Get Help

There are a number of ways to learn more about your product and interact with Oracle and other users.

Get Help in the Applications

Some application pages have help icons to give you access to contextual help. If you don't see any help icons on your page, click your user image or name in the global header and select Show Help Icons. If the page has contextual help, help icons will appear.

Get Training

Increase your knowledge of Oracle Cloud by taking courses at *Oracle University*.

Join Our Community

Use *Cloud Customer Connect* to get information from industry experts at Oracle and in the partner community. You can join forums to connect with other customers, post questions, suggest *ideas* for product enhancements, and watch events.

Share Your Feedback

We welcome your feedback about Oracle Applications user assistance. If you need clarification, find an error, or just want to tell us what you found helpful, we'd like to hear from you.

You can email your feedback to *oracle_fusion_applications_help_ww_grp@oracle.com*.

Thanks for helping us improve our user assistance!

3 Overview

About SOAP Web Services in Oracle Applications Cloud

Use Simple Object Access Protocol (SOAP) web services to integrate different applications within the enterprise or expose business functions to Oracle Cloud partners and customers.

Here are the two categories of SOAP web services in Oracle Applications Cloud.

Categories	What You Use It For
Business Object Services	Work with business objects, such as an opportunity or a marketing campaign. You can perform the standard CRUD operations to create or modify the exposed business objects. These services are implemented using the Application Development Framework (ADF).
Process Services	Manage business processes that are not centered around any particular business object. These services are typically implemented using Service-Oriented Architecture (SOA) composites.

SOAP web services are based on these industry standards.

- Extensible Markup Language (XML): A data format that allows uniform communication between web services consumers and web services providers.
- XML Schema: A framework that describes XML vocabulary used in business transactions.
- Simple Object Access Protocol: A protocol for exchanging structured information in the implementation of web services.
- Web Services Description Language (WSDL): An XML-based language that provides a model for describing SOAP-based web services.
- WS-Policy: A flexible and extensible grammar framework that describes the capabilities, requirements, and general characteristics of web services using the policies.

Access to Web Services

Topics containing details about the web services and supported operations might provide additional information about the privileges required to run them. Make sure that the users are assigned a custom role, optionally based on a predefined role, and that the custom role contains the appropriate privileges.

> **CAUTION:** While creating custom roles, make sure only the required privileges are assigned. Before proceeding further, see *Guidance for Assigning Predefined Roles*.

For details about roles and privileges that are common across Oracle Fusion Cloud Applications, see *Security Reference for Common Features*. For details about roles and privileges specific to your product area, see your product-specific Security Reference guide.

Related Topics

Web Service Life Cycle

You will find three phases of a business object web service in its life cycle. Oracle Applications Cloud supports public external SOAP services throughout their life cycle, until the services are obsolete.

1. Active: When a service is delivered the first time, until it's deprecated.
2. Deprecated: When a service is superseded by a newer version, or if there's a planned obsolescence in a future release. A service in this state is still supported and becomes obsolete in a later release.

   > **Note:** You must use the active version of the service. If you were previously using a service that's now deprecated, then migrate to the new, active version.

3. Obsolete: When a service is no longer shipped or supported.

Backward Compatibility for Web Services

You can update web services as part of an upgrade to a major release or as part of a bundle patch. Make sure the changes made to a service are backward compatible and must not break the existing code. Here are a few examples of backward compatible changes:

- Adding new operations
- Adding new optional attributes for service data object

Don't make backward incompatible changes to any public external service as it breaks the existing code that initiates the service. Here are a few examples of backward incompatible changes

- Removing an operation
- Removing a parameter in an operation
- Changing the parameter type of an existing operation
- Renaming an attribute of a service data object
- Adding a mandatory attribute to a service data object
- Changing the functional behavior of an operation (for example, the service returns a different output when the same values are passed in)

Web Service Versioning

When a service needs a backward incompatible change, don't make the change to the service directly. Keep the existing service as it is, and update its life cycle to deprecated phase. Get a new version of the service, which is a copy of existing one and apply the incompatible changes to it. Mark this new version as Active with its own endpoint and WSDL. Add the new version number to the service namespace.

This diagram shows the life cycle of a service and the coexistence of multiple service versions. Both versions of the service are supported until the deprecated service is finally obsolete. At this point, only the active service is supported.

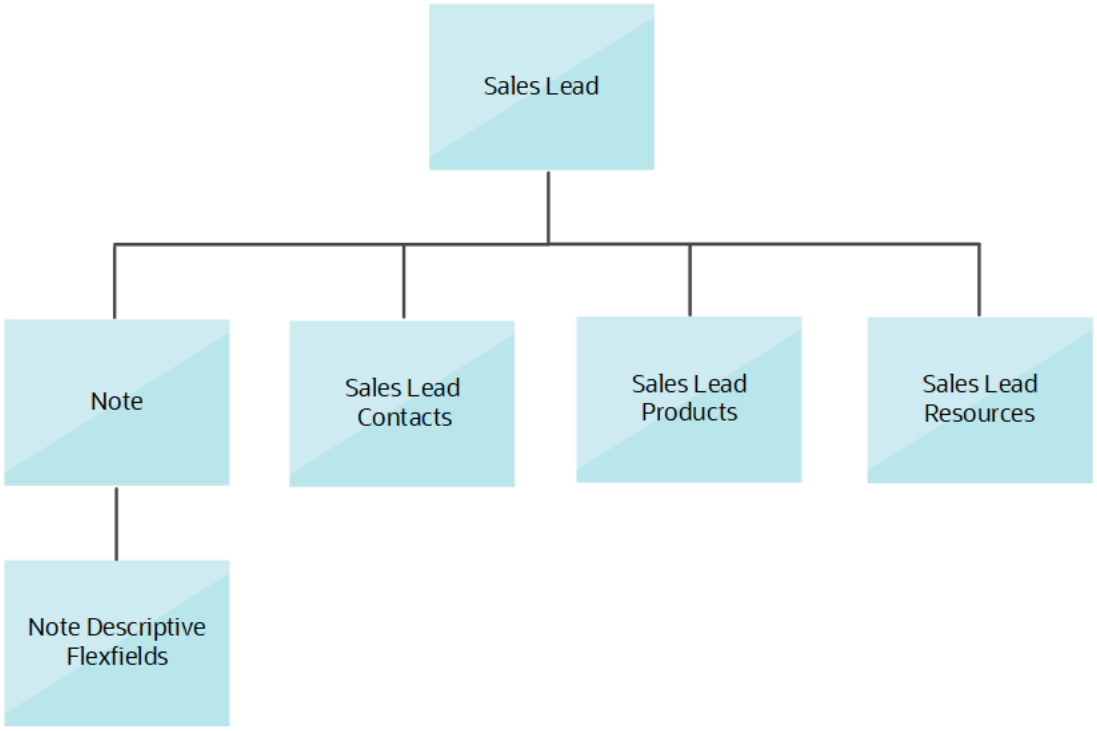
4 Business Object Service Structure

Business Object Components

A business object, which a service implements, is a hierarchy of service data objects. Each service data object is a logical entity that consists of attributes, referred to as service data object attributes. This structure encompasses the required contextual and dependent information, so it's not necessary to invoke multiple services.

For example, a Sales Lead service is defined on the Sales Lead business object, which consists of service data objects such as Sales Lead contacts, Sales Lead products, and the Sales Lead data object itself. Each service data object contains attributes that define the object. `Name`, `DealAmount`, and `Score` are example attributes that define the Sales Lead service data object. These attributes may have a built-in data type such as long and string, or may have a complex data type that corresponds to another service data object. For more information, see *Business Object Service Data Types*.

The following diagram shows the service data objects as rectangles and the relationship between the data objects as lines. The Sales Lead service data object is the top-level entity, and Note, Sales Lead Contacts, Sales Lead Products, and Sales Lead Resources are the child entities. The Note child entity has Note Descriptive Flexfields as the grandchild entity.



Related Topics

Service Interface Artifacts

A service interface is defined by three artifacts.

- *Service WSDL*: Contains standard WSDL elements and annotations that describe the service metadata, display name and service, operation and operation payload elements.
- *Service XSD*: Defines request and response payload types in a separate XSD, which has the same name as the WSDL.
- *Service Data Object XSDs:* Defines the service data object as a complex type and the attributes as the elements in the complex type. An XSD also includes annotations for the entity display name as well as entity and attribute descriptions.

Related Topics

Service WSDL

A service WSDL follows the standard structure of a WSDL document.

- Namespace declarations
- WSDL documentation, which includes the display name, description, operation name, description, and descriptions of request and response payload elements
- Partner link definition
- Security policy definition
- Type definition through imports of XSDs
- Message definition
- Port type and operation definition
- Binding definition
- Service definition

For example, the Sales Lead service interface is defined in the `SalesLeadService.wsdl`. For more information about WSDL specification, see *http://www.w3.org/TR/wsdl*.

Related Topics

Service XSD

A service XSD schema has the following basic structure:

- Namespace declarations
- Imports and includes the specifications of XSDs on which this schema definition has dependencies
- Definition of the elements of the request and response payloads for synchronous and asynchronous versions of all the service operations

> **Note:** The element names start with the operation names. The suffix determines whether the payload is a request or a response, and whether the payload elements are synchronous or asynchronous.

The following is an excerpt from the `SalesLeadService.xsd`.

```
<?xml version="1.0" encoding="UTF-8" ?>
<schema elementFormDefault="qualified"
targetNamespace="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/"
 xmlns:ns0="http://xmlns.oracle.com/apps/sales/leadMgmt/leads/leadService/"
xmlns:ns1="http://xmlns.oracle.com/apps/apps/marketing/leadMgmt/leads/leadService/"
 xmlns:ns2="http://xmlns.oracle.com/adf/svc/types/"
xmlns:tns="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/"
xmlns="http://www.w3.org/2001/XMLSchema"
 <import namespace="http://xmlns.oracle.com/adf/svc/types/"
schemaLocation="https://crm-your-cloud-hostname:port/mklLeads/SalesLeadService?XSD=/META-INF/wsdl/
BC4JService.xsd"/>
 <import namespace="http://xmlns.oracle.com/oracle/apps/marketing/leadMgmt/leads/leadService/"
schemaLocation="https://crm-your-cloud-hostname:port/mklLeads/SalesLeadService?XSD=/oracle/apps/marketing/
leadMgmt/leads/leadService/MklLead.xsd"/>
 <import namespace="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/"
schemaLocation="https://crm-your-cloud-hostname:port/mklLeads/SalesLeadService?XSD=/oracle/apps/marketing/
leadMgmt/leads/leadService/MklLeadResources.xsd"/>
 <import namespace="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/"
schemaLocation="https://crm-your-cloud-hostname:port/mklLeads/SalesLeadService?XSD=/oracle/apps/marketing/
leadMgmt/leads/leadService/MklProdAssoc.xsd"/>
 <import namespace="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/"
schemaLocation="https://crm-your-cloud-hostname:port/mklLeads/SalesLeadService?XSD=/oracle/apps/marketing/
leadMgmt/leads/leadService/MklLeadTcMembers.xsd"/>
 ...
 <element name="getSalesLead">
 <complexType>
 <sequence>
 <element name="leadId" type="long"/>
 </sequence>
 </complexType>
 </element>
 <element name="getSalesLeadResponse">
 <complexType>
 <sequence>
 <element name="result" type="ns1:MlkLead"/>
 </sequence>
 </complexType>
 </element>
 ...
 <element name="getSalesLeadAsync">
 <complexType>
 <sequence>
 <element name="LeadId" type="long"/>
 </sequence>
 </complexType>
 </element>
 <element name="getSalesLeadAsyncResponse">
 <complexType>
 <sequence>
 <element name="result" type="ns1:MklLead"/>
 </sequence>
 </complexType>
 </element>
 ...
</schema>
```

For more information about XML Schema specification, refer to *http://www.w3.org/XML/Schema.html*.

Related Topics

Service Data Object XSDs

Each service data object has one XSD that describes the object and its attributes. For example, the Sales Lead object is defined in `MklLead.xsd`, the Sales Lead products are defined in `MklProdAssoc.xsd`, and the Sales Lead contacts are defined in `MklLeadTcMembers.xsd`. A service data object is uniquely defined by a QName, which is the qualified name of the corresponding XSD.

An XSD schema corresponding to a service data object has the following basic structure:

- Namespace declarations
- Imports and includes the specifications of XSDs on which this schema definition has dependencies
- Schema documentation, which includes display name and description, as well as the name and description of the service data object attributes.
- Definition of the derived types. For example, when you enable service warnings in the service implementation, you need to define a wrapper type.
- Definition of the service data object, which is a complex type. The service data object attributes are defined as elements in the complex type.
- Definition of the element, with the type set to complex

The following is an excerpt from `MklLead.xsd`, which corresponds to the Sales Lead object:

```
<?xml version="1.0" encoding="UTF-8" ?>
<xsd:schema elementFormDefault="qualified"
targetNamespace="http://xmlns.oracle.com/oracle/apps/marketing/leadMgmt/leads/leadService/"
 sdoJava:package="oracle.apps.marketing.leadMgmt.leads.leadService"

Related Topics

Business Object Service Data Types

A service operation payload element and service data object attribute can be one of the following data types:

- Built-in data types
- Complex data types defined by Application Development Framework (ADF)
- Complex data types defined by Oracle Applications Cloud, which are effectively the service data objects

Built-in Data Types

The built-in data types are defined in the *XML Schema* namespace. For more information, refer to *World Wide Web Consortium (W3C)*.

The built-in data types of service operation payload elements and service data object attributes as they are represented in the service XSD and service data object XSDs are:

- anyType: Service operation payload elements and service data object attributes are strongly typed. There are a few exceptions. anyType is used as the service operation parameter type for custom business object services

such as the Marketing Custom Business Object service, which processes custom business objects defined in Application Composer.

- boolean
- byte
- decimal
- double
- float
- int
- integer
- long
- short
- string

The hexBinary, dateTime, time, and date built-in data types are not used in the business object interface. Instead, complex data types defined by ADF are used.

Complex Data Types Defined by Application Development Framework

The complex data types defined by ADF are used as data types for service operation payload elements and service data object attributes. The exceptions are AmountType and MeasureType data types, which are used only for service data object attributes.

These complex data types are defined in two XML schema files:

- BC4JService.xsd: For BC4JService.xsd schema, see *Sample BC4JService.xsd*
- BC4JServiceCS.xsd

To view these schema files on a cloud instance, follow the instructions in *Business Object Service Operations* and replace the tokens in the following URLs:

- For all complex type definitions, except ProcessData, reference: `https://(FADomain,FSCMServices)/fscmService/ServiceCatalogService?XSD=/META-INF/wsdl/BC4JService.xsd`
- For ProcessData type definition only, reference: `https://(FADomain,FSCMServices)/fscmService/ServiceCatalogService?XSD=/META-INF/wsdl/BC4JServiceCS.xsd`

This table lists some commonly used complex data types defined by ADF. This is not an exhaustive list.

Complex Data Type QName	Description
`{http://xmlns.oracle.com/adf/svc/types/}AmountType`	Data type for service data object attributes that specify an amount or price in a particular currency. Attributes of this type capture both the currency and the amount in that currency. Names for this type typically end with **Amount** or **Price**.
`{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler`	Data type for Binary Large OBjects (BLOBs) and Character Large OBjects (CLOBs).
`{http://xmlns.oracle.com/adf/svc/types/}date-Date`	Data type for dates.

Complex Data Type QName	Description
`{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp`	Data type for timestamps.
`{http://xmlns.oracle.com/adf/svc/types/}FindControl`	Data type for a parameter of the *find* operation. This is not being used in the current release and is intended for future use.
`{http://xmlns.oracle.com/adf/svc/types/}FindCriteria`	Data type for a parameter of the *find* operation. This parameter controls the fetch start, fetch size, search criteria, sort order, and attribute inclusion or exclusion.
`{http://xmlns.oracle.com/adf/svc/types/}MeasureType`	Data type for service data object attributes that contain a quantity in a specified unit of measure. Attributes of this type capture both the quantity and the unit of measure. Names for this type typically end with **Measure** or **Quantity**.
`{http://xmlns.oracle.com/adf/svc/types/}MethodResult`	Data type to store service warning messages. If you enable service warnings in an underlying service data object implementation, this is the return object type of the *delete* operation.
`{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints`	Data type for the return value of the *getDfltObjAttrHints* operation. The return value contains a name-value pair: • Name, plural name, and description of the service data object • UI hints for the service data object attributes
`{http://xmlns.oracle.com/adf/svc/types/}ProcessControl`	Data type for a parameter of the *process* and processCS operation. This parameter controls the level of detail for the return data in the response payload and whether to allow partial failure.
`{http://xmlns.oracle.com/adf/svc/types/}ProcessData`	Data type for a parameter of the processCS operation.
`{http://xmlns.oracle.com/adf/svc/types/}StringResult`	Data type for the return parameter of custom service operations that return multiple string values and warning messages. This type is used only if you enable service warnings.

Complex Data Types Defined by Oracle Applications

The complex data types defined by Oracle Applications Cloud are:

- Service data objects: Defined as an element that is a complex type composed of a sequence of elements. The service data object attributes are defined as the elements in the complex type. Sales lead, sales lead contacts, and sales lead products are examples of service data objects defined on the sales lead service. For more information, see *Service Data Object XSDs*.
- Complex types related to the service data objects that extend the `{http://xmlns.oracle.com/adf/svc/types/}MethodResult` type: Defined for service data objects which are designed with service warnings enabled, and can contain both service data object and warning messages. For more information, see the *example in create Operation*.

Related Topics

Business Object Service Operations

A service may be exposed to standard operations and also to custom operations that have signatures and behaviors unique to that service.

Message Pattern

All operations exposed on a business object service have both synchronous and asynchronous versions defined. For conciseness, the service documentation includes the definition for the synchronous message pattern. Both synchronous and asynchronous operations have the same functional behavior and request and response payloads.

Naming convention for asynchronous operations are:

- Operation name: Synchronous operation name appended with **Async**
- Callback name: Synchronous operation name appended with **AsyncResponse**

Using the *Sales Lead service* as an example, if the name of the synchronous operation is `createSalesLead`, the asynchronous operation name and callback name would be `createSalesLeadAsync` and `createSalesLeadAsyncResponse`.

Related Topics

Standard CRUD Operations

This table lists the standard create, read, update, and delete (CRUD) operations for a business object service.

Operation	Method Name	Description
create Operation	`create`***ServiceDataObjectName***	Creates a service data object and its descendants.
delete Operation	`delete`***ServiceDataObjectName***	Deletes a business object.
get Operation	`get`***ServiceDataObjectName***	Retrieves a single business object by the primary key.
find Operation	`find`***ServiceDataObjectName***	Finds and returns a list of business objects that meet the specified search criteria.
find by additional predefined search criteria Operation	`find`***ServiceDataObjectNameSearchStandardName***	Finds and returns a list of business objects that meet the specified search criteria and the additional predefined search criteria.
update Operation	`update`***ServiceDataObjectName***	Updates a business object.
merge Operation	`merge`***ServiceDataObjectName***	Updates a business object, if it exists. Otherwise creates a new business object.
process Operation	`process`***ServiceDataObjectName***	Performs create, update, delete, or merge operation on a list of business objects. The specified operation is applied to all the objects in a given list.

Operation	Method Name	Description
process change summary Operation	`processCS`*`ServiceDataObjectName`*	Performs create, update, or delete operations on a list of business objects. Allows you to specify different operations for different objects.

Related Topics

create Operation

The `create` operation validates and then creates the business object that a request payload passes. The business object includes the top-level object entity as well as the descendant object entities.

Operation Signature

Using the *Sales Lead service* as an example, the following is the signature of the `create` operation that accepts a business object to be defined. Here, `createSalesLead` is the request payload, and the business object it defines is a Sales Lead object of `MklLead` type.

```
<element name="createSalesLead">
 <complexType>
 <sequence>
 <element name="salesLead" type="ns1:MklLead"/>
 </sequence>
 </complexType>
</element>
```

The `create` operation returns the newly defined business object in the response payload.

```
<element name="createSalesLeadResponse">
 <complexType>
 <sequence>
 <element name="result" type="ns1:MklLead"/>/>
 </sequence>
 </complexType>
</element>
```

Example

This example creates a Sales Lead object for **Issaquah Imaging Innovations - Tablets** with a deal amount estimated at **$100,000 USD**.

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:createSalesLead
xmlns:ns1="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/">
 <ns1:salesLead
xmlns:ns2="http://xmlns.oracle.com/oracle/apps/marketing/leadMgmt/leads/leadService/">
 <ns2:Name>Issaquah Imaging Innovations - Tablets</ns2:Name>
 <ns2:DealAmount currencyCode="USD">100000</ns2:DealAmount>
 </ns1:salesLead>
 </ns1:createSalesLead>
 </soap:Body>
</soap:Envelope>
```

The response payload returns the newly created Sales Lead object after the operation completes successfully.

```
<ns0:createSalesLeadResponse xmlns="" xmlns:env="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:ns0="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/"
xmlns:wsa="http://www.w3.org/2005/08/addressing" xmlns:wsu="http://docs.oasis-open.org/
wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">
 <ns2:result xmlns:ns0="http://xmlns.oracle.com/adf/svc/types/"
```

```
xmlns:ns1="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/"
xmlns:ns2="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/"
xmlns:ns3="http://xmlns.oracle.com/apps/crmCommon/notes/noteService"
xmlns:ns4="http://xmlns.oracle.com/oracle/apps/marketing/leadMgmt/leads/leadService/"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:type="ns4:MklLead">
 <ns4:Name>Issaquah Imaging Innovations - Tablets</ns4:Name>
 <ns4:LeadNumber>CDRM_80328</ns4:LeadNumber>
 <ns4:OwnerPartyName>Gabrielle Lee</ns4:OwnerPartyName>
 <ns4:StatusCode>UNQUALIFIED</ns4:StatusCode>
 <ns4:Rank xsi:nil="true"/>
 <ns4:LeadId>300100041938883</ns4:LeadId>
 ...
 <ns4:DealAmount currencyCode="USD"
xmlns:tns="http://xmlns.oracle.com/adf/svc/errors/">100000</ns4:DealAmount>
 ...
 </ns2:result>
</ns0:createSalesLeadResponse>
```

Related Operations

To create a child object on an existing business object, you cannot use the `create` operation. Instead, use the `merge` operation.

To create multiple business objects with a single request, use the `process` operation. This operation allows you to control whether the response returns no value, only the primary keys, or the entire object. You can also use the `process` operation to create large business objects for which response payload values are not required.

Related Topics

delete Operation

The `delete` operation deletes the existing rows of the top-level service data object that a request payload passes. Depending on the requirements of the business object, you may delete the child and descendant entities.

This operation allows:

- Hard delete, for example, delete a row from the database
- Soft delete, for example, update the row status to indicate that it is deleted

A service may expose additional `delete` operations on child or descendant objects, which don't depend on the top-level entity, if it is a functional requirement. For example, the *Sales Lead service* exposes a `deleteSalesLead` operation as well as a `deleteSalesLeadProduct`, `deleteSalesLeadResource`, and other delete operations on the child objects.

Operation Signature

For the Sales Lead service, the following is the signature of the `deleteSalesLead` operation that accepts the Sales Lead business object to be deleted. This operation accepts a `MklLead` object as the input parameter. The primary key or the alternate key attributes are required. You need not populate all the other attributes of the object.

```
<element name="deleteSalesLead">
 <complexType>
 <sequence>
 <element name="saleLead" type="ns1:MklLead"/>
 </sequence>
 </complexType>
</element>
```

The `deleteSalesLead` operation returns an empty response payload.

```
<element name="deleteSalesLeadResponse">
 <complexType>
```

```
 <sequence/>
 </complexType>
</element>
```

Example

This example deletes the Sales Lead service object with **300100041938883** as the internal identifier.

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:deleteSalesLead
 xmlns:ns1="http://xmlns.oracle.com/apps/marketing/leads/leadService/types/">
 <ns1:salesLead
xmlns:ns2="http://xmlns.oracle.com/oracle/apps/marketing/leadMgmt/leads/leadService/">
 <ns2:LeadId>300100054316102</ns2:LeadId>
 </ns1:salesLead>
 </ns1:deleteSalesLead>
 </soap:Body>
</soap:Envelope>
```

The `deleteSalesLead` operation performs a hard delete of the Sales Lead object and all the descendant objects, and returns an empty response payload.

```
<ns0:deleteSalesLeadResponse xmlns="" xmlns:env="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:ns0="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/"
xmlns:wsa="http://www.w3.org/2005/08/addressing" xmlns:wsu="http://docs.oasis-open.org/
wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd"/>
```

Related Operations

To delete a list of business objects passed in the request payload, you can use the `process` operation.

Related Topics

get Operation

The `get` operation accepts the primary key of a business object in the request payload and returns the entire corresponding business object in the response payload. If the business object is a composite business object, then the operation returns all the attributes of the service data objects and its child and descendant objects.

If the internal ID of the business object is not known, use the `find` operation to query based on alternate key or other search criteria.

Operation Signature

The following is the definition of the `get` operation for the Sales Lead service. The operation accepts the Sales Lead internal identifier, which is of `long` type.

```
<element name="getSalesLead">
 <complexType>
 <sequence>
 <element name="leadId" type="long"/>
 </sequence>
 </complexType>
</element>
```

The operation returns information for the corresponding Sales Lead business object, which is of `MklLead` type.

```
<element name="getSalesLeadResponse">
 <complexType>
 <sequence>
 <element name="result" type="ns1:MklLead"/>
 </sequence>
 </complexType>
```

```
</element>
```

Example

This example retrieves the Sales Lead object with **300100041938883** as the internal identifier.

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:getSalesLead
xmlns:ns1="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/">
 <ns1:leadId>300100041938883</ns1:leadId>
 </ns1:getSalesLead>
 </soap:Body>
</soap:Envelope>
```

The response payload includes all the attributes of the Sales Lead business object.

```
<ns0:getSalesLeadResponse xmlns="" xmlns:env="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:ns0="http://xmlns.oracle.com/apps/apps/marketing/leadMgmt/leads/leadService/types/"
xmlns:wsa="http://www.w3.org/2005/08/addressing"

Related Operations

To retrieve only a subset of attributes of a large business object or a service data object with descendants more than the default fetch size of 500, use the `find` operation. This operation allows you to specify fetch start, fetch size, complex search criteria, business object attributes to include or exclude, and sort order.

Related Topics

find Operation

The `find` operation retrieves the service data objects that meet the specified search criteria in the request payload. Use this operation to retrieve a subset of attributes for business objects that consist of entities with many attributes or many service data objects.

You can control the following for the top-level entity and the descendant service data objects:

- Fetch start and size
- Filter criteria
- Sort order
- List of attributes to include or exclude

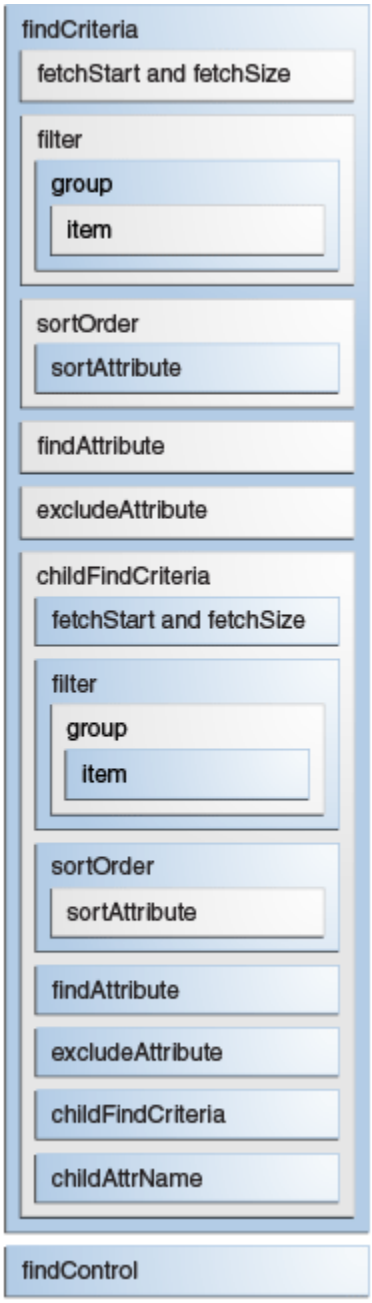
Operation Signature

The request payload for the `find` operation accepts two parameters that control the behavior of the operation. For the definition of the `FindCriteria` and `FindControl` types, see *Sample BC4JService.xsd*.

```
<element name="findSalesLead">
 <complexType>
 <sequence>
 <element name="findCriteria" type="ns0:FindCriteria"/>
 <element name="findControl" type="ns0:FindControl"/>
 </sequence>
 </complexType>
</element>
```

Request Payload Parameters

The parameters of the `find` request payload give extensive control over the search criteria. This figure shows the parameters of the `find` operation.



This table lists the elements of the request payload and provides a brief description for each element.

Parameter	Description
`attribute`	Holds the case sensitive name of the object attribute to filter. All the attributes can be queried.
`childFindCriteria`	Specifies the fetch start, fetch size, filter, sort, and selection criteria for a child service data object that is specified in `childAttrName`. The `childFindCriteria` can be nested within another `childFindCriteria` in order to apply a fetch start, fetch size, and filter, sort and selection criteria to the child and descendants of the top-level object.

Parameter	Description
`conjunction`	Defines how the search conditions are evaluated in relation to each other. Valid values are `And`, `Or`, `Not`, `AndNot`, and `orNot`. These values are case sensitive.
`excludeAttribute`	Indicates whether the attributes specified by `findAttribute` elements are not included in the response payload. The default option is `false`. To reduce the size of the find operation response payload, use `excludeAttribute` in combination with `findAttribute` to return only the required elements.
`fetchStart`	Indicates which objects to fetch and which index to fetch from. This is a zero-based index, and the default value is 0. If the value is set to 0, the result set begins with the first row of the data set. If the value is set to 99, the result set begins with the 100th row of the data set.
`fetchSize`	Specifies the maximum number of top-level objects to retrieve. A `fetchSize` of -1, which is the default value, retrieves all rows up to the maximum `fetchSize` that meet the search criteria starting from `fetchStart`. Valid maximum value for `fetchSize` is 500 rows unless overridden in the service implementation. If `fetchSize` value is greater than the number of remaining rows, only the remaining rows are returned.
`filter`	Contains the search criteria, which includes the conjunction, group and nested elements. If a filter is not specified, all the rows are retrieved. **Note:** Don't use a formular type field in the filter criteria.
`findAttribute`	Specifies the subset of attributes to be retrieved for which the `filter` criteria are satisfied. If the subset is not specified, all the attributes are fetched. If you want to include the child object in the result set, you must include it in the subset.
`findControl`	Not used in the current release.
`findCriteria`	Contains fetch size, search criteria, sort criteria, and content inclusion or exclusion information for all the service data object levels.
`group`	Contains a set of runtime search conditions for one or more attributes. The group element includes the conjunction, `upperCaseCompare`, and item elements.
`item`	Contains one run time search condition for an attribute. The item element includes the conjunction, `upperCaseCompare`, attribute, operator, value, and nested elements.
`nested`	Defines search criteria for child and descendant entities to determine whether the top-level entity must be included in the result. For example, return a parent object if it contains child entities that meet the criteria.
`operator`	Holds the case-sensitive operation to apply to attributes and values. See *list of operators*.
`sortOrder`	Specifies the sorting order of the result set by setting zero or more `sortAttribute` child elements. If more than one `sortAttribute` elements are specified, the sort is based on the order of these elements.
`sortAttribute`	Contains an attribute name and a boolean value to indicate whether the attribute value must be sorted in a descending order. The default sort order is ascending.
`upperCaseCompare`	Indicates whether this is a case insensitive search. The default option is false.
`value`	Holds the attribute filter criteria that can include:

Parameter	Description
	• An asterisk (*) to match zero or more characters • A question mark (?) to match a a single character To minimize performance impact, ensure that the values don't start with a wildcard; for example, use **Foo*** instead of ***Foo**.

Note: The default maximum value for fetch size is 500, unless specified otherwise in the documentation for a specific web service. A single query returns a maximum of 500 rows (objects) regardless of whether the `fetchSize` parameter in the find operation is set to -1 or a value greater than 500. If you need to fetch more than 500 objects, call the `find` operation multiple times with different `fetchStart` values, for example, 0, 500, 1000. This retrieves the results in batches of 500 objects, assuming that the fetch size is 500.You must specify the `childFindCriteria` parameter to control the fetch size of a child attribute rowset.

This table lists the operators that can be specified for the `operator` parameter. Some of these operators may be disabled for specific service data object attributes. For such attributes, you can't use the disabled operators with the `findCriteria` parameter.

Operator	Use for String	Yes	Use for Dates
=	Yes	Yes	Yes
&amp	Yes		
>	Yes		
>=	Yes	Yes	
<	Yes	Yes	
<=	Yes	Yes	
<>	Yes	Yes	Yes
AFTER			Yes
BEFORE			Yes
BETWEEN	Yes	Yes	Yes
CONTAINS	Yes		
DOESNOTCONTAIN	Yes		
ENDSWITH	Yes		
ISBLANK	Yes	Yes	Yes
ISNOTBLANK	Yes	Yes	Yes
NOTBETWEEN	Yes	Yes	Yes
ONORAFTER			Yes
ONORBEFORE			Yes
STARTSWITH	Yes		

Example

This example shows a response payload declaration for the `find` operation.

```
<element name="findSalesLeadResponse">
 <complexType>
 <sequence>
 <element maxOccurs="unbounded" minOccurs="0" name="result" type="ns1:MklLead"/>
 </sequence>
 </complexType>
</element>
```

This example finds the Sales Lead object with `LeadId` equal to **300100041938883** and returns only a subset of attributes of the object.

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:findSalesLead
xmlns:ns1="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/">
 <ns1:findCriteria xmlns:ns2="http://xmlns.oracle.com/adf/svc/types/">
 <ns2:filter>
 <ns2:group>
 <ns2:item>
 <ns2:attribute>LeadId</ns2:attribute>
 <ns2:operator>=</ns2:operator>
 <ns2:value>300100041938883</ns2:value>
 </ns2:item>
 </ns2:group>
 </ns2:filter>
 <ns2:findAttribute>Name</ns2:findAttribute>
 <ns2:findAttribute>LeadId</ns2:findAttribute>
 <ns2:findAttribute>DealAmount</ns2:findAttribute>
 </ns1:findCriteria>
 </ns1:findLocation>
 </soap:Body>
</soap:Envelope>
```

The response payload returns only the `Name`, `LeadId`, and `DealAmount` attributes of the Sales Lead object.

```
<ns0:findSalesLeadResponse xmlns=""
xmlns:env="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:ns0="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/"
xmlns:wsa="http://www.w3.org/2005/08/addressing"
xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">
 <ns2:result xmlns:ns0="http://xmlns.oracle.com/adf/svc/types/"

xmlns:ns3="http://xmlns.oracle.com/apps/crmCommon/notes/noteService"
xmlns:ns4="http://xmlns.oracle.com/oracle/apps/marketing/leadMgmt/leads/leadService/"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:type="ns4:MklLead">
 <ns4:Name>Issaquah Imaging Innovations - Tablets</ns4:Name>
 <ns4:LeadId>300100041938883</ns4:LeadId>
 <ns1:Value>
 <ns4:DealAmount currencyCode="USD"
xmlns:tns="http://xmlns.oracle.com/adf/svc/errors/">100000</ns4:DealAmount>
 </ns2:result>>
</ns0:findSalesLeadResponse><ns0:findLocationResponse xmlns=""
```

Related Operations

To retrieve all the attributes of a service data object, use the `get` operation. This operation is useful when you don't have complex query requirements.

Related Topics

find by additional predefined search criteria Operation

The `find by additional predefined search criteria` operations are similar to the `find` operation, but they also have additional predefined criteria applied to the find criteria specified by the caller.

The `find by view criteria` operations are typically exposed on the service interface for frequently performed searches. Instead of constructing complex payloads for the `find` operation, you can call these operations. The predefined criteria may refer to multiple bind variables or no bind variables. If the criteria reference a bind variable, the bind variable is exposed as a parameter in the request payload, and you can pass an appropriate value to this parameter.

For information about the predefined criteria and the bind variables exposed as parameters, see operation and parameter descriptions in Business Object Services chapter in this guide.

Examples of the `find by view` criteria operations include:

- `getLocationByOriginalSystemReference` operation defined on `LocationService`, searches for locations based on the source system where the location definition originated.
- `findExportBatchesByJobId` operation, defined on `BulkExportService`, finds batch information corresponding to a job ID.

Operation Signature

The signature for the find by additional predefined search criteria operation is similar to the `find` operation and includes additional parameters that correspond to bind variables in the view criteria.

Example

This example defines the `getLocationByOriginalSystemReference` operation on the `LocationService` object. Although the name of the operation starts with `get`, it is a `find` operation with additional predefined search criteria based on the implementation. In addition to the `findCriteria` and `findControl` parameters, the operation takes `bindOrigSystem` and `bindOrigSystemReference` parameters, which correspond to unique original system code and system reference identifiers.

```
<element name="getLocationByOriginalSystemReference">
 <complexType>
 <sequence>
 <element name="findCriteria" type="ns0:FindCriteria"/>
 <element name="bindOrigSystem" type="string"/>
 <element name="bindOrigSystemReference" type="string"/>
 <element name="findControl" type="ns0:FindControl"/>
 </sequence>
 </complexType>
</element>
```

Related Topics

update Operation

The `update` operation updates the existing rows in the top-level service data object as well as the child and descendant entities. The operation throws an exception if the rows do not exist.

If you are updating a subset of the service data object attributes, the request payload must contain:

- Primary key or alternate key: If the primary key is not known, use the `find` operation to retrieve the primary key of the relevant row.

- Values to update: In the request payload, you don't need to pass all the attribute values of the service data object.

Operation Signature

For the Sales Lead service, the following is the `updateSalesLead` operation that accepts the object to be updated.

```
<element name="updateSalesLead">
 <complexType>
 <sequence>
 <element name="salesLead" type="ns1:MklLead"/>
 </sequence>
 </complexType>
</element>
```

The response payload returns the updated object after the operation completes successfully.

```
<element name="updateSalesLeadResponse">
 <complexType>
 <sequence>
 <element name="location" type="ns1:MklLead"/>
 </sequence>
 </complexType>
</element>
```

Example

This example sets the status of the Sales Lead business object with **300100041938883** internal identifier, to **QUALIFIED**.

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:updateSalesLead
 xmlns:ns1="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/">
 <ns1:salesLead
xmlns:ns2="http://xmlns.oracle.com/oracle/apps/marketing/leadMgmt/leads/leadService/">
 <ns2:StatusCode>QUALIFIED</ns2:StatusCode>
 <ns2:LeadId>300100041938883</ns2:LeadId>
 </ns1:salesLead>
 </ns1:updateSalesLead>
 </soap:Body>
</soap:Envelope>
```

The response payload reflects the updated attribute in the Sales Lead business object.

Related Operations

To update large business objects or to update objects for which the response payload is not required, use the `process` operation. This operation allows you to specify if the response payload is empty, contains only the primary key, or contains the entire payload.

Use the `merge` operation to:

- Update existing objects
- Create new objects
- Create new child or descendant objects on an existing object

To delete a row at the appropriate service data object level, use the `delete` operation.

Related Topics

merge Operation

The `merge` operation performs an upsert, which means that the operation updates a service data object if it exists, or creates a new service data object if it doesn't exist.

The upsert behavior of the operation applies to all levels of the service data object. For example, to add a new child entity to an existing top-level entity, you must use the `merge` operation. You can't use the `create` and `update` operations defined at the top-level entity because the `create` operation creates only an entire new object, and the `update` operation updates only existing rows in an object.

Operation Signature

For the Sales Lead service, the following is the `mergeSalesLead` operation that accepts the object to be created or updated.

```
<element name="mergeSalesLead">
 <complexType>
 <sequence>
 <element name="salesLead" type="ns1:MklLead"/>
 </sequence>
 </complexType>
</element>
```

The response payload returns the newly created or updated object after the operation completes successfully.

```
<element name="mergeSalesLeadResponse">
 <complexType>
 <sequence>
 <element name="result" type="ns1:MklLead"/>
 </sequence>
 </complexType>
</element>
```

Example

This example request payload updates the status of the Sales Lead business object by changing the `StatusCode` attribute to **QUALIFIED**. The internal identifier of the object is **300100041938883**.

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:mergeSalesLead
 xmlns:ns1="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/">
 <ns1:salesLead
xmlns:ns2="http://xmlns.oracle.com/oracle/apps/marketing/leadMgmt/leads/leadService/">
 <ns2:StatusCode>QUALIFIED</ns2:StatusCode>
 <ns2:LeadId>300100041938883</ns2:LeadId>
 </ns1:salesLead>
 </ns1:mergeSalesLead>
 </soap:Body>
</soap:Envelope>
```

The response payload contains information about the updated Sales Lead object.

Related Operations

To merge large business objects or to merge objects for which the response payload is not required, use the `process` operation. This operation performs the merge and controls whether the response payload is empty, contains only the primary key, or contains the entire payload.

Depending on the scenario, use `create` and `delete` operations instead of the `merge` operation.

Related Topics

process Operation

The `process` operation performs create, update, delete, or merge operation on a list of business objects of the same type specified in a request payload.

This operation is typically used for bulk processing and can perform the same operation on all the business objects. It can't perform a create operation for one object and delete operation on another object in the same call. The `processControl` parameter controls the following behavior of the operation:

- Level of detail in the response payload: Controls whether the response payload returns an empty payload, a payload of primary keys, or a payload with the complete definitions of the service data object. Use the first two options to improve performance. The first option eliminates the fetch, and both options reduce the size of the response payload.
- Level of detail in the error message: Controls whether the error message contains no information, only the primary key, or all the attributes of the service data object that failed. The first option doesn't provide any information about the object.
- Partial failure control: Controls how the changes to the list of service data objects are committed. Suppose the partial failure feature is enabled for a service and a request utilizes this feature. If an error occurs for a specific object, the operation skips this object and continues processing the other objects. After the processing is complete, objects with successful changes are committed and objects with errors are not. If a processing error affects all the objects, then none of the objects are committed.

  > **Note:** If you define any transaction-level validations during the design phase, then at run time these validations override any partial failure control feature defined at the entity-level. This means that if the transaction-level validation fails at runtime, even if the partial failure control is enabled, none of the service data objects in the transaction are committed.

Operation Signature

For the Sales Lead Service, the signature of the `processSalesLead` operation consists of:

- Name of the operation to be performed on the business objects in the request payload. The `changeOperation` parameter holds this name, and valid values are `Create`, `Update`, `Merge`, and `Delete`. This value is case sensitive.
- List of business objects on which to perform the operation specified in the `changeOperation` parameter.
- Parameters to control the details of response payload and error messages. Set the `returnMode` and `exceptionReturnMode` elements to `Full` to return the entire object, `Key` to return only the primary key, or `None` to return no information.
- Parameter for partial failure mode. Set this parameter to `true` to enable partial failure mode. The default value is `false`.

The request payload has the following signature. For the definition of `ProcessControl` type, see *Sample BC4JService.xsd*.

```
<element name="processSalesLead">
 <complexType>
 <sequence>
 <element name="changeOperation" type="string"/>
 <element maxOccurs="unbounded" minOccurs="0" name="salesLead" type="ns1:MklLead"/>
 <element name="processControl" type="ns2:ProcessControl"/>
 </sequence>
 </complexType>
</element>
```

The response payload returns values based on the `ProcessControl` settings after the operation completes successfully.

```
<element name="processSalesLeadResponse">
 <complexType>
 <sequence>
 <element maxOccurs="unbounded" minOccurs="0" name="result" type="ns1:MklLead"/>
 </sequence>
 </complexType>
</element>
```

Example

This example creates two new Sales Lead objects for **Sammamish Technologies** and **Snoqualmie Software** with deal amounts set to **$1,500,000 USD** and **$450,000 USD** respectively.

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:processSalesLead
xmlns:ns1="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/">
 <ns1:changeOperation>Create</ns1:changeOperation>
 <ns1:salesLead
xmlns:ns2="http://xmlns.oracle.com/oracle/apps/marketing/leadMgmt/leads/leadService/">
 <ns2:Name>Sammamish Technoloiges</ns2:Name>
 <ns2:DealAmount currencyCode="USD">1500000</ns2:DealAmount>
 </ns1:salesLead>
 <ns1:salesLead
 <ns2:Name>Snoqualmie Software</ns2:Name>
 <ns2:DealAmount currencyCode="USD">450000</ns2:DealAmount>
 </ns1:salesLead>
 <ns1:processControl xmlns:ns2="http://xmlns.oracle.com/adf/svc/types/">
 <ns2:returnMode>Key</ns2:returnMode>
 <ns2:exceptionReturnMode>Key</ns2:exceptionReturnMode>
 <ns2:partialFailureAllowed>false</ns2:partialFailureAllowed>
 </ns1:processControl>
 </ns1:processSalesLead>
 </soap:Body>
</soap:Envelope>
```

The response payload contains only the primary keys of the newly created Sales Lead objects.

```
<ns0:processSalesLeadResponse xmlns="" xmlns:env="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:ns0="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/"
xmlns:wsa="http://www.w3.org/2005/08/addressing"
xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">
 <ns2:result xmlns:ns0="http://xmlns.oracle.com/adf/svc/types/"
xmlns:ns1="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/"
xmlns:ns2="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/"
xmlns:ns3="http://xmlns.oracle.com/apps/crmCommon/notes/noteService"
xmlns:ns4="http://xmlns.oracle.com/oracle/apps/marketing/leadMgmt/leads/leadService/"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:type="ns4:MklLead">
 <ns4:LeadId>300100055477603</ns4:LeadId>
 </ns2:result>
 <ns2:result xmlns:ns0="http://xmlns.oracle.com/adf/svc/types/"
xmlns:ns1="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/"
xmlns:ns2="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/"
xmlns:ns3="http://xmlns.oracle.com/apps/crmCommon/notes/noteService"
xmlns:ns4="http://xmlns.oracle.com/oracle/apps/marketing/leadMgmt/leads/leadService/"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:type="ns4:MklLead">
 <ns4:LeadId>300100055477605</ns4:LeadId>
 </ns2:result>
</ns0:processSalesLeadResponse>
```

This example shows a response payload when the `ReturnMode` of the `ProcessSalesLead` parameter is set to `None`.

```
<ns0:processSalesLeadResponse xmlns="" xmlns:env="http://schemas.xmlsoap.org/soap/envelope/"
```

```
xmlns:ns0="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/"
xmlns:wsa="http://www.w3.org/2005/08/addressing"
xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">
 <ns2:result xmlns:ns0="http://xmlns.oracle.com/adf/svc/types/"
xmlns:ns1="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/"
xmlns:ns2="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/"
xmlns:ns3="http://xmlns.oracle.com/apps/crmCommon/notes/noteService"
xmlns:ns4="http://xmlns.oracle.com/oracle/apps/marketing/leadMgmt/leads/leadService/"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:type="ns4:MklLead"/>
 <ns2:result xmlns:ns0="http://xmlns.oracle.com/adf/svc/types/"
xmlns:ns1="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/"
xmlns:ns2="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/"
xmlns:ns3="http://xmlns.oracle.com/apps/crmCommon/notes/noteService"
xmlns:ns4="http://xmlns.oracle.com/oracle/apps/marketing/leadMgmt/leads/leadService/"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:type="ns4:MklLead"/>
</ns0:processSalesLeadResponse>
```

Related Operations

To perform different operations on different objects in a request payload, use the `processCs` operation.

To control the values in the payload for performance optimizations, use the `process` operation instead of `create`, `update`, `merge`, and `delete` operations on individual business objects.

Related Topics

Standard Metadata Operations

A business object service may be exposed to standard metadata operations.

This table lists basic information about the standard metadata operations.

Operation	Description
getServiceLastUpdateTime	Returns the date and time when the service was last updated.
getEntityList	Returns the list of service data objects defined on the service interface.
getDfltObjAttrHints	Returns the UI hints for a given service data object and its attributes.

Related Topics

getServiceLastUpdateTime Operation

This operation returns the date and time of the last update to a service WSDL, service XSD, or business object XSDs. The format of the last update time is ISO 8601.

Schema updates occur, whether there is an actual change in the WSDL or XSD, when you:

- Perform customizations at run time using Application Composer and flexfields
- Redeploy an enterprise application as part of an upgrade to a major release or a patch bundle

This operation may be useful if you generate service factory or JAX-WS proxy clients and want to determine whether to regenerate the client because of a change in the service interface.

Operation Signature

The following is the signature of the `getServiceLastUpdateTime` operation, which doesn't accept any parameters.

```
<element name="getServiceLastUpdateTime">
 <complexType>
 <sequence/>
 </complexType>
</element>
```

The response payload contains the last update time. For the definition of `dateTime-Timestamp` type, see *Sample BC4JService.xsd*.

```
<element name="getServiceLastUpdateTimeResponse">
 <complexType>
 <sequence>
 <element name="result" type="ns0:dateTime-Timestamp"/>
 </sequence>
 </complexType>
</element>
```

Example

This request payload determines when the Sales Lead service definition was last updated.

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:getServiceLastUpdateTime
 xmlns:ns1="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/
 types/"></ns1:getServiceLastUpdateTime>
 </soap:Body>
</soap:Envelope>
```

The response payload returns February 19, 2015 at 12:35:35 AM PT as the time the Sales Lead service was last updated.

```
<ns0:getServiceLastUpdateTimeResponse xmlns=""
xmlns:env="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:ns0="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/"
xmlns:wsa="http://www.w3.org/2005/08/addressing"
xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">
 <result xmlns="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/
 ">2015-02-19T00:35:35.101-08:00</result>
</ns0:getServiceLastUpdateTimeResponse>
```

Related Topics

getEntityList Operation

This operation retrieves the list of service data objects defined on a business object service.

If the business object service implements a generic service interface, this operation retrieves information about custom objects defined in the Application Composer. For example, invoking the `getEntityList` operation on the Sales Custom Business Object service returns the custom objects defined in the Sales application in the Application Composer. Other business object services which implement a generic service interface include Custom Common Business Object, Customer Custom Business Object, Marketing Custom Business Object, Sales Custom Business Object, Sales Lead Custom Business Object, and Sales Territory Custom Business Object.

For each service data object, the response payload includes:

- QName: A fully qualified name of the corresponding XML Schema complex type representing the service data object.

- Service view usage name for the service data object: An internal value in the application module that defines the service. This value can be passed as a parameter to the `getDfltObjAttrHints` operation to get UI hints for attributes in the service data object.
- Object name for custom objects defined in Application Composer: This information is returned only when the operation is invoked on a business object service that implements a generic service interface.
- Boolean values: These values indicate whether `create`, `update`, `merge`, and `delete` operations can be performed directly on the service data object. The default value is `false`.

Operation Signature

The following is the signature of the `getEntityList` operation, which doesn't accept any input parameters.

```
<element name="getEntityList">
 <complexType>
 <sequence/>
 </complexType>
</element>
```

The response payload contains information about the service data objects in this service definition. For the definition of `ServiceViewInfo`, see *Sample BC4JService.xsd*.

```
<element name="getEntityListResponse">
 <complexType>
 <sequence>
 <element maxOccurs="unbounded" minOccurs="0"
 name="result" type="ns2:ServiceViewInfo"/>
 </sequence>
 </complexType>
</element>
```

Example

This example shows a request payload for the `getEntityList` operation defined on the Sales Lead service.

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:getEntityList
xmlns:ns1="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/
types/"></ns1:getEntityList>
 </soap:Body>
</soap:Envelope>
```

The sample response payload contains information for all the service data objects referenced in the Sales Lead service. For a given result, the `typeName` can be mapped to a service data object. If `canCreate`, `canUpdate`, `canMerge` or `canDelete` is set to **true**, the corresponding standard CRUD operation is exposed on the service interface of the service data object. This example shows only the first two elements of the response payload.

```
<ns0:getEntityListResponse xmlns=""
xmlns:env="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:ns0="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/"
xmlns:wsa="http://www.w3.org/2005/08/addressing"
xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">
 <ns1:result xmlns:ns0="http://xmlns.oracle.com/adf/svc/types/"
xmlns:ns1="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/"
xmlns:tns="http://xmlns.oracle.com/adf/svc/errors/"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:type="ns0:ServiceViewInfo">
 ...
 <ns1:result xmlns:ns0="http://xmlns.oracle.com/adf/svc/types/"
xmlns:ns1="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/"
xmlns:tns="http://xmlns.oracle.com/adf/svc/errors/"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:type="ns0:ServiceViewInfo">
 <ns0:name>SalesLead</ns0:name>
```

```
 <ns0:typeName>{http://xmlns.oracle.com/oracle/apps/marketing/leadMgmt/leads/
 leadService/}MklLead</ns0:typeName>
 <ns0:canCreate>true</ns0:canCreate>
 <ns0:canUpdate>true</ns0:canUpdate>
 <ns0:canMerge>true</ns0:canMerge>
 <ns0:canDelete>true</ns0:canDelete>
 </ns1:result>
 <ns1:result xmlns:ns0="http://xmlns.oracle.com/adf/svc/types/"
xmlns:ns1="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/"
xmlns:tns="http://xmlns.oracle.com/adf/svc/errors/"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:type="ns0:ServiceViewInfo">
 <ns0:name>SalesLeadContact</ns0:name>
 <ns0:typeName>{http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/
 leadService/}MklLeadTcMembers</ns0:typeName>
 <ns0:canCreate>true</ns0:canCreate>
 <ns0:canUpdate>true</ns0:canUpdate>
 <ns0:canDelete>true</ns0:canDelete>
 </ns1:result>
</ns0:getEntityListResponse>
```

Related Operations

To get UI hints for the service data objects in a service definition, pass the name element in the `getEntityList` response payload to the `getDfltObjAttrHints` request payload.

Related Topics

getDfltObjAttrHints Operation

This operation returns the labels for the service data objects and the label and UI hints for a given locale for the business object attributes, which are part of the service definition.

This table lists information about the return values of the `getDfltObjAttrHints` operation.

Level	Key	Value
Service data object	LABEL	Name of object (singular)
Service data object	LABEL_PLURAL	Name of object (plural)
Service data object attribute	LABEL_ResId	Expression to retrieve the key from the resource bundle

You must pass the internal names of the service data objects as parameters. To retrieve these internal names, invoke the `getEntityList` operation defined on this service.

Operation Signature

The `getDfltObjAttrHints` operation accepts two parameters:

- `viewName`: Corresponds to the service view usage name, which is an internal name for the service data object. Specify the value of the `<name>` element from the `getEntityList` response payload.
- `localeName`: Evaluates locale-based UI hints. The format of this value is ISO 639-1.

The following is the signature of the `getDfltObjAttrHints` operation:

```
<element name="getDfltObjAttrHints">
 <complexType>
 <sequence>
 <element name="viewName" type="string"/>
 <element name="localeName" type="string"/>
```

```
 </sequence>
 </complexType>
</element>
```

The response payload contains the label and UI hints for the object and the object attributes in a name-value pair format. For the definition of `ObjAttrHints` type, see *Sample BC4JService.xsd*.

```
<element name="getDfltObjAttrHintsResponse">
 <complexType>
 <sequence>
 <element name="result" type="ns0:ObjAttrHints"/>
 </sequence>
 </complexType>
</element>
```

Example

This example shows a request payload that specifies the usage name and `en` locale of the Sales Lead object, and requests for the label and UI hints.

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:getDfltObjAttrHints
xmlns:ns1="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/">
 <ns1:viewName>SalesLead</ns1:viewName>
 <ns1:localeName>en</ns1:localeName>
 </ns1:getDfltObjAttrHints>
 </soap:Body>
</soap:Envelope>
```

The response payload contains information about the service data object attribute. The example payload shows only the object entity level and three of the attribute level hints.

```
<ns0:getDfltObjAttrHintsResponse xmlns="" xmlns:env="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:ns0="http://xmlns.oracle.com/apps/marketing/leadMgmt/leads/leadService/types/"
xmlns:wsa="http://www.w3.org/2005/08/addressing"

<ns0:value>LEAD_TIMELINE</ns0:value>
</ns0:ctrlHint>
</ns0:attrHints>
...
</ns1:result>
</ns0:getDfltObjAttrHintsResponse>
```

Related Operations

To get the list of entities and their names, use the `getEntityList` operation and then pass the name as a request parameter to the `getDfltObjAttrHints` operation.

Related Topics

Custom Operations

In addition to the standard CRUD operations, a business object service may be exposed to custom operations that are specific to the service and map to a related business operation. For more information about the descriptions of the operation and payload elements, see Business Object Services chapter in this guide.

Examples of custom operations include:

- The `ConvertLeadToOpportunity` operation converts a lead to an opportunity. This operation:
  - Is defined on the Sales Lead service
  - Accepts the internal identifier of a Sales Lead object
  - Returns the opportunity ID, which is a string value

  > **Note:** If the lead ID is null, the operation returns null. If an error occurs, the operation returns an error message.

- The `ConvertToPartner` operation converts an organization to a partner. This operation:
  - Is defined on the Partner service
  - Accepts the internal identifier of a party organization object
  - Returns the newly converted partner object
- The `renewProgramEnrollment` operation renews an existing program enrollment. This operation:
  - Is defined on the Partner Program Enrollment service
  - Accepts the internal identifier of an enrollment
  - Returns the internal identifier of the renewed enrollment

5 Resources for Discovering Web Services

Overview

To discover the public external SOAP web services in Oracle Applications Cloud, you can use the SOAP Web Services guides for the appropriate Oracle Applications Cloud service, Developer Connect, or the Service Catalog Service. Information includes public external services for a specific cloud instance and new services that are introduced in patches and customizations.

- SOAP Web Services guide: You can find these guides on the **Books** page for the cloud service at *Oracle Help Center*. This document is one of the SOAP Web Services guide.
- Developer Connect:
  - Provisioned on the cloud instance
  - Provides a user interface
  - Allows developers to discover the web services on a specific cloud instance
  - Applicable for business object services only
- Service Catalog Service:
  - Provisioned on the cloud instance
  - Provides an Application Programming Interface (API) to discover the web services programmatically
  - Applicable for business object services only

Related Topics

Web Services in This Guide

This SOAP web services guide provides details about the business object services, service data objects, and process services.

Business Object Services Information

This table lists the information provided for the business object services in the Business Object Services chapter within this guide.

Information	Description
Description	Provides an overview of the service and may contain details about service usage and related services.
Life Cycle Status	Indicates whether the service is active or deprecated. The status is never indicated as obsolete because obsolete services are not shipped or documented. See *Web Service Life Cycle*.
QName	Holds a unique identifier for the service.

Information	Description
Service WSDL URL	Contains the tokenized URL for the concrete service WSDL from your cloud instance. For example, **`https://(FADomain,CRMServices)/crmService/OpportunityService?WSDL`**.
Logical Business Objects	Contains the business object that the service defines. The service data object may define the business object itself or only a part of it. The logical business objects are grouped into related objects that are in turn grouped into higher-level related objects. For example, **`CRM : Opportunity Management : Opportunity`**. The service operates on the Opportunity object, which is grouped into a related set of objects called Opportunity Management, which in turn is grouped into a larger set of related objects called CRM. Some assets may have a separate entry for the higher-level grouping, which can be ignored because they are redundant. For example, **`CRM`** **`CRM:Marketing`** **`CRM:Marketing:Marketing Campaign`**
Relationships	Describes how the service is related to service data objects and other business object services. The relationship type and their relationship target object type include: • **`Handles`** a service data object. All the service data objects referenced by the service are included. • **`Next version is`** a business object service. This service is superseded by the service described in the relationship target. For example, the next version of the Marketing Budget Service is Marketing Budget Service Version 2. • **`Previous service is`** a business object service. This service supersedes another service. For example, the previous version of the Sales Lead Service Version 2 is Sales Lead Service. To derive the hierarchy of the service data objects, refer to the corresponding service and traverse the **`Contains`** relationship type defined on the entity. See *Service Data Objects Information*.
Operations	Contains information about the operations exposed in the service interface on the business object. Information includes the name of the operation, a brief description, life cycle status, and the name, type, and description of elements in request and response payloads.
Security	Includes information about the privileges, also known as entitlements, required to perform the service operations. It also provides the mapping of duty roles to the privileges that are granted to them. **Note:** You might get an access denied exception when trying to perform a SOAP call. This happens when there is a change in the roles and privileges. To ensure that the latest roles are available before performing a SOAP call, you must run the ESS job Import User and Role Application Security Data.

Service Data Objects Information

This table lists the information provided for the service data objects in the Service Data Objects chapter within this guide.

Information	Description
Description	Provides an overview of the service data object.
QName	Holds a unique identifier for the service data object.
Logical Business Objects	Contains the business object that the service data object defines. The service data object may define the functional business object itself or only a part of it. The logical business objects are grouped into related objects that are in turn grouped into higher-level related objects.
Relationships	Describes how the service data object is related to other service data objects and business object services. The list of relationship types and their relationship target object type include: • **`Contained by`** a service data object. This relationship is the reverse of the **`Contains`** type. • **`Contains`** a service data object. This service data object includes a direct reference to the service data object described in the relationship target. The entity has an attribute which has a type based on the service data object in the relationship target. For example, the Opportunity entity contains the Opportunity Contact. • **`Extended by`** a service data object. This relationship is the reverse of the **`Extends`** type. • **`Extends`** a service data object. This service data object is a subclass of the entity defined in the relationship target. For example, Expertise extends Partner Generic List of Values by adding two additional attributes, namely Expertise Code and Expertise Name. • **`Handled by`** a business object service. This relationship is the reverse of the **`Handles`** type. See *Business Object Services Information*.
Attributes	Provides the name, type, and description of the attributes that define the service data object. The attribute type is represented as a Java class. See *Complex Data Types Defined by Application Development Framework*.

Process Services Information

This table lists the information provided for the process services in the Process Services chapter within this guide.

Information	Description
Description	Provides an overview of the process service.
Life Cycle Status	Indicates whether the service is **`Active`** or **`Deprecated`**. The status is never indicated as **`Obsolete`** because obsolete services are not shipped or documented. See *Web Service Life Cycle*.
Previous version	Specifies the process service that was superseded by this service. This is applicable only if the service supersedes another service.
Next Version	Specifies the process service that supersedes this service. This is applicable only if the service is superseded by another service.
Logical Business Objects	Contains the business object that the service defines. The logical process objects are grouped into related objects that are in turn grouped into higher-level related objects.
Operations	Contains information about the operations exposed on the business object. Information includes the name of the operation, a brief description, callback operation name, and service type. It also includes description and type for the input and output payloads.

Related Topics

Developer Connect Portal

Use the Developer Connect portal to discover business object services, to look up service endpoints, and to view service data object metadata and customizations.

This portal runs on your cloud instance, and contains information about the specific set of services deployed to your cloud instance. It reflects the current service interface, and includes patches and service data object customizations, if any.

To use the Developer Connect portal, your job role must have the `FND_INTEGRATION_SPECIALIST_JOB`, `FND_APPLICATION_DEVELOPER_JOB`, or `ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB` privilege. Alternately, you can grant the `ATK_WEB_SERVICE_INFO_ACCESS_PRIV` entitlement to your custom role, and then grant the custom role to users who require access. For more information, see the security guide for the appropriate cloud service at *Oracle Help Center*.

To open the Developer Connect portal, from the **Navigator** menu, select **Tools** - **Developer Connect**. To synchronize the service information in the Developer Connect portal, click **Synchronize** and all the web services deployed to your cloud instance are listed. Information includes summary of the service, operations defined in the service interface, hierarchy of the service data objects, and privileges required to perform the service operations.

> **Note:** From Release 13 onwards, the context root values in the URL paths are changed. Ensure that you have synchronized the Developer Connect portal since Release 13 so that the service information is displayed correctly.

Summary

This table lists the information provided in the **Summary** panel of the Developer Connect portal.

Field	Description
Name	Display name of the service.
Business Object	Business object that the service defines. For example, Opportunity, Partner, and Sales Revenue.
Life Cycle	Status of the service. Valid values are `Active` or `Deprecated`. See *Web Service Life Cycle*. If the life cycle status is deprecated, the service that supersedes this deprecated service is displayed.
QName	Fully qualified name of the service.
End Point URL	Endpoint URL for the service deployed on your Oracle cloud instance.
WSDL File	Concrete WSDL for the service deployed on your Oracle cloud instance.
Security Policy	Oracle Web Services Manager (OWSM) policy used for the service on the server side.
Description	Brief overview of the service.

Operations

This table lists the information provided in the **Operations** panel of the Developer Connect portal.

Field	Description
Name	Name of the operation. Although business object services support both synchronous and asynchronous message patterns for each operation, only the synchronous operation is displayed in this panel. To view the name, data types, and description of the request and response payload elements, click the operation name.
Life Cycle	Status of this operation. Valid values are `Active` or `Deprecated`.
Description	Brief overview of the operation.

Service Data Object

This table lists the information provided in the **Service Data Object** panel of the Developer Connect portal.

Field	Description
Service Data Objects	Display name of the service data object. The object hierarchy is displayed in a tree structure.
QName	Fully qualified name of the service data object.
State	Valid values are: • `Standard`: Object defined by Oracle Applications • `New`: Custom object defined by the user
Description	Brief overview of the services data object.
Attributes	List of attributes that define the service data object. Information includes name, data type, state, required, and description.

Security

The **Security** panel of the Developer Connect portal displays the list service operations, the privileges required to perform each operation, and display name and description of the privilege.

Sample Payloads

The **Sample Payloads** panel of the Developer Connect portal displays the payloads seeded by Oracle Applications or users. You cannot modify or delete payloads seeded by Oracle Applications. Information in the panel includes the operation name, link to download XML format of the sample payload, and a brief description of the sample payload.

Related Topics

Service Catalog Service

To get the endpoint and metadata for public external services, use the Service Catalog Service provisioned on your cloud instance. This service returns information specific to the cloud instance and the new services introduced in the

patches applied to the instance. You can use this service to programmatically discover and retrieve the required data to invoke the SOAP web services.

The tokenized WSDL for the Service Catalog Service is:

```
https://(FADomain,FSCMServices)/fscmService/ServiceCatalogService?WSDL
```

For instructions on how to derive the concrete URL for the service, see *Deriving Business Object Service Endpoint and WSDL*.

To secure the service, use the `oracle/wss11_saml_or_username_token_with_message_protection_service_policy` security policy. Any authenticated user can invoke this service, which exposes two synchronous operations:

- *`getAllServiceEndpoints`*
- *`getServiceEndpoint`*

Related Topics

getAllServiceEndpoints Operation

This operation returns information about all the public external services on your cloud instance.

> **Note:** The only two public external services for which the `getAllServiceEndpoints` operation doesn't return information are public external composite services and public external Fusion Middleware services, such as the Service Catalog Service.

For each public external service, the information includes:

- `QName`: A name that uniquely identifies the service. For example, the QName for the Opportunity service is `{http://xmlns.oracle.com/apps/sales/opptyMgmt/opportunities/opportunityService/}OpportunityService`
- Logical Business Object: The business object that the service implements. If the service doesn't operate on a business object, then this is null. For example, the logical business object for the Opportunity service is `CRM-CRM : MOO-Opportunity Management : MOO_OPPORTUNITY-Opportunity`. The value in this field represents a hierarchy of the logical business objects, where the most general object is to the left and the most specific is to the right. Each node in the hierarchy is separated by a colon. In the example, `Opportunity` is the most specific business object and is grouped in the `Opportunity Management` object, which in turn is grouped in the `CRM` business object. Each node in the hierarchy is represented by two strings separated by a dash (-). The string to the left of the dash is an internal string and the string to the right is a user-friendly string.
- Life cycle: See *Web Service Life Cycle*.
- Service WSDL URL: The concrete WSDL URL for the service. For example, the URL for the Opportunity service is `https://crm-your-cloud-hostname:port/opptyMgmtOpportunities/OpportunityService?WSDL`.
- Service XSD URL: The URL to the service XSD that contains the service operation payload types. See *Service XSD*. For example, the URL for the Opportunity service is `https://crm-your-cloud-hostname:port/opptyMgmtOpportunities/OpportunityService? XSD=/oracle/apps/sales/opptyMgmt/opportunities/opportunityService/OpportunityService.xsd`.

For more information about the service, refer to the `<wsdl:documentation>` tag in the WSDL and XSD.

Operation Signature

The following is the request payload of the `getAllServiceEndPoints` operation:

```
<element name="getAllServiceEndPoints">
 <complexType>
```

```
 <sequence/>
 </complexType>
</element>
```

The following is the response payload of the `getAllServiceEndPoints` operation:

```
<element name="getAllServiceEndPointsResponse">
 <complexType>
 <sequence>
 <element name="result" type="ns1:CatalogService" minOccurs="0
 maxOccurs="unbounded" />
 </sequence>
 </complexType>
</element>
```

Example

This example shows an empty request payload for the `getAllServiceEndpoints` operation.

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:getAllServiceEndPoints
 xmlns:ns1="http://xmlns.oracle.com/oracle/apps/fnd/applcore/
 webservices/types/">
 </ns1:getAllServiceEndPoints>
 </soap:Body>
</soap:Envelope>
```

The response payload contains the service information for all the public external services on the cloud instance. This example shows only the first two result elements of the response.

```
<env:Envelope xmlns:env="http://schemas.xmlsoap.org/soap/envelope/">
 <env:Header/>
 <env:Body>
 <ns0:getAllServiceEndPointsResponse
 xmlns:ns0="http://xmlns.oracle.com/oracle/apps/fnd/applcore/webservices/types/">
 <ns0:result xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
 xsi:type="ns0:CatalogService">
 <ns0:qName>{http://xmlns.oracle.com/apps/crmCommon/activities/}
 activitiesService/ActivityTaskService</ns0:qName>
 <ns0:lbo xsi:nil="true"/>
 <ns0:lifecycle>Deprecated</ns0:lifecycle>
 <ns0:xsdLocation>https://crm-your-cloud-hostname:port/appCmmnCompActivities/
 ActivityTaskService?XSD=/oracle/apps/crmCommon/activities/
 activitiesService/ActivityTaskService.xsd</ns0:xsdLocation>
 <ns0:wsdlAddress>https://crm-your-cloud-hostname:port/appCmmnCompActivities/
 ActivityTaskService?WSDL</ns0:wsdlAddress>
 </ns0:result>
 <ns0:result xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
 xsi:type="ns0:CatalogService">
 <ns0:qName>{http://xmlns.oracle.com/apps/crmCommon/
 bulkExport/bulkExportServiceV2/}BulkExportService</ns0:qName>
 <ns0:lbo xsi:nil="true"/>
 <ns0:lifecycle>Active</ns0:lifecycle>
 <ns0:xsdLocation>https://crm-your-cloud-hostname:port/crmCommonBulkExport/
 BulkExportService?XSD=/oracle/apps/crmCommon/bulkExport/
 bulkExportServiceV2/BulkExportService.xsd</ns0:xsdLocation>
 <ns0:wsdlAddress>https://crm-your-cloud-hostname:port/
 crmCommonBulkExport/BulkExportService?WSDL</ns0:wsdlAddress>
 </ns0:result>
 ...
 </ns0:getAllServiceEndPointsResponse>
 </env:Body>
</env:Envelope>
```

Related Topics

getServiceEndpoint Operation

This operation returns the endpoint and metadata for a specific public external service.

Operation Signature

The following is the request payload of the `getServiceEndpoint` operation:

```
<element name="getServiceEndPoint">
 <complexType>
 <sequence>
 <element name="qname" type="string"/>
 </sequence>
 </complexType>
</element>
```

The following is the response payload of the `getServiceEndpoint` operation:

```
<element name="getServiceEndPointResponse">
 <complexType>
 <sequence>
 <element name="result" type="ns1:CatalogService"/>
 </sequence>
 </complexType>
</element>
```

Example

This request payload provides the `QName` of the Opportunity Service and requests for the endpoint and metadata.

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:getServiceEndPoint
 xmlns:ns1="http://xmlns.oracle.com/oracle/apps/fnd/applcore/
 webservices/types/">
 <ns1:qname>{http://xmlns.oracle.com/apps/sales/opptyMgmt/
 opportunities/opportunityService/}OpportunityService</ns1:qname>
 </ns1:getServiceEndPoint>
 </soap:Body>
</soap:Envelope>
```

The response contains the endpoint and metadata for the Opportunity service provisioned on the cloud instance, which runs the Service Catalog Service.

```
<env:Envelope xmlns:env="http://schemas.xmlsoap.org/soap/envelope/">
 <env:Header/>
 <env:Body>
 <ns0:getServiceEndPointResponse
 xmlns:ns0="http://xmlns.oracle.com/oracle/apps/fnd/applcore/
 webservices/types/">
 <ns1:result
 xmlns:ns1="http://xmlns.oracle.com/oracle/apps/fnd/applcore/
 webservices/types/"
 xmlns:ns0="http://xmlns.oracle.com/oracle/apps/fnd/applcore/webservices/"
 xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
 xsi:type="ns0:CatalogService">
 <ns0:qName>{http://xmlns.oracle.com/apps/sales/opptyMgmt/opportunities/
 opportunityService/}OpportunityService</ns0:qName>
 <ns0:lbo>CRM-CRM : MOO-Opportunity Management : MOO_OPPORTUNITY-Opportunity
 </ns0:lbo>
 <ns0:lifecycle>Active</ns0:lifecycle>
```

```
<ns0:xsdLocation>https://crm-your-cloud-hostname:port/opptyMgmtOpportunities/
OpportunityService?XSD=/oracle/apps/sales/opptyMgmt/opportunities/
opportunityService/OpportunityService.xsd</ns0:xsdLocation>
<ns0:wsdlAddress>https://crm-your-cloud-hostname:port/
opptyMgmtOpportunities/OpportunityService?WSDL</ns0:wsdlAddress>
</ns1:result>
</ns0:getServiceEndPointResponse>
</env:Body>
</env:Envelope>
```

Related Topics

Derive Business Object Service Endpoint and WSDL

To derive the external virtual host and port for a tokenized service WSDL, use the **Review Topology** page in the **Setup and Maintenance** work area. This page contains information about the domains and applications that are deployed on your cloud instance.

To access the **Review Topology** page, your job role must have the `ASM_REVIEW_TOPOLOGY_HIERARCHY_PRIV` entitlement. This entitlement is granted to the `ASM_APPLICATION_DEPLOYER_DUTY` duty role, which is inherited by the `ASM_APPLICATION_DEVELOPER_DUTY` and `ASM_APPLICATION_ADMIN_DUTY` duty roles. If your user account doesn't have the required role, you can't access the topology information. Contact your security administrator for assistance.

Example

Using the Service Catalog Service, this example explains how to derive the concrete service WSDL URL from the following tokenized URL:

```
https://(FADomain,FSCMServices)/fscmService/ServiceCatalogService?WSDL
```

1. In the **Setup and Maintenance** work area, click the Tasks panel tab, and select **Review Topology**

   .
2. On the Review Topology page, select the **Detailed** tab.
3. In the **Name** column, expand the **FADomain** node, and then expand the **FSCMServices** subnode. Use the following as example values:
   - The virtual host value is `fs-your-cloud-hostname`.
   - The port value is `443`.
4. Replace the values in parenthesis in the tokenized URL with the identified external virtual host and port values:
   `https://fs-your-cloud-hostname:443/fscmService/ServiceCatalogService?wsdl`
5. Remove `?wsdl` from the URL to derive the Service Catalog Service end point URL. Navigating to this URL in a browser results in a blank page as the service tester page is disabled.

Related Topics

6 Business Object Service Advanced Examples

Standard CRUD Operations Additional Configuration

The standard CRUD operations defined on business object services can be configured to:

- Return warning messages along with the service data objects
- Process nil and non-nil values for the service data object attribute in the request payload element
- Search on parent and child objects based on complex search criteria

Related Topics

Services Warnings

If you enable service warnings on a service, the response payload returns the warning messages generated during operation execution along with the service data object. The data type of the element in the response payload extends the service data object and captures the warning messages.

