnicity of the person.
Department	string	The free form text used to name the department.
DepartmentCode	string	The list of values for possible department codes.
Distance	decimal	The distance from the input location.
DoNotCallFlag	boolean	Indicator to specify if the user can send mail to the person or not.
DoNotContactFlag	boolean	Indicator to specify if the user can contact the person through phone, e-mail, or mail or not.
DoNotEmailFlag	boolean	Indicator to specify if the user can send e-mail to the person or not.

Name	Type	Description
DoNotMailFlag	boolean	Indicator to specify if the user can send mail to the person or not.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveLatestChange	string	The date effective entity. Y indicates that this row represents the latest change in the day.
EffectiveSequence	int	The date effective entity. Indicates the order of different changes made during a day. The lowest value represents the earliest change in the day.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
FavoriteContactFlag	boolean	Indicator to specify if the person is key contact.
Gender	string	The gender details such as male, female, or unknown of the person.
HeadOfHouseholdFlag	boolean	The head of household indicator is not used.
HouseholdIncomeAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The household income amount is not used.
HouseholdSize	decimal	The household size is not used.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
JobTitle	string	The free form text for the job title.
JobTitleCode	string	The code given to the job title.
LastContactDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the contact was last contacted.
LastEnrichmentDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was last enriched in DaaS.

Name	Type	Description
LastKnownGPS	string	The geophysical location that is, GPS point last reported for the person.
LastSourceUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated by the source application.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdateSourceSystem	string	The source application that last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaritalStatus	string	The marital status of the person.
MaritalStatusEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the marital status of the person changed.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party.
PartyNumber	string	The unique identification number for the party.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PersonAcademicTitle	string	The academic title that is part of the name of a person such as Dr. Jane Smith.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonInformation	*Trading Community Person Profile Additional Information*	The information of the person.

Name	Type	Description
PersonInitials	string	The Initials of the name.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	Used to identify the Last name prefix such as fon, van and so on for a person. It is used in the same way the new field PERSON_LAST_NAME_PREFIX in HZ_PERSON_PROFILES is used. Corresponds to the field, Last Name Prefix in HL7.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonName	string	The combination of title, first, middle, last, and suffix names.
PersonNameSuffix	string	Indicates the place in a family structure. For example, III in Tom Jones III.
PersonPreNameAdjunct	string	Salutary introduction such as Mr., Herr, and so on.
PersonPreviousLastName	string	The previous last or surname of the person.
PersonProfileId	long	The unique identifier of the person profile. • Primary Key
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PersonalIncomeAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated gross annual income of the person.
PlaceOfBirth	string	The place where the person was born, including city and country.

Name	Type	Description
PreferredContactEmail	string	The preferred contact e-mail of the person.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactName	string	The preferred contact name of the person.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredContactPhone	string	The preferred contact phone of the person.
PreferredContactURL	string	The preferred contact uniform resource locator of the person.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryAddressCity	string	The city of the identifying address.
PrimaryAddressCountry	string	The country listed in the TERRITORY_CODE column of the FND_TERRITORY table for the identifying address.
PrimaryAddressCounty	string	The county of the identifying address.
PrimaryAddressLatitude	decimal	The primary address latitude information for the location for spatial proximity and containment purposes.
PrimaryAddressLine1	string	The first line of the identifying address.
PrimaryAddressLine2	string	The second line of the identifying address.

Name	Type	Description
PrimaryAddressLine3	string	The third line of the identifying address.
PrimaryAddressLine4	string	The fourth line of the identifying address.
PrimaryAddressLocationId	long	The primary address location ID.
PrimaryAddressLongitude	decimal	The primary address longitude information for the location for spatial proximity and containment purposes.
PrimaryAddressPostalCode	string	The postal code of the identifying address.
PrimaryAddressProvince	string	The province of the identifying address.
PrimaryAddressState	string	The state of the identifying address.
PrimaryCustomerId	long	The customer party identifier of a primary customer for a given person. There should be a valid relationship between the person and the customer.
PrimaryCustomerName	string	The customer party name of a primary customer for a given person. There should be a valid relationship between the person and the customer.
PrimaryCustomerRelationshipId	long	The unique identifier of the primary customer relationship.
PrimaryEmailAddress	string	The e-mail address of the person.
PrimaryEmailId	long	The primary contact point e-mail ID of the person.
PrimaryFormattedAddress	string	The primary formatted address of the person.
PrimaryFormattedPhoneNumber	string	The primary telephone number formatted in the local format of the person.
PrimaryLanguage	string	The standard name for a language.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.

