Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalGroupName	*Additional Household Name*	Additional name associated with the group.
AdditionalPartyId	*Additional Identifier*	Additional Identifier for the group.
AnnualExpenses	long	Household annual expenses.
AnnualIncome	long	The value for annual income.
AverageAge	long	Household average age.
Certification	*Certification*	Certification information associated with the group.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
CertificationReasonCode	string	Reason for group party's current certification level assignment. HZ_PARTY_CERT_REASON lookup type.
Child0to6Number	long	The number of children between 0 and 6 years.
Child13to18Number	long	The number of children between 13 and 18 years.
Child7to12Number	long	The number of children between 7 and 12 years.
CodeAssignment	*Classification Assignment*	Classification code assigned to the group.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DependentsNumber	long	The number of dependents.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveLatestChange	string	Not Used.
EffectiveSequence	int	Not Used.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
Email	*E-Mail*	The email address associated with the record.
EmailDomain	*E-Mail Domain*	Email domain information for the group.
FinancialProfile	*Financial Profile*	Financial Profile information of the group.
GroupName	string	Name of this group.
GroupSize	long	Size of the group.
GroupType	string	The party type can only be person, organization, group.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.

Name	Type	Description
LastUpdatedBy	string	The user who last updated the record.
MedianAge	long	The age of the median.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyNumber	string	The unique identification number for the party.
PartyPreference	*Preference*	Preference information of the group.
PartySite	*Address*	Address information associated with the group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUsageAssignment	*Usage Assignment*	Party usage assigned to the group.
PersonLanguage	*Contact Language*	Language information associated with a group.
Phone	*Phone*	The phone information for the entity.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonEmail	string	The E-Mail of the preferred contact person.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredContactPersonName	string	The name of the preferred contact person.
PreferredContactPersonPhone	string	The phone number of the preferred contact person.
PreferredContactPersonURL	string	The URL of the preferred contact person.

Name	Type	Description
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryAddressCity	string	The city of the primary address.
PrimaryAddressCountry	string	The country for the primary address.
PrimaryAddressCounty	string	The country of the primary address.
PrimaryAddressLine1	string	Line one of the primary address.
PrimaryAddressLine2	string	Line two of the primary address.
PrimaryAddressLine3	string	Line three of the primary address.
PrimaryAddressLine4	string	Line four of the primary address.
PrimaryAddressLocationId	long	The unique identification number for the primary address location.
PrimaryAddressPartySiteId	long	The unique identifier for the primary address party site.
PrimaryAddressPostalCode	string	The postal code of the primary address.
PrimaryAddressProvince	string	The province of the primary address.
PrimaryAddressState	string	The state of the primary address.
PrimaryEmail	string	Primary E-Mail Address of the Group.
PrimaryEmailId	long	Primary E-Mail ID.

Name	Type	Description
PrimaryFormattedAddress	string	Primary formatted address for the group.
PrimaryFormattedMultilineAddress	string	Primary formatted multiline address for the group.
PrimaryFormattedPhoneNumber	string	Primary formatted phone number for the group.
PrimaryLanguage	string	Standard name for a primary language.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneId	long	The unique identification number for the primary phone.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURL	string	Primary URL.
PrimaryWebId	long	Primary Web ID.
ProfileCreatedBy	string	The user who created the row.
ProfileCreatedByModule	string	The module that created the profile.
ProfileCreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time of the creation of the row.
ProfileLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time of the last update of the row.

Name	Type	Description
ProfileLastUpdateLogin	string	The session login associated to the user who last updated the row.
ProfileLastUpdatedBy	string	The user who last updated the row.
Relationship	*Relationship*	Relationship information for the group.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.
SuffixOverriddenFlag	boolean	This will have Y if the suffix is overridden by user N if not.
UniqueNameSuffix	string	System generated or manually overridden suffix.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
WealthAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Household wealth amount or net worth.
Web	*Web*	The web information related to the record.

Instant Messaging

The instant messaging information of a trading community member, such as the AOL identifier or Yahoo Messenger information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}InstantMessaging

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*

Relationship Type	Object or Service
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Household*

Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
InstantMessagingAddress	string	The instant messaging information address.
InstantMessagingInformation	*Trading Community Contact Point Additional Information*	The instant messaging information related to the record.
InstantMessengerType	string	The type of the instant messenger type.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.

Name	Type	Description
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary instant messaging Id of the associated object. If the value is True, then this is the primary instant messaging Id. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

My Sales Account

The Web service method to find a list of my sales accounts. My sales accounts are sales accounts assigned to me or my subordinates, and sales accounts assigned to my territories or their descendent territories.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesPartiesService/}MySalesAccount

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Sales Account Territory*
Contains	*Household*
Contains	*Trading Community Organization Details*
Contains	*Trading Community Person Details*
Handled by	*Sales Party*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AssgnExceptionFlag	boolean	Indicator showing whether the sales account had the required dimensions to allow assignment manager to assign territories to the sales account.
AttributeCategory	string	The structure definition of the user descriptive flex field.
CpdrfLastUpd	string	The standard replication column.
CpdrfVerPillar	int	The standard replication column.
CpdrfVerSor	int	The standard replication column.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
ExistingFlag	boolean	The indicator showing whether there is an existing selling or billing relationship with the sales account.
ExistingFlgLastUpdDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the existing flag was last modified.
GroupParty	*Household*	The group associated to the sales party.
InternalStatus	string	The sales party internal status.
LastAssignedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date indicating when the sales account territory assignment was last run by assignment manager.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
NamedAccountFlag	boolean	The indicator for whether a sales account is a named sales account.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was last queried.
OrganizationParty	*Trading Community Organization Details*	The organization associated to the sales party.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.

Name	Type	Description
PartyNumber	string	The unique identification number for the party.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PersonParty	*Trading Community Person Details*	The person associated to the sales party.
SalesAccountId	long	The identifier for the trading community party. • Primary Key
SalesAccountTerritory	*Sales Account Territory*	The reference to a sales party's associated territory information.
SalesAccountType	string	Type of account, contact or household. For example, customer or prospect.
Status	string	The status of the record.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Phone

The phone number associated with a trading community member. For example, the phone number for Oracle Corporation is 650-506-6000.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Phone

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FormattedPhoneNumber	string	The formatted phone number.
LastContactDtTime	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date and time of last contact placed to this contact point.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the

Name	Type	Description
		start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PagerTypeCode	string	The PAGER_TYPE_CODE column stores the lookup code for the type of pager. The type of pager determines how the page is received. For example, tone, number, alphanumeric or two-way alphanumeric.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PhoneAreaCode	string	The area code prefix for the phone number.
PhoneCallingCalendar	string	The name or code for a calling calendar used with this telephone number. This attribute is no longer used in Fusion applications.
PhoneCountryCode	string	The country code prefix for the phone number.
PhoneExtension	string	The additional number addressed after initial connection to an internal telephone system.
PhoneInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community phone.

Name	Type	Description
PhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound, or outbound.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RawPhoneNumber	string	The unformatted telephone number.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TimezoneCode	string	The foreign key to FND_TIMEZONES_B.TIMEZONE_CODE.
TransposedPhoneNumber	string	This column stores the concatenation of PHONE_COUNTRY_CODE, PHONE_AREA_CODE, and PHONE_NUMBER in reverse order. For example, if PHONE_COUNTRY_CODE=1, PHONE_AREA_CODE=650 and PHONE_NUMBER=5065747, this column stores 74756050561. This column is used for building an index to search for any combination of the above three columns.