For example, suppose service warnings are enabled on Location Service. The `create` operation accepts the Location business object to be defined and returns the newly created object along with the service warnings generated during the operation. The `LocationResult` data type acts as a wrapper that allows the result to store both location type and warning messages.

```
<element name="createLocation">
 <complexType>
 <sequence>
 <element name="location" type="ns1:Location"/>
 </sequence>
 </complexType>
</element>

element name="createLocationResponse">
 <complexType>
 <sequence>
 <element name="result" type="ns1:LocationResult"/>
 </sequence>
 </complexType>
</element>
```

The `LocationResult` data type extends the `MethodResult` type. For the definition of the `MethodResult` type, see *Sample BC4JService.xsd*. The `maxOccurs` parameter is set to `unbounded` instead of to `1` because the same data type is used for the `find` and `process` operations, which return multiple objects.

```
<xsd:complexType name="LocationResult">
 <xsd:complexContent>
 <xsd:extension base="ns0:MethodResult">
 <xsd:sequence>
 <xsd:element name="Value" type="Location" minOccurs="0"
 maxOccurs="unbounded"/>
 </xsd:sequence>
 </xsd:extension>
 </xsd:complexContent>
```

```
</xsd:complexType>
```

If you don't enable service warnings on a service, the response payload returns the business object service itself. For example, the `createSalesLead` operation defined on the Sales Lead service has a request and response payload that accepts and returns the Sales Lead object, which is of `MklLead` type.

The following example request payload is for the `createLocation` operation that is defined on `http://xmlns.oracle.com/apps/cdm/foundation/parties/locationService/applicationModule/}LocationService`. This XML fragment creates `1 Oracle Parkway, Redwood Shores, CA 94065, US` location object by using the `AMS` module. This module is registered as a lookup code for the `HZ_CREATED_BY_MODULES` lookup type. See *Using Lookups*.

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:createLocation
 xmlns:ns1="http://xmlns.oracle.com/apps/cdm/foundation/parties/

Behavior of Service Data Object Attribute in Request Payload

This table lists the service data object attribute values in the request payload and describes how **create** and **update** operations process these values.

Request Payload Element	Behavior In create Operation	Behavior In update Operation
The service data object attribute is not included in the request payload. This is the absent element case.	If a default value is defined, the new row is set to this value.	The attribute value for the service data object is not updated.

Request Payload Element	Behavior In create Operation	Behavior In update Operation
The service data object attribute is included in the payload and has an empty element. For example, `<attributeName/>` and `<attributeName></attributeName>`.	If the attribute is nillable, the value is set to nil. Otherwise it is an invalid input.	If the attribute is nillable, the value is not updated. Otherwise it is an invalid input.
The service data object attribute value is included in the payload and has a nil value. For example, `<attributeName xsi:nil="true">`.	If the attribute is nillable, the value is set to nil. Otherwise it is an invalid input.	If the attribute is nillable, the value is updated to nil. Otherwise it is an invalid input.
The service data object attribute is included in the payload. It is not an empty element and contains a non-nil value.	The service data object attribute is set to the specified value.	The service data object attribute is updated to the specified value.

Examples of Using find Operation

Use the various parameters of the find request payload to specify complex search criteria and retrieve attributes from parent and child objects.

Return a Subset of Attributes in the Child Service Data Object

To include the entire `LocationProfile` child object in the response, add a new `findAttribute` element containing `LocationProfile` as the value in the request payload. This example selects the location for which the internal identifier is set to **958**. The response returns `City`, `State`, `Province`, `Country`, `LocationId`, and all the attributes in the `LocationProfile` child object.

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:findLocation
 xmlns:ns1="http://xmlns.oracle.com/apps/cdm/foundation/parties/
 locationService/applicationModule/types/">
 <ns1:findCriteria xmlns:ns2="http://xmlns.oracle.com/adf/svc/types/">
 <ns2:filter>
 <ns2:group>
 <ns2:item>
 <ns2:attribute>LocationId</ns2:attribute>
 <ns2:operator>=</ns2:operator>
 <ns2:value>958</ns2:value>
 </ns2:item>
 </ns2:group>
 </ns2:filter>
 <ns2:findAttribute>City</ns2:findAttribute>
 <ns2:findAttribute>State</ns2:findAttribute>
 <ns2:findAttribute>Province</ns2:findAttribute>
 <ns2:findAttribute>Country</ns2:findAttribute>
 <ns2:findAttribute>LocationId</ns2:findAttribute>
 <ns2:findAttribute>LocationProfile</ns2:findAttribute>
 </ns1:findCriteria>
 </ns1:findLocation>
 </soap:Body>
</soap:Envelope>
```

To include only a subset of the elements from the `LocationProfile` child object, use the `childFindCriteria` element and specify the elements to be included using the `findAttribute` element.

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:findLocation
 xmlns:ns1="http://xmlns.oracle.com/apps/cdm/foundation/parties/locationService/
 applicationModule/types/">
 <ns1:findCriteria xmlns:ns2="http://xmlns.oracle.com/adf/svc/types/">
 <ns2:filter>
 <ns2:group>
 <ns2:item>
 <ns2:attribute>LocationId</ns2:attribute>
 <ns2:operator>=</ns2:operator>
 <ns2:value>958</ns2:value>
 </ns2:item>
 </ns2:group>
 </ns2:filter>
 <ns2:findAttribute>City</ns2:findAttribute>
 <ns2:findAttribute>State</ns2:findAttribute>
 <ns2:findAttribute>Province</ns2:findAttribute>
 <ns2:findAttribute>Country</ns2:findAttribute>
 <ns2:findAttribute>LocationId</ns2:findAttribute>
 <ns2:findAttribute>LocationProfile</ns2:findAttribute>
 <ns2:childFindCriteria>
 <ns2:findAttribute>LocationProfileId</ns2:findAttribute>
 <ns2:findAttribute>EffectiveStartDate</ns2:findAttribute>
 <ns2:findAttribute>EffectiveEndDate</ns2:findAttribute>
 <ns2:childAttrName>LocationProfile</ns2:childAttrName>
 </ns2:childFindCriteria>
 </ns1:findCriteria>
 </ns1:findLocation>
 </soap:Body>
</soap:Envelope>
```

The response payload returns only the `LocationProfileId`, `EffectiveStartDate`, and `EffectiveEndDate` of the `LocationProfile` object, along with the attributes corresponding to the `findAttributes` element.

```

```

Search Criteria with Dependency on Child Data

This example shows how to select parent objects based on search criteria applied to the child objects. The request payload finds all the locations that are in the state of Alaska in the United States, and have an effective date of 1950-04-12 or later in the `LocationProfile` child object entity. The response payload returns the `LocationId` and `Country` attributes in the `Location` object, and the `EffectiveStartDate` and `LocationId` attributes in the `LocationProfile` child object.

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:findLocation
 xmlns:ns1="http://xmlns.oracle.com/apps/cdm/foundation/parties/
 locationService/applicationModule/types/">
 <ns1:findCriteria xmlns:ns2="http://xmlns.oracle.com/adf/svc/types/">
 <ns2:fetchStart>0</ns2:fetchStart>
 <ns2:fetchSize>500</ns2:fetchSize>
 <ns2:filter>
 <ns2:group>
 <ns2:item>
 <ns2:attribute>Country</ns2:attribute>
 <ns2:operator>=</ns2:operator>
 <ns2:value>US</ns2:value>
 </ns2:item>
 <ns2:item>
 <ns2:conjunction>And</ns2:conjunction>
 <ns2:attribute>State</ns2:attribute>
 <ns2:operator>=</ns2:operator>
 <ns2:value>AK</ns2:value>
 </ns2:item>
 <ns2:item>
 <ns2:conjunction>And</ns2:conjunction>
 <ns2:attribute>LocationProfile</ns2:attribute>
 <ns2:nested>
 <ns2:group>
 <ns2:item>
 <ns2:attribute>EffectiveStartDate</ns2:attribute>
 <ns2:operator>ONORAFTER</ns2:operator>

 </ns2:nested>
 </ns2:item>
 </ns2:group>
 </ns2:filter>
 <ns2:findAttribute>LocationId</ns2:findAttribute>
 <ns2:findAttribute>Country</ns2:findAttribute>
 <ns2:findAttribute>State</ns2:findAttribute>
```

```
 <ns2:findAttribute>LocationProfile</ns2:findAttribute>
 <ns2:childFindCriteria>
 <ns2:findAttribute>EffectiveStartDate</ns2:findAttribute>
 <ns2:findAttribute>LocationProfileId</ns2:findAttribute>
 <ns2:childAttrName>LocationProfile</ns2:childAttrName>
 </ns2:childFindCriteria>
 </ns1:findCriteria>
 </ns1:findLocation>
 </soap:Body>
</soap:Envelope>
```

Search Criteria at Child Level

This example shows how to apply search criteria at parent and child levels. The request payload selects the first 500 locations in the state of Alaska in the United States. The response payload returns `PostalCode`, `City`, `State`, `Province`, `Country`, and `LocationId` attributes for the `Location` object. It also returns `Country`, `FloorNumber`, `City`, `State`, `Province`, and `EffectiveStartDate` attributes for the `LocationProfile`, if the `EffectiveStartDate` is equal to or later than **1950-04-12**.

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
 <soap:Body>
 <ns1:findLocation
 xmlns:ns1="http://xmlns.oracle.com/apps/cdm/foundation/parties/
 locationService/applicationModule/types/">
 <ns1:findCriteria xmlns:ns2="http://xmlns.oracle.com/adf/svc/types/">
 <ns2:fetchStart>0</ns2:fetchStart>
 <ns2:fetchSize>500</ns2:fetchSize>
 <ns2:filter>
 <ns2:group>
 <ns2:item>
 <ns2:attribute>Country</ns2:attribute>
 <ns2:operator>=</ns2:operator>
 <ns2:value>US</ns2:value>
 </ns2:item>
 <ns2:item>
 <ns2:conjunction>And</ns2:conjunction>
 <ns2:attribute>State</ns2:attribute>
 <ns2:operator>=</ns2:operator>
 <ns2:value>AK</ns2:value>
 </ns2:item>
 </ns2:group>
 </ns2:filter>
 <ns2:findAttribute>PostalCode</ns2:findAttribute>
 <ns2:findAttribute>City</ns2:findAttribute>
 <ns2:findAttribute>State</ns2:findAttribute>
 <ns2:findAttribute>Province</ns2:findAttribute>
 <ns2:findAttribute>Country</ns2:findAttribute>
 <ns2:findAttribute>LocationId</ns2:findAttribute>
 <ns2:findAttribute>LocationProfile</ns2:findAttribute>
 <ns2:childFindCriteria>
 <ns2:filter>
 <ns2:group>
 <ns2:item>
 <ns2:attribute>EffectiveStartDate</ns2:attribute>
 <ns2:operator>ONORAFTER</ns2:operator>
 <ns2:value>1950-04-12</ns2:value>
 </ns2:item>
 </ns2:group>
 </ns2:filter>
 <ns2:findAttribute>Country</ns2:findAttribute>
 <ns2:findAttribute>FloorNumber</ns2:findAttribute>
 <ns2:findAttribute>City</ns2:findAttribute>
 <ns2:findAttribute>State</ns2:findAttribute>
 <ns2:findAttribute>Province</ns2:findAttribute>
 <ns2:findAttribute>EffectiveStartDate</ns2:findAttribute>
```

```
 <ns2:childAttrName>LocationProfile</ns2:childAttrName>
 </ns2:childFindCriteria>
 </ns1:findCriteria>
 </ns1:findLocation>
 </soap:Body>
</soap:Envelope>
```

Sort the Search Results

This example shows how to sort the search results. The request payload finds the `Location` objects in the state of Alaska in the United States, and sorts them by `PostalCode` in ascending order and then by `City` in descending order. The response payload returns `PostalCode`, `City`, `State`, `Province`, `Country`, and `LocationId` attributes in the `Location` object.

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">

 </ns1:findLocation>
 </soap:Body>
</soap:Envelope>
```

Related Topics

Use Lookups

The attribute description of a service data object may contain references to a lookup type to indicate valid values for that attribute. For example, the `CustomerCategoryCode` attribute of the Trading Community Customer Account Site service data object contains reference to `ADDRESS_CATEGORY` lookup type.

To view the lookup codes:

1. Go to the **Setup and Maintenance** work area, and open the **Manage Standard Lookups** task.
2. Search for the `ADDRESS_CATEGORY` lookup type.
3. Select the lookup type in the search results. The lookup codes displayed for the `ADDRESS_CATEGORY` lookup type are the valid values for the `CustomerCategoryCode` attribute.
4. Select the appropriate value and pass it to the operation request payload for the Trading Community Account Customer service.

7 SOAP Web Services Initiation

Clients for Initiating SOAP Web Services

SOAP web services in Oracle Applications Cloud can be invoked by using various clients.

- *Java Client*
- *Oracle Database*
- *.NET Framework*
- *Php*
- *Perl*
- *Python*
- *Ruby*

Java Client

Use JAVA clients such as HTTP, static proxy, and dynamic proxy to invoke web services.

- HTTP Client: Constructs the HTTP request and handles the HTTP response. This can only use basic authentication over SSL.
- Static Proxy Client: Requires proxy code generation at the client side. So, the client doesn't have to maintain the code, and can use the java objects to handle a request.
- Dynamic Proxy Client: Requires SOAP messages instead of objects.

Related Topics

HTTP Client

You can create a HTTP client, which uses the HTTPS protocol, to invoke a web service.

The following is a sample client code to:

1. Construct an xml payload to invoke the *find* operation on the Expense Item and Expense Report service.
2. Open an `HTTPUrlConnection` to the service.
3. Configure the request content type to `xml` and HTTP method to `POST`.
4. Configure the request to use basic authentication, with a user name and a password to invoke the service.
5. Write the xml payload to the connection as request.
6. Receive the response from the connection, and print the output.

To run this sample code, you must:

- Get the hostname and port for the Expense Item and Expense Report service using the *Developer Connect* portal.

  To use the sample code to invoke a different business object service, replace with the corresponding service endpoint URL. For example, replace `HOST` with **your-host-name:your-port** and `SVC_RELPATH` with **/finExmSharedCommon/ExpenseService**.

- Update the user name and password ("*username*:*password*") with a valid user name and password for your cloud instance.
- Import the certificate from the server into the client trust store using the keytool command.

```
public static void http_client() throws Exception {
System.out.println("Invoke service using direct HTTP call with Basic Auth");
String payload =
"<soap:Envelope xmlns:soap=\"http://schemas.xmlsoap.org/soap/envelope/\">\n" +
" <soap:Header>\n" +
" <fmw-context xmlns=\"http://xmlns.oracle.com/fmw/context/1.0\"/>\n" +

Static JAX-WS Proxy Client

Oracle JDeveloper provides design-time support to generate a static JAX-WS proxy client to invoke a web service. In JDeveloper, you can create an application with a project and then create a new **Web Service Proxy** by selecting **Business Tier** > **Web Services** in the **New Gallery** page. Creating the proxy generates client-side proxy classes. You can then write client-side code to invoke the required service.

For more information, see *Creating a Web Service Proxy*.

```
public class SvcInvoker {
 @WebServiceRef
 private static ExpenseService_Service expenseService_Service;

 public static void main(String[] args) throws ServiceException, Exception {
 expenseService_Service = new ExpenseService_Service();
 SecurityPolicyFeature[] features =
 new SecurityPolicyFeature[] { new SecurityPolicyFeature("policy:oracle/
wss_username_token_over_ssl_client_policy") };
 //or any other policy, as required
 ExpenseService expenseService =
 expenseService_Service.getExpenseServiceSoapHttpPort(features);
 ……//security setting code goes here
 //invoke the service
 FindCriteria fc = new FindCriteria();
 fc.setFetchSize(1);
 List<Expense> exps = expenseService.findExpense(fc, null);
 if (exps != null && !exps.isEmpty()) {
 Expense exp = exps.get(0);
 //access the expenses
 } else
 System.out.println("No expenses");
 }
}
```

Client-Side Security Policy

You must configure the security setting based on the client-side security policy used to invoke a service.

- Transport Layer security policies:
  - `oracle/wss_username_token_over_ssl_client_policy`
  - `oracle/wss_http_token_over_ssl_client_policy`
  - `oracle/wss_saml_token_bearer_over_ssl_client_policy`
- Message protection policies:
  - `oracle/wss11_username_token_with_message_protection_client_policy`
  - `oracle/wss11_saml_token_with_message_protection_client_policy`

For the transport layer security policies, the client uses the Secure Socket Layer (SSL) protocol on the server to invoke a web service. In Oracle Applications Cloud, the SSL protocol is enabled on the server by default. To use the message protection policies, the client imports the public key certificate from the server.

If the client side maintains the user identity to invoke a service, the username token policies are easier to use than the SAML token policies. The SAML token policies support identity propagation, but require certificate exchange between the server and the client, unless all of the following are true:

- Client signing certificate is issued from a Certificate Authority (CA)
- CA certificate is in the server trust store
- SAML assertion carry the signing certificate

If the client-side is on the Oracle Applications Cloud, for example, when the client is deployed in Java Cloud Service, and linked to the corresponding Oracle Applications Cloud instance, the certificate exchange is already configured. You need to decide which client-side policy to use, based on the nature of the client and the requirements of each policy.

Security Configuration

The security configuration required for different client-side security policies are as follows:

oracle/wss_username_token_over_ssl_client_policy

For this policy, the service endpoint URL must use HTTPS protocol, and no configuration is required. The static proxy client-side code specifies the user name and password:

```
WSBindingProvider wsbp = (WSBindingProvider)expenseService;
Map<String, Object> requestContext = wsbp.getRequestContext();

requestContext.put(com.sun.xml.ws.developer.WSBindingProvider.USERNAME_PROPERTY,
"user");

requestContext.put(com.sun.xml.ws.developer.WSBindingProvider.PASSWORD_PROPERTY, "password");
```

Though this is the simplest method, the recommended method is to store the user name and password in a credential store, and use a `csf-key` to refer to the entry in the credential store. Use Oracle JDeveloper to create a credential store when you are generating the web service proxy. You can also edit the properties of the proxy object after it is generated by selecting **Override Properties** > **New Key**.

- `cwallet.sso` file: Credential store

- `jps-config.xml` file: Security context of your program. It contains the entry pointing to the `cwallet.sso` credential store.

The client-side code must specify the location of the `jps-config.xml` file and the `csf-key` value.

```
System.setProperty("oracle.security.jps.config", "path_to_jps-config.xml");
expenseService_Service = new ExpenseService_Service();
SecurityPolicyFeature[] features = new SecurityPolicyFeature[] {
 new SecurityPolicyFeature("policy: oracle/wss_username_token_over_ssl_client_policy " };
ExpenseService expenseService =
 expenseService_Service.getExpenseServiceSoapHttpPort(features);
WSBindingProvider wsbp = (WSBindingProvider)expenseService;
Map<String, Object> requestContext = wsbp.getRequestContext();
requestContext.put(SecurityConstants.ClientConstants.WSS_CSF_KEY, "csf-key");
```

oracle/wss_http_token_over_ssl_client_policy

The requirements for this policy are same as the `oracle/wss_username_token_over_ssl_client_policy` policy. While this policy sets the authentication information in the HTTP header, the `oracle/wss_username_token_over_ssl_client_policy` policy sets the authentication information in the SOAP header.

oracle/wss_saml_token_bearer_over_ssl_client_polic

This policy uses SAML token, and requires a keystore in the client that contains the client signing and encryption keys. The server needs to import the public key certificate from the client.

- Generate keystore in the client: Use keytool provided by JDK to generate the keystore, which stores the security certificate. To generate a `.jks` file, which is the keystore:

  ```
  keytool -genkeypair -keyalg RSA -alias mycompkey -keypass password -keystore
  mycompclient-keystore.jks -storepass password -validity 3600
  ```

- Export certificate from the client: Use the following keytool command to export the certificate:

  ```
  keytool -exportcert -alias mycompkey -file clientpubkey.cer -keystore mycompclient-keystore.jks -
  storepass password
  ```

- Import certificate to the server: Use the following keytool command to import the certificate generated by the client to the server keystore as a trusted certificate entry:

  ```
  keytool -importcert -alias clientkey -file clientpubkey.cer -keystore default-keystore.jks -
  storepass password
  ```

- Add keystore to the client security context: The proxy client-side code must provide the keystore, signing key and encryption key that are protected by passwords. Use Oracle JDeveloper to import the keystore, set the password, and set the keystore in the client-side security context.
- Proxy client-side code: The `WSSEC_SIG_KEY_ALIAS` and `WSSEC_ENC_KEY_ALIAS` are used to specify the signing and encrypting private keys on the client side. This private key must be the same as the one used to generate the certificate. This code request uses SAML token, so the user name is passed but not the password. The client-side code can configure the security as:

  ```
  System.setProperty("oracle.security.jps.config", " path_to_jps-config.xml");
  String policy = "oracle/wss_saml_token_bearer_over_ssl_client_policy";
  expenseService_Service = new ExpenseService_Service();
  SecurityPolicyFeature[] features =
   new SecurityPolicyFeature[] { new SecurityPolicyFeature("policy:" + policy) };
  ExpenseService expenseService =
   expenseService_Service.getExpenseServiceSoapHttpPort(features);

  WSBindingProvider wsbp = (WSBindingProvider)expenseService;
  Map<String, Object> requestContext = wsbp.getRequestContext();
  ```

```
//client-side private signing key
requestContext.put(ClientConstants.WSSEC_SIG_KEY_ALIAS, "mycompkey");
//client-side private encryption key
requestContext.put(ClientConstants.WSSEC_ENC_KEY_ALIAS, "mycompkey");
//location of the keystore file
requestContext.put(ClientConstants.WSSEC_KEYSTORE_LOCATION,
 "path_to_ mycompclient-keystore.jks");
requestContext.put(WSBindingProvider.USERNAME_PROPERTY, "username");
```

oracle/wss11_username_token_with_message_protection_client_policy

Using this policy, the web service consumer inserts username and password credentials, and signs and encrypts the outgoing SOAP message. The web service provider decrypts and verifies the message and the signature. This policy requires that the client imports the public key from the server.

- Generate keystore in the client: Use keytool provided by JDK to generate the keystore, which stores the security certificate. To generate a `.jks` file, which is the keystore:

  ```
  keytool -genkeypair -keyalg RSA -alias mycompkey -keypass password -keystore
  mycompclient-keystore.jks -storepass password -validity 3600
  ```

- Generate public key certificate: The client requires the public key from the server. The WSDL file contains the certificate in the `wsdl:service/wsdl:port/wsa:EndpointReference/wsid:Identity/dsig:keyInfo/dsig:X509Data/dsig:X509Certificate` element. Create a text file and enclose the certificate element with ---- BEGIN CERTIFICATE ---- and ---- END CERTIFICATE ---- statements. Save this text file as `pk.cer`.

  ```
  <wsdl:service name="ExpenseService">
   <wsdl:port name="ExpenseServiceSoapHttpPort" binding="tns:ExpenseServiceSoapHttp">
   ....
   <wsa:EndpointReference xmlns:wsa="http://www.w3.org/2005/08/addressing">
   <wsid:Identity xmlns:wsid="http://schemas.xmlsoap.org/ws/2006/02/addressingidentity">
   <dsig:KeyInfo xmlns:dsig="http://www.w3.org/2000/09/xmldsig#">
   <dsig:X509Data>
  <dsig:X509Certificate>MIICHTCCAYagAwIBAgIEUG1GfDANBgkqhkiG9w0BAQUFADBTMR
  MwEQYKCZImiZPyLGQBGRYDY29tMRYwFAYKCZImiZPyLGQBGRYGb3JhY2xlMRIwEA
  YKCZImiZPyLGQBGRYCdXMxEDAOBgNVBAMTB3NlcnZpY2UwHhcNMTIxMDA0MDgx
  OTA4WhcNMTUxMDA0MDgxOTA4WjBTMRMwEQYKCZImiZPyLGQBGRYDY29tMRYw
  FAYKCZImiZPyLGQBGRYGb3JhY2xlMRIwEAYKCZImiZPyLGQBGRYCdXMxEDAOBgN
  VBAMTB3NlcnZpY2UwgZ8wDQYJKoZIhvcNAQEBBQADgY0AMIGJAoGBAMvYgi3PpA9T
  vD6YptxWZDy6nusDfJYrQe5Q3cYjtR54exM8Ju29z2Mtk98HEZXMs2+GqNO7Ms8QZQ2Owl
  nuS0VZNMUQu3MkjM4UKyK+37H32jud3HP5jigpJARgtxfH1Z1RK4VovU1VFPeRULG+7em
  CvdfOks5o6dTPmH1xpsXLAgMBAAEwDQYJKoZIhvcNAQEFBQADgYEAguzjcfLzQUH5d
  O4jER9g4xrmjxZrKo8YC2xxGKzpxuMSg3EUhUPOznzZFv09+sIO2UFGpPV5NqNWlvFqej3
  VBSal2HfGUQgMRe+kPV6ysAWvZ4T1pOxj4NDeWRUMjgjt14OXEOxifPbLhvOmiC8dD9d
  FwcdWh7lMMcwz0VM9F0M=</dsig:X509Certificate>
  </dsig:X509Certificate>
  ......
  ```

- Import certificate to the client: Use the following keytool command to import the certificate to the client keystore:

  ```
  keytool -importcert -alias pubkey -file pk.cer -keystore mycompclient-keystore.jks -storepass password
  ```

- Configure client security context: The proxy client-side code must provide the keystore, signing key and encryption key that are protected by password. Use Oracle JDeveloper to create the `csf-key` that stores the user/password, import the keystore, and then set the password and keystore in the client-side security context.
- Proxy client-side code: The client-side code can now configure the security as:

  ```
  System.setProperty("oracle.security.jps.config", " path_to_jps-config.xml");
  String policy = "oracle/wss11_username_token_with_message_protection_client_policy";
  expenseService_Service = new ExpenseService_Service();

  SecurityPolicyFeature[] features =
  ```

```
 new SecurityPolicyFeature[] { new SecurityPolicyFeature("policy:" + policy) };
ExpenseService expenseService =
 expenseService_Service.getExpenseServiceSoapHttpPort(features);

WSBindingProvider wsbp = (WSBindingProvider)expenseService;
Map<String, Object> requestContext = wsbp.getRequestContext();

//location of the keystore file
requestContext.put(ClientConstants.WSSEC_KEYSTORE_LOCATION,
 "path_to_mycomp-keystore.jks");

requestContext.put(SecurityConstants.ClientConstants.WSS_CSF_KEY, "csf-key");
```

oracle/wss11_saml_token_with_message_protection_client_policy

This policy uses both message protection and SAML token. To configure message protection, the client-side keystore must import the public key certificate from the server. To use SAML token, the server must import the certificate from the client.

- Generate keystore in the client: Use keytool to generate the keystore, which manages the private and public keys:
  `keytool -genkeypair -keyalg RSA -alias mycompkey -keypass password -keystore mycompclient-keystore.jks -storepass password -validity 3600`
- Generate server-side public key certificate: For this policy, the client requires the public key generated on the server side. The WSDL file contains the certificate in the `wsdl:service/wsdl:port/wsa:EndpointReference/wsid:Identity/dsig:keyInfo/dsig:X509Data/dsig:X509Certificate` element. Create a text file and enclose the certificate element with ---- BEGIN CERTIFICATE ---- and ---- END CERTIFICATE ---- statements. Save this text file as `pk.cer`.
- Import certificate to the client: Use the following keytool command to import the certificate generated by the server to the client keystore:`keytool -importcert -alias pubkey -file pk.cer -keystore mycompclient-keystore.jks -storepass password`
- Export certificate from the client: Use the following keytool command to export the certificate:`keytool -exportcert -alias mycompkey -file clientpubkey.cer -keystore mycompclient-keystore.jks -storepass password`
- Import client-side certificate to server: Use the following keytool command to import the certificate generated by the client to the server keystore as a trusted certificate entry:`keytool -importcert -alias clientkey -file clientpubkey.cer -keystore default-keystore.jks -storepass password`
- Configure client security context: The proxy client-side code must provide the keystore, signing key, and encryption key that are protected by password. Use Oracle JDeveloper to import the keystore, and then set the password and keystore in the client-side security context.
- Proxy client-side code: The `WSSEC_SIG_KEY_ALIAS` and `WSSEC_ENC_KEY_ALIAS` are used to specify the signing and encrypting private keys on the client side. This private key must be the same as the one used to generate the certificate. This code request uses SAML token, so the user name is passed but not the password. The client-side code can configure the security as:

  > **Note:** This sample code works only in a JSE environment. In JEE environment, usually the current user is propagated to the server. The client and server need to share identity store, use identity federation, or the client side uses Security Token Service (STS) to map the client credential to the server credential.

```
System.setProperty("oracle.security.jps.config", "path_to_jps-config.xml");
String policy = "oracle/wss11_saml_token_with_message_protection_client_policy";
expenseService_Service = new ExpenseService_Service();
SecurityPolicyFeature[] features =
 new SecurityPolicyFeature[] { new SecurityPolicyFeature("policy:" +policy)};
```

```
ExpenseService expenseService =
 expenseService_Service.getExpenseServiceSoapHttpPort(features);

WSBindingProvider wsbp = (WSBindingProvider)expenseService;
Map<String, Object> requestContext = wsbp.getRequestContext();

requestContext.put(ClientConstants.WSSEC_SIG_KEY_ALIAS, "mycompkey");
requestContext.put(ClientConstants.WSSEC_ENC_KEY_ALIAS, "mycompkey");
//location of the keystore file
requestContext.put(ClientConstants.WSSEC_KEYSTORE_LOCATION,
 " path_to_mycomp-keystore.jks");
requestContext.put(WSBindingProvider.USERNAME_PROPERTY, "username");
```

Dynamic Dispatch Client

To dynamically invoke web services, you can create a Dispatch client and configure:

- Security properties depending on the security policy to be used
- Keystore requirements

The following is an example code:

```
System.setProperty("oracle.security.jps.config", "path_to_jps-config.xml");
 QName qname = new QName(svcns, svcname);
 Service service = Service.create(new URL(endpointURL + WSDL_URL_SUFFIX), qname);
 QName portname = new QName(svcns, portname);
 SecurityPolicyFeature[] features =
 new SecurityPolicyFeature[] { new SecurityPolicyFeature("policy:" + policy) };
 Dispatch<SOAPMessage> dispatcher =
 service.createDispatch(portname, SOAPMessage.class, Service.Mode.MESSAGE, features);

 Map<String, Object> rc = dispatcher.getRequestContext();
 if (!policy.contains("saml"))
 rc.put(SecurityConstants.ClientConstants.WSS_CSF_KEY, "csf-key");
 else
 rc.put(BindingProvider.USERNAME_PROPERTY, username);
 //only these two don't need keystore
 if ("oracle/wss_http_token_over_ssl_client_policy".equals(policy) ||
 "oracle/wss_username_token_over_ssl_client_policy".equals(policy)) {
 } else {
 //location of the keystore file
 rc.put(ClientConstants.WSSEC_KEYSTORE_LOCATION, jksFPath);
 }

 if (policy.contains("saml")) {
 //client side private key, keystore sign alias; without this, invoking service at client side fails
 rc.put(ClientConstants.WSSEC_SIG_KEY_ALIAS, signKey);

 //client side private key; without this, the user cannot be authenticated

 rc.put(ClientConstants.WSSEC_ENC_KEY_ALIAS, encKey);
 }
 }

 // Obtain a preconfigured SAAJ MessageFactory
 MessageFactory factory = ((SOAPBinding)dispatcher.getBinding()).getMessageFactory();

 // Create SOAPMessage Request
 SOAPMessage req = factory.createMessage();
 // Request Body
 SOAPBody body = req.getSOAPBody();
```

```
// Construct request
DocumentBuilder docBuilder = getDocumentBuilder();
ByteArrayInputStream is = new ByteArrayInputStream(requestStr.getBytes());
try {
Document doc = docBuilder.parse(is);
body.addDocument(doc);
} catch (Exception e) {
throw new RuntimeException("Cannot parse " + requestStr, e);
}

//invoke the service
SOAPMessage res = dispatcher.invoke(req);
//get response
if (res != null) {
ByteArrayOutputStream os = new ByteArrayOutputStream();
res.writeTo(os);
}
```

Oracle Database

Use the various functionalities of Oracle database such as APEX_WEB_SERVICE, UTL_HTTP package, and Application Express (Apex) to invoke SOAP web services.

APEX Web Service

Use APEX_WEB_SERVICE to invoke web services on a database with Application Express (APEX) schema.

The following is a sample client code to:

1. Construct an xml payload to invoke the service. This example code passes a hard coded string to the request.
2. Invoke the service using the APEX_WEB_SERVICE API, which in turn uses the UTL_HTTP package.
3. Receive the response and process it. This example code just prints the response.

```
declare
 l_result XMLTYPE;
 l_envelope CLOB;
BEGIN
 -- Construct xml payload to invoke the service. In this example, it is a hard coded string.
 l_envelope := '<?xml version="1.0" encoding="UTF-8"?>
 <soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"
 xmlns:xsi="http ://www.w3.org/2001/XMLSchema-instance"
 xmlns:xsd="http://www.w3.org/2001/XMLSchema">
 <soap:Body>
 <findRule
 xmlns="http://xmlns.oracle.com/apps/incentiveCompensation/cn/creditSetup/creditRule/creditRuleService/ty
 pes/">
 <findCriteria>
 <fetchStart xmlns="http://xmlns.oracle.com/adf/svc/types/">0</fetchStart>
 <fetchSize xmlns="http://xmlns.oracle.com/adf/svc/types/">-1</fetchSize>
 <filter xmlns="http://xmlns.oracle.com/adf/svc/types/">
 <group>
 <upperCaseCompare>false</upperCaseCompare>
 <item>
 <upperCaseCompare>false</upperCaseCompare>
 <attribute>RuleId</attribute>
 <operator>=</operator>
 <value>300000000851162</value>
 </item>
```

```
 </group>
 </filter>
 <excludeAttribute xmlns="http://xmlns.oracle.com/adf/svc/types/">false</excludeAttribute>
 </findCriteria>
 <findControl>
 <retrieveAllTranslations
 xmlns="http://xmlns.oracle.com/adf/svc/types/">false</retrieveAllTranslations>
 </findControl>
 </findRule>
 </soap:Body>
 </soap:Envelope>';
 -- Call the web service
 l_result := apex_web_service.make_request(
 p_url => 'https://host:port/icCnSetupCreditRulesPublicService/CreditRuleService?wsdl',
 p_action => 'http://xmlns.oracle.com/apps/incentiveCompensation/cn/creditSetup/creditRule/
creditRuleService/findRule',
 p_envelope => l_envelope,
 p_username => 'username',
 p_password => 'password' );
 dbms_output.put_line(l_result.getClobVal());
END;
```

UTL_HTTP Package

Use UTL_HTTP package over HTTPS to invoke a SOAP web service by constructing and processing the XML payload. Configure the following before using the UTL_HTTP package:

- Access to the database network
- Create wallet containing the certificate if you want to access the web service over SSL

For more information, refer to Fusion Middleware Administrator's Guide available at *Oracle Help Center*. The following is a sample client code to:

1. Construct an xml payload to invoke the service. This example code passes a hard coded string to the request.
2. Set the Oracle Wallet used for the request. This wallet must contain the certificate for the server that hosts the service, and is used to access the service using HTTPS.
3. Create a new HTTP request for the `POST` method.
4. Configure the request to use the authentication information to invoke the service.
5. Configure the request content type to `xml`, HTTP method to `POST`, and set the content length.
6. Set the `SOAPAction` to be invoked. Though the call works without this value, it is a recommended standard.
7. Write the xml payload to the connection as request.
8. Receive the response and process it. This example code only prints the response.

```
DECLARE
 -- Construct xml payload to invoke the service. In this example, it is a hard coded string.
 l_envelope VARCHAR2(32767) := '<soap:Envelope
 xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"

 xmlns:xsd="http://www.w3.org/2001/XMLSchema">
 <soap:Body>
 <findRule
xmlns="http://xmlns.oracle.com/apps/incentiveCompensation/cn/creditSetup/creditRule/creditRuleService/ty
pes/">
 <findCriteria>
 <fetchStart
xmlns="http://xmlns.oracle.com/adf/svc/types/">0</fetchStart>
 <fetchSize xmlns="http://xmlns.oracle.com/adf/svc/types/">-
 1</fetchSize>
 <filter xmlns="http://xmlns.oracle.com/adf/svc/types/">
 <group>
 <upperCaseCompare>false</upperCaseCompare>
 <item>
```

```
 <upperCaseCompare>false</upperCaseCompare>
 <attribute>RuleId</attribute>
 <operator>=</operator>
 <value>300000000851162</value>
 </item>
 </group>
 </filter>
 <excludeAttribute
xmlns="http://xmlns.oracle.com/adf/svc/types/">false</excludeAttribute>
 </findCriteria>
 <findControl>
 <retrieveAllTranslations
xmlns="http://xmlns.oracle.com/adf/svc/types/">false</retrieveAllTranslations>
 </findControl>
 </findRule>
 </soap:Body>
 </soap:Envelope>';
l_result VARCHAR2(32767) := null;
l_http_request UTL_HTTP.req;
l_http_response UTL_HTTP.resp;
l_counter PLS_INTEGER;
l_length PLS_INTEGER;
BEGIN
 -- Sets the Oracle wallet used for request; required for HTTPS
 UTL_HTTP.set_wallet('file:/scratch/oradba/wallet', 'password');

 -- Creates a new HTTP request
 l_http_request :=
 UTL_HTTP.begin_request('https://host:port/icCnSetupCreditRulesPublicService/CreditRuleService',
 'POST','HTTP/1.1');

 -- Configure the authentication details
 UTL_HTTP.SET_AUTHENTICATION(l_http_request, 'username', 'password');

 -- Configure the request content type to be xml and set the content length
 UTL_HTTP.set_header(l_http_request, 'Content-Type', 'text/xml');
 UTL_HTTP.set_header(l_http_request, 'Content-Length', LENGTH(l_envelope));

 -- Set the SOAP action to be invoked; while the call works without this, the value is expected to be set
 based on
 standards
 UTL_HTTP.set_header(l_http_request, 'SOAPAction',
 'http://xmlns.oracle.com/apps/incentiveCompensation/cn/creditSetup/creditRule/creditRuleService/findRule');
 -- Write the xml payload to the request
 UTL_HTTP.write_text(l_http_request, l_envelope);

 -- Get the response and process it. In this example, we simply print out the response
 l_http_response := UTL_HTTP.get_response(l_http_request);
 UTL_HTTP.read_text(l_http_response, l_result);
 UTL_HTTP.end_response(l_http_response);
 l_counter := 1;
 l_length := LENGTH(l_result);
 WHILE (l_counter <= l_length) LOOP
 DBMS_OUTPUT.put_line(SUBSTR(l_result, l_counter, 80));
 l_counter := l_counter + 80;
 END LOOP;
END;
/
```

Oracle Application Express (Apex)

Use Apex to integrate the web services by using the Web Service Reference objects. These objects work with the APEX_WEB_SERVICE API to invoke the web services. To define a reference for a ADF business component service, use values such as:

- URL, for example, `https://(ICDomain,Incentive Compensation)/icCnSetupCreditRulesPublicService/CreditRuleService?WSDL`.
- Action: Defines the service and the operation, including the namespace. For example, `{http://xmlns.oracle.com/apps/incentiveCompensation/cn/creditSetup/creditRule/creditRuleService/}RuleAttribute`.
- Basic Authentication: Enable this to pass credentials to a secured service.
- SOAP Envelope: Defines the content to be passed to the service.
- Store Response in Collection: Temporary structure to hold the response from the web service call. Use this object to parse the response XML to be used in the application.

Related Topics

.NET Framework

Use the various features of .NET framework to integrate with the web services in Oracle Applications Cloud.

HttpWebRequest

Use HttpWebRequest to programmatically construct the SOAP envelope and invoke the web service. This Web Proxy approach hides much of the complexity and provides convenience methods, instead of hand-crafting the XML. Some cases may require direct calls with HttpWebRequest. For such cases, the following is an example of a http request to:

1. Construct an xml payload to invoke the service. This example code passes a hard coded string, which is encoded to UTF-8 byte array, to the request.
2. Construct a Base64-encoded string for the credentials of the service call.
3. Create HttpWebRequest connection to the service.
4. Configure the request content type to be `xml`, HTTP method to `POST`, and set the content length.
5. Configure the request to use basic authentication, with Base64-encoded user name and password, to invoke the service.
6. Set the `SOAPAction` to be invoked. Though the service call works without this value, it is a recommended standard.
7. Write the xml payload to the request.
8. Get the response and process it. This example just prints the response.

```
using System;
using System.Text;
using System.Net;
using System.IO;
using System.Xml.Linq;

namespace HttpWebRequestExample1
{
 class Program
 {
 static void Main(string[] args)
 {
 // Construct xml payload to invoke the service. In this example, it is a hard coded string.
```

```

byte[] byteArray = Encoding.UTF8.GetBytes(envelope);

// Construct the base 64 encoded string used as credentials for the service call
byte[] toEncodeAsBytes = System.Text.ASCIIEncoding.ASCII.GetBytes("username" + ":" + "password");
string credentials = System.Convert.ToBase64String(toEncodeAsBytes);

// Create HttpWebRequest connection to the service
HttpWebRequest request =
(HttpWebRequest)WebRequest.Create("https://host:port/icCnSetupCreditRulesPublicService/CreditRuleService");

// Configure the request content type to be xml, HTTP method to be POST, and set the content length
request.Method = "POST";
request.ContentType = "text/xml;charset=UTF-8";
request.ContentLength = byteArray.Length;

// Configure the request to use basic authentication, with base64 encoded user name and password, to invoke
the service.
request.Headers.Add("Authorization", "Basic " + credentials);

// Set the SOAP action to be invoked; while the call works without this, the value is expected to be set
based as per standards
request.Headers.Add("SOAPAction", "http://xmlns.oracle.com/apps/incentiveCompensation/cn/creditSetup/
creditRule/creditRuleService/findRule");

// Write the xml payload to the request
Stream dataStream = request.GetRequestStream();
dataStream.Write(byteArray, 0, byteArray.Length);
dataStream.Close();

// Get the response and process it; In this example, we simply print out the response XDocument doc;
using (WebResponse response = request.GetResponse())
{
using (Stream stream = response.GetResponseStream())
{
```

```
doc = XDocument.Load(stream);
}
}
Console.WriteLine(doc);
}
}
}
```

Service Reference

Use Microsoft Visual Studio to create Service Reference and generate a proxy that can invoke web services.

Note: Create Service Reference, and not Web Reference as it may fail due to cyclic references in the service definition.

To integrate with a service, first *generate a Service Reference* and then use the specified service reference name to access the objects generated in the code. In the following example, **FusionServiceReference** is the service reference name. This example shows how to use a generated reference object to find, create, and delete a rule by calling a web service.

```
using System;
using System.ServiceModel.Channels;
using System.ServiceModel;
using ServiceReferenceExample1Client.FusionServiceReference;

namespace ServiceReferenceExample1Client
{
/// <summary>
/// Custom binding that can be used to invoke Fusion Application services secured with OWSM policy
/// </summary>
/// <remarks>
/// This custom binding can be used to invoke Fusion Application services secured with
/// "oracle/wss_username_token_over_ssl_service_policy" OWSM policy
/// </remarks>
public class UsernameTokenOverSslBinding : CustomBinding
{
public override BindingElementCollection CreateBindingElements()
{
BindingElementCollection bindingElements = new BindingElementCollection();
bindingElements.Add(SecurityBindingElement.CreateUserNameOverTransportBindingElement());
MtomMessageEncodingBindingElement messageEncoding = new MtomMessageEncodingBindingElement();
messageEncoding.MessageVersion = MessageVersion.Soap11;
bindingElements.Add(messageEncoding);
HttpsTransportBindingElement transport = new HttpsTransportBindingElement();
bindingElements.Add(transport);
return bindingElements.Clone();
}
}

class Program
{
static void Main(string[] args)
{

EndpointAddress endpointAddress = new EndpointAddress(new
Uri("https://host:port/icCnSetupCreditRulesPublicService/CreditRuleService"));

// Get instance of the service to be invoked
CreditRuleServiceClient crs = new CreditRuleServiceClient(new UsernameTokenOverSslBinding(),
endpointAddress);

// Set the authentication details to be used for the service call
crs.ClientCredentials.UserName.UserName = "username";
crs.ClientCredentials.UserName.Password = "password";
```

```
// Run the test case which includes queries, creates and deletes a rule
callFindRule(crs);
callCreateRule(crs);
Rule rule = callFindRule(crs);
callDeleteRule(crs, rule);
callFindRule(crs);

}

/// <summary>
/// Logic to find a object using a web service call
/// </summary>
/// <param name="crs">Instance of the credit rule service client</param>

PHP

To use PHP to invoke web services, you must create the development environment and enable:

- Soap extension by removing semi-colon (;), which is the comment character, from the line starting with `extension=php_soap.dll`
- SSL extension by removing semi-colon (;) from the line starting with `extension=php_openssl.dll`

Install and configure any of the available PHP development environments.

The following is an example code to create a simple form to call the *SoapClient*:

1. Simple HTML form that contains a button to submit a request and a text area to display the result.
2. Processing logic that branches based on request type. A POST request calls a web service; any other request clears the value of the text area that contains the result.
3. Processing logic that creates a new instance for the soap client.
4. Construct an array structure that contains the parameters to be passed to the web service.
5. Parse the response as XML and assign to a variable that is displayed in the text area for output.

```
<?php
// Process POST requests
if ($_SERVER['REQUEST_METHOD'] == 'POST'){
 try {
 $username ="username";
 $password ="password";
 // Create new instance for the client
 $client = new SoapClient("https://host:port/icCnSetupCreditRulesPublicService/CreditRuleService?wsdl",
 array('trace' => 1,
 'login' => $username,
 'password' => $password));
 // Construct the payload to be used to invoke the service.
 $params = array(
 'findCriteria' => array(
 'fetchStart' => '0',
 'fetchSize' => '-1',
 'filter' => array(
 'group' => array(
 'upperCaseCompare' => 'false',
 'item' => array(
 'upperCaseCompare' => 'false',
 'attribute' => 'RuleId',
 'operator' => '=',
 'value' => '300000000851162')
 )
 ),
 'excludeAttribute' => 'false'
 ),
 'findControl' => array(
 'retrieveAllTranslations' => 'false')
 );
 // Invoke the service
 $response = $client->FindRule($params);

 // Process the response. In this example, the content is copied to a variable that is displayed as output
 $dom = new DOMDocument;
```

```
$dom->preserveWhiteSpace = FALSE;
$dom->loadXML($client->__getLastResponse());
$dom->formatOutput = TRUE;
$dom->saveXml();
$output = $dom->saveXml();
} catch(Exception $e) {
print "Exception: " . $e->getMessage();
}
} else {
// For GET request, set the variable displayed as output
$output = "";
}
?>
<form name="envelope" method="POST">
<!-- Button used to start the processing -->
<input id="invoke_service" type="submit" value="Invoke Service" />
<!-- Text area to display the result for processing. As the result is XML, it is encoded; otherwise it is
not displayed correctly -->
<textarea name="outputpayload" wrap="off" style="width:100%;height:100%" rows=30><?php echo
htmlentities($output);?></textarea>
</form>
```

Perl

Use Perl to invoke web services using various techniques such as `HTTP::Request` and `SOAP::Lite`.

HTTP::Request

Use `HTTP::Request` to directly construct and process the XML for the SOAP web services.

The following is a sample code to:

1. Construct an xml payload to invoke the service. This example code passes a hard coded string, which is encoded to UTF-8 byte array, to the request.
2. Construct a Base64-encoded string for the credentials of the service call.
3. Create a POST request for the service.
4. Configure the request content type to be `xml`, to use basic authentication with Base64-encoded credentials.
5. Set the `SOAPAction` to be invoked. Though the service call works without this value, it is a recommended standard.
6. Write the xml payload to the request.
7. Call the service.
8. Process the response. This example just prints the response.

```
#!/usr/bin/perl -w

use strict;

use LWP::UserAgent;
use HTTP::Request::Common;
use MIME::Base64;

my $ua = LWP::UserAgent->new(agent => 'perl post');

# Construct xml payload to invoke the service. In the example, it is hard coded.
my $envelope = <<END;
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"
```

```
 xmlns:xsd="http://www.w3.org/2001/XMLSchema">
 <soap:Body>
 <findRule
 xmlns="http://xmlns.oracle.com/apps/incentiveCompensation/cn/creditSetup/creditRule/creditRuleService/
types/">
 <findCriteria>
 <fetchStart xmlns="http://xmlns.oracle.com/adf/svc/types/">0</fetchStart>
 <fetchSize xmlns="http://xmlns.oracle.com/adf/svc/types/">-1</fetchSize>
 <filter xmlns="http://xmlns.oracle.com/adf/svc/types/">
 <group>
 <upperCaseCompare>false</upperCaseCompare>
 <item>
 <upperCaseCompare>false</upperCaseCompare>
 <attribute>RuleId</attribute>
 <operator>=</operator>
 <value>300000000851162</value>
 </item>
 </group>
 </filter>
 <excludeAttribute xmlns="http://xmlns.oracle.com/adf/svc/types/">false</excludeAttribute>
 </findCriteria>
 <findControl>
 <retrieveAllTranslations xmlns="http://xmlns.oracle.com/adf/svc/types/">false</retrieveAllTranslations>
 </findControl>
 </findRule>
 </soap:Body>
</soap:Envelope>
END

# Construct the base 64 encoded string used as the credentials for the service call.
my $credentials = encode_base64('username:password');
my $url = 'https://host:port/icCnSetupCreditRulesPublicService/CreditRuleService';

# Create new POST request
my $req=new HTTP::Request 'POST',$url;

# Configure the request to use basic authentication, with base64-encoded user name and password to invoke
 the service.
$req->header('Authorization' => "Basic " . $credentials);

# Set the SOAP action to be invoked; while the call works without this, the value is expected to be set
 based on standards
$req->header('SOAPAction' =>
'http://xmlns.oracle.com/apps/incentiveCompensation/cn/creditSetup/creditRule/creditRuleService/findRule');

# Configure the request content type to be xml, HTTP method to be POST, and set the content length
$req->header('Content-Type' => 'text/xml;charset=UTF-8');

# Write the xml payload to the request.
$req->content($envelope);

# Call the service
my $response=$ua->request($req);

# Process the response. In this example, we simply print the response.
print $response->error_as_HTML unless $response->is_success;
print $response->as_string;
```

SOAP::Lite

The following is a `SOAP:Lite` code example to:

1. Create a new of the SOAP Lite.
2. Register the namespaces for the envelope.

3. Create a SOAP header with security information.
4. Call the service.
5. Process the response. This example just prints the response.

```
#!/usr/bin/perl
use lib '/usr/lib/perl5/5.8.8/';
use MIME::Base64;
use SOAP::Lite;

SOAP::Lite->import(trace => debug);

# Create a new instance for the SOAP Lite
my $soap = SOAP::Lite->new(
 proxy => 'http://host:port/hcmEmploymentCoreWorker/WorkerService',
 service => 'http://host:port/hcmEmploymentCoreWorker/WorkerService?wsdl',
 );

# Register namespace(s) for the envelope
my $serializer = $soap->serializer();
$serializer->register_ns( 'http://xmlns.oracle.com/apps/hcm/employment/core/workerService/types/', 'typ' );

# Create SOAP header with security information
my $auth = SOAP::Header->new( name => "wsse:Security" );
$auth->attr( { "xmlns:wsse" => "http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-
wssecuritysecext-1.0.xsd"});
$auth->mustUnderstand(1);
$auth->value( \SOAP::Data->value(
 SOAP::Data->name("wsse:UsernameToken" => \SOAP::Data->value(
 SOAP::Data->name("wsse:Username" => 'username')->type(""),
 SOAP::Data->name("wsse:Password" => 'password')->type("")
 ->attr( {"Type" => "http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-usernametoken-
profile-1.0#PasswordText"}),
 SOAP::Data->name("wsse:nonce" => 'jwCzGGijT90Wml6eZe4cxg==')->type("")
 ->attr( {"EncodingType" => "http://docs.oasis-open.org/wss/2004/01/oasis-200401-wsssoap-message-
security-1.0#Base64Binary"}),
 SOAP::Data->name("wsse:created" => '2012-07-04T06:49:48.981Z')->type("")
 )->type("")
 )->attr( {"wsu:Id" => "UsernameToken-2",
 "xmlns:wsu" => "http://docs.oasis-open.org/wss/2004/01/oasis-200401-wsswssecurity-utility-1.0.xsd"
 })
 )->type("")
 );

# Populate parameters to call the service
my $parameters =SOAP::Data->name("typ:personId" => '300000010363707')->type("");

# Call the service
my $result = $soap->call(SOAP::Data->name('typ:getWorker') => $parameters, $auth);

# Process the response. In this example, we simply print the response
die $result->faultstring if ($result->fault);
print $result->result, "\n";
```

Python

Use Python to invoke web services using various techniques such as `urllib2` to create a HTTP request and Suds client.

urllib2 Library

The following code uses *urllib2 library* to create a HTTP request to:

1. Construct an xml payload to invoke the service. This example code passes a hard coded string.
2. Construct a Base64-encoded string for the credentials of the service call.
3. Create and register an opener. If the call is to a server behind a firewall, handle it through proxy.
4. Create a request to call the service.
5. Configure the request content type to be `xml`.
6. Configure the request header with the authentication information.
7. Set the `SOAPAction` to be invoked. Though the service call works without this value, it is a recommended standard.
8. Write the xml payload to the request and execute the request.
9. Get the response and process it. This example just prints the response.

```
import urllib2, base64
username='username'
password='password'

# Construct xml payload to invoke the service. In the example, it is a hard coded string.
envelope = """<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"

 xmlns:xsd="http://www.w3.org/2001/XMLSchema">
 <soap:Body>
 <findRule
 xmlns="http://xmlns.oracle.com/apps/incentiveCompensation/cn/creditSetup/creditRule/creditRuleService/
types/">
 <findCriteria>
 <fetchStart xmlns="http://xmlns.oracle.com/adf/svc/types/">0</fetchStart>
 <fetchSize xmlns="http://xmlns.oracle.com/adf/svc/types/">-1</fetchSize>
 <filter xmlns="http://xmlns.oracle.com/adf/svc/types/">
 <group>
 <upperCaseCompare>false</upperCaseCompare>
 <item>
 <upperCaseCompare>false</upperCaseCompare>
 <attribute>RuleId</attribute>
 <operator>=</operator>
 <value>300000000851162</value>
 </item>
 </group>
 </filter>
 <excludeAttribute
 xmlns="http://xmlns.oracle.com/adf/svc/types/">false</excludeAttribute>
 </findCriteria>
 <findControl>
 <retrieveAllTranslations
 xmlns="http://xmlns.oracle.com/adf/svc/types/">false</retrieveAllTranslations>
 </findControl>
 </findRule>
 </soap:Body>
 </soap:Envelope>"""

# Construct the base 64 encoded string used as credentials for the service call
creadentials = base64.encodestring('%s:%s' % (username, password))[:-1]
authorization = "Basic %s" % creadentials

# Create and register opener. Requires proxy when behind a firewall
opener = urllib2.build_opener(urllib2.HTTPHandler(), urllib2.HTTPSHandler(),
 urllib2.ProxyHandler({'https':'proxyhost:proxyport'}))
urllib2.install_opener(opener)

# Create request for the service call
request = urllib2.Request("https://host:port/icCnSetupCreditRulesPublicService/CreditRuleService")
```

```
# Configure the request content type to be xml
request.add_header("Content-Type", 'text/xml;charset=UTF-8')

# Configure the request authentication in the header with base64-encoded user name and password
request.add_header("Authorization", authorization)

# Set the SOAP action to be invoked; while the call works without this, the value is expected to be set
 based on standards
request.add_header("SOAPAction",
'http://xmlns.oracle.com/apps/incentiveCompensation/cn/creditSetup/creditRule/creditRuleService/findRule')

# Write the xml payload to the request
request.add_data(envelope)

# Execute the request
handle = urllib2.urlopen(request)

# Get the response and process it. This example just prints the response.
content = handle.read()
print content
```

Suds Client

Use Suds, which is based on WSDL, to build SOAP envelope and client for consuming web services. For information about installing suds, see *setup tools*.

The following is a sample code using the suds framework to call a service:

1. Construct a Base64-encoded string for the credentials of the service call.
2. Configure the request header with the content type, SOAP action, and authentication information.
3. Create a new client based on the WSDL.
4. Populate the objects to use as parameters.
5. Call the service.
6. Process the response. This example just prints the response.

```
import base64
from suds.client import Client

username='username'
password='password'

# Construct the base64-encoded string used as the credentials for the service call
credentials = base64.encodestring('%s:%s' % (username, password))[:-1]
authorization = "Basic %s" % credentials

url = 'https://host:port/icCnSetupCreditRulesPublicService/CreditRuleService?wsdl'

# Configure the request content type, SOAP action, and authentication in header
authenticationHeader = {
 "SOAPAction" :"http://xmlns.oracle.com/apps/incentiveCompensation/cn/creditSetup/creditRule/
creditRuleService/findRule",
 "Content-Type" : "text/xml;charset=UTF-8",
 "Authorization" : authorization }

# Create new client
client = Client(url=url, headers=authenticationHeader)

# Populate the objects to be used as parameter
findCriteria = client.factory.create('ns4:FindCriteria')
findControl = client.factory.create('ns4:FindControl')
viewCriteria = client.factory.create('ns4:ViewCriteria')
viewCriteriaRow = client.factory.create('ns4:ViewCriteriaRow')
viewCriteriaItem = client.factory.create('ns4:ViewCriteriaItem')
```

```
viewCriteriaItem.upperCaseCompare = "false";
viewCriteriaItem.attribute = "RuleId";
viewCriteriaItem.operator = "=";
viewCriteriaItem.value = "300000000851162"

viewCriteriaRow.upperCaseCompare = "false"
viewCriteriaRow.item.append([viewCriteriaItem])
viewCriteria.group.append([viewCriteriaRow])

findCriteria.fetchStart = "0"
findCriteria.fetchSize = "-1"
findCriteria.excludeAttribute = "false"
findCriteria.filter = viewCriteria

findControl.retrieveAllTranslations = "false"

# Call the service
rule = client.service.findRule(findCriteria, findControl)

# Process the response. This example just prints the response.
print rule
```

Related Topics

Ruby

Use Ruby to invoke web services using SOAP clients such as Savon.

You must install and configure the development environment and then create the base application:

- Create application, for example rails new `WsTest1`
- Create controller, for example rails generate `WsCallSample WsCall` controller
- Set the root. In this example, delete `public/index.html` and modify the root property in `config/routes.rb` to `WsCallSample#WsCall`
- Add Savon to the application, for example add `gem'savon'` to `app/Gemfile`

For more information, see *Ruby on Rails*.

The following is a sample code to create a HTML form to enter the payload to be passed to the service, and invoke processing for *Savon* and `net/https` call. In this example application, the HTML form is created under `views/ws_call_sample/WsCall.html.erb`.

```
<HTML>
<HEAD>
<title>WsCallSample#WsCall</title>
</HEAD>
<BODY >

<form name="envelope" method="POST">
 <input type="hidden" name="INPUT_PAYLOAD" >
 <input type="hidden" name="OUTPUT_PAYLOAD" >
 <%= submit_tag "Invoke Savon", :name => "invokeSavon" %>
 <%= submit_tag "Invoke HttpRequest", :name => "invokeHttpRequest" %>
 <br>
 <table style="width:100%; font-size: small;" align=center>
 <tr>
 <td align="left"><b>Input Payload</b></td>
 <td align="left"><b>Output Payload</b></td>
```

```
 </tr>
 <tr>
 <td align="center"><textarea name="inputpayload" wrap="off" style="width:100%;height:100%" rows=30 ><%=
 params["inputpayload"] %></textarea></td>
 <td align="center"><textarea name="outputpayload" wrap="off" style="width:100%;height:100%" rows=30 ><%=
 params["xmlbody"] %></textarea></td>
 </tr>
 </table>
 <br>
</form>
</BODY>
</HTML>
```

The following is a sample code to update the controller to handle the submissions from the HTML form. In this example application, the controller is under `controllers/ws_call_sample_controller.rb`. This code processes the envelope in the input, executes using Savon and basic `net/https` call, and displays the response in the output field.

```
require 'rubygems'
require 'nokogiri'
require 'rexml/document'
require "net/https"
require 'uri'

class WsCallSampleController < ApplicationController
 def WsCall
 username ="username";
 password ="password";
 input=params["inputpayload"];

 if params['invokeSavon']
 # Process submission when the invokeSavon button was pressed
 url = "https://host:port/icCnSetupCreditRulesPublicService/CreditRuleService?wsdl";

 # Create new instance of the Savon client using basic authentication
 client = Savon.client(wsdl: url, basic_auth: [username, password], ssl_verify_mode: :none )

 # Call the service with the envelope provided as input
 response = client.call(:on_fault, xml: input)

 # Parse the response to XML
 doc = Nokogiri::XML(response.to_xml ,&:noblanks)
 s = doc.to_xml( indent:2, indent_text:" " )

 # Populate reponse content to a variable to be displayed on the output area
 params["xmlbody"] = s

 elsif params['invokeHttpRequest']
 # Process submission when the invokeHttpRequest button was pressed
 uri = URI.parse("https://host:port/icCnSetupCreditRulesPublicService/CreditRuleService")

 # Create new instance of HTTP object
 http = Net::HTTP.new(uri.host, uri.port)

 # The request uses SSL, certificates are NOT verified
 http.use_ssl = true
 http.verify_mode = OpenSSL::SSL::VERIFY_NONE

 # Create new instance of HTTP POST request
 request = Net::HTTP::Post.new(uri.request_uri)

 # Configure the request content type to be xml and SOAP action
 request.basic_auth(username, password)
 request.add_field("SOAPAction", "http://xmlns.oracle.com/apps/incentiveCompensation/cn/creditSetup/
creditRule/creditRuleService/findRule")
 request.add_field("Content-Type", "text/xml;charset=UTF-8")
```

```
 # Set the envelope content obtained from the input to the request
 request.body = input

 # Execute the request and obtain the response
 response = http.request(request)

 # Parse the response to XML
 doc = Nokogiri::XML(response.body ,&:noblanks)
 s = doc.to_xml( indent:2, indent_text:" " )

 # Populate reponse content to a variable to be displayed on the output area
 params["xmlbody"] = s
 else
 # For any other action than invokeSavon / invokeHttpRequest default the input SOAP enveloper
 params["inputpayload"] = ""+

8 Business Object Services

Action Plan Service

Service to create action plans.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crm/service/actionplan/actionplanService/}ActionPlanService

Service WSDL URL: https://servername/crmService/ActionPlanService?WSDL

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Template Action*
Handles	*Action Attribute*
Handles	*Template*
Handles	*Action Plan Action Relation*
Handles	*Action Condition*
Handles	*Action Plan*
Handles	*Action Plan Action*
Handles	*Action Relation*

- *deleteActionPlan*
- *findActionPlan*
- *getTemplate*
- *createTemplate*
- *updateTemplate*
- *deleteTemplate*

addActionPlan

Creates a action plan for the given entity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
templateId	long	Identifier for the action plan template from which the action is created.
objectEntityName	string	Name of the parent entity object of the action plan.
objectId	long	Object identifier for the action plan.
actionPlanName	string	Name of the action plan.

Response Payload

Element Name	Type	Description
result	long	Indicates that the action plan is created.

orchestrateActions

This method is invoked through the ESS job to process all the exsiting plans and their actions. This method does the following 1. Compute statuses for all the actions in progress 2. Check if a new action must be initiated 3. Initiate actions and create respective business objects 4. Update action plans accordingly

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	void	None.

initiateActionPlan

Initiates an action plan by starting the root actions in it.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
actionPlanId	long	Action plan identifier.

Response Payload

Element Name	Type	Description
result	boolean	Indicates if an action plan is initiated or not.

addAdhocActionToActionPlan

Add an adhoc action to action plan.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
actionPlanId	long	Indicates an action plan identifier.
actionNumber	string	Indicates an action reference number.

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	long	Indicates an action plan action identifier.

discardActionPlan

API to delete an uninitiated Action Plan

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
actionPlanNumber	string	Indicates an action plan reference Number

Response Payload

Element Name	Type	Description
result	boolean	Identifies if an action plan is deleted or not

getAction

Queries and retrieves a single action record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
actionId	long	Action identifier.

Response Payload

Element Name	Type	Description
result	*Action*	An action that matches the inbound parameters.

createAction

Creates a single action record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
action	*Action*	The action to be created.

Response Payload

Element Name	Type	Description
result	*Action*	The action that is created.

updateAction

Updates a single action record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
action	*Action*	The action to be updated.

Response Payload

Element Name	Type	Description
result	*Action*	The updated action.

deleteAction

Deletes a single action record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
action	*Action*	The action record to be deleted.

Response Payload

Element Name	Type	Description
result	void	None.

getActionPlan

Queries and retrieves a single action plan record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
actionPlanId	long	Action plan identifier.

Response Payload

Element Name	Type	Description
result	*Action Plan*	An action plan that matches the inbound parameters.

createActionPlan

Creates a single action plan record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
actionPlan	*Action Plan*	The action plan to be created.

Response Payload

Element Name	Type	Description
result	*Action Plan*	The action plan that is created.

updateActionPlan

Updates a single action plan record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
actionPlan	*Action Plan*	The action plan to be updated.

Response Payload

Element Name	Type	Description
result	*Action Plan*	The updated action plan.

deleteActionPlan

Deletes a single action plan record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
actionPlan	*Action Plan*	The action plan record to be deleted.

Response Payload

Element Name	Type	Description
result	void	None.

findActionPlan

Queries a list of action plans based on a filter criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	Indicates the criteria used to query a list of action plans.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Indicates a criteria to filter out action plans that are not currently used.

Response Payload

Element Name	Type	Description
result	*Action Plan*	Indicates a list of action plans that satisfy the inbound parameters.

getTemplate

Queries a single template record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
templateId	long	The template identifier.

Response Payload

Element Name	Type	Description
result	*Template*	A template that matches the inbound parameters.

createTemplate

Creates a single template record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
template	*Template*	The template to be created.

Response Payload

Element Name	Type	Description
result	*Template*	The template that is created.

updateTemplate

Updates a single template record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
template	*Template*	The template to be updated.

Response Payload

Element Name	Type	Description
result	*Template*	The updated template.

deleteTemplate

Deletes a single template record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
template	*Template*	The template record to be deleted.

Response Payload

Element Name	Type	Description
result	void	None.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getTemplate	SVC_SETUP_ACTION_PLAN_PRIV	Setup Action Plan	Allows action plan setup.
getTemplate	SVC_VIEW_ACTION_PLAN_PRIV	View Action Plan	Allows viewing of an Action Plan.
getTemplate	SVC_EDIT_ACTION_PLAN_PRIV	Edit Action Plan	Allows edit of an Action Plan.
getTemplate	SVC_CREATE_ACTION_PLAN_PRIV	Create Action Plan	Allows creation of an Action Plan.
initiateActionPlan	SVC_EDIT_ACTION_PLAN_PRIV	Edit Action Plan	Allows edit of an Action Plan.
updateAction	SVC_SETUP_ACTION_PLAN_PRIV	Setup Action Plan	Allows action plan setup.
updateAction	SVC_EDIT_ACTION_PLAN_PRIV	Edit Action Plan	Allows edit of an Action Plan.
findActionPlan	SVC_SETUP_ACTION_PLAN_PRIV	Setup Action Plan	Allows action plan setup.
findActionPlan	SVC_VIEW_ACTION_PLAN_PRIV	View Action Plan	Allows viewing of an Action Plan.
findActionPlan	SVC_EDIT_ACTION_PLAN_PRIV	Edit Action Plan	Allows edit of an Action Plan.
findActionPlan	SVC_CREATE_ACTION_PLAN_PRIV	Create Action Plan	Allows creation of an Action Plan.
createTemplate	SVC_SETUP_ACTION_PLAN_PRIV	Setup Action Plan	Allows action plan setup.
createActionPlan	SVC_CREATE_ACTION_PLAN_PRIV	Create Action Plan	Allows creation of an Action Plan.
updateActionPlan	SVC_EDIT_ACTION_PLAN_PRIV	Edit Action Plan	Allows edit of an Action Plan.
discardActionPlan	SVC_EDIT_ACTION_PLAN_PRIV	Edit Action Plan	Allows edit of an Action Plan.

Operation Name	Privilege Code	Privilege Name	Privilege Description
getActionPlan	SVC_VIEW_ACTION_PLAN_PRIV	View Action Plan	Allows viewing of an Action Plan.
getActionPlan	SVC_EDIT_ACTION_PLAN_PRIV	Edit Action Plan	Allows edit of an Action Plan.
getActionPlan	SVC_CREATE_ACTION_PLAN_PRIV	Create Action Plan	Allows creation of an Action Plan.
getAction	SVC_SETUP_ACTION_PLAN_PRIV	Setup Action Plan	Allows action plan setup.
getAction	SVC_VIEW_ACTION_PLAN_PRIV	View Action Plan	Allows viewing of an Action Plan.
getAction	SVC_EDIT_ACTION_PLAN_PRIV	Edit Action Plan	Allows edit of an Action Plan.
getAction	SVC_CREATE_ACTION_PLAN_PRIV	Create Action Plan	Allows creation of an Action Plan.
deleteAction	SVC_SETUP_ACTION_PLAN_PRIV	Setup Action Plan	Allows action plan setup.
deleteAction	SVC_EDIT_ACTION_PLAN_PRIV	Edit Action Plan	Allows edit of an Action Plan.
addActionPlan	SVC_CREATE_ACTION_PLAN_PRIV	Create Action Plan	Allows creation of an Action Plan.
deleteTemplate	SVC_SETUP_ACTION_PLAN_PRIV	Setup Action Plan	Allows action plan setup.
addAdhocActionToActionPlan	SVC_EDIT_ACTION_PLAN_PRIV	Edit Action Plan	Allows edit of an Action Plan.
addAdhocActionToActionPlan	SVC_CREATE_ACTION_PLAN_PRIV	Create Action Plan	Allows creation of an Action Plan.
createAction	SVC_SETUP_ACTION_PLAN_PRIV	Setup Action Plan	Allows action plan setup.
createAction	SVC_EDIT_ACTION_PLAN_PRIV	Edit Action Plan	Allows edit of an Action Plan.
deleteActionPlan	SVC_EDIT_ACTION_PLAN_PRIV	Edit Action Plan	Allows edit of an Action Plan.
updateTemplate	SVC_SETUP_ACTION_PLAN_PRIV	Setup Action Plan	Allows action plan setup.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
SVC_CREATE_ACTION_PLAN_PRIV	ORA_SVC_HELPDESK_SR_MANAGEMENT	HR Help Desk Service Request Management	Manages all aspects of the HR Help Desk Service Request object.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
SVC_CREATE_ACTION_PLAN_PRIV	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
SVC_CREATE_ACTION_PLAN_PRIV	ORA_SVC_CASE_ADMINISTRATOR	Case Administrator	Administers all aspects of Case Management.
SVC_CREATE_ACTION_PLAN_PRIV	ORA_SVC_HR_SR_MANAGEMENT	HR Service Request Management	Manages all aspects of the Next Gen HR Help Desk Service Request object.
SVC_CREATE_ACTION_PLAN_PRIV	ORA_SVC_INTERNAL_HELPDESK_ANALYSIS	Internal Service Request Analysis	Manages a group of Internal Help Desk agents. Can view Internal service requests, activities, and attachments. Monitors metrics and overall resource balancing, critical service requests, service level agreements.
SVC_CREATE_ACTION_PLAN_PRIV	ORA_SVC_SR_POWER_USER	Service Request Power User	Advanced Service Request management capabilities not available to Service Representatives
SVC_CREATE_ACTION_PLAN_PRIV	ORA_SVC_HELPDESK_ADMINISTRATION	HR Help Desk Administration	Manage all aspects of the HCM help desk service requests. In addition can manage queues and administer the HCM help desk service application, including setup.
SVC_CREATE_ACTION_PLAN_PRIV	ORA_SVC_CASE_EXECUTION	Case Execution	Assists clients who are applying for benefits, opens cases and manages all tasks associated to the case, processes clients applications, evaluate clients needs for benefits, counsels benefits recipients, performs assessments of clients strengths and needs to develop benefit plans, performs follow-up with clients to ensure they are working on their tasks.
SVC_CREATE_ACTION_PLAN_PRIV	ORA_SVC_HR_SR_ANALYSIS	HR Service Request Analysis	Manages a group of Next Gen HR Help Desk agents. Can view Next Gen HR service requests, activities, and attachments. Monitors metrics and overall resource balancing, critical service requests, service level agreements.
SVC_CREATE_ACTION_PLAN_PRIV	ORA_SVC_HELPDESK_ANALYSIS	HR Help Desk Analysis	Manages group of HR Help Desk agents. Can view service requests, activities, and attachments. Monitors metrics and overall

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			resource balancing, critical service requests, service level agreements.
SVC_CREATE_ACTION_PLAN_PRIV	ORA_SVC_CASE_SUPERVISION	Case Supervision	Supervises and manages caseworkers, assists caseworkers with any complex issues, handles case approvals and escalations, coordinates care and benefits with external service providers, assigns or reassigns cases to caseworkers, conducts evaluations of benefits programs and provides feedback.
SVC_CREATE_ACTION_PLAN_PRIV	ORA_SVC_INTERNAL_HELPDESK_SR_MANAGEMENT	Internal Service Request Management	Manages all aspects of the Internal Help Desk Service Request object.
SVC_CREATE_ACTION_PLAN_PRIV	ORA_SVC_HR_SR_ADMINISTRATION	HR Service Request Administration	Manages all aspects of Next Gen HR service requests. In addition, can manage queues and administer the Next Gen HR Help Desk service application, including setup.
SVC_CREATE_ACTION_PLAN_PRIV	ORA_SVC_SR_TROUBLESHOOTER	Service Request Troubleshooter	Manages all aspects of the Service Request object
SVC_CREATE_ACTION_PLAN_PRIV	ORA_SVC_INTERNAL_HELPDESK_ADMINISTRATION	Internal Service Request Administration	Manages all aspects of Internal service requests. In addition, can manage queues and administer the Internal Help Desk service application, including setup.
SVC_SETUP_ACTION_PLAN_PRIV	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
SVC_SETUP_ACTION_PLAN_PRIV	ORA_SVC_HELPDESK_ADMINISTRATION	HR Help Desk Administration	Manage all aspects of the HCM help desk service requests. In addition can manage queues and administer the HCM help desk service application, including setup.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_SVC_SR_TROUBLESHOOTER	ORA_SVC_CUST_SERVICE_BILLING_VIEWING	Customer Service Billing Information Viewing	View customer billing information across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_POWER_USER	ORA_SVC_CUST_SERVICE_BILLING_VIEWING	Customer Service Billing Information Viewing	View customer billing information across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_CUST_SERVICE_BILLING_VIEWING	Customer Service Billing Information Viewing	View customer billing information across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_TROUBLESHOOTER	ORA_SVC_CUST_SERVICE_SCM_ORDERS_MANAGEMENT	Customer Service SCM Orders Management	Allow creation and management of supply chain management orders across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_POWER_USER	ORA_SVC_CUST_SERVICE_SCM_ORDERS_MANAGEMENT	Customer Service SCM Orders Management	Allow creation and management of supply chain management orders across Oracle Fusion Service, including service requests and service work orders.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_CUST_SERVICE_SCM_ORDERS_MANAGEMENT	Customer Service SCM Orders Management	Allow creation and management of supply chain management orders across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_TROUBLESHOOTER	ORA_SVC_CUST_SERVICE_SCM_ORDERS_VIEWING	Customer Service SCM Orders Viewing	View supply chain management orders across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_POWER_USER	ORA_SVC_CUST_SERVICE_SCM_ORDERS_VIEWING	Customer Service SCM Orders Viewing	View supply chain management orders across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_CUST_SERVICE_SCM_ORDERS_VIEWING	Customer Service SCM Orders Viewing	View supply chain management orders across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_INTERNAL_HELPDESK_ADMINISTRATION	ORA_SVC_INTERNAL_HELP_DESK_ENGAGEMENT_CHANNEL_ADMINISTRATOR	Internal Help Desk Engagement Channel Application Administrator	Individual responsible for monitoring and administration of the supervisor dashboard for Internal Help Desk.
ORA_SVC_INTERNAL_HELPDESK_ADMINISTRATION	ORA_HZRESOURCE_ADMINISTRATOR_DUTY	Resource Administration	Administers resource information.
ORA_SVC_HELPDESK_ADMINISTRATION	ORA_HZRESOURCE_ADMINISTRATOR_DUTY	Resource Administration	Administers resource information.
ORA_SVC_HR_SR_ADMINISTRATION	ORA_HZRESOURCE_ADMINISTRATOR_DUTY	Resource Administration	Administers resource information.
ORA_SVC_INTERNAL_HELPDESK_ADMINISTRATION	ORA_HZRESOURCE_ORGANIZATION_ADMINISTRATOR_DUTY	Resource Organization Administration	Administers resource organizations.
ORA_SVC_HELPDESK_ADMINISTRATION	ORA_HZRESOURCE_ORGANIZATION_ADMINISTRATOR_DUTY	Resource Organization Administration	Administers resource organizations.
ORA_SVC_HR_SR_ADMINISTRATION	ORA_HZRESOURCE_ORGANIZATION_ADMINISTRATOR_DUTY	Resource Organization Administration	Administers resource organizations.
ORA_SVC_INTERNAL_HELPDESK_ADMINISTRATION	ORA_HZRESOURCE_TEAM_ADMINISTRATOR_DUTY	Resource Team Administration	Defines resource teams.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_SVC_HELPDESK_ ADMINISTRATION	ORA_HZRESOURCE_TEAM_ ADMINISTRATOR_DUTY	Resource Team Administration	Defines resource teams.
ORA_SVC_HR_SR_ ADMINISTRATION	ORA_HZRESOURCE_TEAM_ ADMINISTRATOR_DUTY	Resource Team Administration	Defines resource teams.
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_GEN_AI_ADMIN	Service Generative AI Administrator	Administer activities related to Service Gen AI APIs such as configuration of prompts across all areas of Oracle Fusion Service, such as Service Center, Knowledge, and Chat.
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_GEN_AI_USER	Service Generative AI User	Can use generative AI features across Oracle Fusion Service including but not limited to Service Center, Knowledge Management and Chat areas. Usage requires access to all generative AI API's essential to input data and fetch results from the LLM model.