Name	Type	Description
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneId	long	The primary contact point phone ID of the person.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURL	string	The uniform resource locator.
PrimaryWebId	long	The unique identifier of the primary uniform resource locator.
Pronunciation	string	The person pronunciation.
RentOwnInd	string	Indicates if the person rents or owns his or her residence. Lookup values include rent, own, lease, and so on.
RequestId	long	A system-generated read-only attribute used by the application framework.
SalesAffinityCode	string	The affinity of a person towards the deploying organization.
SalesBuyingRoleCode	string	The role of a person in the buying process.
Salutation	string	The phrase used to address a party in any correspondence.
Status	string	The status of the record.
SuffixOverriddenFlag	boolean	This attribute has Y if the suffix is overridden by user and N if not. Default value is N.
UniqueNameSuffix	string	Identifies system generated or manually overridden suffix.

Name	Type	Description
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.

Contact Address

The address of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PersonPartySite

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Phone*
Contains	*Trading Community Address Purpose*
Contains	*Contact Preference*
Contains	*Source System Reference*
Contains	*Trading Community Address Additional Information*
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Addressee	string	The information of the addressee in the contact address.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
GlobalLocationNumber	string	The global location number that uniquely identifies each location in a trading partners enterprise.
IdentifyingAddressFlag	boolean	Indicates whether this is the identifying address for the party. If the value is Y, then this is the identifying address for the party.
Language	string	The language used in the contact's location.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.

Name	Type	Description
Mailstop	string	A user-defined code to indicate a mail drop point within their organization.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary address of the associated object. If the value is True, then this is the primary address. The default value is False.
PartyId	long	The unique identifier of the contact party.
PartyNameDba	string	The doing-business_as (DBA) party name for a party site.
PartyNameDivision	string	The division of the party name for a party site.
PartyNameLegal	string	The legal party name for a party site.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
PartySiteName	string	The address associated with the party site.
PartySiteNumber	string	The alternate identifier of the party site.
PartySiteType	string	The type of the party site.
PartySiteUse	*Trading Community Address Purpose*	Indicates the use of the party site.
PartyUsageCode	string	The usage context of a party's contact point.
PersonPartySiteInformation	*Trading Community Address Additional Information*	The party site information of the person.

Name	Type	Description
Phone	*Phone*	The phone information for the entity.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Contact Interest

The interests of the trading community member, such as baseball, sports car, or painting.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}PersonInterest

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
InterestName	string	A text field that lets you assign a descriptive name to an interest. For example, pets, dogs, baseball, or sports car racing.
InterestTypeCode	string	A code to classify interests for evaluation.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LevelOfInterest	string	The user-defined level number or name to rate the amount of interest in the activity. For example, high, medium, or low.
LevelOfParticipation	string	The user-defined level number or name to indicate if the person participates and to what extent.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PersonInterestId	long	The unique identifier of interests of the person. • Primary Key

Name	Type	Description
RequestId	long	A system-generated read-only attribute used by the application framework.
Since	{http://xmlns.oracle.com/adf/svc/types/}date-Date	An approximate date from which the person was involved with the activity.
SportIndicator	string	Indicates if the activity is a sport. Y stands for sports and N stands for non-sport activities.
Status	string	The status of the record.
SubInterestTypeCode	string	A code to classify subinterests of the interest type code.
Team	string	Any team the person likes to watch or play for.

Contact Language

The languages known information of a trading community member. For example, Mary Smith can speak both Spanish and English but can only read and write English.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PersonLanguage

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Handled by	*Trading Community Group*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*

Relationship Type	Object or Service
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LanguageName	string	The standard name for a language. For example, Spanish, Mandarin, or American English. Foreign key to the FND_LANGUAGES table.
LanguageUseReferenceId	long	The unique identifier of the language use reference. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
NativeLanguageFlag	boolean	Indicator to specify if the language is the declared native language of a person. Y stands for a declared native language and N stands for all other languages.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
PartyId	long	The unique identifier of the contact party.
PrimaryLanguageIndicator	string	Indicates if this is the primary language used by a person in day-to-day transactions. Y stands for the primary language and N stands for other languages.
ReadsLevel	string	The user-defined level number or name to indicate the ability to read a language.
RequestId	long	A system-generated read-only attribute used by the application framework.
SpeaksLevel	string	The user-defined level number or name to indicate the ability to speak a language.
SpokenComprehensionLevel	string	The code to indicate comprehension of a spoken language.
Status	string	The status of the record.
WritesLevel	string	The user-defined level number or name to indicate the ability to write in a language.