Preference

The preferences of a trading community member. For example, a member may prefer that the transaction currency is the US dollar.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartyPreference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalValue1	string	The additional preference value.
AdditionalValue2	string	The additional preference value.
AdditionalValue3	string	The additional preference value.
AdditionalValue4	string	The additional preference value.
AdditionalValue5	string	The additional preference value.
Category	string	A preference category is used to logically group one or more preference codes in a particular user interface. The combination of CATEGORY and PREFERENCE_CODE identifies a preference.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Module	string	The program that creates the preference. For example, TCA MOBILE CUSTOMER DIRECTORY.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PartyPreferenceId	long	The unique identifier of the party preference. • Primary Key
PreferenceCode	string	A preference code determines if a preference is a single value or a multiple value preference. The preference code is validated by the HZ_PREFERENCE lookup. The combination of

Name	Type	Description
		CATEGORY and PREFERENCE_CODE identifies a preference.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
ValueDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The preference value when the data type is DATE.
ValueName	string	A user-defined alias for a preference value.
ValueNumber	decimal	The preference value when the data type is NUMBER.
ValueVarchar2	string	The preference value when the data type is VARCHAR2.

Relationship

The relationship between two trading community members. For example, John Doe is the spouse of Jane Doe or Michael Smith is a contact of Oracle Corporation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}Relationship

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Phone*
Contains	*Address*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalInformation1	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type. For operating unit and legal entity to bank relationships, column stores communication agreement ID, which identifies agreement between payer and bank

Name	Type	Description
		on type of EDIFACT documents that can be sent for processing payments.
AdditionalInformation10	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation11	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation12	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation13	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation14	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation15	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation16	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation17	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation18	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation19	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation2	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation20	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.

Name	Type	Description
AdditionalInformation21	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation22	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation23	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation24	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation25	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation26	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation27	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation28	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation29	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation3	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation30	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation4	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.

Name	Type	Description
AdditionalInformation5	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation6	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation7	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation8	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation9	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
Comments	string	The comments for the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DirectionCode	string	The code of the relationship direction. The list of accepted values are defined in the lookup DIRECTION_CODE.
Email	*E-Mail*	The email address associated with the record.

Name	Type	Description
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectEmailAddress	string	The e-mail address of the object party in the relationship.
ObjectId	long	The unique identifier of the object party in this relationship.
ObjectPartyName	string	The name of the object party in this relationship.
ObjectTableName	string	The source table name of the object party in this relationship.
ObjectType	string	The object type of the relationship.
ObjectUsageCode	string	The usage code of object party in the relationship.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationContact	*Customer Contact Profile*	The organization contact information.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyName	string	The name of the party.
PartySite	*Address*	The party site associated with the relationship.

Name	Type	Description
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the relationship.
PercentageOwnership	decimal	The percentage of the child entity owned by the parent entity.
Phone	*Phone*	The phone information for the entity.
PreferredContactFlag	boolean	Indicates if this contact person is primary contact for the customer.
PrimaryCustomerFlag	boolean	Indicates if this customer is primary customer for the contact.
RelationshipCode	string	The code for a forward or a backward relationship. A list of accepted relationship values is defined in the lookup PARTY_RELATIONS_TYPE.
RelationshipId	long	The relationship identifier for the record.
RelationshipInformation	*Trading Community Relationship Additional Information*	The relationship type information.
RelationshipRecId	long	The unique identifier of the contact's relationship record. • Primary Key
RelationshipType	string	The relationship type name. For example, CUSTOMER_SUPPLIER. A list of valid relationship types is defined in the lookup HZ_RELATIONSHIP_TYPE.
RequestId	long	A system-generated read-only attribute used by the application framework.
Role	string	The role between the subject and object party in this relationship.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
SubjectEmailAddress	string	The e-mail address of the subject party in relationship.

Name	Type	Description
SubjectId	long	The unique identifier of the subject in this relationship.
SubjectPartyUsageAssignment	*Usage Assignment*	The usage assignment of the subject party in the relationship.
SubjectTableName	string	The source table of the subject.
SubjectType	string	The subject type of the relationship.
SubjectUsageCode	string	The usage code of subject party in the relationship.
Web	*Web*	The web information related to the record.

Sales Account

An object used to store sales account profile attributes. A sales account is a sales party with usage as sales account.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesPartiesService/}SalesAccount

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Account*
Contains	*Sales Account Territory*
Contains	*Asset*
Contains	*Household*
Contains	*Trading Community Organization Details*
Contains	*Sales Account Contact Point SDO*
Contains	*Sales Account Resource*

Relationship Type	Object or Service
Contains	*Contact*
Contains	*Trading Community Person Details*
Contains	*Sales Account Contact*
Contained by	*Sales Party*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountDirectorId	long	The identifier for the sales account owner.
Asset	*Asset*	Represents the products owned by customer.
AssgnExceptionFlag	boolean	The indicator shows whether the sales account has the required dimensions to allow the assignment manager to assign territories to the sales account.
AttributeCategory	string	A segment of the user descriptive flex field.
ClassCategory	string	The label displaying the classification category.
ClassCategory1	string	The label displaying the classification category.
ClassCode	string	The label displaying the classification code.
CodeAssignmentId	long	The label displaying the classification code assignment identifier for a sales party.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CpdrfLastUpd	string	The standard replication column.

Name	Type	Description
CpdrfVerPillar	int	The standard replication column.
CpdrfVerSor	int	The standard replication column.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DeleteCustomerKey	string	The label for a transient attribute for delete operations in a web services call. If set to Y in WS payload, then sales account profile, its party usage, contact relationships, hierarchies and TCA party will be deleted. If set to N in the payload, then only sales account profile will be deleted.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
ExistingFlag	boolean	The indicator shows whether there is an existing selling or billing relationship with the sales account.
ExistingFlgLastUpdDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the existing flag was last modified.
Group	*Household*	The group associated to the sales account.
InternalStatus	string	The label displaying the internal status of a sales account to track if its active or inactive. Values for InternalStatus are active and inactive.
LastAssignedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date indicates when the sales account territory assignment was last run by assignment manager.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Meaning	string	The label displaying the classification category meaning.
NamedAccountFlag	boolean	The indicator shows whether a sales account is a named sales account.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationD	*Account*	The organization associated to the sales account.
OrganizationParty	*Trading Community Organization Details*	The organization associated to the sales account.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUniqueName1	string	The label displaying the unique name of a sales party.
PersonD	*Contact*	The person associated to the sales account.
PersonParty	*Trading Community Person Details*	The person associated to the sales account.
PrimaryFlag	boolean	The label indicating whether an account is designated primary for a sales party with

Name	Type	Description
		multiple sales accounts. Values for PrimaryFlag are yes and no.
Rating	int	Indicates the user's favorite rating for the sales account. Users can select a number between 1 to 5 to set or update the favorite rating for the sales account.
SalesAccountContactPoints	*Sales Account Contact Point*	The contact points associated to the sales account.
SalesAccountContacts	*Sales Account Contact*	The contacts associated to the sales account.
SalesAccountId	long	The label displaying the internal identifier of a sales party. • Primary Key
SalesAccountName	string	Indicates the name of the sales account.
SalesAccountNameSuffix	string	The suffix of the sales account name.
SalesAccountResource	*Sales Account Resource*	The resources associated to the sales account.
SalesAccountStatus	string	The status value reflecting the current state of the sales account. Values for status are active and inactive.
SalesAccountTerritory	*Sales Account Territory*	The territories associated to the sales account.
SalesAccountType	string	Type of account, contact or household. For example, customer or prospect.
SalesAccountUniqueName	string	Indicates the sales account unique name.
SellToPartySiteId	long	Indicates the party site id which has usage as SELL_TO.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.
Status1	string	The label displaying the status of a sales account. Sample values for status are active and inactive.

Name	Type	Description
UpdateRating	int	Indicates the user's favorite rating for the sales account. Users can pass a number between 1 to 5 to query sales accounts for which they have given one-star favorite rating to 5-star favorite rating.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.
UserSalesAccountId	long	Identifier of the user who has marked this customer account as a favorite.
ViewApplicationId	long	The label displaying view application.