Action

Contains the details for all the actions that can be associated to an action plan template in the system.

QName: {http://xmlns.oracle.com/apps/crm/service/actionplan/actionplanService/}Action

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Action Attribute*
Contains	*Action Condition*
Handled by	*Action Plan Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActionCategoryCd	string	Indicates the category of action.
ActionCategoryCdMeaning	string	Indicates the display value corresponding to the action category lookup code for the action.
ActionId	long	Indicates the action identifier. • Primary Key
ActionNumber	string	Indicates the reference number of the action.
BUOrgId	long	The unique ID of the business unit name associated to the action.
BusinessUnitName	string	The name of the business unit associated to the action.
CopyAttachmentsFlag	boolean	Indicates whether attachments are copied from the parent context to the child object this action represents.
CreatedBy	string	Indicates the user who created the action.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time of the creation of the action.
DeleteFlag	boolean	Flag that indicates if the user has access to delete the record.
DeletedFlag	boolean	Indicates whether the action is deleted.
Description	string	Indicates the description of an action.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the action was last updated.
LastUpdateLogin	string	Indicates the login session of the user who last updated the action.
LastUpdatedBy	string	Indicates the user who last updated the action.
LeadTime	long	Indicates the estimated time to complete the action.
LeadTimeUnit	string	Indicates the unit of measurement of lead time. i.e. minutes, hours, days.

Name	Type	Description
LeadTimeUnitMeaning	string	Indicates the display value corresponding to the lead time unit lookup code for the action.
Name	string	Indicates the name of the action.
ObjectEntityName	string	Indicates the entity name of the object on which the action is based.
ObjectEntityNameMeaning	string	Indicates the display value corresponding to the object entity name lookup code for the action.
ObjectEntitySubtype	string	Indicates the subtype of the object on which the action is based.
ObjectEntityType	string	Indicates the entity type of the object on which the action is based.
ObjectEntityTypeMeaning	string	Indicates the display value corresponding to the object entity type lookup code for the action.
ObjectLinkTypeId	long	Indicates the object link type identifier associated to the action.
OperationCd	string	Indicates the operation code entry for the action.
OperationCdMeaning	string	Indicates the display value corresponding to the operation lookup code for the action.
OriginalSystemReference	string	Indicates the original system reference entry for the action.
ParentEntityName	string	Indicates the entity name of the object on which the action is used.
ParentEntityNameMeaning	string	Indicates the display value corresponding to the parent entity name lookup code for the action.
ProcessConnectionTypeCd	string	Lookup code that indicates if the connection to Process Cloud is basic or integrated.
ProcessMetadataId	long	Indicates the process metadata identifier.
ProcessMetadataNumber	string	Indicates the reference number of the process metadata.

Name	Type	Description
StripeCd	string	Indicates the application context of the action.
StripeCdMeaning	string	Indicates the display value corresponding to the stripe lookup code for the action.
UpdateFlag	boolean	Flag that indicates if the user has access to update the record.
UseDefaultVersionFlag	boolean	Indicates whether the default version of the action should be used. Example: Default version of a process action.
VisibilityCd	string	Indicates the visibility level of the action.
VisibilityCdMeaning	string	Indicates the display value corresponding to the visibility lookup code for the action.
actionAttribute	*Action Attribute*	Contains the attributes to be set while creating or updating the entity object of an action.
actionCondition	*Action Condition*	Indicates the action condition identifier of an action plan.

Action Attribute

Contains the attributes to be set while creating or updating the entity object of an action.

QName: {http://xmlns.oracle.com/apps/crm/service/actionplan/actionplanService/}ActionAttribute

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Action*
Handled by	*Action Plan Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActionAttributeId	long	Indicates the identifier of the action attribute. • Primary Key
ActionId	long	Indicates the unique identifier for the action attribute.
AttributeName	string	Indicates the attribute name of the associated entity object.
AttributeValue	string	Indicates a value to be set on the action attribute.
AttributeValueContextCd	string	Indicates the context within which the attribute value is interpreted.
AttributeValueContextCdMeaning	string	Indicates the display value corresponding to the context lookup code for the action attribute.
ChildAttributeFlag	boolean	Flag which identifies if this attribute belongs to the parent or one of its child objects.
CreatedBy	string	Indicates the user who created the action attribute.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the action attribute was created.
DeleteFlag	boolean	Flag that indicates if the user has access to delete the record.
DeletedFlag	boolean	Indicates whether the action attribute is deleted.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the action attribute was last updated.
LastUpdateLogin	string	Indicates the login session of the user who last updated the action condition.
LastUpdatedBy	string	Indicates the user who last updated the action attribute.
UpdateFlag	boolean	Flag that indicates if the user has access to update the record.
UsageCd	string	Indicates when the attribute is to be used.

Name	Type	Description
UsageCdMeaning	string	Indicates the display value corresponding to the usage lookup code for the action attribute.

Action Condition

Contains the definitions of conditions for the entity object of an action.

QName: {http://xmlns.oracle.com/apps/crm/service/actionplan/actionplanService/}ActionCondition

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Action*
Handled by	*Action Plan Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActionConditionId	long	Indicates the action condition identifier. • Primary Key
ActionId	long	Indicates the action identifier for which the condition is defined.
ActionStatusCd	string	Indicates the action status based on whether the condition is met or not.
ActionStatusCdMeaning	string	Indicates the display value corresponding to the action status lookup code for the action condition.
CompletionFlag	boolean	Indicates the action is completed when the condition is met.

Name	Type	Description
Condition	string	Indicates an expression whether the condition is met or not.
CreatedBy	string	Indicates the user who created the action condition.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the condition was created.
DeleteFlag	boolean	Flag that indicates if the user has access to delete the record.
Description	string	Indicates the description of the action condition.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the action condition was last updated.
LastUpdateLogin	string	Indicates the login session of the user who last updated the action condition.
LastUpdatedBy	string	Indicates the user who last updated the action condition.
Name	string	Indicates the name of the action condition.
UpdateFlag	boolean	Flag that indicates if the user has access to update the record.

Action Plan

Contains details of an action plan instance as created by the agent.

QName: {http://xmlns.oracle.com/apps/crm/service/actionplan/actionplanService/}ActionPlan

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Action Plan Action*

Relationship Type	Object or Service
Handled by	*Action Plan Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActionId	long	Indicates the action identifier.
ActionNumber	string	Indicates the reference number of the action.
ActionObjectEntitySubtype	string	Indicates the object entity subtype of the action.
ActionObjectId	long	Indicates the object identifier associated with the action.
ActionObjectReferenceNumber	string	Indicates the reference number of the object associated with the action.
ActionPlanId	long	Indicates the action plan identifier. • Primary Key
ActionPlanNumber	string	Indicates the action plan reference number.
ActionPlanTypeCd	string	Lookup code that indicates the type of action plan, such as Template based Action Plan, PCS process based Action Plan.
ActionPlanTypeCdMeaning	string	Indicates the display value corresponding to the action plan type lookup code for the action plan.
ActionStatusCd	string	Indicates the status of the action.
ActionStatusCdMeaning	string	Indicates the display value corresponding to the status lookup code for the action.
ActualCompletionDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the actual date of completion of the action plan.
AdditionalInformation	string	Indicates additional information about the action plan record.

Name	Type	Description
CalendarId	long	Indicates the calendar identifier associated with the action plan.
CreatedBy	string	Indicates the user who created the action plan.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the action plan was created.
DeleteFlag	boolean	Flag that controls if the user has access to delete the record.
DeletedFlag	boolean	Indicates whether the action plan is deleted.
ExpectedCompletionDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the projected completion date of the action plan.
InitialCompletionDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the initial date when the action plan was expected to be completed.
LastRefreshedDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date when action plan status was last refreshed
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the action plan was last updated.
LastUpdateLogin	string	Indicates the login session of the user who last updated the action plan.
LastUpdatedBy	string	Indicates the user who last updated the action plan.
Name	string	Indicates the name of the action plan.
ObjectEntityName	string	Indicates the parent entity object name of the action plan.
ObjectEntityNameMeaning	string	Indicates the display value corresponding to the object entity name lookup code for the action plan.
ObjectId	long	Indicates the object identifier of the action plan.
OrderNumber	long	Indicates the order of the action plan in the list of action plans.

Name	Type	Description
ProcessInstanceId	string	Indicates the process instance identifier of an external process.
ProcessStatus	string	Indicates the status of the external process.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the start date of the action plan.
Status	string	Indicates the status of the action plan.
StatusCd	string	Indicates the status of the action plan.
StatusCdMeaning	string	Indicates the display value corresponding to the status lookup code for the action plan.
StatusDetails	string	Indicates the status explanation for the action plan if there is an error.
TemplateId	long	Indicates the action plan template identifier from which the action plan is created.
UpdateFlag	boolean	Flag that controls if the user has access to update the record.
actionPlanAction	*Action Plan Action*	Contains the actions for an action plan instance.

Action Plan Action

Contains the actions for an action plan instance.

QName: {http://xmlns.oracle.com/apps/crm/service/actionplan/actionplanService/}ActionPlanAction

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Action Plan Action Relation*
Contained by	*Action Plan Action Relation*

Relationship Type	Object or Service
Contained by	*Action Plan*
Handled by	*Action Plan Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActionDescription	string	Indicates the description of an action.
ActionId	long	Indicates the action identifier.
ActionName	string	Indicates the name of the action.
ActionNumber	string	Indicates the reference number of the action.
ActionPlanActionId	long	Indicates the action identifier of the action plan. • Primary Key
ActionPlanActionNumber	string	Indicates the action plan reference number.
ActionPlanId	long	Indicates the action plan identifier.
CreatedBy	string	Indicates the user who created the action in an action plan.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the action was created in the action plan.
DelayedFlag	boolean	Indicates whether the action in the action plan is delayed.
DeleteFlag	boolean	Flag to indicate if the user has access to delete the record.
DeletedFlag	boolean	Indicates whether the action in the action plan is deleted.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the end date of an action in the action plan.

Name	Type	Description
EndDateReadOnlyFlag	boolean	Indicates whether the end date should be read only.
ExpectedCompletionDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the expected completion date of the action in the action plan.
ExpectedStartDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the expected start date of an action in the action plan.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the action was last updated in the action plan.
LastUpdateLogin	string	Indicates the login details of the user who last updated the action in the action plan.
LastUpdatedBy	string	Indicates the user who last updated the action in the action plan.
LeadTime	long	Indicates the estimated time to complete the action.
LeadTimeUnit	string	Indicates the unit of measurement of lead time, such as minutes, hours or days.
LeadTimeUnitMeaning	string	Indicates the display value corresponding to the lead time unit lookup code for the action plan action.
MandatoryFlag	boolean	Indicates whether the action for the action plan is mandatory.
ObjectEntityName	string	Indicates the parent entity object name of the action plan.
ObjectEntityNameMeaning	string	Indicates the display value corresponding to the object entity name lookup code for the action plan action.
ObjectEntitySubtype	string	Indicates the object entity subtype of the action in the action plan.
ObjectEntityType	string	Indicates the type of the entity object on which the action is based.
ObjectEntityTypeMeaning	string	Indicates the display value corresponding to the object entity type lookup code for the action plan action.

Name	Type	Description
ObjectId	long	Indicates the object identifier associated with the action.
ObjectReferenceNumber	string	Indicates the reference number of the object associated with the action.
OrderNumber	long	Indicates the action's order in an action plan.
OwnerName	string	Indicates the name of the owner of the action.
Prerequisites	string	Indicates the prerequisite action steps for the action.
ProcessInstanceId	string	Indicates the process instance identifier of an external process.
ProcessStatus	string	Indicates the status of the external process.
SkipFlag	boolean	Indicates whether the action for the action plan can be skipped.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the start date of an action in the action plan.
StatusCd	string	Indicates the status of the action.
StatusCdMeaning	string	Indicates the display value corresponding to the status lookup code for the action plan action.
StatusDetails	string	Indicates the details of the action status in the action plan.
TemplateId	long	Indicates the action plan template identifier from which the action is created.
UpdateFlag	boolean	Flag to indicate if the user has access to update the record.
VisibilityCd	string	Indicates the visibility level of the action.
VisibilityCdMeaning	string	Indicates the display value corresponding to the visibility lookup code for the action plan action.
actionPlanActionRelation	*Action Plan Action Relation*	Contains the dependencies of actions on other actions in an action plan.

Action Plan Action Relation

Indicates the relation between the actions of an action plan instance.

QName: {http://xmlns.oracle.com/apps/crm/service/actionplan/actionplanService/}ActionPlanActionRelation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Action Plan Action*
Contained by	*Action Plan Action*
Handled by	*Action Plan Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActionPlanActionId	long	Indicates the action plan action identifier.
ActionStatusCd	string	Indicates the status code which describes the dependency condition of this relation record
CreatedBy	string	Indicates the user who created the dependencies of action.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the action dependency record was created.
DeleteFlag	boolean	Flag that indicates if the user has access to delete the record.
DeletedFlag	boolean	Indicates whether the dependency record is logically deleted.
DepActionPlanAction	*Action Plan Action*	Indicates the relation identifier between actionPlanActionVO and actionPlanActionRelationVO.

Name	Type	Description
DepActionPlanActionId	long	Indicates the dependent action identifier of an action plan.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the dependency record was last updated.
LastUpdateLogin	string	Indicates the login session of the user who last updated the dependency record.
LastUpdatedBy	string	Indicates the user who last updated the dependencies of action.
RelationId	long	Indicates the relation identifier between actions in an action plan. • Primary Key
UpdateFlag	boolean	Flag that indicates if the user has access to update the record.

Action Relation

Indicates the relation between the actions of an action plan template.

QName: {http://xmlns.oracle.com/apps/crm/service/actionplan/actionplanService/}ActionRelation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Template Action*
Contained by	*Template Action*
Handled by	*Action Plan Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActionStatusCd	string	Indicates the status code which describes the dependency condition of this relation record
ActionStatusCdMeaning	string	Indicates the display value corresponding to the action status lookup code for the action relation.
CreatedBy	string	Indicates the user who created the dependencies of action.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the action dependency record was created.
DeleteFlag	boolean	Flag that indicates if the user has access to delete the record.
DeletedFlag	boolean	Indicates whether the dependency record is logically deleted.
DepTemplateAction	*Template Action*	Contains the association of an action relation to respective template action.
DepTemplateActionId	long	Indicates the template action identifier of a dependent action.
DepTmpActionOrderNumber	long	Indicates the order of display for an action within an action template.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the dependency record was last updated.
LastUpdateLogin	string	Indicates the login session of the user who last updated the dependency record.
LastUpdatedBy	string	Indicates the user who last updated the dependencies of action.
RelationId	long	Indicates the relation identifier between actions in an action plan template. • Primary Key
TemplateActionId	long	Indicates the identifier of an action in an action plan template.
UpdateFlag	boolean	Flag that indicates if the user has access to update the record.

Template

Contains details for the action plan templates in the system.

QName: {http://xmlns.oracle.com/apps/crm/service/actionplan/actionplanService/}Template

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Template Action*
Handled by	*Action Plan Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActionPlanTypeCd	string	Indicates the category of the action plan template.
ActionPlanTypeCdMeaning	string	Indicates the display value corresponding to the action plan type lookup code for the template.
AutoStartFlag	boolean	Indicates if action plans created using the template are automatically started.
BUOrgId	long	The unique ID of the business unit name associated to the action plan template.
BusinessUnitName	string	The name of the business unit associated to the template.
CalendarId	long	Indicates the identifier of calendar to associate with the action plan template.
CoverageName	string	Indicates the name of the calendar the action plan template refers to.
CoverageTimeId	long	Indicates the unique identifier for the calendar entry.

Name	Type	Description
CreatedBy	string	Indicates the user who created the action plan template.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time of the creation of the action plan template.
DeleteFlag	boolean	Flag that indicates if the user has access to delete the record.
DeletedFlag	boolean	Indicates whether the action plan template is deleted.
Description	string	Indicates the description of the action plan template.
EnabledFlag	boolean	Indicates whether the action plan template has been published.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the end date of the action plan template.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the action plan template was last updated.
LastUpdateLogin	string	Indicates the session login associated to the user who last updated the action plan template.
LastUpdatedBy	string	Indicates the user who last updated the action plan template.
Name	string	Indicates the name of the action plan template.
ObjectEntityName	string	Indicates the entity name of the object that the template uses to create action plans.
ObjectEntityNameMeaning	string	Indicates the display value corresponding to the object entity name lookup code for the template.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the start date of the action plan template.
StripeCd	string	Indicates the application context of the action plan template.

Name	Type	Description
StripeCdMeaning	string	Indicates the display value corresponding to the stripe lookup code for the template.
TemplateId	long	Indicates the action plan template identifier. • Primary Key
TemplateNumber	string	Indicates the reference number of the action plan template.
UpdateFlag	boolean	Flag that indicates if the user has access to update the record.
templateAction	*Template Action*	Contains the association of actions to action plan templates.

Template Action

Contains the association of actions to action plan templates.

QName: {http://xmlns.oracle.com/apps/crm/service/actionplan/actionplanService/}TemplateAction

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Action Relation*
Contained by	*Action Relation*
Contained by	*Template*
Handled by	*Action Plan Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActionId	long	Indicates the action identifier.
ActionNumber	string	Indicates the reference number of the action.
CreatedBy	string	Indicates the user who created the action template.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the action template was created
DeleteFlag	boolean	Flag that indicates if the user has access to delete the record.
DeletedFlag	boolean	Indicates whether the associated record is deleted.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the action action template was last updated.
LastUpdateLogin	string	Indicates the login session of the user who last updated the action template.
LastUpdatedBy	string	Indicates the user who last updated the action template.
MandatoryFlag	boolean	Indicates whether the action in the action plan is mandatory.
OrderNumber	long	Indicates the order of display for an action within an action template.
Prerequisites	string	Indicates the prerequisite action steps for the action.
TemplateActionId	long	Indicates template action identifier. • Primary Key
TemplateActionNumber	string	Indicates the template action reference number.
TemplateId	long	Indicates the action plan template identifier.
Tier	long	Used in Action Plan diagram view to display the action nodes at appropriate levels.
UpdateFlag	boolean	Flag that indicates if the user has access to update the record.

Name	Type	Description
actionRelation	*Action Relation*	Indicates the relation between the actions of an action plan template.

Activity Service

Service to operate on activity object.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activityManagementService/}ActivityService

Service WSDL URL: https://servername/crmService/ActivityService?WSDL

Logical Business Objects

- CRM : Applications Common Components : Activity

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Common Attachment SDO*
Handles	*Activity Assignee*
Handles	*Activity Delete Exception*
Handles	*Note Descriptive Flexfields*
Handles	*Activity Contact*
Handles	*Note*
Handles	*Activity*
Handles	*Activity Objective*

Operations

- *deleteAttachment*
- *getAttachmentsListWithoutContent*
- *getAttachmentContent*
- *copyAttachment*
- *createAttachment*
- *generateActivitiesFromTemplate*
- *getActivity*
- *createActivity*
- *updateActivity*
- *deleteActivity*
- *mergeActivity*
- *findActivity*
- *processActivity*
- *createActivityAssignee*
- *updateActivityAssignee*
- *deleteActivityAssignee*
- *findActivityAssignee*
- *createActivityContact*
- *updateActivityContact*
- *deleteActivityContact*
- *findActivityContact*
- *findActivityDeleteExceptions*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

deleteAttachment

An operation to delete a single or multiple attachments associated to an activity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
deleteParams	*Common Attachment*	The parameter based on which deletion of attachments should trigger.
commitData	string	A flag to indicate whether or not to commit transaction for this operation.

Response Payload

Element Name	Type	Description
result	string	The parameter returns the success or failure status of the operation.

getAttachmentsListWithoutContent

An operation to get list of all the attachment associated with an activity without any file content.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
getParameters	*Common Attachment*	The parameters based on which list of attachments to be fetched is determined.

Response Payload

Element Name	Type	Description
result	*Common Attachment*	The parameter returns the list of all the attachments without any file content.

getAttachmentContent

An operation to get attachment associated with an activity with file content if applicable.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
getParameters	*Common Attachment*	The parameters based on which attachment to be fetched is determined.

Response Payload

Element Name	Type	Description
result	*Common Attachment*	The parameter returns the attachment with file content, if applicable.

Element Name	Type	Description

copyAttachment

An operation to copy a single or multiple attachments associated to an activity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
attachmentRows	*Common Attachment*	The parameter for the list of attachments to be copied.
commitData	string	A flag to indicate whether or not to commit transaction for this operation.

Response Payload

Element Name	Type	Description
result	string	The parameter returns the success or failure status of the operation.

createAttachment

An operation to create a single or multiple attachments associated to an activity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
attachmentRows	*Common Attachment*	The parameter which provides the list of attachments to be created.
commitData	string	A flag to indicate whether or not to commit transaction for this operation.

Response Payload

Element Name	Type	Description
result	string	The parameter returns the success or failure status of the operation.

generateActivitiesFromTemplate

An operation to generate activities from a template. A valid value for templateId should be passed. Only following activity attributes are supported in activityAttributes input parameter as of now: CustomerId, OwnerId, AssesmentId, ActivityContact, ActivityAssignee, ActivityStartDate, LeadId, OpportunityId, and CampaignId.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
templateId	long	The unique identifier of the template-set using which the activities are to be generated.
activityAttributes	*Activity*	The Activity SDO attribute list using which template activities should be generated.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns the list of all the generated activities using the template.

getActivity

The out-of-the-box Get operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityId	long	The activity ID for which the activity record is to be fetched.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns the activity record based on input activity ID.

createActivity

The out-of-the-box Create operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activity	*Activity*	The activity record to be created for the method createActivity.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns the created activity record.

updateActivity

The out-of-the-box Update operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activity	*Activity*	The activity record to be updated for the method createActivity carrying updated attributes.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns the updated activity record.

deleteActivity

The out-of-the-box Delete operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activity	*Activity*	The activity record to be deleted for the method deleteActivity.

Response Payload

Element Name	Type	Description
result	void	This operation returns nothing for the method deleteActivity.

mergeActivity

OOTB merge operation on Activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activity	*Activity*	Activities which have to be merged.

Response Payload

Element Name	Type	Description
result	*Activity*	Merged Activity.

findActivity

The out-of-the-box Find operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The FindCriteria object using which the find operation works for the method findActivity.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The FindControl object using which the find operation works for the method findActivity.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns the list of activity records based on FindCriteria and FindControl input objects.

processActivity

The out-of-the-box Process operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	The name of the operation to be performed like, create, update, and so on.
activity	*Activity*	The list of activity records on which the operation is to be performed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The optional ProcessControl object to be used while performing this operation.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns a list of activity records after the operation is complete.

createActivityAssignee

The out-of-the-box Create operation for the activity assignee SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityAssigneeWebService	*Activity Assignee*	The activity assignee record to be created for the method createActivityAssignee.

Response Payload

Element Name	Type	Description
result	*Activity Assignee*	The parameter returns the created activity assignee record.

updateActivityAssignee

The out-of-the-box Update operation for the activity assignee SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityAssigneeWebService	*Activity Assignee*	The activity assignee record to be updated for the method updateActivityAssignee.

Response Payload

Element Name	Type	Description
result	*Activity Assignee*	The parameter returns the updated activity assignee record.

deleteActivityAssignee

The out-of-the-box Delete operation for the activity assignee SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityAssigneeWebService	*Activity Assignee*	The activity assignee record to be deleted for the method deleteActivityAssignee.

Response Payload

Element Name	Type	Description
result	void	This operation returns nothing for the method deleteActivityAssignee.

findActivityAssignee

The out-of-the-box Find operation for the activity assignee SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The FindCriteria object using which the find operation works for the method findActivityAssignee.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The FindControl object using which the find operation works for the method findActivityAssignee.

Response Payload

Element Name	Type	Description
result	*Activity Assignee*	The parameter returns the list of activity assignee records based on FindCriteria and FindControl input objects.

createActivityContact

The out-of-the-box Create operation for the activity contact SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityContactWebService	*Activity Contact*	The activity contact record to be created for the method createActivityContact.

Response Payload

Element Name	Type	Description
result	*Activity Contact*	The parameter returns the created activity contact record.

updateActivityContact

The out-of-the-box Update operation for the activity contact SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityContactWebService	*Activity Contact*	The activity contact record to be updated for the method updateActivityContact.

Response Payload

Element Name	Type	Description
result	*Activity Contact*	The parameter returns the updated activity contact record.

deleteActivityContact

The out-of-the-box Delete operation for the activity contact SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityContactWebService	*Activity Contact*	The activity contact record to be deleted for the method deleteActivityContact.

Response Payload

Element Name	Type	Description
result	void	This operation returns nothing for the method deleteActivityContact.

findActivityContact

The out-of-the-box Find operation for the activity contact SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The FindCriteria object using which the find operation works for the method findActivityContact.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The FindControl object using which the find operation works for the method findActivityContact.

Response Payload

Element Name	Type	Description
result	*Activity Contact*	The parameter returns the list of activity contact records based on FindCriteria and FindControl input objects.

findActivityDeleteExceptions

The out-of-the-box Find operation on activity delete exception SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The FindCriteria object using which the find operation works for the method findActivityDeleteExceptions.

Element Name	Type	Description
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The FindControl object using which the find operation works for the method findActivityDeleteExceptions.

Response Payload

Element Name	Type	Description
result	*Activity Delete Exception*	The parameter returns the list of activity delete exception records based on FindCriteria and FindControl input objects.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The parameter returns the label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The parameter returns the date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	The parameter returns a list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getActivity	ZMM_VIEW_ONLY_ACTIVITY_PRIV	View Only Activity	Allows only viewing of activities.
getActivity	ZMM_VIEW_ACTIVITY_PRIV	View Activity	Allows viewing activities.

Activity

The task and appointment information.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activityManagementService/}Activity

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Activity Assignee*
Contains	*Activity Contact*
Contains	*Activity*
Contains	*Note*
Contains	*Activity Objective*
Contained by	*Activity*
Handled by	*Activity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountId	long	The party ID of the activity account (e.g. Customer - org/person, or Partner).
AccountName	string	The name of the account associated with the activity.
AccountNumber	string	Account Number of account associated with the activity.
ActivityAssignee	*Activity Assignee*	The attribute used to capture the assignees and resources associated with the activity.
ActivityContact	*Activity Contact*	The attribute used to capture the contacts associated to the activity.
ActivityCreatedBy	string	The original activity created by.
ActivityCreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The original activity creation date.
ActivityDescription	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The text field for capturing descriptive information about the activity.

Name	Type	Description
ActivityEndDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The end date and time of an appointment or the completion time of a task.
ActivityFunctionCode	string	The task vs. appointment for system use only.
ActivityId	long	The unique identifier of the activity. • Primary Key
ActivityLastUpdateLogin	string	The original activity last update login.
ActivityMtgMinutes	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The activity meeting minutes.
ActivityNumber	string	The system-generated activity number that can come from an external system (user key).
ActivityObjectives	*Activity Objective*	The activity objectives.
ActivityStartDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The start date and time of an appointment or a task that defaults to null for an appointment and to creation datetime for a task.
ActivitySubtypeCode	string	Displays a list of subtype values that are dependent on the value of the activity.
ActivityTimezone	string	The time zone that the activity needs to be created in, which may be different from the default logged in user's time zone preference.
ActivityTypeCode	string	The type or category of the activity.
ActivityUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The original activity update date.
ActivityUpdatedBy	string	The original activity updated by.
ActivityUserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The original activity user last update date.
AllDayFlag	boolean	Indicates that an appointment is for the entire day.
ArticleVersionId	string	Knowledge Article Version

Name	Type	Description
AssessmentId	long	The identifier of the assessment to which the activity or the activity template is associated with.
AssetId	long	Id of the Asset associated with the activity.
AssetName	string	Name of the Asset associated with the activity
AssetNumber	string	Asset Number.
AssetSerialNumber	string	Asset Serial Number.
AutoLogSource	string	The source system activities that are auto-generated and used later in sync back logic to avoid double appearances of the same activity.
BpId	long	The related business plan.
BusinessPlanName	string	The business plan name associated with the activity.
BusinessPlanNumber	string	Business Plan Number of the business plan associated with the activity.
CallReportToActivity	*Activity*	The call report to the activity.
CallReportUpcomingYN	string	Indicates Y,N, or M for upcoming appointments.
CallReportYN	string	Indicates to check if the activity has a call report.
CampaignId	long	The unique identifier for the campaign.
CampaignName	string	The name of the campaign associated with the activity.
CampaignNumber	string	Campaign Number of the campaign associated with the activity.
CaseId	long	Case Id
CaseNumber	string	Case Number
CaseTitle	string	Case Title

Name	Type	Description
CheckedInBy	string	Specifies the name of the person who checks-in to a location.
CheckedOutBy	string	Specifies the name of the person who checks-out to a location.
CheckinDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Stores the date and time when a user checks in to an Appointment.
CheckinLatitude	decimal	Stores the latitude of a location where a user checks in to an Appointment.
CheckinLongitude	decimal	Stores the longitude of a location where a user checks in to an Appointment.
CheckoutDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Stores the date and time when a user checks out of an Appointment.
CheckoutLatitude	decimal	Stores the latitude of a location where a user checks out of an Appointment.
CheckoutLongitude	decimal	Stores the longitude of a location where a user checks out of an Appointment.
ClaimId	long	The related claim.
ClaimName	string	The claim name associated with the activity.
ClaimNumber	string	Claim Number of the claim associated with the activity.
ContactNumber	string	Contact Number of primary contact associated with the activity.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.

Name	Type	Description
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CustomFKAttribute	string	The custom foreign key attribute.
CustomerAccountId	long	The ID of the customer account that the activity relates to.
DealId	long	The related deal.
DealNumber	string	The deal number associated with the activity.
DelegatorId	long	The activity resource that delegated activity ownership to another resource.
DelegatorName	string	The name of activity resource that delegated activity ownership to another resource.
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
DirectionCode	string	The inbound/outbound direction code which is optional and defaults to null.
DismissAssignee	string	Flag to dismiss Assignee.Valid values are Y and N.
DismissFlag	boolean	This Flag indicates if this activity is Dismissed
DoNotCallFlag	boolean	Flag to indicate if primary Contact can be called.
DueDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date the task activity is due to be completed.
Duration	decimal	The duration of an appointment or task.
EmailSentDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	This field is used to capture the Activity Email Notification shared date for Outlook integration
ExternalContactEmail	string	Indicates the Email address of an external contact.
ExternalContactName	string	Indicates the name of an external contact.

Name	Type	Description
ExternallyOwnedFlag	boolean	Indicates that the activity is not created by an internal resource.
FundRequestId	long	The related fund request.
FundRequestName	string	The fund request name associated with the activity.
FundRequestNumber	string	Fund Request Number of the fund request associated with the activity.
IbAssetId	long	Id of the Installed Base Asset associated with the activity.
IbAssetNumber	string	Number of the Installed Base Asset associated with the activity.
IbAssetSerialNumber	string	Serial Number of the Installed Base Asset associated with the activity.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LeadId	long	The related lead ID.
LeadName	string	The lead name.
LeadNumber	string	Lead Number of lead associated with the activity.
Location	string	The appointment location.
LocationId	long	Location or Address ID of the activity account or primary contact.
MobileActivityCode	string	The unique identifier of an external mobile device.
Note	*Note*	The attribute used to capture note records for an activity.

Name	Type	Description
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ObjectiveId	long	The related objective.
OpportunityId	long	The related opportunity.
OpportunityName	string	The name of the opportunity associated with the activity.
OpportunityNumber	string	Opportunity Number of the opportunity Associated with the activity.
OtherPartyPhoneNumber	string	The phone number for inbound phone calls as they apply to the ANI or number being called from. For outbound calls, this applies to the phone number being called.
OutcomeCode	string	The outcome of the activity.
OutlookAutoSyncFlag	boolean	Indicates whether an appointment was automatically generated by the synchronization process from Microsoft 365
OutlookFlag	boolean	Indicates if activity was created from Outlook and synced. A "Y" indicates yes.
OutlookGlobalId	string	The unique identifier of an appointment created from Microsoft 365
OutlookIdentifier	string	The unique identifier from Outlook activity.
OwnerAddress	string	Activity Owner's Address.
OwnerEmailAddress	string	Activity Owner's Email Address.
OwnerId	long	The primary resource on the activity which supports resources only.
OwnerName	string	The name of the primary resource of activity.
OwnerPhoneNumber	string	Activity Owner's Phone Number.

Name	Type	Description
ParentActivity	*Activity*	The parent activity.
ParentActivityId	long	The related activity ID; only applicable if the record is a follow up activity.
PartnerEnrollmentId	long	The related partner enrollment.
PartnerPartyId	long	Party identifier of the partner organization.
PartnerPartyName	string	Party name of the partner organization.
PartnerPartyNumber	string	Partner Party Number of partner associated with the activity.
PartnerProgramId	long	The related partner program.
PartnerProgramName	string	The name of the partner program associated with the activity.
PartnerProgramNumber	string	Partner Program Number of partner program associated with the activity.
PartnerUsageFlag	boolean	The flag to indicate that the activity has been created for an organization account with usage as partner.
PercentageComplete	decimal	Indicates a numeric value 0-100 to reflect the percent complete status of the activity. Free form numeric and % value at end.
PrimaryContactEmailAddress	string	The holder for the email ID of the primary contact.
PrimaryContactId	long	The primary contact of the activity.
PrimaryContactName	string	The name of the primary contact.
PrimaryFormattedAddress	string	Holds Address of the primary contact
PrimaryFormattedPhoneNumber	string	The holder for the phone number of the primary contact.
PriorityCode	string	The priority of the activity which defaults to 2 and has possible values of 1, 2, and 3.

Name	Type	Description
PrivateFlag	boolean	Indicates if the activity is private.
RecurDay	long	Indicates a repeat on a specified day of the month (for monthly appointments).
RecurEndDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the activity ends on a specified date.
RecurEveryOptionFlag	boolean	Indicates if the recurrence occurs for every day, month, or year. For example, a daily recurring appointment can occur every day of the week or weekdays only. If it is everyday of the week, it is set to Y. If it is weekdays only, it is set to N.
RecurExceptionFlag	boolean	Indicates if the appointment instance has been updated outside of a recurring appointment series.
RecurFrequency	decimal	The frequency that the recurring appointment series repeats.
RecurFriFlag	boolean	Indicates an appointment repeat on Friday.
RecurMonFlag	boolean	Indicates an appointment repeat on Monday.
RecurMonth	string	Indicates an appointment repeat on specified month (for yearly appointments).
RecurNumberOfInstances	decimal	The specific number of occurrences for the series to end after.
RecurOrigInstDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The original date of a recurring appointment instance.
RecurPattern	string	The week for an appointment to recur (for monthly and yearly appointments). Possible values: First, Second, Third, Fourth, Last.
RecurRecType	string	The type to be used for internal use only. Either "I" for instance or "S" for series or "N" for non-recurring. Do not populate it if Activity is of type Task.
RecurSatFlag	boolean	Indicates an appointment repeat on Saturday.
RecurSeriesId	long	The series ID that links instances of a series together.

Name	Type	Description
RecurSunFlag	boolean	Indicates an appointment repeat on Sunday.
RecurThuFlag	boolean	Indicates an appointment repeat on Thursday.
RecurTueFlag	boolean	Indicates an appointment repeat on Tuesday.
RecurTypeCode	string	Indicates how often an appointment is repeated. Possible values include Daily, Weekly, Monthly, and Yearly.
RecurWedFlag	boolean	Indicates an appointment repeat on Wednesday.
RecurWeekday	string	The recurrence that works in conjunction with the RecurPattern attribute. Possible values include Monday to Sunday, Weekday, Weekend, and Day.
ReferenceCustomerActTypeCode	string	The activity type for a reference customer activity to be used as an extension only.
ReferenceCustomerId	long	The ID of the reference customer (party) associated with the activity.
ReminderPeriod	string	The reminder period.
ResourceNumber	string	Resource Number of owner associated with the activity.
ResponseCode	string	The response code.
SalesObjectiveName	string	The sales objective name associated with the activity.
SalesObjectiveNumber	string	Sales Objective Number of the sales objective associated with the activity.
ShowTimeAs	string	The show time.
SortDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	This is an internal column which is used to sort the activity based on the due date for task and start date for activity.
SourceObjectCode	string	The object code to which the activity will be related to.

Name	Type	Description
SourceObjectId	long	The identifier of the object to which activity will be related to.
SrId	long	The service request ID.
SrNumber	string	The service request number.
StatusCode	string	The pre-defined code used to indicate the status.
Subject	string	The subject/name/title of the activity.
SubmittedBy	long	The call report submitter.
SubmittedByName	string	The call report submitter.
SubmittedDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The call report submission date.
SwitchCallId	string	The unique identifier of the call on the external phone system.
TaskReminderPeriod	string	Task Reminder Period
TemplateDuration	decimal	The duration (in days) of the template activity. This attribute is used with the start date when generating an activity from a template in order to calculate the due date.
TemplateLeadTime	decimal	The lead time (in days) of the template activity. This attribute is used with the date input parameter when generating an activity from a template in order to calculate the activity start date. Activity start date = date provided as input parameter + lead time.
UpdateFlag	boolean	The flag that controls if the user has access to update the record.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.
WebConferenceDetails	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	Web conference details
WebConferenceId	string	Web conference unique id

Name	Type	Description
WebConferenceURL	string	Web conference join URL

Activity Assignee

The assignee or resource associated with the activity.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activityManagementService/}ActivityAssignee

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Activity*
Handled by	*Activity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivityAssigneeId	long	The activity assignee ID which is the surrogate key added for BI and Outlook. This is not a substitute for the primary key.
ActivityId	long	The unique identifier of the activity. • Primary Key
AssigneeId	long	The ID of the assignee associated with the activity. • Primary Key
AssigneeName	string	The assignee's name.
AssigneePartyNumber	string	The attribute that holds the party number of the contact.

Name	Type	Description
AttendeeFlag	boolean	The flag to check if the contact attended the activity.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DismissFlag	boolean	The flag that indicates if the activity is dismissed.
JobName	string	The job name.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
Phone	string	The phone information for the entity.
PrimaryEmail	string	The attribute that holds the email ID of the contact.
PrimaryFormattedAddress	string	The attribute that holds the primary address of the resource.

Name	Type	Description
ReminderDatetime	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date/time to send the appointment reminder.
ReminderPeriod	int	Indicates how soon before the appointment to send a reminder.
ResourceNumber	string	Resource Number of the resource associated with the activity.
ResponseCode	string	The flag to indicate whether a reminder is needed.
ShowTimeAsCode	string	Indicates how to display the appointment time on the calendar (e.g. free, busy, tentative).
TaskReminderPeriod	int	Designates how soon before the task due to send a reminder.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Activity Contact

The contact associated with the activity.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activityManagementService/}ActivityContact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Activity*
Handled by	*Activity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivityContactId	long	The activity contact ID which is a surrogate key added for BI and Outlook. This is not a substitute for the primary key.
ActivityId	long	The unique identifier of the activity. • Primary Key
Affinity	string	The contact affinity.
AttendeeFlag	boolean	The flag to check If the contact attended the activity.
BuyingRole	string	The contact buying role.
ContactAccount	string	The attribute that holds the account name that the contact is associated with.
ContactAccountId	long	The attribute that holds the ID of the account that the contact is associated with.
ContactEmail	string	The attribute that holds the email ID of the contact.
ContactId	long	The ID of the contact associated with the activity. • Primary Key
ContactJobTitle	string	The attribute that holds the job title of the contact.
ContactName	string	The contact name.
ContactPartyNumber	string	The attribute that holds the party number of the contact.
ContactPhone	string	The attribute that holds the phone number of the contact.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DoNotCallFlag	boolean	The flag to check if the contact can be contacted through call.
DoNotContactFlag	boolean	The flag to check if the contact can be contacted.
DoNotEmailFlag	boolean	The flag to check if this contact can be contacted through email.
ExternalContactEmail	string	Indicates the Email address of an external contact.
ExternalContactFlag	boolean	Indicates that the contact does not exist in Oracle Sales Cloud.
ExternalContactName	string	Indicates the name of an external contact.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PrimaryContactFlag	boolean	This used of enable/disable PrimaryContactFlag for a contact.
PrimaryFormattedAddress	string	The attribute that holds the primary address of the contact.
RelationshipId	long	The relationship identifier for the record.

Name	Type	Description
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Activity Delete Exception

The instances of an appointment series that have been deleted.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activityManagementService/}ActivityDeleteException

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Activity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DeleteExceptionSeriesId	long	The unique identifier of the appointment series. • Primary Key
DeleteExceptionStartDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The start date of the recurring appointment that was deleted. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.

Name	Type	Description
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Activity Objective

The objectives associated with the activity.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activityManagementService/}ActivityObjectives

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Activity*
Handled by	*Activity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivityId	long	The unique identifier of the activity.
CompletedFlag	boolean	The completed flag.
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.

Name	Type	Description
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ObjectiveCode	string	The objective code.
ObjectiveFreefmtText	string	The objective free format text.
ObjectiveId	long	The objective ID. • Primary Key

Common Attachment

The attachment that can include documents, files, or web site links associated with appointments, interactions or tasks.

QName: {http://xmlns.oracle.com/apps/crmCommon/objects/objectsService/}CommonAttachments

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Appointment Service*
Handled by	*Customer Interaction*
Handled by	*Activity Service*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttachedDocumentId	long	The identifier of the document attachment.
Attachment	string	The title or name of the attachment.
CategoryName	string	The name of the attachment category.
DatatypeCode	string	The code value of the data type.
Description	string	The free text description of the record.
DmFolderPath	string	The folder path of the attachment.
DmNode	decimal	The attachment node.
DmRepository	string	The attachment repository.
DmType	string	The type of attachment.
DmVersionNumber	string	The version number of the attachment.
DocumentAttributes	string	The attributes of the document attachment.
DocumentEntityId	long	The identifier of document entity.

Name	Type	Description
DownloadStatus	string	The download status of attachment.
EntityAttributes	string	The entity attributes of the attachment.
EntityName	string	The name of the entity attachment.
FileName	string	The name of the file attachment.
FileURL	string	The URL of the file attachment.
Pk1Value	string	Value of primary key 1.
Pk2Value	string	Value of primary key 2.
Pk3Value	string	Value of primary key 3.
Pk4Value	string	Value of primary key 4.
Pk5Value	string	Value of primary key 5.
TableName	string	The table name of attachment.
Title	string	The attachment title.
URL	string	The destination URL associated with a specific Google AdWords ad.
UploadedFile	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The uploaded attachment file.
UploadedFileContentType	string	The content type of file attachment.
UploadedFileLength	long	The length of file attachment.
UploadedFileName	string	The name of the file attachment.
UploadedText	string	The attachment text.
UsageType	string	The usage type of the attachment.
VersionControlIcon	string	The attachment version control.

Name	Type	Description

Note

The object that captures comments, information, or instructions for an Oracle Fusion Applications business object.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/noteService}Note

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Note Descriptive Flexfields*

Handled by	*Sales Competitor Service*
Handled by	*Sales Cloud Household*
Handled by	*Partner Program Enrollment Service*
Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactRelationshipId	long	The identifier of the contact relationship record in Trading Community Architecture (TCA).
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreatorPartyId	long	This is the party identifier for the note creator.

Name	Type	Description
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DeleteFlag	boolean	Indicates whether the user has access to delete the note.
Dff	*Note Descriptive Flexfields*	The descriptive flex field segment.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record
NoteAttributeCategory	string	The contextual flex field for development usage.
NoteAttributeUid1	string	The flex field for development usage.
NoteAttributeUid2	string	The flex field for development usage.
NoteAttributeUid3	string	The flex field for development usage.
NoteAttributeUid4	string	The flex field for development usage.
NoteAttributeUid5	string	The flex field for development usage.
NoteId	long	The unique identifier of the note. • Primary Key
NoteNumber	string	The alternate unique identifier of the note. A user key that is system generated or from an external system.
NoteTitle	string	The title of the note entered by the user.
NoteTxt	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	This is the column that stores the actual note text.

Name	Type	Description
NoteTypeCode	string	This is the note type code for categorization of note.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
SourceObjectCode	string	This is the source_object_code for the source object as defined in OBJECTS Metadata.
SourceObjectId	string	This is the source_object_Uid for the source object such as Activities, Opportunities, and so on defined in OBJECTS metadata.
UpdateFlag	boolean	Indicates whether the user can update the note.
VisibilityCode	string	This is the attribute to specify the visibility level of the note.

Note Descriptive Flexfields

The descriptive flex field that captures additional information for notes, such as a priority or status.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/flex/noteDff/}NoteDFF

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Note*
Handled by	*Business Plan Service*
Handled by	*Sales Reference Customer*
Handled by	*Appointment Service*
Handled by	*Sales Cloud Contact*
Handled by	*Sales Objective*

reassignTaskViaPartyId

Reassigns an activity task using assignee party identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
taskId	string	The identifier of the activity task reassigned using assignee party identifier.
assigneesId	long	The identifiers of the task assignees reassigned using assignee party identifier.

Response Payload

Element Name	Type	Description
result	void	

createTask

Creates an activity task.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
taskRow	*Task*	The identifier of the created activity task.

Response Payload

Element Name	Type	Description
result	*Task*	The created activity task.

claimTask

The claim operation for activity task.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
taskId	string	Identifier of the claimed activity task.

Response Payload

Element Name	Type	Description
result	*Task*	The claimed activity task.

completeTask

The complete operation for activity task.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
taskId	string	Identifier of the completed activity task.

Response Payload

Element Name	Type	Description
result	*Task*	The completed activity task.

findTask

Finds an activity task.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
criteriaAsXML	string	The criteria used to limit your query result, such as the filter (where clause), the fetch size, etc.
findControl	string	Find control. Not currently used.

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	*Task*	A list of activity tasks that satisfy the inbound criteria.

generateTasksFromTemplate

Generates task from template.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
templateId	long	Identifier of the template when generating tasks from a template.
sourceObjectId	long	Identifier of the source object of the template when generating tasks from a template.
startDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Start date of the template when generating tasks from a template.
taskAttributes	*Task*	Attributes of the tasks generated from a template.

Response Payload

Element Name	Type	Description
result	*Task*	Tasks generated from a template.

getTaskById

Retrieves activity task using activity task Identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
taskId	string	Identifier of the activity task.

Response Payload

Element Name	Type	Description
result	*Task*	Task that matches the activity task identifier.

reassignTask

Reassigns an activity task.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
taskId	string	Identifier of the reassigned activity task.
assignees	string	Task assignees.

Response Payload

Element Name	Type	Description
result	void	

releaseTask

Release operation for activity task.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
taskId	string	Identifier of the released activity task.

Response Payload

Element Name	Type	Description
result	*Task*	Released activity task.

resumeTask

Resume operation for activity task.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
taskId	string	Identifier of the resumed activity task.

Response Payload

Element Name	Type	Description
result	*Task*	Resumed activity task.

suspendTask

Suspend operation for activity task.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
taskId	string	Identifier of the suspended activity task.

Response Payload

Element Name	Type	Description
result	*Task*	Suspended activity task.

updateTask

Update operation for activity task.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
taskRow	*Task*	Identifier of the updated activity task.

Response Payload

Element Name	Type	Description
result	*Task*	Updated activity task.

updateTaskTCAPartyMerge

Updates activity task following party merge.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
survivorId	string	Identifier of survivor party for activity task update following party merge.
recordId	string	Identifier of party for activity task update following party merge.
objDef	string	Object definition for activity task update following party merge.

Response Payload

Element Name	Type	Description
result	string	Updates activity task following party merge.

withdrawTask

Withdraw operation for activity task.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
taskId	string	Identifier of the withdrawn activity task.

Response Payload

Element Name	Type	Description
result	*Task*	Withdrawn activity task.

createTaskContact

Creates an activity task contact.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityTaskContact	*Activity Task Contact*	Activity task contact to be created.

Response Payload

Element Name	Type	Description
result	*Activity Task Contact*	Created activity task contact.

deleteTaskContact

Deletes an activity task contact.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityTaskContact	*Activity Task Contact*	Activity task contact to be deleted.

Response Payload

Element Name	Type	Description
result	void	

getTaskContact

Retrieves an activity task contact.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityTaskContactId	long	Unique identifier for activity contact record.

Response Payload

Element Name	Type	Description
result	*Activity Task Contact*	Activity task contact that matches the inbound key attributes.

findTaskContact

Finds operation for activity task contact.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Activity Task Contact*	A list of activity task contact that satisfy the inbound criteria.

getDfltObjAttrHints

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	
localeName	string	

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	

getServiceLastUpdateTime

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	

getEntityList

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	

Element Name	Type	Description

Activity Service

Service to operate on activity object.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activityManagementService/}ActivityService

Service WSDL URL: https://servername/crmService/ActivityService?WSDL

Logical Business Objects

deleteAttachment

An operation to delete a single or multiple attachments associated to an activity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
deleteParams	*Common Attachment*	The parameter based on which deletion of attachments should trigger.
commitData	string	A flag to indicate whether or not to commit transaction for this operation.

Response Payload

Element Name	Type	Description
result	string	The parameter returns the success or failure status of the operation.

getAttachmentsListWithoutContent

An operation to get list of all the attachment associated with an activity without any file content.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
getParameters	*Common Attachment*	The parameters based on which list of attachments to be fetched is determined.

Response Payload

Element Name	Type	Description
result	*Common Attachment*	The parameter returns the list of all the attachments without any file content.

getAttachmentContent

An operation to get attachment associated with an activity with file content if applicable.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
getParameters	*Common Attachment*	The parameters based on which attachment to be fetched is determined.

Response Payload

Element Name	Type	Description
result	*Common Attachment*	The parameter returns the attachment with file content, if applicable.

copyAttachment

An operation to copy a single or multiple attachments associated to an activity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
attachmentRows	*Common Attachment*	The parameter for the list of attachments to be copied.
commitData	string	A flag to indicate whether or not to commit transaction for this operation.

Response Payload

Element Name	Type	Description
result	string	The parameter returns the success or failure status of the operation.

createAttachment

An operation to create a single or multiple attachments associated to an activity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
attachmentRows	*Common Attachment*	The parameter which provides the list of attachments to be created.
commitData	string	A flag to indicate whether or not to commit transaction for this operation.

Response Payload

Element Name	Type	Description
result	string	The parameter returns the success or failure status of the operation.

generateActivitiesFromTemplate

An operation to generate activities from a template. A valid value for templateId should be passed. Only following activity attributes are supported in activityAttributes input parameter as of now: CustomerId, OwnerId, AssesmentId, ActivityContact, ActivityAssignee, ActivityStartDate, LeadId, OpportunityId, and CampaignId.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
templateId	long	The unique identifier of the template-set using which the activities are to be generated.
activityAttributes	*Activity*	The Activity SDO attribute list using which template activities should be generated.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns the list of all the generated activities using the template.

getActivity

The out-of-the-box Get operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityId	long	The activity ID for which the activity record is to be fetched.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns the activity record based on input activity ID.

createActivity

The out-of-the-box Create operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activity	*Activity*	The activity record to be created for the method createActivity.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns the created activity record.

updateActivity

The out-of-the-box Update operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activity	*Activity*	The activity record to be updated for the method createActivity carrying updated attributes.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns the updated activity record.

deleteActivity

The out-of-the-box Delete operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activity	*Activity*	The activity record to be deleted for the method deleteActivity.

Response Payload

Element Name	Type	Description
result	void	This operation returns nothing for the method deleteActivity.

mergeActivity

OOTB merge operation on Activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activity	*Activity*	Activities which have to be merged.

Response Payload

Element Name	Type	Description
result	*Activity*	Merged Activity.

findActivity

The out-of-the-box Find operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The FindCriteria object using which the find operation works for the method findActivity.

Element Name	Type	Description
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The FindControl object using which the find operation works for the method findActivity.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns the list of activity records based on FindCriteria and FindControl input objects.

processActivity

The out-of-the-box Process operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	The name of the operation to be performed like, create, update, and so on.
activity	*Activity*	The list of activity records on which the operation is to be performed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The optional ProcessControl object to be used while performing this operation.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns a list of activity records after the operation is complete.

createActivityAssignee

The out-of-the-box Create operation for the activity assignee SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityAssigneeWebService	*Activity Assignee*	The activity assignee record to be created for the method createActivityAssignee.

Response Payload

Element Name	Type	Description
result	*Activity Assignee*	The parameter returns the created activity assignee record.

updateActivityAssignee

The out-of-the-box Update operation for the activity assignee SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityAssigneeWebService	*Activity Assignee*	The activity assignee record to be updated for the method updateActivityAssignee.

Response Payload

Element Name	Type	Description
result	*Activity Assignee*	The parameter returns the updated activity assignee record.

deleteActivityAssignee

The out-of-the-box Delete operation for the activity assignee SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityAssigneeWebService	*Activity Assignee*	The activity assignee record to be deleted for the method deleteActivityAssignee.

Response Payload

Element Name	Type	Description
result	void	This operation returns nothing for the method deleteActivityAssignee.

findActivityAssignee

The out-of-the-box Find operation for the activity assignee SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The FindCriteria object using which the find operation works for the method findActivityAssignee.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The FindControl object using which the find operation works for the method findActivityAssignee.

Response Payload

Element Name	Type	Description
result	*Activity Assignee*	The parameter returns the list of activity assignee records based on FindCriteria and FindControl input objects.

createActivityContact

The out-of-the-box Create operation for the activity contact SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityContactWebService	*Activity Contact*	The activity contact record to be created for the method createActivityContact.

Response Payload

Element Name	Type	Description
result	*Activity Contact*	The parameter returns the created activity contact record.

updateActivityContact

The out-of-the-box Update operation for the activity contact SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityContactWebService	*Activity Contact*	The activity contact record to be updated for the method updateActivityContact.

Response Payload

Element Name	Type	Description
result	*Activity Contact*	The parameter returns the updated activity contact record.

deleteActivityContact

The out-of-the-box Delete operation for the activity contact SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityContactWebService	*Activity Contact*	The activity contact record to be deleted for the method deleteActivityContact.

Response Payload

Element Name	Type	Description
result	void	This operation returns nothing for the method deleteActivityContact.

findActivityContact

The out-of-the-box Find operation for the activity contact SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The FindCriteria object using which the find operation works for the method findActivityContact.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The FindControl object using which the find operation works for the method findActivityContact.

Response Payload

Element Name	Type	Description
result	*Activity Contact*	The parameter returns the list of activity contact records based on FindCriteria and FindControl input objects.

findActivityDeleteExceptions

The out-of-the-box Find operation on activity delete exception SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The FindCriteria object using which the find operation works for the method findActivityDeleteExceptions.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The FindControl object using which the find operation works for the method findActivityDeleteExceptions.

Response Payload

Element Name	Type	Description
result	*Activity Delete Exception*	The parameter returns the list of activity delete exception records based on FindCriteria and FindControl input objects.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The parameter returns the label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The parameter returns the date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	The parameter returns a list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getActivity	ZMM_VIEW_ONLY_ACTIVITY_PRIV	View Only Activity	Allows only viewing of activities.
getActivity	ZMM_VIEW_ACTIVITY_PRIV	View Activity	Allows viewing activities.
createActivity	ZMM_LOG_A_CALL_ACTIVITY_PRIV	Log a Call Activity	Allows logging a call for activities.
createActivity	ZMM_CREATE_ACTIVITY_PRIV	Create Activity	Allows creating activities.
createActivity	ZMM_CREATE_ACTIVITY_APPOINTMENT_PRIV	Create Activity Appointment	Allows creating activities of type appointment.
createActivity	ZMM_CREATE_ACTIVITY_CALL_REPORT_PRIV	Create Activity Call Report	Allows creating activities of type call report.

Operation Name	Privilege Code	Privilege Name	Privilege Description
createActivity	ZMM_CREATE_ACTIVITY_TASK_PRIV	Create Activity Task	Allows creating activities of type task.
deleteActivityContact	ZMM_DELETE_ACTIVITY_PRIV	Delete Activity	Allows deleting activities.
deleteActivityContact	ZMM_UPDATE_ONLY_ACTIVITY_PRIV	Update Only Activity	Allows only editing of activities.
deleteActivityContact	ZMM_UPDATE_ACTIVITY_PRIV	Update Activity	Allows editing activities.
generateActivitiesFromTemplate	ZMM_CREATE_ACTIVITY_PRIV	Create Activity	Allows creating activities.
generateActivitiesFromTemplate	ZMM_CREATE_ACTIVITY_TASK_PRIV	Create Activity Task	Allows creating activities of type task.
updateActivityContact	ZMM_UPDATE_ONLY_ACTIVITY_PRIV	Update Only Activity	Allows only editing of activities.
updateActivityContact	ZMM_UPDATE_ACTIVITY_PRIV	Update Activity	Allows editing activities.
findActivityContact	ZMM_VIEW_ONLY_ACTIVITY_PRIV	View Only Activity	Allows only viewing of activities.
findActivityContact	ZMM_VIEW_ACTIVITY_PRIV	View Activity	Allows viewing activities.
deleteAttachment	ZMM_DELETE_ACTIVITY_PRIV	Delete Activity	Allows deleting activities.
deleteAttachment	ZMM_UPDATE_ONLY_ACTIVITY_PRIV	Update Only Activity	Allows only editing of activities.
deleteAttachment	ZMM_UPDATE_ACTIVITY_PRIV	Update Activity	Allows editing activities.
createActivityAssignee	ZMM_LOG_A_CALL_ACTIVITY_PRIV	Log a Call Activity	Allows logging a call for activities.
createActivityAssignee	ZMM_CREATE_ACTIVITY_PRIV	Create Activity	Allows creating activities.
createActivityAssignee	ZMM_CREATE_ACTIVITY_APPOINTMENT_PRIV	Create Activity Appointment	Allows creating activities of type appointment.
createActivityAssignee	ZMM_CREATE_ACTIVITY_CALL_REPORT_PRIV	Create Activity Call Report	Allows creating activities of type call report.
createActivityAssignee	ZMM_CREATE_ACTIVITY_TASK_PRIV	Create Activity Task	Allows creating activities of type task.

Operation Name	Privilege Code	Privilege Name	Privilege Description
createActivityAssignee	ZMM_UPDATE_ONLY_ACTIVITY_PRIV	Update Only Activity	Allows only editing of activities.
createActivityAssignee	ZMM_UPDATE_ACTIVITY_PRIV	Update Activity	Allows editing activities.
getDfltObjAttrHints	ZMM_VIEW_ONLY_ACTIVITY_PRIV	View Only Activity	Allows only viewing of activities.
getDfltObjAttrHints	ZMM_VIEW_ACTIVITY_PRIV	View Activity	Allows viewing activities.
createAttachment	ZMM_LOG_A_CALL_ACTIVITY_PRIV	Log a Call Activity	Allows logging a call for activities.
createAttachment	ZMM_CREATE_ACTIVITY_PRIV	Create Activity	Allows creating activities.
createAttachment	ZMM_CREATE_ACTIVITY_APPOINTMENT_PRIV	Create Activity Appointment	Allows creating activities of type appointment.
createAttachment	ZMM_CREATE_ACTIVITY_CALL_REPORT_PRIV	Create Activity Call Report	Allows creating activities of type call report.
createAttachment	ZMM_CREATE_ACTIVITY_TASK_PRIV	Create Activity Task	Allows creating activities of type task.
createAttachment	ZMM_UPDATE_ONLY_ACTIVITY_PRIV	Update Only Activity	Allows only editing of activities.
createAttachment	ZMM_UPDATE_ACTIVITY_PRIV	Update Activity	Allows editing activities.
findActivity	ZMM_VIEW_ONLY_ACTIVITY_PRIV	View Only Activity	Allows only viewing of activities.
findActivity	ZMM_VIEW_ACTIVITY_PRIV	View Activity	Allows viewing activities.
deleteActivity	ZMM_DELETE_ACTIVITY_PRIV	Delete Activity	Allows deleting activities.
deleteActivityAssignee	ZMM_DELETE_ACTIVITY_PRIV	Delete Activity	Allows deleting activities.
deleteActivityAssignee	ZMM_UPDATE_ONLY_ACTIVITY_PRIV	Update Only Activity	Allows only editing of activities.
deleteActivityAssignee	ZMM_UPDATE_ACTIVITY_PRIV	Update Activity	Allows editing activities.
createActivityContact	ZMM_LOG_A_CALL_ACTIVITY_PRIV	Log a Call Activity	Allows logging a call for activities.

Operation Name	Privilege Code	Privilege Name	Privilege Description
createActivityContact	ZMM_CREATE_ACTIVITY_PRIV	Create Activity	Allows creating activities.
createActivityContact	ZMM_CREATE_ACTIVITY_APPOINTMENT_PRIV	Create Activity Appointment	Allows creating activities of type appointment.
createActivityContact	ZMM_CREATE_ACTIVITY_CALL_REPORT_PRIV	Create Activity Call Report	Allows creating activities of type call report.
createActivityContact	ZMM_CREATE_ACTIVITY_TASK_PRIV	Create Activity Task	Allows creating activities of type task.
createActivityContact	ZMM_UPDATE_ONLY_ACTIVITY_PRIV	Update Only Activity	Allows only editing of activities.
createActivityContact	ZMM_UPDATE_ACTIVITY_PRIV	Update Activity	Allows editing activities.
findActivityAssignee	ZMM_VIEW_ONLY_ACTIVITY_PRIV	View Only Activity	Allows only viewing of activities.
findActivityAssignee	ZMM_VIEW_ACTIVITY_PRIV	View Activity	Allows viewing activities.
processActivity	ZMM_DELETE_ACTIVITY_PRIV	Delete Activity	Allows deleting activities.
processActivity	ZMM_LOG_A_CALL_ACTIVITY_PRIV	Log a Call Activity	Allows logging a call for activities.
processActivity	ZMM_CREATE_ACTIVITY_PRIV	Create Activity	Allows creating activities.
processActivity	ZMM_VIEW_ONLY_ACTIVITY_PRIV	View Only Activity	Allows only viewing of activities.
processActivity	ZMM_CREATE_ACTIVITY_APPOINTMENT_PRIV	Create Activity Appointment	Allows creating activities of type appointment.
processActivity	ZMM_CREATE_ACTIVITY_CALL_REPORT_PRIV	Create Activity Call Report	Allows creating activities of type call report.
processActivity	ZMM_CREATE_ACTIVITY_TASK_PRIV	Create Activity Task	Allows creating activities of type task.
processActivity	ZMM_VIEW_ACTIVITY_PRIV	View Activity	Allows viewing activities.
processActivity	ZMM_UPDATE_ONLY_ACTIVITY_PRIV	Update Only Activity	Allows only editing of activities.
processActivity	ZMM_UPDATE_ACTIVITY_PRIV	Update Activity	Allows editing activities.

getAttachmentContent	ZMM_VIEW_ACTIVITY_PRIV	View Activity	Allows viewing activities.
getAttachmentsListWithoutContent	ZMM_VIEW_ONLY_ACTIVITY_PRIV	View Only Activity	Allows only viewing of activities.
getAttachmentsListWithoutContent	ZMM_VIEW_ACTIVITY_PRIV	View Activity	Allows viewing activities.

Operation Name	Privilege Code	Privilege Name	Privilege Description
getServiceLastUpdateTime	ZMM_VIEW_ONLY_ACTIVITY_PRIV	View Only Activity	Allows only viewing of activities.
getServiceLastUpdateTime	ZMM_VIEW_ACTIVITY_PRIV	View Activity	Allows viewing activities.
updateActivityAssignee	ZMM_UPDATE_ONLY_ACTIVITY_PRIV	Update Only Activity	Allows only editing of activities.
updateActivityAssignee	ZMM_UPDATE_ACTIVITY_PRIV	Update Activity	Allows editing activities.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZMM_CREATE_ACTIVITY_PRIV	ORA_SVC_HELPDESK_SR_MANAGEMENT	HR Help Desk Service Request Management	Manages all aspects of the HR Help Desk Service Request object.
ZMM_CREATE_ACTIVITY_PRIV	ORA_SVC_HR_SR_MANAGEMENT	HR Service Request Management	Manages all aspects of the Next Gen HR Help Desk Service Request object.
ZMM_CREATE_ACTIVITY_PRIV	ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Master Data Management Application Administrator	Administers the installation and maintenance of customer data management application and foundation model.
ZMM_CREATE_ACTIVITY_PRIV	ORA_SVC_INTERNAL_HELPDESK_ANALYSIS	Internal Service Request Analysis	Manages a group of Internal Help Desk agents. Can view Internal service requests, activities, and attachments. Monitors metrics and overall resource balancing, critical service requests, service level agreements.
ZMM_CREATE_ACTIVITY_PRIV	ORA_SVC_SR_CONTRIBUTOR	Service Request Contributor	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request Management capabilities. Would not be able to respond to customer, assign SR to a user or change the status of a SR.
ZMM_CREATE_ACTIVITY_PRIV	ORA_ZPM_CHANNEL_SALES_MANAGER_JOB	Channel Sales Manager	Manages the indirect sales pipeline by routing leads to partners, reviewing lead registrations, approving or rejecting registrations, and forecasting sales.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZMM_CREATE_ACTIVITY_PRIV	ORA_SVC_SR_CHANNEL_USER	Service Request Channel User	Manages all aspects of the Service Request related to partner accounts
ZMM_CREATE_ACTIVITY_PRIV	ORA_ZBS_SALES_ADMINISTRATOR_JOB	Sales Administrator	Manages sales department and personnel. Performs ongoing administrative tasks, corrects erroneous data, and configures the application according to business needs.
ZMM_CREATE_ACTIVITY_PRIV	ORA_ZPM_CHANNEL_PARTNER_PORTAL_ADMINISTRATOR_JOB	Channel Partner Portal Administrator	Maintains customer-specific changes of all partner portal pages, external, internal, and anonymous pages.
ZMM_CREATE_ACTIVITY_PRIV	ORA_MKT_MARKETING_MANAGER_JOB	Sales Marketing Manager	Coordinates marketing messaging content, pricing, segmentation, communication channels, and launch activities for marketing campaigns. Contributes to sales lead pipeline process and estimations, product definitions, and return on investment calculations.
ZMM_CREATE_ACTIVITY_PRIV	ORA_ZCH_TRADING_COMMUNITY_DATA_STEWARD_JOB	Customer Data Steward	Performs customer data management activities including data import, cleansing, duplicate identification, and duplicate resolution.
ZMM_CREATE_ACTIVITY_PRIV	ORA_ZBS_SALES_MANAGER_JOB	Sales Manager	Manages salespersons within the organization. Generates revenue within a territory, builds pipeline, manages territory forecasts, and assists salespersons in closing deals.
ZMM_CREATE_ACTIVITY_PRIV	ORA_ZBS_SALES_REPRESENTATIVE_JOB	Sales Representative	Represents the business to sell its products. Maintains relationships with customers and contacts, builds pipeline, manages leads and opportunities and performs sales forecasting.
ZMM_CREATE_ACTIVITY_PRIV	ORA_ZPM_PARTNER_SALES_REPRESENTATIVE_JOB	Partner Sales Representative	Maintains leads, registers leads, and manages partner opportunities.
ZMM_CREATE_ACTIVITY_PRIV	ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Customer Relationship Management Application Administrator	Individual responsible for customer relationship management application administration. Collaborates with customer relationship management

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			application users to maintain consistent financial application setup, rules, and access.
ZMM_CREATE_ACTIVITY_PRIV	ORA_SVC_HELPDESK_ANALYSIS	HR Help Desk Analysis	Manages group of HR Help Desk agents. Can view service requests, activities, and attachments. Monitors metrics and overall resource balancing, critical service requests, service level agreements.
ZMM_CREATE_ACTIVITY_PRIV	ORA_ZPM_CHANNEL_PARTNER_MANAGER_JOB	Channel Partner Manager	Defines new channel partner programs.
ZMM_CREATE_ACTIVITY_PRIV	ORA_SVC_INTERNAL_HELPDESK_SR_MANAGEMENT	Internal Service Request Management	Manages all aspects of the Internal Help Desk Service Request object.
ZMM_CREATE_ACTIVITY_PRIV	ORA_ZPM_CHANNEL_OPERATIONS_MANAGER_JOB	Channel Operations Manager	Maintains and manages partner transactional data.
ZMM_CREATE_ACTIVITY_PRIV	ORA_ZPM_PARTNER_SALES_MANAGER_JOB	Partner Sales Manager	Manages a set of partner sales representatives and has visibility into all of their teams' transactions and the ability to work with leads and opportunities. This role is for a partner sales manager.
ZMM_CREATE_ACTIVITY_PRIV	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
ZMM_CREATE_ACTIVITY_PRIV	ORA_ZPM_CHANNEL_ADMINISTRATOR_JOB	Channel Administrator	Executes Oracle Partnership Management setup tasks.
ZMM_CREATE_ACTIVITY_PRIV	ORA_SVC_HELPDESK_ADMINISTRATION	HR Help Desk Administration	Manage all aspects of the HCM help desk service requests. In addition can manage queues and administer the HCM help desk service application, including setup.
ZMM_CREATE_ACTIVITY_PRIV	ORA_SVC_SR_POWER_USER	Service Request Power User	Advanced Service Request management capabilities not available to Service Representatives
ZMM_CREATE_ACTIVITY_PRIV	ORA_ZCH_DATA_STEWARD_MANAGER_JOB	Data Steward Manager	Manages customer data stewards and has additional privileges including assigning requests.
ZMM_CREATE_ACTIVITY_PRIV	ORA_ZBS_SALES_VP_JOB	Sales VP	Manages sales managers within the organization. Responsible for

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			account planning, territory and quota management, and managing sales forecasts for the territory.
ZMM_CREATE_ACTIVITY_PRIV	ORA_MKT_MARKETING_VP_JOB	Marketing VP	Determines high-level marketing objectives, strategies and budgets. Analyzes marketing activities to measure the effectiveness of marketing programs, reviews real-time marketing intelligence to optimize decisions throughout the marketing and sales cycle, take timely actions to influence business outcomes, and gain competitive advantage.
ZMM_CREATE_ACTIVITY_PRIV	ORA_MKL_SALES_LEAD_QUALIFIER_JOB	Sales Lead Qualifier	Identifies, generates and qualifies sales leads and ensures that they are successfully closed within established time objectives. Includes the ability to deliver reports, ensure a healthy sales pipeline volume, help shorten sales cycles, shape lead generation strategies, and provide effective guidance to the rest of the lead qualification team. Other supporting roles include territory development, event and webinar strategies.
ZMM_CREATE_ACTIVITY_PRIV	ORA_ZPM_CHANNEL_ACCOUNT_MANAGER_JOB	Channel Account Manager	Sets the objectives and goals for partners. Works with a partner organization to identify what programs best fit the partner organization and the training that the partner should take to increase skill sets or qualify for programs.
ZMM_CREATE_ACTIVITY_PRIV	ORA_SVC_HR_SR_ANALYSIS	HR Service Request Analysis	Manages a group of Next Gen HR Help Desk agents. Can view Next Gen HR service requests, activities, and attachments. Monitors metrics and overall resource balancing, critical service requests, service level agreements.
ZMM_CREATE_ACTIVITY_PRIV	ORA_ZBS_SALES_RESTRICTED_USER_JOB	Sales Restricted User	Has the same scope of visibility as the Sales Manager role to application data but can only view or read most of that data. The ability to create, update or delete data is restricted to notes, activities, attachments and reports.
ZMM_CREATE_ACTIVITY_PRIV	ORA_ZPM_PARTNER_ADMINISTRATOR_JOB	Partner Administrator	Registers the partner organization and program enrollment for the

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			partner company. Manages the creation and removal of partner users and the users' privileges.
ZMM_CREATE_ACTIVITY_PRIV	ORA_ZPM_PARTNER_ADMINISTRATOR_LIMITED_ABSTRACT	Prospective Partner Administrator	Views limited information about partner organization is in a status of registered or expired. This is for the partner administrator.
ZMM_CREATE_ACTIVITY_PRIV	ORA_MKT_CORPORATE_MARKETING_MANAGER_JOB	Corporate Marketing Manager	Develops and executes marketing strategies, translating customer needs from varied industries and markets into clear value propositions and actionable marketing programs. Communicates the corporate marketing message, manages the corporate marketing budget for allocation to marketing activities, and follows through the complete marketing life cycle to measure results.
ZMM_CREATE_ACTIVITY_PRIV	ORA_SVC_HR_SR_ADMINISTRATION	HR Service Request Administration	Manages all aspects of Next Gen HR service requests. In addition, can manage queues and administer the Next Gen HR Help Desk service application, including setup.
ZMM_CREATE_ACTIVITY_PRIV	ORA_SVC_SR_TROUBLESHOOTER	Service Request Troubleshooter	Manages all aspects of the Service Request object
ZMM_CREATE_ACTIVITY_PRIV	ORA_ZPM_CHANNEL_SALES_DIRECTOR_JOB	Channel Sales Director	Supervises channel roles to support partner relationships and transactions.
ZMM_CREATE_ACTIVITY_PRIV	ORA_SVC_INTERNAL_HELPDESK_ADMINISTRATION	Internal Service Request Administration	Manages all aspects of Internal service requests. In addition, can manage queues and administer the Internal Help Desk service application, including setup.
ZMM_CREATE_ACTIVITY_PRIV	ORA_MKT_MARKETING_OPERATIONS_MANAGER_JOB	Marketing Operations Manager	Manages the operations for marketing and leads. Develops tactical campaigns to carry out marketing strategies and communicate offers to customer segments using multiple marketing channels. Monitors campaign interactions, captures campaign responses, and manages sales leads to fill the sales pipeline. Creates and maintains the setup for marketing campaigns,

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			responses, segments, lists, and treatments.
ZMM_VIEW_ACTIVITY_PRIV	ORA_SVC_HELPDESK_SR_MANAGEMENT	HR Help Desk Service Request Management	Manages all aspects of the HR Help Desk Service Request object.
ZMM_VIEW_ACTIVITY_PRIV	ORA_SVC_HR_SR_MANAGEMENT	HR Service Request Management	Manages all aspects of the Next Gen HR Help Desk Service Request object.
ZMM_VIEW_ACTIVITY_PRIV	ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Master Data Management Application Administrator	Administers the installation and maintenance of customer data management application and foundation model.
ZMM_VIEW_ACTIVITY_PRIV	ORA_SVC_INTERNAL_HELPDESK_ANALYSIS	Internal Service Request Analysis	Manages a group of Internal Help Desk agents. Can view Internal service requests, activities, and attachments. Monitors metrics and overall resource balancing, critical service requests, service level agreements.
ZMM_VIEW_ACTIVITY_PRIV	ORA_SVC_SR_CONTRIBUTOR	Service Request Contributor	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request Management capabilities. Would not be able to respond to customer, assign SR to a user or change the status of a SR.
ZMM_VIEW_ACTIVITY_PRIV	ORA_ZPM_CHANNEL_SALES_MANAGER_JOB	Channel Sales Manager	Manages the indirect sales pipeline by routing leads to partners, reviewing lead registrations, approving or rejecting registrations, and forecasting sales.
ZMM_VIEW_ACTIVITY_PRIV	ORA_SVC_SR_CHANNEL_USER	Service Request Channel User	Manages all aspects of the Service Request related to partner accounts
ZMM_VIEW_ACTIVITY_PRIV	ORA_ZBS_SALES_ADMINISTRATOR_JOB	Sales Administrator	Manages sales department and personnel. Performs ongoing administrative tasks, corrects erroneous data, and configures the application according to business needs.
ZMM_VIEW_ACTIVITY_PRIV	ORA_ZPM_CHANNEL_PARTNER_PORTAL_ADMINISTRATOR_JOB	Channel Partner Portal Administrator	Maintains customer-specific changes of all partner portal pages, external, internal, and anonymous pages.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZMM_VIEW_ACTIVITY_PRIV	ORA_MKT_MARKETING_MANAGER_JOB	Sales Marketing Manager	Coordinates marketing messaging content, pricing, segmentation, communication channels, and launch activities for marketing campaigns. Contributes to sales lead pipeline process and estimations, product definitions, and return on investment calculations.