Contact Preference

The contact preference of the trading community member. For example, do not call Joe Smith between 10 a.m. and 12 noon on weekdays.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}ContactPreference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*
Contained by	*Electronic Data Interchange*

Relationship Type	Object or Service
Contained by	*E-Mail*
Contained by	*Instant Messaging*
Contained by	*Household*
Contained by	*Phone*
Contained by	*Telex*

Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Relationship Type	Object or Service
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactLevelTable	string	The table that stores the contact level of the contact preference, and uses the SUBJECT_TABLE lookup. The list of accepted values are HZ_PARTIES, HZ_PARTIES_SITES, or HZ_CONTACT_POINTS.
ContactLevelTableId	long	The foreign key to the table specified in CONTACT_LEVEL_TABLE column. The list of accepted values are PARTY_ID from HZ_PARTIES table, CONTACT_POINT_ID from HZ_CONTACT_POINTS table, or PARTY_SITE_ID from HZ_PARTY_SITES table.
ContactPreferenceId	long	The unique identifier for the contact preference. • Primary Key
ContactType	string	The contact party type that defines whether the contact is a sales account, a prospect, a contact, or any other user-defined party type. The default value is CUSTOMER. A list of accepted values is defined in the lookup CONTACT_TYPE.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
MaximumNoOfInteractUOMCode	string	The period of time during which the maximum number of interactions applies. Uses the MAX_NO_OF_INTERACT_UOM_CODE lookup.
MaximumNoOfInteractions	decimal	The number of times you can use this contact point. The period of time that this number applies is stored in the MAX_NO_OF_INTERACT_UOM_CODE column.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PreferenceCode	string	Indicates whether to use a particular contact method. The list of accepted values are defined in the PREFERENCE_CODE lookup.
PreferenceEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes inactive.
PreferenceEndTimeHR	int	The hour part of time when the contact preference becomes inactive. The time is recorded in the 24 hour format.
PreferenceEndTimeMi	int	The minutes part of the time when the contact preference becomes inactive.
PreferenceStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes active.
PreferenceStartTimeHR	int	The hour part of time when the contact preference becomes active. The time is recorded in the 24 hour format.
PreferenceStartTimeMi	int	The minutes part of the time when the contact preference becomes active.
PreferenceTopicType	string	The appropriate subjects to send the party that the preference is created for. The list of accepted values are defined in the PREFERENCE_TOPIC_TYPE lookup.
PreferenceTopicTypeCode	string	The code of the preference topic type.

Name	Type	Description
PreferenceTopicTypeId	long	The unique identifier of the preference topic type.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
RequestedBy	string	Indicates if the permission or restriction was created internally or requested by the party. The list of accepted values are defined in the REQUESTED_BY lookup.
Status	string	The status of the record.

Credit Rating

The trading community member's credit rating information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}CreditRating

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*

Relationship Type	Object or Service
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AverageHighCredit	decimal	The average of all the high credit experiences.
BankruptcyInd	string	Indicates if open bankruptcy exists. Y stands for any open bankruptcy that exists and N stands for no open bankruptcy.
BusinessDiscontinued	string	The business discontinued at the listed location. Prompts reader to contact D and B customer service center if any business is operating.
ClaimsInd	string	Indicates if open claims, legal claims, liens, protested bills, or any equivalent information exists. Y stands for availability of information and N stands for no information.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRatingId	long	The unique identifier of the credit rating. • Primary Key
CreditRiskScoreExplain	string	Explains numeric credit risk score that estimates the risk of delinquent payment over the next 12 months.

