Remove Hold on a Contract

In this use case, we'll remove hold on a contract.

Contract type: All

Operation: **removeHoldOnContract**

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
<soap:Body>
<ns1:removeHoldOnContract xmlns:ns1="http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/
types/">
<ns1:contractId>300100092562530</ns1:contractId>
<ns1:removeHoldDate>2016-10-30</ns1:removeHoldDate>
</ns1:removeHoldOnContract>
</soap:Body>
```

```
</soap:Envelope>
```

Remove Hold on a Contract Line

In this use case, we'll remove hold on a contract line.

Contract type: All

Operation: **removeHoldOnContract**

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:removeHoldOnContract xmlns:ns1="http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/
types/">
 <ns1:lineId>300100092562530</ns1:lineId>
 <ns1:removeHoldDate>2016-10-30</ns1:removeHoldDate>
 </ns1:removeHoldOnContract>
 </soap:Body>
</soap:Envelope>
```

Reopen a Contract

In this use case, we'll reopen a contract.

Contract type: All

Operation: **reopenContract**

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:reopenContract xmlns:ns1="http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/
types/">
 <ns1:contractId>300100092562530</ns1:contractId>
 </ns1:reopenContract>
 </soap:Body>
</soap:Envelope>
```

Reopen a Contract Line

In this use case, we'll reopen a contract line.

Contract type: All

Operation: **reopenContract**

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:reopenContract xmlns:ns1="http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/
types/">
 <ns1:contractId>300100092562530</ns1:contractId>
 </ns1:reopenContract>
 </soap:Body>
</soap:Envelope>
```

Update Active Contract with no Versioning

In this use case, we'll update an active contract with no versioning.

Contract type: All

Operation: **mergeContractInAllStatus**

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
<soap:Body>
<ns1:mergeContractInAllStatus xmlns:ns1="http://xmlns.oracle.com/apps/contracts/coreAuthoring/
contractService/types/">
<ns1:contractHeader xmlns:ns2="http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/">
<ns2:Id>300100151581582</ns2:Id>
<ns2:MajorVersion>1</ns2:MajorVersion>
<ns2:StartDate>2016-09-15</ns2:StartDate>
<ns2:AmendmentEffectiveDate>2016-09-15</ns2:AmendmentEffectiveDate>
</ns1:contractHeader>
<ns1:versionFlag>false</ns1:versionFlag>
</ns1:mergeContractInAllStatus>
</soap:Body>
</soap:Envelope>
```

Update Active Contract with Versioning

In this use case, we'll update an active contract with versioning.

Contract type: All

Operation: **mergeContractInAllStatus**

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
<soap:Body>
<ns1:mergeContractInAllStatus xmlns:ns1="http://xmlns.oracle.com/apps/contracts/coreAuthoring/
contractService/types/">
<ns1:contractHeader xmlns:ns2="http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/">
<ns2:Id>300100151581582</ns2:Id>
<ns2:MajorVersion>1</ns2:MajorVersion>
<ns2:StartDate>2016-09-16</ns2:StartDate>
<ns2:AmendmentEffectiveDate>2016-09-16</ns2:AmendmentEffectiveDate>
</ns1:contractHeader>
<ns1:versionFlag>true</ns1:versionFlag>
</ns1:mergeContractInAllStatus>
</soap:Body>
</soap:Envelope>
```

Update Line Amount of an Active Contract

In this use case, we'll update the line amount of an active contract.

Contract type: All

Operation: **mergeContractInAllStatus**

Note: For free-form type lines, you can pass the amount through the attribute/tag `LineValueAmount`. For item-based type lines, amount is derived from values passed through `ItemQuantity` and `UnitPrice` tags.

This payload will amend the contract, make the line amount changes, and moves the amended version to Active status. Since amendment is involved, it is mandatory to pass `AmendmentEffectiveDate` in the payload.