Activity Task Assignee

An assignee on an activity task such as John Jones or Mary Smith, who is responsible for performing the piece of work.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activitiesService/}TaskAssignee

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Task*
Handled by	*Activity Task Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AssigneeGUID	string	The unique identifier of the task assignee. • Primary Key
AssigneeName	string	The name of the task assignee.
PartyIdTransient	long	The owner party identifier used to populate the owner when a task is created from a service.
TaskId	string	The unique identifier of the task. • Primary Key

Activity Task Contact

A contact such as Steve Smith, who is involved with an activity task or for whom the task is being done.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activitiesService/}TaskContact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Task*
Handled by	*Activity Task Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivityTaskContactId	long	The unique identifier for activity contact record. • Primary Key

Name	Type	Description
ContactId	long	The unique identifier of the person contact for the customer.
ContactRelationshipId	long	The identifier of the contact relationship record in Trading Community Architecture (TCA).
EmailAddress	string	The email address associated with the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNameTransient	string	The transient name of the party.
TaskGUID	string	A unique, system generated number automatically populated by the Activities component.

Task

An activity task data object representing some type of work the task owner must do, with a priority and a due date.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activitiesService/}Task

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Activity Task Contact*
Contains	*Activity Task Assignee*
Handled by	*Activity Task Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountId	long	The account for the customer associated with the task.
AcquireByPartyIdTransient	long	The party identifier corresponding to the AcquiredBy username value.
AcquiredBy	string	The user name corresponding to the 'Claim By' attribute in the WFTASK table.
AssessmentId	long	The identifier of the assessment to which the task relates.
AssociatedObjectCd	string	The code of the object associated with the task.
AssociatedObjectId	long	The identifier of the object associated with the task.
CustomerId	long	The identifier of the customer associated with the task.
DueDt	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date by which the task is due to be completed.
ExtnDateAttribute1	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date extension attribute for the task.
ExtnDateAttribute10	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date extension attribute for the task.
ExtnDateAttribute11	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date extension attribute for the task.
ExtnDateAttribute12	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date extension attribute for the task.
ExtnDateAttribute13	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date extension attribute for the task.
ExtnDateAttribute14	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date extension attribute for the task.

Name	Type	Description
ExtnDateAttribute15	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date extension attribute for the task.
ExtnDateAttribute16	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date extension attribute for the task.
ExtnDateAttribute17	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date extension attribute for the task.
ExtnDateAttribute18	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date extension attribute for the task.
ExtnDateAttribute19	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date extension attribute for the task.
ExtnDateAttribute2	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date extension attribute for the task.
ExtnDateAttribute20	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date extension attribute for the task.
ExtnDateAttribute3	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date extension attribute for the task.
ExtnDateAttribute4	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date extension attribute for the task.
ExtnDateAttribute5	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date extension attribute for the task.
ExtnDateAttribute6	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date extension attribute for the task.
ExtnDateAttribute7	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date extension attribute for the task.
ExtnDateAttribute8	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date extension attribute for the task.
ExtnDateAttribute9	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date extension attribute for the task.
ExtnNumberAttribute1	long	The number extension attribute for the task.
ExtnNumberAttribute10	long	The number extension attribute for the task.

Name	Type	Description
ExtnNumberAttribute11	long	The number extension attribute for the task.
ExtnNumberAttribute12	long	The number extension attribute for the task.
ExtnNumberAttribute13	long	The number extension attribute for the task.
ExtnNumberAttribute14	long	The number extension attribute for the task.
ExtnNumberAttribute15	long	The number extension attribute for the task.
ExtnNumberAttribute16	long	The number extension attribute for the task.
ExtnNumberAttribute17	long	The number extension attribute for the task.
ExtnNumberAttribute18	long	The number extension attribute for the task.
ExtnNumberAttribute19	long	The number extension attribute for the task.
ExtnNumberAttribute2	long	The number extension attribute for the task.
ExtnNumberAttribute20	long	The number extension attribute for the task.
ExtnNumberAttribute3	long	The number extension attribute for the task.
ExtnNumberAttribute4	long	The number extension attribute for the task.
ExtnNumberAttribute5	long	The number extension attribute for the task.
ExtnNumberAttribute6	long	The number extension attribute for the task.
ExtnNumberAttribute7	long	The number extension attribute for the task.
ExtnNumberAttribute8	long	The number extension attribute for the task.
ExtnNumberAttribute9	long	The number extension attribute for the task.
ExtnTextAttribute1	string	The text extension attribute for the task.
ExtnTextAttribute10	string	The text extension attribute for the task.
ExtnTextAttribute11	string	The text extension attribute for the task.

Name	Type	Description
ExtnTextAttribute12	string	The text extension attribute for the task.
ExtnTextAttribute13	string	The text extension attribute for the task.
ExtnTextAttribute14	string	The text extension attribute for the task.
ExtnTextAttribute15	string	The text extension attribute for the task.
ExtnTextAttribute16	string	The text extension attribute for the task.
ExtnTextAttribute17	string	The text extension attribute for the task.
ExtnTextAttribute18	string	The text extension attribute for the task.
ExtnTextAttribute19	string	The text extension attribute for the task.
ExtnTextAttribute2	string	The text extension attribute for the task.
ExtnTextAttribute20	string	The text extension attribute for the task.
ExtnTextAttribute3	string	The text extension attribute for the task.
ExtnTextAttribute4	string	The text extension attribute for the task.
ExtnTextAttribute5	string	The text extension attribute for the task.
ExtnTextAttribute6	string	The text extension attribute for the task.
ExtnTextAttribute7	string	The text extension attribute for the task.
ExtnTextAttribute8	string	The text extension attribute for the task.
ExtnTextAttribute9	string	The text extension attribute for the task.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
ListOfAssigneeGUID	string	The party identifier corresponding to the AcquiredBy username value.
OwnerUser	string	The owner user name associated with the task.

Name	Type	Description
PartyIdTransient	long	The owner party identifier used to populate the owner when a task is created from a service.
PercentageCompleteNumber	long	The percentage completion of the task.
PlannedStartDt	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The start date of the task.
ReferenceCustomerId	long	The identifier of the reference customer of the task.
ReferenceTypeCd	string	The reference type code of the task.
SiteId	long	The identifier of the site associated with the task.
SourceObjectCd	string	The code of the related object associated with the task.
SourceObjectId	long	The identifier of the related object associated with the task.
TaskActionsList	string	The comma separated list of all task actions for a given task ID.
TaskAssignee	*Activity Task Assignee*	The assignees on the task.
TaskCategoryCd	string	The code for the task category.
TaskContact	*Activity Task Contact*	The contact for the task.
TaskDescription	string	The description of the task.
TaskDisplayURL	string	The relative path of the create or edit task page that is used when a task is edited from the work list.
TaskId	string	The identifier of the task. • Primary Key
TaskName	string	The name of the task.
TaskPriorityCd	string	The priority code of the task.
TaskStateCd	string	The code for the state of the task.

Name	Type	Description
TaskVisibilityCd	string	The code for the task visibility.
TemplateId	long	The identifier of the task template.

Appointment Service (Deprecated)

Service to capture events such as meetings or appointments that occur at a specific time and appear on a user's calendar. WARNING: This service has been deprecated and is being replaced with ActivityService.

Life Cycle Status: Deprecated. This service is deprecated and replaced by .

mergeAppointment

Merge operation for appointment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
appointmentRow	*Appointment Transient*	Appointment ID to be merged.

Response Payload

Element Name	Type	Description
result	*Appointment Transient*	Merged appointment.

copyAttachment

Copy operation for appointment attachment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
attachmentVORows	*Common Attachment*	The list of attachment objects to be copied or created.
commitData	string	Indicates whether data should be committed to the database.

Response Payload

Element Name	Type	Description
result	string	A list of warnings or informational messages encountered when deleting the appointment attachment.

createAttachment

Creates an appointment attachment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
attachmentVORows	*Common Attachment*	The list of attachment objects to be copied or created.
commitData	string	Indicates whether data should be committed to the database.

Response Payload

Element Name	Type	Description
result	string	A list of warnings or informational messages encountered when deleting the appointment attachment.

deleteAttachment

Deletes an appointment attachment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
deleteParams	*Common Attachment*	Parameters driving the delete operation for appointment attachment.
commitData	string	Indicates whether data should be committed to the database.

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	string	A list of warnings or informational messages encountered when deleting the appointment attachment.

getAttachment

Retrieves an appointment attachment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
getParameters	*Common Attachment*	Parameters driving the get operation for appointment attachment.

Response Payload

Element Name	Type	Description
result	*Common Attachment*	The retrieved appointment attachment.

getAppointment

Get operation for appointment transient SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityId	long	Identifier of the appointment to retrieved.

Response Payload

Element Name	Type	Description
result	*Appointment Transient*	Appointment transient SDO that matches the inbound key attributes.

createAppointment

Create operation for appointment transient SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
appointment	*Appointment Transient*	Appointment transient SDO to be created.

Response Payload

Element Name	Type	Description
result	*Appointment Transient*	Created appointment transient SDO.

createActivityContact

Creates an appointment contact.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityContact	*Appointment Contact*	appointment contact to be created.

Response Payload

Element Name	Type	Description
result	*Appointment Contact*	Created appointment contact.

deleteActivityContact

Deletes an appointment contact.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityContact	*Appointment Contact*	Appointment contact to be deleted.

Response Payload

Element Name	Type	Description
result	void	

getActivityContact

Retrieves an appointment contact.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityContactId	long	Unique identifier for activity contact record.

Response Payload

Element Name	Type	Description
result	*Appointment Contact*	Appointment contact that matches the inbound key attributes.

updateActivityContact

Updates appointment contact.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityContact	*Appointment Contact*	Appointment contact to be updated.

Response Payload

Element Name	Type	Description
result	*Appointment Contact*	Updated appointment contact.

createActivityAssignee

Creates an appointment assignee.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityAssignee	*Appointment Assignee*	Appointment assignee to be created.

Response Payload

Element Name	Type	Description
result	*Appointment Assignee*	Created appointment assignee.

deleteActivityAssignee

Deletes an appointment assignee.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityAssignee	*Appointment Assignee*	Appointment assignee to be deleted.

Response Payload

Element Name	Type	Description
result	void	

getActivityAssignee

Retrieves an appointment assignee.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityAssigneeId	long	Unique identifier for activity assignee record.

Response Payload

Element Name	Type	Description
result	*Appointment Assignee*	Appointment assignee that matches the inbound key attributes.

updateActivityAssignee

Updates an appointment assignee.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityAssignee	*Appointment Assignee*	Appointment assignee to be updated.

Response Payload

Element Name	Type	Description
result	*Appointment Assignee*	Updated appointment assignee.

updateAppointment

Updates an appointment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
appointmentRow	*Appointment Transient*	Identifier of the appointment to be updated.

Response Payload

Element Name	Type	Description
result	*Appointment Transient*	Updated appointment.

deleteAppointment

Deletes an appointment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
appointmentRow	*Appointment Transient*	Identifier of the appointment to be deleted.

Response Payload

Element Name	Type	Description
result	void	

findActivityAssignee

Find operation for appointment assignee.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Appointment Assignee*	A list of appointment assignee that satisfy the inbound criteria.

getActivityCategories

Retrieves an appointment category.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityCategoryId	long	Identifier of the appointment category.

Response Payload

Element Name	Type	Description
result	*Appointment Category*	Appointment category that matches the inbound key attributes.

createActivityCategories

Creates an appointment category.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityCategories	*Appointment Category*	Appointment category to be created.

Response Payload

Element Name	Type	Description
result	*Appointment Category*	Created appointment category.

updateActivityCategories

Updates an appointment category.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityCategories	*Appointment Category*	Appointment category to be updated.

Response Payload

Element Name	Type	Description
result	*Appointment Category*	Updated appointment category.

deleteActivityCategories

Delete an appointment category.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityCategories	*Appointment Category*	Appointment category to be deleted.

Response Payload

Element Name	Type	Description
result	void	

findActivityCategories

Find operation for appointment category.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Appointment Category*	A list of appointment category that satisfy the inbound criteria.

findActivityContact

Find operation for appointment contact.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Appointment Contact*	A list of appointment contact that satisfy the inbound criteria.

getNotes

Retrieves a note.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
noteId	long	Unique note identifier. This is the primary key of the notes table.

Response Payload

Element Name	Type	Description
result	*Note*	Note that matches the inbound key attributes.

createNotes

Creates a note.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
notes	*Note*	Note to be created.

Response Payload

Element Name	Type	Description
result	*Note*	Created note.

updateNotes

Updates a note.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
notes	*Note*	Note to be updated.

Response Payload

Element Name	Type	Description
result	*Note*	Updated note.

deleteNotes

Deletes a note.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
notes	*Note*	Note to be deleted.

Response Payload

Element Name	Type	Description
result	void	

findNotes

Find operation for note.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used..

Response Payload

Element Name	Type	Description
result	*Note*	A list of notes that satisfy the inbound criteria.

findAppointment

Find operation for appointment transient SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Appointment Transient*	A list of appointment transient SDO that satisfy the inbound criteria.

getAppointmentDeleteException

Retrieves an appointment deletion exception.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityChildId	long	Retrieves an appointment deletion exception given the ID of an appointment child object.

Response Payload

Element Name	Type	Description
result	*Appointment Deletion Exception*	Appointment deletion exception that matches the inbound key attributes.

createAppointmentDeleteException

Creates an appointment deletion exception.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
appointmentDeleteException	*Appointment Deletion Exception*	Appointment deletion exception to be created.

Response Payload

Element Name	Type	Description
result	*Appointment Deletion Exception*	Created Appointment Deletion Exception.

updateAppointmentDeleteException

Updates an appointment deletion exception.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
appointmentDeleteException	*Appointment Deletion Exception*	Appointment deletion exception to be updated.

Response Payload

Element Name	Type	Description
result	*Appointment Deletion Exception*	Updated appointment deletion exception.

deleteAppointmentDeleteException

Deletes an appointment deletion exception.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
appointmentDeleteException	*Appointment Deletion Exception*	Appointment deletion exception to be deleted.

Response Payload

Element Name	Type	Description
result	void	

findAppointmentDeleteException

Find operation for appointment deletion exception.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Appointment Deletion Exception*	A list of appointment deletion exception that satisfy the inbound criteria.

getDfltObjAttrHints

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	
localeName	string	

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	

getServiceLastUpdateTime

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	

getEntityList

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	

Activity Service

Service to operate on activity object.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activityManagementService/}ActivityService

Service WSDL URL: https://servername/crmService/ActivityService?WSDL

Logical Business Objects

deleteAttachment

An operation to delete a single or multiple attachments associated to an activity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
deleteParams	*Common Attachment*	The parameter based on which deletion of attachments should trigger.
commitData	string	A flag to indicate whether or not to commit transaction for this operation.

Response Payload

Element Name	Type	Description
result	string	The parameter returns the success or failure status of the operation.

getAttachmentsListWithoutContent

An operation to get list of all the attachment associated with an activity without any file content.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
getParameters	*Common Attachment*	The parameters based on which list of attachments to be fetched is determined.

Response Payload

Element Name	Type	Description
result	*Common Attachment*	The parameter returns the list of all the attachments without any file content.

getAttachmentContent

An operation to get attachment associated with an activity with file content if applicable.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
getParameters	*Common Attachment*	The parameters based on which attachment to be fetched is determined.

Response Payload

Element Name	Type	Description
result	*Common Attachment*	The parameter returns the attachment with file content, if applicable.

copyAttachment

An operation to copy a single or multiple attachments associated to an activity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
attachmentRows	*Common Attachment*	The parameter for the list of attachments to be copied.
commitData	string	A flag to indicate whether or not to commit transaction for this operation.

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	string	The parameter returns the success or failure status of the operation.

createAttachment

An operation to create a single or multiple attachments associated to an activity.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
attachmentRows	*Common Attachment*	The parameter which provides the list of attachments to be created.
commitData	string	A flag to indicate whether or not to commit transaction for this operation.

Response Payload

Element Name	Type	Description
result	string	The parameter returns the success or failure status of the operation.

generateActivitiesFromTemplate

An operation to generate activities from a template. A valid value for templateId should be passed. Only following activity attributes are supported in activityAttributes input parameter as of now: CustomerId, OwnerId, AssesmentId, ActivityContact, ActivityAssignee, ActivityStartDate, LeadId, OpportunityId, and CampaignId.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
templateId	long	The unique identifier of the template-set using which the activities are to be generated.

Element Name	Type	Description
activityAttributes	*Activity*	The Activity SDO attribute list using which template activities should be generated.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns the list of all the generated activities using the template.

getActivity

The out-of-the-box Get operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityId	long	The activity ID for which the activity record is to be fetched.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns the activity record based on input activity ID.

createActivity

The out-of-the-box Create operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activity	*Activity*	The activity record to be created for the method createActivity.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns the created activity record.

updateActivity

The out-of-the-box Update operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activity	*Activity*	The activity record to be updated for the method createActivity carrying updated attributes.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns the updated activity record.

deleteActivity

The out-of-the-box Delete operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activity	*Activity*	The activity record to be deleted for the method deleteActivity.

Response Payload

Element Name	Type	Description
result	void	This operation returns nothing for the method deleteActivity.

mergeActivity

OOTB merge operation on Activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activity	*Activity*	Activities which have to be merged.

Response Payload

Element Name	Type	Description
result	*Activity*	Merged Activity.

findActivity

The out-of-the-box Find operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The FindCriteria object using which the find operation works for the method findActivity.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The FindControl object using which the find operation works for the method findActivity.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns the list of activity records based on FindCriteria and FindControl input objects.

Element Name	Type	Description

processActivity

The out-of-the-box Process operation for the activity SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	The name of the operation to be performed like, create, update, and so on.
activity	*Activity*	The list of activity records on which the operation is to be performed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The optional ProcessControl object to be used while performing this operation.

Response Payload

Element Name	Type	Description
result	*Activity*	The parameter returns a list of activity records after the operation is complete.

createActivityAssignee

The out-of-the-box Create operation for the activity assignee SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityAssigneeWebService	*Activity Assignee*	The activity assignee record to be created for the method createActivityAssignee.

Response Payload

Element Name	Type	Description
result	*Activity Assignee*	The parameter returns the created activity assignee record.

updateActivityAssignee

The out-of-the-box Update operation for the activity assignee SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityAssigneeWebService	*Activity Assignee*	The activity assignee record to be updated for the method updateActivityAssignee.

Response Payload

Element Name	Type	Description
result	*Activity Assignee*	The parameter returns the updated activity assignee record.

deleteActivityAssignee

The out-of-the-box Delete operation for the activity assignee SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityAssigneeWebService	*Activity Assignee*	The activity assignee record to be deleted for the method deleteActivityAssignee.

Response Payload

Element Name	Type	Description
result	void	This operation returns nothing for the method deleteActivityAssignee.

findActivityAssignee

The out-of-the-box Find operation for the activity assignee SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The FindCriteria object using which the find operation works for the method findActivityAssignee.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The FindControl object using which the find operation works for the method findActivityAssignee.

Response Payload

Element Name	Type	Description
result	*Activity Assignee*	The parameter returns the list of activity assignee records based on FindCriteria and FindControl input objects.

createActivityContact

The out-of-the-box Create operation for the activity contact SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityContactWebService	*Activity Contact*	The activity contact record to be created for the method createActivityContact.

Response Payload

Element Name	Type	Description
result	*Activity Contact*	The parameter returns the created activity contact record.

updateActivityContact

The out-of-the-box Update operation for the activity contact SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityContactWebService	*Activity Contact*	The activity contact record to be updated for the method updateActivityContact.

Response Payload

Element Name	Type	Description
result	*Activity Contact*	The parameter returns the updated activity contact record.

deleteActivityContact

The out-of-the-box Delete operation for the activity contact SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
activityContactWebService	*Activity Contact*	The activity contact record to be deleted for the method deleteActivityContact.

Response Payload

Element Name	Type	Description
result	void	This operation returns nothing for the method deleteActivityContact.

findActivityContact

The out-of-the-box Find operation for the activity contact SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The FindCriteria object using which the find operation works for the method findActivityContact.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The FindControl object using which the find operation works for the method findActivityContact.

Response Payload

Element Name	Type	Description
result	*Activity Contact*	The parameter returns the list of activity contact records based on FindCriteria and FindControl input objects.

findActivityDeleteExceptions

The out-of-the-box Find operation on activity delete exception SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The FindCriteria object using which the find operation works for the method findActivityDeleteExceptions.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The FindControl object using which the find operation works for the method findActivityDeleteExceptions.

Response Payload

Element Name	Type	Description
result	*Activity Delete Exception*	The parameter returns the list of activity delete exception records based on FindCriteria and FindControl input objects.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The parameter returns the label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The parameter returns the date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	The parameter returns a list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getActivity	ZMM_VIEW_ONLY_ACTIVITY_PRIV	View Only Activity	Allows only viewing of activities.
getActivity	ZMM_VIEW_ACTIVITY_PRIV	View Activity	Allows viewing activities.

Appointment Assignee

An internal resource participant on an appointment, such as John Jones or Mary Smith.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activitiesService/}ActivityAssignee

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Appointment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivityAssigneeId	long	The unique identifier for the activity assignee record. • Primary Key

Name	Type	Description
ActivityId	long	The unique identifier of the activity.
AppointmentResponseCd	string	The user friendly name for the Appointment Response Code.
AssigneeId	long	The unique identifier of the HZ_PARTY record with party_usage as Resource.
AssigneeRsrcOrgId	long	The identifier of the organization to which the resource belongs.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ReminderPeriod	int	Indicates the period in minutes for the reminder notification before the appointment starts.
ShowTimeAsCd	string	The user friendly name for the Show Time As Code.

Appointment Category

The category for an appointment, such as a phone call or demonstration category.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activitiesService/}ActivityCategory

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Appointment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivityCategoryId	long	The unique identifier for the activity category record. • Primary Key
ActivityId	long	The unique identifier of the activity.
CategoryCd	string	The category of the appointment. Usually the user selects a value from a list of categories.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Appointment Contact

The contact participant on an appointment, such as Steve Smith or Jane Doe.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activitiesService/}ActivityContact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Appointment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivityContactId	long	The unique identifier for the activity contact record. • Primary Key
ActivityId	long	The unique identifier of the activity.

Name	Type	Description
ContactId	long	The party identifier of party type person who is associated with the appointment.
ContactRelationshipId	long	The identifier of the contact relationship record in Trading Community Architecture (TCA).
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Appointment Deletion Exception

An object representing a recurring appointment exception to delete. For example, deleting an instance of a scheduled monthly sales meeting.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activitiesService/}AppointmentDeleteException

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Appointment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivityChildId	long	The unique primary key identifier for storing the deleted child exceptions. • Primary Key
ActivityId	long	The unique identifier of the activity.
ChildId	long	The primary key for the child object tables.

Name	Type	Description
ChildObjectCd	string	The child object code that identifies the child object to which the record belongs to.
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Appointment Transient Assignee

A participant in an appointment and each instance of a recurring appointment. The participant is an internal resource.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activitiesService/}TransientAssignee

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Appointment Transient*

Relationship Type	Object or Service
Handled by	*Sales Reference Customer*
Handled by	*Appointment Service*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivityAssigneeId	long	The unique identifier for the appointment resource participant. • Primary Key
ActivityId	long	The unique identifier of the activity.
AppointmentResponseCd	string	The response to an appointment invitation such as Accepted, Rejected, and Tentatively Accepted.
AssigneeId	long	The identifier of the party corresponding to resource participating at the appointment.
AssigneeRsrcOrgId	long	The identifier of the organization to which the resource belongs.
OwnerFlag	boolean	The attribute that indicates that the appointment resource participant is also the appointment owner.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
ShowTimeAsCd	string	The attribute to show a resource time as Busy or Available on a calendar.

Appointment Transient Category

A category that the appointment and its instances belong to, such as a phone call or demonstration.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activitiesService/}TransientCategory

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Appointment Transient*
Handled by	*Sales Reference Customer*
Handled by	*Appointment Service*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivityCategoryId	long	The unique identifier for the Appointment Category table. • Primary Key
ActivityId	long	The unique identifier of the activity.
CategoryCd	string	The attribute for lookup code for category.

Appointment Transient Contact

A contact participant in an appointment and each instance of a recurring appointment.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activitiesService/}TransientContact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Appointment Transient*
Handled by	*Sales Reference Customer*
Handled by	*Appointment Service*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivityContactId	long	The identifier of the row in the intersection table between Appointment and Contact. • Primary Key
ActivityId	long	The unique identifier of the activity.
ContactId	long	The Party id of the contact.
ContactRelationshipId	long	The identifier of the contact relationship record in Trading Community Architecture (TCA).
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_

Name	Type	Description
		PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.

Appointment Transient Note

A note for an appointment and each instance of a recurring appointment.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activitiesService/}TransientNote

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Appointment Transient*
Handled by	*Sales Reference Customer*
Handled by	*Appointment Service*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
NoteId	long	The unique identifier of the note. • Primary Key

Name	Type	Description
NoteTxt	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The description of the note.
NoteTypeCode	string	The lookup code for the type of the note associated to the appointment, such as, General, Reference, or Special.
PartyId	string	The unique identifier of the contact party.
PartyName	string	The name of the party.
SourceObjectCode	string	Indicates that the object associated to the appointment is a Note.
SourceObjectId	long	The Note id associated to the appointment.
VisibilityCode	string	The Lookup code for note visibility, such as private, internal or external.

Appointment Transient

A individual appointment or an instance of a recurring appointment. For example, monthly lunchtime sales meetings or a client visit.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activitiesService/}TransientAppointment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Appointment Transient Category SDO*
Contains	*Appointment Transient Note SDO*
Contains	*Appointment Transient Assignee SDO*
Contains	*Appointment Transient Contact*
Contained by	*Opportunity*

Relationship Type	Object or Service
Contained by	*Reference*
Handled by	*Sales Reference Customer*
Handled by	*Appointment Service*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivityDescription	string	The description of the appointment.
ActivityId	long	The unique identifier of the activity. • Primary Key
ActivityLocationTxt	string	The location of the appointment.
ActivityName	string	The subject of the appointment.
AlarmFlag	boolean	Indicates whether a reminder alarm should start prior to the appointment.
AllDayFlag	boolean	Indicates the appointment is an all-day appointment.
AppointmentAssignee	*Appointment Transient Assignee*	Not used in V1.0 for appointment.
AppointmentContact	*Appointment Transient Contact*	The contact populated on the appointment using its party id.
AppointmentNote	*Appointment Transient Note*	The appointment note.
ApptAlarmTmMinimumNumber	long	Specifies how long the Alarm Notice Time should be in minutes.
AsgnDenormFlag	boolean	Not used in V1.0 for appointment.
AsgnManualFlag	boolean	Not used in V1.0 for appointment.

Name	Type	Description
AsgnSystemFlag	boolean	Not used in V1.0 for appointment.
CategoryCodeTransient	string	The lookup code corresponding to the category set on the appointment.
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CustomerId	long	The identifier of the customer on the appointment.
CustomerName	string	The name of the customer on the appointment.
CustomerPartyType	string	The customer type of the customer assigned to the appointment.
DoNotRouteFlag	boolean	Not used in V1.0 for appointment.
EditMode	string	Not used in V1.0 for appointment.
FuseParticipants	string	Internal Attribute. Do not use.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LockAsgnFlag	boolean	Not used in V1.0 for appointment.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
Owner	string	The name of the appointment owner.

Name	Type	Description
OwnerId	long	The Party Id of the appointment owner.
OwnerRsrcOrgId	long	The identifier corresponding to the organization to which the appointment owner belongs.
PartyId	long	The unique identifier of the contact party.
PartyId1	long	The name of the party.
PartyName	string	The name of the party.
PartyName1	string	The name of the party.
PlannedDurationNumber	decimal	Not used in V1.0 for appointment.
PlannedDurationUOMCd	string	Not used in V1.0 for appointment.
PlannedEndDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The appointment end date and time.
PlannedStartDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The appointment start date and time.
RecurApptId	long	The identifier of the appointment record describing recurrence.
RecurDay	long	The week days the appointment can be recurring on.
RecurEndDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Specifies a specific date when recurrence stops.
RecurExceptionFlag	boolean	Indicates that this is an exception in a recurrence series.
RecurFlag	boolean	Indicates that the appointment is recurring.
RecurFreqNumber	long	Recurrence frequency, such as, Every x Days, Every x Weeks, Every x Months, Every x Years.
RecurFriFlag	boolean	Indicates in weekly recurrence patterns that appointments occur on Friday.

Name	Type	Description
RecurMonFlag	boolean	Indicates in weekly recurrence patterns that appointments occur on Monday.
RecurMonth	string	In yearly recurrence, indicates the month appointments occur in.
RecurOccursNumber	long	The number of recurrence instances.
RecurOrigInstDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The first date and time an appointment occurs in a recurring series.
RecurPattern	string	Indicates recurrence patterns such as Third Week of Every Month.
RecurReplaceCd	string	Not used in V1.0 for appointment.
RecurSatFlag	boolean	Indicates in weekly recurrence patterns that appointments occur on Saturday.
RecurSunFlag	boolean	Indicates in weekly recurrence patterns that appointments occur on Sunday.
RecurThuFlag	boolean	Indicates in weekly recurrence patterns that appointments occur on Thursday.
RecurTueFlag	boolean	Indicates in weekly recurrence patterns that appointments occur on Tuesday.
RecurTypeCd	string	Indicates the type of recurrence such as Daily, Weekly, Monthly, Yearly.
RecurWedFlag	boolean	Indicates in weekly recurrence patterns that appointments occur on Wednesday.
RecurWeekDayCd	string	Indicates if the appointment should occur every day including weekends or just on week days, applicable for daily recurring appointments.
ReferenceCustomerId	long	The identifier corresponding to the reference customer set on the appointment.
ReferenceCustomerName	string	The reference customer name set on the appointment.
Response	string	The response of the participant, such as Accepted, Rejected, Tentatively Accepted.

Name	Type	Description
ShowTimeAs	string	Indicates how the time between the appointment start and end date-time shows on a participant's calendar, such as Busy.
SourceObjectCd	string	Indicates the object type the appointment is related to.
SourceObjectCodeMeaningTransient	string	The code indicating the type of business object associated with the appointment, examples: LEAD or OPPORTUNITY.
SourceObjectId	long	The object identifier to which the appointment is related.
TemplateFlag	boolean	Not used in V1.0 for appointment.
TemplateId	long	Not used in V1.0 for appointment.
TransientCategory	*Appointment Transient Category*	The category of an appointment.
VisibilityCd	string	Not used in V1.0 for appointment.

Common Attachment

The attachment that can include documents, files, or web site links associated with appointments, interactions or tasks.

QName: {http://xmlns.oracle.com/apps/crmCommon/objects/objectsService/}CommonAttachments

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Appointment Service*
Handled by	*Customer Interaction*
Handled by	*Activity Service*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttachedDocumentId	long	The identifier of the document attachment.
Attachment	string	The title or name of the attachment.
CategoryName	string	The name of the attachment category.
DatatypeCode	string	The code value of the data type.
Description	string	The free text description of the record.
DmFolderPath	string	The folder path of the attachment.
DmNode	decimal	The attachment node.
DmRepository	string	The attachment repository.
DmType	string	The type of attachment.
DmVersionNumber	string	The version number of the attachment.
DocumentAttributes	string	The attributes of the document attachment.
DocumentEntityId	long	The identifier of document entity.
DownloadStatus	string	The download status of attachment.
EntityAttributes	string	The entity attributes of the attachment.
EntityName	string	The name of the entity attachment.
FileName	string	The name of the file attachment.
FileURL	string	The URL of the file attachment.
Pk1Value	string	Value of primary key 1.
Pk2Value	string	Value of primary key 2.

Name	Type	Description
Pk3Value	string	Value of primary key 3.
Pk4Value	string	Value of primary key 4.
Pk5Value	string	Value of primary key 5.
TableName	string	The table name of attachment.
Title	string	The attachment title.
URL	string	The destination URL associated with a specific Google AdWords ad.
UploadedFile	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The uploaded attachment file.
UploadedFileContentType	string	The content type of file attachment.
UploadedFileLength	long	The length of file attachment.
UploadedFileName	string	The name of the file attachment.
UploadedText	string	The attachment text.
UsageType	string	The usage type of the attachment.
VersionControlIcon	string	The attachment version control.

Note

The object that captures comments, information, or instructions for an Oracle Fusion Applications business object.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/noteService}Note

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Note Descriptive Flexfields*

Relationship Type	Object or Service

Relationship Type	Object or Service
Handled by	*Partner Program Enrollment Service*
Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactRelationshipId	long	The identifier of the contact relationship record in Trading Community Architecture (TCA).
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreatorPartyId	long	This is the party identifier for the note creator.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DeleteFlag	boolean	Indicates whether the user has access to delete the note.
Dff	*Note Descriptive Flexfields*	The descriptive flex field segment.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record

Name	Type	Description
NoteAttributeCategory	string	The contextual flex field for development usage.
NoteAttributeUid1	string	The flex field for development usage.
NoteAttributeUid2	string	The flex field for development usage.
NoteAttributeUid3	string	The flex field for development usage.
NoteAttributeUid4	string	The flex field for development usage.
NoteAttributeUid5	string	The flex field for development usage.
NoteId	long	The unique identifier of the note. • Primary Key
NoteNumber	string	The alternate unique identifier of the note. A user key that is system generated or from an external system.
NoteTitle	string	The title of the note entered by the user.
NoteTxt	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	This is the column that stores the actual note text.
NoteTypeCode	string	This is the note type code for categorization of note.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
SourceObjectCode	string	This is the source_object_code for the source object as defined in OBJECTS Metadata.
SourceObjectId	string	This is the source_object_Uid for the source object such as Activities, Opportunities, and so on defined in OBJECTS metadata.
UpdateFlag	boolean	Indicates whether the user can update the note.
VisibilityCode	string	This is the attribute to specify the visibility level of the note.

Note Descriptive Flexfields

The descriptive flex field that captures additional information for notes, such as a priority or status.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/flex/noteDff/}NoteDFF

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Note*

Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
NoteId	long	The unique identifier of the note. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Assignment Service

Service to assign sales objects. This service performs territory, rule, classification or scoring assignment processing for a single record.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmCommon/workMgmt/assignmentMgr/assignmentService/}AssignmentService

Service WSDL URL: https://servername/crmService/AssignmentService?WSDL

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Assignable Work Objects*
Handles	*Assignment Passed Scores*
Handles	*Assignment Score Request*
Handles	*Assignment Passed Candidates*
Handles	*Rule Set Information*
Handles	*Assignment Request*
Handles	*Assignment Candidate Exclusion List*

Relationship Type	Object or Service
Handles	*Assignment Candidate Information*
Handles	*Assignment Match Request*

Operations

- *getScoreAndAssign*
- *getScore*
- *findMatchAndAssign*
- *findMatch*
- *assignScore*
- *assign*

getScoreAndAssign

Calculates a score for each work object and assigns the score to the work object. This method can be used with rule-based assignment only.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
request	*Assignment Score Request*	Input information for the method.

Response Payload

Element Name	Type	Description
result	void	

getScore

Calculates a score for each work object. This method can be used with rule-based assignment only.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
request	*Assignment Score Request*	Input information for the method.

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	*Assignment Passed Scores*	Values returned by the method.

findMatchAndAssign

Identifies the matching candidate or candidates for each work objects being assigned and executes the logic to assign the matches. This method can be used with rule-based assignment, territory-based assignment and territory-based assignment with rule filtering.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
request	*Assignment Match Request*	Input information for the method.

Response Payload

Element Name	Type	Description
result	void	

findMatch

Identifies the matching candidate or candidates for each work object being assigned. This method can be used with rule-based assignment, territory-based assignment and territory-based assignment with rule filtering.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
request	*Assignment Match Request*	Input information for the method.

Response Payload

Element Name	Type	Description
result	*Assignable Work Objects*	Matching values returned by the method.

assignScore

Assigns a score to a work object where the score is already known. This method can be used with rule-based assignment only.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
request	*Assignment Passed Scores*	Input information for the method.

Response Payload

Element Name	Type	Description
result	void	

assign

This is used if the candidate or candidates for a work object are already known. The assignment processing is used to execute its assignment logic, which stores the candidate on the work object or in the work object child table. This method can be used with rule-based assignment and territory-based assignment.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
request	*Assignment Request*	Input information for the method.

Response Payload

Element Name	Type	Description
result	void	

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MOW_RUN_BATCH_ASSIGN_PROCESS_PRIV	Run Purge Batch Assignment Information Process	Allows scheduling and monitoring of the process to purge the batch assignment data.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MOW_RUN_BATCH_ASSIGN_PROCESS_PRIV	ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Customer Relationship Management Application Administrator	Individual responsible for customer relationship management application administration. Collaborates with customer relationship management application users to maintain consistent financial application setup, rules, and access.
MOW_RUN_BATCH_ASSIGN_PROCESS_PRIV	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
MOW_RUN_BATCH_ASSIGN_PROCESS_PRIV	ORA_ZPM_PARTNER_ACCOUNT_ADMINISTRATION_DUTY	Partner Account Administration	Maintains a partner account, including managing members and partner profile information.
MOW_RUN_BATCH_ASSIGN_PROCESS_PRIV	ORA_SVC_HELPDESK_ADMINISTRATION	HR Help Desk Administration	Manage all aspects of the HCM help desk service requests. In addition can manage queues and administer the HCM help desk service application, including setup.
MOW_RUN_BATCH_ASSIGN_PROCESS_PRIV	ORA_MOO_OPPORTUNITY_ADMINISTRATION_DUTY	Opportunity Administration	Administers all aspects of the application, including some setup. This role is for opportunity administrators.
MOW_RUN_BATCH_ASSIGN_PROCESS_PRIV	ORA_ZCM_SALES_PARTY_ADMINISTRATION_DUTY	Sales Party Administration	Manages named sales accounts, sales account import scheduler and the flagging of existing accounts. Additional duties include managing sales parties, functional setups, customer center objects,

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			and relationship information inquiries.
MOW_RUN_BATCH_ASSIGN_PROCESS_PRIV	ORA_SVC_HR_SR_ADMINISTRATION	HR Service Request Administration	Manages all aspects of Next Gen HR service requests. In addition, can manage queues and administer the Next Gen HR Help Desk service application, including setup.
MOW_RUN_BATCH_ASSIGN_PROCESS_PRIV	ORA_SVC_INTERNAL_HELPDESK_ADMINISTRATION	Internal Service Request Administration	Manages all aspects of Internal service requests. In addition, can manage queues and administer the Internal Help Desk service application, including setup.
MOW_RUN_BATCH_ASSIGN_PROCESS_PRIV	ORA_MKT_MARKETING_OPERATIONS_MANAGER_JOB	Marketing Operations Manager	Manages the operations for marketing and leads. Develops tactical campaigns to carry out marketing strategies and communicate offers to customer segments using multiple marketing channels. Monitors campaign interactions, captures campaign responses, and manages sales leads to fill the sales pipeline. Creates and maintains the setup for marketing campaigns, responses, segments, lists, and treatments.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_MKT_MARKETING_OPERATIONS_MANAGER_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_CHANNEL_MANAGER_DASHBOARD_DUTY	Channel Manager Dashboard	Provides channel roles a dashboard to manage their daily transactions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_AMENDMENT_DUTY_CRM	Contract Amendment	Amends approved contracts. This includes initiating an amendment, reverting the contract to the previous signed version, updating

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
			all allowable attributes, and submitting the amendment for approval.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_AUTHORING_DUTY_CRM	Contract Authoring	Authors contracts, including terms and conditions, interactions, and customer account information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_SEARCH_VIEW_DUTY_CRM	Contract Search and View Access	Searches and views contracts for the assigned business units.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_SETUP_DUTY_CRM	Contract Setup	Contract Setup
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_CONV_MESSAGE_ADMINISTRATION	Conversation Message Administration	Has complete conversation message management capabilities including create messages, reply to messages, change a reply to ready to send status and delete a message.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_CDM_ADMIN_DUTY	Customer Data Management Administration	Administers customer data management.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_CSS_ADMINISTRATION	Customer Self-Service Administration	Manages the provisioning and approval of self service registration requests
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_CUST_SERVICE_BILLING_VIEWING	Customer Service Billing Information Viewing	View customer billing information across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_CUST_SERVICE_SCM_ORDERS_MANAGEMENT	Customer Service SCM Orders Management	Allow creation and management of supply chain management orders across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_CUST_SERVICE_SCM_ORDERS_VIEWING	Customer Service SCM Orders Viewing	View supply chain management orders across Oracle Fusion Service, including service requests and service work orders.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_DATA_INTEGRATION_MANAGEMENT_DUTY	Data Integration Management	This role allows setup and management of data integration maps and instances.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_FFS_FIELD_SERVICE_APPLICATION_ADMINISTRATOR_DUTY	Field Service Application Administrator	Individual responsible for the duty of configuring Field Service mobile application
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_GEO_ADMIN_DUTY	Geography Administration	Grants privileges to set up geographies
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_CN_INCENTIVES_ADMINISTRATION_DUTY_CRM	Incentive Compensation Administration	Configure and maintain incentive compensation enterprise and business unit setup.
ORA_SVC_INTERNAL_HELPDESK_ADMINISTRATION	ORA_SVC_INTERNAL_HELP_DESK_ENGAGEMENT_CHANNEL_ADMINISTRATOR	Internal Help Desk Engagement Channel Application Administrator	Individual responsible for monitoring and administration of the supervisor dashboard for Internal Help Desk.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_AUTHORING_DUTY	Interview Definition Authoring	Manage access for authoring Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_MANAGING_DUTY	Interview Definition Managing	Manage access for deleting and forcing checkout of Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_PUBLISHING_DUTY	Interview Definition Publishing	Manage access for publishing and unpublishing Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_VIEWING_DUTY	Interview Definition Viewing	Manage access for viewing Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_EGP_ITEM_MANAGEMENT_DUTY_CRM	Item Management	Creates and manages items including item attributes, item structures, packs, associations, relationships, and catalog assignments.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_CSO_KNOWLEDGE_SETUP_AND_MAINTENANCE_DUTY	Knowledge Setup and Maintenance	Provides the users with the ability to setup and manage knowledge base
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_LEAD_REGISTRATION_MANAGEMENT_DUTY	Lead Registration Management	Manages and analyzes sales lead registrations. Includes the ability to create sales lead registrations, edit both internal and partner lead attributes as needed, and view lead age and status.
ORA_MKT_MARKETING_OPERATIONS_MANAGER_JOB	ORA_MKL_LEAD_REGISTRATION_PROCESSING_DUTY	Lead Registration Processing	Reviews, accepts, and rejects sales lead registrations. Includes the ability to view sales lead details and update internal attributes.

ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_TEAM_ADMINISTRATOR_DUTY	Resource Team Administration	Defines resource teams.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_REVIEW_CRM_APPROVAL_TRANSACTIONS_ADMINISTRATOR	Review CRM Approval Transactions Administrator	Allows viewing of information for CRM approval transactions by an administrator.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZBS_SALES_CHANGE_HISTORY_INQUIRY_DUTY	Sales Change History Inquiry	Views change history of sales business objects for members within the sales organization.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_SALES_LEAD_FOLLOW_UP_DUTY	Sales Lead Follow Up	Processes sales lead for follow up actions including the qualification and conversion of sales lead to revenue opportunities.
ORA_MKT_MARKETING_OPERATIONS_MANAGER_JOB	ORA_MKL_SALES_LEAD_PROCESSING_DUTY	Sales Lead Processing	Processes sales leads including managing, importing, and assigning sales lead activities.
ORA_MKT_MARKETING_OPERATIONS_MANAGER_JOB	ORA_ZCM_SALES_PARTY_ADMINISTRATION_DUTY	Sales Party Administration	Manages named sales accounts, sales account import scheduler and the flagging of existing accounts. Additional duties include managing sales parties, functional setups, customer center objects, and relationship information inquiries.
ORA_MKT_MARKETING_OPERATIONS_MANAGER_JOB	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ORA_ZCM_SALES_PARTY_ADMINISTRATION_DUTY	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_AVAILABILITY_MANAGEMENT	Service Availability Management	Manage the service availability data including reading and writing the availability of a service.
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_GEN_AI_ADMIN	Service Generative AI Administrator	Administer activities related to Service Gen AI APIs such as

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
			configuration of prompts across all areas of Oracle Fusion Service, such as Service Center, Knowledge, and Chat.
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_GEN_AI_USER	Service Generative AI User	Can use generative AI features across Oracle Fusion Service including but not limited to Service Center, Knowledge Management and Chat areas. Usage requires access to all generative AI API's essential to input data and fetch results from the LLM model.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_PROFILE_ADMINISTRATION	Service Profile Administration	Manages all aspects of the Service Profile object, including deleting a service profile.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_STATUS_COMPUTATION	Service Status Computation	Perform actions required to determine the availability of a service.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_SETUP_CUSTOMER_CENTER_DUTY	Setup Customer Center	Manages customer center set up, sales party creation and their related objects, such as appointments, assessments, interactions, notes and tasks.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HRS_SOCIAL_CONNECTION_PARTNER_DUTY_CRM	Social Connection Partner	Performs all Oracle Fusion Social Connection partner duties.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SPECIALIST_JOB	Subscription Specialist	Individual responsible for managing subscriptions, establishing recurring and usage billing processes, initiating manual discounts and invoice adjustments, and handling billing discrepancies and disputes.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	Territory Management Setup	Manages sales territory setup, including lookups, profile options, flexfields, and dimension data. Runs dimension synchronization, and visibility jobs. Additional duties include quota management setup.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_CUSTOMER_ACCOUNT_ADMINISTRATION_DUTY	Trading Community Customer Account Administration	Grants privileges to setup customer account information.
ORA_ZCM_SALES_PARTY_ADMINISTRATION_DUTY	ORA_DATA_QUALITY_ADMIN_DUTY	Trading Community Data Quality Administration	Configures, reviews, and edits predefined data quality server configurations and the predefined matching, synchronization, and cleansing configurations.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DATA_QUALITY_ADMIN_DUTY	Trading Community Data Quality Administration	Configures, reviews, and edits predefined data quality server configurations and the predefined matching, synchronization, and cleansing configurations.
ORA_MKT_MARKETING_OPERATIONS_MANAGER_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCM_SALES_PARTY_ADMINISTRATION_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_PERSON_ADMINISTRATION_DUTY	Trading Community Person Administration	Grants privileges to setup person information.

Assignable Work Objects

The work object records that can be assigned.

QName: {http://xmlns.oracle.com/apps/crmCommon/workMgmt/assignmentMgr/assignmentMgrService/}InputWorkObjects

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Assignment Passed Candidates*
Contains	*Assignment Candidate Exclusion List*
Contained by	*Assignment Match Request*
Contained by	*Assignment Score Request*
Contained by	*Assignment Request*
Handled by	*Assignment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CandidateExclusionList	*Assignment Candidate Exclusion List*	The attribute for list of candidates to be excluded from assignment processing.
PassedCandidates	*Assignment Passed Candidates*	The passed candidates of assignment processing.
WorkObject	string	The code of the assignment work object. • Primary Key
WorkObjectPrimaryKey1	string	The first attribute of a work object primary key. • Primary Key

Name	Type	Description
WorkObjectPrimaryKey2	string	The second attribute of a work object primary key. • Primary Key
WorkObjectPrimaryKey3	string	The third attribute of a work object primary key. • Primary Key

Assignment Candidate Exclusion List

The candidates that are excluded when assigning a work object.

QName: {http://xmlns.oracle.com/apps/crmCommon/workMgmt/assignmentMgr/assignmentMgrService/}CandidateExclusionList

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Assignable Work Objects*
Handled by	*Assignment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CandidateObjectPrimaryKey1	string	The first attribute of a candidate object primary key. • Primary Key
CandidateObjectPrimaryKey2	string	The second attribute of a candidate object primary key. • Primary Key
CandidateObjectPrimaryKey3	string	The third attribute of a candidate object primary key. • Primary Key

Name	Type	Description
WorkObject	string	The code of the assignment work object. • Primary Key
WorkObjectPrimaryKey1	string	The first attribute of a work object primary key. • Primary Key
WorkObjectPrimaryKey2	string	The second attribute of a work object primary key. • Primary Key
WorkObjectPrimaryKey3	string	The third attribute of a work object primary key. • Primary Key

Assignment Candidate Information

The information of the candidate to be assigned to a work object.

QName: {http://xmlns.oracle.com/apps/crmCommon/workMgmt/assignmentMgr/assignmentMgrService/}CandidateInfo

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Assignment Passed Candidates*
Handled by	*Assignment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CandidateInformationColumn	string	The name of the column such as territory type that displays additional information about the candidate. • Primary Key

Name	Type	Description
CandidateInformationValue	string	The value of the additional candidate information column.
CandidateObjectPrimaryKey1	string	The first attribute of a candidate object primary key. • Primary Key
CandidateObjectPrimaryKey2	string	The second attribute of a candidate object primary key. • Primary Key
CandidateObjectPrimaryKey3	string	The third attribute of a candidate object primary key. • Primary Key
WorkObject	string	The code of the assignment work object. • Primary Key
WorkObjectPrimaryKey1	string	The first attribute of a work object primary key. • Primary Key
WorkObjectPrimaryKey2	string	The second attribute of a work object primary key. • Primary Key
WorkObjectPrimaryKey3	string	The third attribute of a work object primary key. • Primary Key

Assignment Match Request

The information used to evaluate candidates to assign to a work object by the assignment engine.

QName: {http://xmlns.oracle.com/apps/crmCommon/workMgmt/assignmentMgr/assignmentMgrService/}MatchRequest

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Assignable Work Objects*
Handled by	*Assignment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AsgnMode	string	The attribute for mode of assignment processing such as matching or territory.
CandidateObject	string	The code of the assignment candidate object.
CustomData	string	The custom information passed into the assignment processing.
GroupingAttrName	string	The name of the attribute used to group together records for assignment processing.
InputWorkObjects	*Assignable Work Objects*	The identifier of a work object for assignment processing.
JobId	string	The identifier of the batch assignment process.
ReplaceTeamFlag	boolean	The attribute that indicates whether the team is replaced if the assignment result differs during reassignment of an object.
ReturnCandidateInformationFlag	boolean	The attribute that indicates whether additional candidate info should be included in the assignment output.
RuleSetGroupId	string	The identifier of the rule category to use assignment processing.
RuleSetGroupName	string	The name of the rule category to use assignment processing.
WorkObject	string	The code of the assignment work object. • Primary Key

Assignment Passed Candidates

The candidates identified to be assigned to a work object. Optionally, also includes the candidate score.

QName: {http://xmlns.oracle.com/apps/crmCommon/workMgmt/assignmentMgr/assignmentMgrService/}PassedCandidates

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Assignment Candidate Information*
Contained by	*Assignable Work Objects*
Handled by	*Assignment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CandidateInfo	*Assignment Candidate Information*	Additional display columns configured in assignment metadata for the candidate object.
CandidateObject	string	The code of the assignment candidate object.
CandidateObjectPrimaryKey1	string	The first attribute of a candidate object primary key. • Primary Key
CandidateObjectPrimaryKey2	string	The second attribute of a candidate object primary key. • Primary Key
CandidateObjectPrimaryKey3	string	The third attribute of a candidate object primary key. • Primary Key
Score	long	The score calculated in assignment processing.

Name	Type	Description
WorkObject	string	The code of the assignment work object. • Primary Key
WorkObjectPrimaryKey1	string	The first attribute of a work object primary key. • Primary Key
WorkObjectPrimaryKey2	string	The second attribute of a work object primary key. • Primary Key
WorkObjectPrimaryKey3	string	The third attribute of a work object primary key. • Primary Key

Assignment Passed Scores

The scores of the work object returned by assignment processing.

QName: {http://xmlns.oracle.com/apps/crmCommon/workMgmt/assignmentMgr/assignmentMgrService/}PassedScores

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Rule Set Information*
Contained by	*Assignment Score Request*
Handled by	*Assignment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
MaximumScore	long	The attribute for maximum score calculated in assignment processing.

Name	Type	Description
RulesetInfo	*Rule Set Information*	The attribute that encapsulates the score details at Ruleset level.
Score	long	The score calculated in assignment processing.
WorkObject	string	The code of the assignment work object. • Primary Key
WorkObjectPrimaryKey1	string	The first attribute of a work object primary key. • Primary Key
WorkObjectPrimaryKey2	string	The second attribute of a work object primary key. • Primary Key
WorkObjectPrimaryKey3	string	The third attribute of a work object primary key. • Primary Key

Assignment Request

The work object and the assignment processing type to be performed.

QName: {http://xmlns.oracle.com/apps/crmCommon/workMgmt/assignmentMgr/assignmentMgrService/}AssignRequest

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Assignable Work Objects*
Handled by	*Assignment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AsgnMode	string	The attribute for mode of assignment processing such as matching or territory.
CustomData	string	The custom information passed into the assignment processing.
GroupingAttrName	string	The name of the attribute used to group together records for assignment processing.
InputWorkObjects	*Assignable Work Objects*	The identifier for a work object for assignment processing.
JobId	string	The identifier of the batch assignment process.
ReplaceTeamFlag	boolean	The attribute that indicates whether the team is replaced if the assignment result differs during reassignment of an object.
WorkObject	string	The assignment records for assignment processing. • Primary Key

Assignment Score Request

The information used by the assignment processing when scoring a work object.

QName: {http://xmlns.oracle.com/apps/crmCommon/workMgmt/assignmentMgr/assignmentMgrService/}ScoreRequest

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Assignable Work Objects*
Contains	*Assignment Passed Scores*
Handled by	*Assignment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
InputWorkObjects	*Assignable Work Objects*	The identifier of a work object for assignment processing.
PassedScores	*Assignment Passed Scores*	The attribute that encapsulates the score details calculated in assignment processing.
RuleSetGroupId	string	The identifier of the rule category to use assignment processing.
RuleSetGroupName	string	The name of the rule category to use in assignment processing.
workObject	string	The code of the assignment work object. • Primary Key

Rule Set Information

The rule set and score information for rule sets evaluated during assignment processing.

QName: {http://xmlns.oracle.com/apps/crmCommon/workMgmt/assignmentMgr/assignmentMgrService/}RulesetInfo

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Assignment Passed Scores*
Handled by	*Assignment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
EvaluatedScore	long	The calculated score for a rule set when the use score option is enabled.
MaximumScore	long	The attribute for maximum score calculated in assignment processing.
RuleSetName	string	The name of the rule set to use in assignment processing.
WorkObject	string	The code of the assignment work object. • Primary Key
WorkObjectPrimaryKey1	string	The first attribute of a work object primary key. • Primary Key
WorkObjectPrimaryKey2	string	The second attribute of a work object primary key. • Primary Key
WorkObjectPrimaryKey3	string	The third attribute of a work object primary key. • Primary Key

Bulk Export (Deprecated)

A web service used to extract data in a batch process. This service is deprecated and is replaced with Bulk Export V 2 (oracle.apps.crmCommon.bulkExport.bulkExportServiceV2.BulkExportService).

Life Cycle Status: Deprecated. This service is deprecated and replaced by .

QName: {http://xmlns.oracle.com/apps/crmCommon/bulkExport/publicModel/}CrmCommonBulkExportService

Service WSDL URL: https://servername/crmService/CrmCommonBulkExportService?WSDL

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Next version is	*Bulk Export Version 2*
Handles	*File Export Output*

Relationship Type	Object or Service
Handles	*Object Code*
Handles	*Description*
Handles	*Name*
Handles	*File Export Job*
Handles	*View Criteria Name*
Handles	*File Export Batch*

Operations

- *runExportJob*
- *getAttachmentsForBatch*
- *createAndRunExportJob*
- *RunExportJobWithVC*
- *getJob*
- *findJobs*
- *getBatch*
- *deleteBatch*
- *findBatches*
- *findExportBatchesByJobId*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

runExportJob

The operation that runs the specified export job with an optionally specified timestamp range. If beginTm is specified, the records exported by the bulk export job will only contain those records whose LastUpdateDate is on or after the specified beginTm parameter. If endTm is specified, the records exported by the bulk export job will only contain those whose LastUpdateDate is on or before the specified endTm parameter. If the view being exported does not contain a column named LastUpdateDate, all records will be exported.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
jobId	long	The name is an identifier for the bulk export job.
beginTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The time when the bulk export job begins. It can be on or after the filter time, and can be null.
endTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The time when the bulk export job ends. It can be on or before the filter time, and can be null.

Response Payload

Element Name	Type	Description
result	long	The batch identifier created for the job run will be returned, or null will be returned if a batch wasn't created.

getAttachmentsForBatch

The operation returns a list of attachments for a specific batch identifier.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
batchId	long	The operation identifies the times when the export of a job runs.

Response Payload

Element Name	Type	Description
result	*File Export Output*	A list of attachments associated with the provided batch identifier. The attachments correspond to data in the view object(s) that were selected in the job that was executed.

createAndRunExportJob

The operation for bulk export.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
jobRequest	*Description*	The input details of the job request.

Response Payload

Element Name	Type	Description
result	long	The operation returns batch identifier for corresponding job.

RunExportJobWithVC

The operation that runs the export job specified by the job number.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
jobNumber	string	The operation that runs the export job specified by the job number.
zipFileName	string	The operation that runs the export job specified by the job number.
viewCriteria	string	The return value of the createEntity web service method. Includes the full set of attributes and child entities of the record.
bindVar	*Export Job Bind Value*	The operation that runs the export job specified by the job number.

Response Payload

Element Name	Type	Description
result	long	The operation that runs the export job specified by the job number.

getJob

The get operation for file export job.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
exportJobId	long	The get operation for bulk export job identifier.

Response Payload

Element Name	Type	Description
result	*File Export Job*	The file export job that matches the inbound key attributes.

findJobs

The find operation for file export job.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*File Export Job*	A list of file export job that satisfy the inbound criteria.

getBatch

The get operation for file export batch.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
exportBatchId	long	The export batch identifier identifies each time the export of a job is run.

Response Payload

Element Name	Type	Description
result	*File Export Batch*	The file export batch that matches the inbound key attributes.

deleteBatch

The operation to delete file export batch.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
crmCommonExportBatches2	*File Export Batch*	The file export batch to be deleted.

Response Payload

Element Name	Type	Description
result	void	The operation to delete file export batch.

findBatches

The find operation for file export batch.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*File Export Batch*	A list of file export batch that satisfy the inbound criteria.

findExportBatchesByJobId

The find operation for file export batch using the job identifier.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
jobId	long	The find operation for bulk export job identifier.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*File Export Batch*	A list of file export batch that satisfy the inbound criteria.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The return value of the findEntity web service method. Includes the full set of attributes and child entities of the records.
localeName	string	An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	An operation that returns the date and time when the schema files referenced in the service definition last changed.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	An operation to get the list of service data objects defined on this service.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	Run CRM Export Process	This privilege would grant a user the ability to schedule CRM object to export to a file

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PLAN_ADMINISTRATOR_JOB	Incentive Compensation Plan Administrator	Configure and manage incentive plans, plan components, and classification rules
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_CUSTOMER_CONTRACT_TEAM_MEMBER_ABSTRACT	Customer Contract Team Member	
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OSS_SUBSCRIPTION_SETUP_DUTY	Subscription Setup	Handles the setup required for subscriptions.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Master Data Management Application Administrator	Administers the installation and maintenance of customer data management application and foundation model.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_EXPORT_IMPORT_DUTY	Territory Management Export Import	Manages sales territory export and import. Provides users with the ability to export territory data, modify it offline and import.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_CUSTOMER_CONTRACT_MANAGER_JOB	Customer Contract Manager	Manages a team of customer contract administrators.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_SUPPLIER_CONTRACT_ADMINISTRATOR_JOB	Supplier Contract Administrator	Works with internal buyers and legal to negotiate and author supplier contracts and agreements. Tracks critical contract milestones, monitors supplier performance, and assists buyers during contract renewals, closeout, and amendments.

ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZPM_CHANNEL_PARTNER_PORTAL_ADMINISTRATOR_JOB	Channel Partner Portal Administrator	Maintains customer-specific changes of all partner portal pages, external, internal, and anonymous pages.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCH_TRADING_COMMUNITY_DATA_STEWARD_JOB	Customer Data Steward	Performs customer data management activities including data import, cleansing, duplicate identification, and duplicate resolution.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_SUPPLIER_CONTRACT_TEAM_MEMBER_ABSTRACT	Supplier Contract Team Member	
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_CN_INCENTIVE_COMPENSATION_MANAGER_JOB	Incentive Compensation Manager	Manage processes and workloads, assignments, and payments
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_CN_INCENTIVE_COMPENSATION_ASSIGNMENT_ADMISTRATION_DUTY_CRM	Incentive Compensation Participant Assignments	Create and maintain the assignments of analyst to participant, participants and roles to compensation and payment plans as well as pay groups
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Customer Relationship Management Application Administrator	Individual responsible for customer relationship management application administration. Collaborates with customer relationship management application users to maintain consistent financial application setup, rules, and access.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_QSC_SALES_CATALOG_ADMINISTRATOR_JOB	Sales Catalog Administrator	Sets up and maintains sales catalogs for leads, opportunities, quotes and orders. Sets up and maintains rollup catalog for the purpose of forecasting, territory management, and other purposes. Also associates products, promotions, and competitor products to catalogs, and defines eligibility rules. Also manages the bulk export and import of all product group-related objects.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	Territory Management Setup	Manages sales territory setup, including lookups, profile options, flexfields, and dimension data. Runs dimension synchronization, and visibility jobs. Additional duties include quota management setup.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MKT_MARKETING_MAINTENANCE_DUTY	Marketing Maintenance	Creates and maintains setup for marketing campaigns, responses, segments, lists, and treatments across the enterprise. Additional duties include file import management for the import of marketing campaign responses.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MOT_QUOTA_EXPORT_MANAGEMENT_DUTY	Quota Export Management	Manages bulk export of all sales territory quota related objects.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_EXPORT_IMPORT_READ_ONLY_DUTY	Territory Management Export Import Read Only	Read Only role for Territory Management Export Import Duty.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_ENTERPRISE_CONTRACT_MANAGER_JOB	Enterprise Contract Manager	Manages a team of enterprise contract administrators.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZPM_CHANNEL_OPERATIONS_MANAGER_JOB	Channel Operations Manager	Maintains and manages partner transactional data.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_ENTERPRISE_CONTRACT_ADMINISTRATOR_JOB	Enterprise Contract Administrator	Performs the duties of both customer contract administrator and supplier contract administrator.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_GEO_ADMIN_DUTY	Geography Administration	Grants privileges to set up geographies

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_CN_INCENTIVE_COMPENSATION_ADMINISTRATOR_JOB	Incentive Compensation Application Administrator	Set up incentive compensation application
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_ENTERPRISE_CONTRACT_TEAM_MEMBER_ABSTRACT	Enterprise Contract Team Member	
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_PJF_GRANTS_ADMINISTRATOR_JOB	Grants Administrator	Assists the principal investigator with the administrative functions of an award and its related projects, particularly with data collection and data entry tasks.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZPM_CHANNEL_ADMINISTRATOR_JOB	Channel Administrator	Executes Oracle Partnership Management setup tasks.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_CUSTOMER_CONTRACT_ADMINISTRATOR_JOB	Customer Contract Administrator	Works with sales account teams and legal to negotiate and author customer contracts. Tracks critical contract milestones, service level agreements, and assists account teams during contract renewals and amendments.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_SVC_HELPDESK_ADMINISTRATION	HR Help Desk Administration	Manage all aspects of the HCM help desk service requests. In addition can manage queues and administer the HCM help desk service application, including setup.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCH_DATA_STEWARD_MANAGER_JOB	Data Steward Manager	Manages customer data stewards and has additional privileges including assigning requests.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_PJF_GRANTS_DEPARTMENT_ADMINISTRATOR_JOB	Grants Department Administrator	Assists the principal investigator with the administrative functions of an award and its related projects, particularly with data collection and data entry tasks for one or more departments within the enterprise.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_LOY_ADMINISTRATOR_DUTY	Loyalty Administrator	Manages the provisioning , setup and configuration of Loyalty Application.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_SUPPLIER_CONTRACT_MANAGER_JOB	Supplier Contract Manager	Manages a team of supplier contract administrators.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_POZ_DATAFOX_INTEL_ADMINISTRATION_DUTY_CRM	DataFox Administration for Supplier Intelligence	Manages setup for Power Supplier Intelligence with Oracle DataFox Smart Data feature. Not applicable outside of this feature and should be granted only to a user responsible for configuring this setup. This duty role has been obsoleted as part of the deprecation of the feature Manage Supplier Risk with DataFox Supplier Intelligence feature.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCM_SALES_PARTY_REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_T2P_MIGRATION_DUTY	Territory Management T2P Migration	Manages sales territory export and import. Provides users with the ability to export territory data from a test environment and import into production.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_PJF_PRINCIPAL_INVESTIGATOR_JOB	Principal Investigator	Controls and monitors the technical direction and academic quality of research projects such as laboratory studies or clinical trials. Ensures that projects comply with the terms, conditions, and policies defined by the sponsor and the institution. Owns ultimate responsibility for the management of the sponsored research award, especially in cases where funding is obtained from federal agencies such as the NIH or NSF.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCM_SALES_PARTY_ADMINISTRATION_DUTY	Sales Party Administration	Manages named sales accounts, sales account import scheduler and the flagging of existing accounts. Additional duties include managing sales parties, functional setups, customer center objects, and relationship information inquiries.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_SVC_HR_SR_ADMINISTRATION	HR Service Request Administration	Manages all aspects of Next Gen HR service requests. In addition, can manage queues and administer the Next Gen HR Help Desk service application, including setup.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCM_SETUP_CUSTOMER_CENTER_DUTY	Setup Customer Center	Manages customer center set up, sales party creation and

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			their related objects, such as appointments, assessments, interactions, notes and tasks.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_SVC_INTERNAL_HELPDESK_ADMINISTRATION	Internal Service Request Administration	Manages all aspects of Internal service requests. In addition, can manage queues and administer the Internal Help Desk service application, including setup.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.

Bulk Export Version 2

A web service used to extract data in a batch process.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmCommon/bulkExport/bulkExportServiceV2/}BulkExportService

Service WSDL URL: https://servername/crmService/BulkExportService?WSDL

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Previous version is	*Bulk Export*
Handles	*Export Parameters View Object*
Handles	*File Export Batch Version 2*
Handles	*File Export Job Version 2*
Handles	*Bulk Hierarchy Export Job Input View Object*
Handles	*Bulk Hierarchy Export Job Output Parameters View Object*
Handles	*File Export Output Version 2*
Handles	*Bulk Hierarchy Child Export Input View Object*
Handles	*Export Object Filter Criteria Details View Object*
Handles	*View Name*

Operations

- *runExportJob*
- *getAttachmentsForBatch*
- *runHierachicalExportJob*
- *runHierachicalExport*
- *createAndActivateBulkExportJob*
- *getJob*

- *findJobs*
- *getBatch*
- *deleteBatch*
- *findBatches*
- *findExportBatchesByJobId*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

runExportJob

Runs the specified export job with an optionally specified timestamp range. If beginTm is specified the records exported by the bulk export job will only contain those whose LastUpdateDate is on or after the specified beginTm parameter. If endTm is specified the records exported by the bulk export job will only contain those whose LastUpdateDate is on or before the specified endTm parameter. If the view being exported does not contain a column named LastUpdateDate all records will be exported regardless.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
jobId	long	The unique identifier of the bulk export job.
beginTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The time after the filter time when the export job was run.
endTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The endTm on or before filter time, may be null.

Response Payload

Element Name	Type	Description
result	long	The batch ID created for the run is returned, or null if a batch wasn't created.

getAttachmentsForBatch

Returns a list of attachments for a specific batch ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
batchId	long	The unique identifier of the batch for the import job.

Response Payload

Element Name	Type	Description
result	*File Export Output Version 2*	A list of attachments associated with the provided batch ID. The attachments correspond to data in the view objects that were selected in the job that was executed.

runHierachicalExportJob

The export job with the hierarchical object structure.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
jobNumber	string	The number identifying the export job.
zipFileName	string	The string type of the name of the zip file.
viewCriteria	string	The string type of the view criteria name.
bindVar	*View Name*	The type ExportBindValue contains bindName of the string type, bindValue of the string type, and isdateFlag of boolean type.

Response Payload

Element Name	Type	Description
result	long	Returns the ESS request ID of export job submitted.

runHierachicalExport

Runs the hierarchical export.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
jobId	long	The unique identifier of the bulk export job.
zipFileName	string	The string type of the name of the zip file.
viewCriteria	string	The string type of the view criteria name.

Response Payload

Element Name	Type	Description
result	long	Returns the batch ID.

createAndActivateBulkExportJob

Creates a new export job with parent and child objects with the corresponding filter criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
jobParams	*Export Parameters View Object*	The parameters of the bulk hierarchy export job.
objectParams	*Bulk Hierarchy Export Job Input View Object*	The details of the bulk hierarchy export object.

Response Payload

Element Name	Type	Description
result	*Bulk Hierarchy Export Job Output Parameters View Object*	Returns Export Job ID, batch ID and error information if any.

getJob

The Get operation for the file export job.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
exportJobId	long	The identifier of the bulk export job.

Response Payload

Element Name	Type	Description
result	*File Export Job Version 2*	File Export Job that matches the inbound key attributes.

findJobs

The Find operation for the file export job.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*File Export Job Version 2*	A list of File Export Job that satisfy the inbound criteria.

getBatch

The Get operation for the file export batch.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
exportBatchId	long	The unique identifier of the export batch. It identifies a batch each time the export is run.

Response Payload

Element Name	Type	Description
result	*File Export Batch Version 2*	File Export Batch that matches the inbound key attributes.

deleteBatch

The Delete operation for the file export batch.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
bulkExportBatches1	*File Export Batch Version 2*	The bulk export batch to be deleted.

Response Payload

Element Name	Type	Description
result	void	The Delete operation for the file export batch.

findBatches

The Find operation for the file export batch.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*File Export Batch Version 2*	The list of file export batches that satisfy the inbound criteria.

findExportBatchesByJobId

The find operation for job identifier to find file export batches.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
jobId	long	The find operation for bulk export job identifier.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*File Export Batch Version 2*	A list of file export batch that satisfy the inbound criteria.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The return value of the getEntity web service method. Includes the full set of attributes and child entities of the record.