Name	Type	Description
CreditScore	string	Indicates the risk of delinquent payments.
CreditScoreAge	decimal	Indicates the age of the credit score expressed in months.
CreditScoreClass	decimal	The date when the credit score was calculated.
CreditScoreCommentary	string	The lookup for explanation codes in the CREDIT_SCORE column.
CreditScoreCommentary10	string	Indicates comments about the credit score.
CreditScoreCommentary2	string	Indicates comments about the credit score.
CreditScoreCommentary3	string	Indicates comments about the credit score.
CreditScoreCommentary4	string	Indicates comments about the credit score.
CreditScoreCommentary5	string	Indicates comments about the credit score.
CreditScoreCommentary6	string	Indicates comments about the credit score.
CreditScoreCommentary7	string	Indicates comments about the credit score.
CreditScoreCommentary8	string	Indicates comments about the credit score.
CreditScoreCommentary9	string	Indicates comments about the credit score.
CreditScoreDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the credit score was calculated.
CreditScoreIncdDefault	decimal	Indicates the probability expressed as a percentage of delinquency for a score range or class.
CreditScoreNatlPercentile	decimal	Indicates the relative credit rating of a business compared to all businesses whose credit ratings are included in the local country database.
CreditScoreOverrideCode	string	Indicates why no score was calculated or why score is equal to zero in the US.

Name	Type	Description
CriminalProceedingInd	string	Indicates if criminal proceedings exist. Y stands for availability of information and N stands for no information.
DebarmentInd	string	Indicates whether the company is debarred from doing business with government agencies. Y stands for company debarred and N stands for not debarred.
DebarmentsCount	decimal	The count of filings by government agencies in the United States that prohibit the party from entering into contracts or transactions with those agencies.
DebarmentsDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date of the most recent filing to prohibit the party from entering into contracts or transactions with a government agency in the United States.
DelqPmtPctgForAllFirms	decimal	Specifies a delinquency percentage for all firms.
DelqPmtRngPrcnt	decimal	Specifies a delinquency percentage for credit score range.
Description	string	The free text description of the record.
DetHistoryInd	string	The code that indicates if detrimental information exists for the party and whether complete details exist on management and party. Y stands for availability of information and N stands for no information.
DisasterInd	string	Indicates if information exists about disasters such as fires, hurricanes, and so on. Y stands for availability of information and N stands for no information.
FailureScore	string	For US, the failure risk class, 1 through 5. For Canada , the stability score that indicates risk of business closure, 1 through 10. For Australia, the percentile failure score.
FailureScoreAge	decimal	The failure score age in months.
FailureScoreClass	decimal	1 through 5 to indicate risk of financial stress for a customer account. 1 for a business with greatest risk and 5 for a business with least risk.
FailureScoreCommentary	string	The comments related to failure score.

Name	Type	Description
FailureScoreCommentary10	string	The comments related to failure score.
FailureScoreCommentary2	string	The comments related to failure score.
FailureScoreCommentary3	string	The comments related to failure score.
FailureScoreCommentary4	string	The comments related to failure score.
FailureScoreCommentary5	string	The comments related to failure score.
FailureScoreCommentary6	string	The comments related to failure score.
FailureScoreCommentary7	string	The comments related to failure score.
FailureScoreCommentary8	string	The comments related to failure score.
FailureScoreCommentary9	string	The comments related to failure score.
FailureScoreDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the failure score was calculated.
FailureScoreIncdDefault	decimal	Probability, in percentage, of failure for score range of class.
FailureScoreNatnlPercentile	decimal	The national percentile that reflects the relative ranking of a company among all scored companies in the local country database.
FailureScoreOverrideCode	string	In Europe, code for the reason for variance between the D and B rating and the failure score. In the US, code for the reason why no score was calculated, or why the score is zero.
FinclEmbtInd	string	Indicates if open bankruptcy, receivership liquidation, or any equivalent information exists. Y stands for availability of information and N stands for no information.
FinclLglEventInd	string	Indicates if special events such as financial embarrassment and legal filings exist. Y stands for availability of information and N stands for no information.
GlobalFailureScore	string	The global score for the risk of business default.

Name	Type	Description
HighCredit	decimal	Maximum credit ever extended to the organization.
HighRngDelqScr	decimal	Specifies the high end of the range of the commercial credit score.
JudgementInd	string	Indicates if open judgments exist. Y stands for any open judgment that exists and N stands for no open judgments.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LienInd	string	Indicates if open liens exist. Y stands for any open lien that exists and N stands for no open liens.
LowRngDelqScr	decimal	Specifies the low end of the range of the commercial credit score.
MaximumCreditCurrencyCode	string	The currency used to denominate the MAXIMUM_CREDIT_RECOMMENDATION column.
MaximumCreditRecommendationAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Maximum credit limit recommended for the currency specified in the MAXIMUM_CREDIT_CURRENCY_CODE column.
NegvPmtExpl	string	The conditional comment generated when negative payments are present.
NoTradeInd	string	Indicates that no trade experiences exist. Y stands for any trade experience that exists and N stands for no trade experience.
NumberParentBankruptcyConversions	decimal	The number of bankruptcy conversions by the parent.
NumberParentBankruptcyFiling	decimal	The number of bankruptcies filed by the parent.
NumberSpecialEvent	decimal	The number of occurrences of the special events.