Sales Account Contact Point

These are contact points associated with the account.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesPartiesService/}SalesAccountContactPoints

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Account*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point.
CpdrfLastUpd	string	The standard replication column.

Name	Type	Description
CpdrfVerPillar	int	The standard replication column.
CpdrfVerSor	int	The standard replication column.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PrimaryFlag	boolean	Indicates contact point as primary. Note, multiple contact points for an account can be marked as primary, as long as they are not of the same type. For example, an account can have a primary email and a primary phone number.
SAccountContactPointId	long	Indicates account contact point identifier. • Primary Key
SalesAccountId	long	Indicates account which is related to the contact point.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Sales Account Contact

These are contacts associated with the account.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesPartiesService/}SalesAccountContacts

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Account*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AffinityLvlCd	string	The LOV that shows the affinity the contact has with the deployment company. Valid values are Favorable, negative, neutral, somewhat favorable, and somewhat negative.
BuyingRoleCd	string	Indicates the buying role of the contact. LOV with valid values as Does not matter, Key decision maker, Secondary decision maker, and Supporting role.
Comments	string	The comments for the record.
CpdrfLastUpd	string	The standard replication column.
CpdrfVerPillar	int	The standard replication column.
CpdrfVerSor	int	The standard replication column.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
InfluenceLvlCd	string	Indicates the influence level of the contact. LOV with valid values as Influence Circle, None, and Political Structure.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PersonPartyId	long	Indicates the person party id of this relationship.
PrimaryFlag	boolean	Indicates account contact as primary.
RelationshipId	long	The relationship identifier for the record.
SAccountContactId	long	Indicates the account contact identifier. • Primary Key
SalesAccountId	long	Indicates the account which is related to the contact.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Sales Account Resource

An object representing a resource party that is assigned to a sales account team and has a defined access role for the sales account.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesPartiesService/}SalesAccountResource

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Party*
Contained by	*Sales Account*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Sales Account Resource Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevelCode	string	The access level determines the type of access granted to the resource as well as managers of the organizations. The possible values are contained in the ZCA_ACCESS_LEVEL lookup.
AccountDirectorId	long	The party identifier for the resource designated as the sales account owner.
AssignmentTypeCode	string	The code indicating how the resource is assigned to the sales account team. The possible values are contained in the ZCA_ASSIGNMENT_TYPE lookup.
Attribute1	string	The segment of the user descriptive flex field.
Attribute10	string	The segment of the user descriptive flex field.

Name	Type	Description
Attribute11	string	The segment of the user descriptive flex field.
Attribute12	string	The segment of the user descriptive flex field.
Attribute13	string	The segment of the user descriptive flex field.
Attribute14	string	The segment of the user descriptive flex field.
Attribute15	string	The segment of the user descriptive flex field.
Attribute2	string	The segment of the user descriptive flex field.
Attribute3	string	The segment of the user descriptive flex field.
Attribute4	string	The segment of the user descriptive flex field.
Attribute5	string	The segment of the user descriptive flex field.
Attribute6	string	The segment of the user descriptive flex field.
Attribute7	string	The segment of the user descriptive flex field.
Attribute8	string	The segment of the user descriptive flex field.
Attribute9	string	The segment of the user descriptive flex field.
AttributeCategory	string	The structure definition of the user descriptive flex field.
AttributeDate1	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The segment of the user descriptive flex field.
AttributeDate2	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The segment of the user descriptive flex field.
AttributeDate3	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The segment of the user descriptive flex field.
AttributeDate4	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The segment of the user descriptive flex field.
AttributeDate5	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The segment of the user descriptive flex field.

Name	Type	Description
AttributeNumber1	decimal	The segment of the user descriptive flex field.
AttributeNumber2	decimal	The segment of the user descriptive flex field.
AttributeNumber3	decimal	The segment of the user descriptive flex field.
AttributeNumber4	decimal	The segment of the user descriptive flex field.
AttributeNumber5	decimal	The segment of the user descriptive flex field.
CpdrfLastUpd	string	The standard replication column.
CpdrfVerPillar	int	The standard replication column.
CpdrfVerSor	int	The standard replication column.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
EmailAddress	string	The email address associated with the record.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
FormattedPhoneNumber	string	The formatted phone number.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
LockAssignmentBooleanFlag	boolean	Indicates whether the sales account resource is enabled for locked assignment, which means the sales account resource cannot be removed from the team at future territory assignments.
LockAssignmentFlag	boolean	The flag indicates automatic territory assignment cannot remove the sales account team resource when this flag is Y'. When a sales account team member is added manually, this flag is defaulted to Y'.
ManagerPartyId	long	The party identifier for the manager.
MemberFunctionCode	string	The lookup code indicating a sales account resource's role on the resource team such as Integrator, Executive Sponsor and Technical Account Manager. The code lookup is stored in FND_LOOKUPS.
Name	string	The name of the organization for the resource.
Name1	string	The name of the territory.
NamedAccountFlag	boolean	The indicator for whether a sales account is a named sales account.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was last queried.
ObjectVersionNumber2	int	The number to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
OrgTreeCode	string	The code for the organization hierarchy tree. Managers and administrators of sales account resource gain access through this hierarchy.

Name	Type	Description
OrgTreeStructureCode	string	The structure code for the organization hierarchy tree. Managers/Administrators of parent member organizations will gain access through this hierarchy.
OrganizationId	long	The identifier for the organization the sales account resource belongs.
OwnerResourceId	long	The identifier for the sales account owner.
PartyName	string	The name of the party.
PartyName1	string	The party name of the manager.
PrTerritoryId	long	The territory the sales account team resource belongs to.
ReportsToFlag	boolean	The indicator showing a resource reports to another resource in the same account team.
ResourceId	long	The unique identifier of the resource.
ResourceOrgId	long	The resource organization identifier.
ResourcePartyId	long	The party identifier for the resource.
ResourcePrimaryOrgId	long	The resource primary organization identifier.
ResourcePrimaryOrgName	string	The resource primary organization name.
RoleName	string	The list of all roles for the resources in the organization.
SAccountResourceId	long	The surrogate primary key for the member of the sales account resource team. • Primary Key
SalesAccountId	long	The identifier for the sales account.
SalesAccountPartyId	long	The unique identifier for the sales account.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
TerritoryVersionId	long	The territory version is a primary key.

Name	Type	Description
TypeCode	string	The type code for the territory of which the resource is member of.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Sales Account Resource Access

The alternative sales account resource service data object used exclusively by Oracle Fusion Secure Enterprise Search.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesPartiesService/}SalesAccountResourceAccess

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Sales Party*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
PartyName	string	The name of the party.
ResourceId	decimal	The unique identifier of the resource. • Primary Key
SalesAccountId	long	The identifier for the sales account. • Primary Key
UserGUID	string	The user guid for the sales account resource.

Sales Account Territory

An object representing sales account territory attributes for territory assigned to the sales account.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesPartiesService/}SalesAccountTerritory

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Party*
Contained by	*My Sales Account*
Contained by	*Sales Account*
Handled by	*Sales Account Territory Service*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Name	string	The territory name.