Element Name	Type	Description
localeName	string	The locale to use when evaluating locale-based user interface hints. The locale name is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	Run CRM Export Process	This privilege would grant a user the ability to schedule CRM object to export to a file

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PLAN_ADMINISTRATOR_JOB	Incentive Compensation Plan Administrator	Configure and manage incentive plans, plan components, and classification rules
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_CUSTOMER_CONTRACT_TEAM_MEMBER_ABSTRACT	Customer Contract Team Member	
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OSS_SUBSCRIPTION_SETUP_DUTY	Subscription Setup	Handles the setup required for subscriptions.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Master Data Management Application Administrator	Administers the installation and maintenance of customer data management application and foundation model.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_EXPORT_IMPORT_DUTY	Territory Management Export Import	Manages sales territory export and import. Provides users with the ability to export territory data, modify it offline and import.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_CUSTOMER_CONTRACT_MANAGER_JOB	Customer Contract Manager	Manages a team of customer contract administrators.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_SUPPLIER_CONTRACT_ADMINISTRATOR_JOB	Supplier Contract Administrator	Works with internal buyers and legal to negotiate and author

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			supplier contracts and agreements. Tracks critical contract milestones, monitors supplier performance, and assists buyers during contract renewals, closeout, and amendments.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZBS_SALES_ADMINISTRATOR_JOB	Sales Administrator	Manages sales department and personnel. Performs ongoing administrative tasks, corrects erroneous data, and configures the application according to business needs.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZPM_CHANNEL_PARTNER_PORTAL_ADMINISTRATOR_JOB	Channel Partner Portal Administrator	Maintains customer-specific changes of all partner portal pages, external, internal, and anonymous pages.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCH_TRADING_COMMUNITY_DATA_STEWARD_JOB	Customer Data Steward	Performs customer data management activities including data import, cleansing, duplicate identification, and duplicate resolution.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_SUPPLIER_CONTRACT_TEAM_MEMBER_ABSTRACT	Supplier Contract Team Member	
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_CN_INCENTIVE_COMPENSATION_MANAGER_JOB	Incentive Compensation Manager	Manage processes and workloads, assignments, and payments
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_CN_INCENTIVE_COMPENSATION_ASSIGNMENT_ADMISTRATION_DUTY_CRM	Incentive Compensation Participant Assignments	Create and maintain the assignments of analyst to participant, participants and roles to compensation and payment plans as well as pay groups
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Customer Relationship Management Application Administrator	Individual responsible for customer relationship management application administration. Collaborates with customer relationship management application users to maintain consistent financial application setup, rules, and access.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_QSC_SALES_CATALOG_ADMINISTRATOR_JOB	Sales Catalog Administrator	Sets up and maintains sales catalogs for leads, opportunities, quotes and orders. Sets up and maintains rollup catalog for the purpose of forecasting, territory management, and other purposes. Also associates products, promotions, and competitor products to catalogs, and defines

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			eligibility rules. Also manages the bulk export and import of all product group-related objects.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	Territory Management Setup	Manages sales territory setup, including lookups, profile options, flexfields, and dimension data. Runs dimension synchronization, and visibility jobs. Additional duties include quota management setup.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MKT_MARKETING_MAINTENANCE_DUTY	Marketing Maintenance	Creates and maintains setup for marketing campaigns, responses, segments, lists, and treatments across the enterprise. Additional duties include file import management for the import of marketing campaign responses.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MOT_QUOTA_EXPORT_MANAGEMENT_DUTY	Quota Export Management	Manages bulk export of all sales territory quota related objects.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_EXPORT_IMPORT_READ_ONLY_DUTY	Territory Management Export Import Read Only	Read Only role for Territory Management Export Import Duty.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_ENTERPRISE_CONTRACT_MANAGER_JOB	Enterprise Contract Manager	Manages a team of enterprise contract administrators.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZPM_CHANNEL_OPERATIONS_MANAGER_JOB	Channel Operations Manager	Maintains and manages partner transactional data.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_ENTERPRISE_CONTRACT_ADMINISTRATOR_JOB	Enterprise Contract Administrator	Performs the duties of both customer contract administrator and supplier contract administrator.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_GEO_ADMIN_DUTY	Geography Administration	Grants privileges to set up geographies
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_CN_INCENTIVE_COMPENSATION_ADMINISTRATOR_JOB	Incentive Compensation Application Administrator	Set up incentive compensation application
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_ENTERPRISE_CONTRACT_TEAM_MEMBER_ABSTRACT	Enterprise Contract Team Member	

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_PJF_GRANTS_ADMINISTRATOR_JOB	Grants Administrator	Assists the principal investigator with the administrative functions of an award and its related projects, particularly with data collection and data entry tasks.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZPM_CHANNEL_ADMINISTRATOR_JOB	Channel Administrator	Executes Oracle Partnership Management setup tasks.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_CUSTOMER_CONTRACT_ADMINISTRATOR_JOB	Customer Contract Administrator	Works with sales account teams and legal to negotiate and author customer contracts. Tracks critical contract milestones, service level agreements, and assists account teams during contract renewals and amendments.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_SVC_HELPDESK_ADMINISTRATION	HR Help Desk Administration	Manage all aspects of the HCM help desk service requests. In addition can manage queues and administer the HCM help desk service application, including setup.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCH_DATA_STEWARD_MANAGER_JOB	Data Steward Manager	Manages customer data stewards and has additional privileges including assigning requests.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_PJF_GRANTS_DEPARTMENT_ADMINISTRATOR_JOB	Grants Department Administrator	Assists the principal investigator with the administrative functions of an award and its related projects, particularly with data collection and data entry tasks for one or more departments within the enterprise.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_LOY_ADMINISTRATOR_DUTY	Loyalty Administrator	Manages the provisioning , setup and configuration of Loyalty Application.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_SUPPLIER_CONTRACT_MANAGER_JOB	Supplier Contract Manager	Manages a team of supplier contract administrators.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_POZ_DATAFOX_INTEL_ADMINISTRATION_DUTY_CRM	DataFox Administration for Supplier Intelligence	Manages setup for Power Supplier Intelligence with Oracle DataFox Smart Data feature. Not applicable outside of this feature and should be granted only to a user responsible for configuring this setup. This duty role has been obsoleted as part of the deprecation of the feature Manage Supplier Risk with DataFox Supplier Intelligence feature.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCM_SALES_PARTY_REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_T2P_MIGRATION_DUTY	Territory Management T2P Migration	Manages sales territory export and import. Provides users with the ability to export territory data from a test environment and import into production.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_PJF_PRINCIPAL_INVESTIGATOR_JOB	Principal Investigator	Controls and monitors the technical direction and academic quality of research projects such as laboratory studies or clinical trials. Ensures that projects comply with the terms, conditions, and policies defined by the sponsor and the institution. Owns ultimate responsibility for the management of the sponsored research award, especially in cases where funding is obtained from federal agencies such as the NIH or NSF.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCM_SALES_PARTY_ADMINISTRATION_DUTY	Sales Party Administration	Manages named sales accounts, sales account import scheduler and the flagging of existing accounts. Additional duties include managing sales parties, functional setups, customer center objects, and relationship information inquiries.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_SVC_HR_SR_ADMINISTRATION	HR Service Request Administration	Manages all aspects of Next Gen HR service requests. In addition, can manage queues and administer the Next Gen HR Help Desk service application, including setup.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCM_SETUP_CUSTOMER_CENTER_DUTY	Setup Customer Center	Manages customer center set up, sales party creation and their related objects, such as appointments, assessments, interactions, notes and tasks.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_SVC_INTERNAL_HELPDESK_ADMINISTRATION	Internal Service Request Administration	Manages all aspects of Internal service requests. In addition, can manage queues and administer the Internal Help Desk service application, including setup.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_OKC_SUPPLIER_CONTRACT_MANAGER_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttachmentEntityName	string	This is a required column as part of attachments uptake and is used in the view link between the batches VO and the attachments VO. It is a hard coded value that will never change.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndFilterTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The end time filter. If the filter isn't null, any retrieved results will have a LastModifiedDate on or before this time.
EndTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The end time for schedule.
ExportBatchId	long	The primary key for the batch record. • Primary Key
ExportJobId	long	The export job for which the batch is being run.
InitialExtractFilterTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	WARNING: This SDO has been deprecated and is being replaced with File Export Batch Version 2.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MassUpdateDtlId	long	WARNING: This SDO has been deprecated and is being replaced with File Export Batch Version 2.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
RequestId	long	A system-generated read-only attribute used by the application framework.
StartFilterTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The start time filter. If the filter isn't null, any retrieved results will have a LastModifiedDate on or after this time.
StartTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The start date for schedule.
Status	string	The status of the record.

File Export Job

The jobs that define what object and mapping will be exported. WARNING: This SDO has been deprecated and is being replaced with File Export Job V 2 (oracle.apps.crmCommon.bulkExport.bulkExportServiceV2.BulkExportJobs).

QName: {http://xmlns.oracle.com/apps/crmCommon/bulkExport/publicModel/}CrmCommonExportJobsSvcSDO

Logical Business Objects

- CRM : Common CRM : Bulk Export

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Next version is	*File Export Job Version 2*
Handled by	*Bulk Export*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveFlag	boolean	Indicates whether the task is active (registered within ESS).

Name	Type	Description
Compression	string	The compression options available. G=gzip individual files, Z=create single zip of all files, J=create single zip of all files.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DateFormat	string	The date format to be used in job record.
DecimalSeparator	string	The decimal separator.
Delimiter	string	The delimiter to use. For example, comma, tab.
DescText	string	The job description.
EndDateTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The end date time.
EndOfLine	string	The End of Line character to use. Lookup to be CR, LF, or CRLF. Default: LF.
ErrorThreshold	int	The number of errors to allow before aborting. A value of Null indicates that there is no limit.
ExportJobId	long	The primary key for the export job. • Primary Key
ExportJobNumber	string	The unique number to identify a job.
ExportMapId	long	Identifies the export mapping used for field mappings.
FileCharset	string	The charset to use. For example, UTF-8, UTF-16, etc. Lookup to FND_LOOKUPS.
FileType	string	The file export type such as CSV (for future use XML).
HeaderRowIncluded	string	Indicates whether to include the header row in the output.
InitialExtractFilterTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Saves the initial date time of the interval between which the data export has to happen.

Name	Type	Description
LastBatchId	long	The most recently run batch.
LastBatchStartTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The last time a batch for this job was started.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MassUpdateDtlId	long	Contains the mass update detail ID.
Name	string	The export job name.
NextScheduleTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The next scheduled date.
NullValue	string	The value used to represent a null value. If null itself no value is output. Default: null.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ParentRequestId	long	The parent scheduler request in case of repeating exports.
QuoteChar	string	The character(s) to use to encapsulate value if it contains the delimiter (e.g. double quote, single quote, null for nothing).
RepeatFrequency	long	The number of repeat frequency.
RepeatUnitCd	string	The repeat unit code. Options are hours, days, weeks, and months.
RequestId	long	A system-generated read-only attribute used by the application framework.
ScheduleModeCd	string	The schedule mode. The options are repeating, one time (manually), and one time (scheduled).

Name	Type	Description
ScheduleStatusCd	string	The schedule status. The options are scheduled, not scheduled, running, complete, and error.
StartTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The start date for schedule.
TimestampFormat	string	The timestamp format to be used in job record.

File Export Output

The comma-separated variable output files for service data objects that are exported for a given batch. WARNING: This SDO has been deprecated and is being replaced with File Export Output V 2 (oracle.apps.crmCommon.bulkExport.bulkExportServiceV2.BulkExportAttachment).

QName: {http://xmlns.oracle.com/apps/crmCommon/bulkExport/publicModel/}CrmCommonExportAttachmentSDO

runExportJob

Runs the specified export job with an optionally specified timestamp range. If beginTm is specified the records exported by the bulk export job will only contain those whose LastUpdateDate is on or after the specified beginTm parameter. If endTm is specified the records exported by the bulk export job will only contain those whose LastUpdateDate is on or before the specified endTm parameter. If the view being exported does not contain a column named LastUpdateDate all records will be exported regardless.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
jobId	long	The unique identifier of the bulk export job.
beginTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The time after the filter time when the export job was run.
endTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The endTm on or before filter time, may be null.

Response Payload

Element Name	Type	Description
result	long	The batch ID created for the run is returned, or null if a batch wasn't created.

getAttachmentsForBatch

Returns a list of attachments for a specific batch ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
batchId	long	The unique identifier of the batch for the import job.

Response Payload

Element Name	Type	Description
result	*File Export Output Version 2*	A list of attachments associated with the provided batch ID. The attachments correspond to data in the view objects that were selected in the job that was executed.

runHierachicalExportJob

The export job with the hierarchical object structure.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
jobNumber	string	The number identifying the export job.
zipFileName	string	The string type of the name of the zip file.
viewCriteria	string	The string type of the view criteria name.
bindVar	*View Name*	The type ExportBindValue contains bindName of the string type, bindValue of the string type, and isdateFlag of boolean type.

Response Payload

Element Name	Type	Description
result	long	Returns the ESS request ID of export job submitted.

runHierachicalExport

Runs the hierarchical export.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
jobId	long	The unique identifier of the bulk export job.
zipFileName	string	The string type of the name of the zip file.
viewCriteria	string	The string type of the view criteria name.

Response Payload

Element Name	Type	Description
result	long	Returns the batch ID.

createAndActivateBulkExportJob

Creates a new export job with parent and child objects with the corresponding filter criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
jobParams	*Export Parameters View Object*	The parameters of the bulk hierarchy export job.
objectParams	*Bulk Hierarchy Export Job Input View Object*	The details of the bulk hierarchy export object.

Response Payload

Element Name	Type	Description
result	*Bulk Hierarchy Export Job Output Parameters View Object*	Returns Export Job ID, batch ID and error information if any.

getJob

The Get operation for the file export job.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
exportJobId	long	The identifier of the bulk export job.

Response Payload

Element Name	Type	Description
result	*File Export Job Version 2*	File Export Job that matches the inbound key attributes.

findJobs

The Find operation for the file export job.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*File Export Job Version 2*	A list of File Export Job that satisfy the inbound criteria.

getBatch

The Get operation for the file export batch.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
exportBatchId	long	The unique identifier of the export batch. It identifies a batch each time the export is run.

Response Payload

Element Name	Type	Description
result	*File Export Batch Version 2*	File Export Batch that matches the inbound key attributes.

deleteBatch

The Delete operation for the file export batch.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
bulkExportBatches1	*File Export Batch Version 2*	The bulk export batch to be deleted.

Response Payload

Element Name	Type	Description
result	void	The Delete operation for the file export batch.

findBatches

The Find operation for the file export batch.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*File Export Batch Version 2*	The list of file export batches that satisfy the inbound criteria.

findExportBatchesByJobId

The find operation for job identifier to find file export batches.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
jobId	long	The find operation for bulk export job identifier.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*File Export Batch Version 2*	A list of file export batch that satisfy the inbound criteria.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The return value of the getEntity web service method. Includes the full set of attributes and child entities of the record.
localeName	string	The locale to use when evaluating locale-based user interface hints. The locale name is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	Run CRM Export Process	This privilege would grant a user the ability to schedule CRM object to export to a file

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PLAN_ADMINISTRATOR_JOB	Incentive Compensation Plan Administrator	Configure and manage incentive plans, plan components, and classification rules
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_CUSTOMER_CONTRACT_TEAM_MEMBER_ABSTRACT	Customer Contract Team Member	
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OSS_SUBSCRIPTION_SETUP_DUTY	Subscription Setup	Handles the setup required for subscriptions.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Master Data Management Application Administrator	Administers the installation and maintenance of customer data management application and foundation model.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_EXPORT_IMPORT_DUTY	Territory Management Export Import	Manages sales territory export and import. Provides users with the ability to export territory data, modify it offline and import.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_CUSTOMER_CONTRACT_MANAGER_JOB	Customer Contract Manager	Manages a team of customer contract administrators.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_SUPPLIER_CONTRACT_ADMINISTRATOR_JOB	Supplier Contract Administrator	Works with internal buyers and legal to negotiate and author supplier contracts and agreements. Tracks critical contract milestones, monitors supplier performance, and assists buyers during contract renewals, closeout, and amendments.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZBS_SALES_ADMINISTRATOR_JOB	Sales Administrator	Manages sales department and personnel. Performs ongoing administrative tasks, corrects erroneous data, and configures the application according to business needs.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZPM_CHANNEL_PARTNER_PORTAL_ADMINISTRATOR_JOB	Channel Partner Portal Administrator	Maintains customer-specific changes of all partner portal pages, external, internal, and anonymous pages.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCH_TRADING_COMMUNITY_DATA_STEWARD_JOB	Customer Data Steward	Performs customer data management activities including data import, cleansing, duplicate identification, and duplicate resolution.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_SUPPLIER_CONTRACT_TEAM_MEMBER_ABSTRACT	Supplier Contract Team Member	
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_CN_INCENTIVE_COMPENSATION_MANAGER_JOB	Incentive Compensation Manager	Manage processes and workloads, assignments, and payments
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_CN_INCENTIVE_COMPENSATION_ASSIGNMENT_ADMISTRATION_DUTY_CRM	Incentive Compensation Participant Assignments	Create and maintain the assignments of analyst to participant, participants and roles to compensation and payment plans as well as pay groups
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Customer Relationship Management Application Administrator	Individual responsible for customer relationship management application administration. Collaborates with customer relationship management application users to maintain

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			consistent financial application setup, rules, and access.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_QSC_SALES_CATALOG_ADMINISTRATOR_JOB	Sales Catalog Administrator	Sets up and maintains sales catalogs for leads, opportunities, quotes and orders. Sets up and maintains rollup catalog for the purpose of forecasting, territory management, and other purposes. Also associates products, promotions, and competitor products to catalogs, and defines eligibility rules. Also manages the bulk export and import of all product group-related objects.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	Territory Management Setup	Manages sales territory setup, including lookups, profile options, flexfields, and dimension data. Runs dimension synchronization, and visibility jobs. Additional duties include quota management setup.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MKT_MARKETING_MAINTENANCE_DUTY	Marketing Maintenance	Creates and maintains setup for marketing campaigns, responses, segments, lists, and treatments across the enterprise. Additional duties include file import management for the import of marketing campaign responses.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MOT_QUOTA_EXPORT_MANAGEMENT_DUTY	Quota Export Management	Manages bulk export of all sales territory quota related objects.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_EXPORT_IMPORT_READ_ONLY_DUTY	Territory Management Export Import Read Only	Read Only role for Territory Management Export Import Duty.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_ENTERPRISE_CONTRACT_MANAGER_JOB	Enterprise Contract Manager	Manages a team of enterprise contract administrators.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZPM_CHANNEL_OPERATIONS_MANAGER_JOB	Channel Operations Manager	Maintains and manages partner transactional data.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_ENTERPRISE_CONTRACT_ADMINISTRATOR_JOB	Enterprise Contract Administrator	Performs the duties of both customer contract administrator and supplier contract administrator.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_GEO_ADMIN_DUTY	Geography Administration	Grants privileges to set up geographies
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_CN_INCENTIVE_COMPENSATION_ADMINISTRATOR_JOB	Incentive Compensation Application Administrator	Set up incentive compensation application
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_ENTERPRISE_CONTRACT_TEAM_MEMBER_ABSTRACT	Enterprise Contract Team Member	
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_PJF_GRANTS_ADMINISTRATOR_JOB	Grants Administrator	Assists the principal investigator with the administrative functions of an award and its related projects, particularly with data collection and data entry tasks.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZPM_CHANNEL_ADMINISTRATOR_JOB	Channel Administrator	Executes Oracle Partnership Management setup tasks.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_CUSTOMER_CONTRACT_ADMINISTRATOR_JOB	Customer Contract Administrator	Works with sales account teams and legal to negotiate and author customer contracts. Tracks critical contract milestones, service level agreements, and assists account teams during contract renewals and amendments.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_SVC_HELPDESK_ADMINISTRATION	HR Help Desk Administration	Manage all aspects of the HCM help desk service requests. In addition can manage queues and administer the HCM help desk service application, including setup.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCH_DATA_STEWARD_MANAGER_JOB	Data Steward Manager	Manages customer data stewards and has additional privileges including assigning requests.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_PJF_GRANTS_DEPARTMENT_ADMINISTRATOR_JOB	Grants Department Administrator	Assists the principal investigator with the administrative functions of an award and its related projects, particularly with data collection and data entry tasks for one or more departments within the enterprise.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_LOY_ADMINISTRATOR_DUTY	Loyalty Administrator	Manages the provisioning , setup and configuration of Loyalty Application.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_SUPPLIER_CONTRACT_MANAGER_JOB	Supplier Contract Manager	Manages a team of supplier contract administrators.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_POZ_DATAFOX_INTEL_ADMINISTRATION_DUTY_CRM	DataFox Administration for Supplier Intelligence	Manages setup for Power Supplier Intelligence with Oracle DataFox Smart Data feature. Not applicable outside of this feature and should be granted only to a user responsible for configuring this setup. This duty role has been obsoleted as part of the deprecation of the feature Manage Supplier Risk with DataFox Supplier Intelligence feature.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCM_SALES_PARTY_REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_T2P_MIGRATION_DUTY	Territory Management T2P Migration	Manages sales territory export and import. Provides users with the ability to export territory data from a test environment and import into production.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_PJF_PRINCIPAL_INVESTIGATOR_JOB	Principal Investigator	Controls and monitors the technical direction and academic quality of research projects such as laboratory studies or clinical trials. Ensures that projects comply with the terms, conditions, and policies defined by the sponsor and the institution. Owns ultimate responsibility for the management of the sponsored research award, especially in cases where funding is obtained from federal agencies such as the NIH or NSF.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCM_SALES_PARTY_ADMINISTRATION_DUTY	Sales Party Administration	Manages named sales accounts, sales account import scheduler and the flagging of existing accounts. Additional duties include managing sales parties, functional setups, customer center objects, and relationship information inquiries.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_SVC_HR_SR_ADMINISTRATION	HR Service Request Administration	Manages all aspects of Next Gen HR service requests. In addition, can manage queues and administer the Next Gen HR Help Desk service application, including setup.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCM_SETUP_CUSTOMER_CENTER_DUTY	Setup Customer Center	Manages customer center set up, sales party creation and their related objects, such as appointments, assessments, interactions, notes and tasks.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_SVC_INTERNAL_HELPDESK_ADMINISTRATION	Internal Service Request Administration	Manages all aspects of Internal service requests. In addition, can manage queues and administer the Internal Help Desk service application, including setup.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_OKC_SUPPLIER_CONTRACT_MANAGER_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_OKC_ENTERPRISE_CONTRACT_MANAGER_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_OKC_CUSTOMER_CONTRACT_ADMINISTRATOR_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.

Bulk Export

A web service used to extract data in a batch process. This service is deprecated and is replaced with Bulk Export V 2 (oracle.apps.crmCommon.bulkExport.bulkExportServiceV2.BulkExportService).

Life Cycle Status: Deprecated. This service is deprecated and replaced by .

QName: {http://xmlns.oracle.com/apps/crmCommon/bulkExport/publicModel/}CrmCommonBulkExportService

Service WSDL URL: https://servername/crmService/CrmCommonBulkExportService?WSDL

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Next version is	*Bulk Export Version 2*
Handles	*File Export Output*
Handles	*Object Code*
Handles	*Description*
Handles	*Name*
Handles	*File Export Job*
Handles	*View Criteria Name*
Handles	*File Export Batch*

Operations

- *runExportJob*
- *getAttachmentsForBatch*
- *createAndRunExportJob*
- *RunExportJobWithVC*
- *getJob*
- *findJobs*
- *getBatch*
- *deleteBatch*
- *findBatches*

- *findExportBatchesByJobId*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

runExportJob

The operation that runs the specified export job with an optionally specified timestamp range. If beginTm is specified, the records exported by the bulk export job will only contain those records whose LastUpdateDate is on or after the specified beginTm parameter. If endTm is specified, the records exported by the bulk export job will only contain those whose LastUpdateDate is on or before the specified endTm parameter. If the view being exported does not contain a column named LastUpdateDate, all records will be exported.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
jobId	long	The name is an identifier for the bulk export job.
beginTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The time when the bulk export job begins. It can be on or after the filter time, and can be null.
endTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The time when the bulk export job ends. It can be on or before the filter time, and can be null.

Response Payload

Element Name	Type	Description
result	long	The batch identifier created for the job run will be returned, or null will be returned if a batch wasn't created.

getAttachmentsForBatch

The operation returns a list of attachments for a specific batch identifier.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
batchId	long	The operation identifies the times when the export of a job runs.

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	*File Export Output*	A list of attachments associated with the provided batch identifier. The attachments correspond to data in the view object(s) that were selected in the job that was executed.

createAndRunExportJob

The operation for bulk export.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
jobRequest	*Description*	The input details of the job request.

Response Payload

Element Name	Type	Description
result	long	The operation returns batch identifier for corresponding job.

RunExportJobWithVC

The operation that runs the export job specified by the job number.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
jobNumber	string	The operation that runs the export job specified by the job number.
zipFileName	string	The operation that runs the export job specified by the job number.

Element Name	Type	Description
viewCriteria	string	The return value of the createEntity web service method. Includes the full set of attributes and child entities of the record.
bindVar	*Export Job Bind Value*	The operation that runs the export job specified by the job number.

Response Payload

Element Name	Type	Description
result	long	The operation that runs the export job specified by the job number.

getJob

The get operation for file export job.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
exportJobId	long	The get operation for bulk export job identifier.

Response Payload

Element Name	Type	Description
result	*File Export Job*	The file export job that matches the inbound key attributes.

findJobs

The find operation for file export job.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*File Export Job*	A list of file export job that satisfy the inbound criteria.

getBatch

The get operation for file export batch.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
exportBatchId	long	The export batch identifier identifies each time the export of a job is run.

Response Payload

Element Name	Type	Description
result	*File Export Batch*	The file export batch that matches the inbound key attributes.

deleteBatch

The operation to delete file export batch.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
crmCommonExportBatches2	*File Export Batch*	The file export batch to be deleted.

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	void	The operation to delete file export batch.

findBatches

The find operation for file export batch.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*File Export Batch*	A list of file export batch that satisfy the inbound criteria.

findExportBatchesByJobId

The find operation for file export batch using the job identifier.

Life Cycle Status: Deprecated

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.

Element Name	Type	Description
jobId	long	The find operation for bulk export job identifier.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*File Export Batch*	A list of file export batch that satisfy the inbound criteria.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The return value of the findEntity web service method. Includes the full set of attributes and child entities of the records.
localeName	string	An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	An operation that returns the date and time when the schema files referenced in the service definition last changed.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	An operation to get the list of service data objects defined on this service.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	Run CRM Export Process	This privilege would grant a user the ability to schedule CRM object to export to a file

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_CN_INCENTIVE_COMPENSATION_PLAN_ADMINISTRATOR_JOB	Incentive Compensation Plan Administrator	Configure and manage incentive plans, plan components, and classification rules

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_CUSTOMER_CONTRACT_TEAM_MEMBER_ABSTRACT	Customer Contract Team Member	
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OSS_SUBSCRIPTION_SETUP_DUTY	Subscription Setup	Handles the setup required for subscriptions.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Master Data Management Application Administrator	Administers the installation and maintenance of customer data management application and foundation model.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_EXPORT_IMPORT_DUTY	Territory Management Export Import	Manages sales territory export and import. Provides users with the ability to export territory data, modify it offline and import.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_CUSTOMER_CONTRACT_MANAGER_JOB	Customer Contract Manager	Manages a team of customer contract administrators.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_SUPPLIER_CONTRACT_ADMINISTRATOR_JOB	Supplier Contract Administrator	Works with internal buyers and legal to negotiate and author supplier contracts and agreements. Tracks critical contract milestones, monitors supplier performance, and assists buyers during contract renewals, closeout, and amendments.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZBS_SALES_ADMINISTRATOR_JOB	Sales Administrator	Manages sales department and personnel. Performs ongoing administrative tasks, corrects erroneous data, and configures the application according to business needs.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZPM_CHANNEL_PARTNER_PORTAL_ADMINISTRATOR_JOB	Channel Partner Portal Administrator	Maintains customer-specific changes of all partner portal pages, external, internal, and anonymous pages.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCH_TRADING_COMMUNITY_DATA_STEWARD_JOB	Customer Data Steward	Performs customer data management activities including data import, cleansing, duplicate

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			identification, and duplicate resolution.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_SUPPLIER_CONTRACT_TEAM_MEMBER_ABSTRACT	Supplier Contract Team Member	
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_CN_INCENTIVE_COMPENSATION_MANAGER_JOB	Incentive Compensation Manager	Manage processes and workloads, assignments, and payments
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_CN_INCENTIVE_COMPENSATION_ASSIGNMENT_ADMISTRATION_DUTY_CRM	Incentive Compensation Participant Assignments	Create and maintain the assignments of analyst to participant, participants and roles to compensation and payment plans as well as pay groups
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Customer Relationship Management Application Administrator	Individual responsible for customer relationship management application administration. Collaborates with customer relationship management application users to maintain consistent financial application setup, rules, and access.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_QSC_SALES_CATALOG_ADMINISTRATOR_JOB	Sales Catalog Administrator	Sets up and maintains sales catalogs for leads, opportunities, quotes and orders. Sets up and maintains rollup catalog for the purpose of forecasting, territory management, and other purposes. Also associates products, promotions, and competitor products to catalogs, and defines eligibility rules. Also manages the bulk export and import of all product group-related objects.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	Territory Management Setup	Manages sales territory setup, including lookups, profile options, flexfields, and dimension data. Runs dimension synchronization, and visibility jobs. Additional duties include quota management setup.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MKT_MARKETING_MAINTENANCE_DUTY	Marketing Maintenance	Creates and maintains setup for marketing campaigns, responses, segments, lists, and treatments across the enterprise. Additional duties include file import management for the import of marketing campaign responses.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MOT_QUOTA_EXPORT_MANAGEMENT_DUTY	Quota Export Management	Manages bulk export of all sales territory quota related objects.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_EXPORT_IMPORT_READ_ONLY_DUTY	Territory Management Export Import Read Only	Read Only role for Territory Management Export Import Duty.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_ENTERPRISE_CONTRACT_MANAGER_JOB	Enterprise Contract Manager	Manages a team of enterprise contract administrators.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZPM_CHANNEL_OPERATIONS_MANAGER_JOB	Channel Operations Manager	Maintains and manages partner transactional data.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_ENTERPRISE_CONTRACT_ADMINISTRATOR_JOB	Enterprise Contract Administrator	Performs the duties of both customer contract administrator and supplier contract administrator.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_GEO_ADMIN_DUTY	Geography Administration	Grants privileges to set up geographies
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_CN_INCENTIVE_COMPENSATION_ADMINISTRATOR_JOB	Incentive Compensation Application Administrator	Set up incentive compensation application
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_ENTERPRISE_CONTRACT_TEAM_MEMBER_ABSTRACT	Enterprise Contract Team Member	
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_PJF_GRANTS_ADMINISTRATOR_JOB	Grants Administrator	Assists the principal investigator with the administrative functions of an award and its related projects, particularly with data collection and data entry tasks.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZPM_CHANNEL_ADMINISTRATOR_JOB	Channel Administrator	Executes Oracle Partnership Management setup tasks.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_CUSTOMER_CONTRACT_ADMINISTRATOR_JOB	Customer Contract Administrator	Works with sales account teams and legal to negotiate and author customer contracts. Tracks critical contract milestones, service level agreements, and assists account teams during contract renewals and amendments.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_SVC_HELPDESK_ADMINISTRATION	HR Help Desk Administration	Manage all aspects of the HCM help desk service requests. In addition can manage queues and administer the HCM help desk

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			service application, including setup.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCH_DATA_STEWARD_MANAGER_JOB	Data Steward Manager	Manages customer data stewards and has additional privileges including assigning requests.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_PJF_GRANTS_DEPARTMENT_ADMINISTRATOR_JOB	Grants Department Administrator	Assists the principal investigator with the administrative functions of an award and its related projects, particularly with data collection and data entry tasks for one or more departments within the enterprise.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_LOY_ADMINISTRATOR_DUTY	Loyalty Administrator	Manages the provisioning , setup and configuration of Loyalty Application.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_OKC_SUPPLIER_CONTRACT_MANAGER_JOB	Supplier Contract Manager	Manages a team of supplier contract administrators.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_POZ_DATAFOX_INTEL_ADMINISTRATION_DUTY_CRM	DataFox Administration for Supplier Intelligence	Manages setup for Power Supplier Intelligence with Oracle DataFox Smart Data feature. Not applicable outside of this feature and should be granted only to a user responsible for configuring this setup. This duty role has been obsoleted as part of the deprecation of the feature Manage Supplier Risk with DataFox Supplier Intelligence feature.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCM_SALES_PARTY_REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_T2P_MIGRATION_DUTY	Territory Management T2P Migration	Manages sales territory export and import. Provides users with the ability to export territory data from a test environment and import into production.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_PJF_PRINCIPAL_INVESTIGATOR_JOB	Principal Investigator	Controls and monitors the technical direction and academic quality of research projects such as laboratory studies or clinical trials. Ensures that projects comply with the terms, conditions, and policies defined by the sponsor and the institution. Owns ultimate

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			responsibility for the management of the sponsored research award, especially in cases where funding is obtained from federal agencies such as the NIH or NSF.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCM_SALES_PARTY_ADMINISTRATION_DUTY	Sales Party Administration	Manages named sales accounts, sales account import scheduler and the flagging of existing accounts. Additional duties include managing sales parties, functional setups, customer center objects, and relationship information inquiries.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_SVC_HR_SR_ADMINISTRATION	HR Service Request Administration	Manages all aspects of Next Gen HR service requests. In addition, can manage queues and administer the Next Gen HR Help Desk service application, including setup.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCM_SETUP_CUSTOMER_CENTER_DUTY	Setup Customer Center	Manages customer center set up, sales party creation and their related objects, such as appointments, assessments, interactions, notes and tasks.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_SVC_INTERNAL_HELPDESK_ADMINISTRATION	Internal Service Request Administration	Manages all aspects of Internal service requests. In addition, can manage queues and administer the Internal Help Desk service application, including setup.
ZCA_RUN_CRM_EXPORT_PROCESS_PRIV	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.

			well as appointments, interactions, and customer contacts.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ORA_ZPM_CHANNEL_PARTNER_PORTAL_ADMINISTRATOR_JOB	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ORA_ZPM_CHANNEL_ADMINISTRATOR_JOB	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	ORA_ZCM_SALES_PARTY_REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_AVAILABILITY_MANAGEMENT	Service Availability Management	Manage the service availability data including reading and writing the availability of a service.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_AVAILABILITY_MANAGEMENT	Service Availability Management	Manage the service availability data including reading and writing the availability of a service.
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_GEN_AI_ADMIN	Service Generative AI Administrator	Administer activities related to Service Gen AI APIs such as configuration of prompts across all areas of Oracle Fusion Service, such as Service Center, Knowledge, and Chat.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_GEN_AI_USER	Service Generative AI User	Can use generative AI features across Oracle Fusion Service including but not limited to Service Center, Knowledge Management and Chat areas. Usage requires access to all generative AI API's essential to input data and fetch results from the LLM model.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_PROFILE_ADMINISTRATION	Service Profile Administration	Manages all aspects of the Service Profile object, including deleting a service profile.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_PROFILE_ADMINISTRATION	Service Profile Administration	Manages all aspects of the Service Profile object, including deleting a service profile.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
ORA_ZPM_CHANNEL_OPERATIONS_MANAGER_JOB	ORA_SVC_SR_CHANNEL_USER	Service Request Channel User	Manages all aspects of the Service Request related to partner accounts
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_STATUS_COMPUTATION	Service Status Computation	Perform actions required to determine the availability of a service.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_STATUS_COMPUTATION	Service Status Computation	Perform actions required to determine the availability of a service.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_SETUP_CUSTOMER_CENTER_DUTY	Setup Customer Center	Manages customer center set up, sales party creation and their related objects, such as appointments, assessments, interactions, notes and tasks.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_ZCM_SETUP_CUSTOMER_CENTER_DUTY	Setup Customer Center	Manages customer center set up, sales party creation and their related objects, such as appointments, assessments, interactions, notes and tasks.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HRS_SOCIAL_CONNECTION_PARTNER_DUTY_CRM	Social Connection Partner	Performs all Oracle Fusion Social Connection partner duties.
ORA_ZPM_CHANNEL_OPERATIONS_MANAGER_JOB	ORA_HRS_SOCIAL_CONNECTION_PARTNER_DUTY_CRM	Social Connection Partner	Performs all Oracle Fusion Social Connection partner duties.
ORA_ZPM_CHANNEL_PARTNER_PORTAL_ADMINISTRATOR_JOB	ORA_HRS_SOCIAL_CONNECTION_PARTNER_DUTY_CRM	Social Connection Partner	Performs all Oracle Fusion Social Connection partner duties.
ORA_ZPM_CHANNEL_ADMINISTRATOR_JOB	ORA_HRS_SOCIAL_CONNECTION_PARTNER_DUTY_CRM	Social Connection Partner	Performs all Oracle Fusion Social Connection partner duties.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_AMENDMENT_DUTY	Subscription Amendment	Amends approved subscriptions. This includes initiating an amendment, reverting the subscription to the previous signed version, updating all allowable attributes, and submitting the amendment for approval.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_AUTHORING_DUTY	Subscription Authoring	Authors subscriptions
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SEARCH_VIEW_DUTY	Subscription Search and View Access	Searches and views subscriptions for the assigned business units.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SETUP_DUTY	Subscription Setup	Handles the setup required for subscriptions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SPECIALIST_JOB	Subscription Specialist	Individual responsible for managing subscriptions, establishing recurring and usage billing processes, initiating manual discounts and invoice adjustments, and handling billing discrepancies and disputes.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZPM_CHANNEL_OPERATIONS_MANAGER_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_ENTERPRISE_ADMINISTRATION_DUTY	Territory Management Enterprise Administration	Manages sales territories and territory proposals. Additional duties include territory management setup and quota management administration.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	Territory Management Setup	Manages sales territory setup, including lookups, profile options, flexfields, and dimension data. Runs dimension synchronization, and visibility jobs. Additional duties include quota management setup.
ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	ORA_MOT_TERRITORY_MANAGEMENT_T2P_MIGRATION_DUTY	Territory Management T2P Migration	Manages sales territory export and import. Provides users with the ability to export territory data from a test environment and import into production.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_CUSTOMER_ACCOUNT_ADMINISTRATION_DUTY	Trading Community Customer Account Administration	Grants privileges to setup customer account information.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_CUSTOMER_ACCOUNT_ADMINISTRATION_DUTY	Trading Community Customer Account Administration	Grants privileges to setup customer account information.
ORA_ZCM_SALES_PARTY_ADMINISTRATION_DUTY	ORA_DATA_QUALITY_ADMIN_DUTY	Trading Community Data Quality Administration	Configures, reviews, and edits predefined data quality server configurations and the predefined matching, synchronization, and cleansing configurations.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DATA_QUALITY_ADMIN_DUTY	Trading Community Data Quality Administration	Configures, reviews, and edits predefined data quality server configurations and the predefined matching, synchronization, and cleansing configurations.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DATA_QUALITY_ADMIN_DUTY	Trading Community Data Quality Administration	Configures, reviews, and edits predefined data quality server configurations and the predefined matching, synchronization, and cleansing configurations.
ORA_ZCH_DATA_STEWARD_MANAGER_JOB	ORA_ZCQ_TRADING_COMMUNITY_DQ_MGMT_DUTY	Trading Community Data Quality Management	Performs real-time and batch data quality functions such as matching and cleansing.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCQ_TRADING_COMMUNITY_DQ_MGMT_DUTY	Trading Community Data Quality Management	Performs real-time and batch data quality functions such as matching and cleansing.
ORA_ZCH_TRADING_COMMUNITY_DATA_STEWARD_JOB	ORA_ZCQ_TRADING_COMMUNITY_DQ_MGMT_DUTY	Trading Community Data Quality Management	Performs real-time and batch data quality functions such as matching and cleansing.
ORA_ZCH_DATA_STEWARD_MANAGER_JOB	ORA_DUP_IDEN_MANAGE_DUTY	Trading Community Duplicate Identification Batch Management	Grants privileges to manage duplicate identification batches
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DUP_IDEN_MANAGE_DUTY	Trading Community Duplicate Identification Batch Management	Grants privileges to manage duplicate identification batches
ORA_ZCH_TRADING_COMMUNITY_DATA_STEWARD_JOB	ORA_DUP_IDEN_MANAGE_DUTY	Trading Community Duplicate Identification Batch Management	Grants privileges to manage duplicate identification batches
ORA_ZCH_DATA_STEWARD_MANAGER_JOB	ORA_DUP_RES_MANAGE_DUTY	Trading Community Duplicate Resolution Request Management	Grants privileges to manage duplicate resolution requests
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DUP_RES_MANAGE_DUTY	Trading Community Duplicate Resolution Request Management	Grants privileges to manage duplicate resolution requests
ORA_ZCH_TRADING_COMMUNITY_DATA_STEWARD_JOB	ORA_DUP_RES_MANAGE_DUTY	Trading Community Duplicate Resolution Request Management	Grants privileges to manage duplicate resolution requests
ORA_ZCM_SALES_PARTY_ADMINISTRATION_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZPM_CHANNEL_OPERATIONS_MANAGER_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCH_DATA_STEWARD_MANAGER_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.

ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_PERSON_ADMINISTRATION_DUTY	Trading Community Person Administration	Grants privileges to setup person information.

Bulk Hierarchy Child Export Input View Object

Holds child object details of a parent export object.

QName: {http://xmlns.oracle.com/apps/crmCommon/bulkExport/bulkExportServiceV2/}BulkExportChildObject

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Bulk Hierarchy Child Export Input View Object*
Contains	*Export Object Filter Criteria Details View Object*
Contained by	*Bulk Hierarchy Child Export Input View Object*
Contained by	*Bulk Hierarchy Export Job Input View Object*
Handled by	*Bulk Export Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributeNameList	string	The list of child export object attribute names delimited by ;(semicolon).
BulkExportFilterCriteria	*Export Object Filter Criteria Details View Object*	The filter criteria for a current Object.
ObjectCode	string	The bulk export child object. • Primary Key
ObjectCodeBulkExportChildObject	*Bulk Hierarchy Child Export Input View Object*	The child object of the current object.
ParentObjectCode	string	The parent export object code.
ViewCriteriaName	string	The view criteria name.

Bulk Hierarchy Export Job Input View Object

Bulk export hierarchy job details.

QName: {http://xmlns.oracle.com/apps/crmCommon/bulkExport/bulkExportServiceV2/}BulkExportHierarchyJob

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Bulk Hierarchy Child Export Input View Object*
Contains	*Export Object Filter Criteria Details View Object*
Handled by	*Bulk Export Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributeNameList	string	The list of parent export object attribute names delimited by ;(semicolon).

Name	Type	Description
BulkExportChildObject	*Bulk Hierarchy Child Export Input View Object*	The child export object.
BulkExportFilterCriteria	*Export Object Filter Criteria Details View Object*	The parent export object filter criteria.
ObjectCode	string	The parent export object code. • Primary Key
ViewCriteriaName	string	The parent export object view criteria name.

Bulk Hierarchy Export Job Output Parameters View Object

The name value pairs containing Export Job Id, Export BatchId, Error Code, and Error Message.

QName: {http://xmlns.oracle.com/apps/crmCommon/bulkExport/bulkExportServiceV2/}BulkExportOutParam

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Bulk Export Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Name	string	Represents output parameter name. • Primary Key
Value	string	Represents output parameter value.

Export Object Filter Criteria Details View Object

Handles export object column filter details.

QName: {http://xmlns.oracle.com/apps/crmCommon/bulkExport/bulkExportServiceV2/}BulkExportFilterCriteria

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Bulk Hierarchy Child Export Input View Object*
Contained by	*Bulk Hierarchy Export Job Input View Object*
Handled by	*Bulk Export Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributeValueFirst	string	The first attribute value.
AttributeValueSecond	string	The second attribute value.
VCOperator	string	The filter operator.
ViewAttributeName	string	The view attribute name. • Primary Key
ViewCriteriaName	string	The view criteria name for a defined object.

Export Parameters View Object

Bulk hierarchy export job parameters.

QName: {http://xmlns.oracle.com/apps/crmCommon/bulkExport/bulkExportServiceV2/}BulkExportHierarchyJobParams

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Bulk Export Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Name	string	The job parameter name. • Primary Key
Value	string	The job param value.

File Export Batch Version 2

The export jobs set to run as a batch at a scheduled time.

QName: {http://xmlns.oracle.com/apps/crmCommon/bulkExport/bulkExportServiceV2/}BulkExportBatches

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Previous version is	*File Export Batch*
Handled by	*Bulk Export Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttachmentEntityName	string	Internally used to create attachment associated with the batch record.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndFilterTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The end time filter. If the filter isn't null, then any retrieved results will have a LastModifiedDate on or before this time.
EndTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The end time for schedule.
ExportBatchId	long	The primary key for the batch record. • Primary Key
ExportJobId	long	The export job for which the batch is being run.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
StartFilterTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The start time filter. If the filter isn't null, then any retrieved results will have a LastModifiedDate on or after this time.
StartTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The start date for schedule.
Status	string	The status of the record.

File Export Job Version 2

The jobs that define what object and mapping will be exported.

QName: {http://xmlns.oracle.com/apps/crmCommon/bulkExport/bulkExportServiceV2/}BulkExportJobs

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Previous version is	*File Export Job*
Handled by	*Bulk Export Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveFlag	boolean	Indicates whether the task is active (registered within ESS).
Compression	string	The compression options available. G=gzip individual files, Z=create single zip of all files, J=create single zip of all files.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DateFormat	string	The date format to be used in job record.
DecimalSeparator	string	The decimal separator used.
Delimiter	string	The delimiter to use such as comma, tab.
DescriptionText	string	The job description.
EmailAddress	string	Email Address to be used for sending notification email on export activity completion.
EndDateTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The end date time.
EndOfLine	string	The End of Line character used. Lookup to be CR, LF, or CRLF. Default: LF.

Name	Type	Description
ErrorThreshold	int	The number of errors to allow before aborting. A value of Null indicates that there is no limit.
ExportJobId	long	The primary key for the export job. • Primary Key
ExportJobNumber	string	This identifies the export job.
ExportMapId	long	Identifies the export mapping used for field mappings.
FileCharset	string	The character set to use. For example, UTF-8, UTF-16, etc. Lookup to FND_LOOKUPS.
FileType	string	The file export type, e.g. CSV (for future use XML).
HeaderRowIncluded	string	Indicates whether or not to include the header row in the output.
LastBatchId	long	The most recently run batch.
LastBatchStartTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The last time a batch for this job was started.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Name	string	The export job name.
NextScheduleTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The next scheduled date.
NullValue	string	The value used to represent a null value. If null itself no value is output. Default: null.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
ParentRequestId	long	The parent scheduler request in case of repeating exports.
QuoteChar	string	The character(s) used to encapsulate value if it contains the delimiter (e.g. double quote, single quote, null for nothing).
RepeatFrequency	long	The number of repeat frequency.
RepeatUnitCd	string	The repeat unit code. Options are hours, days, weeks, and months.
RequestId	long	A system-generated read-only attribute used by the application framework.
ScheduleModeCd	string	The schedule mode. The options are repeating, one time (manually), and one time (scheduled).
ScheduleStatusCd	string	The schedule status. The options are scheduled, not scheduled, running, complete, and error.
ScheduleTypeCd	string	The code defining the type of schedule. Options are Immediate and Scheduled.
StartTm	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The start date for schedule.
TimestampFormat	string	The timestamp format to be used in job record.

File Export Output Version 2

The comma-separated variable output files for service data objects that are exported for a given batch.

QName: {http://xmlns.oracle.com/apps/crmCommon/bulkExport/bulkExportServiceV2/}BulkExportAttachment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Previous version is	*File Export Output*
Handled by	*Bulk Export Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContentId	string	Contains ContentId for where the file is stored in the content repository.
Filename	string	The name of the file where data will be exported.
Size	long	The size of the file.
URL	string	The destination URL associated with a specific Google AdWords ad.
creationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the file is created.

View Name

Maintains View Criteria bind values.

QName: {http://xmlns.oracle.com/apps/crmCommon/bulkExport/bulkExportServiceV2/}BulkExportBindValue

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Bulk Export Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
bindName	string	The bind name. • Primary Key
bindValue	string	The bind value.
isDateFlag	boolean	The date flag.

Business Plan Service

External service to operate on business plans.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmCommon/businessPlans/businessPlanService/}BusinessPlanService

Service WSDL URL: https://servername/crmService/BusinessPlanService?WSDL

Logical Business Objects

- CRM : Common CRM : Sales Business Plan

getServiceName

A web service method to retrieve the service name.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}StringResult	The parameter returns the Service Name qualified with NameSpace.

getBusinessPlan

A web service method that queries a single record of Oracle Fusion BusinessPlan Object by ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
businessPlanId	long	A required input parameter of the getBusinessPlan web service method. It is the row ID of the record you want to query for.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/crmCommon/businessPlans/businessPlanService/}BusinessPlanResult	The return value of getBusinessPlan web service method which includes the full set of attributes of the record.

createBusinessPlan

A web service method that creates records of Oracle Fusion BusinessPlan Object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
businessPlan	*Business Plan*	A required input parameter of the createBusinessPlan web service method. The input object includes the attribute values that the BusinessPlan record is created with.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/crmCommon/businessPlans/businessPlanService/}BusinessPlanResult	The return value of the createBusinessPlan web service method which includes the full set of attributes of the record.

updateBusinessPlan

A web service method that updates a record of Oracle Fusion BusinessPlan object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
businessPlan	*Business Plan*	A required parameter of the updateBusinessService web service method. The record matching the ID specified in this input is updated with the corresponding input attribute values.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/crmCommon/businessPlans/businessPlanService/}BusinessPlanResult	The return value of the updateBusinessPlan web service method which includes the full set of attributes of the record.

deleteBusinessPlan

A web service method that deletes an Oracle Fusion BusinessPlan Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
businessPlan	*Business Plan*	A required input parameter of the deleteBusinessPlan web service method. The record matching the input attribute values specified in the BusinessPlan is deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The return value of the deleteBusinessPlan web service method.

mergeBusinessPlan

A web service method that either creates a single record of Oracle Fusion BusinessPlan Object or updates a record with given ID.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
businessPlan	*Business Plan*	A required parameter of the mergeBusinessPlan web service method. The record matching the ID specified in this input is updated. If no ID is specified, then the record is created instead.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/crmCommon/businessPlans/businessPlanService/}BusinessPlanResult	The return value of the mergeBusinessPlan web service method. Includes the full set of attributes of the record.

findBusinessPlan

A web service method that queries by criteria, a single record or set of records of Oracle Fusion Business Plan Object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findBusinessPlan web service method. The filter criteria is the cumulative set of attribute criteria that will identify records queried for.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findBusinessPlan.

Response Payload

Element Name	Type	Description
result	*Business Plan*	The return value of the findBusinessPlan web service method. Includes the full set of attributes of records queried.

processBusinessPlan

A web service method that creates or updates records of Oracle Fusion BusinessPlan object in bulk.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Either of create, merge or update needs to be passed as input parameter value.
businessPlan	*Business Plan*	A required parameter of the processBusinessPlan web service method. The list of BusinessPlan input records to be created or merged or updated.

Element Name	Type	Description
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	It has three parts. For the first parameter, value can be full which means full set of BusinessPlan attributes to be returned, value of key means only BusinessPlanId values to be returned, value of none means non value returned. For the second parameter, similar to first parameter but related to exceptions. For the third mandatory parameter, indicates true or false for partial failure allowed or not.

Response Payload

Element Name	Type	Description
result	*Business Plan*	The return value of the processBusinessPlan web service method. It can be none or a list of only the BusinessPlan IDs or a list of full set of BusinessPlan records.

processCSBusinessPlan

A web service operation that processes the BusinessPlans.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	A required input parameter to pass the data to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	It has three parts. For the first parameter, value can be Full which means full set of BusinessPlan attributes to be returned, value of Key means only BusinessPlanId values to be returned, value of None means non value returned. For the second parameter, similar to first parameter but related to Exceptions. For the third mandatory parameter, indicates True or False for partial failure allowed or not.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The return value of the processCSBusinessPlan web service method. It can be none or a list of

Element Name	Type	Description
		only the BusinessPlan IDs or a list of full set of BusinessPlan records.

deleteBusinessPlanResource

A web service method that deletes a record of Oracle Fusion Business Plan Resource Object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
businessPlanResource	*Business Plan Team*	A required input parameter of the deleteBusinessPlanResource web service method. The record matching the input attribute values specified in the Business Plan Resource is deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The return value of the deleteBusinessPlanResource web service method.

deleteBusinessPlanSWOT

A web service method that deletes an Oracle Fusion Business Plan SWOT Object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
businessPlanSWOT	*Business Plan SWOT*	A required input parameter of the deleteBusinessPlanSWOT web service method. The record matching the input attribute values specified in the BusinessPlan SWOT is deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The return value of the deleteBusinessPlanSWOT web service method.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The return value of the label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The parameter returns the date and time when the service definition last changed in ISO 8601 format.

Element Name	Type	Description

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	The parameter returns a list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getBusinessPlan	ZCA_VIEW_SALES_BUS_PLN_PRIV	View Sales Business Plan	Allows viewing sales business plans.
updateBusinessPlan	ZCA_UPDATE_SALES_BUS_PLN_PRIV	Update Sales Business Plan	Allows updating sales business plans.
mergeBusinessPlan	ZCA_UPDATE_SALES_BUS_PLN_PRIV	Update Sales Business Plan	Allows updating sales business plans.
createBusinessPlan	ZCA_CREATE_SALES_BUS_PLN_PRIV	Create Sales Business Plan	Allows creating sales business plans.
deleteBusinessPlan	ZCA_DELETE_SALES_BUS_PLN_PRIV	Delete Sales Business Plan	Allows deleting sales business plans.
deleteBusinessPlanSWOT	ZCA_UPDATE_SALES_BUS_PLN_PRIV	Update Sales Business Plan	Allows updating sales business plans.

Operation Name	Privilege Code	Privilege Name	Privilege Description
getEntityList	ZCA_VIEW_SALES_BUS_PLN_PRIV	View Sales Business Plan	Allows viewing sales business plans.
deleteBusinessPlanResource	ZCA_UPDATE_SALES_BUS_PLN_PRIV	Update Sales Business Plan	Allows updating sales business plans.
getDfltObjAttrHints	ZCA_VIEW_SALES_BUS_PLN_PRIV	View Sales Business Plan	Allows viewing sales business plans.
processCSBusinessPlan	ZCA_UPDATE_SALES_BUS_PLN_PRIV	Update Sales Business Plan	Allows updating sales business plans.
findBusinessPlan	ZCA_VIEW_SALES_BUS_PLN_PRIV	View Sales Business Plan	Allows viewing sales business plans.
processBusinessPlan	ZCA_UPDATE_SALES_BUS_PLN_PRIV	Update Sales Business Plan	Allows updating sales business plans.
getServiceLastUpdateTime	ZCA_VIEW_SALES_BUS_PLN_PRIV	View Sales Business Plan	Allows viewing sales business plans.

Privileges to Duty Roles Mapping

Business Plan

The business plan information.

QName: {http://xmlns.oracle.com/apps/crmCommon/businessPlans/businessPlanService/}BusinessPlan

Logical Business Objects

- CRM : Common CRM : Sales Business Plan

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Note*
Contains	*Business Plan Team*
Contains	*Business Plan SWOT*
Handled by	*Business Plan Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BusinessPlanClassCode	string	The business plan class code.
BusinessPlanId	long	The system-generated business plan identifier. • Primary Key
BusinessPlanNumber	string	The unique identifier of the business plan.
BusinessPlanOwnerId	long	The business plan class code.
BusinessPlanOwnerNumber	string	Alternate key corresponding to BusinessPlanOwnerId.
BusinessPlanResource	*Business Plan Team*	The business plan resource records.
BusinessPlanTypeCode	string	The business plan type code.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CustomerId	long	Identifier of the Account for which a business plan is created.

Name	Type	Description
CustomerNumber	string	Alternate Key corresponding to CustomerId.
CustomerPartyType	string	Indicates the Account party type.
CustomerPartyUniqueName	string	Indicates the Account unique name.
DeleteFlag	boolean	Shows whether current user can delete Business Plan
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Name	string	The business plan name.
Note	*Note*	Note associated with Sales Business Plan.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigCreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The original creation date of the record that is used during import and migration.
OwnerResourceName	string	The business plan owner.
PartnerId	long	The unique identifier of the partner.
PartnerName	string	The partner name.
PartnerNumber	string	Alternate Key corresponding to PartnerId.
PeriodEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the period end date.
PeriodEndDisplayName	string	The end period display name.

Name	Type	Description
PeriodEndName	string	The end values for the appropriate period type that are based on the entries in GL calendar.
PeriodRangeDisplayName	string	The concatenated display names of start and end periods.
PeriodSetName	string	The period set name of the business plan.
PeriodStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the period start date.
PeriodStartDisplayName	string	The start period display name.
PeriodStartName	string	The start values for the appropriate period type that are based on the entries in GL calendar.
PeriodTypeCode	string	The period type such as year, quarter, or period.
SourceType	string	Source Object Code for Business Plans Notes.
StatusCode	string	The pre-defined code used to indicate the status.
Swot	*Business Plan SWOT*	The business plan SWOT records.
UpdateFlag	boolean	Shows whether current user can update Business Plan

Business Plan SWOT

The SWOT information about the business plan.

QName: {http://xmlns.oracle.com/apps/crmCommon/businessPlans/businessPlanService/}Swot

Logical Business Objects

- CRM : Common CRM : Sales Business Plan

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Business Plan*
Handled by	*Business Plan Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BusinessPlanId	long	The identifier of the business plan that is a parent of the SWOT.
BusinessPlanNumber	string	Parent puid.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
SWOTId	long	The SWOT identifier. • Primary Key
SWOTNumber	string	PUID/surrogate key for the Business Plan SWOT.
SWOTTypeCode	string	The SWOT type code.

Business Plan Team

The team that will work on the business plan.

QName: {http://xmlns.oracle.com/apps/crmCommon/businessPlans/businessPlanService/}BusinessPlanResource

Logical Business Objects

- CRM : Common CRM : Sales Business Plan

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Business Plan*
Handled by	*Business Plan Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevelCode	string	Access level determines the type of access granted to the Business Plan team member.
BusinessPlanId	long	The identifier of the business plan that is a parent of the BusinessPlanResource.
BusinessPlanNumber	string	Parent puid.
BusinessPlanResourceId	long	The unique identifier of the BusinessPlanResource record. • Primary Key
BusinessPlanResourceNumber	string	The public unique identifier of the BusinessPlanResource.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DenormMgrId	long	The ID of the manager.
EmailAddress	string	Email address of the resource.
FormattedPhoneNumber	string	The formatted phone number.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ManagerName	string	The name of the manager.
MemberFunctionCode	string	The BusinessPlan team member's function.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationName	string	The name of the party when the party type is Organization.
OwnerFlag	boolean	Indicates if the resource is the owner of the business plan.
ResourceId	long	The unique identifier of the resource.
ResourceName	string	The name of business plan team member.
ResourceNumber	string	Alternate key corresponding to ResourceId.
RoleName	string	The role name of the resource.

Note

The object that captures comments, information, or instructions for an Oracle Fusion Applications business object.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/noteService}Note

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Note Descriptive Flexfields*

Handled by	*Sales Cloud Household*
Handled by	*Partner Program Enrollment Service*
Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactRelationshipId	long	The identifier of the contact relationship record in Trading Community Architecture (TCA).
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreatorPartyId	long	This is the party identifier for the note creator.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.

Name	Type	Description
DeleteFlag	boolean	Indicates whether the user has access to delete the note.
Dff	*Note Descriptive Flexfields*	The descriptive flex field segment.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record
NoteAttributeCategory	string	The contextual flex field for development usage.
NoteAttributeUid1	string	The flex field for development usage.
NoteAttributeUid2	string	The flex field for development usage.
NoteAttributeUid3	string	The flex field for development usage.
NoteAttributeUid4	string	The flex field for development usage.
NoteAttributeUid5	string	The flex field for development usage.
NoteId	long	The unique identifier of the note. • Primary Key
NoteNumber	string	The alternate unique identifier of the note. A user key that is system generated or from an external system.
NoteTitle	string	The title of the note entered by the user.
NoteTxt	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	This is the column that stores the actual note text.
NoteTypeCode	string	This is the note type code for categorization of note.
PartyId	long	The unique identifier of the contact party.

Name	Type	Description
PartyName	string	The name of the party.
SourceObjectCode	string	This is the source_object_code for the source object as defined in OBJECTS Metadata.
SourceObjectId	string	This is the source_object_Uid for the source object such as Activities, Opportunities, and so on defined in OBJECTS metadata.
UpdateFlag	boolean	Indicates whether the user can update the note.
VisibilityCode	string	This is the attribute to specify the visibility level of the note.

Note Descriptive Flexfields

The descriptive flex field that captures additional information for notes, such as a priority or status.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/flex/noteDff/}NoteDFF

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Note*
Handled by	*Business Plan Service*
Handled by	*Sales Reference Customer*
Handled by	*Appointment Service*

- *deleteCaseOpportunities*

getCase

Queries and retrieves a single case record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
caseId	long	Case identifier.

Response Payload

Element Name	Type	Description
result	*Case*	A case that matches the inbound parameters.

createCase

Creates a single case record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
caseInstance	*Case*	The case to be created.

Response Payload

Element Name	Type	Description
result	*Case*	The case that is created.

updateCase

Updates a singlecase record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
caseInstance	*Case*	The case to be updated.

Response Payload

Element Name	Type	Description
result	*Case*	The updated case.

deleteCase

Deletes a single case record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
caseInstance	*Case*	The case record to be deleted.

Response Payload

Element Name	Type	Description
result	void	None.

mergeCase

Updates a single case record if one exists; otherwise, creates a new case record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
caseInstance	*Case*	The case record to be updated.

Response Payload

Element Name	Type	Description
result	*Case*	The updated case record.

findCase

Queries a list of cases based on a filter criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	Indicates the criteria used to query a list of cases.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Indicates a criteria to filter out cases that are not currently used.

Response Payload

Element Name	Type	Description
result	*Case*	Indicates a list of cases that satisfy the inbound parameters.

getCaseContacts

Queries a single case contact record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
caseContactId	long	The case contact ID.

Response Payload

Element Name	Type	Description
result	*Case Contact*	The case contact that matches the inbound parameter.

deleteCaseContacts

Deletes a case contact record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
caseContacts	*Case Contact*	The case contact to be deleted.

Response Payload

Element Name	Type	Description
result	void	None.

getCaseHouseholds

Queries a single case household record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
caseHouseholdId	long	The case household ID.

Response Payload

Element Name	Type	Description
result	*Case Household*	The case household that matches the inbound parameter.

deleteCaseHouseholds

Deletes a case household record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
caseHouseholds	*Case Household*	The case household to be deleted.

Response Payload

Element Name	Type	Description
result	void	None.

getCaseMessages

Queries a single case message record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
messageId	long	The case message ID.

Response Payload

Element Name	Type	Description
result	*Case Message*	The case message that matches the inbound parameter.

deleteCaseMessages

Deletes a case message record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
caseMessages	*Case Message*	The case message to be deleted.

Response Payload

Element Name	Type	Description
result	void	None.

getCaseResources

Queries a single case resource record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
caseResourceId	long	The case resource ID.

Response Payload

Element Name	Type	Description
result	*Case Resource*	The case resource that matches the inbound parameter.

deleteCaseResources

Deletes a case resource record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
caseResources	*Case Resource*	The case resource to be deleted.

Response Payload

Element Name	Type	Description
result	void	None.

getCaseOpportunities

Queries and retrieves a single case opportunity record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
caseOpportunityId	long	Case opportunity identifier.

Response Payload

Element Name	Type	Description
result	*Case Opportunity*	A case opportunity that matches the inbound parameters.

deleteCaseOpportunities

Deletes a single case opportunity record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
caseOpportunities	*Case Opportunity*	The case opportunity record to be deleted.

Response Payload

Element Name	Type	Description
result	void	None.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getCaseResources	SVC_CREATE_CASE_PRIV	Create Case	Allows user to create case records
getCaseResources	SVC_DELETE_CASE_PRIV	Delete Case	Allows user to delete a case record
getCaseResources	SVC_VIEW_CASE_PRIV	View Case	Allows user to view case records
getCaseResources	SVC_EDIT_CASE_PRIV	Edit Case	Allows user to edit case attributes
deleteCaseContacts	SVC_DELETE_CASE_PRIV	Delete Case	Allows user to delete a case record

Operation Name	Privilege Code	Privilege Name	Privilege Description
createCase	SVC_CREATE_CASE_PRIV	Create Case	Allows user to create case records
getCase	SVC_CREATE_CASE_PRIV	Create Case	Allows user to create case records
getCase	SVC_DELETE_CASE_PRIV	Delete Case	Allows user to delete a case record
getCase	SVC_VIEW_CASE_PRIV	View Case	Allows user to view case records

			up with clients to ensure they are working on their tasks.
SVC_CREATE_CASE_PRIV	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
SVC_CREATE_CASE_PRIV	ORA_SVC_CASE_SUPERVISION	Case Supervision	Supervises and manages caseworkers, assists caseworkers with any complex issues, handles case approvals and escalations, coordinates care and benefits with external service providers, assigns or reassigns cases to caseworkers, conducts evaluations of benefits programs and provides feedback.
SVC_CREATE_CASE_PRIV	ORA_SVC_CASE_ADMINISTRATOR	Case Administrator	Administers all aspects of Case Management.
SVC_CREATE_CASE_PRIV	ORA_SVC_CASE_EXECUTION	Case Execution	Assists clients who are applying for benefits, opens cases and manages all tasks associated to the case, processes clients applications, evaluate clients needs for benefits, counsels benefits recipients, performs assessments of clients strengths and needs to develop benefit plans, performs follow-up with clients to ensure they are working on their tasks.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_CUST_SERVICE_BILLING_VIEWING	Customer Service Billing Information Viewing	View customer billing information across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_CUST_SERVICE_SCM_ORDERS_MANAGEMENT	Customer Service SCM Orders Management	Allow creation and management of supply chain management orders across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_CUST_SERVICE_SCM_ORDERS_VIEWING	Customer Service SCM Orders Viewing	View supply chain management orders across Oracle Fusion Service, including service requests and service work orders.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_GEN_AI_ADMIN	Service Generative AI Administrator	Administer activities related to Service Gen AI APIs such as configuration of prompts across all areas of Oracle Fusion Service, such as Service Center, Knowledge, and Chat.
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_GEN_AI_USER	Service Generative AI User	Can use generative AI features across Oracle Fusion Service including but not limited to Service Center, Knowledge Management and Chat areas. Usage requires access to all generative AI API's essential to input data and fetch results from the LLM model.

Case

Contains the details and related information across case life cycle.

QName: {http://xmlns.oracle.com/apps/crm/service/caseMgmt/caseMgmtService/}Case

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Case Resource*
Contains	*Case Contact*
Contains	*Case Opportunity*
Contains	*Case Message*
Contains	*Case Household*
Handled by	*Case Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AllegationCd	string	
AllegationCdMeaning	string	
ArbitrationRequiredFlag	boolean	
AssigneePartyName	string	Indicates the party name of the case assignee.
AssigneeResourceId	long	The ID of the resource (for example, a support engineer) assigned to the case.
BUOrgId	long	The unique ID of the business unit name associated to the case.
BusinessUnitName	string	Indicates the Business Unit Name of the case.
CaseCategoryId	long	Indicates the category of case.
CaseCreatedBy	string	Migration Who Column: set to the user who created the row.
CaseCreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Migration Who Column: set to the case creation date.
CaseId	long	Indicates the case identifier. • Primary Key
CaseLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Migration Who Column: set to the date and time of the last update of the case.
CaseLastUpdateLogin	string	Migration Who Column: set to the session login associated to the user who last updated the case.
CaseLastUpdatedBy	string	Migration Who Column: set to the user who last updated the case.
CaseNumber	string	Indicates the reference number of the case.
CaseTypeCd	string	Lookup code that indicates the type of case.
CaseTypeCdMeaning	string	Indicates the display value corresponding to the case type lookup code for the case.

Name	Type	Description
CategoryName	string	Indicates the name of the category associated to the case.
ClosedDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the closed date for case.
ComplaintTypeCd	string	
ComplaintTypeCdMeaning	string	
ContributingFactorsCd	string	
ContributingFactorsCdMeanings	string	
CorpCurrencyCode	string	Indicates the corporate currency code.
CreatedBy	string	Indicates the user who created the case.
CreatedByPartyId	long	The user who created the case in the system.
CreatedByPartyName	string	The name of the user who created the case in the system.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time of the creation of the case.
CurcyConvRateType	string	The corporate currency conversion rate type.
CurrencyCode	string	The currency code.
DeleteFlag	boolean	Indicates if the record can be deleted by the current user.
Description	string	Indicates description/statement of the case.
FiledByTypeCd	string	
FiledByTypeCdMeaning	string	
IncidentOccurrenceDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	
IncidentTypeCd	string	

Name	Type	Description
IncidentTypeCdMeaning	string	
IsolatedIncidentFlag	boolean	
LastClosedDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates last closed date for case, if the case was closed and then reopened.
LastReopenDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates last reopen date for case, if the case was reopened.
LastResolvedDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the case was last updated.
LastUpdateLogin	string	Indicates the login session of the user who last updated the case.
LastUpdatedBy	string	Indicates the user who last updated the case.
LastUpdatedByPartyId	long	Indicates the party id of the user who last updated the case.
LastUpdatedByPartyName	string	The name of the user who last updated the case.
MeasuresTakenCd	string	
MeasuresTakenCdMeanings	string	
OpenDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the opened date for case, in case the case is approved.
PolicyViolatedFlag	boolean	
PrimaryContactPartyId	long	Indicates the primary contact for the case.
PrimaryContactPartyName	string	Indicates the name of the case primary contact.
PrimaryHouseholdPartyId	long	Indicates the primary household for the case.
PrimaryHouseholdPartyName	string	Indicates the name of the case primary household.

Name	Type	Description
PriorityCd	string	Indicates the priority of the case.
PriorityCdMeaning	string	Indicates the display value corresponding to the priority lookup code for the case.
QueueId	long	Indicates the queue ID the case is assigned to.
QueueName	string	The name of the queue associated to the case.
ReportedByPartyId	long	Indicates the person who reported the case.
ReportedByPartyName	string	Indicates Reported By Party Name.
ResolutionCd	string	
ResolutionCdMeaning	string	
ResolveDescription	string	
ResolveOutcomeCd	string	
ResolveOutcomeCdMeaning	string	
ResolvedBy	string	
ResolvedByPartyId	long	
ReviewedByCd	string	
ReviewedByCdMeanings	string	
SensitivityCd	string	Indicates the sensitivity of the case.
SensitivityCdMeaning	string	Indicates the display value corresponding to the sensitivity lookup code for the case.
SettlementAmount	decimal	
SettlementRequiredFlag	boolean	
SettlementSummary	string	

Name	Type	Description
SourceCd	string	Indicates how the case was entered into the system.
SourceCdMeaning	string	Indicates the display value corresponding to the source lookup code for the case.
SpecialistRequiredFlag	boolean	
StatusCd	string	Indicates the status of the case.
StatusCdMeaning	string	Indicates the display value corresponding to the status lookup code for the case.
StatusTypeCd	string	Indicates the status type of the case.
StatusTypeCdMeaning	string	Indicates the display value corresponding to the status type lookup code for the case.
StripeCd	string	Indicates the stripe code for the case.
Title	string	Indicates the title of the case.
UpdateFlag	boolean	Indicates if the record can be updated by the current user.
caseContacts	*Case Contact*	Contains many-to-many relationships of case and associated contacts.
caseHouseholds	*Case Household*	Contains many-to-many relationships of case and associated households.
caseMessages	*Case Message*	Contains information about every communication update to the case.
caseOpportunities	*Case Opportunity*	Contains many-to-many relationships of case and associated case opportunities.
caseResources	*Case Resource*	Contains many-to-many relationships of case and associated resources.

Case Contact

Contains many-to-many relationships of case and associated contacts.

QName: {http://xmlns.oracle.com/apps/crm/service/caseMgmt/caseMgmtService/}CaseContact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Case*
Handled by	*Case Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CaseContactId	long	Indicates the case contact identifier. • Primary Key
CaseId	long	Indicates the case to which this contact is associated.
CorpCurrencyCode	string	Indicates the corporate currency code.
CreatedBy	string	Indicates the user who created the contact for the case.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time of the creation of the contact for the case.
CurcyConvRateType	string	The corporate currency conversion rate type.
CurrencyCode	string	The currency code.
DeleteFlag	boolean	Indicates if the record can be deleted by the current user.

Name	Type	Description
EmailAddress	string	Indicates the email address of the party associated with the contact.
FormattedPhoneNumber	string	Indicates the formatted phone number of the party associated with the contact.
JobTitle	string	Indicates the job title of the party associated with the contact.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the contact for the case was last updated.
LastUpdateLogin	string	Indicates the login session of the user who last updated the contact for the case.
LastUpdatedBy	string	Indicates the user who last updated the contact for the case.
PartyId	long	Indicates the party id of the contact.
PartyName	string	Indicates the party id of the contact.
PersonId	long	The unique identification of a person that's an employee on a case.
PrimaryFlag	boolean	Indicates if the contact is the primary contact for the case.
RelationshipCd	string	Lookup code that indicates the relation of contact to the case.
RelationshipCdMeaning	string	Indicates the display value corresponding to the relationship lookup code for the case contact.
UpdateFlag	boolean	Indicates if the record can be updated by the current user.

Case Household

Contains many-to-many relationships of case and associated households.

QName: {http://xmlns.oracle.com/apps/crm/service/caseMgmt/caseMgmtService/}CaseHousehold

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Case*
Handled by	*Case Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CaseHouseholdId	long	Indicates the case household identifier. • Primary Key
CaseId	long	Indicates the case to which this household is associated.
CorpCurrencyCode	string	Indicates the corporate currency code.
CreatedBy	string	Indicates the user who created the household for the case.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time of the creation of the household for the case.
CurcyConvRateType	string	The corporate currency conversion rate type.
CurrencyCode	string	The currency code.
DeleteFlag	boolean	Indicates if the record can be deleted by the current user.
HouseholdName	string	Indicates the name of the household.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the household for the case was last updated.
LastUpdateLogin	string	Indicates the login session of the user who last updated the household for the case.

Name	Type	Description
LastUpdatedBy	string	Indicates the user who last updated the household for the case.
PartyId	long	Indicates the party id of the household.
PrimaryFlag	boolean	Indicates if the household is the primary household for the case.
UpdateFlag	boolean	Indicates if the record can be updated by the current user.

Case Message

Contains information about every communication update to the case.

QName: {http://xmlns.oracle.com/apps/crm/service/caseMgmt/caseMgmtService/}CaseMessage

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Case*
Handled by	*Case Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CaseId	long	Indicates the case to which this message is associated.
Content	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	Indicates content of the message that is not an attachment.
CorpCurrencyCode	string	Indicates the corporate currency code.

Name	Type	Description
CreatedBy	string	Indicates the user who created the message for the case.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time of the creation of the message for the case.
CurcyConvRateType	string	The corporate currency conversion rate type.
CurrencyCode	string	The currency code.
DeleteFlag	boolean	Indicates if the record can be deleted by the current user.
LastEditedDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the last edited date of the message for the case.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the message for the case was last updated.
LastUpdateLogin	string	Indicates the login session of the user who last updated the message for the case.
LastUpdatedBy	string	Indicates the user who last updated the message for the case.
MessageCreatedBy	string	Migration Who Column: set to the user who created the row.
MessageCreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Migration Who Column: set to the message creation date.
MessageId	long	Indicates the case message identifier. • Primary Key
MessageLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Migration Who Column: set to the date and time of the last update of the row.
MessageLastUpdateLogin	string	Migration Who Column: set to the session login associated to the user who last updated the row.
MessageLastUpdatedBy	string	Migration Who Column: set to the user who last updated the row.
MessageNumber	string	Indicates the reference number of the message ID.

Name	Type	Description
MessageTypeCd	string	Lookup code that indicates the type of message
MessageTypeCdMeaning	string	Indicates the display value corresponding to the message type lookup code for the case message.
OriginationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date on which the message was originated/posted.
ParentMessageId	long	Indicates the parent message for this record.
PostedByPartyId	long	Indicates the party id of user who posted the message.
PostedByPartyName	string	Indicates the party name of the user who posted the message.
RichTextFlag	boolean	Indicates whether the message content is in rich text format (Y or N).
SourceCd	string	Lookup code that indicates how the message was entered into the system.
SourceCdMeaning	string	Indicates the display value corresponding to the source lookup code for the case message.
StatusCd	string	Lookup code that indicates the status of the message, such as COMMITTED.
StatusCdMeaning	string	Indicates the display value corresponding to the status lookup code for the case message.
UpdateFlag	boolean	Indicates if the record can be updated by the current user.
VisibilityCd	string	Lookup code that indicates visibility of a message.
VisibilityCdMeaning	string	Indicates the display value corresponding to the visibility lookup code for the case message.

Case Opportunity

Indicates the one-to-many relationships between the case and associated opportunities.

QName: {http://xmlns.oracle.com/apps/crm/service/caseMgmt/caseMgmtService/}CaseOpportunity

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Case*
Handled by	*Case Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CaseId	long	Indicates the case to which this case opportunity is associated.
CaseOpportunityId	long	Indicates the case opportunity identifier. • Primary Key
CreatedBy	string	Indicates the user who created the case opportunity for the case.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time of the creation of the case opportunity for the case.
DeleteFlag	boolean	Indicates if the record can be deleted by the current user.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the case opportunity for the case was last updated.
LastUpdateLogin	string	Indicates the login session of the user who last updated the case opportunity for the case.

Name	Type	Description
LastUpdatedBy	string	Indicates the user who last updated the case opportunity for the case.
ObjectVersionNumber	int	Indicates object version number.
OptyId	long	Indicates the opportunity associated with the case.
UpdateFlag	boolean	Indicates if the record can be updated by the current user.

Case Resource

Contains many-to-many relationships of case and associated resources.

QName: {http://xmlns.oracle.com/apps/crm/service/caseMgmt/caseMgmtService/}CaseResource

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Case*
Handled by	*Case Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CaseId	long	Indicates the case to which this resource is associated.
CaseResourceId	long	Indicates the case resource identifier. • Primary Key
CorpCurrencyCode	string	Indicates the corporate currency code.

Name	Type	Description
CreatedBy	string	Indicates the user who created the resource for the case.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time of the creation of the resource for the case.
CurcyConvRateType	string	The corporate currency conversion rate type.
CurrencyCode	string	The currency code.
DeleteFlag	boolean	Indicates if the record can be deleted by the current user.
EmailAddress	string	Indicates the email address of the case resource.
FormattedPhoneNumber	string	Indicates the formatted phone number of the case resource.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the resource for the case was last updated.
LastUpdateLogin	string	Indicates the login session of the user who last updated the resource for the case.
LastUpdatedBy	string	Indicates the user who last updated the resource for the case.
OwnerFlag	boolean	Indicates if the resource is the owner of the case.
PartyId	long	Indicates the party id of the resource.
ResourceName	string	Indicates the name of the resource.
UpdateFlag	boolean	Indicates if the record can be updated by the current user.