Name	Type	Description
NumberTradeExperiences	decimal	The number of trade experiences.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OprgSpecificationEvntInd	string	Indicates if information exists about operational changes such as name changes, management changes, change of control, moves, and so on. Y stands for availability of information and N stands for no information.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OtherSpecificationEvntInd	string	Indicates if special events exist that are not otherwise specified.
ParentHQBankruptcyInd	string	Indicates if parent (P) or headquarters (H) are entered into bankruptcy.
PartyId	long	The unique identifier of the contact party.
PaydexComment	string	Additional paydex information.
PaydexFirmComment	string	Comment on the paydex score for the organization.
PaydexFirmDays	string	The number of days used in the paydex score.
PaydexIndustryComment	string	Comment on the paydex score for the industry.
PaydexIndustryDays	string	The number of days used in the paydex score for the industry.
PaydexNorm	string	Median or average Paydex score for the industry.
PaydexScore	string	Paydex score for the previous 12 months payment history.
PaydexThreeMonthsAgo	string	Paydex score three months ago.
PrntBkcyChapterConv	string	The change of bankruptcy type.

Name	Type	Description
PrntBkcyConvDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the bankruptcy converted from one type to another.
PrntBkcyFilgChapter	decimal	The chapter number of the bankruptcy filed by the parent under the US uniform commercial code.
PrntBkcyFilgDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The bankruptcy filing date of the parent.
PrntBkcyFilgType	string	The type of bankruptcy filed by the parent.
PubRecExpl	string	The conditional comment generated if suits, liens, and judgments exist.
RatedAsOfDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the rating was acquired.
Rating	string	The rating number or code of the rating company.
RatingOrganization	string	The name of the credit rating organization.
RequestId	long	A system-generated read-only attribute used by the application framework.
SecuredFlngInd	string	Indicates if open secured filings such as UCC filings, secured charges or mortgages pledging, or any equivalent information exists. Y stands for availability of information and N stands for no information.
SlowTradeExpl	string	The conditional comment generated when paydex score indicates that slow trade experiences are present.
SpecialEventComment	string	The comment generated if special event section exists.
SpecialEventText	string	The narrative of the special event.
SpecialEventUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the special event was updated.
Status	string	The status of the record.

Name	Type	Description
SuitInd	string	Indicates if open suits exist. Y stands for any open suit that exists and N stands for no open suits.

Customer Contact Profile

The person who functions as a contact for an organization.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}OrganizationContact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Organization Contact Additional Information*
Contains	*Customer Contact Responsibility*
Contains	*Source System Reference*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
ContactFormattedAddress	string	The formatted version of the contact address.
ContactFormattedMultilineAddress	string	The formatted multiline version of the contact address.
ContactName	string	The name of the contact.
ContactNumber	string	The user-defined identification number for this contact.
ContactPartyId	long	The unique identifier of the contact.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CustomerEmailAddress	string	The e-mail address of the customer this contact person belongs to.
CustomerName	string	The name of the customer.

Name	Type	Description
CustomerPartyId	long	The unique identifier of the customer this contact person belongs to.
CustomerPartyNumber	string	The alternate unique identifier of the customer this contact person belongs to.
CustomerUniqueName	string	The unique name of the customer. For an Organization, the value is a concatenation of unique_name_alias and suffix. For a Person, the value is a concatenation of person_name and suffix.
DecisionMakerFlag	boolean	Indicates if this contact is a decision maker. If the value is True, then the contact is a decision maker.
Department	string	The free form text used to name the department for the contact.
DepartmentCode	string	The department code for the contact. A list of accepted values is defined in the lookup DEPARTMENT_TYPE.
EmailAddress	string	The email address associated with the record.
FormattedAddress	string	The formatted address information.
FormattedPhoneNumber	string	The formatted phone number.
JobTitle	string	The free form text for job title.
JobTitleCode	string	The code given to the job title.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
OrgContactId	long	The unique identifier of the organization contact. • Primary Key
OrgContactInformation	*Trading Community Organization Contact Additional Information*	The information of the organization contact.
OrganizationContactRole	*Customer Contact Responsibility*	The role of the contact in the organization.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyRelationshipId	long	The unique identifier of the relationship of the party.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PartySiteName	string	The address associated with the party site.
PersonAcademicTitle	string	The part of the person's title that denotes the academic qualification, such as Dr. Jane Smith.
PersonCertReasonCode	string	The reason for the organization's current certification level assignment. A list of accepted values is defined using the lookup HZ_PARTY_CERT_REASON.
PersonCertificationLevel	string	The certification level of a organization. A list of accepted values is defined in the lookup HZ_PARTY_CERT_LEVEL.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLanguageName	string	The language name associated with the person.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.