Name	Type	Description
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
SAccountTerritoryId	long	The sales account territory identifier. • Primary Key
SalesAccountId	long	The sales account identifier.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
StatusCode	string	The pre-defined code used to indicate the status.
TerritoryId	long	The territory identifier.
TerritoryVersionId	long	The territory version identifier.
TypeCode	string	The type code of the sales account territory.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Sales Party

An object representing sales party attributes that is used to store values while creating or changing a sales party. A sales party can be a legal entity, a sales prospect, or a sales account.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesPartiesService/}SalesParty

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Sales Account Territory*
Contains	*Sales Account*
Contains	*Household*
Contains	*Trading Community Organization Details*
Contains	*Sales Account Resource*
Contains	*Trading Community Person Details*
Handled by	*Sales Party*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountDirectorId	long	The identifier for the sales account owner.
AssgnExceptionFlag	boolean	Indicator showing whether the sales account had the required dimensions to allow assignment manager to assign territories to the sales account.
AttachmentEntityName	string	The name of the attachment entity, which is a constant expression. The expression being ZCA_SALES_PARTY.
AttributeCategory	string	The structure definition of the user descriptive flex field.
CpdrfLastUpd	string	The standard replication column.
CpdrfVerPillar	int	The standard replication column.
CpdrfVerSor	int	The standard replication column.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
ExistingFlag	boolean	The indicator showing whether there is an existing selling or billing relationship with the sales account.
ExistingFlgLastUpdDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the existing flag was last modified.
GroupParty	*Household*	The group object representing the sales party.
InternalStatus	string	The sales party internal status.
LastAssignedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date indicating when the sales account territory assignment was last run by assignment manager.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
NamedAccountFlag	boolean	The indicator for whether a sales account is a named sales account.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was last queried.
OrganizationParty	*Trading Community Organization Details*	The organization associated to the sales party.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.

Name	Type	Description
PartyNumber	string	The unique identification number for the party.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PersonParty	*Trading Community Person Details*	The person object representing the sales party.
SalesAccount	*Sales Account*	The sales account associated with the sales party.
SalesAccountId	long	The sales account identifier. • Primary Key
SalesAccountPartyId	long	The identifier for the trading community party.
SalesAccountResource	*Sales Account Resource*	The sales account resource associated to the sales party.
SalesAccountTerritory	*Sales Account Territory*	The reference to a sales account's associated territory information.
Status	string	The status of the record.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Source System Reference

The name of external source system where the trading community information is imported from.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}OriginalSystemReference

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OldOrigSystemReference	string	The old source system reference that is being replaced.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.

Name	Type	Description
OrigSystemReferenceId	long	The unique identifier for original system reference. • Primary Key
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
SourceSystemRefInformation	*Trading Community Original System Mapping Identifier Additional Information*	The source system reference information.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Telex

The telex number information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Telex

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.

Name	Type	Description
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary telex of the associated object. If the value is True, then this is the primary telex. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.

Name	Type	Description
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TelexNumber	string	The telex reference number (usually a telephone number) of the organization.

Trading Community Address Additional Information

The address information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/partySite/}PartySiteInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contact Address*
Contained by	*Address*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BeginDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date at the start of the date range within which the row is active.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
IntegrationKey	string	The integration key is not used.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PartySiteUseId	long	The unique identifier of the party site used. • Primary Key

Name	Type	Description
PrimaryPerType	string	Indicates if this is the primary use for the site. Y stands for the primary site and N stands for all other sites.
RequestId	long	A system-generated read-only attribute used by the application framework.
SiteUseType	string	The site use type associated with the address.
Status	string	The status of the record.

Trading Community Contact Point Additional Information

The contact point for a trading community member like phone or e-mail. For example 650-506-6000 is the phone number for Oracle Corporation, john.doe@example.com is the e-mail address for John Doe.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/contactPoint/}ContactPointInformation

Relationships

Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalOrganizationName	*Additional Account Name*	The additional name associated with the organization.
AdditionalPartyId	*Additional Identifier*	The additional identifier associated with the organization or person.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AnalysisFy	string	The fiscal year that the financial information is based on.
CategoryCode	string	The code of the category to which the person belongs. A list of accepted values is defined in the lookup type CUSTOMER_CATEGORY.
CeoName	string	The name of the chief executive officer. It is the denormalized value of the CEO_NAME in HZ_ORGANIZATION_PROFILES.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
Certification	*Certification*	The certification information associated with the organization.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
City	string	The name of the city.
CodeAssignment	*Classification Assignment*	The classification code assigned to the organization.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.

Name	Type	Description
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRating	*Credit Rating*	The credit rating for the organization.
CurrentFiscalYearPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its current fiscal year.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
Edi	*Electronic Data Interchange*	The electronic data interchange information for the organization.
Eft	*Electronic File Transfer*	The electronic file transfer information for the organization.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EmailDomain	*E-Mail Domain*	The domain name of the email address.
EmployeesTotal	decimal	The total number of employees.
FinancialProfile	*Financial Profile*	The financial profile information of the organization.
FinancialReport	*Financial Report*	The financial report information of the organization.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services

Name	Type	Description
		Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
GroupType	string	The type of the group.
HQBranchIndicator	string	The status of this site, such as HQ, a branch, or a single location. A list of accepted values are defined in the lookup type HQ_BRANCH_IND.
HomeCountry	string	The home country associated with the party.
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LanguageName	string	The standard name for the language.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MissionStatement	string	The corporate charter of organization in user-defined text format.
NextFyPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its next fiscal year.

Name	Type	Description
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationProfile	*Account*	The information about the partner organization.
OrganizationSize	string	The size of the organization based on its revenue, number of employees, and so on.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartyPreference	*Preference*	The preference mentioned in the organization details.
PartySite	*Address*	The party site associated with the organization.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the organization.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
Phone	*Phone*	The phone information for the entity.

Name	Type	Description
PostalCode	string	The postal code element of the address.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryEmailContactPointId	long	The unique identifier of the primary e-mail.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneContactPointId	long	The unique identifier of the primary phone contact point.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.

Name	Type	Description
PrimaryURLContactPointId	long	The unique identifier of the primary URL contact point.
PrincipalName	string	The Name of the highest ranking person in the company.
Province	string	The name of the province.
Relationship	*Relationship*	The relationship information of the organization.
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The Standard Industry Classification (SIC) code.
SICCodeType	string	The version of Standard Industry Classification (SIC) code.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
SourceSystemUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the source system information was last updated.
State	string	The name of the state.
Status	string	The status of the record.
Telex	*Telex*	The telex information of the organization.
ThirdPartyFlag	boolean	Indicates whether a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. If the value is Y, then the party is a third party relationship. If Oracle Service is installed, the Third Party field in the Customers window is mandatory.
TradingPartnerIdentifier	string	The FSIO related trading partner codes.
URL	string	The destination URL associated with a specific Google AdWords ad.

Name	Type	Description
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
Web	*Web*	The web information related to the record.
YearEstablished	int	The year when the organization began doing business.

Trading Community Organization Profile Additional Information

The additional profile information about an organization, such as the organization type.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/organization/}OrganizationInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalPartyId	*Additional Identifier*	The additional identifier associated with the organization or person.
AdditionalPersonName	*Additional Contact Name*	The additional name of the person.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
CategoryCode	string	The code of the category to which the person belongs. A list of accepted values is defined in the lookup type CUSTOMER_CATEGORY.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
Certification	*Certification*	The certification information for the person.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
Citizenship	*Citizenship*	The citizenship information of a person.
City	string	The name of the city.
CodeAssignment	*Classification Assignment*	The classification code assigned to the person.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
Country	string	The name of the country.

Name	Type	Description
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRating	*Credit Rating*	The credit rating of the person.
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was born.
Education	*Education*	The education information of the person.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EmailDomain	*E-Mail Domain*	The domain name of the email address.
EmploymentHistory	*Employment History*	The employment history information of a person.
FinancialProfile	*Financial Profile*	The financial profile information of a person.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
Gender	string	The gender of the person, such as male, female, and unknown. A list of accepted values is defined in the lookup HZ_GENDER.
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.

Name	Type	Description
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LanguageName	string	The standard name for the language.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaritalStatus	string	The marital status of the person. A list of accepted values is defined in the lookup MARITAL_STATUS.
MissionStatement	string	The corporate charter of organization in user-defined text format.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartyPreference	*Preference*	The preference mentioned in the person details.
PartySite	*Contact Address*	The party site associated with the person.