Company and User Registration

Service to register a company and its users. Users can belong to partner or B2B companies, or could be B2C users in the future.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmSelfService/common/customer/publicModel/registration/}RegistrationService

Service WSDL URL: https://servername/crmService/RegistrationService?WSDL

Operations

- *isUserNameAvailable*
- *createPartnerCompanyAndAdministrator*
- *createPartnerWithUserProvisioning*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

isUserNameAvailable

Checks the availability of a username. This operation takes username as a parameter and returns a boolean value indicating whether the username is duplicate.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
userName	string	The username that needs to be validated for existence in the enterprise.

Response Payload

Element Name	Type	Description
result	string	If the return value is true, then the username already exists in the enterprise.

createPartnerCompanyAndAdministrator

Creates partner company and admin records. This operation takes organization party, person party, location and partner profile objects as parameters and returns the party id of newly created partner company.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
organizationParty	*Trading Community Organization Details*	Organization SDO containing organization details of the registering partner company.
personParty	*Trading Community Person Details*	Person SDO containing administrator details who is registering the partner company.
location	*Location Details*	Location SDO containing address of the registering partner company.
partnerProfile	*Partner*	Partner SDO containing partner specific information of the registering partner company.
userLanguage	string	The string containing language information for the method createPartnerCompanyAndAdministrator.

Response Payload

Element Name	Type	Description
result	long	The Organization PARTY_ID created for the registering partner company is returned.

createPartnerWithUserProvisioning

Creates partner company and admin records along with user provisioning. This operation takes organization party, person party, location and partner profile objects as parameters and returns the party id of newly created partner company.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
organizationParty	*Trading Community Organization Details*	Organization SDO containing organization details of the registering partner company.
personParty	*Trading Community Person Details*	Person SDO containing administrator details who is registering the partner company.

Element Name	Type	Description
location	*Location Details*	Location SDO containing address of the registering partner company.
partnerProfile	*Partner*	Partner SDO containing partner specific information of the registering partner company.
userLanguage	string	The string containing language information for the method createPartnerWithUserProvisioning.

Response Payload

Element Name	Type	Description
result	long	The Organization PARTY_ID created for the registering partner company is returned.

getDfltObjAttrHints

Retrieves user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service displays an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition was last updated. The parameter is present in ISO 8601 format.

getEntityList

Gets the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
isUserNameAvailable	CRM_ANONYMOUS_SELFREGISTER_PRIV_PRIV	Create Self Service Partner Registration	Allows access to register Partner Company and also request for username
isUserNameAvailable	ZPM_CREATE_PARTNER_USER_PRIV	Create Partner User	Allows provisioning of partner members to sign into the vendor partner network.

Operation Name	Privilege Code	Privilege Name	Privilege Description
createPartnerCompanyAndAdminis	CRM_ANONYMOUS_ SELFREGISTER_PRIV_PRIV	Create Self Service Partner Registration	Allows access to register Partner Company and also request for username
createPartnerCompanyAndAdminis	ZPM_CREATE_PARTNER_USER_ PRIV	Create Partner User	Allows provisioning of partner members to sign into the vendor partner network.
createPartnerWithUserProvisioning	CRM_ANONYMOUS_ SELFREGISTER_PRIV_PRIV	Create Self Service Partner Registration	Allows access to register Partner Company and also request for username
createPartnerWithUserProvisioning	ZPM_CREATE_PARTNER_USER_ PRIV	Create Partner User	Allows provisioning of partner members to sign into the vendor partner network.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZPM_CREATE_PARTNER_USER_ PRIV	ORA_ZPM_PARTNER_ACCOUNT_ MAINTENANCE_DUTY	Partner Account Maintenance	Maintains a partner account, including managing members and partner profile information. This role is for members of the partner account team and their management chain.
ZPM_CREATE_PARTNER_USER_ PRIV	ORA_ZPM_PARTNER_ACCOUNT_ ADMINISTRATION_DUTY	Partner Account Administration	Maintains a partner account, including managing members and partner profile information.
ZPM_CREATE_PARTNER_USER_ PRIV	ORA_ZPM_PARTNER_ MANAGMENT_AS_PARTNER_ DUTY	Partner Management as Partner Administrator	Manages the partner account for their partner organization, including managing members, users, and profile information. This role is for the partner administrator.
CRM_ANONYMOUS_ SELFREGISTER_PRIV_PRIV	ORA_FND_ANONYMOUS_USER_ ABSTRACT	Anonymous User	Maps to OPSS system Anonymous Role

Account

An organization account and its profile information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}OrganizationProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Organization Profile Additional Information*
Contained by	*Sales Account*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Alias	string	The organization alias name.
AnalysisFy	string	The fiscal year that the financial information is based on.
BankCode	string	Identifies the bank in several countries, typically for regulatory purposes.
BankOrBranchNumber	string	Stores bank number for banks and branch number for bank branches. Primarily stores ABA number for US bank branches.

Name	Type	Description
BranchCode	string	Identifies the bank branch in several countries, typically for regulatory purposes.
BranchFlag	boolean	Indicates if this is a branch location. If the value is True, then this is a branch location.
BusinessReport	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	Dun and Bradstreet business information report.
BusinessScope	string	The physical class of business in which a business participates. For example, local, national, or international.
CeoName	string	The name of the chief executive officer. It is the denormalized value of the CEO_NAME in HZ_ORGANIZATION_PROFILES.
CeoTitle	string	The formal title of the chief executive officer.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
Comments	string	The comments for the record.
CongDistCode	string	The U.S. Congressional district code for the account.
ContentSourceNumber	string	The content source number is not used.
ControlYr	decimal	The year when current ownership gained control of the organization.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CorporationClass	string	The taxation classification for corporation entities such as Chapter S in the US.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CurrentFiscalYearPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its current fiscal year.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DataCloudStatus	string	Specifies the enrichment status of the person.
DbRating	string	The Dun & Bradstreet credit rating.
Disadv8aInd	string	Indicates whether the organization is considered disadvantaged by the US government under Title 8A. If the value is Yes, the organization is considered disadvantaged under Title 8A. The default value is No.
DisplayedDUNSPartyIdentifier	long	Dun and Bradstreet does not maintain data for the branch offices of companies that are located beyond North America. Data is only maintained for the company headquarters. If the data pertains only to company headquarters, the headquarters PARTY_ID is stored. If the data pertains to a branch office, the branch PARTY_ID is stored.
DoNotConfuseWith	string	Indicates existence of similarly named businesses.
DomesticUltimateDUNSNumberC	string	DUNS Number for the Domestic Ultimate, which is the highest family member in the same country as the business entity. A subject can be its own Domestic Ultimate.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveLatestChange	string	The effective latest change is not used.

Name	Type	Description
EffectiveSequence	int	The effective sequence is not used.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
EmployeesAtPrimaryAddress	string	The number of employees at the referenced address.
EmployeesAtPrimaryAddressEstimation	string	Indicates the calculation of employees at the primary address as estimated.
EmployeesAtPrimaryAddressMinimum	string	Indicates the calculation of employees at the primary address as minimum.
EmployeesAtPrimaryAddressText	string	The number of employees at the referenced address that cannot be mapped to a number.
EmployeesTotal	decimal	The total number of employees.
EnquiryDUNS	string	The identifier used to query the Dun and Bradstreet data. If a location is a branch, then in some countries the headquarters DUNS number is used to do the query. Otherwise it is the same as the DUNS number.
ExportInd	string	Indicates whether the organization is an exporter. If the value is Y, then the organization is an exporter. The default value is N.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
GlobalUltimateDUNSNumberC	string	DUNS Number for the Global Ultimate, which is the highest family member in the same country as the business entity as you proceed further on this branch of the tree. A case can be its own ultimate.
GrowthStrategyDescription	string	The description of the growth strategy.

Name	Type	Description
HQBranchIndicator	string	The status of this site, such as HQ, a branch, or a single location. A list of accepted values are defined in the lookup type HQ_BRANCH_IND.
HomeCountry	string	The home country associated with the party.
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
ImportInd	string	Indicates whether the organization is an importer. If the value is Y, then the organization is an importer. The default value is N.
IncorpYear	int	The year that the business was formally incorporated.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LaborSurplusInd	string	Indicates whether the organization operates in an area with a labor surplus. If the value is Y, then the organization operates in an area with a labor surplus. The default value is N.
LastEnrichmentDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was last enriched in DaaS.
LastSourceUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated by the source system.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdateSourceSystem	string	The source system that last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
LegalStatus	string	The legal structure of the organization such as partnership, corporation, and so on.
LineOfBusiness	string	The type of business activities performed at this site.
LocalActivityCode	string	The local activity classification code.
LocalActivityCodeType	string	The local activity classification code type identifier.
LocalBusIdenType	string	The most common business identifiers in a country such as Chamber of Commerce Number in Italy, Government Registration Number in Taiwan. A list of accepted values are defined in the lookup type LOCAL_BUS_IDEN_TYPE.
LocalBusIdentifier	string	The primary identifier assigned to a businesses by a government agency such as Chamber of Commerce, or other authority. It is often used by countries other than USA.
MinorityOwnedInd	string	Indicates whether the organization is primarily owned by ethnic or racial minorities. If the value is Y, then the organization is owned by ethnic or racial minorities. The default value is N.
MinorityOwnedType	string	The type of minority-owned firm.
MissionStatement	string	The corporate charter of organization in user-defined text format.
NextFyPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its next fiscal year.
OobInd	string	Indicates whether the organization is out of business. If the value is Y, then the organization is out of business. The default value is N.
OrgInformation	*Trading Community Organization Profile Additional Information*	The information of the organization.
OrganizationName	string	The name of the party when the party type is Organization.
OrganizationProfileId	long	The unique identifier of the organization profile.

Name	Type	Description
		• Primary Key
OrganizationSize	string	Size of an organization based on revenue, number of employees, and so on.
OrganizationType	string	Not used in Fusion V1.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
ParentDUNSNumberC	string	Parent is a corporation that owns more than 50 percent capital stock of another corporation. The parent company can also be a subsidiary of another corporation. If the parent also has branches, then it is headquarters and also parent company. Headquarters is a business establishment that has branches or divisions reporting to it, and is financially responsible for those branches or divisions. If the headquarters has more than 50 percent of capital stock owned by another corporation, then it is also a subsidiary. If it owns more than 50 percent of capital stock of another corporation, then it is also a parent.
ParentSubInd	string	Indicates whether the organization is a parent or subsidiary.
PartyId	long	The unique identifier of the contact party.
PartyNumber	string	The unique identification number for the party.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PreferredContactEmailAddress	string	The e-mail address of the primary contact person of the organization.
PreferredContactFormattedPhoneNumber	string	The formatted phone number of the primary contact person of the organization.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.

Name	Type	Description
PreferredContactName	string	The name of the primary contact person of the organization.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryAddressCity	string	The city of the identifying address.
PrimaryAddressCountry	string	The country listed in the TERRITORY_CODE column of the FND_TERRITORY table for the identifying address.
PrimaryAddressCounty	string	The county of the Identifying address.
PrimaryAddressLine1	string	The first line of the identifying address.
PrimaryAddressLine2	string	The second line of the Identifying address.
PrimaryAddressLine3	string	The third line of the Identifying address.
PrimaryAddressLine4	string	The fourth line of the Identifying address.
PrimaryAddressPostalCode	string	The postal code of the identifying address.
PrimaryAddressProvince	string	The province of the identifying address.
PrimaryAddressState	string	The state of the Identifying address.
PrimaryEmailAddress	string	The e-mail address of the organization.

Name	Type	Description
PrimaryEmailId	long	The primary e-mail contact point ID of the organization.
PrimaryFormattedPhoneNumber	string	The primary telephone number formatted in the local format of the organization.
PrimaryLanguage	string	The standard name for a language.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneId	long	The primary contact point phone ID of the organization.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURL	string	The primary uniform resource locator.
PrimaryWebId	long	The unique identifier of the primary uniform resource locator.
PrincipalName	string	The Name of the highest ranking person in the company.
PrincipalTitle	string	The title of the highest ranking person in the organization.
Pronunciation	string	The pronunciation of the organization.
PublicPrivateOwnershipFlag	boolean	Indicator to specify if the organization is privately owned. Y stands for a privately owned organization and N stands for a publicly owned organization.

Name	Type	Description
RegistrationType	string	Indicates the registration type of the organization.
RentOwnInd	string	Indicates if this account owns or rents the place of business. A list of valid values for rent, own, and lease are defined in the lookup OWN_RENT_IND.
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The standard industry classification (SIC) code.
SICCodeType	string	The version of the standard industry classification (SIC) code.
SeblUserKeyLoc	string	The location of the account, optional part of the user primary key.
SmallBusInd	string	Indicates whether the organization is considered as a small business. If the value is Y, then the organization is considered as a small business. The default value is N.
Status	string	The status of the record.
StockSymbol	string	The corporate stock symbol such as ORCL.
SuffixOverriddenFlag	boolean	Indicator to specify that the attribute has Y if the suffix is overridden by user and N otherwise. Default value is N.
ThirdPartyFlag	boolean	Indicator that tracks if a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. Y stands for a third party relationship, N stands for a direct relationship. If Oracle Service is installed, the third party field in the Customers window is required.
TotalEmployeesEstimatedIndicator	string	Indicates if the employee total is estimated. The accepted values are defined in the lookup type TOTAL_EMP_EST_IND.
TotalEmployeesInd	string	Indicates if subsidiaries are included in the calculation of total employees. The accepted values are defined in the lookup type TOTAL_EMPLOYEES_INDICATOR.

Name	Type	Description
TotalEmployeesMinimumIndicator	string	Indicates if the number is a minimum, maximum, or average number of total employees. The accepted values are defined in the lookup type TOTAL_EMP_MIN_IND.
TotalEmployeesText	string	The total number of employees in text format.
TotalPaymentAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total number of payment experiences.
TradingPartnerIdentifier	string	One column to store the FSIO related trading partner codes. It stores alpha numeric values and also addresses the Fed vs. Non-Fed attribute requirement.
UniqueNameAlias	string	The name as identified by the users to internally recognize the organization.
UniqueNameSuffix	string	Identifies system generated or manually overridden suffix.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
WomanOwnedInd	string	Indicates whether the organization is primarily owned by women. If the value is Y, then the organization is primarily owned by women. The default value is N.
YearEstablished	int	The year when the organization began doing business.

Additional Account Name

An additional name of an organization, such as a legal name or a DBA name.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}AdditionalOrganizationName

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*

Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OrigSystem	string	The source system name.

Name	Type	Description
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPreferredFlag	boolean	Indicator to specify the preferred additional name for the organization.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNameId	long	The unique identifier of the party name. It is primary Key and system generated. • Primary Key
PartyNameType	string	The type of the name. It is a value defined by the additional party name and identifier type entity. The party type must be consistent with the party type that the PARTY_NAME_TYPE can be applied to.
PreferredFlag	boolean	Indicator to specify the name as preferred name for this party within the name type. Possible values are Y and N. Default value is N.
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
TransliterationLang	string	Used to identify the language for the name. It is validated against FND_LANGUAGES.LANGUAGE_CODE. Default value is the Session Language.

Additional Contact Name

An additional name of a person, such as the maiden name or alias.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}AdditionalPersonName

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPreferredFlag	boolean	Indicator to specify the preferred additional name of a person.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNameId	long	The unique identifier of the party name ID. It is primary key and system generated. • Primary Key
PartyNameType	string	The type of the name. It is a value defined by the additional party name and identifier type entity. The party type must be consistent with the party type that the PARTY_NAME_TYPE can be applied to.
PersonAcademicTitle	string	Used to specify the academic title for a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field degree in HL7.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	Used to specify the last name prefix such as fon, van, and so on for a person. It is used in the same way the new field PERSON_LAST_NAME_PREFIX in HZ_PERSON_PROFILES is used. It corresponds to the field Last Name Prefix in HL7.

Name	Type	Description
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	Used to specify the name suffix such as junior, senior, the third, and so on for a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Suffix in HL7.
PersonPreNameAdjunct	string	Used to specify the name prefix such as Mr., Ms, Dr, and so on for a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Prefix in HL7. It is validated against lookup CONTACT_TITLE.
PersonPreviousLastName	string	Used to specify the previous last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It has no mapping in HL7.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PreferredFlag	boolean	Indicator to specify the name as preferred name for the party within the name type. Possible values are Y and N. Default value is N.
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
TransliterationLang	string	Used to specify the language used for the name. It is validated against FND_LANGUAGES.LANGUAGE_CODE. Default value is the Session Language.

Additional Identifier

An additional identifier of a trading community member, such as driver's license number or passport number.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}AdditionalPartyId

Relationships

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Country	string	The name of the country.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
ExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The expiration date for the identifier. It may be NULL, and does not apply to all types of identifiers.
IssueDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date in which the Identifier was issued. It may be NULL and does not apply to all types of identifiers.
IssuingAuthorityName	string	The issuing authority name.
IssuingAuthorityPartyId	long	The unique identifier of the issuing authority.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party.
PartyIdentifierId	long	The unique identifier of the party identifier. • Primary Key
PartyIdentifierType	string	Indicates the type for the current identifier. The list of accepted values are defined in the lookup TYPE_CODE of HZ_NAME_AND_ID_TYPE_B. The party type should be consistent with the party type that the PARTY_IDENTIFIER_TYPE can be applied to.

Name	Type	Description
PartyIdentifierType1	string	Indicates the type for the current identifier. The list of accepted values are defined in the lookup TYPE_CODE of HZ_NAME_AND_ID_TYPE_B. The party type should be consistent with the party type that the PARTY_IDENTIFIER_TYPE can be applied to.
PartyIdentifierValue	string	The value of the party identifier.
PartyName	string	The name of the party.
RequestId	long	A system-generated read-only attribute used by the application framework.
StateProvince	string	The province of the address.
StatusCode	string	The pre-defined code used to indicate the status.

Address

An address of a trading community member, such as Oracle Corporation is located at 500 Oracle Parkway, Redwood Shores, CA.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartySite

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AddressExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the location is no longer valid.
AddressLinesPhonetic	string	The phonetic or Kana representation of the Kanji address lines that are used in Japan.
AddressStyle	string	Style of the address.
Addressee	string	The information of the addressee.
City	string	The name of the city.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
ContactPreferenceExistFlag	boolean	Indicator to specify if the contact is primary contact for the party.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
Country	string	The name of the country.
Country1	string	The attribute country1 is not used.

Name	Type	Description
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DateValidated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address was last validated.
DoNotValidateFlag	boolean	Indicator to specify that a particular location is not eligible for address validation irrespective of the current validation.
Eft	*Electronic File Transfer*	The electronic file transfer information for the party.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
FormattedAddress	string	The formatted read-only address.
FormattedLocaleAddress	string	The formatted read-only local address.
FormattedMultilineAddress	string	The formatted multi line address of the party site.

Name	Type	Description
GlobalLocationNumber	string	The global location number that uniquely identifies each location in a trading partners enterprise.
HouseType	string	Indicates the building type.
IdentifyingAddressFlag	boolean	Indicator to specify the identifying address for the party. Y stands for the indentifying site and N stands for sites that are not the indentifying site.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
Language	string	The operating language for the party site.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Latitude	decimal	The latitude of the party address.
LocationDirections	string	Directions to the location.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
LocationLanguage	string	The operating language for the locations.
Longitude	decimal	The longitude of the party address.
Mailstop	string	A user-defined code to indicate a mail drop point within the organization.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction

Name	Type	Description
		to detect whether another session has updated the row since it was last queried.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary address of the contact irrespective of the context. Y stands for primary address and N stands for all others.
PartyId	long	The unique identifier of the contact party.
PartyNameDba	string	Stores the doing-business_as (DBA) party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameDivision	string	Stores the division party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameLegal	string	Stores the legal party name for a party site. This column is used to store FSIO related legal party name attribute.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
PartySiteInformation	*Trading Community Address Additional Information*	The party address information.
PartySiteName	string	The user-defined name for the site.
PartySiteNumber	string	The party site number of the address.
PartySiteType	string	Stores the party site type and is based on the lookup. Currently this is either null or one-time.
PartySiteUse	*Trading Community Address Purpose*	The information of the party address usage.
PartyUsageCode	string	The usage context of a party's contact point.

Name	Type	Description
Phone	*Phone*	The phone information for the entity.
Position	string	The primary direction such as north or east that is used to access the location.
PostalCode	string	The postal code element of the address.
PostalPlus4Code	string	The four digit extension to the United States postal ZIP code.
Province	string	The name of the province.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
State	string	The name of the state.
Status	string	The status of the record.
Telex	*Telex*	The Telex information associated with the party.
UsageCode	string	The usage code is not used.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
ValidationStatusCode	string	The standardized status code describing the results of the validation.
Web	*Web*	The web information related to the record.

Certification

The certification information of a trading community member, such as a full ISO 9001 registered firm.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}Certification

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CertificationId	long	The unique identifier for certification. • Primary Key
CertificationName	string	The name of the certification such as ISO9000 and GMP001.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrentStatus	string	The name for the status of the certification. For example, applied for, granted, or expired.
ExpiresOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the certification expires.
Grade	string	The level or grade of certification provided by the ISSUED_BY_AUTHORITY. For example, founding member, gold, fully certified, and partially certified.
IssuedByAuthority	string	The name of the certifying authority.
IssuedOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the certification was issued.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
PartyId	long	The unique identifier of the contact party.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Citizenship

The citizenship information about a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}Citizenship

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BirthOrSelected	string	Indicates if the citizenship was granted by being born in the country or by naturalization.
CitizenshipId	long	The unique citizenship identifier of a person. • Primary Key
CountryCode	string	The ISO code of the country from which a person claims citizenship.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
DateDisowned	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when an individual renounced citizenship. This is usually a self-declared date that might not match a legal effective date.
DateRecognized	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the country granted citizenship to the individual. For a native-born person, this date is typically the person's date of birth.
DocumentReference	string	The unique reference number such as passport number or naturalization reference number associated with DOCUMENT_TYPE.
DocumentType	string	The class of document that confirms citizenship. For example, a passport, or naturalization papers.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
PartyId	long	The unique identifier of the contact party.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Classification Assignment

The classification code assigned to a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}CodeAssignment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*
Contained by	*Sales Competitor*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Reference*
Handled by	*Sales Reference Customer*
Handled by	*Company and User Registration*
Handled by	*Sales Party*
Handled by	*Sales Competitor Service*
Handled by	*Trading Community Person Information*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party Territory service*
Handled by	*Sales Party Resource Service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ClassCategory	string	The name of the classification category.
ClassCode	string	The code of the classification.
CodeAssignmentId	long	The unique identifier of the assignment of an industrial classification code to an object. It is primary key and system generated. • Primary Key
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableKey1	string	The first column of the alphanumeric or multi-part foreign key.

Name	Type	Description
OwnerTableKey2	string	The second column of the alphanumeric or multi-part foreign key.
OwnerTableKey3	string	The third column of the alphanumeric or multi-part foreign key.
OwnerTableKey4	string	The fourth column of the alphanumeric or multi-part foreign key.
OwnerTableKey5	string	The fifth column of the alphanumeric or multi-part foreign key.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PrimaryFlag	boolean	Indicator that specifies if this is the primary class code of a class category for the organization. Y stands for the primary class code and N stands for all others.
Rank	decimal	Ranks classes if multiple classes are assigned to a party.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Contact

The profile information of the trading community person. The profile includes information such as marital status and additional name.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}PersonProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Person Profile Additional Information*
Contained by	*Trading Community Person Details*
Contained by	*Sales Account*
Contained by	*Loyalty Member*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Loyalty Member Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Alias	string	Person alias name.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
Comments	string	The comments for the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DataCloudStatus	string	The enrichment status of the person.
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was born.
DateOfDeath	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person died.
DeceasedFlag	boolean	Y or N indicates whether the person is deceased or not.
DeclaredEthnicity	string	The declared ethnicity of the person.
Department	string	The free form text used to name the department.
DepartmentCode	string	The list of values for possible department codes.
Distance	decimal	The distance from the input location.
DoNotCallFlag	boolean	Indicator to specify if the user can send mail to the person or not.
DoNotContactFlag	boolean	Indicator to specify if the user can contact the person through phone, e-mail, or mail or not.
DoNotEmailFlag	boolean	Indicator to specify if the user can send e-mail to the person or not.

Name	Type	Description
DoNotMailFlag	boolean	Indicator to specify if the user can send mail to the person or not.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveLatestChange	string	The date effective entity. Y indicates that this row represents the latest change in the day.
EffectiveSequence	int	The date effective entity. Indicates the order of different changes made during a day. The lowest value represents the earliest change in the day.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
FavoriteContactFlag	boolean	Indicator to specify if the person is key contact.
Gender	string	The gender details such as male, female, or unknown of the person.
HeadOfHouseholdFlag	boolean	The head of household indicator is not used.
HouseholdIncomeAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The household income amount is not used.
HouseholdSize	decimal	The household size is not used.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
JobTitle	string	The free form text for the job title.
JobTitleCode	string	The code given to the job title.
LastContactDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the contact was last contacted.
LastEnrichmentDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was last enriched in DaaS.

Name	Type	Description
LastKnownGPS	string	The geophysical location that is, GPS point last reported for the person.
LastSourceUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated by the source application.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdateSourceSystem	string	The source application that last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaritalStatus	string	The marital status of the person.
MaritalStatusEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the marital status of the person changed.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party.
PartyNumber	string	The unique identification number for the party.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PersonAcademicTitle	string	The academic title that is part of the name of a person such as Dr. Jane Smith.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonInformation	*Trading Community Person Profile Additional Information*	The information of the person.

Name	Type	Description
PersonInitials	string	The Initials of the name.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	Used to identify the Last name prefix such as fon, van and so on for a person. It is used in the same way the new field PERSON_LAST_NAME_PREFIX in HZ_PERSON_PROFILES is used. Corresponds to the field, Last Name Prefix in HL7.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonName	string	The combination of title, first, middle, last, and suffix names.
PersonNameSuffix	string	Indicates the place in a family structure. For example, III in Tom Jones III.
PersonPreNameAdjunct	string	Salutary introduction such as Mr., Herr, and so on.
PersonPreviousLastName	string	The previous last or surname of the person.
PersonProfileId	long	The unique identifier of the person profile. • Primary Key
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PersonalIncomeAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated gross annual income of the person.
PlaceOfBirth	string	The place where the person was born, including city and country.

Name	Type	Description
PreferredContactEmail	string	The preferred contact e-mail of the person.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactName	string	The preferred contact name of the person.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredContactPhone	string	The preferred contact phone of the person.
PreferredContactURL	string	The preferred contact uniform resource locator of the person.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryAddressCity	string	The city of the identifying address.
PrimaryAddressCountry	string	The country listed in the TERRITORY_CODE column of the FND_TERRITORY table for the identifying address.
PrimaryAddressCounty	string	The county of the identifying address.
PrimaryAddressLatitude	decimal	The primary address latitude information for the location for spatial proximity and containment purposes.
PrimaryAddressLine1	string	The first line of the identifying address.
PrimaryAddressLine2	string	The second line of the identifying address.

Name	Type	Description
PrimaryAddressLine3	string	The third line of the identifying address.
PrimaryAddressLine4	string	The fourth line of the identifying address.
PrimaryAddressLocationId	long	The primary address location ID.
PrimaryAddressLongitude	decimal	The primary address longitude information for the location for spatial proximity and containment purposes.
PrimaryAddressPostalCode	string	The postal code of the identifying address.
PrimaryAddressProvince	string	The province of the identifying address.
PrimaryAddressState	string	The state of the identifying address.
PrimaryCustomerId	long	The customer party identifier of a primary customer for a given person. There should be a valid relationship between the person and the customer.
PrimaryCustomerName	string	The customer party name of a primary customer for a given person. There should be a valid relationship between the person and the customer.
PrimaryCustomerRelationshipId	long	The unique identifier of the primary customer relationship.
PrimaryEmailAddress	string	The e-mail address of the person.
PrimaryEmailId	long	The primary contact point e-mail ID of the person.
PrimaryFormattedAddress	string	The primary formatted address of the person.
PrimaryFormattedPhoneNumber	string	The primary telephone number formatted in the local format of the person.
PrimaryLanguage	string	The standard name for a language.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.

Name	Type	Description
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneId	long	The primary contact point phone ID of the person.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURL	string	The uniform resource locator.
PrimaryWebId	long	The unique identifier of the primary uniform resource locator.
Pronunciation	string	The person pronunciation.
RentOwnInd	string	Indicates if the person rents or owns his or her residence. Lookup values include rent, own, lease, and so on.
RequestId	long	A system-generated read-only attribute used by the application framework.
SalesAffinityCode	string	The affinity of a person towards the deploying organization.
SalesBuyingRoleCode	string	The role of a person in the buying process.
Salutation	string	The phrase used to address a party in any correspondence.
Status	string	The status of the record.
SuffixOverriddenFlag	boolean	This attribute has Y if the suffix is overridden by user and N if not. Default value is N.
UniqueNameSuffix	string	Identifies system generated or manually overridden suffix.

Name	Type	Description
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.

Contact Address

The address of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PersonPartySite

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Phone*
Contains	*Trading Community Address Purpose*
Contains	*Contact Preference*
Contains	*Source System Reference*
Contains	*Trading Community Address Additional Information*
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Addressee	string	The information of the addressee in the contact address.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
GlobalLocationNumber	string	The global location number that uniquely identifies each location in a trading partners enterprise.
IdentifyingAddressFlag	boolean	Indicates whether this is the identifying address for the party. If the value is Y, then this is the identifying address for the party.
Language	string	The language used in the contact's location.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.

Name	Type	Description
Mailstop	string	A user-defined code to indicate a mail drop point within their organization.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary address of the associated object. If the value is True, then this is the primary address. The default value is False.
PartyId	long	The unique identifier of the contact party.
PartyNameDba	string	The doing-business_as (DBA) party name for a party site.
PartyNameDivision	string	The division of the party name for a party site.
PartyNameLegal	string	The legal party name for a party site.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
PartySiteName	string	The address associated with the party site.
PartySiteNumber	string	The alternate identifier of the party site.
PartySiteType	string	The type of the party site.
PartySiteUse	*Trading Community Address Purpose*	Indicates the use of the party site.
PartyUsageCode	string	The usage context of a party's contact point.
PersonPartySiteInformation	*Trading Community Address Additional Information*	The party site information of the person.

Name	Type	Description
Phone	*Phone*	The phone information for the entity.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Contact Interest

The interests of the trading community member, such as baseball, sports car, or painting.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}PersonInterest

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
InterestName	string	A text field that lets you assign a descriptive name to an interest. For example, pets, dogs, baseball, or sports car racing.
InterestTypeCode	string	A code to classify interests for evaluation.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LevelOfInterest	string	The user-defined level number or name to rate the amount of interest in the activity. For example, high, medium, or low.
LevelOfParticipation	string	The user-defined level number or name to indicate if the person participates and to what extent.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PersonInterestId	long	The unique identifier of interests of the person. • Primary Key

Name	Type	Description
RequestId	long	A system-generated read-only attribute used by the application framework.
Since	{http://xmlns.oracle.com/adf/svc/types/}date-Date	An approximate date from which the person was involved with the activity.
SportIndicator	string	Indicates if the activity is a sport. Y stands for sports and N stands for non-sport activities.
Status	string	The status of the record.
SubInterestTypeCode	string	A code to classify subinterests of the interest type code.
Team	string	Any team the person likes to watch or play for.

Contact Language

The languages known information of a trading community member. For example, Mary Smith can speak both Spanish and English but can only read and write English.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PersonLanguage

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Handled by	*Trading Community Group*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*

Relationship Type	Object or Service
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LanguageName	string	The standard name for a language. For example, Spanish, Mandarin, or American English. Foreign key to the FND_LANGUAGES table.
LanguageUseReferenceId	long	The unique identifier of the language use reference. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
NativeLanguageFlag	boolean	Indicator to specify if the language is the declared native language of a person. Y stands for a declared native language and N stands for all other languages.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
PartyId	long	The unique identifier of the contact party.
PrimaryLanguageIndicator	string	Indicates if this is the primary language used by a person in day-to-day transactions. Y stands for the primary language and N stands for other languages.
ReadsLevel	string	The user-defined level number or name to indicate the ability to read a language.
RequestId	long	A system-generated read-only attribute used by the application framework.
SpeaksLevel	string	The user-defined level number or name to indicate the ability to speak a language.
SpokenComprehensionLevel	string	The code to indicate comprehension of a spoken language.
Status	string	The status of the record.
WritesLevel	string	The user-defined level number or name to indicate the ability to write in a language.

Contact Preference

The contact preference of the trading community member. For example, do not call Joe Smith between 10 a.m. and 12 noon on weekdays.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}ContactPreference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactLevelTable	string	The table that stores the contact level of the contact preference, and uses the SUBJECT_TABLE lookup. The list of accepted values are HZ_PARTIES, HZ_PARTIES_SITES, or HZ_CONTACT_POINTS.
ContactLevelTableId	long	The foreign key to the table specified in CONTACT_LEVEL_TABLE column. The list of accepted values are PARTY_ID from HZ_PARTIES table, CONTACT_POINT_ID from HZ_CONTACT_POINTS table, or PARTY_SITE_ID from HZ_PARTY_SITES table.
ContactPreferenceId	long	The unique identifier for the contact preference. • Primary Key
ContactType	string	The contact party type that defines whether the contact is a sales account, a prospect, a contact, or any other user-defined party type. The default value is CUSTOMER. A list of accepted values is defined in the lookup CONTACT_TYPE.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
MaximumNoOfInteractUOMCode	string	The period of time during which the maximum number of interactions applies. Uses the MAX_NO_OF_INTERACT_UOM_CODE lookup.
MaximumNoOfInteractions	decimal	The number of times you can use this contact point. The period of time that this number applies is stored in the MAX_NO_OF_INTERACT_UOM_CODE column.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PreferenceCode	string	Indicates whether to use a particular contact method. The list of accepted values are defined in the PREFERENCE_CODE lookup.
PreferenceEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes inactive.
PreferenceEndTimeHR	int	The hour part of time when the contact preference becomes inactive. The time is recorded in the 24 hour format.
PreferenceEndTimeMi	int	The minutes part of the time when the contact preference becomes inactive.
PreferenceStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes active.
PreferenceStartTimeHR	int	The hour part of time when the contact preference becomes active. The time is recorded in the 24 hour format.
PreferenceStartTimeMi	int	The minutes part of the time when the contact preference becomes active.
PreferenceTopicType	string	The appropriate subjects to send the party that the preference is created for. The list of accepted values are defined in the PREFERENCE_TOPIC_TYPE lookup.
PreferenceTopicTypeCode	string	The code of the preference topic type.

Name	Type	Description
PreferenceTopicTypeId	long	The unique identifier of the preference topic type.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
RequestedBy	string	Indicates if the permission or restriction was created internally or requested by the party. The list of accepted values are defined in the REQUESTED_BY lookup.
Status	string	The status of the record.

Credit Rating

The trading community member's credit rating information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}CreditRating

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*

Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AverageHighCredit	decimal	The average of all the high credit experiences.
BankruptcyInd	string	Indicates if open bankruptcy exists. Y stands for any open bankruptcy that exists and N stands for no open bankruptcy.
BusinessDiscontinued	string	The business discontinued at the listed location. Prompts reader to contact D and B customer service center if any business is operating.
ClaimsInd	string	Indicates if open claims, legal claims, liens, protested bills, or any equivalent information exists. Y stands for availability of information and N stands for no information.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRatingId	long	The unique identifier of the credit rating. • Primary Key
CreditRiskScoreExplain	string	Explains numeric credit risk score that estimates the risk of delinquent payment over the next 12 months.

Name	Type	Description
CreditScore	string	Indicates the risk of delinquent payments.
CreditScoreAge	decimal	Indicates the age of the credit score expressed in months.
CreditScoreClass	decimal	The date when the credit score was calculated.
CreditScoreCommentary	string	The lookup for explanation codes in the CREDIT_SCORE column.
CreditScoreCommentary10	string	Indicates comments about the credit score.
CreditScoreCommentary2	string	Indicates comments about the credit score.
CreditScoreCommentary3	string	Indicates comments about the credit score.
CreditScoreCommentary4	string	Indicates comments about the credit score.
CreditScoreCommentary5	string	Indicates comments about the credit score.
CreditScoreCommentary6	string	Indicates comments about the credit score.
CreditScoreCommentary7	string	Indicates comments about the credit score.
CreditScoreCommentary8	string	Indicates comments about the credit score.
CreditScoreCommentary9	string	Indicates comments about the credit score.
CreditScoreDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the credit score was calculated.
CreditScoreIncdDefault	decimal	Indicates the probability expressed as a percentage of delinquency for a score range or class.
CreditScoreNatlPercentile	decimal	Indicates the relative credit rating of a business compared to all businesses whose credit ratings are included in the local country database.
CreditScoreOverrideCode	string	Indicates why no score was calculated or why score is equal to zero in the US.

Name	Type	Description
CriminalProceedingInd	string	Indicates if criminal proceedings exist. Y stands for availability of information and N stands for no information.
DebarmentInd	string	Indicates whether the company is debarred from doing business with government agencies. Y stands for company debarred and N stands for not debarred.
DebarmentsCount	decimal	The count of filings by government agencies in the United States that prohibit the party from entering into contracts or transactions with those agencies.
DebarmentsDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date of the most recent filing to prohibit the party from entering into contracts or transactions with a government agency in the United States.
DelqPmtPctgForAllFirms	decimal	Specifies a delinquency percentage for all firms.
DelqPmtRngPrcnt	decimal	Specifies a delinquency percentage for credit score range.
Description	string	The free text description of the record.
DetHistoryInd	string	The code that indicates if detrimental information exists for the party and whether complete details exist on management and party. Y stands for availability of information and N stands for no information.
DisasterInd	string	Indicates if information exists about disasters such as fires, hurricanes, and so on. Y stands for availability of information and N stands for no information.
FailureScore	string	For US, the failure risk class, 1 through 5. For Canada , the stability score that indicates risk of business closure, 1 through 10. For Australia, the percentile failure score.
FailureScoreAge	decimal	The failure score age in months.
FailureScoreClass	decimal	1 through 5 to indicate risk of financial stress for a customer account. 1 for a business with greatest risk and 5 for a business with least risk.
FailureScoreCommentary	string	The comments related to failure score.

Name	Type	Description
FailureScoreCommentary10	string	The comments related to failure score.
FailureScoreCommentary2	string	The comments related to failure score.
FailureScoreCommentary3	string	The comments related to failure score.
FailureScoreCommentary4	string	The comments related to failure score.
FailureScoreCommentary5	string	The comments related to failure score.
FailureScoreCommentary6	string	The comments related to failure score.
FailureScoreCommentary7	string	The comments related to failure score.
FailureScoreCommentary8	string	The comments related to failure score.
FailureScoreCommentary9	string	The comments related to failure score.
FailureScoreDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the failure score was calculated.
FailureScoreIncdDefault	decimal	Probability, in percentage, of failure for score range of class.
FailureScoreNatnlPercentile	decimal	The national percentile that reflects the relative ranking of a company among all scored companies in the local country database.
FailureScoreOverrideCode	string	In Europe, code for the reason for variance between the D and B rating and the failure score. In the US, code for the reason why no score was calculated, or why the score is zero.
FinclEmbtInd	string	Indicates if open bankruptcy, receivership liquidation, or any equivalent information exists. Y stands for availability of information and N stands for no information.
FinclLglEventInd	string	Indicates if special events such as financial embarrassment and legal filings exist. Y stands for availability of information and N stands for no information.
GlobalFailureScore	string	The global score for the risk of business default.

Name	Type	Description
HighCredit	decimal	Maximum credit ever extended to the organization.
HighRngDelqScr	decimal	Specifies the high end of the range of the commercial credit score.
JudgementInd	string	Indicates if open judgments exist. Y stands for any open judgment that exists and N stands for no open judgments.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LienInd	string	Indicates if open liens exist. Y stands for any open lien that exists and N stands for no open liens.
LowRngDelqScr	decimal	Specifies the low end of the range of the commercial credit score.
MaximumCreditCurrencyCode	string	The currency used to denominate the MAXIMUM_CREDIT_RECOMMENDATION column.
MaximumCreditRecommendationAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Maximum credit limit recommended for the currency specified in the MAXIMUM_CREDIT_CURRENCY_CODE column.
NegvPmtExpl	string	The conditional comment generated when negative payments are present.
NoTradeInd	string	Indicates that no trade experiences exist. Y stands for any trade experience that exists and N stands for no trade experience.
NumberParentBankruptcyConversions	decimal	The number of bankruptcy conversions by the parent.
NumberParentBankruptcyFiling	decimal	The number of bankruptcies filed by the parent.
NumberSpecialEvent	decimal	The number of occurrences of the special events.

Name	Type	Description
NumberTradeExperiences	decimal	The number of trade experiences.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OprgSpecificationEvntInd	string	Indicates if information exists about operational changes such as name changes, management changes, change of control, moves, and so on. Y stands for availability of information and N stands for no information.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OtherSpecificationEvntInd	string	Indicates if special events exist that are not otherwise specified.
ParentHQBankruptcyInd	string	Indicates if parent (P) or headquarters (H) are entered into bankruptcy.
PartyId	long	The unique identifier of the contact party.
PaydexComment	string	Additional paydex information.
PaydexFirmComment	string	Comment on the paydex score for the organization.
PaydexFirmDays	string	The number of days used in the paydex score.
PaydexIndustryComment	string	Comment on the paydex score for the industry.
PaydexIndustryDays	string	The number of days used in the paydex score for the industry.
PaydexNorm	string	Median or average Paydex score for the industry.
PaydexScore	string	Paydex score for the previous 12 months payment history.
PaydexThreeMonthsAgo	string	Paydex score three months ago.
PrntBkcyChapterConv	string	The change of bankruptcy type.

Name	Type	Description
PrntBkcyConvDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the bankruptcy converted from one type to another.
PrntBkcyFilgChapter	decimal	The chapter number of the bankruptcy filed by the parent under the US uniform commercial code.
PrntBkcyFilgDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The bankruptcy filing date of the parent.
PrntBkcyFilgType	string	The type of bankruptcy filed by the parent.
PubRecExpl	string	The conditional comment generated if suits, liens, and judgments exist.
RatedAsOfDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the rating was acquired.
Rating	string	The rating number or code of the rating company.
RatingOrganization	string	The name of the credit rating organization.
RequestId	long	A system-generated read-only attribute used by the application framework.
SecuredFlngInd	string	Indicates if open secured filings such as UCC filings, secured charges or mortgages pledging, or any equivalent information exists. Y stands for availability of information and N stands for no information.
SlowTradeExpl	string	The conditional comment generated when paydex score indicates that slow trade experiences are present.
SpecialEventComment	string	The comment generated if special event section exists.
SpecialEventText	string	The narrative of the special event.
SpecialEventUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the special event was updated.
Status	string	The status of the record.

Name	Type	Description
SuitInd	string	Indicates if open suits exist. Y stands for any open suit that exists and N stands for no open suits.

Customer Contact Profile

The person who functions as a contact for an organization.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}OrganizationContact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Organization Contact Additional Information*
Contains	*Customer Contact Responsibility*
Contains	*Source System Reference*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
ContactFormattedAddress	string	The formatted version of the contact address.
ContactFormattedMultilineAddress	string	The formatted multiline version of the contact address.
ContactName	string	The name of the contact.
ContactNumber	string	The user-defined identification number for this contact.
ContactPartyId	long	The unique identifier of the contact.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CustomerEmailAddress	string	The e-mail address of the customer this contact person belongs to.
CustomerName	string	The name of the customer.

Name	Type	Description
CustomerPartyId	long	The unique identifier of the customer this contact person belongs to.
CustomerPartyNumber	string	The alternate unique identifier of the customer this contact person belongs to.
CustomerUniqueName	string	The unique name of the customer. For an Organization, the value is a concatenation of unique_name_alias and suffix. For a Person, the value is a concatenation of person_name and suffix.
DecisionMakerFlag	boolean	Indicates if this contact is a decision maker. If the value is True, then the contact is a decision maker.
Department	string	The free form text used to name the department for the contact.
DepartmentCode	string	The department code for the contact. A list of accepted values is defined in the lookup DEPARTMENT_TYPE.
EmailAddress	string	The email address associated with the record.
FormattedAddress	string	The formatted address information.
FormattedPhoneNumber	string	The formatted phone number.
JobTitle	string	The free form text for job title.
JobTitleCode	string	The code given to the job title.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
OrgContactId	long	The unique identifier of the organization contact. • Primary Key
OrgContactInformation	*Trading Community Organization Contact Additional Information*	The information of the organization contact.
OrganizationContactRole	*Customer Contact Responsibility*	The role of the contact in the organization.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyRelationshipId	long	The unique identifier of the relationship of the party.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PartySiteName	string	The address associated with the party site.
PersonAcademicTitle	string	The part of the person's title that denotes the academic qualification, such as Dr. Jane Smith.
PersonCertReasonCode	string	The reason for the organization's current certification level assignment. A list of accepted values is defined using the lookup HZ_PARTY_CERT_REASON.
PersonCertificationLevel	string	The certification level of a organization. A list of accepted values is defined in the lookup HZ_PARTY_CERT_LEVEL.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLanguageName	string	The language name associated with the person.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.

Name	Type	Description
PersonLastNamePrefix	string	The prefix for the last name of a person, such as fon, van. For example, if a person's name is Hans Van, the last name of the person is captured using this attribute.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	The place in a family structure. For example, in "Tom Jones III", the "III".
PersonPreNameAdjunct	string	The preferred name adjacency of a resource.
PersonPreviousLastName	string	The previous last name of a person.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PreferredContactFlag	boolean	Indicates if this contact person is primary contact for the customer.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PrimaryCustomerFlag	boolean	Indicates if this customer is primary customer for the contact.
Rank	string	The rank associated with this customer contact.
ReferenceUseFlag	boolean	Indicates if this contact can be used as a reference. If the value is Y, then the contact can be used as a reference.
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
SalesAffinityCode	string	The affinity of a contact to the deploying organization. A list of accepted values is defined in the lookup HZ_SLS_CNTCT_AFFINITY_CODE.
SalesAffinityComments	string	The comments about the contact's affinity to the deploying organization.
SalesBuyingRoleCode	string	The roles played by a contact in the buying process, for example, decision maker or supporting role. A list of accepted values is defined in the lookup HZ_SLS_CNTCT_BUY_ROLE_CODE.
SalesInfluenceLevelCode	string	The influence of the contact has on the deploying organization. A list of accepted values are defined in the lookup HZ_SLS_CNTCT_INFLUENCE_LVL_CD.
Salutation	string	The size of the household this person is a part of.
WebUrl	string	The web URL of contact point.

Customer Contact Responsibility

The role or responsibility of an organization contact.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}OrganizationContactRole

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Customer Contact Profile*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*

Relationship Type	Object or Service
Handled by	*Sales Account Service*

Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgContactId	long	The organization contact identifier. Foreign key to the HZ_ORG_CONTACTS table.

Name	Type	Description
OrgContactRoleId	long	The unique contact role identifier. It is primary key and system generated. • Primary Key
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PrimaryContactPerRoleType	string	Indicates if the contact is the primary contact for the role. Y stands for primary contact and N stands for a contact that is not the primary contact for the role type. The default value is N.
PrimaryFlag	boolean	Indicator that specifies if this is the primary role for the contact. Y stands for primary role and N stands for a non-primary role for the contact. The default value is N.
RequestId	long	A system-generated read-only attribute used by the application framework.
RoleLevel	string	The role level of the contact. For example, executive, department head, or middle manager.
RoleType	string	The role performed by a contact.
Status	string	The status of the record.

Education

The trading community person's education information. For example, a person may have attended the University of California from 1995 to 1999 and received an undergraduate degree in Computer Science with a GPA of 4.0.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}Education

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CourseMajor	string	The primary area of study.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DegreeReceived	string	The abbreviation for the degree. For example, BA, BSc, MBA, MSc, PhD, and Gd (graduate diploma).
EducationId	long	The unique identifier of the education record. • Primary Key
LastDateAttended	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The year and month when a person last attended the educational institution.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
PartyId	long	The unique identifier of the contact party.
RequestId	long	A system-generated read-only attribute used by the application framework.
SchoolAttendedName	string	The name of the school.
SchoolPartyId	long	The party identifier of the school.
StartDateAttended	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the attendance of a person starts.
Status	string	The status of the record.
TypeOfSchool	string	The classification of the educational organization. For example, high school, college, university, or professional school. Note that the classification of schools varies among different cultures.

Electronic Data Interchange

The electronic data interchange information associated with a trading community member. For example, the details of standard codes and payment methods that are to be used for data interchange.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Edi

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Organization Details*

Relationship Type	Object or Service
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EDIEceTpLocationCode	string	The trading partner location code for EDI Gateway.

Name	Type	Description
EDIIdNumber	string	The EDI trading partner number for the supplier site.
EDIPaymentFormat	string	Indicates type of information being transmitted with the funds if using EDI_PAYMENT_ METHOD ACH. The list of accepted values are CCD, CCP, CHZ, CTX, PPD, and PPP.
EDIPaymentMethod	string	Indicates how a payment is to be made through EDI. The list of accepted values are ACH and BOP.
EDIRemittanceInstruction	string	Indicates who will send the remittance advice. The list of accepted values are Banks or Payables systems.
EDIRemittanceMethod	string	Indicates how remittance advice are sent to the supplier.
EDITpHeaderId	long	The unique identifier of the EDI transaction header.
EDITransactionHandling	string	The ANSI standard code for EDI transaction type.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/ types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary EDI of the associated object. If the value is True, then this is the primary EDI. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Electronic File Transfer

The electronic funds transfer information of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Eft

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EFTPrintingProgramId	long	The printing program identifier.
EFTSWIFTCode	string	The EFT swift code information.
EFTTransmissionProgramId	long	The transmission program identifier.
EFTUserNumber	string	The number that identifies you as a user of electronic funds transfer service for your bank or clearing organization.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

E-Mail

The e-mail address associated with a trading community member. For example, john.doe@oracle.com.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Email

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*

Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmailAddress	string	The email address associated with the record.
EmailFormat	string	The preferred format for e-mail addressed to this address such as HTML or ASCII. A list of accepted values is defined using the lookup EMAIL_FORMAT.

Name	Type	Description
EmailInformation	*Trading Community Contact Point Additional Information*	The additional information about the e-mail.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary e-mail of the associated object. If the value is True, then this is the primary e-mail. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact

Name	Type	Description
		point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

E-Mail Domain

The domain of the e-mail address associated with a trading community member. For example, ABC Corporation has CORP and BUSINESS e-mail domains.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}EmailDomain

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*

Relationship Type	Object or Service
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DomainName	string	The actual or non-reversed domain name of the organization for display purpose.
EmailDomainId	long	The sequence generated unique identifier. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
PartyId	long	The unique identifier of the contact party.
Status	string	The status of the record.
TransposedDomain	string	The reversed domain name for the purposes of searching.

Employment History

The employment history information of a trading community member. For example, John Doe was a Vice President at Business World from 2001 to 2007 and President at World of Business from 2007 to 2009.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}EmploymentHistory

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Work Class*
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BeginDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the employment officially began.
Branch	string	The military branch code.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmployedAsTitle	string	Job position title assigned by an employer.
EmployedAsTitleCode	string	The code for the job title. If title cannot be represented by a code, then the EMPLOYED_AS_TITLE column must be used.
EmployedByDivisionName	string	The common name of a division or an organization at which the person was employed.
EmployedByNameCompany	string	The name of the organization at which the person was employed. Note that the name must not include the division name.
EmployedByPartyId	long	The party identifier of the employer for situations in which the employer is represented as a party.
EmploymentHistoryId	long	The unique employment history identifier. • Primary Key
EmploymentTypeCode	string	Indicates whether the employment is part-time or full-time.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FacultyPositionFlag	boolean	Indicator Y or N to specify whether the position is a faculty position or not.
FractionOfTenure	decimal	The fraction of tenure.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MilitaryRank	string	The rank of the person in the branch.
PartyId	long	The unique identifier of the contact party.
ReasonForLeaving	string	The free format text that describes the reason for leaving.
RequestId	long	A system-generated read-only attribute used by the application framework.
Responsibility	string	Job responsibility of the person.
Served	string	Indicates where the person performed military service.
Station	string	Indicates the station name.
Status	string	The status of the record.
SupervisorName	string	The full name of the manager of the person.
TenureCode	string	The type of tenure for faculty positions.
WeeklyWorkHours	decimal	The usual number of hours worked per week.
WorkClass	*Work Class*	The custom-defined classification information about job title and work experience of a person.

Expertise

The expertise of a partner.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerExpertise

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extends	*Partner Generic List of Values*
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ExpertiseCode	string	The expertise code of the partner expertise.
ExpertiseName	string	The expertise name of the partner expertise.

Partner Generic List of Values

The generic list of multiple values used for certifications and expertise.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerProfileMultivalueLov

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Partner Certification*
Extended by	*Expertise*

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
LookupCode	string	The value from a multi-value list of values category that applies to the profile.
LookupType	string	The list of values code that defines the category to which the list of values belong. This value indicates the profile field to which the value belongs.
PartnerMultivalLovId	long	The unique identifier of the list of values code selected for a specific multi-value field in the partner profile. • Primary Key

Name	Type	Description
PartyId	long	The unique identifier of the contact party.

Financial Number

The financial report numbers of a trading community member, such as assets, liabilities, and cash balance.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}FinancialNumber

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Financial Report*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
FinancialNumber	decimal	The value for the financial number. For example, the FINANCIAL_NUMBER_NAME column could have a numerical value of 3,000,000,000 for annual sales.
FinancialNumberCurrency	string	The ISO currency code for the financial number.
FinancialNumberId	long	The unique identifier of the financial number. • Primary Key
FinancialNumberName	string	A text field that lets you assign a descriptive name to a financial report item. For example, gross annual sales, profit, and net annual sales. A user-defined lookup.
FinancialReportId	long	The unique identifier of the financial report.
FinancialUnitsApplied	decimal	The order of magnitude (tens, hundreds, thousands, and so on) used for the FINANCIAL_NUMBER column.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ProjectedActualCode	string	Indicates if the projected amount is projected or actual. The list of accepted values are P and A. The default value is A.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Financial Profile

The financial details of a trading community member, such as bank account information that was obtained as part of a credit evaluation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}FinancialProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessAuthorityDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when access to the information in the account was granted.
AccessAuthorityGranted	string	Indicates whether access to information in a financial account was granted. If the value is True, then the access has been granted.
BalanceAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The reported balance on an account. The balance can be a positive number, negative number, or zero.
BalanceVerifiedOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the account balance was verified.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
FinancialAccountNumber	string	The alternate unique identifier of the financial account.
FinancialAccountType	string	The short name that classifies the financial accounts. For example, savings, checking, home loan, personal loan, trading, and so on.
FinancialOrgType	string	The classification of financial organizations. For example, bank, savings and loan, private lender, building society and so on.
FinancialOrganizationName	string	The name of the financial organization that holds the account.
FinancialProfileId	long	The unique identifier of the party's financial profile. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the

Name	Type	Description
		start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Financial Report

The financial report information of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}FinancialReport

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Financial Number*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*

Relationship Type	Object or Service
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AuditInd	string	Indicates if the financial reports are audited. If the value is True, then the financial reports have been audited.
ConsolidatedInd	string	Indicates if the financial reports are consolidated. If the value is C, then the reports are consolidated.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DateReportIssued	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the financial report was published.
DocumentReference	string	The unique reference number such as passport number or naturalization reference number associated with DOCUMENT_TYPE.
EstimatedInd	string	Indicates whether the financial reports provide estimated data. If the value is True, then the financial reports provide the data.
FinalInd	string	Indicates whether the financial reports are the final closing statements for a business that has ceased operations. If the value is True, then the reports are final closing statements.
FinancialNumber	*Financial Number*	The number that indicates a financial value like annual sales.
FinancialReportId	long	The unique identifier for a financial report. • Primary Key

Name	Type	Description
FiscalInd	string	Indicates whether the financial reports cover a fiscal twelve-month accounting period. If the value is Y, then the financial report covers a twelve-month fiscal period.
ForecastInd	string	Indicates whether the financial reports display forecasts or future projections. If the value is Y, then the financial report displays forecasts.
IssuedPeriod	string	The period covered by the financial report. For example, fiscal year 1999, 1998, and so on.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OpeningInd	string	Indicates whether the financial reports are the opening statements for a business. If the value is Y, then the financial statements are opening statements.
PartyId	long	The unique identifier of the contact party.
ProformaInd	string	Indicates if the financial reports are pro forma numbers. If the value is Y, then the financial reports are pro forma numbers.
QualifiedInd	string	Indicates whether the financial reports include qualifying remarks from auditors about the fairness and accuracy of the numbers. If the value is Y, then the report is qualified by auditors.
ReportEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The end date of the report, used instead of Issued Period.
ReportStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The start date of the report, used instead of Issued Period.
RequestId	long	A system-generated read-only attribute used by the application framework.
RequiringAuthority	string	The name of the primary organization that requires this financial report. For example,

Name	Type	Description
		auditors, the Federal Trade Commission, or the Internal Revenue Service.
RestatedInd	string	Indicates whether the financial reports include data that was corrected after the original financial reports. If the value is Y, then the report has been corrected.
SignedByPrincipalsInd	string	Indicates whether the financial reports were signed by the principals of the organization. If the value is Y, then the reports are signed.
Status	string	The status of the record.
TrialBalanceInd	string	Indicates whether the financial reports include trial balance numbers. If the value is Y, then the financial report includes trial balance numbers.
TypeOfFinancialReport	string	A name for the financial report. For example, 10K report, Annual Report, or Shareholder's Special Report.
UnbalancedInd	string	Indicates whether the financial reports include balance sheet accounts that do not balance. If the value is Y, then report includes unbalanced balance sheet accounts.
WhUdpateId	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the record was entered or changed in a data warehouse.

Industries Served

The industries in which a partner operates.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerIndustryServed

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extends	*Partner Dimension Member*
Contained by	*Partner*

Relationship Type	Object or Service
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ClassificationCategory	string	The classification category of the industry served.
ClassificationCode	string	The classification code of the industry served.
ClassificationName	string	The classification name of the industry served.

Partner Dimension Member

A generic list of multiple values used for territory dimensions.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerDimensionMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Industries Served*
Extended by	*Focus Areas*
Contained by	*Partner*
Handled by	*Deal Registration Service*

Relationship Type	Object or Service
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributePk1	string	This is the ATTRIBUTE PK1 column.
AttributePk2	string	This is the ATTRIBUTE PK1 column.
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DimSubtypeCode	string	A specific type of item within the dimension code. For example, for the products dimension, product items and product categories are there.
DimensionCode	string	The dimension of the item being stored. For example, geography.
DimensionMemberName	string	The name of the dimension member.
DimensionMemberNameBackup	string	The name of the dimension member to which this record refers to. This is stored in case the dimension member was removed and the user still requires the name of the item that was removed.
IntegrationId	string	The reference to the actual dimension member item.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.

Name	Type	Description
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OwnerId	long	The unique identifier of the entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
OwnerType	string	The type of entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
PartitionTypeCode	string	The type of partition in which the data is stored.
PartnerDimMembersId	long	This column is the private key of the table. • Primary Key
TerrDimMemberId	long	The key data for the territory dimension.
TerrDimPartitionId	long	The primary key.
TypeCode	string	The type of the partition.

Instant Messaging

The instant messaging information of a trading community member, such as the AOL identifier or Yahoo Messenger information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}InstantMessaging

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*

Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
InstantMessagingAddress	string	The instant messaging information address.
InstantMessagingInformation	*Trading Community Contact Point Additional Information*	The instant messaging information related to the record.
InstantMessengerType	string	The type of the instant messenger type.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary instant messaging Id of the associated object. If the value is True, then this is the primary instant messaging Id. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Location Details

The details about a geographical or physical location. For example, 500 Oracle Parkway, Redwood Shores, CA 94065.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/locationService/}Location

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Location Profile Additional Information*
Contains	*Location Locale*
Contains	*Source System Reference*
Contains	*Location Profile*
Handled by	*Trading Community Location*
Handled by	*Company and User Registration*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AddrElementAttribute1	string	The additional address element to support flexible address format.
AddrElementAttribute2	string	The additional address element to support flexible address format.
AddrElementAttribute3	string	The additional address element to support flexible address format.
AddrElementAttribute4	string	The additional address element to support flexible address format.

Name	Type	Description
AddrElementAttribute5	string	The additional address element to support flexible address format.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AddressEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address becomes effective.
AddressExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address is no longer active.
AddressLinesPhonetic	string	The phonetic or kana representation of the Kanji address lines (used in Japan).
AddressStyle	string	The context value for Flexible Address Format descriptive flex field. Do not use this column, join to the FND_TERRITORIES table via COUNTRY = TERRITORY_CODE to retrieve the address style for the country.
Building	string	The specific building name or number at a given address.
City	string	The name of the city.
CliiCode	string	Common Language Location Identifier (CLLI) code.
Comments	string	The comments for the record.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DateValidated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address was last validated.
Description	string	The free text description of the record.
Distance	decimal	The distance from the input location.
DoNotValidateFlag	boolean	Indicates that a particular location should not validated, regardless of the current validation status code. If the value is Yes, then the location is not validated. The default is No.
EffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the location becomes valid.
FaLocationId	long	Foreign key to the FA_LOCATIONS table.
FloorNumber	string	The floor number of the address.
GeometryStatusCode	string	The spatial data integration status for given location.
HouseType	string	Indicates the building type for the building in the address. A list of valid values are defined in the lookup HZ_HOUSE_TYPE.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
Language	string	The language used in the location.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Latitude	decimal	The latitude information for the address. The latitude information for the location is used for spatial proximity and containment purposes.

Name	Type	Description
LocationDirections	string	The directions to the address location.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table. • Primary Key
LocationInformation	*Trading Community Location Profile Additional Information*	The detailed information about the location.
LocationLocale	*Location Locale*	The location or address information in the local language.
LocationProfile	*Location Profile*	The profile information of the location.
Longitude	decimal	The longitude information for the address. The longitude information for the location is used for spatial proximity and containment purposes.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
Position	string	The primary direction such as North or East that is used to access the location.
PostalCode	string	The postal code element of the address.
PostalPlus4Code	string	The four-digit extension to the United States Postal ZIP code for the address.
Province	string	The name of the province.
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
SalesTaxGeocode	string	The US Sales Tax Jurisdiction code. This provides a Jurisdiction Code (also called as Geocode) defined by either Vertex or Taxware. This value is passed as a ship-to location jurisdiction code to the tax partner API.
SalesTaxInsideCityLimits	string	Indicates if the location is inside the boundary of a city. Used to calculate state and local taxes in the United States. If the value is 1, then the location is within city limits.
ShortDescription	string	The short description of the location.
State	string	The name of the state.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
TimezoneCode	string	The code of the time zone for the location.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
ValidationStatusCode	string	A standardized status code describing the results of the validation. The value is internally set by system during address cleansing.

Location Locale

The details about a location or address in the local language.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/locationService/}LocationLocale

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Location Details*
Handled by	*Trading Community Location*

Relationship Type	Object or Service
Handled by	*Company and User Registration*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AddrElementAttribute1	string	The additional address element to support flexible address format.
AddrElementAttribute2	string	The additional address element to support flexible address format.
AddrElementAttribute3	string	The additional address element to support flexible address format.
AddrElementAttribute4	string	The additional address element to support flexible address format.
AddrElementAttribute5	string	The additional address element to support flexible address format.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
Building	string	The specific building name or number at a given address in the local language.
City	string	The name of the city.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
FloorNumber	string	The floor number of the address in the local language.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PostalCode	string	The postal code element of the address.
PostalPlus4Code	string	The four-digit extension to the United States Postal ZIP code for the address.
Province	string	The name of the province.
State	string	The name of the state.
TransliterationLang	string	The language used to define the address elements of the location. The list of accepted values are defined in the FND_LANGUAGES.LANGUAGE_COD lookup.

Location Profile

The profile information of a location.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/locationService/}LocationProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Location Details*
Handled by	*Trading Community Location*
Handled by	*Company and User Registration*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AddrElementAttribute1	string	The additional address element to support flexible address format.
AddrElementAttribute2	string	The additional address element to support flexible address format.
AddrElementAttribute3	string	The additional address element to support flexible address format.
AddrElementAttribute4	string	The additional address element to support flexible address format.
AddrElementAttribute5	string	The additional address element to support flexible address format.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
Building	string	The specific building name or number at a given address.
City	string	The name of the city.
Country	string	The name of the country.

Name	Type	Description
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DateValidated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address was last validated.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveLatestChange	string	Indicates whether the row has the latest change in the day. If the value is True, then this row has the latest change in the day.
EffectiveSequence	int	The order of the different changes made during the day. The lowest value represents the earliest change in the day.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
FloorNumber	string	The floor number of the address.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
LocationProfileId	long	The unique Identifier for a location profile. • Primary Key
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
PostalCode	string	The postal code element of the address.
Province	string	The name of the province.
RequestId	long	A system-generated read-only attribute used by the application framework.
State	string	The name of the state.
ValidationSstFlag	boolean	Indicates if the location information has been validated. If the value is Y, then the location has been validated.
ValidationStatusCode	string	A standardized status code describing the results of the validation. The value is internally set by system during address cleansing.

Partner

The set of partner profile attributes used to provide values while creating or changing a partner account.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}Partner

Logical Business Objects

- CRM : Partner Management : Partner

Relationships

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountDirectorId	long	The unique identifier of a valid employee resource who owns and manages the partner sales account.
Address1	string	The first line of the address.
AnalysisFy	string	The fiscal year that the financial information is based on.
AnnualRevenue	decimal	The partner's annual revenue. This field is maintained by the channel manager and partner administrator.
Auxiliary1ClassCode	string	The auxiliary Class Code 1 for a classification.
Auxiliary1CodeAssignmentId	long	The unique identifier of the assignment of the auxiliary Class Code 1.
Auxiliary1EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 1 is no longer active.
Auxiliary1StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 1 becomes effective.
Auxiliary2ClassCode	string	The auxiliary Class Code 2 for a classification.
Auxiliary2CodeAssignmentId	long	The unique identifier of the assignment of the auxiliary Class Code 2.
Auxiliary2EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 2 is no longer active.
Auxiliary2StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 2 becomes effective.
Auxiliary3ClassCode	string	The auxiliary Class Code 3 for a classification.
Auxiliary3CodeAssignmentId	long	The unique identifier of the assignment of the auxiliary Class Code 3.
Auxiliary3EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 3 is no longer active.

Name	Type	Description
Auxiliary3StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the auxiliary Class Code 3 becomes effective.
BusinessScope	string	The physical class of business in which a business participates. For example, local, national, or international.
CeoName	string	The name of the chief executive officer. It is the denormalized value of the CEO_NAME in HZ_ORGANIZATION_PROFILES.
CeoTitle	string	The formal title of the chief executive officer.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
City	string	The name of the city.
ClassificationTypes	*Classification Assignment*	The classification type of a partner.
CompanyNumber	string	The partner's company number that is an alternate unique identifier of the partner. This value is maintained by the channel manager and partner administrator.
ComplianceReviewedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the compliance review for the partner was last completed.
ComplianceStatus	string	Indicates whether the partner is compliant with vendor's criteria such as certifications, training, and so on. If the value is True, then the partner is compliant.
ControlYr	decimal	The year when current ownership gained control of the organization.
CorpCurrencyCode	string	Corporate currency
Country	string	The name of the country.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyCode	string	Currency
CurrentFyPotentialRevenue	decimal	The estimated revenues that can be earned by the organization during its current fiscal year.
DUNSNumber	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DbRating	string	The Dun & Bradstreet credit rating.
Description	string	The free text description of the record.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
EligibleForPublicProfile	string	Indicates whether the partner is eligible to publish their public profile. If the value is True, then the partner can publish their public profile.
Email	*E-Mail*	The email address associated with the record.
EmployeesTotal	decimal	The total number of employees.
ExportInd	string	Indicates whether the organization is an exporter. If the value is Y, then the organization is an exporter. The default value is N.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
FormattedAddress	string	The formatted address information.
FormattedPhoneNumber	string	The formatted phone number.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an

Name	Type	Description
		account, then the value of this attribute is set to null.
GeoNameReferenceId	long	The unique name reference identifier.
GeographyId	long	The geography ID for the geography served by the partner.
HomeCountry	string	The home country associated with the party.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
IncorpYear	int	The year that the business was formally incorporated.
IndustryClassCode	string	The Industry classification code. The classification codes are defined for every classification category as specified in IndustryCodeType attribute.
IndustryCodeAssignmentId	long	The unique identifier of the assignment of an industrial classification code.
IndustryCodeEndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the industry class code is no longer valid.
IndustryCodeStartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the industry class code applies to the industry.
IsSelfRegisteredPartner	string	Indicates whether the partner registered through the self-service user interface.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LastTerritoryAssignedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the territory was last assigned.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
LegalStatus	string	The legal structure of the organization such as partnership, corporation, and so on.
LineOfBusiness	string	The type of business activities performed at this site.
Location	string	The location information of the partner.
LockTerritoryAssignment	string	Indicates if the automatic territory assignment can be set. If the value is True, then the automatic territory assignment cannot remove the sales account team resource. The default value is False.
MinorityOwnedInd	string	Indicates whether the organization is primarily owned by ethnic or racial minorities. If the value is Y, then the organization is owned by ethnic or racial minorities. The default value is N.
MinorityOwnedType	string	The type of minority-owned firm.
NextFyPotentialRevenue	decimal	The estimated revenues that can be earned by the organization during its next fiscal year.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OpportunitiesWonPriorYear	decimal	Opportunities that the partner sales representatives closed and won in the prior fiscal year.
OpportunitiesWonYTD	decimal	Opportunities that the partner sales representatives closed and won in the current fiscal year-to-date.
OrgTypeClassCode	string	The classification code for the organization type.
OrgTypeCodeAssignmentId	long	The unique identifier of the assignment of an industrial classification code to an organization type.
OrgTypeCodeEndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the organization type class code is no longer valid.

Name	Type	Description
OrgTypeCodeStartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the class code applies to the organization type.
OrganizationName	string	The name of the party when the party type is Organization.
OrganizationProfileId	long	The unique identifier of the organization profile.
OrganizationSize	string	The size of the organization based on its revenue, number of employees, and so on.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OrigSystemReferenceId	long	The unique identifier for original system reference.
OwnerName	string	The name of a valid employee resource that owns and manages the partner account.
OwnerPersonPartyId	long	The unique identifier of a valid employee resource who owns and manages the partner account.
ParentPartnerPartyId	long	A foreign key reference to the TCA party records that represents the Partner's parent company.
ParentPartnerPartyNumber	string	Candidate for public surrogate key field and serves as a user-entered identifier for the Partner's Parent company.
ParentPk1Value	string	Attribute Deprecated, use Attribute ParentPartnerPartyId instead
PartnerAccountId	long	The unique identifier of the partner account resource team member.
PartnerAccountResourceToAccountP	*Partner Account Team*	The list of account resources for the partner account.
PartnerCertificationP	*Partner Certification*	The list of certifications for partner.
PartnerDimensionMemberPVO	*Partner Dimension Member*	The list of dimension members for the partner.

Name	Type	Description
PartnerEmailPVO	*Partner E-Mail*	The list of e-mails for the partner.
PartnerExpertise	*Expertise*	The list of expertise for the partner.
PartnerFaxPVO	*Partner Phone*	The list of fax for the partner.
PartnerGeography	*Geographies Served*	The list of geographies served by the partner.
PartnerIndustry	*Industries Served*	The list of industries served by the partner.
PartnerLevel	string	The relative tier of the partner.
PartnerMember	*Partner Members*	The list of members for a partner.
PartnerMemberPVO	*Partner Public Contact*	The public contact information of the partner.
PartnerPhonePVO	*Partner Phone*	The list of phones of the partner.
PartnerProductSpeciality	*Focus Areas*	The list of product specialties of the partner.
PartnerProfileMultivalueLovP	*Partner Generic List of Values*	The list of partner profile values for the partner.
PartnerSummary	string	The description of the partner company.
PartnerTypeDimensionMemberP	*Partner Type*	The list of partner type dimensions for the partner.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartySite	*Address*	The party site associated with the partner.
Phone	*Phone*	The phone information for the entity.
PostalCode	string	The postal code element of the address.

Name	Type	Description
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PrefferedContactId	long	The unique identifier of the preferred contact person for the partner.
PrefferedContactName	string	The name of the preferred contact person for the partner.
PrimaryPhoneContactPointId	long	The unique identifier of the primary phone contact point.
PrimaryURLContactPointId	long	The unique identifier of the primary URL contact point.
PrincipalName	string	The Name of the highest ranking person in the company.
PrincipalTitle	string	The title of the highest ranking person in the organization.
ProfileObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
Province	string	The name of the province.
PublicAddressId	long	The partner company address displayed in Partner Finder.
PublicContactId	long	The partner contact name displayed in Partner Finder.
PublicEmailId	long	The e-mail displayed in Partner Finder.
PublicFaxId	long	The fax number displayed in in Partner Finder.
PublicPhoneId	long	The phone displayed in Partner Finder.

Name	Type	Description
PublicPrivateOwnershipFlag	boolean	Indicates whether the organization is publically or privately owned. If the value is Y, then the organization is a privately owned organization. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
PublicStatus	string	Status of approval of public profile.
RangeEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The end date in the import range.
RangeStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The start date in the import range.
ReassignTerritory	string	Indicates whether this partner needs territory reassignment.
RegistrationType	string	Indicates the registration type of the partner.
SmallBusInd	string	Indicates whether the organization is considered as a small business. If the value is Y, then the organization is considered as a small business. The default value is N.
SolutionOverview	string	The overview description of partner solutions.
State	string	The name of the state.
Status	string	The status of the record.
StockSymbol	string	The corporate stock symbol of the organization as listed in stock exchanges.
Synergy	string	The description of the value of the partnership between the Vendor and Partner.
TierId	long	The unique identifier for a tier to which a partner applies.
TotalEmployeesInd	string	Indicates if subsidiaries are included in the calculation of total employees. The accepted values are defined in the lookup type TOTAL_EMPLOYEES_INDICATOR.
TotalEmployeesText	string	The total number of employees in text format.

Name	Type	Description
TreeCode	string	The unique code of the partner organization tree.
TreeStructureCode	string	The unique code for the partner organization tree structure.
URL	string	The destination URL associated with a specific Google AdWords ad.
UniqueNameSuffix	string	The suffix used to generate the attribute PartyUniqueName. The suffix is concatenated to the Organization Name attribute to generate the PartyUniqueName. The primary address is defaulted as the suffix.
Web	*Web*	The web information related to the record.
YearEstablished	int	The year when the organization began doing business.

Partner Account Team

The person assigned to a partner account team.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerAccountResource

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevelCode	string	The type of access granted to the resource as well as managers of the organizations.
AssignmentTypeCode	string	The code indicating how the resource is assigned to the sales account team.
CreatedBy	string	Who column: indicates the date and time of the creation of the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who created the row.
EmailAddress	string	The email address associated with the record.
FormattedPhoneNumber	string	The formatted phone number.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the user who last updated the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
MemberFunctionCode	string	The code indicating the role of a sales team member in the resource team such as Integrator, Executive Sponsor, and Technical Account Manager. A list of accepted values is defined in the lookup FND_LOOKUPS.
OrganizationName	string	The name of the party when the party type is Organization.
OrganizationRole	string	The role of the partner in the organization.
PartnerAccountId	long	The unique identifier of the partner account resource team.
PartnerAccountResourceId	long	The unique identifier of the member of the partner account resource team. • Primary Key

Name	Type	Description
PartnerPartyId	long	The PartyId of Partner whose Account Team includes this resource.
ResourceId	long	The unique identifier of the resource.
ResourceName	string	The name of the resource associated with the partner account team.
TerritoryName	string	The name of the territory for the partner account.