Name	Type	Description
PersonLastNamePrefix	string	The prefix for the last name of a person, such as fon, van. For example, if a person's name is Hans Van, the last name of the person is captured using this attribute.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	The place in a family structure. For example, in "Tom Jones III", the "III".
PersonPreNameAdjunct	string	The preferred name adjacency of a resource.
PersonPreviousLastName	string	The previous last name of a person.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PreferredContactFlag	boolean	Indicates if this contact person is primary contact for the customer.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PrimaryCustomerFlag	boolean	Indicates if this customer is primary customer for the contact.
Rank	string	The rank associated with this customer contact.
ReferenceUseFlag	boolean	Indicates if this contact can be used as a reference. If the value is Y, then the contact can be used as a reference.
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
SalesAffinityCode	string	The affinity of a contact to the deploying organization. A list of accepted values is defined in the lookup HZ_SLS_CNTCT_AFFINITY_CODE.
SalesAffinityComments	string	The comments about the contact's affinity to the deploying organization.
SalesBuyingRoleCode	string	The roles played by a contact in the buying process, for example, decision maker or supporting role. A list of accepted values is defined in the lookup HZ_SLS_CNTCT_BUY_ROLE_CODE.
SalesInfluenceLevelCode	string	The influence of the contact has on the deploying organization. A list of accepted values are defined in the lookup HZ_SLS_CNTCT_INFLUENCE_LVL_CD.
Salutation	string	The size of the household this person is a part of.
WebUrl	string	The web URL of contact point.

Customer Contact Responsibility

The role or responsibility of an organization contact.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}OrganizationContactRole

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Customer Contact Profile*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*

Relationship Type	Object or Service
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgContactId	long	The organization contact identifier. Foreign key to the HZ_ORG_CONTACTS table.

Name	Type	Description
OrgContactRoleId	long	The unique contact role identifier. It is primary key and system generated. • Primary Key
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PrimaryContactPerRoleType	string	Indicates if the contact is the primary contact for the role. Y stands for primary contact and N stands for a contact that is not the primary contact for the role type. The default value is N.
PrimaryFlag	boolean	Indicator that specifies if this is the primary role for the contact. Y stands for primary role and N stands for a non-primary role for the contact. The default value is N.
RequestId	long	A system-generated read-only attribute used by the application framework.
RoleLevel	string	The role level of the contact. For example, executive, department head, or middle manager.
RoleType	string	The role performed by a contact.
Status	string	The status of the record.

Education

The trading community person's education information. For example, a person may have attended the University of California from 1995 to 1999 and received an undergraduate degree in Computer Science with a GPA of 4.0.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}Education

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CourseMajor	string	The primary area of study.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DegreeReceived	string	The abbreviation for the degree. For example, BA, BSc, MBA, MSc, PhD, and Gd (graduate diploma).
EducationId	long	The unique identifier of the education record. • Primary Key
LastDateAttended	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The year and month when a person last attended the educational institution.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
PartyId	long	The unique identifier of the contact party.
RequestId	long	A system-generated read-only attribute used by the application framework.
SchoolAttendedName	string	The name of the school.
SchoolPartyId	long	The party identifier of the school.
StartDateAttended	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the attendance of a person starts.
Status	string	The status of the record.
TypeOfSchool	string	The classification of the educational organization. For example, high school, college, university, or professional school. Note that the classification of schools varies among different cultures.

Electronic Data Interchange

The electronic data interchange information associated with a trading community member. For example, the details of standard codes and payment methods that are to be used for data interchange.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Edi

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Organization Details*

Relationship Type	Object or Service
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EDIEceTpLocationCode	string	The trading partner location code for EDI Gateway.