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:mergeContractInAllStatus xmlns:ns1="http://xmlns.oracle.com/apps/contracts/coreAuthoring/
contractService/types/">
 <ns1:contractHeader xmlns:ns2="http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/">
 <ns2:Id>300100168601844</ns2:Id>
 <ns2:MajorVersion>1</ns2:MajorVersion>
 <ns2:AmendmentEffectiveDate>2016-10-08</ns2:AmendmentEffectiveDate>
 <ns2:ContractLine><!-- Free form line -->
 <ns2:Id>300100168602041</ns2:Id>
 <ns2:MajorVersion>1</ns2:MajorVersion>
 <ns2:LineValueAmount currencyCode="USD">12345</ns2:LineValueAmount>
 </ns2:ContractLine>
 <ns2:ContractLine><!-- Item based line -->
 <ns2:Id>300100168601787</ns2:Id>
 <ns2:MajorVersion>1</ns2:MajorVersion>
 <ns2:ItemQuantity unitCode="Ea">5</ns2:ItemQuantity>
 <ns2:UnitPrice currencyCode="USD">12</ns2:UnitPrice>
 </ns2:ContractLine>
 </ns1:contractHeader>
 <ns1:versionFlag>true</ns1:versionFlag>
 </ns1:mergeContractInAllStatus>
 </soap:Body>
</soap:Envelope>
```

Merge Contract In All Status

In this use case we will merge contract in all status.

Operation: mergeContractInAllStatus

Organization Web Service Sample Payloads

The following topics describe the sample payloads for OrganizationService External V2, for different use cases.

For each use case, you can find the organization type, the operation involved to invoke the web service, followed by sample payload.

Create an Organization

In this use case, we'll create a customer organization.

Operation: **createOrganization**

> **Note:** When creating an organization, you must ensure that the Lookup codes used are defined in the Lookup Type. You can manage lookup types and lookup codes in the task Manage Standard Lookups.

Request Body

```
<?xml version="1.0" encoding="UTF-8"?>
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body
 xmlns:ns1="http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/applicationModule/
types/">
 <ns1:createOrganization>
 <ns1:organizationParty xmlns:ns2="http://xmlns.oracle.com/apps/cdm/foundation/parties/
organizationService/">
 <ns2:CreatedByModule>AMS</ns2:CreatedByModule>
 <ns2:PartyUsageAssignment xmlns:ns3="http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/">
 <ns3:PartyUsageCode>CUSTOMER</ns3:PartyUsageCode>
 <ns3:CreatedByModule>AMS</ns3:CreatedByModule>
 </ns2:PartyUsageAssignment>
```

```
 <ns2:OrganizationProfile>

Create Organization Party and change Owner (Account Director)

In this use case, we'll create an organization party and change owner (account director). To perform this, we will create an organization party using createOrganization operation of Organization web service. Find the SalesAccountId using the PartyId of the organization in findSalesAccountOperation of SalesParty web service. Using the SalesAccountId, update the AccountDirectorId in updateSalesAccount operation of SalesParty web service.

1. Create an organization using createOrganization operation of Organization web service

   Operation: **createOrganization**

   Request Body

```

Delete Code Assignment for an Organization

In this use case, we'll delete code assignment for an organization.

Operation: **updateOrganization**

Request Body

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:updateOrganization xmlns:ns1="http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/
applicationModule/types/">
 <ns1:organizationParty xmlns:ns2="http://xmlns.oracle.com/apps/cdm/foundation/parties/
organizationService/">
 <ns2:PartyId>300100547088843</ns2:PartyId>
 <ns2:CodeAssignment xmlns:ns3="http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/">
 <ns3:CodeAssignmentId>300100547088844</ns3:CodeAssignmentId>
 <ns3:Status>I</ns3:Status>
 </ns2:CodeAssignment>
 </ns1:organizationParty>
 </ns1:updateOrganization>
 </soap:Body>
</soap:Envelope>
```

Response Body

```
<env:Envelope xmlns:env="http://schemas.xmlsoap.org/soap/envelope/" xmlns:wsa="http://www.w3.org/2005/08/

Update Contact Point of a Contact record Customer

In this use case, we'll update existing contact points for a person and for an organization. Person contact point is updated using mergePerson operation of Person web service and Organization contact point is updated using updateOrganization operation of Organization web service.

Updating contact point of a Person

Operation: **mergePerson**

Request Body

```

Person Web Services Sample Payloads

The following topics describe the sample payloads for PersonService External V2, for different use cases.