Name	Type	Description
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the person.
PersonAcademicTitle	string	The part of the person's title that denotes the academic qualification, such as Dr. Jane Smith.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonInterest	*Contact Interest*	The interest information associated with a person.
PersonLanguage	*Contact Language*	The language information associated with a person.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	The prefix for the last name of a person, such as fon, van. For example, if a person's name is Hans Van, the last name of the person is captured using this attribute.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	The place in a family structure. For example, in "Tom Jones III", the "III".
PersonPreNameAdjunct	string	The preferred name adjacency of a resource.
PersonPreviousLastName	string	The previous last name of a person.
PersonProfile	*Contact*	The profile information of the person.

Name	Type	Description
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
Phone	*Phone*	The phone information for the entity.
PostalCode	string	The postal code element of the address.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryEmailContactPTId	long	The unique identifier of the primary e-mail.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneContactPTId	long	The unique identifier of the primary phone contact point.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.

Name	Type	Description
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURLContactPTId	long	The unique identifier of the primary URL contact point.
Province	string	The name of the province.
Relationship	*Relationship*	The relationship information of the person.
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The Standard Industry Classification (SIC) code.
SICCodeType	string	The version of Standard Industry Classification (SIC) code.
Salutation	string	The size of the household this person is a part of.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
SourceSystemUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the source system information was last updated.
State	string	The name of the state.
Status	string	The status of the record.
ThirdPartyFlag	boolean	Indicates whether a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. If the value is Y, then the party is a third party relationship. If Oracle Service is installed, the

Name	Type	Description
		Third Party field in the Customers window is mandatory.
URL	string	The destination URL associated with a specific Google AdWords ad.
UserGUID	string	The "light weight" user Global Unique Id. Light Weight users defined in the Extended Security (XS) System.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
Web	*Web*	The web information related to the record.

Trading Community Person Profile Additional Information

The additional information about a trading community person.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/person/}PersonInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contact*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Loyalty Member Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
PersonProfileId	long	The unique identifier of the person profile. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Relationship Additional Information

The relationship between two trading community members. For example, John Doe is the spouse of Jane Doe or Michael Smith is a contact of Oracle Corporation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/relationship/}RelationshipInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*

Relationship Type	Object or Service
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
RelationshipRecId	long	The unique identifier of the contact's relationship record. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Usage Assignment

The party usage assigned to a trading community member. For example, John Doe is a contact of ABC Corporation and XYZ Corporation is a supplier.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartyUsageAssignment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*

Relationship Type	Object or Service
Contained by	*Trading Community Organization Details*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Trading Community Party Usage Assignment Service*
Handled by	*Trading Community Party Information*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
PartyUsageCode	string	The usage context of a party's contact point.
PartyUsgAssignmentId	long	The unique identifier of the party usage assignment. • Primary Key
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.

Web

The Web information associated with a trading community member. For example, Oracle's address on the Web is www.oracle.com.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Web

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*

Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*

Relationship Type	Object or Service
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N stands for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.

Name	Type	Description
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
URL	string	The destination URL associated with a specific Google AdWords ad.
WebInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community Web.
WebType	string	The prefix class to a Web address. Typically, this is either FTP or HTTP.

Work Class

The custom-defined classification of information about a person's job title and work experience.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}WorkClass

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Employment History*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*

Relationship Type	Object or Service
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmploymentHistoryId	long	The foreign key to the HZ_EMPLOYMENT_HISTORY table.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LevelOfExperience	string	The user-defined rating for the level of experience in the class of work. For example, journeyman, trainee, or exposure.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.
WorkClassId	long	The unique identifier for the class of work. • Primary Key
WorkClassName	string	The user-determined classification for work. For example, bricklayer, doctor, lawyer, programmer, or minister of health.

Sales Party Resource Service

The service to create, update, get, or find sales party resources.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesPartyResourceService/}SalesPartyResourceService

Service WSDL URL: https://servername/crmService/SalesPartyResourceService?WSDL

Operations

- *getSalesPartyResource*
- *createSalesPartyResource*
- *updateSalesPartyResource*
- *deleteSalesPartyResource*
- *findSalesPartyResource*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

getSalesPartyResource

The get operation for sales party resource details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyResourceId	long	The identifier for sales party resource.

Response Payload

Element Name	Type	Description
result	*Sales Party Resource*	The operation that returns sales party resource details that matches the inbound key attributes.

createSalesPartyResource

The operation that created sales party resource details for a party.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesPartyResource	*Sales Party Resource*	Sales Party Resource Details to be created

Response Payload

Element Name	Type	Description
result	*Sales Party Resource*	The result of the operation including the successfully created sales party resource and any warnings or informational messages.

updateSalesPartyResource

The operation to update sales party resource details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesPartyResource	*Sales Party Resource*	The required input parameter of the updateEntity web service method. Use the API name of the custom object you want to update.

Response Payload

Element Name	Type	Description
result	*Sales Party Resource*	The result of the operation includes the successfully updated sales party resource details or a list of warnings or informational messages, or both.

deleteSalesPartyResource

The operation that deletes sales party resource details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesPartyResource	*Sales Party Resource*	Sales Party Resource Details to be deleted

Response Payload

Element Name	Type	Description
result	void	A list of warnings or informational messages encountered when deleting the object.

findSalesPartyResource

The find operation for sales party resource details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.

Element Name	Type	Description
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*Sales Party Resource*	The result of the operation including the list of sales party resource details that satisfy the inbound criteria and any warnings or informational messages encountered during the invocation.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The locale name is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	ZCM_MANAGE_SALES_PARTY_TEAM_PRIV	Manage Sales Party Team	Allows managing the sales party team

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCM_MANAGE_SALES_PARTY_TEAM_PRIV	ORA_ZCM_SR_SALES_PARTY_MANAGEMENT	Service Sales Party Management	Can create Service Requests and help with resolution of the Service

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			Request. Has basic Service Request management capabilities.
ZCM_MANAGE_SALES_PARTY_TEAM_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
ZCM_MANAGE_SALES_PARTY_TEAM_PRIV	ORA_ZCM_PARTNER_SALES_PARTY_MANAGEMENT_DUTY	Partner Sales Party Management	Manages creation and maintenance of sales organizations and consumers for partners. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts. This role has limited access to customers and contacts.
ZCM_MANAGE_SALES_PARTY_TEAM_PRIV	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	ORA_OKC_ALL_BUSINESS_UNITS_CONTRACT_INQUIRY_DUTY_CRM	Contract View Access Across All Contracts	Views all contracts across an enterprise.
ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	ORA_ZCM_SALES_PARTY_REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.

Account

An organization account and its profile information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}OrganizationProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Organization Profile Additional Information*
Contained by	*Sales Account*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Alias	string	The organization alias name.
AnalysisFy	string	The fiscal year that the financial information is based on.
BankCode	string	Identifies the bank in several countries, typically for regulatory purposes.
BankOrBranchNumber	string	Stores bank number for banks and branch number for bank branches. Primarily stores ABA number for US bank branches.
BranchCode	string	Identifies the bank branch in several countries, typically for regulatory purposes.
BranchFlag	boolean	Indicates if this is a branch location. If the value is True, then this is a branch location.
BusinessReport	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	Dun and Bradstreet business information report.
BusinessScope	string	The physical class of business in which a business participates. For example, local, national, or international.
CeoName	string	The name of the chief executive officer. It is the denormalized value of the CEO_NAME in HZ_ORGANIZATION_PROFILES.
CeoTitle	string	The formal title of the chief executive officer.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
Comments	string	The comments for the record.
CongDistCode	string	The U.S. Congressional district code for the account.
ContentSourceNumber	string	The content source number is not used.