Name	Type	Description
EDIIdNumber	string	The EDI trading partner number for the supplier site.
EDIPaymentFormat	string	Indicates type of information being transmitted with the funds if using EDI_PAYMENT_ METHOD ACH. The list of accepted values are CCD, CCP, CHZ, CTX, PPD, and PPP.
EDIPaymentMethod	string	Indicates how a payment is to be made through EDI. The list of accepted values are ACH and BOP.
EDIRemittanceInstruction	string	Indicates who will send the remittance advice. The list of accepted values are Banks or Payables systems.
EDIRemittanceMethod	string	Indicates how remittance advice are sent to the supplier.
EDITpHeaderId	long	The unique identifier of the EDI transaction header.
EDITransactionHandling	string	The ANSI standard code for EDI transaction type.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/ types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary EDI of the associated object. If the value is True, then this is the primary EDI. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Electronic File Transfer

The electronic funds transfer information of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Eft

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EFTPrintingProgramId	long	The printing program identifier.
EFTSWIFTCode	string	The EFT swift code information.
EFTTransmissionProgramId	long	The transmission program identifier.
EFTUserNumber	string	The number that identifies you as a user of electronic funds transfer service for your bank or clearing organization.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

E-Mail

The e-mail address associated with a trading community member. For example, john.doe@oracle.com.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Email

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*

Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmailAddress	string	The email address associated with the record.
EmailFormat	string	The preferred format for e-mail addressed to this address such as HTML or ASCII. A list of accepted values is defined using the lookup EMAIL_FORMAT.

Name	Type	Description
EmailInformation	*Trading Community Contact Point Additional Information*	The additional information about the e-mail.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary e-mail of the associated object. If the value is True, then this is the primary e-mail. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact

Name	Type	Description
		point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

E-Mail Domain

The domain of the e-mail address associated with a trading community member. For example, ABC Corporation has CORP and BUSINESS e-mail domains.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}EmailDomain

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*

Relationship Type	Object or Service
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DomainName	string	The actual or non-reversed domain name of the organization for display purpose.
EmailDomainId	long	The sequence generated unique identifier. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
PartyId	long	The unique identifier of the contact party.
Status	string	The status of the record.
TransposedDomain	string	The reversed domain name for the purposes of searching.

Employment History

The employment history information of a trading community member. For example, John Doe was a Vice President at Business World from 2001 to 2007 and President at World of Business from 2007 to 2009.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}EmploymentHistory

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Work Class*
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BeginDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the employment officially began.
Branch	string	The military branch code.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmployedAsTitle	string	Job position title assigned by an employer.
EmployedAsTitleCode	string	The code for the job title. If title cannot be represented by a code, then the EMPLOYED_AS_TITLE column must be used.
EmployedByDivisionName	string	The common name of a division or an organization at which the person was employed.
EmployedByNameCompany	string	The name of the organization at which the person was employed. Note that the name must not include the division name.
EmployedByPartyId	long	The party identifier of the employer for situations in which the employer is represented as a party.
EmploymentHistoryId	long	The unique employment history identifier. • Primary Key
EmploymentTypeCode	string	Indicates whether the employment is part-time or full-time.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FacultyPositionFlag	boolean	Indicator Y or N to specify whether the position is a faculty position or not.
FractionOfTenure	decimal	The fraction of tenure.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MilitaryRank	string	The rank of the person in the branch.
PartyId	long	The unique identifier of the contact party.
ReasonForLeaving	string	The free format text that describes the reason for leaving.
RequestId	long	A system-generated read-only attribute used by the application framework.
Responsibility	string	Job responsibility of the person.
Served	string	Indicates where the person performed military service.
Station	string	Indicates the station name.
Status	string	The status of the record.
SupervisorName	string	The full name of the manager of the person.
TenureCode	string	The type of tenure for faculty positions.
WeeklyWorkHours	decimal	The usual number of hours worked per week.
WorkClass	*Work Class*	The custom-defined classification information about job title and work experience of a person.