For each use case, you can find the person type, the operation involved to invoke the web service, followed by sample payload.

Create a Contact

In this use case, we'll create a contact.

Operation: **createPerson**

Request Body

```
<?xml version="1.0" encoding="UTF-8"?>
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">

Create a Person with Multiple Addresses

In this use case, we'll create a person with multiple addresses. This use case requires a person to be created using **createPerson** operation of Person Web Service and then assigning a address to the `PartyId` using **createAddress** operation of Address Web Service.

Operation: **createAddress**

Request Body

```
<soapenv:Envelope xmlns:add="http://xmlns.oracle.com/apps/crmCommon/salesParties/addressService/"
 xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:typ="http://xmlns.oracle.com/apps/
crmCommon/salesParties/addressService/types/">
 <soapenv:Body>
 <typ:createAddress>
 <typ:address>
 <add:PartyId>300100551137328</add:PartyId>
 <add:CreatedByModule>HZ_WS</add:CreatedByModule>
 <add:PrimaryFlag>true</add:PrimaryFlag>
 <add:Status>A</add:Status>
 <add:Address1>3450 North Triumph Boulevard</add:Address1>
 <add:Address2>Suite 300</add:Address2>
 <add:City>Lehi</add:City>
 <add:Country>US</add:Country>
 <add:PostalCode>84043</add:PostalCode>
 <add:State>Utah</add:State>
 <add:AddressPurpose>
 <add:Purpose>SHIP_TO</add:Purpose>
 </add:AddressPurpose>
 </typ:address>
 </typ:createAddress>
 </soapenv:Body>
</soapenv:Envelope>
```

Response Body

```

Customer Account Web Service Sample Payloads

The following topics describe the sample payloads for CustomerAccountService External V2, for different use cases.

For each use case, you can find the customer account type, the operation involved to invoke the web service, followed by sample payload.

Add a Account Site Contact Phone Number

In this use case, we'll add an account site contact phone number to a customer account.

Following are the steps to add account site contact phone number. This requires interaction between PartiesPerson, SalesPartiesRelationships, and CustomerAccount Web Services.

- Use **createPerson** operation of **Person** service to create a person.

  Operation: **createPerson**

  Request Body

```

Create a Customer Account including Customer Account Site and Customer Account Site Use

In this use case, we'll create a customer account with customer account site and customer account site use. This requires CustomerAccountService to interact with LocationService and OrganizationService. A location is created using createLocation operation of Location service. A PartySite is created using the LocationId value in mergeOrganization

operation of Organization web service. A CustomerAccount is created using the PartySiteID and PartySiteUseId values in mergeCustomerAccount operation of Customer web service.

1. Create a Location using Location Web Service

   Operation: **createLocation**

   Request Body

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:typ="http://
xmlns.oracle.com/apps/cdm/foundation/parties/locationService/applicationModule/types/"
 xmlns:loc="http://xmlns.oracle.com/apps/cdm/foundation/parties/locationService/" xmlns:par="http://
xmlns.oracle.com/apps/cdm/foundation/parties/partyService/" xmlns:sour="http://xmlns.oracle.com/apps/
cdm/foundation/parties/flex/sourceSystemRef/" xmlns:loc1="http://xmlns.oracle.com/apps/cdm/foundation/
parties/flex/location/">
 <soapenv:Header/>
 <soapenv:Body>
 <typ:createLocation>
 <typ:location>
 <loc:Country>CA</loc:Country>
 <loc:Address1>Lakewood Shores</loc:Address1>
 <loc:City>Redwood</loc:City>
 <loc:PostalCode>78741</loc:PostalCode>
 <loc:State>Ontario</loc:State>
 <loc:CreatedByModule>HZ_WS</loc:CreatedByModule>
 </typ:location>
 </typ:createLocation>
 </soapenv:Body>
</soapenv:Envelope>
```