Name	Type	Description
ControlYr	decimal	The year when current ownership gained control of the organization.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CorporationClass	string	The taxation classification for corporation entities such as Chapter S in the US.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CurrentFiscalYearPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its current fiscal year.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DataCloudStatus	string	Specifies the enrichment status of the person.
DbRating	string	The Dun & Bradstreet credit rating.
Disadv8aInd	string	Indicates whether the organization is considered disadvantaged by the US government under Title 8A. If the value is Yes, the organization is considered disadvantaged under Title 8A. The default value is No.
DisplayedDUNSPartyIdentifier	long	Dun and Bradstreet does not maintain data for the branch offices of companies that are located beyond North America. Data is only maintained for the company headquarters. If the data pertains only to company headquarters, the headquarters PARTY_ID is stored. If the data pertains to a branch office, the branch PARTY_ID is stored.

Name	Type	Description
DoNotConfuseWith	string	Indicates existence of similarly named businesses.
DomesticUltimateDUNSNumberC	string	DUNS Number for the Domestic Ultimate, which is the highest family member in the same country as the business entity. A subject can be its own Domestic Ultimate.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveLatestChange	string	The effective latest change is not used.
EffectiveSequence	int	The effective sequence is not used.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
EmployeesAtPrimaryAddress	string	The number of employees at the referenced address.
EmployeesAtPrimaryAddressEstimation	string	Indicates the calculation of employees at the primary address as estimated.
EmployeesAtPrimaryAddressMinimum	string	Indicates the calculation of employees at the primary address as minimum.
EmployeesAtPrimaryAddressText	string	The number of employees at the referenced address that cannot be mapped to a number.
EmployeesTotal	decimal	The total number of employees.
EnquiryDUNS	string	The identifier used to query the Dun and Bradstreet data. If a location is a branch, then in some countries the headquarters DUNS number is used to do the query. Otherwise it is the same as the DUNS number.
ExportInd	string	Indicates whether the organization is an exporter. If the value is Y, then the organization is an exporter. The default value is N.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services

Name	Type	Description
		Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
GlobalUltimateDUNSNumberC	string	DUNS Number for the Global Ultimate, which is the highest family member in the same country as the business entity as you proceed further on this branch of the tree. A case can be its own ultimate.
GrowthStrategyDescription	string	The description of the growth strategy.
HQBranchIndicator	string	The status of this site, such as HQ, a branch, or a single location. A list of accepted values are defined in the lookup type HQ_BRANCH_IND.
HomeCountry	string	The home country associated with the party.
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
ImportInd	string	Indicates whether the organization is an importer. If the value is Y, then the organization is an importer. The default value is N.
IncorpYear	int	The year that the business was formally incorporated.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LaborSurplusInd	string	Indicates whether the organization operates in an area with a labor surplus. If the value is Y, then the organization operates in an area with a labor surplus. The default value is N.
LastEnrichmentDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was last enriched in DaaS.

Name	Type	Description
LastSourceUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated by the source system.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdateSourceSystem	string	The source system that last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LegalStatus	string	The legal structure of the organization such as partnership, corporation, and so on.
LineOfBusiness	string	The type of business activities performed at this site.
LocalActivityCode	string	The local activity classification code.
LocalActivityCodeType	string	The local activity classification code type identifier.
LocalBusIdenType	string	The most common business identifiers in a country such as Chamber of Commerce Number in Italy, Government Registration Number in Taiwan. A list of accepted values are defined in the lookup type LOCAL_BUS_IDEN_TYPE.
LocalBusIdentifier	string	The primary identifier assigned to a businesses by a government agency such as Chamber of Commerce, or other authority. It is often used by countries other than USA.
MinorityOwnedInd	string	Indicates whether the organization is primarily owned by ethnic or racial minorities. If the value is Y, then the organization is owned by ethnic or racial minorities. The default value is N.
MinorityOwnedType	string	The type of minority-owned firm.
MissionStatement	string	The corporate charter of organization in user-defined text format.
NextFyPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its next fiscal year.

Name	Type	Description
OobInd	string	Indicates whether the organization is out of business. If the value is Y, then the organization is out of business. The default value is N.
OrgInformation	*Trading Community Organization Profile Additional Information*	The information of the organization.
OrganizationName	string	The name of the party when the party type is Organization.
OrganizationProfileId	long	The unique identifier of the organization profile. • Primary Key
OrganizationSize	string	Size of an organization based on revenue, number of employees, and so on.
OrganizationType	string	Not used in Fusion V1.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
ParentDUNSNumberC	string	Parent is a corporation that owns more than 50 percent capital stock of another corporation. The parent company can also be a subsidiary of another corporation. If the parent also has branches, then it is headquarters and also parent company. Headquarters is a business establishment that has branches or divisions reporting to it, and is financially responsible for those branches or divisions. If the headquarters has more than 50 percent of capital stock owned by another corporation, then it is also a subsidiary. If it owns more than 50 percent of capital stock of another corporation, then it is also a parent.
ParentSubInd	string	Indicates whether the organization is a parent or subsidiary.
PartyId	long	The unique identifier of the contact party.
PartyNumber	string	The unique identification number for the party.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix.

Name	Type	Description
		For Person, it is concatenation of person_name and suffix.
PreferredContactEmailAddress	string	The e-mail address of the primary contact person of the organization.
PreferredContactFormattedPhoneNumber	string	The formatted phone number of the primary contact person of the organization.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactName	string	The name of the primary contact person of the organization.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryAddressCity	string	The city of the identifying address.
PrimaryAddressCountry	string	The country listed in the TERRITORY_CODE column of the FND_TERRITORY table for the identifying address.
PrimaryAddressCounty	string	The county of the Identifying address.
PrimaryAddressLine1	string	The first line of the identifying address.
PrimaryAddressLine2	string	The second line of the Identifying address.
PrimaryAddressLine3	string	The third line of the Identifying address.

Name	Type	Description
PrimaryAddressLine4	string	The fourth line of the Identifying address.
PrimaryAddressPostalCode	string	The postal code of the identifying address.
PrimaryAddressProvince	string	The province of the identifying address.
PrimaryAddressState	string	The state of the Identifying address.
PrimaryEmailAddress	string	The e-mail address of the organization.
PrimaryEmailId	long	The primary e-mail contact point ID of the organization.
PrimaryFormattedPhoneNumber	string	The primary telephone number formatted in the local format of the organization.
PrimaryLanguage	string	The standard name for a language.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneId	long	The primary contact point phone ID of the organization.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURL	string	The primary uniform resource locator.
PrimaryWebId	long	The unique identifier of the primary uniform resource locator.

Name	Type	Description
PrincipalName	string	The Name of the highest ranking person in the company.
PrincipalTitle	string	The title of the highest ranking person in the organization.
Pronunciation	string	The pronunciation of the organization.
PublicPrivateOwnershipFlag	boolean	Indicator to specify if the organization is privately owned. Y stands for a privately owned organization and N stands for a publicly owned organization.
RegistrationType	string	Indicates the registration type of the organization.
RentOwnInd	string	Indicates if this account owns or rents the place of business. A list of valid values for rent, own, and lease are defined in the lookup OWN_RENT_IND.
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The standard industry classification (SIC) code.
SICCodeType	string	The version of the standard industry classification (SIC) code.
SeblUserKeyLoc	string	The location of the account, optional part of the user primary key.
SmallBusInd	string	Indicates whether the organization is considered as a small business. If the value is Y, then the organization is considered as a small business. The default value is N.
Status	string	The status of the record.
StockSymbol	string	The corporate stock symbol such as ORCL.
SuffixOverriddenFlag	boolean	Indicator to specify that the attribute has Y if the suffix is overridden by user and N otherwise. Default value is N.
ThirdPartyFlag	boolean	Indicator that tracks if a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. Y