Financial Number

The financial report numbers of a trading community member, such as assets, liabilities, and cash balance.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}FinancialNumber

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Financial Report*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
FinancialNumber	decimal	The value for the financial number. For example, the FINANCIAL_NUMBER_NAME column could have a numerical value of 3,000,000,000 for annual sales.
FinancialNumberCurrency	string	The ISO currency code for the financial number.
FinancialNumberId	long	The unique identifier of the financial number. • Primary Key

Name	Type	Description
FinancialNumberName	string	A text field that lets you assign a descriptive name to a financial report item. For example, gross annual sales, profit, and net annual sales. A user-defined lookup.
FinancialReportId	long	The unique identifier of the financial report.
FinancialUnitsApplied	decimal	The order of magnitude (tens, hundreds, thousands, and so on) used for the FINANCIAL_NUMBER column.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ProjectedActualCode	string	Indicates if the projected amount is projected or actual. The list of accepted values are P and A. The default value is A.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Financial Profile

The financial details of a trading community member, such as bank account information that was obtained as part of a credit evaluation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}FinancialProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*

Relationship Type	Object or Service
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessAuthorityDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when access to the information in the account was granted.
AccessAuthorityGranted	string	Indicates whether access to information in a financial account was granted. If the value is True, then the access has been granted.
BalanceAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The reported balance on an account. The balance can be a positive number, negative number, or zero.
BalanceVerifiedOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the account balance was verified.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
FinancialAccountNumber	string	The alternate unique identifier of the financial account.
FinancialAccountType	string	The short name that classifies the financial accounts. For example, savings, checking, home loan, personal loan, trading, and so on.
FinancialOrgType	string	The classification of financial organizations. For example, bank, savings and loan, private lender, building society and so on.
FinancialOrganizationName	string	The name of the financial organization that holds the account.
FinancialProfileId	long	The unique identifier of the party's financial profile. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Name	Type	Description

Financial Report

The financial report information of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}FinancialReport

Relationships

Relationship Type	Object or Service
Contains	*Financial Number*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AuditInd	string	Indicates if the financial reports are audited. If the value is True, then the financial reports have been audited.

Name	Type	Description
ConsolidatedInd	string	Indicates if the financial reports are consolidated. If the value is C, then the reports are consolidated.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DateReportIssued	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the financial report was published.
DocumentReference	string	The unique reference number such as passport number or naturalization reference number associated with DOCUMENT_TYPE.
EstimatedInd	string	Indicates whether the financial reports provide estimated data. If the value is True, then the financial reports provide the data.
FinalInd	string	Indicates whether the financial reports are the final closing statements for a business that has ceased operations. If the value is True, then the reports are final closing statements.
FinancialNumber	*Financial Number*	The number that indicates a financial value like annual sales.
FinancialReportId	long	The unique identifier for a financial report. • Primary Key
FiscalInd	string	Indicates whether the financial reports cover a fiscal twelve-month accounting period. If the value is Y, then the financial report covers a twelve-month fiscal period.
ForecastInd	string	Indicates whether the financial reports display forecasts or future projections. If the value is Y, then the financial report displays forecasts.
IssuedPeriod	string	The period covered by the financial report. For example, fiscal year 1999, 1998, and so on.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OpeningInd	string	Indicates whether the financial reports are the opening statements for a business. If the value is Y, then the financial statements are opening statements.
PartyId	long	The unique identifier of the contact party.
ProformaInd	string	Indicates if the financial reports are pro forma numbers. If the value is Y, then the financial reports are pro forma numbers.
QualifiedInd	string	Indicates whether the financial reports include qualifying remarks from auditors about the fairness and accuracy of the numbers. If the value is Y, then the report is qualified by auditors.
ReportEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The end date of the report, used instead of Issued Period.
ReportStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The start date of the report, used instead of Issued Period.
RequestId	long	A system-generated read-only attribute used by the application framework.
RequiringAuthority	string	The name of the primary organization that requires this financial report. For example, auditors, the Federal Trade Commission, or the Internal Revenue Service.
RestatedInd	string	Indicates whether the financial reports include data that was corrected after the original financial reports. If the value is Y, then the report has been corrected.
SignedByPrincipalsInd	string	Indicates whether the financial reports were signed by the principals of the organization. If the value is Y, then the reports are signed.
Status	string	The status of the record.

Name	Type	Description
TrialBalanceInd	string	Indicates whether the financial reports include trial balance numbers. If the value is Y, then the financial report includes trial balance numbers.
TypeOfFinancialReport	string	A name for the financial report. For example, 10K report, Annual Report, or Shareholder's Special Report.
UnbalancedInd	string	Indicates whether the financial reports include balance sheet accounts that do not balance. If the value is Y, then report includes unbalanced balance sheet accounts.
WhUdpateId	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the record was entered or changed in a data warehouse.

Household

The trading community group information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/groupService/}Group