   Response Body

</typ1:nested>
</typ1:item>
</typ1:group>
</typ1:filter>
<typ1:findAttribute>AccountName</typ1:findAttribute>
<typ1:findAttribute>AccountNumber</typ1:findAttribute>
<typ1:findAttribute>CustAcctInformation</typ1:findAttribute>
<typ1:excludeAttribute>false</typ1:excludeAttribute>
</typ:findCriteria>
<typ:findControl>
<typ1:retrieveAllTranslations>false</typ1:retrieveAllTranslations>
</typ:findControl>
</typ:findCustomerAccount>
</soapenv:Body>
</soapenv:Envelope>
```

Get an Email Address of the Bill-To Contact

In this use case, we'll retrieve email address from Bill-To Contact using SOAP.

Steps to retrieve the email address of the Bill-To Contact:

1. Run the CustomerAccountService SOAP call
2. Use the ContactPersonId from the response and run a getPerson SOAP call

Step 1: Run the CustomerAccountService SOAP call

Operation: **findCustomerAccount**

Request Body

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"

```

Step 2: Run a getPerson SOAP call

Use the ContactPersonId and run a getPerson SOAP call.

Operation: **getPerson**

Request Body

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
 xmlns:typ="http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/
applicationModule/types/">
  <soapenv:Header/>
  <soapenv:Body>
     <typ:getPerson>
        <typ:partyId>300000189682584</typ:partyId>
     </typ:getPerson>
  </soapenv:Body>
</soapenv:Envelope>
```

Response Body

```
<env:Envelope xmlns:env="http://schemas.xmlsoap.org/soap/envelope/" xmlns:wsa="http://
www.w3.org/2005/08/addressing">
   <env:Header>

```

This will retrieve the email address when there is a single contact for a customer.

Set a Contact as the Primary Contact

In this use case, we'll set a contact as a primary contact.

Operation: **mergeCustomerAccount**

Request Body

```

Location Web Service Sample Payloads

The following topics describe the sample payloads for LocationService External V2, for different use cases.

For each use case, you can find the location type, the operation involved to invoke the web service, followed by sample payload.

Create a Location

In this use case, we'll create a location.

Operation: **createLocation**

> **Note:** The *CreatedByModule* attribute is mandatory only for **Create** operation. It is not used in the request of **Update** operation.

Request Body

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:typ="http://
xmlns.oracle.com/apps/cdm/foundation/parties/locationService/applicationModule/types/" xmlns:loc="http://

Trading Community Customer Account Web Service Sample Payloads

The following topics describe the sample payloads for CustomerAccountService External V2, for different use cases.

For each use case, you can find the customer account type, the operation involved to invoke the web service, followed by sample payload.

Create a Basic Customer Account

In this use case, we'll create basic customer account.

Operation: **createAccount**

Request Body

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:typ="http://
xmlns.oracle.com/apps/cdm/foundation/parties/customerAccountService/applicationModule/types/"

Opportunity Web Service Sample Payloads

Using Recur Frequency Code

In this use case, we'll update an opportunity using recur frequency code.

Update recur frequency code in Opportunity

The `recurstart` date for a revenue line is always the `effectivedate` of the revenue line. When a revenue line is newly created, it copies the effective date of the opportunity. The recur start date will also hold the same value.

So, it is always advised to ensure that the recurEndDate should have a value greater than start date. Alternatively you can provide recur frequency code instead of recur end date.

Operation: **mergeOpportunity**

Request Body