Name	Type	Description
		stands for a third party relationship, N stands for a direct relationship. If Oracle Service is installed, the third party field in the Customers window is required.
TotalEmployeesEstimatedIndicator	string	Indicates if the employee total is estimated. The accepted values are defined in the lookup type TOTAL_EMP_EST_IND.
TotalEmployeesInd	string	Indicates if subsidiaries are included in the calculation of total employees. The accepted values are defined in the lookup type TOTAL_EMPLOYEES_INDICATOR.
TotalEmployeesMinimumIndicator	string	Indicates if the number is a minimum, maximum, or average number of total employees. The accepted values are defined in the lookup type TOTAL_EMP_MIN_IND.
TotalEmployeesText	string	The total number of employees in text format.
TotalPaymentAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total number of payment experiences.
TradingPartnerIdentifier	string	One column to store the FSIO related trading partner codes. It stores alpha numeric values and also addresses the Fed vs. Non-Fed attribute requirement.
UniqueNameAlias	string	The name as identified by the users to internally recognize the organization.
UniqueNameSuffix	string	Identifies system generated or manually overridden suffix.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
WomanOwnedInd	string	Indicates whether the organization is primarily owned by women. If the value is Y, then the organization is primarily owned by women. The default value is N.
YearEstablished	int	The year when the organization began doing business.

Additional Account Name

An additional name of an organization, such as a legal name or a DBA name.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}AdditionalOrganizationName

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPreferredFlag	boolean	Indicator to specify the preferred additional name for the organization.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNameId	long	The unique identifier of the party name. It is primary Key and system generated. • Primary Key
PartyNameType	string	The type of the name. It is a value defined by the additional party name and identifier type entity. The party type must be consistent with the party type that the PARTY_NAME_TYPE can be applied to.
PreferredFlag	boolean	Indicator to specify the name as preferred name for this party within the name type. Possible values are Y and N. Default value is N.
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.

Name	Type	Description
TransliterationLang	string	Used to identify the language for the name. It is validated against FND_LANGUAGES.LANGUAGE_CODE. Default value is the Session Language.

Additional Contact Name

An additional name of a person, such as the maiden name or alias.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}AdditionalPersonName

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*

Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.

Name	Type	Description
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPreferredFlag	boolean	Indicator to specify the preferred additional name of a person.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNameId	long	The unique identifier of the party name ID. It is primary key and system generated. • Primary Key
PartyNameType	string	The type of the name. It is a value defined by the additional party name and identifier type entity. The party type must be consistent with the party type that the PARTY_NAME_TYPE can be applied to.
PersonAcademicTitle	string	Used to specify the academic title for a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field degree in HL7.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_

Name	Type	Description
		PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	Used to specify the last name prefix such as fon, van, and so on for a person. It is used in the same way the new field PERSON_LAST_NAME_ PREFIX in HZ_PERSON_PROFILES is used. It corresponds to the field Last Name Prefix in HL7.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	Used to specify the name suffix such as junior, senior, the third, and so on for a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Suffix in HL7.
PersonPreNameAdjunct	string	Used to specify the name prefix such as Mr., Ms, Dr, and so on for a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Prefix in HL7. It is validated against lookup CONTACT_TITLE.
PersonPreviousLastName	string	Used to specify the previous last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It has no mapping in HL7.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_ PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PreferredFlag	boolean	Indicator to specify the name as preferred name for the party within the name type. Possible values are Y and N. Default value is N.
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
TransliterationLang	string	Used to specify the language used for the name. It is validated against FND_LANGUAGES.LANGUAGE_CODE. Default value is the Session Language.

Additional Household Name

An additional name associated with a group. For example, the phonetic name of a group.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/groupService/}AdditionalGroupName

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Household*
Handled by	*Trading Community Group*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.

Name	Type	Description
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OverallPreferredFlag	boolean	Identify the name as preferred name for this party within this name type. Possible values are 'Y' and 'N'. Default is 'N'.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNameId	long	Unique Identifier of Party Name. • Primary Key
PartyNameType	string	The type of party name.
PreferredFlag	boolean	The flag which Identifies the name as preferred name for this party within this name type. Possible values are 'Y' and 'N'. Default is 'N'.
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
TransliterationLang	string	Used to capture the language used for the name.

Additional Identifier

An additional identifier of a trading community member, such as driver's license number or passport number.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}AdditionalPartyId

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Country	string	The name of the country.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
ExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The expiration date for the identifier. It may be NULL, and does not apply to all types of identifiers.
IssueDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date in which the Identifier was issued. It may be NULL and does not apply to all types of identifiers.
IssuingAuthorityName	string	The issuing authority name.
IssuingAuthorityPartyId	long	The unique identifier of the issuing authority.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party.
PartyIdentifierId	long	The unique identifier of the party identifier. • Primary Key
PartyIdentifierType	string	Indicates the type for the current identifier. The list of accepted values are defined in the lookup TYPE_CODE of HZ_NAME_AND_ID_TYPE_B. The party type should be consistent with the party type that the PARTY_IDENTIFIER_TYPE can be applied to.
PartyIdentifierType1	string	Indicates the type for the current identifier. The list of accepted values are defined in the lookup TYPE_CODE of HZ_NAME_AND_ID_TYPE_B. The party type should be consistent with the party type that the PARTY_IDENTIFIER_TYPE can be applied to.
PartyIdentifierValue	string	The value of the party identifier.
PartyName	string	The name of the party.
RequestId	long	A system-generated read-only attribute used by the application framework.
StateProvince	string	The province of the address.
StatusCode	string	The pre-defined code used to indicate the status.

Address

An address of a trading community member, such as Oracle Corporation is located at 500 Oracle Parkway, Redwood Shores, CA.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartySite

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Phone*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AddressExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the location is no longer valid.
AddressLinesPhonetic	string	The phonetic or Kana representation of the Kanji address lines that are used in Japan.
AddressStyle	string	Style of the address.
Addressee	string	The information of the addressee.
City	string	The name of the city.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.

Name	Type	Description
ContactPreferenceExistFlag	boolean	Indicator to specify if the contact is primary contact for the party.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
Country	string	The name of the country.
Country1	string	The attribute country1 is not used.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DateValidated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address was last validated.
DoNotValidateFlag	boolean	Indicator to specify that a particular location is not eligible for address validation irrespective of the current validation.
Eft	*Electronic File Transfer*	The electronic file transfer information for the party.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.

Name	Type	Description
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
FormattedAddress	string	The formatted read-only address.
FormattedLocaleAddress	string	The formatted read-only local address.
FormattedMultilineAddress	string	The formatted multi line address of the party site.
GlobalLocationNumber	string	The global location number that uniquely identifies each location in a trading partners enterprise.
HouseType	string	Indicates the building type.
IdentifyingAddressFlag	boolean	Indicator to specify the identifying address for the party. Y stands for the indentifying site and N stands for sites that are not the indentifying site.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
Language	string	The operating language for the party site.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Latitude	decimal	The latitude of the party address.
LocationDirections	string	Directions to the location.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
LocationLanguage	string	The operating language for the locations.

Name	Type	Description
Longitude	decimal	The longitude of the party address.
Mailstop	string	A user-defined code to indicate a mail drop point within the organization.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was last queried.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary address of the contact irrespective of the context. Y stands for primary address and N stands for all others.
PartyId	long	The unique identifier of the contact party.
PartyNameDba	string	Stores the doing-business_as (DBA) party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameDivision	string	Stores the division party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameLegal	string	Stores the legal party name for a party site. This column is used to store FSIO related legal party name attribute.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
PartySiteInformation	*Trading Community Address Additional Information*	The party address information.
PartySiteName	string	The user-defined name for the site.