Partner Certification

The list of certifications that a partner has achieved.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerCertification

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extends	*Partner Generic List of Values*
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CertificationCode	string	The code for the certification.
CertificationName	string	The name of this certification.
LookupCode1	string	The key information for the certification.
LookupType1	string	The key information for the certification.
Meaning	string	The name of this certification.

Partner Generic List of Values

The generic list of multiple values used for certifications and expertise.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerProfileMultivalueLov

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Partner Certification*
Extended by	*Expertise*
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
LookupCode	string	The value from a multi-value list of values category that applies to the profile.
LookupType	string	The list of values code that defines the category to which the list of values belong. This value indicates the profile field to which the value belongs.
PartnerMultivalLovId	long	The unique identifier of the list of values code selected for a specific multi-value field in the partner profile. • Primary Key
PartyId	long	The unique identifier of the contact party.

Partner Dimension Member

A generic list of multiple values used for territory dimensions.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerDimensionMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Industries Served*

Relationship Type	Object or Service
Extended by	*Focus Areas*
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributePk1	string	This is the ATTRIBUTE PK1 column.
AttributePk2	string	This is the ATTRIBUTE PK1 column.
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DimSubtypeCode	string	A specific type of item within the dimension code. For example, for the products dimension, product items and product categories are there.
DimensionCode	string	The dimension of the item being stored. For example, geography.
DimensionMemberName	string	The name of the dimension member.
DimensionMemberNameBackup	string	The name of the dimension member to which this record refers to. This is stored in case the dimension member was removed and the user still requires the name of the item that was removed.

Name	Type	Description
IntegrationId	string	The reference to the actual dimension member item.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OwnerId	long	The unique identifier of the entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
OwnerType	string	The type of entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
PartitionTypeCode	string	The type of partition in which the data is stored.
PartnerDimMembersId	long	This column is the private key of the table. • Primary Key
TerrDimMemberId	long	The key data for the territory dimension.
TerrDimPartitionId	long	The primary key.
TypeCode	string	The type of the partition.

Partner E-Mail

The e-mail address of the partner.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerPublicEmail

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActualContentSource	string	The information regarding the source of the contact point.
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPointValue	string	The key information for the contact point.
CreatedByModule	string	The module that created the record.
EmailAddress	string	The email address associated with the record.
EmailFormat	string	The information on how to interpret the e-mail address.

Name	Type	Description
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
OrigSystemReference	string	The identifier for the record from the original system.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
Primary2Flag	boolean	Indicator to specify that the contact point is the primary point of contact.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
RelationshipId	long	The relationship identifier for the record.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Focus Areas

The focus areas or product specialties of the partner.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerProductSpeciality

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extends	*Partner Dimension Member*
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ProductId	string	The unique identifier of the product for product specialties.
ProductName	string	The name of the product for product specialties.

Partner Dimension Member

A generic list of multiple values used for territory dimensions.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerDimensionMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributePk1	string	This is the ATTRIBUTE PK1 column.
AttributePk2	string	This is the ATTRIBUTE PK1 column.
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DimSubtypeCode	string	A specific type of item within the dimension code. For example, for the products dimension, product items and product categories are there.
DimensionCode	string	The dimension of the item being stored. For example, geography.
DimensionMemberName	string	The name of the dimension member.
DimensionMemberNameBackup	string	The name of the dimension member to which this record refers to. This is stored in case the dimension member was removed and the user still requires the name of the item that was removed.
IntegrationId	string	The reference to the actual dimension member item.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.

Name	Type	Description
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OwnerId	long	The unique identifier of the entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
OwnerType	string	The type of entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
PartitionTypeCode	string	The type of partition in which the data is stored.
PartnerDimMembersId	long	This column is the private key of the table. • Primary Key
TerrDimMemberId	long	The key data for the territory dimension.
TerrDimPartitionId	long	The primary key.
TypeCode	string	The type of the partition.

Partner Generic List of Values

The generic list of multiple values used for certifications and expertise.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerProfileMultivalueLov

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*Partner Certification*

Relationship Type	Object or Service
Extended by	*Expertise*
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
LookupCode	string	The value from a multi-value list of values category that applies to the profile.
LookupType	string	The list of values code that defines the category to which the list of values belong. This value indicates the profile field to which the value belongs.

Name	Type	Description
PartnerMultivalLovId	long	The unique identifier of the list of values code selected for a specific multi-value field in the partner profile. • Primary Key
PartyId	long	The unique identifier of the contact party.

Geographies Served

The geographies in which a partner operates.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerGeographyServed

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributePk1	string	This is the ATTRIBUTE PK1 column.
AttributePk2	string	This is the ATTRIBUTE PK1 column.
CreatedBy	string	Who column: indicates the user who created the row.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DimSubtypeCode	string	A specific type of item within the dimension code. For example, for the products dimension there could be product items and product categories.
DimensionCode	string	The dimension of the item being stored. For example, geography.
DimensionMemberName	string	Name of dimension member.
DimensionMemberNameBackup	string	The name of the dimension remember this record refers to. This is stored in case the dimension member was removed and the user still needs to know the name of the item that was removed.
GeographyId	string	The geography ID of the geography served.
GeographyName	string	The geography name of the geography served.
IntegrationId	string	The reference to the actual dimension member item.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
OwnerId	long	The identifier of the entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.

Name	Type	Description
OwnerType	string	The type of entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.
PartitionTypeCode	string	The type of partition in which the data is stored.
PartnerDimMembersId	long	This column is the private key of this table. • Primary Key
TerrDimMemberId	long	Key data for the territory dimension.
TerrDimPartitionId	long	Primary key.
TypeCode	string	Type of the partition.

Partner Members

The partner members for a partner.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalPartyId	*Additional Identifier*	The additional identifier associated with the organization or person.
AdditionalPersonName	*Additional Contact Name*	The additional name of the person.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
CategoryCode	string	The code of the category to which the person belongs. A list of accepted values is defined in the lookup type CUSTOMER_CATEGORY.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
Certification	*Certification*	The certification information for the person.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
Citizenship	*Citizenship*	The citizenship information of a person.
City	string	The name of the city.
CodeAssignment	*Classification Assignment*	The classification code assigned to the person.
Comments	string	The comments for the record.

Name	Type	Description
ContactPreference	*Contact Preference*	The contact preference associated with the record.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRating	*Credit Rating*	The credit rating of the person.
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was born.
Education	*Education*	The education information of the person.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EmailDomain	*E-Mail Domain*	The domain name of the email address.
EmploymentHistory	*Employment History*	The employment history information of a person.
FinancialProfile	*Financial Profile*	The financial profile information of a person.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
Gender	string	The gender of the person, such as male, female, and unknown. A list of accepted values is defined in the lookup HZ_GENDER.

Name	Type	Description
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LanguageName	string	The standard name for the language.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaritalStatus	string	The marital status of the person. A list of accepted values is defined in the lookup MARITAL_STATUS.
MissionStatement	string	The corporate charter of organization in user-defined text format.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.

Name	Type	Description
PartyPreference	*Preference*	The preference mentioned in the person details.
PartySite	*Contact Address*	The party site associated with the person.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the person.
PersonAcademicTitle	string	The part of the person's title that denotes the academic qualification, such as Dr. Jane Smith.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonInterest	*Contact Interest*	The interest information associated with a person.
PersonLanguage	*Contact Language*	The language information associated with a person.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	The prefix for the last name of a person, such as fon, van. For example, if a person's name is Hans Van, the last name of the person is captured using this attribute.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	The place in a family structure. For example, in "Tom Jones III", the "III".
PersonPreNameAdjunct	string	The preferred name adjacency of a resource.

Name	Type	Description
PersonPreviousLastName	string	The previous last name of a person.
PersonProfile	*Contact*	The profile information of the person.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
Phone	*Phone*	The phone information for the entity.
PostalCode	string	The postal code element of the address.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryEmailContactPTId	long	The unique identifier of the primary e-mail.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneContactPTId	long	The unique identifier of the primary phone contact point.

Name	Type	Description
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURLContactPTId	long	The unique identifier of the primary URL contact point.
Province	string	The name of the province.
Relationship	*Relationship*	The relationship information of the person.
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The Standard Industry Classification (SIC) code.
SICCodeType	string	The version of Standard Industry Classification (SIC) code.
Salutation	string	The size of the household this person is a part of.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
SourceSystemUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the source system information was last updated.
State	string	The name of the state.

Name	Type	Description
Status	string	The status of the record.
ThirdPartyFlag	boolean	Indicates whether a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. If the value is Y, then the party is a third party relationship. If Oracle Service is installed, the Third Party field in the Customers window is mandatory.
URL	string	The destination URL associated with a specific Google AdWords ad.
UserGUID	string	The "light weight" user Global Unique Id. Light Weight users defined in the Extended Security (XS) System.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
Web	*Web*	The web information related to the record.

Partner Phone

The phone number for a contact point.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerPublicPhone

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActualContentSource	string	The information regarding the source of the contact point.
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPointValue	string	The key information for the contact point.
CreatedByModule	string	The module that created the record.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FormattedPhoneNumber	string	The formatted phone number.
LastContactDtTime	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The last time when the contact point was contacted.
OrigSystemReference	string	The identifier for the record from the original system.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PagerTypeCode	string	The type of pager for the phone number.
PartyUsageCode	string	The usage context of a party's contact point.
PhoneAreaCode	string	The area code prefix for the phone number.
PhoneCallingCalendar	string	The information on proper calling times.

Name	Type	Description
PhoneCountryCode	string	The country code prefix for the phone number.
PhoneExtension	string	The extension of the phone number.
PhoneLineType	string	The type of phone line.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
RawPhoneNumber	string	The unformatted phone number.
RelationshipId	long	The relationship identifier for the record.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TransposedPhoneNumber	string	The transposed phone number.

Partner Public Contact

The point of contact used for the public profile.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerPublicContact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*

Relationship Type	Object or Service
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AnalysisFy	string	The fiscal year that the financial information is based on.
CategoryCode	string	The user-defined category. The lookup type is CUSTOMER_CATEGORY.
CeoName	string	The name of the chief executive officer. It is the denormalized value of the CEO_NAME in HZ_ORGANIZATION_PROFILES.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
City	string	The name of the city.

Name	Type	Description
Comments1	string	The denormalization of the COMMENTS in HZ_GROUP_PROFILES.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy1	string	The user who created the account record.
CreatedByModule1	string	The module that created the account record.
CreationDate1	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrencyFyPotentialRevenue	decimal	The potential revenue of the organization in this fiscal year.
DUNSNumber	string	DUNS_NUMBER in VARCHAR format. Column value is not restricted to nine digit DUNS number.
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The denormalization of the DATE_OF_BIRTH in HZ_PERSON_PROFILES.
EmailAddress	string	The email address associated with the record.
EmployeesTotal	decimal	The total number of employees.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
FormattedAddress	string	The formatted address of the contact.
FormattedPhoneNumber	string	The formatted phone number.
Gender	string	The denormalization of the GENDER in HZ_PERSON_PROFILES.
GroupType	string	The lookup for the group type.
HQBranchInd	string	The status of the site. Identifies if the location is the headquarters, a branch, or a single location.
HomeCountry	string	The home country associated with the party.

Name	Type	Description
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LanguageName	string	The standard name for a language.
LastUpdateDate1	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin1	string	The login of the user who last updated the record.
LastUpdatedBy1	string	The user who last updated the record.
MaritalStatus	string	The denormalization of the MARITAL_STATUS in HZ_PERSON_PROFILES.
MissionStatement	string	The corporate charter of the organization.
NextFyPotentialRevenue	decimal	The potential revenue of the organization for the next fiscal year.
OrigSystemReference	string	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PersonAcademicTitle	string	An academic title that is part of the name of a person, such as Dr. John Smith.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_

Name	Type	Description
		PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	Used to specify the last name prefix such as fon, van, and so on for a person. It is used in the same way the new field PERSON_LAST_NAME_PREFIX in HZ_PERSON_PROFILES is used. Corresponds to the field Last Name Prefix in HL7.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	Indicates the place in a family structure. For example, in Tom Jones III, III is the suffix.
PersonPreNameAdjunct	string	The salutary introduction such as Mr. or Herr.
PersonPreviousLastName	string	The previous last or surname of the person.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PostalCode	string	The postal code element of the address.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.

Name	Type	Description
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryEmailContactPTId	long	The key to primary e-mail contact point.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneContactPTId	long	The key to the primary contact point.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURLContactPTId	long	The key to the primary URL contact point.
Province	string	The name of the province.
SICCode	string	The standard industry classification (SIC) code.
SICCodeType	string	The version of standard industry classification (SIC) code.
Salutation	string	The phrase used to address a party in any correspondence.
State	string	The name of the state.

Name	Type	Description
Status1	string	The party status indicator.
TradingPartnerIdentifier	string	One column to store the FSIO related trading partner codes. This column stores alpha numeric values. The column also addresses Fed vs. Non-Fed attribute requirement.
URL	string	The destination URL associated with a specific Google AdWords ad.
UserGUID	string	Stores the light weight user Global Unique ID. Light weight users are defined in the Extended Security (XS) system. Foreign key to FND_USER.
YearEstablished	int	The year when the organization began doing business.

Partner Type

The information about the partner type.

QName: {http://xmlns.oracle.com/apps/partnerMgmt/partnerCenter/}PartnerTypeDimensionMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Partner*
Handled by	*Deal Registration Service*
Handled by	*Company and User Registration*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributePk1	string	This is the ATTRIBUTE PK1 column.
AttributePk2	string	This is the ATTRIBUTE PK2 column.
CreatedBy	string	Who column: indicates the user who created the row.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
DimSubtypeCode	string	This attribute is not used.
DimensionCode	string	This will contain the string 'SChnl' to indicate Partner Type.
DimensionMemberName	string	Name of dimension member.
DimensionMemberNameBackup	string	The name of the dimension remember this record refers to. This is stored in case the dimension member was removed and the user still needs to know the name of the item that was removed.
IntegrationId	string	The reference to the actual dimension member item.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the user who last updated the row.
LastUpdateLogin	string	Who column: indicates the date and time of the last update of the row.
LastUpdatedBy	string	Who column: indicates the session login associated to the user who last updated the row.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
OwnerId	long	Partner Party Id of the Partner.
OwnerType	string	The type of entity that owns the relationship with the dimension data. For example, partner profile, partner program, or enrollment.

Name	Type	Description
PartitionTypeCode	string	The type of partition in which the data is stored.
PartnerDimMembersId	long	This column is the private key of this table. • Primary Key
PartnerTypeCode	string	The partner type code for partner.
PartnerTypeName	string	The name of the partner type, such as Value Added Reseller.
TerrDimMemberId	long	Key data for the territory dimension.
TerrDimPartitionId	long	Primary key.
TypeCode	string	Type of the partition.

Phone

The phone number associated with a trading community member. For example, the phone number for Oracle Corporation is 650-506-6000.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Phone

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Marketing Response*

Relationship Type	Object or Service
Contained by	*Partner*
Contained by	*Household*
Contained by	*Contact Address*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FormattedPhoneNumber	string	The formatted phone number.
LastContactDtTime	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date and time of last contact placed to this contact point.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PagerTypeCode	string	The PAGER_TYPE_CODE column stores the lookup code for the type of pager. The type of pager determines how the page is received. For example, tone, number, alphanumeric or two-way alphanumeric.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PhoneAreaCode	string	The area code prefix for the phone number.
PhoneCallingCalendar	string	The name or code for a calling calendar used with this telephone number. This attribute is no longer used in Fusion applications.
PhoneCountryCode	string	The country code prefix for the phone number.
PhoneExtension	string	The additional number addressed after initial connection to an internal telephone system.
PhoneInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community phone.
PhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound, or outbound.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party

Name	Type	Description
		or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RawPhoneNumber	string	The unformatted telephone number.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TimezoneCode	string	The foreign key to FND_TIMEZONES_B.TIMEZONE_CODE.
TransposedPhoneNumber	string	This column stores the concatenation of PHONE_COUNTRY_CODE, PHONE_AREA_CODE, and PHONE_NUMBER in reverse order. For example, if PHONE_COUNTRY_CODE=1, PHONE_AREA_CODE=650 and PHONE_NUMBER=5065747, this column stores 74756050561. This column is used for building an index to search for any combination of the above three columns.

Preference

The preferences of a trading community member. For example, a member may prefer that the transaction currency is the US dollar.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartyPreference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalValue1	string	The additional preference value.
AdditionalValue2	string	The additional preference value.
AdditionalValue3	string	The additional preference value.
AdditionalValue4	string	The additional preference value.
AdditionalValue5	string	The additional preference value.
Category	string	A preference category is used to logically group one or more preference codes in a

Name	Type	Description
		particular user interface. The combination of CATEGORY and PREFERENCE_CODE identifies a preference.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Module	string	The program that creates the preference. For example, TCA MOBILE CUSTOMER DIRECTORY.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PartyPreferenceId	long	The unique identifier of the party preference. • Primary Key
PreferenceCode	string	A preference code determines if a preference is a single value or a multiple value preference. The preference code is validated by the HZ_PREFERENCE lookup. The combination of CATEGORY and PREFERENCE_CODE identifies a preference.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
ValueDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The preference value when the data type is DATE.
ValueName	string	A user-defined alias for a preference value.

Name	Type	Description
ValueNumber	decimal	The preference value when the data type is NUMBER.
ValueVarchar2	string	The preference value when the data type is VARCHAR2.

Relationship

The relationship between two trading community members. For example, John Doe is the spouse of Jane Doe or Michael Smith is a contact of Oracle Corporation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}Relationship

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Phone*
Contains	*Address*
Contains	*Instant Messaging*
Contains	*Web*
Contains	*Usage Assignment*
Contains	*Trading Community Relationship Additional Information*
Contains	*Customer Contact Profile*
Contains	*Source System Reference*
Contains	*Email*
Contained by	*Trading Community Person Details*
Contained by	*Household*

Relationship Type	Object or Service
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*

Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalInformation1	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type. For operating unit and legal entity to bank relationships, column stores communication agreement ID, which identifies agreement between payer and bank on type of EDIFACT documents that can be sent for processing payments.
AdditionalInformation10	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation11	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation12	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.

Name	Type	Description
AdditionalInformation13	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation14	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation15	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation16	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation17	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation18	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation19	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation2	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation20	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation21	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation22	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation23	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.

Name	Type	Description
AdditionalInformation24	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation25	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation26	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation27	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation28	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation29	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation3	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation30	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation4	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation5	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation6	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation7	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.

Name	Type	Description
AdditionalInformation8	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation9	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
Comments	string	The comments for the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DirectionCode	string	The code of the relationship direction. The list of accepted values are defined in the lookup DIRECTION_CODE.
Email	*E-Mail*	The email address associated with the record.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.

Name	Type	Description
LastUpdatedBy	string	The user who last updated the record.
ObjectEmailAddress	string	The e-mail address of the object party in the relationship.
ObjectId	long	The unique identifier of the object party in this relationship.
ObjectPartyName	string	The name of the object party in this relationship.
ObjectTableName	string	The source table name of the object party in this relationship.
ObjectType	string	The object type of the relationship.
ObjectUsageCode	string	The usage code of object party in the relationship.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationContact	*Customer Contact Profile*	The organization contact information.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyName	string	The name of the party.
PartySite	*Address*	The party site associated with the relationship.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the relationship.
PercentageOwnership	decimal	The percentage of the child entity owned by the parent entity.
Phone	*Phone*	The phone information for the entity.
PreferredContactFlag	boolean	Indicates if this contact person is primary contact for the customer.
PrimaryCustomerFlag	boolean	Indicates if this customer is primary customer for the contact.

Name	Type	Description
RelationshipCode	string	The code for a forward or a backward relationship. A list of accepted relationship values is defined in the lookup PARTY_ RELATIONS_TYPE.
RelationshipId	long	The relationship identifier for the record.
RelationshipInformation	*Trading Community Relationship Additional Information*	The relationship type information.
RelationshipRecId	long	The unique identifier of the contact's relationship record. • Primary Key
RelationshipType	string	The relationship type name. For example, CUSTOMER_SUPPLIER. A list of valid relationship types is defined in the lookup HZ_ RELATIONSHIP_TYPE.
RequestId	long	A system-generated read-only attribute used by the application framework.
Role	string	The role between the subject and object party in this relationship.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
SubjectEmailAddress	string	The e-mail address of the subject party in relationship.
SubjectId	long	The unique identifier of the subject in this relationship.
SubjectPartyUsageAssignment	*Usage Assignment*	The usage assignment of the subject party in the relationship.
SubjectTableName	string	The source table of the subject.
SubjectType	string	The subject type of the relationship.
SubjectUsageCode	string	The usage code of subject party in the relationship.

Name	Type	Description
Web	*Web*	The web information related to the record.

Source System Reference

The name of external source system where the trading community information is imported from.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}OriginalSystemReference

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OldOrigSystemReference	string	The old source system reference that is being replaced.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OrigSystemReferenceId	long	The unique identifier for original system reference. • Primary Key
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
SourceSystemRefInformation	*Trading Community Original System Mapping Identifier Additional Information*	The source system reference information.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Telex

The telex number information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Telex

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.

Name	Type	Description
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary telex of the associated object. If the value is True, then this is the primary telex. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TelexNumber	string	The telex reference number (usually a telephone number) of the organization.

Trading Community Address Additional Information

The address information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/partySite/}PartySiteInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contact Address*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*

Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BeginDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date at the start of the date range within which the row is active.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
IntegrationKey	string	The integration key is not used.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PartySiteUseId	long	The unique identifier of the party site used. • Primary Key
PrimaryPerType	string	Indicates if this is the primary use for the site. Y stands for the primary site and N stands for all other sites.
RequestId	long	A system-generated read-only attribute used by the application framework.
SiteUseType	string	The site use type associated with the address.
Status	string	The status of the record.

Trading Community Contact Point Additional Information

The contact point for a trading community member like phone or e-mail. For example 650-506-6000 is the phone number for Oracle Corporation, john.doe@example.com is the e-mail address for John Doe.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/contactPoint/}ContactPointInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*E-Mail*
Contained by	*Instant Messaging*
Contained by	*Phone*

Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalOrganizationName	*Additional Account Name*	The additional name associated with the organization.
AdditionalPartyId	*Additional Identifier*	The additional identifier associated with the organization or person.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AnalysisFy	string	The fiscal year that the financial information is based on.
CategoryCode	string	The code of the category to which the person belongs. A list of accepted values is defined in the lookup type CUSTOMER_CATEGORY.
CeoName	string	The name of the chief executive officer. It is the denormalized value of the CEO_NAME in HZ_ORGANIZATION_PROFILES.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
Certification	*Certification*	The certification information associated with the organization.

Name	Type	Description
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
City	string	The name of the city.
CodeAssignment	*Classification Assignment*	The classification code assigned to the organization.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRating	*Credit Rating*	The credit rating for the organization.
CurrentFiscalYearPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its current fiscal year.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
Edi	*Electronic Data Interchange*	The electronic data interchange information for the organization.
Eft	*Electronic File Transfer*	The electronic file transfer information for the organization.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EmailDomain	*E-Mail Domain*	The domain name of the email address.

Name	Type	Description
EmployeesTotal	decimal	The total number of employees.
FinancialProfile	*Financial Profile*	The financial profile information of the organization.
FinancialReport	*Financial Report*	The financial report information of the organization.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
GroupType	string	The type of the group.
HQBranchIndicator	string	The status of this site, such as HQ, a branch, or a single location. A list of accepted values are defined in the lookup type HQ_BRANCH_IND.
HomeCountry	string	The home country associated with the party.
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LanguageName	string	The standard name for the language.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MissionStatement	string	The corporate charter of organization in user-defined text format.
NextFyPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its next fiscal year.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationProfile	*Account*	The information about the partner organization.
OrganizationSize	string	The size of the organization based on its revenue, number of employees, and so on.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartyPreference	*Preference*	The preference mentioned in the organization details.
PartySite	*Address*	The party site associated with the organization.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.

Name	Type	Description
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the organization.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
Phone	*Phone*	The phone information for the entity.
PostalCode	string	The postal code element of the address.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryEmailContactPointId	long	The unique identifier of the primary e-mail.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneContactPointId	long	The unique identifier of the primary phone contact point.

Name	Type	Description
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURLContactPointId	long	The unique identifier of the primary URL contact point.
PrincipalName	string	The Name of the highest ranking person in the company.
Province	string	The name of the province.
Relationship	*Relationship*	The relationship information of the organization.
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The Standard Industry Classification (SIC) code.
SICCodeType	string	The version of Standard Industry Classification (SIC) code.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
SourceSystemUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the source system information was last updated.
State	string	The name of the state.

Name	Type	Description
Status	string	The status of the record.
Telex	*Telex*	The telex information of the organization.
ThirdPartyFlag	boolean	Indicates whether a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. If the value is Y, then the party is a third party relationship. If Oracle Service is installed, the Third Party field in the Customers window is mandatory.
TradingPartnerIdentifier	string	The FSIO related trading partner codes.
URL	string	The destination URL associated with a specific Google AdWords ad.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
Web	*Web*	The web information related to the record.
YearEstablished	int	The year when the organization began doing business.

Trading Community Organization Profile Additional Information

The additional profile information about an organization, such as the organization type.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/organization/}OrganizationInformation

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalPartyId	*Additional Identifier*	The additional identifier associated with the organization or person.
AdditionalPersonName	*Additional Contact Name*	The additional name of the person.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
CategoryCode	string	The code of the category to which the person belongs. A list of accepted values is defined in the lookup type CUSTOMER_CATEGORY.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
Certification	*Certification*	The certification information for the person.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.

Name	Type	Description
Citizenship	*Citizenship*	The citizenship information of a person.
City	string	The name of the city.
CodeAssignment	*Classification Assignment*	The classification code assigned to the person.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRating	*Credit Rating*	The credit rating of the person.
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was born.
Education	*Education*	The education information of the person.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EmailDomain	*E-Mail Domain*	The domain name of the email address.
EmploymentHistory	*Employment History*	The employment history information of a person.
FinancialProfile	*Financial Profile*	The financial profile information of a person.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the

Name	Type	Description
		organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
Gender	string	The gender of the person, such as male, female, and unknown. A list of accepted values is defined in the lookup HZ_GENDER.
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LanguageName	string	The standard name for the language.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaritalStatus	string	The marital status of the person. A list of accepted values is defined in the lookup MARITAL_STATUS.
MissionStatement	string	The corporate charter of organization in user-defined text format.
OrigSystemReference	string	The identifier for the record from the original system.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartyPreference	*Preference*	The preference mentioned in the person details.
PartySite	*Contact Address*	The party site associated with the person.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the person.
PersonAcademicTitle	string	The part of the person's title that denotes the academic qualification, such as Dr. Jane Smith.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonInterest	*Contact Interest*	The interest information associated with a person.
PersonLanguage	*Contact Language*	The language information associated with a person.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	The prefix for the last name of a person, such as fon, van. For example, if a person's name is Hans Van, the last name of the person is captured using this attribute.

Name	Type	Description
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	The place in a family structure. For example, in "Tom Jones III", the "III".
PersonPreNameAdjunct	string	The preferred name adjacency of a resource.
PersonPreviousLastName	string	The previous last name of a person.
PersonProfile	*Contact*	The profile information of the person.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
Phone	*Phone*	The phone information for the entity.
PostalCode	string	The postal code element of the address.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the

Name	Type	Description
		Profile Name will be used as preferred name. By default the value is NULL.
PrimaryEmailContactPTId	long	The unique identifier of the primary e-mail.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneContactPTId	long	The unique identifier of the primary phone contact point.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURLContactPTId	long	The unique identifier of the primary URL contact point.
Province	string	The name of the province.
Relationship	*Relationship*	The relationship information of the person.
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The Standard Industry Classification (SIC) code.
SICCodeType	string	The version of Standard Industry Classification (SIC) code.
Salutation	string	The size of the household this person is a part of.
SourceSystem	string	The source system name where the record originated.

Name	Type	Description
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
SourceSystemUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the source system information was last updated.
State	string	The name of the state.
Status	string	The status of the record.
ThirdPartyFlag	boolean	Indicates whether a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. If the value is Y, then the party is a third party relationship. If Oracle Service is installed, the Third Party field in the Customers window is mandatory.
URL	string	The destination URL associated with a specific Google AdWords ad.
UserGUID	string	The "light weight" user Global Unique Id. Light Weight users defined in the Extended Security (XS) System.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
Web	*Web*	The web information related to the record.

Trading Community Person Profile Additional Information

The additional information about a trading community person.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/person/}PersonInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contact*

Relationship Type	Object or Service
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Loyalty Member Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
PersonProfileId	long	The unique identifier of the person profile. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Relationship Additional Information

The relationship between two trading community members. For example, John Doe is the spouse of Jane Doe or Michael Smith is a contact of Oracle Corporation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/relationship/}RelationshipInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
RelationshipRecId	long	The unique identifier of the contact's relationship record. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Usage Assignment

The party usage assigned to a trading community member. For example, John Doe is a contact of ABC Corporation and XYZ Corporation is a supplier.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartyUsageAssignment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Trading Community Party Usage Assignment Service*
Handled by	*Trading Community Party Information*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
PartyUsageCode	string	The usage context of a party's contact point.
PartyUsgAssignmentId	long	The unique identifier of the party usage assignment. • Primary Key
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.

Web

The Web information associated with a trading community member. For example, Oracle's address on the Web is www.oracle.com.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Web

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*

Relationship Type	Object or Service
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*

Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N stands for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact

Name	Type	Description
		point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
URL	string	The destination URL associated with a specific Google AdWords ad.
WebInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community Web.
WebType	string	The prefix class to a Web address. Typically, this is either FTP or HTTP.

Work Class

The custom-defined classification of information about a person's job title and work experience.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}WorkClass

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Employment History*
Handled by	*Sales Account Service*

Relationship Type	Object or Service
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmploymentHistoryId	long	The foreign key to the HZ_EMPLOYMENT_HISTORY table.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LevelOfExperience	string	The user-defined rating for the level of experience in the class of work. For example, journeyman, trainee, or exposure.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Name	Type	Description
WorkClassId	long	The unique identifier for the class of work. • Primary Key
WorkClassName	string	The user-determined classification for work. For example, bricklayer, doctor, lawyer, programmer, or minister of health.

Contract Service (Deprecated)

This service is deprecated from Release 11 onwards. Use the version 2 of the service identified by oracle.apps.contracts.coreAuthoring.contractService.ContractService.

Life Cycle Status: Deprecated. This service is deprecated and replaced by .

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/transaction/transactionService/}ContractService

Service WSDL URL: https://servername/fscmService/ContractServiceV1?WSDL

Logical Business Objects

mergeContractInAllStatus

The custom merge operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractHeader	*Contract Deprecated*	The contract header SDOs of all the contracts that would be merged.
targetStatusCode	string	The target status code after the merge operation.
closeDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contract was closed.
closeReasonCode	string	The close reason code of the contract.
cancelReasonCode	string	The reason code for canceling a contract.
versionFlag	boolean	The flag that denotes whether a new version of the contract would be created for the merge operation.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the merge operation that also includes the warning or information message.

deleteContract

The custom delete operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
id	long	The identifier of the contract.
majorVersion	long	The major version of the contract.
externalSourceKey	string	The external source key of the contract.
externalReferenceKey	string	The external reference key of the contract.
deleteAllVersions	boolean	The flag that denotes whether all the versions of the contract would be deleted or not.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the delete operation that also includes the warning or information message.

removeHoldOnContract

The custom remove hold operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	The identifier of the contract.
lineId	long	The identifier of the line.

Element Name	Type	Description
removeHoldDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the hold on the contract was removed.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the remove hold operation that also includes the warning or information message.

reopenContract

The custom reopen contract operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	The identifier of the contract.
externalSourceKey	string	The external source key of the contract.
externalReferenceKey	string	The external reference key of the contract.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the reopen operation that also includes the warning or information message.

reopenContractLine

The custom reopen contract line operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractLineId	long	The contract line identifier.
externalSourceKey	string	The external source key of the contract.
externalReferenceKey	string	The external reference key of the contract.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the reopen operation includes the warning or information message.

applyHoldOnContractUsingSetId

The custom hold operation using the set identifier for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	The identifier of the contract.
lineId	long	The identifier of the line.
headerExternalSourceKey	string	The external source key of the header.
headerExternalReferenceKey	string	The external reference key of the header.
lineExternalSourceKey	string	The external source key of the line.
lineExternalReferenceKey	string	The external reference key of the line.
holdUntilDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date until which the contract is on hold.
holdReasonCode	string	The reason code for the contract being on hold.
applyHldRsnSetId	long	The reason set identifier for the contract being on hold.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the apply hold operation that also includes the warning or information message.

closeContractLineUsingSetId

The custom close contract line operation using the set identifier for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractLineId	long	The contract line identifier.
closedDate	{http://xmlns.oracle.com/adf/svc/types/}dateDate	The date when the contract was closed.
reasonCode	string	The reason code for the line being closed.
externalSourceKey	string	The external source key of the contract.
externalReferenceKey	string	The external reference key of the contract.
trnCodeSetId	long	The transaction code set identifier.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the close operation that also includes the warning or information message.

closeContractUsingSetId

The custom close contract operation using the set identifier for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	The identifier of the contract.
closedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contract was closed.
reasonCode	string	The reason code for the contract being closed.
externalSourceKey	string	The external source key of the contract.
externalReferenceKey	string	The external reference key of the contract.
trnCodeSetId	long	The transaction code set identifier.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the close operation that also includes the warning or information message.

cancelContractUsingSetId

The custom cancel contract operation using the set identifier for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	The identifier of the contract.
reasonCode	string	The reason code for the contract being canceled.
externalSourceKey	string	The external source key of the contract.
externalReferenceKey	string	The external reference key of the contract.
trnCodeSetId	long	The transaction code set identifier.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the cancel operation that also includes the warning or information message.

updateContractToActive

The custom activate operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	The identifier of the contract.
runValidationFlag	boolean	The flag that denotes whether validations are run or not.

Response Payload

Element Name	Type	Description
result	void	The result of the update operation that also includes the successfully activated contract header SDO.

getContract

The get operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
id	long	The identifier of the contract.
majorVersion	long	The major version of the contract.

Response Payload

Element Name	Type	Description
result	*Contract Deprecated*	The result of the get operation that also includes the successfully retrieved contract header SDO.

getContractByPrimaryKey

Get operation for Contract Header SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	Contract Id

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/contracts/coreAuthoring/transaction/transactionService/}ContractHeaderResult	Result of the operation includes the successfully retrieved Contract Header SDO

createContract

The create operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractHeader	*Contract Deprecated*	The contract header SDOs of all the contracts that would be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/contracts/coreAuthoring/transaction/transactionService/}ContractHeaderResult	The result of the create operation includes the successfully created contract header SDO.

updateContract

The update operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractHeader	*Contract Deprecated*	The contract header SDOs of the contract that would be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/contracts/coreAuthoring/transaction/transactionService/}ContractHeaderResult	The result of the update operation that also includes the successfully updated contract header SDO.

mergeContract

The merge operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractHeader	*Contract Deprecated*	The contract header SDOs of all the contracts that would be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/contracts/coreAuthoring/transaction/transactionService/}ContractHeaderResult	The result of the merge operation that also includes the successfully merged contract header SDO.

findContract

The find operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This field is not currently used.

Response Payload

Element Name	Type	Description
result	*Contract Deprecated*	The result of the operation that includes a list of contract header SDO satisfying the inbound criteria and any warnings or information messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and the object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, which is an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale that the application would use when evaluating the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and the object's attributes in a name-value pair format.

Element Name	Type	Description

getServiceLastUpdateTime

An operation that returns the date and time when the schema files were referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in the ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined for this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for this service. For each service data object, the result includes the name, internal name, and boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
updateContractToActive	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.

Operation Name	Privilege Code	Privilege Name	Privilege Description
updateContractToActive	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
removeHoldOnContract	OKC_HOLD_CONTRACT_PRIV	Hold Contract	Allows the application of a hold on a contract or contract line.
mergeContractInAllStatus	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
mergeContractInAllStatus	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
mergeContractInAllStatus	OKC_CREATE_CONTRACT_PRIV	Create Contract	Provides ability to initiate contract creation.
cancelContractUsingSetId	OKC_CANCEL_CONTRACT_PRIV	Cancel Contract	Allows the cancellation of contracts and contract lines.
cancelContractUsingSetId	OKC_CANCEL_CONTRACT_VIA_WEB_SERVICE_PRIV	Cancel Contract via Web Service	Allows the cancellation of contracts and contract lines from outside the application.
reopenContractLine	OKC_CLOSE_CONTRACT_PRIV	Close Contract	Allows the closing of contracts and contract lines.
reopenContractLine	OKC_CLOSE_CONTRACT_VIA_WEB_SERVICE_PRIV	Close Contract by Web Service	Allows the closing of contracts and contract lines from outside the application..
createContract	OKC_CREATE_CONTRACT_PRIV	Create Contract	Provides ability to initiate contract creation.
applyHoldOnContractUsingSetId	OKC_HOLD_CONTRACT_PRIV	Hold Contract	Allows the application of a hold on a contract or contract line.
updateContract	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
updateContract	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
deleteContract	OKC_DELETE_CONTRACT_PRIV	Delete Contract	Allows the deletion of draft or canceled contracts.

Operation Name	Privilege Code	Privilege Name	Privilege Description
reopenContract	OKC_CLOSE_CONTRACT_PRIV	Close Contract	Allows the closing of contracts and contract lines.
reopenContract	OKC_CLOSE_CONTRACT_VIA_WEB_SERVICE_PRIV	Close Contract by Web Service	Allows the closing of contracts and contract lines from outside the application..
closeContractLineUsingSetId	OKC_CLOSE_CONTRACT_PRIV	Close Contract	Allows the closing of contracts and contract lines.
closeContractLineUsingSetId	OKC_CLOSE_CONTRACT_VIA_WEB_SERVICE_PRIV	Close Contract by Web Service	Allows the closing of contracts and contract lines from outside the application..
closeContractUsingSetId	OKC_CLOSE_CONTRACT_PRIV	Close Contract	Allows the closing of contracts and contract lines.
closeContractUsingSetId	OKC_CLOSE_CONTRACT_VIA_WEB_SERVICE_PRIV	Close Contract by Web Service	Allows the closing of contracts and contract lines from outside the application..
getContract	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
getContract	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
getContract	OKC_VIEW_CONTRACT_PRIV	View Contract	Allows viewing and printing of a contract and its history, including the contract's financial summary.
mergeContract	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
mergeContract	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
mergeContract	OKC_CREATE_CONTRACT_PRIV	Create Contract	Provides ability to initiate contract creation.
findContract	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.

Operation Name	Privilege Code	Privilege Name	Privilege Description
findContract	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
findContract	OKC_VIEW_CONTRACT_PRIV	View Contract	Allows viewing and printing of a contract and its history, including the contract's financial summary.

Contains	*Contract Related Document*
Handled by	*Contract Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdjustmentBasis	string	The adjustment basis for the contract.
AgreedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The agreed amount for the contract.
AgreementAmtLimit	decimal	The agreement amount limit for the contract.
AgreementEnabledFlag	boolean	The flag that denotes whether agreement is enabled for the contract.
AmendmentEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The effective date of the amendment.
ApTermsId	long	The terms identifier for accounts payable.
AutoReleaseInvoice	string	The auto release invoice.
BillPlan	*Contract Bill Plans*	The bill plan of the contract.
BillSequence	long	The sequence in which the bill was generated.
BillToAcctId	long	The unique identifier of the bill-to account.
BillToSiteUseId	long	The identifier of the customer site identifier where the invoices are sent.
BilledAtSource	string	Indicates whether the contract was billed at source.
BillingSalesrepId	long	The unique identifier of the billing sales person.
BilltoLocationId	long	The unique identifier of the bill-to location.
BuyOrSell	string	Indicates the intent of the contract; whether it is a buy or a sell contract.
CarrierId	long	The unique identifier of the carrier.
Cognomen	string	The name of the contract.
CommitmentAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount committed for the contract.
ContractHeaderDFFVL	*Contract Header Descriptive Flexfield Attributes*	The flex field element of the contract header.

Name	Type	Description
ContractId	long	Contract Id • Primary Key
ContractLine	*Contract Line Deprecated*	The contract line element.
ContractNumber	string	The number of the contract.
ContractOwnerId	long	The unique identifier of the contract owner.
ContractParty	*Contract Party Deprecated*	The contract party element.
ContractRelatedDocument	*Contract Related Document Deprecated*	The related document of the contract.
ContractTypeId	long	The unique identifier of the contract type.
ContributionPercent	decimal	The contribution percent of the contract.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CustPoNumber	string	The customer PO number.
Description	string	The free text description of the record.
DiscountPercent	decimal	The discount in percentage of the contract applied to the bill rate.
EncumbranceLevel	string	The encumbrance level of the contract.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
EstimatedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated amount of the contract.
ExemptCertificateNumber	string	The exempted certificate number.
ExemptReasonCode	string	The code associated with the exemption reason.

Name	Type	Description
ExternalReferenceKey	string	The unique identifier of the override in the source application. Used to identify overrides created through external web services.
ExternalSourceKey	string	The unique identifier of the source application where the contract was created. Used to identify records created through external web services.
Fob	string	The Free on Board of the Contract.
FreightTerms	string	The freight terms associated with the contract.
HeaderBillingControl	*Contract Billing Control Deprecated*	The billing control element of the contract.
HoldReasonCode	string	The code identifying the hold reason.
HoldReasonCodeSetId	long	The unique identifier of the hold reason code set.
HoldUntilDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date until which the contract is on hold.
Id	long	The unique identifier of the contract.
InvConvRateDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the invoice conversion rate was set up.
InvConvRateDateType	string	The type of the invoice conversion rate date.
InvConvRateType	string	The type of the invoice conversion rate.
InvOrganizationId	long	The unique identifier of the item master organization.
InvTrxTypeId	long	The unique identifier of the invoice transaction type.
LastRevRecogDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the revenue was last recognized.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LegalEntityId	long	The unique identifier of the legal entity.

Name	Type	Description
LineAutonumberEnabledFlag	boolean	Indicates whether a contract line can be automatically numbered.
MajorVersion	long	The major version of the record.
MinReleaseAmt	decimal	The minimum release amount.
NetInvoiceFlag	boolean	Indicates whether the invoice is a net invoice.
OrgId	long	The unique identifier of the business unit.
OrigSystemId1	long	The unique identifier of the original system.
OrigSystemReference1	string	The reference of the original system.
OrigSystemSourceCode	string	The code identifying the original system source.
OutputTaxClassificationCode	string	The code identifying the output tax classification.
OverallRiskCode	string	The code identifying the overall risk.
OwningOrgId	long	The unique identifier of the owning organization.
PartyId	long	The unique identifier of the contact party.
PriceList	string	The price list.
RecvInvOrgId	long	The unique identifier of the receiving inventory organization.
RevenuePlan	*Contract Revenue Plan Deprecated*	The revenue plan element.
SalesAcctId	long	The unique identifier of the sales account.
SalesCredit	*Sales Credit Deprecated*	The sales credit element.
ShipInvOrgId	long	The unique identifier of the shipping inventory organization.
ShipToAcctId	long	The unique identifier of the ship-to account.

Name	Type	Description
ShipToSiteUseId	long	The unique identifier of the ship-to site.
ShiptoLocationId	long	The ship-to site use location.
ShortDescription	string	The short description.
SoldToAcctId	long	The unique identifier of the sold-to account.
SoldToSiteId	long	The unique identifier of the sold-to site.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
StsCode	string	The code identifying the status.
SupplierId	long	The unique identifier of the supplier.
SupplierSiteId	long	The unique identifier of the supplier site.
TaxAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The tax amount.
TaxExemptionControl	string	The tax exemption control.
TermsTemplateId	long	The unique identifier of the terms template.
TrnCode	string	The code identifying the cancel or the close reason.
TrnCodeSetId	long	The unique identifier of the cancel or the close reason code set.
VersionDescription	string	The description of the version.
VersionType	string	The type of the version.
WebServiceFlag	boolean	The flag identifying the web service.

Contract Assigned Billing Extension Deprecated

The set of billing extensions, that define custom invoice and revenue processing, assigned to a project contract bill or revenue plan.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/contractService/}AssignmentDetail

Logical Business Objects

- Projects
- Projects : Project Billing

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Revenue Plan Deprecated*
Contained by	*Contract Bill Plans*
Handled by	*Contract Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveFlag	boolean	ndicator to check if assigned billing extension is active.
AssignmentDetailId	long	Unique identifier of the assigned billing extension for the bill or revenue plan. • Primary Key
CalculationLevelCode	string	Indicates the level at which the billing event amount is calculated by the billing extension. Values are Contract Line and Associated Project.
CurrencyCode	string	Bill transaction currency of the assigned billing extension amount on the bill or revenue plan.

Name	Type	Description
ExtensionAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	User-entered amount in bill transaction currency used by the billing extension to create an automatic billing event.
ExternalReferenceKey	string	Unique identifier of the assigned billing extension in the source application. Used to identify billing extension assignments to contract bill plans created through external webservices.
ExternalSourceKey	string	Unique identifier of the source application from where the assigned billing extension originates. Used to identify billing extension assignments created through external webservices.
MajorVersion	long	Version of the contract containing this particular set of assigned billing extension details. • Primary Key
Percentage	decimal	User-specified percentage to apply in calculating automatic events by the billing extension.

Contract Bill Plan Descriptive Flexfields

The contract bill plan descriptive flex fields.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/flex/BilllPlanDff/}BilllPlanDff

Logical Business Objects

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Revenue Plan Deprecated*
Contained by	*Contract Bill Plans*
Handled by	*Contract Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BillPlanId	long	Unique identifier of the bill plan that contains details on how contract lines are to be invoiced. • Primary Key
BillPlanName	string	Translated name of the bill plan that contains details on how contract lines are to be invoiced.
InvoiceComment	string	User-specified translated text intended for printing on invoices created for this bill plan.
InvoiceInstructions	string	Internal translated billing instructions that will not appear on the customer invoice.
Language	string	Indicates into which language the bill plan is translated. • Primary Key
MajorVersion	long	Version of the contract containing this particular set of bill plan translation details. • Primary Key
SourceLang	string	Indicates which language is the source language of the bill plan.

Contract Bill Plans

The set of instructions, assigned to one or many contract lines, on how to invoice the project contract customer.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/contractService/}BillPlan

Logical Business Objects

- Projects
- Projects : Project Billing

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Contract Bill Plan Descriptive Flexfields*

Contains	*Nonlabor Rate Override*
Contains	*Contract Job Rate Override*
Contained by	*Contract Deprecated*
Handled by	*Contract Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AssignmentDetail	*Contract Assigned Billing Extension Deprecated*	Section that displays the billing extensions assigned to the bill plan.
BillMethodId	long	Unique identifier of the invoice method used to invoice against this bill plan.

Name	Type	Description
BillPlanDescriptiveFlexField	*Contract Bill Plan Descriptive Flexfields*	A set of configurable fields that captures customer specific business process information on the contract bill plan.
BillPlanId	long	Unique identifier of the contract bill plan. • Primary Key
BillPlanName	string	Name of the bill plan that contains details on how contract lines are to be invoiced.
BillPlanTranslation	*Contract Bill Plan Translation Deprecated*	A complete set of language translations for the multilingual attributes of a bill plan and revenue plan.
BillSetNum	decimal	Indicates which bill plans for the same contract can be invoiced together. Transactions for bill plans with a common bill set number will be invoiced on the same invoice.
BillToContactId	long	Unique identifier of the bill-to customer contact person on a bill plan.
BillToCustAcctId	long	Unique identifier of the bill-to customer account that receives the invoice and pays the invoice amount.
BillToSiteUseId	long	Unique identifier of the bill-to customer site that is responsible for receiving and paying the invoice amount.
BillingCycleId	long	Unique identifier of the frequency at which invoices are created for the bill plan.
BurdenSchFixedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	User-specified date used to derive the bill rate from the burden schedule.
BurdenSchId	long	Unique identifier of the burden schedule specified in the bill plan.
DocNumber	string	A unique identifier of the letter of credit document issued to the award on the bill plan.
EmpBillRateSchId	long	Unique identifier of the person rate schedule used to derive the bill rate for labor transactions.

Name	Type	Description
EnableLbrBillXtnsnFlag	boolean	Indicator to allow usage of the labor billing extension when deriving the bill rate for labor transactions.
EnableNlBillXtnsnFlag	boolean	Indicator to allow usage of the nonlabor billing extension when deriving the bill rate for nonlabor transactions.
EventsInvoiceFormatId	long	Unique identifier of the invoice format that is used to group events invoiced against the bill plan into invoice lines.
ExternalReferenceKey	string	Unique identifier of the bill plan in the source application. Used to identify contract bill plans created through external webservices.
ExternalSourceKey	string	Unique identifier of the source application from where the bill plan originates. Used to identify contract bill plans created through external webservices.
FirstBillingOffsetDays	decimal	The number of days after the commencement of the project, that the first invoice will be generated.
InvoiceComment	string	User-specified text intended for printing on invoices created for this bill plan.
InvoiceCurrDateType	string	The source of the bill transaction to invoice and revenue currency conversion date for a bill plan, such as transaction date or fixed date.
InvoiceCurrExchgDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on a bill plan from which a conversion rate is used to convert the amount in the bill transaction currency into the invoice and revenue currency.
InvoiceCurrRateType	string	The source of the bill transaction to invoice and revenue currency conversion rate for a bill plan, such as user defined, spot, or corporate.
InvoiceCurrencyCode	string	The name of the currency in which the invoice is issued and revenue is recognized. It is also known as the entered currency in Oracle Fusion General Ledger for invoice and revenue accounting entries.
InvoiceCurrencyOptCode	string	The type of currency that is used to determine the invoice and revenue currency for invoices and revenue that are created for the contract lines associated with the bill plan. The billing

Name	Type	Description
		currency type can be the contract currency, bill transaction currency, or any user-specified currency.
InvoiceInstructions	string	Internal billing instructions that will not appear on the customer invoice.
JobAssignmentOverride	*Contract Job Assignment Override*	Section that displays the job assignment overrides for a bill plan.
JobBillRateSchId	long	Unique identifier of the job rate schedule used to derive the bill rate for labor transactions.
JobRateOverride	*Contract Job Rate Override*	Section that displays the job rate overrides for a bill plan.
JobTitleOverride	*Job Title Override*	Name of the object that stores all the job title overrides for a bill plan or revenue plan.
LaborBillBasisCode	string	Labor cost basis code for cost reimbursable.
LaborDiscountPercentage	decimal	The factor by which all bill rates derived from the person or job rate schedule for this bill plan are to be discounted.
LaborDiscountReasonCode	string	Explains the reason for the discount percentage offered against the person and job rate schedules specified in the bill plan.
LaborInvoiceFormatId	long	Unique identifier of the invoice format that is used to group labor expenditure items invoiced against the bill plan into invoice lines.
LaborMarkupPercentage	decimal	Labor Markup Percentage.
LaborMultiplierOverride	*Labor Multiplier Override*	Section that displays the labor multiplier overrides for a bill plan.
LaborSchFixedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	User-specified date used to derive the bill rate from the person or job rate schedule.
LaborTpSchFixedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	User-specified date used to derive the bill rate from the intercompany labor transfer price schedule.
LaborTpScheduleId	long	Unique identifier of the transfer price labor schedule used to derive the bill rate for intercompany labor transactions.

Name	Type	Description
LocFlag	boolean	Indicates the bill plan uses letter of credit for billing.
MajorVersion	long	Version of the contract containing this particular set of bill plan details. • Primary Key
NlBillBasisCode	string	Nonlabor cost basis code for cost reimbursable.
NlBillRateSchId	long	Unique identifier of the nonlabor rate schedule used to derive the bill rate for nonlabor transactions.
NlDiscountPercentage	decimal	The factor by which all bill rates derived from the nonlabor rate schedule for this bill plan are to be discounted.
NlDiscountReasonCode	string	Explains the reason for the discount percentage offered against the nonlabor rate schedule specified in the bill plan.
NlInvoiceFormatId	long	Unique identifier of the invoice format that is used to group nonlabor expenditure items invoiced against the bill plan into invoice lines.
NlMarkupPercentage	decimal	The factor by which the bill amount will be calculated over the nonlabor cost.
NlSchFixedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The fixed date used to determine the effective bill rates of the standard non labor bill rate schedule
NlTpSchFixedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	User-specified date used to derive the bill rate from the nonlabor rate schedule.
NlTpScheduleId	long	Unique identifier of the transfer price labor schedule used to derive the bill rate for intercompany nonlabor transactions.
NonLaborRateOverride	*Non-labor Rate Override Deprecated*	Section that displays the nonlabor rate overrides for a bill plan.
OnHoldFlag	boolean	Indicator to check if bill plan is eligible for invoice generation.
PaymentTermId	long	Terms used to schedule payments and to calculate due dates, discount dates, and discount amounts for each invoice.

Name	Type	Description
PersonRateOverride	*Person Rate Override Deprecated*	Section that displays the person rate overrides for a bill plan.
ReportTypeCode	string	Indicates the federal invoice format that is used for bill presentment.

Contract Billing Control Deprecated

The set of hard and soft limits within a date range, at the contract header and contract line levels, that controls which transactions and the total amount of transactions that can be invoiced or recognized for revenue for a contract and contract line.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/contractService/}BillingControl

Logical Business Objects

- Projects
- Projects : Project Billing

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Deprecated*
Handled by	*Contract Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveFlag	boolean	Indicator to check if billing control is active.
BillingControlId	long	Unique identifier of a billing control defined on the contract or contract line. • Primary Key

Name	Type	Description
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which a billing control is no longer available for validating a transaction for billing.
ExternalReferenceKey	string	Unique identifier of the billing control in the source application. Used to identify contract billing controls created through external webservices.
ExternalSourceKey	string	Unique identifier of the source application from where the billing control originates. Used to identify contract billing controls created through external webservices.
HardLimitAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The maximum inception-to-date billed amount for transactions applicable to this billing control at which an error is to be given that the hard limit has been reached. Billing can not continue beyond the hard limit amount.
HardLimitCurrencyCode	string	
MajorVersion	long	Version of the contract containing this particular set of billing control details. • Primary Key
RbsElementId	long	Unique identifier of the resource associated with the billing control on the contract.
SoftLimitAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The inception-to-date billed amount for transactions applicable to this billing control at which a warning is to be given that the soft limit has been reached. Billing can continue beyond the soft limit amount.
SoftLimitCurrencyCode	string	
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date before which a billing control is no longer available for validating a transaction for billing.

Contract Header Descriptive Flexfield Attributes

The contract header flex field view object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/header/flex/header/}ContractHeaderFlexfield

Logical Business Objects

Name	Type	Description
AgreedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The agreed amount on the contract line.
CleId	long	The unique identifier of the line.
Cognomen	string	The contract line.
Comments	string	The comments for the record.

Name	Type	Description
ContractLineDFFVL	*Contract Line Descriptive Flexfield Attributes Deprecated*	The contract line flex field element.
ContractParty	*Contract Party Deprecated*	The contract party element.
ContractSubLine	*Contract Line Deprecated*	The sub line of the contract.
CustPoNumber	string	The customer PO number.
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
Description	string	The free text description of the record.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
ExemptCertificateNumber	string	The exempted certificate number.
ExemptReasonCode	string	The code associated with the exemption reason.
ExternalItemKey	string	The external item key.
ExternalItemReference1	string	The unique identifier of the override in the source application. Used to identify overrides created through external web services.
ExternalItemReference2	string	The unique identifier of the override in the source application. Used to identify overrides created through external web services.
ExternalItemReference3	string	The unique identifier of the override in the source application. Used to identify overrides created through external web services.
ExternalItemReference4	string	The unique identifier of the override in the source application. Used to identify overrides created through external web services.
ExternalItemReference5	string	The unique identifier of the override in the source application. Used to identify overrides created through external web services.

Name	Type	Description
ExternalItemSource	string	The unique identifier of the override in the source application. Used to identify overrides created through external web services.
ExternalReferenceKey	string	The unique identifier of the override in the source application. Used to identify overrides created through external web services.
ExternalSourceKey	string	The unique identifier of the source application where the contract line was created. Used to identify records created through external web services.
HoldReasonCode	string	The code identifying the hold reason.
HoldReasonCodeSetId	long	The unique identifier of the hold reason code set.
HoldUntilDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date until which the contract is on hold.
Id	long	The unique identifier of the contract line.
ItemName	string	The name of the item.
JtotObject1Code	string	The Jtot object code.
LineAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount in the contract line.
LineId	long	Line Id • Primary Key
LineNumber	string	The line number.
LineTypeId	long	The unique identifier of the line type.
MajorVersion	long	The major version of the record.
Name	string	The line name.
NumOfItem	decimal	The number of items.
Object1Id1	long	The unique identifier of the item.

Name	Type	Description
Object1Id2	long	The unique identifier of the item.
OrigSystemId1	decimal	The unique identifier of the originating system.
OrigSystemReference1	string	The reference of the originating system.
OrigSystemSourceCode	string	The code identifying the originating system source.
OutputTaxClassificationCode	string	The code identifying the output tax classification.
PriceUnit	decimal	The price unit.
ShipInvOrgId	long	The unique identifier of the shipping inventory organization.
ShipToAcctId	long	The unique identifier of the ship-to account.
ShipToSiteUseId	long	The unique identifier of the ship-to site.
SourceCodeClass	string	The class of the source code.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
StatusCode	string	The pre-defined code used to indicate the status.
TaxAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The tax amount.
TaxExemptionControl	string	The tax exemption control.
TrnCode	string	The code identifying the close or the cancel reason.
TrnCodeSetId	long	The unique identifier of the close or the cancel reason code set.
UomCode	string	The code identifying the unit of measure.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/transaction/transactionService/}ContractPartyAddress

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Party Deprecated*
Handled by	*Contract Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AddressId	long	The identifier of the contact party address.
AddressSource	string	The address source of the contact party.
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
ExternalReferenceKey	string	The unique identifier of the override in the source application. Used to identify overrides created through external web services.
ExternalSourceKey	string	The unique identifier of the source application where the contract party address was created. Used to identify records created through external web services.
Id	long	The unique identifier of the contract party address. • Primary Key
MajorVersion	long	The major version of the record. • Primary Key
SourceObjectCode	string	The code of the source object.
SourceObjectId	long	The unique identifier of the source object.

Contract Party Contact Deprecated

The contract party contact view object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/transaction/transactionService/}ContractPartyContact

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Party Deprecated*
Handled by	*Contract Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevel	string	The level of the access in the hierarchy.
CroCode	string	The role code of the contact.
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
ExternalReferenceKey	string	The unique identifier of the override in the source application. Used to identify overrides created through external web services.
ExternalSourceKey	string	The unique identifier of the source application where the contract part contact was created. Used to identify records created through external web services.
Id	long	The unique identifier of the contract party contact. • Primary Key
JtotObject1Code	string	The Jtot object code.
MajorVersion	long	The major version of the record. • Primary Key
Object1Id1	long	The unique identifier of the contract.
Object1Id2	long	The unique identifier of the item.

Name	Type	Description
OwnerYn	string	Indicates whether the contact is the owner of the contract.

Contract Party Descriptive Flexfield Attributes

The contract party flex field view object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/parties/flex/party/}ContractPartyFlexfield

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Party*
Contained by	*Contract Party Deprecated*
Handled by	*Contract Service Version 2*
Handled by	*Contract Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Id	long	The unique identifier of the contract party flex field. • Primary Key
MajorVersion	long	The major version of the record. • Primary Key

Name	Type	Description
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Contract Related Document Deprecated

The related document view object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/transaction/transactionService/}ContractRelatedDocument

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Deprecated*
Handled by	*Contract Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
DeleteFlag	boolean	Indicates whether the record can be deleted or not.
ExternalReferenceKey	string	The unique identifier of the override in the source application. Used to identify overrides created through external web services.
ExternalSourceKey	string	The unique identifier of the source application where the contract related document was

Name	Type	Description
		created. Used to identify records created through external web services.
Id	long	The unique identifier of the related document. • Primary Key
JtotObject1Code	string	The Jtot object code.
Object1Id1	long	The unique identifier of the related contract.
RtyCode	string	The code identifying the relationship.

Contract Revenue Plan Deprecated

The set of instructions, assigned to one or many contract lines, on how to recognize project contract revenue.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/contractService/}RevenuePlan

Logical Business Objects

- Projects
- Projects : Project Billing

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Contract Bill Plan Descriptive Flexfields*
Contains	*Person Rate Override*
Contains	*Contract Assigned Billing Extension Deprecated*
Contains	*Labor Multiplier Override*
Contains	*Contract Bill Plan Translation*
Contains	*Contract Job Assignment Override*

Relationship Type	Object or Service
Contains	*Nonlabor Rate Override*
Contains	*Contract Job Rate Override*
Contained by	*Contract Deprecated*
Handled by	*Contract Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AssignmentDetail	*Contract Assigned Billing Extension Deprecated*	Section that displays the billing extensions assigned to the revenue plan.
BillMethodId	long	Unique identifier of the revenue method used to recognize revenue against this revenue plan.
BillPlanId	long	Unique identifier of the contract revenue plan. • Primary Key
BillPlanName	string	Name of the revenue plan that contains details on how contract lines are to be recognized for revenue.
BurdenSchFixedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	User-specified date used to derive the bill rate from the burden schedule.
BurdenSchId	long	Unique identifier of the burden schedule specified in the revenue plan.
EmpBillRateSchId	long	Unique identifier of the person rate schedule used to derive the bill rate for labor transactions.
EnableLbrBillXtnsnFlag	boolean	Indicator to allow usage of the labor billing extension when deriving the bill rate for labor transactions.
EnableNlBillXtnsnFlag	boolean	Indicator to allow usage of the nonlabor billing extension when deriving the bill rate for nonlabor transactions.

Name	Type	Description
ExternalReferenceKey	string	Unique identifier of the revenue plan in the source application. Used to identify contract revenue plans created through external webservices.
ExternalSourceKey	string	Unique identifier of the source application from where the revenue plan originates. Used to identify contract revenue plans created through external webservices.
JobAssignmentOverride	*Contract Job Assignment Override*	Section that displays the job assignment overrides for a revenue plan.
JobBillRateSchId	long	Unique identifier of the job rate schedule used to derive the bill rate for labor transactions.
JobRateOverride	*Contract Job Rate Override*	Section that displays the job rate overrides for a revenue plan.
LaborBillBasisCode	string	Labor cost basis code for cost reimbursable
LaborDiscountPercentage	decimal	The factor by which all bill rates derived from the person or job rate schedule for this revenue plan are to be discounted.
LaborDiscountReasonCode	string	Explains the reason for the discount percentage offered against the person and job rate schedules specified in the revenue plan.
LaborMarkupPercentage	decimal	Labor Markup Percentage
LaborMultiplierOverride	*Labor Multiplier Override*	Section that displays the labor multiplier overrides for a revenue plan.
LaborSchFixedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	User-specified date used to derive the bill rate from the person or job rate schedule.
LaborTpSchFixedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	User-specified date used to derive the bill rate from the intercompany labor transfer price schedule.
LaborTpScheduleId	long	Unique identifier of the transfer price labor schedule used to derive the bill rate for intercompany labor transactions.
MajorVersion	long	Version of the contract containing this particular set of revenue plan details. • Primary Key

Name	Type	Description
NlBillBasisCode	string	Identifies if applicable nonlabor expenditure items must be billed at raw cost or burdened cost.
NlBillRateSchId	long	Unique identifier of the nonlabor rate schedule used to derive the bill rate for nonlabor transactions.
NlDiscountPercentage	decimal	The factor by which all bill rates derived from the nonlabor rate schedule for this revenue plan are to be discounted.
NlDiscountReasonCode	string	Explains the reason for the discount percentage offered against the nonlabor rate schedule specified in the revenue plan.
NlMarkupPercentage	decimal	
NlSchFixedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	User-specified date used to derive the bill rate from the nonlabor rate schedule.
NlTpSchFixedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	User-specified date used to derive the bill rate from the intercompany nonlabor transfer price schedule.
NlTpScheduleId	long	Unique identifier of the transfer price labor schedule used to derive the bill rate for intercompany nonlabor transactions.
NonLaborRateOverride	*Non-labor Rate Override Deprecated*	Section that displays the nonlabor rate overrides for a revenue plan.
OnHoldFlag	boolean	Indicator to check if revenue plan is eligible for revenue generation.
PersonRateOverride	*Person Rate Override Deprecated*	Section that displays the person rate overrides for a revenue plan.
RevenuePlanDescriptiveFlexField	*Contract Bill Plan Descriptive Flexfields*	
RevenuePlanTranslation	*Contract Bill Plan Translation Deprecated*	

Contract Service Version 2

The external service of the contract.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractService

Service WSDL URL: https://servername/fscmService/ContractServiceV2?WSDL

mergeContractInAllStatus

The custom merge operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractHeader	*Contract*	The contract header SDOs of all the contracts that would be merged.

Element Name	Type	Description
targetStatusCode	string	The target status code after the merge operation.
closeDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contract was closed.
closeReasonCode	string	The reason code for closing a contract.
cancelReasonCode	string	The reason code for canceling a contract.
versionFlag	boolean	The flag that denotes whether a new version of the contract would be created for the merge operation.

Response Payload

Element Name	Type	Description
result	*Contract*	The result of the merge operation that also includes the successfully merged contract header SDO.

deleteContract

The custom delete operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
id	long	The unique identifier of the contract.
majorVersion	long	The major version of the contract.
externalSourceKey	string	The external source key of the contract.
externalReferenceKey	string	The external reference key of the contract.
deleteAllVersions	boolean	The flag that denotes whether all the versions of the contract would be deleted or not.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the delete operation that also includes the warning or information message.

updateContractToActive

The custom active operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	The unique identifier of the contract.
runValidationFlag	boolean	The flag that denotes whether validations are run or not.
emptyResponseFlag	boolean	The flag that indicates whether response payload is needed or not

Response Payload

Element Name	Type	Description
result	*Contract*	The result of the update operation that also includes the successfully activated Contract header SDO.

addContractDocuments

The custom operation for adding documents to contracts.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractDocuments	*Contract Document*	The contract document that would be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the add operation that also includes the warning or information message.

applyHoldOnContract

The custom hold operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	The identifier of the contract.
lineId	long	The identifier of the line.
headerExternalSourceKey	string	The external source key of the header.
headerExternalReferenceKey	string	The external reference key of the header.
lineExternalSourceKey	string	The external source key of the line.
lineExternalReferenceKey	string	The external reference key of the line.
holdUntilDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date until which the contract is on hold.
holdReasonCode	string	The reason code for the contract being on hold.
applyHldRsnSetId	long	The reason set identifier for the contract being on hold.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the hold operation that also includes the warning or information message.

closeContract

The custom close operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	The identifier of the contract.
contractLineId	long	The contract line identifier.
headerExternalSourceKey	string	The external source key of the header.
headerExternalReferenceKey	string	The external reference key of the header.
lineExternalSourceKey	string	The external source key of the line.
lineExternalReferenceKey	string	The external reference key of the line.
closedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contract was closed.
closeReasonCode	string	The close reason code of the contract.
trnCodeSetId	long	The transaction code set identifier.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the close operation that also includes the warning or information message.

cancelContract

The custom cancel operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	The identifier of the contract.
reasonCode	string	The reason code for the contract being canceled.

Element Name	Type	Description
externalSourceKey	string	The external source key of the contract.
externalReferenceKey	string	The external reference key of the contract.
trnCodeSetId	long	The transaction code set identifier.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the cancel operation that also includes the warning or information message.

removeHoldOnContract

The custom remove hold operation for the contract header and the contract line SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	The identifier of the contract.
lineId	long	The identifier of the line.
headerExternalSourceKey	string	The external source key of the header.
headerExternalReferenceKey	string	The external reference key of the header.
lineExternalSourceKey	string	The external source key of the line.
lineExternalReferenceKey	string	The external reference key of the line.
removeHoldDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the hold on the contract was removed.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the remove hold operation that also includes the warning or information message.

reopenContract

The custom reopen operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	The identifier of the contract.
contractLineId	long	The contract line identifier.
headerExternalSourceKey	string	The external source key of the header.
headerExternalReferenceKey	string	The external reference key of the header.
lineExternalSourceKey	string	The external source key of the line.
lineExternalReferenceKey	string	The external reference key of the line.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the reopen operation that also includes the warning or information message.

submitContractForApproval

Custom submit for approval operation for Contract Header SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	Contract ID

Element Name	Type	Description
externalSourceKey	string	Eaternal Source Key
externalReferenceKey	string	Eaternal Reference Key
submitOnWarningsFlag	boolean	Flag that instructs to proceed with submit even there are any validation warnings

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}StringResult	Returns list of strings. First element gives whether contract is submitted or not and batch id used for validation separated by : ex. SUBMITTED:123456789 or NOT_SUBMITTED:123456789. Second element onwards it will have validation messages in the format Severity:Validation Message

previewContract

Custom Preview operation for Contract Header SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	Contract Id
majorVersion	long	Contract Major Version
externalSourceKey	string	External Source Key
externalReferenceKey	string	External Reference Key
language	string	Preview Language

Response Payload

Element Name	Type	Description
result	string	Result of the operation includes the PDF of the contract

previewContractInHTML

Custom HTML Preview operation for Contract Header SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	Contract Id
majorVersion	long	Contract Version Number
externalSourceKey	string	External Source Key
externalReferenceKey	string	External Reference Key
language	string	Preview Language

Response Payload

Element Name	Type	Description
result	string	Result of the operation includes the HTML of the contract

previewContractInRTF

Custom RTF Preview operation for Contract Header SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	Contract Id
majorVersion	long	Contract Version Number

Element Name	Type	Description
externalSourceKey	string	External Source Key
externalReferenceKey	string	External Reference Key
language	string	Preview Language

Response Payload

Element Name	Type	Description
result	string	Result of the operation includes the RTF of the contract

runContractExpert

The custom run Contract Expert operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	The identifier of the contract.
externalSourceKey	string	The external source key of the contract.
externalReferenceKey	string	The external reference key of the contract.
variableValues	*Contract Variable Values*	All user defined variables and values used in document clauses.
questionResponses	*Contract Question Responses*	All questions and responses used in Contract Expert rules associated to a document.
runContractExpertYN	string	Indicator to control whether to run Contract Expert.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	Result of the run Contract Expert operation includes the warning or information messages.

amendContract

The amend operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
amendContractParams	*Amend Contract*	Input values for amending a contract

Response Payload

Element Name	Type	Description
result	void	Result of the operation includes the warning or informational message.

revertContract

The revert operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
revertContractParams	*Revert Contract*	Input values for reverting a contract

Response Payload

Element Name	Type	Description
result	void	Result of the operation includes the warning or informational message.

cancelContractLine

The cancel operation for the contract line SDO. This service can be used to cancel contract lines or its covered assets.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
cancelContractLineParams	*Cancel Contract Line*	Input values for canceling a contract line.

Response Payload

Element Name	Type	Description
result	void	Result of the operation includes the warning or informational message.

closeServiceContract

The close operation for the contract header SDO. This service is for service contracts only.This service can be used to close the contract, its lines or its covered assets.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
closeServiceContractParams	*Close Service Contract*	Input values for closing a service contract.

Response Payload

Element Name	Type	Description
result	void	Result of the operation includes the warning or informational message.

getContractDocuments

Custom operation to get contract documents of a contract

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
inputParams	*Get Contract Documents List*	Input values for this operation

Response Payload

Element Name	Type	Description
result	*Contract Document*	Returns list of contract documents of a contract

getContractDocumentFileContents

Custom operation to get file contents along with file name and content type of a contract document

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
inputParams	*Get Contract Document Content*	Input values for this operation

Response Payload

Element Name	Type	Description
result	string	Returns an array of 3 strings - file name (un-encoded), file content type (un-encoded) and file contents (base64 encoded).

renewContract

The amend operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
manualRenewalParams	*Contract Renewal Request*	Input values for renewing a contract

Response Payload

Element Name	Type	Description
result	*Contract Renewal Response*	Result of the operation includes the renewed contract information.

raiseUserTransitionEvent

Custom operation to update the state_transition_flow_state in Contracts.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
inputParams	*Event Payload*	Input values for this operation

Response Payload

Element Name	Type	Description
result	string	Result of the operation includes the warning or informational message.

getContract

The get operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
id	long	The identifier of the contract.
majorVersion	long	The major version of the contract.

Response Payload

Element Name	Type	Description
result	*Contract*	The result of the get operation that also includes the successfully retrieved contract header SDO.

signContract

Service to capture signer details and sign a contract.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
inputParams	*Sign Contract*	Input values for sign contract

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	Result of the operation includes the warning or informational message.

getContractValidDocumentCategories

Custom operation to get valid contract documents of a contract.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	string	Result of this operation includes valid document categories of Contract

getContractByPrimaryKey

Get operation for Contract Header SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	Contract Id

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractHeaderResult	Result of the operation includes the successfully retrieved Contract Header SDO

createContract

The create operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractHeader	*Contract*	The contract header SDOs of all the contracts that would be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractHeaderResult	The result of the create operation that also includes the successfully created contract header SDO.

updateContract

The update operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractHeader	*Contract*	The contract header SDOs of the contract that would be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractHeaderResult	The result of the update operation that also includes the successfully updated contract header SDO.

Element Name	Type	Description

mergeContract

The merge operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractHeader	*Contract*	The contract header SDOs of all the contracts that would be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractHeaderResult	The result of the merge operation includes the successfully merged contract header SDO.

findContract

The find operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This field is not currently used.

Response Payload

Element Name	Type	Description
result	*Contract*	The result of the find operation that also includes a list of the contract header SDO satisfying the inbound criteria and any warnings or information messages.

Element Name	Type	Description

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, which is an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale that the application would use when evaluating the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and the object's attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in the ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the Name, internal name, and boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
cancelContract	OKC_CANCEL_CONTRACT_PRIV	Cancel Contract	Allows the cancellation of contracts and contract lines.
cancelContract	OKC_CANCEL_CONTRACT_VIA_WEB_SERVICE_PRIV	Cancel Contract via Web Service	Allows the cancellation of contracts and contract lines from outside the application.
removeHoldOnContract	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
removeHoldOnContract	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
getContractDocuments	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
getContractDocuments	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.

Operation Name	Privilege Code	Privilege Name	Privilege Description
getContractDocuments	OKC_VIEW_CONTRACT_PRIV	View Contract	Allows viewing and printing of a contract and its history, including the contract's financial summary.
previewContract	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
previewContract	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.

Job Title Override

The job title assigned to a specific person on a contract bill or revenue plan, rather than the normal job title for that person.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/contractService/}JobTitleOverride

Logical Business Objects

- Projects
- Projects : Project Billing

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Bill Plans*
Handled by	*Contract Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BillingTitle	string	Name of the override job title being assigned to the job for this bill plan. Used to display on the invoice to the customer.
ContractLineId	long	Unique identifier of the contract line for which the job title override is defined.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date to which a job title override applies.
ExternalReferenceKey	string	Unique identifier of the job title override in the source application. Used to identify job title overrides created through external webservices.
ExternalSourceKey	string	Unique identifier of the source application from where the job title override originates. Used to identify job title overrides created through external webservices.
JobId	long	Unique identifier of the job for which the job title override is defined.
JobTitleOverrideId	long	Unique identifier of the job titile override on the bill plan that identifies the negotiated job title assigned to a specific person, rather than the normal title for that person. • Primary Key
MajorVersion	long	Version of the contract containing this particular set of job title override details. • Primary Key
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date from which a job title override applies.

Labor Multiplier Override

The negotiated value to be multiplied by the cost rate for labor on a contract bill or revenue plan.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/contractService/}LaborMultiplierOverride

Logical Business Objects

- Projects
- Projects : Project Billing

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Revenue Plan Deprecated*
Contained by	*Contract Bill Plans*
Handled by	*Contract Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContractLineId	long	Version of the contract containing this particular set of labor multiplier override details.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date to which a labor multiplier override applies.
ExternalReferenceKey	string	Unique identifier of the labor multiplier override in the source application. Used to identify labor multiplier overrides created through external webservices.
ExternalSourceKey	string	Unique identifier of the source application from where the labor multiplier override originates. Used to identify labor multiplier overrides created through external webservices.

Name	Type	Description
LaborMultiplier	decimal	Name of the object that stores all the labor multipliers for a bill plan or revenue plan.
LaborMultiplierId	long	Unique identifier of the labor multiplier override on the bill plan that identifies the negotiated value to be multiplied by the cost rate for labor. • Primary Key
MajorVersion	long	Version of the contract containing this particular set of labor multiplier override details. • Primary Key
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date from which a labor multiplier override applies.

Non-labor Rate Override Deprecated

The negotiated rate, discount, or markup for non-labor on a contract bill or revenue plan.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/contractService/}NonLaborRateOverride

Logical Business Objects

- Projects
- Projects : Project Billing

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Revenue Plan Deprecated*
Contained by	*Contract Bill Plans*
Handled by	*Contract Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BillRateOverrideId	long	Unique identifier of the nonlabor rate override. • Primary Key
ContractLineId	long	Unique identifier of the contract line for which the nonlabor rate override is defined.
DiscountPercentage	decimal	The factor by which the bill rate derived for the nonlabor expenditure type, resource, and organization and bill or revenue plan is to be discounted.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date to which a nonlabor rate override applies.
ExpenditureTypeId	long	Unique identifier of the expenditure type for which the bill rate is being overridden.
ExternalReferenceKey	string	Unique identifier of the nonlabor rate override in the source application. Used to identify nonlabor rate overrides created through external webservices.
ExternalSourceKey	string	Unique identifier of the source application from where the nonlabor rate override originates. Used to identify nonlabor rate overrides created through external webservices.
MajorVersion	long	Version of the contract containing this particular set of nonlabor rate override details. • Primary Key
MarkupPercentage	decimal	Identifies the factor by which the bill amount will be calculated over the cost for this nonlabor rate override.
NonLaborResourceId	long	Unique identifier of the nonlabor resource for which the nonlabor rate override applies.
OrganizationId	long	Unique identifier of the nonlabor resource organization for which the nonlabor rate override applies.
Rate	decimal	A unit rate override for the nonlabor expenditure type, resource, and organization and bill or revenue plan.
RateCurrencyCode	string	Currency of the nonlabor rate override on the bill or revenue plan.

Name	Type	Description
RateDiscReasonCode	string	Explains the reason for the discount percentage offered against the nonlabor expenditure type, oranization, and resource.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date from which a nonlabor rate override applies.

Person Rate Override Deprecated

The person rate overrides for a bill or revenue plan.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/contractService/}PersonRateOverride

Logical Business Objects

- Projects
- Projects : Project Billing

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Revenue Plan Deprecated*
Contained by	*Contract Bill Plans*
Handled by	*Contract Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BillRateOverrideId	long	Unique identifier of the person rate override. • Primary Key
ContractLineId	long	Version of the contract containing this particular set of person rate override details.

Name	Type	Description
DiscountPercentage	decimal	The factor by which the bill rate derived for the person and bill or revenue plan is to be discounted.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date to which a person rate override applies.
ExternalReferenceKey	string	Unique identifier of the person rate override in the source application. Used to identify person rate overrides created through external webservices.
ExternalSourceKey	string	Unique identifier of the source application from where the person rate override originates. Used to identify person rate overrides created through external webservices.
MajorVersion	long	Version of the contract containing this particular set of person rate override details. • Primary Key
PersonId	long	Unique identifier of the person for which the person rate override is defined.
Rate	decimal	A unit rate override for the person and bill or revenue plan.
RateCurrencyCode	string	Currency of the person rate override on the bill or revenue plan.
RateDiscReasonCode	string	Explains the reason for the discount percentage offered against the person.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date from which a person rate override applies.

Sales Credit Deprecated

The sales credit view object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/transaction/transactionService/}SalesCredit

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Deprecated*
Handled by	*Contract Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveYn	string	The flag to activate sales credit.
Id	long	The unique identifier of the sales credit. • Primary Key
MajorVersion	long	The major version of the record. • Primary Key
Percent	decimal	The sales credit percentage.
SalesCreditTypeId	long	The unique identifier of the sales credit type.
SalesrepId	long	The unique identifier of the salesperson.

Contract Service Version 2

The external service of the contract.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractService

Service WSDL URL: https://servername/fscmService/ContractServiceV2?WSDL

mergeContractInAllStatus

The custom merge operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractHeader	*Contract*	The contract header SDOs of all the contracts that would be merged.
targetStatusCode	string	The target status code after the merge operation.
closeDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contract was closed.
closeReasonCode	string	The reason code for closing a contract.
cancelReasonCode	string	The reason code for canceling a contract.

Element Name	Type	Description
versionFlag	boolean	The flag that denotes whether a new version of the contract would be created for the merge operation.

Response Payload

Element Name	Type	Description
result	*Contract*	The result of the merge operation that also includes the successfully merged contract header SDO.

deleteContract

The custom delete operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
id	long	The unique identifier of the contract.
majorVersion	long	The major version of the contract.
externalSourceKey	string	The external source key of the contract.
externalReferenceKey	string	The external reference key of the contract.
deleteAllVersions	boolean	The flag that denotes whether all the versions of the contract would be deleted or not.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the delete operation that also includes the warning or information message.

updateContractToActive

The custom active operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	The unique identifier of the contract.
runValidationFlag	boolean	The flag that denotes whether validations are run or not.
emptyResponseFlag	boolean	The flag that indicates whether response payload is needed or not

Response Payload

Element Name	Type	Description
result	*Contract*	The result of the update operation that also includes the successfully activated Contract header SDO.

addContractDocuments

The custom operation for adding documents to contracts.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractDocuments	*Contract Document*	The contract document that would be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the add operation that also includes the warning or information message.

applyHoldOnContract

The custom hold operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	The identifier of the contract.
lineId	long	The identifier of the line.
headerExternalSourceKey	string	The external source key of the header.
headerExternalReferenceKey	string	The external reference key of the header.
lineExternalSourceKey	string	The external source key of the line.
lineExternalReferenceKey	string	The external reference key of the line.
holdUntilDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date until which the contract is on hold.
holdReasonCode	string	The reason code for the contract being on hold.
applyHldRsnSetId	long	The reason set identifier for the contract being on hold.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the hold operation that also includes the warning or information message.

closeContract

The custom close operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	The identifier of the contract.
contractLineId	long	The contract line identifier.

Element Name	Type	Description
headerExternalSourceKey	string	The external source key of the header.
headerExternalReferenceKey	string	The external reference key of the header.
lineExternalSourceKey	string	The external source key of the line.
lineExternalReferenceKey	string	The external reference key of the line.
closedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contract was closed.
closeReasonCode	string	The close reason code of the contract.
trnCodeSetId	long	The transaction code set identifier.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the close operation that also includes the warning or information message.

cancelContract

The custom cancel operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	The identifier of the contract.
reasonCode	string	The reason code for the contract being canceled.
externalSourceKey	string	The external source key of the contract.
externalReferenceKey	string	The external reference key of the contract.
trnCodeSetId	long	The transaction code set identifier.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the cancel operation that also includes the warning or information message.

removeHoldOnContract

The custom remove hold operation for the contract header and the contract line SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	The identifier of the contract.
lineId	long	The identifier of the line.
headerExternalSourceKey	string	The external source key of the header.
headerExternalReferenceKey	string	The external reference key of the header.
lineExternalSourceKey	string	The external source key of the line.
lineExternalReferenceKey	string	The external reference key of the line.
removeHoldDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the hold on the contract was removed.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the remove hold operation that also includes the warning or information message.

reopenContract

The custom reopen operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	The identifier of the contract.
contractLineId	long	The contract line identifier.
headerExternalSourceKey	string	The external source key of the header.
headerExternalReferenceKey	string	The external reference key of the header.
lineExternalSourceKey	string	The external source key of the line.
lineExternalReferenceKey	string	The external reference key of the line.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	The result of the reopen operation that also includes the warning or information message.

submitContractForApproval

Custom submit for approval operation for Contract Header SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	Contract ID
externalSourceKey	string	Eaternal Source Key
externalReferenceKey	string	Eaternal Reference Key
submitOnWarningsFlag	boolean	Flag that instructs to proceed with submit even there are any validation warnings

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}StringResult	Returns list of strings. First element gives whether contract is submitted or not and batch id used for validation separated by : ex. SUBMITTED:123456789 or NOT_SUBMITTED:123456789. Second element onwards it will have validation messages in the format Severity:Validation Message

previewContract

Custom Preview operation for Contract Header SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	Contract Id
majorVersion	long	Contract Major Version
externalSourceKey	string	External Source Key
externalReferenceKey	string	External Reference Key
language	string	Preview Language

Response Payload

Element Name	Type	Description
result	string	Result of the operation includes the PDF of the contract

previewContractInHTML

Custom HTML Preview operation for Contract Header SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	Contract Id
majorVersion	long	Contract Version Number
externalSourceKey	string	External Source Key
externalReferenceKey	string	External Reference Key
language	string	Preview Language

Response Payload

Element Name	Type	Description
result	string	Result of the operation includes the HTML of the contract

previewContractInRTF

Custom RTF Preview operation for Contract Header SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	Contract Id
majorVersion	long	Contract Version Number
externalSourceKey	string	External Source Key
externalReferenceKey	string	External Reference Key
language	string	Preview Language

Response Payload

Element Name	Type	Description
result	string	Result of the operation includes the RTF of the contract

runContractExpert

The custom run Contract Expert operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	The identifier of the contract.
externalSourceKey	string	The external source key of the contract.
externalReferenceKey	string	The external reference key of the contract.
variableValues	*Contract Variable Values*	All user defined variables and values used in document clauses.
questionResponses	*Contract Question Responses*	All questions and responses used in Contract Expert rules associated to a document.
runContractExpertYN	string	Indicator to control whether to run Contract Expert.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	Result of the run Contract Expert operation includes the warning or information messages.

amendContract

The amend operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
amendContractParams	*Amend Contract*	Input values for amending a contract

Response Payload

Element Name	Type	Description
result	void	Result of the operation includes the warning or informational message.

revertContract

The revert operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
revertContractParams	*Revert Contract*	Input values for reverting a contract

Response Payload

Element Name	Type	Description
result	void	Result of the operation includes the warning or informational message.

cancelContractLine

The cancel operation for the contract line SDO. This service can be used to cancel contract lines or its covered assets.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
cancelContractLineParams	*Cancel Contract Line*	Input values for canceling a contract line.

Response Payload

Element Name	Type	Description
result	void	Result of the operation includes the warning or informational message.

closeServiceContract

The close operation for the contract header SDO. This service is for service contracts only.This service can be used to close the contract, its lines or its covered assets.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
closeServiceContractParams	*Close Service Contract*	Input values for closing a service contract.

Response Payload

Element Name	Type	Description
result	void	Result of the operation includes the warning or informational message.

getContractDocuments

Custom operation to get contract documents of a contract

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
inputParams	*Get Contract Documents List*	Input values for this operation

Response Payload

Element Name	Type	Description
result	*Contract Document*	Returns list of contract documents of a contract

getContractDocumentFileContents

Custom operation to get file contents along with file name and content type of a contract document

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
inputParams	*Get Contract Document Content*	Input values for this operation

Response Payload

Element Name	Type	Description
result	string	Returns an array of 3 strings - file name (un-encoded), file content type (un-encoded) and file contents (base64 encoded).

renewContract

The amend operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
manualRenewalParams	*Contract Renewal Request*	Input values for renewing a contract

Response Payload

Element Name	Type	Description
result	*Contract Renewal Response*	Result of the operation includes the renewed contract information.

raiseUserTransitionEvent

Custom operation to update the state_transition_flow_state in Contracts.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
inputParams	*Event Payload*	Input values for this operation

Response Payload

Element Name	Type	Description
result	string	Result of the operation includes the warning or informational message.

getContract

The get operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
id	long	The identifier of the contract.
majorVersion	long	The major version of the contract.

Response Payload

Element Name	Type	Description
result	*Contract*	The result of the get operation that also includes the successfully retrieved contract header SDO.

signContract

Service to capture signer details and sign a contract.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
inputParams	*Sign Contract*	Input values for sign contract

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	Result of the operation includes the warning or informational message.

getContractValidDocumentCategories

Custom operation to get valid contract documents of a contract.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	string	Result of this operation includes valid document categories of Contract

getContractByPrimaryKey

Get operation for Contract Header SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractId	long	Contract Id

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractHeaderResult	Result of the operation includes the successfully retrieved Contract Header SDO

createContract

The create operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractHeader	*Contract*	The contract header SDOs of all the contracts that would be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractHeaderResult	The result of the create operation that also includes the successfully created contract header SDO.

updateContract

The update operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractHeader	*Contract*	The contract header SDOs of the contract that would be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractHeaderResult	The result of the update operation that also includes the successfully updated contract header SDO.

mergeContract

The merge operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
contractHeader	*Contract*	The contract header SDOs of all the contracts that would be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractHeaderResult	The result of the merge operation includes the successfully merged contract header SDO.

findContract

The find operation for the contract header SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This field is not currently used.

Response Payload

Element Name	Type	Description
result	*Contract*	The result of the find operation that also includes a list of the contract header SDO satisfying the inbound criteria and any warnings or information messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, which is an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale that the application would use when evaluating the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and the object's attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in the ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the Name, internal name, and boolean values indicating whether create, update,

Element Name	Type	Description
		merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
cancelContract	OKC_CANCEL_CONTRACT_PRIV	Cancel Contract	Allows the cancellation of contracts and contract lines.
cancelContract	OKC_CANCEL_CONTRACT_VIA_WEB_SERVICE_PRIV	Cancel Contract via Web Service	Allows the cancellation of contracts and contract lines from outside the application.
removeHoldOnContract	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
removeHoldOnContract	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
getContractDocuments	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
getContractDocuments	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
getContractDocuments	OKC_VIEW_CONTRACT_PRIV	View Contract	Allows viewing and printing of a contract and its history, including the contract's financial summary.
previewContract	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
previewContract	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.

Operation Name	Privilege Code	Privilege Name	Privilege Description
previewContract	OKC_VIEW_CONTRACT_PRIV	View Contract	Allows viewing and printing of a contract and its history, including the contract's financial summary.
mergeContractInAllStatus	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
mergeContractInAllStatus	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
mergeContractInAllStatus	OKC_CREATE_CONTRACT_PRIV	Create Contract	Provides ability to initiate contract creation.
createContract	OKC_CREATE_CONTRACT_PRIV	Create Contract	Provides ability to initiate contract creation.
updateContract	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
updateContract	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
submitContractForApproval	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
submitContractForApproval	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
deleteContract	OKC_DELETE_CONTRACT_PRIV	Delete Contract	Allows the deletion of draft or canceled contracts.
cancelContractLine	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
cancelContractLine	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
cancelContractLine	OKC_VIEW_CONTRACT_PRIV	View Contract	Allows viewing and printing of a contract and its history, including the contract's financial summary.

Operation Name	Privilege Code	Privilege Name	Privilege Description
mergeContract	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
mergeContract	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
mergeContract	OKC_CREATE_CONTRACT_PRIV	Create Contract	Provides ability to initiate contract creation.
amendContract	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
amendContract	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
amendContract	OKC_VIEW_CONTRACT_PRIV	View Contract	Allows viewing and printing of a contract and its history, including the contract's financial summary.
getContractByPrimaryKey	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
getContractByPrimaryKey	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
getContractByPrimaryKey	OKC_VIEW_CONTRACT_PRIV	View Contract	Allows viewing and printing of a contract and its history, including the contract's financial summary.
getContractDocumentFileContents	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
getContractDocumentFileContents	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
getContractDocumentFileContents	OKC_VIEW_CONTRACT_PRIV	View Contract	Allows viewing and printing of a contract and its history, including the contract's financial summary.
signContract	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.

Operation Name	Privilege Code	Privilege Name	Privilege Description
signContract	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
updateContractToActive	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
updateContractToActive	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
applyHoldOnContract	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
applyHoldOnContract	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
previewContractInRTF	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
previewContractInRTF	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
previewContractInRTF	OKC_VIEW_CONTRACT_PRIV	View Contract	Allows viewing and printing of a contract and its history, including the contract's financial summary.
addContractDocuments	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
addContractDocuments	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
raiseUserTransitionEvent	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
raiseUserTransitionEvent	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
renewContract	OKC_RENEW_CONTRACT_PRIV	Renew Contract	Allows renewal of a contract

Operation Name	Privilege Code	Privilege Name	Privilege Description
previewContractInHTML	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
previewContractInHTML	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
previewContractInHTML	OKC_VIEW_CONTRACT_PRIV	View Contract	Allows viewing and printing of a contract and its history, including the contract's financial summary.
runContractExpert	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
runContractExpert	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
runContractExpert	OKC_VIEW_CONTRACT_PRIV	View Contract	Allows viewing and printing of a contract and its history, including the contract's financial summary.
revertContract	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
revertContract	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
revertContract	OKC_VIEW_CONTRACT_PRIV	View Contract	Allows viewing and printing of a contract and its history, including the contract's financial summary.
getContractValidDocumentCategori	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
getContractValidDocumentCategori	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
getContractValidDocumentCategori	OKC_VIEW_CONTRACT_PRIV	View Contract	Allows viewing and printing of a contract and its history, including the contract's financial summary.

Operation Name	Privilege Code	Privilege Name	Privilege Description
reopenContract	OKC_CLOSE_CONTRACT_PRIV	Close Contract	Allows the closing of contracts and contract lines.
reopenContract	OKC_CLOSE_CONTRACT_VIA_WEB_SERVICE_PRIV	Close Contract by Web Service	Allows the closing of contracts and contract lines from outside the application..
getContract	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
getContract	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
getContract	OKC_VIEW_CONTRACT_PRIV	View Contract	Allows viewing and printing of a contract and its history, including the contract's financial summary.
closeServiceContract	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
closeServiceContract	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
closeServiceContract	OKC_VIEW_CONTRACT_PRIV	View Contract	Allows viewing and printing of a contract and its history, including the contract's financial summary.
closeContract	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
closeContract	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
findContract	OKC_EDIT_CONTRACT_PRIV	Edit Contract	Allows the editing of contracts, as well as other contract management tasks.
findContract	OKC_EDIT_CONTRACT_VIA_WEB_SERVICE_PRIV	Edit Contract by Web Service	Allows the editing of contracts and other contract management tasks from outside the application.
findContract	OKC_VIEW_CONTRACT_PRIV	View Contract	Allows viewing and printing of a contract and its history, including the contract's financial summary.

Amend Contract

The amend contract object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}AmendContractParams

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ExternalReferenceKey	string	Used to identify external records that were imported.

Name	Type	Description
ExternalSourceKey	string	The source application where the contract was created. Used to identify records created through external web services.
Id	long	The unique identifier of the contract.
VersionFlag	boolean	Flag to mention whether new version to be created for amend operation

Cancel Contract Line

The cancel contract line object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}CancelContractLineParams

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CancelReasonCode	string	The reason code for the cancellation of a contract line or a covered asset.
ExternalReferenceKey	string	External reference key to identify a contract line or a covered asset.
ExternalSourceKey	string	External source key to identify a contract line or a covered asset.

Name	Type	Description
Id	long	Identifier of the contract line or covered asset.
RecordType	string	Type indicating which entity is being canceled - contract line or covered asset.
TrnCodeSetId	long	The set id to which the cancellation reason belongs to.

Close Service Contract

The close service contract object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}CloseServiceContractParams

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CloseDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date of closure of a contract, contract line or a covered asset.
CloseReasonCode	string	The reason code for the closure of a contract, contract line or a covered asset.
ExternalReferenceKey	string	External reference key to identify a contract, contract line or a covered asset.

Name	Type	Description
ExternalSourceKey	string	External source key to identify a contract, contract line or a covered asset.
Id	long	Identifier of the contract, contract line or covered asset.
RecordType	string	Type indicating which entity is being closed - contract, contract line or covered asset.
TerminationCreditMethodCode	string	The termination credit method for a contract, contract line or a covered asset.
TrnCodeSetId	long	The set id to which the close reason belongs to.

Contract

The contract header view object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractHeader

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Contract Header Language Translation*
Contains	*Contract Billing Control*
Contains	*Contract Party*
Contains	*Sales Credit*
Contains	*Contract Related Document*
Contains	*Contract Header Descriptive Flexfield Attributes*

Relationship Type	Object or Service
Contains	*Contract Line*
Contains	*Contract Revenue Plan*
Contains	*Contract Bill Plan*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevel	string	The level of the access in the hierarchy.
AccountRuleId	long	The unique identifier of the accounting rule used for service revenue recognition.
AccountRuleName	string	The accounting rule used for service revenue recognition.
AdjustmentBasis	string	The adjustment basis for the contract.
AgreedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Agreed Amount
AgreementAmountLimit	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Agreement Amount Limit
AgreementEnabledFlag	boolean	The flag that denotes whether agreement is enabled for the contract.
AllowCurrencyOverrideFlag	boolean	Indicates whether currency can be overridden on a contract.
AllowExternalItemFlag	boolean	The flag that denotes whether external item is allowed on the contract.
AmendmentEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The effective date of the amendment.
ApTermsId	long	The terms identifier for accounts payable.

Name	Type	Description
ArInterfaceYn	string	Indicates whether the billing information has been interfaced.
Assignee	string	The assignee of the contract.
AssigneeId	long	The identifier associated with the assignee of the contract.
AssigneeType	string	The assignee type for the contract.
AuthoringPartyCode	string	The code of the authoring party.
AuthoringPartyMeaning	string	The meaning of the authoring party.
AutoSendForSignature	string	Auto Send For Signature Flag
BaseContractYN	string	Indicates if the contract is Base Contract.
BillPlan	*Contract Bill Plan*	The bill plan of the contract.
BillSequence	long	The sequence in which the bill was generated.
BillToAccount	string	The account to be billed for the contract.
BillToAccountId	long	The unique identifier of the bill-to account.
BillToAccountNumber	string	The account number of the bill-to account.
BillToSiteUseId	long	The identifier of the customer site identifier where the invoices are sent.
BillToSiteUseLocation	string	The user location of the bill-to site.
BillingControl	*Contract Billing Control*	The billing control element of the contract.
BillingDateMethod	string	Billing Date type for Billing Schedule.
BillingFrequency	string	The frequency in which service billing will occur.
BillingSalesrepId	long	Billing Sales Rep ID
BillingSalesrepName	string	Billing Sales Rep Name

Name	Type	Description
BuyOrSell	string	Indicates the intent of the contract; whether it is a buy or a sell contract.
CancelReason	string	The reason for cancellation of the contract.
CancelledAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Cancelled Amount
ChrType	string	The code associated with the type of the contract.
CloseReason	string	The reason for closing the contract.
Cognomen	string	The name of the contract.
Comment	string	The comment for the contract.
CommitmentAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount committed for the contract.
ContractClass	string	The class to which the contract belongs.
ContractCreditedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Contract Credited Amount
ContractHeaderFlexfieldVA	*Contract Header Descriptive Flexfield Attributes*	The contract header flex field element.
ContractHeaderTranslation	*Contract Header Language Translation*	The contract header translation element.
ContractId	long	Contract Unique Id • Primary Key
ContractInvoicedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Contract Invoiced Amount
ContractLine	*Contract Line*	The contract line element.
ContractNumber	string	The number of the contract.
ContractNumberModifier	string	The contract number modifier.
ContractOwnerId	long	The unique identifier of the contract owner.

Name	Type	Description
ContractParty	*Contract Party*	The contract party element.
ContractPuid	string	Contract PUID
ContractTrueValue	decimal	The true value of a contract after considering the terminations.
ContractTypeId	long	The unique identifier of the contract type.
ContractTypeName	string	The type of the contract.
ContributionPercent	decimal	The contribution percent of the contract.
CorpCurrencyCode	string	Corporate Currency Code
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	Currency Conversion Rate
Currency	string	The currency of the contract.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CustomerPONumber	string	The customer PO number.
CustomerPartyId	long	The unique identifier of the customer party.
CustomerPartyName	string	Customer Party Name
CustomerPartySiteId	long	The unique identifier of the customer party site.
CustomerPartySiteName	string	Customer Party Site Name
DateApproved	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contract was approved.
DateSigned	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contract was signed.

Name	Type	Description
DateTerminated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contract was terminated.
DatetimeCancelled	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date and time when the contract was cancelled.
Description	string	The free text description of the record.
DiscountPercent	decimal	The discount in percentage of the contract applied to the bill rate.
DocumentSubType	string	Document Sub Type
EnableElectronicSignFlag	boolean	Flag to enable electronic signature
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
EsignTemplateId	string	Esignature Template Id
EstimatedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated amount of the contract.
ExemptCertificateNumber	string	The exempted certificate number.
ExemptReasonCode	string	The code associated with the exemption reason.
ExemptionReasonMeaning	string	The meaning of the exemption reason.
ExternalKey	string	Used to identify external records that were imported.
ExternalSource	string	The source application where the contract was created. Used to identify records created through external web services.
FOB	string	The Free on Board (FOB) of the contract.
FreightTerms	string	The freight terms associated with the contract.
GenerateBillingSchedule	string	Flag indicating whether billing schedules should be generated automatically or not.

Name	Type	Description
GeneratedInvoiceStatus	string	Generated Invoice Status
HoldReasonCode	string	The code identifying the hold reason.
HoldReasonCodeSetId	long	The unique identifier of the hold reason code set.
HoldReasonMeaning	string	Hold Reason Meaning
HoldUntilDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date until which the contract is on hold.
Id	long	The unique identifier of the contract.
IgnoreQAWarningsFlag	boolean	Indicator to ignore contract validation warnings.
InterCompanyFlag	boolean	Inter Company Flag
InterProjectFlag	boolean	Inter Project Flag
InvConvRateDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the invoice conversion rate was set up.
InvConvRateDateType	string	The type of the invoice conversion rate date.
InvConvRateDateTypeName	string	Inventory Conversion Rate Date Type Name
InvConvRateType	string	The type of the invoice conversion rate.
InvConvRateTypeName	string	Inventory Conversion Rate Type Name
InvConversionRate	decimal	The currency conversion rate applied to the invoice.
InvOrganizationId	long	The unique identifier of the item master organization.
InvPrepayTrxTypeId	long	Invoice Prepayment Transaction Type ID
InvPrepayTrxTypeName	string	Invoice Prepayment Transaction Type Name
InvTrxTypeId	long	The unique identifier of the invoice transaction type.

Name	Type	Description
InvTrxTypeName	string	Invoice Transaction Type Name
InvoiceRuleId	long	The unique identifier of the invoice rule used for service billing.
InvoiceRuleName	string	The invoice rule used for service billing.
ItemSourceCode	string	The code identifying the item source.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LedgerCurrency	string	The currency used in the ledger.
LegalEntityId	long	The unique identifier of the legal entity.
LegalEntityName	string	The name of the legal entity.
LineClassCode	string	Line Class Code
MajorVersion	long	The major version of the record.
NegotiationCommChannel	string	The communication channel used in the negotiation process
NegotiationContractLayoutTemplate	string	The Contract Layout Template of the contract
NegotiationCustomerAcceptance	string	The flag which indicates if customer acceptance is required for contract activation
NegotiationEnableNotification	string	The flag to enable and disable reminder notifications
NegotiationInternalApproval	string	The internal approval criteria for contract activation
NegotiationLanguage	string	The language used in the negotiation process
NegotiationTermsLayoutTemplate	string	The terms layout template of the contract

Name	Type	Description
NetInvoiceFlag	boolean	Indicates whether the invoice is a net invoice.
NonStandardClauseCount	short	Nonstandard Clause Count
OrderNumber	string	The number of the order that created the contract.
OrderSource	string	The source of the order that created the contract.
OrgId	long	The unique identifier of the business unit.
OrgName	string	The name of the business unit.
OrigSystemId	long	The unique identifier of the original system.
OrigSystemReference	string	The identifier for the record from the original system.
OrigSystemSourceCode	string	The code identifying the original system source.
OutputTaxClassificationCode	string	The code identifying the output tax classification.
OutputTaxSetId	long	The unique identifier of the output tax set.
OverallRiskCode	string	The code identifying the overall risk.
OwningOrgId	long	The unique identifier of the owning organization.
OwningOrgName	string	The name of the owning organization.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyObjectType	string	The type of the party object.
PaymentTermId	long	The unique identifier of the customer payment terms used for service billing.

Name	Type	Description
PaymentTermName	string	The customer payment terms used for service billing.
PeriodStartMeaning	string	Indicates whether service is priced from when it was bought or from calendar month start.
PeriodStartUsed	string	The code that Indicates whether service is priced from when it was bought or from calendar month start.
PeriodTypeMeaning	string	Indicates whether service is priced by fixed days for every month or by actual days of the month.
PeriodTypeUsed	string	The code Indicates whether service is priced by fixed days for every month or by actual days of the month.
PersonId	long	The unique identifier of the person.
PriceApplicationRule	string	Price Application Rule
PriceList	string	The price list.
PriceListName	string	The name of the price list.
PricingCalendarId	long	The unique identifier of the pricing calendar.
PricingCalendarName	string	The name of the pricing calendar.
PricingEffectivityDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The effective start date of pricing.
PricingPeriodType	string	The type of the pricing period.
PricingSegmentCode	string	The code of the pricing segment used to determine the pricing strategy for the contract.
PricingSegmentExplanation	string	Explanation of why a particular pricing segment was used to determine the pricing strategy for the contract.
PricingStrategyExplanation	string	Explanation of why a particular pricing strategy was used for pricing the contract.
PricingStrategyId	long	The unique identifier of the pricing strategy used to price the contract.

Name	Type	Description
PricingStrategyName	string	Pricing Strategy Name
PrimaryLedgerId	long	The unique identifier of the primary ledger.
PrimaryPartyId	long	The unique identifier of the primary party.
PrimarySalesRepresentative	string	The name of the primary sales rep
PrimarySalesrepId	long	The primary sales rep resource identifier
ProjectEnabledFlag	boolean	Indicates whether the project is enabled.
QuoteAccount	string	The organization name of the quote to contact
QuoteAddress	string	The correspondence address of the quote to contact
QuoteEmail	string	The email address of the quote to contact
QuoteFax	string	The fax of the quote to contact
QuoteOrg	string	The organization name of the quote to contact
QuotePhone	string	The phone number of the quote to contact
QuoteToContact	string	The party name of the quote to contact
QuoteToContactId	long	The party identifier of the quote to contact
QuoteToCopyToEmail	string	The copy to email address for customer communications
RecvInvOrg	string	The receiving inventory organization.
RecvInvOrgId	long	The unique identifier of the receiving inventory organization.
RelatedDocument	*Contract Related Document*	The related document element.
RenewalType	string	Renewal Type
RevenuePlan	*Contract Revenue Plan*	The revenue plan element.

Name	Type	Description
RunContractExpertFlag	boolean	Flag to decide whether to run expert after defaulting terms during contract creation or updation
SalesAccountId	long	The unique identifier of the sales account.
SalesAccountName	string	The name of the sales account.
SalesCredit	*Sales Credit*	The sales credit element.
SegmentExplanationMessageName	string	The explanation message name of the pricing segment used to determine the pricing strategy for the contract.
ServiceEnabledFlag	boolean	Indicates whether service is enabled.
ShipInvOrg	string	The shipping inventory organization.
ShipInvOrgId	long	The unique identifier of the shipping inventory organization.
ShipToAccount	string	The ship-to account.
ShipToAccountId	long	The unique identifier of the ship-to account.
ShipToAccountNumber	string	The account number of the ship-to account.
ShipToOrgLocation	string	The ship-to organization location.
ShipToPartyId	long	The unique identifier of the ship-to party location.
ShipToPartyName	string	Ship To Party Name
ShipToPartySiteId	long	The unique identifier of the ship-to party site location.
ShipToPartySiteLocation	string	Ship To Party Site Location
ShipToSiteUseId	long	The unique identifier of the ship-to site.
ShipToSiteUseLocation	string	The ship-to site use location.

Name	Type	Description
ShortDescription	string	The short description.
SkipPDPFlag	boolean	Indicator to Skip PDP call when defaulting Pricing Terms for Sales agreements
SoldToAccount	string	The sold-to account.
SoldToAccountDescription	string	The description of the sold-to account.
SoldToAccountId	long	The unique identifier of the sold-to account.
SoldToAccountNumber	string	The account number of the sold-to account.
SoldToAddress	string	The sold-to address.
SoldToNumber	string	The sold-to number.
SoldToSiteId	long	The unique identifier of the sold-to site.
SourceDocumentId	long	Source Document Id
SourceDocumentSystemCode	string	Source Application Code
SpecificDays	int	The day and offset for Billing Schedule.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
StateTransitionFlowName	string	The name of the state transition flow.
StateTransitionFlowState	string	The state transition flow state.
Status	string	The status of the record.
StsCode	string	The code identifying the status.
Subtotal	decimal	The sub total amount of the contract.
Supplier	string	The supplier of the contract.
SupplierId	long	The unique identifier of the supplier.

Name	Type	Description
SupplierSite	string	The supplier site.
SupplierSiteId	long	The unique identifier of the supplier site.
TaxAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The tax amount.
TaxClassificationMeaning	string	The meaning of the tax classification.
TaxExemptionControl	string	The tax exemption control.
TemplateFlag	boolean	The flag identifying the template.
TerminateCancelSource	string	The source of terminating or canceling the contract.
TermsTemplateId	long	The unique identifier of the terms template.
TermsTemplateName	string	Terms Template Name
TransactionTypeName	string	Transaction type name
TrnCodeSetId	long	The unique identifier of the cancel or the close reason code set.
UnbilledAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Unbilled Amount
UnderAmendVersionFlag	boolean	Under Amend Version Flag
UnderMigrationFlag	boolean	Under Migration Flag
UserStatusCode	string	The code identifying the user status.
UserStatusMeaning	string	The meaning of the user status.
VersionDescription	string	The description of the version.
VersionType	string	Version Type
WebServiceFlag	boolean	The flag identifying the web service.

Contract Assigned Billing Extension

The set of billing extensions, that define custom invoice and revenue processing, assigned to a project contract bill or revenue plan.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/contractPublicService/}AssignmentDetail

Logical Business Objects

- Projects : Project Billing

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Bill Plan*
Contained by	*Contract Revenue Plan*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveFlag	boolean	Indicator to check if assigned billing extension is active.
AssignmentDetailId	long	Unique identifier of the assigned billing extension for the bill or revenue plan. • Primary Key
CalculationLevel	string	The calculation level of the contract.
CalculationLevelCode	string	Indicates the level at which the billing event amount is calculated by the billing extension. Values are Contract Line and Associated Project.

Name	Type	Description
ExtensionAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	User-entered amount in bill transaction currency used by the billing extension to create an automatic billing event.
ExternalReferenceKey	string	Unique identifier of the assigned billing extension in the source application. Used to identify billing extension assignments to contract bill plans created through external webservices.
ExternalSourceKey	string	Unique identifier of the source application from where the assigned billing extension originates. Used to identify billing extension assignments created through external webservices.
MajorVersion	long	Version of the contract containing this particular set of assigned billing extension details. • Primary Key
Percentage	decimal	User-specified percentage to apply in calculating automatic events by the billing extension.

Contract Associated Project

The association of a contract line that funds project-based work to the projects and tasks that manage the execution of the work.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/contractPublicService/}AssociatedProject

Logical Business Objects

- Projects : Project Billing

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Line*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveFlag	boolean	Indicator to check if associated project is active.
ExternalReferenceKey	string	Unique identifier of the associated project in the source application. Used to identify project and task associations to contract lines created through external webservices.
ExternalSourceKey	string	Unique identifier of the source application from where the associated project originates. Used to identify project and task associations created through external webservices.
FundingAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The portion of the amount, to be received to fund a contract line, applicable to the associated project.
LinkId	long	Unique identifier of the association of a project and task to a contract line. • Primary Key
MajorVersion	long	Version of the contract containing this particular set of associated project details. • Primary Key
PercentComplete	decimal	For an associated project, a numeric value from 0-100 reflecting the progress it is making towards completion.
ProjElementId	long	Unique identifier of the task associated with the contract line.
ProjectId	long	Unique identifier for the project associated with the contract line.
ProjectNumber	string	The project number of the project on the linkage.
TaskNumber	string	The task number of the task on the linkage.

Contract Bill Plan

The set of instructions, assigned to one or many contract lines, on how to invoice the project contract customer.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/contractPublicService/}BillPlan

Logical Business Objects

- Projects : Project Billing

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Job Title Override SDO*
Contains	*Job Rate Override SDO*
Contains	*Labor Multiplier Override SDO*
Contains	*Contract Bill Plan Descriptive Flexfields*
Contains	*Non-labor Rate Override*
Contains	*Contract Assigned Billing Extension*
Contains	*Contract Bill Plan Translation*
Contains	*Job Assignment Override SDO*
Contains	*Person Rate Override*
Contained by	*Contract*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AssignmentDetail	*Contract Assigned Billing Extension*	Section that displays the billing extensions assigned to the bill plan.
BillMethodId	long	Unique identifier of the invoice method used to invoice against this bill plan.
BillMethodName	string	The name of the bill method.
BillPlanDescriptiveFlexField	*Contract Bill Plan Descriptive Flexfields*	A set of configurable fields that captures customer specific business process information on the contract bill plan.
BillPlanId	long	Unique identifier of the contract bill plan. • Primary Key
BillPlanName	string	Name of the bill plan that contains details on how contract lines are to be invoiced.
BillPlanTranslation	*Contract Bill Plan Translation*	A complete set of language translations for the multilingual attributes of a bill plan and revenue plan.
BillSetNumber	decimal	The billing set number used to group invoices.
BillToAccountNumber	string	The customer to whom invoices are sent to and is responsible for the payment.
BillToContactEmail	string	The email of the contact person from the bill-to customer site.
BillToContactId	long	Unique identifier of the bill-to customer contact person on a bill plan.
BillToContactName	string	The contact person of the bill-to customer.
BillToCustomerAccountId	long	The unique identifier of the account of the bill-to customer.
BillToSite	string	The customer site where the invoices are sent.
BillToSiteUseId	long	Unique identifier of the bill-to customer site that is responsible for receiving and paying the invoice amount.
BillingCurrencyType	string	The currency option of the bill plan.

Name	Type	Description
BillingCycle	string	The billing cycle of the contract bill plan.
BillingCycleId	long	Unique identifier of the frequency at which invoices are created for the bill plan.
BurdenSchFixedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	User-specified date used to derive the bill rate from the burden schedule.
BurdenSchId	long	Unique identifier of the burden schedule specified in the bill plan.
BurdenSchedule	string	The burden schedule on the revenue plan.
DocumentNumber	string	The document number on the bill plan for the letter of credit.
EnableLbrBillXtnsnFlag	boolean	Indicator to allow usage of the labor billing extension when deriving the bill rate for labor transactions.
EnableNlBillXtnsnFlag	boolean	Indicator to allow usage of the nonlabor billing extension when deriving the bill rate for nonlabor transactions.
EventInvoiceFormat	string	Events invoice identifier which summarizes invoice distributions into invoice lines. This option is applicable for events transactions.
EventsInvoiceFormatId	long	Unique identifier of the invoice format that is used to group events invoiced against the bill plan into invoice lines.
ExternalReferenceKey	string	Unique identifier of the bill plan in the source application. Used to identify contract bill plans created through external webservices.
ExternalSourceKey	string	Unique identifier of the source application from where the bill plan originates. Used to identify contract bill plans created through external webservices.
FederalInvoiceFormat	string	The invoice format of the GMS contract invoices.
FirstBillingOffsetDays	decimal	The number of days after the commencement of the project, that the first invoice will be generated.

Name	Type	Description
InvoiceComment	string	User-specified text intended for printing on invoices created for this bill plan.
InvoiceCurrencyCode	string	The name of the currency in which the invoice is issued and revenue is recognized. It is also known as the entered currency in Oracle Fusion General Ledger for invoice and revenue accounting entries.
InvoiceCurrencyConversionDateType	string	The type of the invoice currency date.
InvoiceCurrencyConversionRateType	string	The code identifying the invoice currency rate type.
InvoiceCurrencyDateType	string	The code identifying the invoice currency date type.
InvoiceCurrencyExchgDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the invoice currency exchange was set up.
InvoiceCurrencyOptCode	string	The type of currency that is used to determine the invoice and revenue currency for invoices and revenue that are created for the contract lines associated with the bill plan. The billing currency type can be the contract currency, bill transaction currency, or any user-specified currency.
InvoiceCurrencyRateType	string	The code signifying the invoice currency rate type.
InvoiceInstructions	string	Internal billing instructions that will not appear on the customer invoice.
JobAssignmentOverride	*Job Assignment Override SDO*	Job assignment override linkage
JobBillRateSchId	long	Unique identifier of the job rate schedule used to derive the bill rate for labor transactions.
JobRateOverride	*Job Rate Override*	Section that displays the job rate overrides for a bill plan.
JobTitleOverride	*Job Title Override SDO*	Job title override linkage
LaborBillBasisCode	string	Nonlabor cost basis code for cost reimbursable.
LaborCostBasis	string	The labor cost basis for cost reimbursable.

Name	Type	Description
LaborDiscountPercentage	decimal	The factor by which all bill rates derived from the person or job rate schedule for this bill plan are to be discounted.
LaborDiscountReasonCode	string	Explains the reason for the discount percentage offered against the person and job rate schedules specified in the bill plan.
LaborInvoiceFormat	string	The labor invoice format that summarizes the invoice distribution in the invoice lines. This option is applicable for labor transactions.
LaborInvoiceFormatId	long	Unique identifier of the invoice format that is used to group labor expenditure items invoiced against the bill plan into invoice lines.
LaborMarkupPercentage	decimal	Labor markup percentage.
LaborMultiplierOverride	*Labor Multiplier Override SDO*	Labor multiplier override linkage
LaborRateChangeReason	string	The reason for the change in the labor rate.
LaborSchFixedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	User-specified date used to derive the bill rate from the person or job rate schedule.
LaborTpSchFixedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	User-specified date used to derive the bill rate from the intercompany labor transfer price schedule.
LaborTpScheduleId	long	Unique identifier of the transfer price labor schedule used to derive the bill rate for intercompany labor transactions.
LocFlag	boolean	Indicates the bill plan uses letter of credit for billing.
MajorVersion	long	Version of the contract containing this particular set of bill plan details. • Primary Key
NlBillBasisCode	string	The nonlabor cost basis code of the reimbursable cost.
NlBillRateSchId	long	Unique identifier of the nonlabor rate schedule used to derive the bill rate for nonlabor transactions.

Name	Type	Description
NlDiscountPercentage	decimal	The factor by which all bill rates derived from the nonlabor rate schedule for this bill plan are to be discounted.
NlDiscountReasonCode	string	Explains the reason for the discount percentage offered against the nonlabor rate schedule specified in the bill plan.
NlInvoiceFormatId	long	Unique identifier of the invoice format that is used to group nonlabor expenditure items invoiced against the bill plan into invoice lines.
NlMarkupPercentage	decimal	The factor by which the bill amount will be calculated over the nonlabor cost.
NlSchFixedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	User-specified date used to derive the bill rate from the nonlabor rate schedule.
NlTpSchFixedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	User-specified date used to derive the bill rate from the intercompany nonlabor transfer price schedule.
NlTpScheduleId	long	Unique identifier of the transfer price labor schedule used to derive the bill rate for intercompany nonlabor transactions.
NonLaborRateOverride	*Non-labor Rate Override*	Section that displays the nonlabor rate overrides for a bill plan.
NonlaborCostBasis	string	The nonlabor cost basis of the reimbursable cost.
NonlaborInvoiceFormat	string	The nonlabor invoice format that summarizes the invoice distributions in the invoice lines. This option is applicable for nonlabor transactions.
NonlaborRateChangeReason	string	The reason for change in the nonlabor rate.
OnHoldFlag	boolean	Indicator to check if bill plan is eligible for invoice generation.
PaymentTerms	string	The payment term.
PaymentTermsId	long	The unique identifier of the payment term.
PersonBillRateSchId	long	The unique identifier of the employee bill rate schedule.

Name	Type	Description
PersonRateOverride	*Person Rate Override*	Section that displays the person rate overrides for a bill plan.
ProjectRoleBillRateSchId	long	
ReportTypeCode	string	Indicates the federal invoice format that is used for bill presentment.

Contract Bill Plan Descriptive Flexfields

The contract bill plan descriptive flex fields.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/flex/BilllPlanDff/}BilllPlanDff

Logical Business Objects

- Projects : Project Billing

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Revenue Plan Deprecated*
Contained by	*Contract Bill Plans*
Contained by	*Contract Bill Plan*
Contained by	*Contract Revenue Plan*
Handled by	*Contract Service Version 2*
Handled by	*Contract Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BillPlanId	long	The unique identifier of the bill plan. • Primary Key
MajorVersion	long	The major version on which the bill plan was defined. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Contract Bill Plan Translation

The complete set of language translations for the multilingual attributes of bill plan and revenue plan.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/contractPublicService/}BillPlanTranslation

Logical Business Objects

- Projects : Project Billing

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Bill Plan*
Contained by	*Contract Revenue Plan*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BillPlanId	long	Unique identifier of the bill plan that contains details on how contract lines are to be invoiced. • Primary Key
BillPlanName	string	Translated name of the bill plan that contains details on how contract lines are to be invoiced.
InvoiceComment	string	User-specified translated text intended for printing on invoices created for this bill plan.
InvoiceInstructions	string	Internal translated billing instructions that will not appear on the customer invoice.
Language	string	Indicates into which language the bill plan is translated. • Primary Key
MajorVersion	long	Version of the contract containing this particular set of bill plan translation details. • Primary Key
SourceLang	string	Indicates which language is the source language of the bill plan.

Contract Billing Control

The set of hard and soft limits within a date range, at the contract header and contract line levels, that controls which transactions and the total amount of transactions that can be invoiced or recognized for revenue for a contract and contract line.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/contractPublicService/}BillingControl

Logical Business Objects

- Projects : Project Billing

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Line*

Relationship Type	Object or Service
Contained by	*Contract*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveFlag	boolean	Indicator to check if billing control is active.
BillingControlId	long	Unique identifier of a billing control defined on the contract or contract line. • Primary Key
BillingResource	string	The resource breakdown structure element of the billing control.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which a billing control is no longer available for validating a transaction for billing.
ExternalReferenceKey	string	Unique identifier of the billing control in the source application. Used to identify contract billing controls created through external webservices.
ExternalSourceKey	string	Unique identifier of the source application from where the billing control originates. Used to identify contract billing controls created through external webservices.
HardLimitAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The maximum inception-to-date billed amount for transactions applicable to this billing control at which an error is to be given that the hard limit has been reached. Billing can't continue beyond the hard limit amount.
MajorVersion	long	Version of the contract containing this particular set of billing control details. • Primary Key
RbsElementId	long	Unique identifier of the resource associated with the billing control on the contract.

Name	Type	Description
SoftLimitAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The inception-to-date billed amount for transactions applicable to this billing control at which a warning is to be given that the soft limit has been reached. Billing can continue beyond the soft limit amount.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date before which a billing control is no longer available for validating a transaction for billing.

Contract Charge

The contract charge view object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractCharge

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Contract Charge Component*
Contains	*Contract Manual Price Adjustment*
Contained by	*Contract Line*
Contained by	*Contract Covered Asset*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ChargeAppliesTo	string	Charge Applies To
ChargeCurrencyCode	string	Charge Currency Code
ChargeDefinition	string	The definition of the charge applied to calculate the service price.
ChargeDefinitionCode	string	Charge Definition Code
ChargeSubtypeCode	string	Charge Subtype Code
ChargeTypeCode	string	Charge Type Code
ContractChargeComponent	*Contract Charge Component*	The contract charge component.
ContractManualPriceAdjustment	*Contract Manual Price Adjustment*	Contract Manual Price Adjustment
CoverageExtendedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The extended amount calculated by multiplying the charge price times the service duration.
CoveredItemQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	Covered Item Quantity
CoveredItemUOMCode	string	Covered Item UOM Code
CurrencyCode	string	Currency Code
ExternalReferenceKey	string	The unique identifier of the override in the source application. Used to identify overrides created through external web services.
ExternalSourceKey	string	The unique identifier of the source application where the contract charge was created. Used to identify records created through external web services.
Id	long	The unique identifier of the contract charge. • Primary Key
InvoiceRuleId	long	The unique identifier of the invoice rule used for service billing.
InvoiceRuleMeaning	string	The invoice rule used for service billing.
MajorVersion	long	The major version of the record.

Name	Type	Description
		• Primary Key
ParentEntityCode	string	Parent entity code
PaymentSetId	long	The unique identifier of the prepayment receipt.
PricePeriodicity	string	The applicable unit of duration in which the price is calculated.
PricePeriodicityCode	string	Price Periodicity Code
PriceTypeCode	string	Price Type Code
PricedQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	Priced Quantity
PricedQuantityUOMCode	string	Priced Quantity UOM Code
PrimaryFlag	boolean	Primary Flag
RollupFlag	boolean	Rollup Flag
SourceChargeId	string	Source Charge Id
UnitPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The unit price of the charge.

Contract Charge Component

The contract charge component view object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractChargeComponent

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Charge*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ChargeComponentId	long	Charge Component Id
ChargeCurrencyCode	string	Charge Currency Code
ChargeCurrencyExtendedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The extended amount calculated for the charge component in the charge currency.
ChargeCurrencyUnitPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Charge Currency Unit price
ChargeId	long	Charge Id
CoverageExtendedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Coverage Extended Amount
Explanation	string	Charge Component Explantion
ExplanationMessageName	string	Explanation Message Name
ExternalReferenceKey	string	The unique identifier of the override in the source application. Used to identify overrides created through external web services.
ExternalSourceKey	string	The unique identifier of the source application where the contract charge component was created. Used to identify records created through external web services.
HeaderCurrencyCode	string	Header Currency Code
HeaderCurrencyCoverageExtendedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The extended amount calculated for the charge component in the header currency.
HeaderCurrencyExtendedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Header Currency Extended Amount

Name	Type	Description
HeaderCurrencyUnitPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Header Currency Unit Price
Id	long	The unique identifier of the charge component. • Primary Key
MajorVersion	long	The major version of the record. • Primary Key
PercentOfComparisonElement	decimal	Percent Of Comparison Element
PriceElementCode	string	The code of the price element used for the charge component.
PriceElementUsageCode	string	Price Element Usage Code
PricingSourceId	long	Pricing Source Id
PricingSourceTypeCode	string	Pricing Source Type Code
RollupFlag	boolean	Indicates whether the charge component is a roll up of other charge components.
SourceChargeComponentId	string	Source Charge Component Id
SourceChargeId	string	Source Charge Id
SourceParentChargeComponentId	string	Source Parent Charge Component Id
TaxIncludedFlag	boolean	Tax Included Flag

Contract Covered Asset

The contract-covered asset view object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractCoveredAsset

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Contract Charge*
Contains	*Contract Service Billing Summary*
Contained by	*Contract Line*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Amount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The covered asset amount.
AssetId	long	The unique identifier of the customer asset.
AssetName	string	The customer asset name referred to in the covered asset.
CancelledAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Cancelled Amount
ContractBillLine	*Contract Service Billing Summary*	Contract Bill Line
ContractCharge	*Contract Charge*	The charge associated with the contract.
CoveragePricingError	string	The error code generated while calculating the price on the covered asset.
CreditedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Credited Amount
DateTerminated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date Terminated

Name	Type	Description
DurationQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	Covered Asset Duration
EndDate	{http://xmlns.oracle.com/adf/svc/types/}dateDate	The date on which the service ends on the covered asset.
ExternalReferenceKey	string	The unique identifier of the override in the source application. Used to identify overrides created through external web services.
ExternalSourceKey	string	The unique identifier of the source application where the contract covered asset was created. Used to identify records created through external web services.
GenerateBillingSchedule	string	Flag indicating whether billing schedules should be generated automatically or not.
Id	long	The unique identifier of the covered asset. • Primary Key
InvoiceText	string	The text for the invoice line that is interfaced for service billing.
InvoicedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Invoiced Amount
ItemId	long	The unique identifier of the item.
LineNumber	string	The line number.
LineSubTotal	decimal	Line SubTotal
MajorVersion	long	The major version of the record. • Primary Key
Period	string	Covered Asset Period
PriceAsOf	{http://xmlns.oracle.com/adf/svc/types/}dateDate	The date as of which a contract line or asset line is priced.
PriceList	string	Price List
PriceListId	long	Price List Id

Name	Type	Description
PriceUOM	string	The unit of measure in which the service is priced for the covered asset.
PricingActionCode	string	The pricing action used to calculate the price on the covered asset.
Quantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The number of items.
ReasonCodeMeaning	string	Reason Code Meaning
RenewalType	string	Renewal Type
ReturnCreditMethodCode	string	The code of the credit method used to calculate credit.
ReturnCreditMethodMeaning	string	Return Credit Method Meaning
SerialNumber	string	Serial Number
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the service starts on the covered asset.
StatusCode	string	Status Code
StatusMeaning	string	Status Meaning
TaxAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Tax Amount
TaxError	string	Tax Error
TerminatedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Terminated Amount
TransactionCodeSetId	long	The reference set used to filter the termination or cancellation code applied on the covered asset.
UOMCode	string	The code identifying the unit of measure.
UnbilledAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Unbilled Amount
VersionType	string	Version Type

Name	Type	Description

Contract Document

The view object for adding documents to a contract.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractAttachment

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttachedBy	string	Name of the user who created this attachment
AttachedDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Date when this attachment is created
AttachedDocumentId	long	Attched Document Identifier
AttachmentType	string	The attachment type of the contract document.
AttachmentTypeName	string	Attachment Type Name of the Document
Category	string	Category Name of the Document
CategoryCode	string	The category code of the document.
ContractId	long	Contract ID.

Name	Type	Description
Description	string	The free text description of the record.
ExternalKey	string	Used to identify external records that were imported.
ExternalSource	string	The source application where the contract document was created. Used to identify records created through external web services.
MajorVersion	long	Contract Major Version
Title	string	The title of the document.
URL	string	The destination URL associated with a specific Google AdWords ad.
UploadedFile	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The uploaded file.
UploadedFileName	string	The name of the uploaded file.

Contract Header Descriptive Flexfield Attributes

The contract header flex field view object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/header/flex/header/}ContractHeaderFlexfield

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Deprecated*

Relationship Type	Object or Service
Handled by	*Contract Service Version 2*
Handled by	*Contract Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContractId	long	Contract Header Flexfield Unique ID • Primary Key
Id	long	The unique identifier of the contract header flex field.
MajorVersion	long	The major version of the record.
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Contract Header Language Translation

The contract header translation view object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractHeaderTranslation

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract*

Relationship Type	Object or Service
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Cognomen	string	The translation of the contract header language.
Description	string	The free text description of the record.
Id	long	The unique identifier of the contract translation. • Primary Key
Language	string	Indicates the code of the language in which the contents of the translatable columns are translated. • Primary Key
MajorVersion	long	The major version of the record. • Primary Key
ShortDescription	string	The short description.
SourceLang	string	The language at the source system.
VersionDescription	string	The description of the version.

Contract Line

The contract line view object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractLine

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Contract Billing Control*
Contains	*Internal Contract Line Attributes SDO*
Contains	*Sales Credit*
Contains	*Contract Charge*
Contains	*Contract Line Language Translation*
Contains	*Contract Line*

Contained by	*Contract Line*
Contained by	*Contract*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountRuleId	long	The unique identifier of the accounting rule used for service revenue recognition.

Name	Type	Description
AccountRuleMeaning	string	The accounting rule used for service revenue recognition.
AdjustmentAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The adjustment amount on the contract line.
AdjustmentBasisCode	string	The adjustment basis code on the contract line.
AdjustmentBasisId	long	Adjustment Basis Id
AdjustmentType	string	The adjustment type on the contract line.
AdjustmentTypeCode	string	The adjustment type code on the contract line.
AgreedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The agreed amount on the contract line.
AgreedQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The agreed quantity on the contract line.
AgreementAmountLimit	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The agreement amount limit on the contract line.
AgreementPriceLimit	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The agreement price limit on the contract line.
AgreementPriceOverAllwdYn	string	The flag that denotes whether the agreement price can be overridden on the contract.
AgreementQuantityLimit	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The agreement quantity limit on the contract line.
AgreementUnitPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The agreement unit price on the contract line.
AllowCustomAdjustmentsFlag	boolean	The flag that denotes whether custom adjustment is allowed.
AllowPricelistOverrideYn	string	An indicator to denote whether price list can be overridden on the contract.
AllowPromotionsYn	string	The flag that denotes whether promotions are allowed on the contract.
ArInterfaceYn	string	Indicates whether the billing information has been interfaced.

Name	Type	Description
AssociatedProject	*Contract Associated Project*	The associated project on the contract line.
AtRiskYn	string	Indicates whether the contract is at risk.
AutoApplyStrategyPriceAdjustmentFlag	boolean	Auto Apply Strategy Price Adjustment Flag
BillPlan	string	The name of the bill plan.
BillPlanId	long	The unique identifier of the bill plan.
BillToAccount	string	The bill-to account where invoices are sent.
BillToAccountDescription	string	Bill To Account Description
BillToAccountId	long	The unique identifier of the bill-to account.
BillToAccountNumber	string	The number of the bill-to account where invoices are sent.
BillToAddress	string	The bill-to address where invoices are sent.
BillToSiteUseId	long	The unique identifier of the bill-to site where invoices are sent.
BillToSiteUseLocation	string	The bill-to site location where invoices are sent.
BillingControl	*Contract Billing Control*	The billing control element of the contract line.
BillingDateMethod	string	Billing Date type for Billing Schedule.
BillingFrequency	string	The code of the frequency in which service billing occurs.
BillingFrequencyMeaning	string	The frequency in which service billing occurs.
CancelledAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Cancelled Amount
CarrierId	long	The unique identifier of the carrier.
CarrierName	string	The name of the carrier.

Name	Type	Description
CloseReason	string	The reason for closing the contract.
Cognomen	string	The contract line.
Comments	string	The comments for the record.
CommitLevel	string	The commit level for the contract line.
CommitLevelCode	string	The code associated with the commit level.
ContractAllLineDesFlexVA	*Contract Line Descriptive Flexfield Attribute*	The flex field element of the contract line.
ContractAllLine_2	*Contract Line*	The sub-line element of the contract.
ContractBillLine	*Contract Service Billing Summary*	Contract Bill Line
ContractCharge	*Contract Charge*	The charge associated with the contract.
ContractCoveredAsset	*Contract Covered Asset*	The asset covered by the contract.
ContractLineTranslation	*Contract Line Language Translation*	The contract line translation element.
ContractSubscriptionLineRenewalType	string	Contract Renewal Type
CoverageScheduleId	long	Coverage Schedule
CreditedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Credited Amount
CustomerPONumber	string	The customer PO number.
DateTerminated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contract was terminated.
DeliveryDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contract was delivered.
DurationQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	Duration
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.

Name	Type	Description
EstimatedVariableConsiderationAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Estimated Variable Consideration Amount
ExemptCertificateNumber	string	The exempted certificate number.
ExemptReason	string	The reason why the contract was exempted.
ExemptReasonCode	string	The code associated with the exemption reason.
ExternalItemKey	string	The external item key.
ExternalItemReference1	string	The unique identifier of the override in the source application. Used to identify overrides created through external web services.
ExternalItemReference2	string	The unique identifier of the override in the source application. Used to identify overrides created through external web services.
ExternalItemReference3	string	The unique identifier of the override in the source application. Used to identify overrides created through external web services.
ExternalItemReference4	string	The unique identifier of the override in the source application. Used to identify overrides created through external web services.
ExternalItemReference5	string	The unique identifier of the override in the source application. Used to identify overrides created through external web services.
ExternalItemSource	string	The source of the external item.
ExternalKey	string	Used to identify external records that were imported.
ExternalSource	string	The source application where the contract line was created. Used to identify records created through external web services.
FOB	string	The FOB of the contract line.
FOBCode	string	The code identifying the FOB of the contract.
FixedPriceServiceYn	string	Indicates whether the contract supports fixed price service.

Name	Type	Description
FloorPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The floor price of the contract.
FreightTerms	string	The freight terms associated with the contract.
FreightTermsCode	string	The code identifying the freight term.
GenerateBillingSchedule	string	Flag indicating whether billing schedules should be generated automatically or not.
HoldReason	string	The reason signifying why the contract is on hold.
HoldReasonCode	string	The code identifying the hold reason.
HoldReasonCodeSetId	long	The unique identifier of the hold reason code set.
HoldUntilDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date until which the contract is on hold.
Id	long	The unique identifier of the contract line.
InvTrxTypeId	long	The identifier of the invoice transaction type used for service billing.
InvoiceRuleId	long	The unique identifier of the invoice rule.
InvoiceRuleMeaning	string	The invoice rule used for service billing.
InvoiceText	string	The text for the invoice line that is interfaced for service billing.
InvoicedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount as per the invoice.
ItemDescription	string	The description of the item.
ItemName	string	The name of the item.
ItemNameTxt	string	The free form name of the item.
ItemQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The number of items.

Name	Type	Description
LastRevenueRecogDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the revenue was last recognized.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Last Update Date
LineAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount in the contract line.
LineId	long	Line Id • Primary Key
LineNumber	string	The line number.
LinePuid	string	Line PUID
LineStatus	string	The status of the line.
LineSubTotal	decimal	Line SubTotal
LineTypeId	long	The unique identifier of the line type.
LineTypeName	string	The name of the line type.
LineValueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The amount at the contract line.
ListPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The listed price.
MajorVersion	long	The major version of the record.
MinimumReleaseAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The minimum release amount.
MinimumReleaseQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The minimum release quantity.
Object1Id1	long	The unique identifier of the item.
Object1Id2	long	The unique identifier of the item.

Name	Type	Description
OrderId	long	The source system identifier of the order that created the contract line.
OrderLineId	long	The source system line identifier of the order that created the contract line.
OrderLineNumber	string	The source system line number of the order that created the contract line.
OrderNumber	string	The source system number of the order that created the contract line.
OrderSource	string	The source of the order that created the contract line.
OrigSystemReference	string	The identifier for the record from the original system.
OrigSystemSourceCode	string	The code identifying the originating system source.
OutputTaxClassMeaning	string	The output tax classification.
OutputTaxClassificationCode	string	The code identifying the output tax classification.
PaymentSetId	long	The unique identifier of the prepayment receipt.
PaymentTerms	string	The payment term.
PaymentTermsId	long	The unique identifier of the payment term.
PaymentTermsMeaning	string	The customer payment terms used for service billing.
PercentComplete	decimal	The percentage complete.
PriceApplicationRule	string	Price Application Rule
PriceAsOf	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date as of which a contract line or asset line is priced.
PriceBook	string	Price Book
PriceBookId	long	Price Book Id

Name	Type	Description
PriceDuringBillingYn	string	Flag indicating whether the pricing should be done during the billing time.
PriceItemQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	Price Item Quantity
PriceItemUOM	string	Price Item UOM
PriceList	string	The price list.
PriceListId	long	The unique identifier of the price list.
PriceUOM	string	Price UOM
PricingError	string	Pricing Error
PricingTerm	*Pricing Terms Sales Agreement*	Pricing Term
ProjectContractLineInternalAttributes	*Internal Contract Line Attributes SDO*	Project Contract Line Internal Attributes
PurchasingCategory	string	The purchasing category.
PurchasingCategoryId	long	The unique identifier of the purchasing category.
RecInvOrgName	string	The name of the receiving inventory organization.
RecvInvOrgId	long	The unique identifier of the receiving inventory organization.
RecvLocationId	long	The unique identifier of the receiving location.
ReturnCreditMethodCode	string	The code of the credit method used to calculate credit.
ReturnCreditMethodMeaning	string	The credit method used to calculate credit.
RevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The revenue amount.
RevenuePlan	string	The name of the revenue plan.

Name	Type	Description
RevenuePlanId	long	The unique identifier of the revenue plan.
SalesCredit	*Sales Credit*	Sales Credit
ShipInvOrgId	long	The unique identifier of the ship-to inventory organization.
ShipToAccount	string	The name of the ship-to account.
ShipToAccountId	long	The unique identifier of the ship-to account.
ShipToAccountNumber	string	The account number of the ship-to account.
ShipToOrgLocation	string	The ship-to organization location.
ShipToPartyId	long	The unique identifier of the ship-to party location.
ShipToPartyName	string	Ship To Party Name
ShipToPartySiteId	long	The unique identifier of the ship-to party site location.
ShipToPartySiteLocation	string	Ship To Party Site Location
ShipToSite	string	The ship-to site.
ShipToSiteUseId	long	The unique identifier of the ship-to site.
SourceDocumentId	long	Source Document Id
SourceDocumentLineId	long	Source Document Line Id
SourceDocumentSystemCode	string	Source Application Code
SourceSystemAttributes	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The attributes of the source system.
SpecificDays	int	The day and offset for Billing Schedule.
StandaloneSellingPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Standalone Selling Price

Name	Type	Description
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
StsCode	string	The code identifying the status.
Supplier	string	The name of the supplier.
SupplierId	long	The unique identifier of the supplier.
SupplierSiteId	long	The unique identifier of the supplier site.
SupplierSiteName	string	The name of the supplier site.
TaxAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Tax Amount
TaxClassificationMeaning	string	Tax Classification Meaning
TaxError	string	Tax Error
TaxExemptionControl	string	The tax exemption control.
TaxExemptionControlMeaning	string	The meaning of the tax exemption control.
TerminatedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Terminated Amount
TrnCode	string	The code identifying the close or the cancel reason.
TrnCodeSetId	long	The unique identifier of the close or cancel set.
UOMCode	string	The code identifying the unit of measure.
UnbilledAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Unbilled Amount
UnitOfMeasure	string	The unit Of measure.
UnitPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The unit price.
VendorSiteId	long	The unique identifier of the vendor site.

Name	Type	Description
VersionType	string	Version Type
WareHouse	string	The ware house.

Contract Line Descriptive Flexfield Attribute

The contract line flex field view object.

QName: {http://xmlns.oracle.com/apps/flex/contracts/coreAuthoring/lines/}ContractLineDescFlexfield

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Line*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Id	long	The unique identifier of the contract line flex field.
LineId	long	Line Id • Primary Key
MajorVersion	long	The major version of the record.
ObjectVersionNumber	int	Object Version Number

Name	Type	Description
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Contract Line Language Translation

The contract line translation view object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractLineTranslation

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Line*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Cognomen	string	The translation of the contract line language.
Comments	string	The comments for the record.
Id	long	The unique identifier of the contract line. • Primary Key
ItemDescription	string	The description of the item.

Name	Type	Description
ItemName	string	The name of the item.
Language	string	Indicates the code of the language into which the contents of the translatable columns are translated. • Primary Key
LineDescription	string	The description of the line.
LineName	string	The name of the line.
LineReference	string	The reference of the line.
MajorVersion	long	The major version of the record. • Primary Key
SourceLanguage	string	The language at the source system.

Contract Manual Price Adjustment

The contract manual price adjustment object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractManualPriceAdj

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Charge*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdjustmentAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The adjustment amount.
AdjustmentCurrencyCode	string	The currency code of the adjustment being applied.
AdjustmentTypeCode	string	The code of the adjustment type.
AdjustmentValue	decimal	The value of the adjustment.
BasisElementCode	string	The code of the adjustment basis element.
ChargeDefinitionCode	string	The code of the charge definition applied to calculate the service price.
ChargeDefinitionId	string	The identifier of the charge definition applied to calculate the service price.
ChargeParentEntityCode	string	The code of the parent entity of the charge being applied.
ChargeParentEntityId	long	The identifier of the parent entity of the charge being applied.
ChargeRollupFlag	boolean	Flag indicating whether the charge should be rolled up.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Id	long	The unique identifier of the manual adjustment applied on a charge for a contract line. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MajorVersion	long	The major version of the record.

Name	Type	Description
		• Primary Key
ManualPricingError	string	The error code generated while applying a manual adjustment on a charge of a contract line.
PeriodFrom	decimal	Charge period from of a manual adjustment.
PeriodUntil	decimal	Charge period to of a manual adjustment.
PricePeriodicityCode	string	The major version of the record.
ReasonCode	string	The code of the manual adjustment reason.
UsageUOMCode	string	The UOM code for usage charge.
ValidFrom	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The start date of the manual adjustment.
ValidUntil	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The end date of the manual adjustment.

Contract Party

The contract party view object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractParty

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Contract Party Descriptive Flexfield Attributes*
Contains	*Contract Party Language Translation*

Relationship Type	Object or Service
Contains	*Contract Party Contact*
Contained by	*Contract*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContractPartyContact	*Contract Party Contact*	The contact of the contract party.
ContractPartyFlexfieldVA	*Contract Party Descriptive Flexfield Attributes*	The flex field element of the contract party.
ContractPartyTranslation	*Contract Party Language Translation*	The translation element of the contract party.
DeleteFlag	boolean	Delete Flag
ExternalKey	string	Used to identify external records that were imported.
ExternalSource	string	The source application where the contract party was created. Used to identify records created through external web services.
Id	long	The unique identifier of the contract party. • Primary Key
MajorVersion	long	The major version of the record. • Primary Key
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyRoleCode	string	The code identifying the party role.
PartyRolePuid	string	Party Role PUID
Role	string	The name of the contact role.

Name	Type	Description
SignedBy	string	Signed By
SignedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Signed Date
SignerRole	string	Signer Role

Contract Party Contact

The contract party contact view object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractPartyContact

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Contract Party Contact Descriptive Flexfield Attributes*
Contained by	*Contract Party*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevel	string	The level of the access in the hierarchy.
AccessLevelName	string	The name of the access level.
ContactId	long	The unique identifier of the contract.

Name	Type	Description
ContactPuid	string	Contact PUID
ContactRoleCode	string	The code associated with the contact role.
ContractPartyContactFlexfieldVA	*Contract Party Contact Descriptive Flexfield Attributes*	The flex field element of the contract party contact.
ExternalKey	string	Used to identify external records that were imported.
ExternalSource	string	The source application where the contract party contact was created. Used to identify records created through external web services.
Id	long	The unique identifier of the contract party contact. • Primary Key
MajorVersion	long	The major version of the record. • Primary Key
OwnerFlag	boolean	Indicates whether the contact is the owner of the contract.
PartyContactName	string	The name of the contact.
Role	string	The name of the contact role.
RoutingSequence	decimal	Signing Sequence
SignatureRole	string	Signatory Role Code
SignatureRoleMeaning	string	Signatory Role
SignerSequence	int	Singer Sequence
SignerYn	string	Contact who is a DocuSign recipient for electronic signature purposes

Contract Party Contact Descriptive Flexfield Attributes

The contract party contact flex field view object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/parties/flex/partyContact/}ContractPartyContactFlexfield

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Party Contact*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Id	long	The unique identifier of the contract party contact flex field. • Primary Key
MajorVersion	long	The major version of the record. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Contract Party Descriptive Flexfield Attributes

The contract party flex field view object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/parties/flex/party/}ContractPartyFlexfield

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Party*
Contained by	*Contract Party Deprecated*
Handled by	*Contract Service Version 2*
Handled by	*Contract Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Id	long	The unique identifier of the contract party flex field. • Primary Key
MajorVersion	long	The major version of the record. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Contract Party Language Translation

The contract party translation view object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractPartyTranslation

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract Party*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Alias	string	The alias of the contract party.
Cognomen	string	The translation of the contract party language.
Id	long	The unique identifier of the contract party translation. • Primary Key
Language	string	Indicates the code of the language in which the contents of the translatable columns are translated. • Primary Key
MajorVersion	long	The major version of the record. • Primary Key
SourceLang	string	The language at the source system.

Contract Question Responses

Service to capture question responses used in Contract Expert rules associated to a document.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}QuestionResponses

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
QuestionCode	string	The unique code that identifies a question.
QuestionResponse	string	The response value provided for a question.
QuestionResponseId	string	The response value id.

Contract Related Document

The related document view object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}RelatedDocument

Logical Business Objects

- CRM : Enterprise Contracts : Contract

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contract*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContractId	long	Related Document Unique ID
ContractNumber	string	The number of the related contract.
ExternalKey	string	Used to identify external records that were imported.
ExternalSource	string	The source application where the contract related document was created. Used to identify records created through external web services.
Id	long	The unique identifier of the related document. • Primary Key
PartyName	string	Party Name
RelatedContractId	long	The unique identifier of the related contract.
RelatedObjPuid	string	Related Obj PUID
Relationship	string	The name of the relationship.
RelationshipCode	string	The code identifying the relationship.

Contract Renewal Request

The ContractRenewalInParams object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractRenewalInParams

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Duration	long	To Store Duration Value
Period	string	To Store Period Value
SourceContractModifier	string	To Store Source Contract Modifier
SourceContractNumber	string	To Store Source Contract Number • Primary Key
TargetContractModifier	string	To Store Target Contract Modifier
TargetContractNumber	string	To Store Target Contract Number

Contract Renewal Response

The ContractRenewalOutParams object.

QName: {http://xmlns.oracle.com/apps/contracts/coreAuthoring/contractService/}ContractRenewalOutParams

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
TargetContractModifier	string	To Store Target Contract Modifier
TargetContractNumber	string	To Store Target Contract Number • Primary Key

Contract Revenue Plan

The set of instructions, assigned to one or many contract lines, on how to recognize project contract revenue.

QName: {http://xmlns.oracle.com/apps/projects/billing/contracts/contractPublicService/}RevenuePlan

Logical Business Objects

- Projects : Project Billing

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Job Rate Override*
Contains	*Labor Multiplier Override SDO*
Contains	*Contract Bill Plan Descriptive Flexfields*
Contains	*Non-labor Rate Override*

Relationship Type	Object or Service
Contains	*Contract Assigned Billing Extension*
Contains	*Contract Bill Plan Translation*
Contains	*Job Assignment Override SDO*
Contains	*Person Rate Override*
Contained by	*Contract*
Handled by	*Contract Service Version 2*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AssignmentDetail	*Contract Assigned Billing Extension*	Section that displays the billing extensions assigned to the revenue plan.
BillMethodId	long	The unique identifier of the revenue method.
BillMethodName	string	The name of the revenue method.
BillPlanId	long	Unique identifier of the contract revenue plan. • Primary Key
BillPlanName	string	Name of the revenue plan that contains details on how contract lines are to be recognized for revenue.
BurdenSchFixedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	User-specified date used to derive the bill rate from the burden schedule.
BurdenSchId	long	Unique identifier of the burden schedule specified in the revenue plan.
BurdenSchedule	string	The burden schedule on the revenue plan.
EnableLbrBillXtnsnFlag	boolean	Indicator to allow usage of the labor billing extension when deriving the bill rate for labor transactions.

Name	Type	Description
EnableNlBillXtnsnFlag	boolean	Indicator to allow usage of the nonlabor billing extension when deriving the bill rate for nonlabor transactions.
ExternalReferenceKey	string	Unique identifier of the revenue plan in the source application. Used to identify contract revenue plans created through external webservices.
ExternalSourceKey	string	Unique identifier of the source application from where the revenue plan originates. Used to identify contract revenue plans created through external webservices.
JobAssignmentOverride	*Job Assignment Override SDO*	Job assignment override linkage
JobBillRateSchId	long	Unique identifier of the job rate schedule used to derive the bill rate for labor transactions.
JobRateOverride	*Job Rate Override*	Section that displays the job rate overrides for a revenue plan.
LaborBillBasisCode	string	Labor cost basis code for cost reimbursable.
LaborCostBasis	string	The labor cost basis for cost reimbursable.
LaborDiscountPercentage	decimal	The factor by which all bill rates derived from the person or job rate schedule for this revenue plan are to be discounted.
LaborDiscountReasonCode	string	Explains the reason for the discount percentage offered against the person and job rate schedules specified in the revenue plan.
LaborMarkupPercentage	decimal	Labor markup percentage.
LaborMultiplierOverride	*Labor Multiplier Override SDO*	Labor multiplier override linkage
LaborRateChangeReason	string	The reason for the change in the labor rate.