Name	Type	Description
PartySiteNumber	string	The party site number of the address.
PartySiteType	string	Stores the party site type and is based on the lookup. Currently this is either null or one-time.
PartySiteUse	*Trading Community Address Purpose*	The information of the party address usage.
PartyUsageCode	string	The usage context of a party's contact point.
Phone	*Phone*	The phone information for the entity.
Position	string	The primary direction such as north or east that is used to access the location.
PostalCode	string	The postal code element of the address.
PostalPlus4Code	string	The four digit extension to the United States postal ZIP code.
Province	string	The name of the province.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
State	string	The name of the state.
Status	string	The status of the record.
Telex	*Telex*	The Telex information associated with the party.
UsageCode	string	The usage code is not used.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
ValidationStatusCode	string	The standardized status code describing the results of the validation.

Name	Type	Description
Web	*Web*	The web information related to the record.

Certification

The certification information of a trading community member, such as a full ISO 9001 registered firm.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}Certification

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*

Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CertificationId	long	The unique identifier for certification. • Primary Key
CertificationName	string	The name of the certification such as ISO9000 and GMP001.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrentStatus	string	The name for the status of the certification. For example, applied for, granted, or expired.
ExpiresOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the certification expires.
Grade	string	The level or grade of certification provided by the ISSUED_BY_AUTHORITY. For example, founding member, gold, fully certified, and partially certified.
IssuedByAuthority	string	The name of the certifying authority.
IssuedOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the certification was issued.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
PartyId	long	The unique identifier of the contact party.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Name	Type	Description

Citizenship

The citizenship information about a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}Citizenship

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*

Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BirthOrSelected	string	Indicates if the citizenship was granted by being born in the country or by naturalization.
CitizenshipId	long	The unique citizenship identifier of a person. • Primary Key

Name	Type	Description
CountryCode	string	The ISO code of the country from which a person claims citizenship.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DateDisowned	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when an individual renounced citizenship. This is usually a self-declared date that might not match a legal effective date.
DateRecognized	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the country granted citizenship to the individual. For a native-born person, this date is typically the person's date of birth.
DocumentReference	string	The unique reference number such as passport number or naturalization reference number associated with DOCUMENT_TYPE.
DocumentType	string	The class of document that confirms citizenship. For example, a passport, or naturalization papers.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
PartyId	long	The unique identifier of the contact party.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Classification Assignment

The classification code assigned to a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}CodeAssignment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*
Contained by	*Sales Competitor*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Reference*
Handled by	*Sales Reference Customer*
Handled by	*Company and User Registration*
Handled by	*Sales Party*
Handled by	*Sales Competitor Service*
Handled by	*Trading Community Person Information*

Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*

Relationship Type	Object or Service
Handled by	*Sales Account Service*
Handled by	*Sales Party Territory service*
Handled by	*Sales Party Resource Service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ClassCategory	string	The name of the classification category.
ClassCode	string	The code of the classification.
CodeAssignmentId	long	The unique identifier of the assignment of an industrial classification code to an object. It is primary key and system generated. • Primary Key
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableKey1	string	The first column of the alphanumeric or multi-part foreign key.
OwnerTableKey2	string	The second column of the alphanumeric or multi-part foreign key.
OwnerTableKey3	string	The third column of the alphanumeric or multi-part foreign key.
OwnerTableKey4	string	The fourth column of the alphanumeric or multi-part foreign key.
OwnerTableKey5	string	The fifth column of the alphanumeric or multi-part foreign key.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PrimaryFlag	boolean	Indicator that specifies if this is the primary class code of a class category for the organization. Y stands for the primary class code and N stands for all others.
Rank	decimal	Ranks classes if multiple classes are assigned to a party.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Contact

The profile information of the trading community person. The profile includes information such as marital status and additional name.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}PersonProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Person Profile Additional Information*
Contained by	*Trading Community Person Details*
Contained by	*Sales Account*
Contained by	*Loyalty Member*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Loyalty Member Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Alias	string	Person alias name.

Name	Type	Description
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
Comments	string	The comments for the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DataCloudStatus	string	The enrichment status of the person.
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was born.
DateOfDeath	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person died.
DeceasedFlag	boolean	Y or N indicates whether the person is deceased or not.
DeclaredEthnicity	string	The declared ethnicity of the person.
Department	string	The free form text used to name the department.
DepartmentCode	string	The list of values for possible department codes.

Name	Type	Description
Distance	decimal	The distance from the input location.
DoNotCallFlag	boolean	Indicator to specify if the user can send mail to the person or not.
DoNotContactFlag	boolean	Indicator to specify if the user can contact the person through phone, e-mail, or mail or not.
DoNotEmailFlag	boolean	Indicator to specify if the user can send e-mail to the person or not.
DoNotMailFlag	boolean	Indicator to specify if the user can send mail to the person or not.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveLatestChange	string	The date effective entity. Y indicates that this row represents the latest change in the day.
EffectiveSequence	int	The date effective entity. Indicates the order of different changes made during a day. The lowest value represents the earliest change in the day.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
FavoriteContactFlag	boolean	Indicator to specify if the person is key contact.
Gender	string	The gender details such as male, female, or unknown of the person.
HeadOfHouseholdFlag	boolean	The head of household indicator is not used.
HouseholdIncomeAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The household income amount is not used.
HouseholdSize	decimal	The household size is not used.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or

Name	Type	Description
		organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
JobTitle	string	The free form text for the job title.
JobTitleCode	string	The code given to the job title.
LastContactDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the contact was last contacted.
LastEnrichmentDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was last enriched in DaaS.
LastKnownGPS	string	The geophysical location that is, GPS point last reported for the person.
LastSourceUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated by the source application.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdateSourceSystem	string	The source application that last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaritalStatus	string	The marital status of the person.
MaritalStatusEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the marital status of the person changed.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party.
PartyNumber	string	The unique identification number for the party.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix.

Name	Type	Description
		For Person, it is concatenation of person_name and suffix.
PersonAcademicTitle	string	The academic title that is part of the name of a person such as Dr. Jane Smith.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonInformation	*Trading Community Person Profile Additional Information*	The information of the person.
PersonInitials	string	The Initials of the name.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	Used to identify the Last name prefix such as fon, van and so on for a person. It is used in the same way the new field PERSON_LAST_NAME_ PREFIX in HZ_PERSON_PROFILES is used. Corresponds to the field, Last Name Prefix in HL7.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonName	string	The combination of title, first, middle, last, and suffix names.
PersonNameSuffix	string	Indicates the place in a family structure. For example, III in Tom Jones III.
PersonPreNameAdjunct	string	Salutary introduction such as Mr., Herr, and so on.
PersonPreviousLastName	string	The previous last or surname of the person.
PersonProfileId	long	The unique identifier of the person profile. • Primary Key
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double

Name	Type	Description
		last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PersonalIncomeAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated gross annual income of the person.
PlaceOfBirth	string	The place where the person was born, including city and country.
PreferredContactEmail	string	The preferred contact e-mail of the person.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactName	string	The preferred contact name of the person.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredContactPhone	string	The preferred contact phone of the person.
PreferredContactURL	string	The preferred contact uniform resource locator of the person.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryAddressCity	string	The city of the identifying address.

Name	Type	Description
PrimaryAddressCountry	string	The country listed in the TERRITORY_CODE column of the FND_TERRITORY table for the identifying address.
PrimaryAddressCounty	string	The county of the identifying address.
PrimaryAddressLatitude	decimal	The primary address latitude information for the location for spatial proximity and containment purposes.
PrimaryAddressLine1	string	The first line of the identifying address.
PrimaryAddressLine2	string	The second line of the identifying address.
PrimaryAddressLine3	string	The third line of the identifying address.
PrimaryAddressLine4	string	The fourth line of the identifying address.
PrimaryAddressLocationId	long	The primary address location ID.
PrimaryAddressLongitude	decimal	The primary address longitude information for the location for spatial proximity and containment purposes.
PrimaryAddressPostalCode	string	The postal code of the identifying address.
PrimaryAddressProvince	string	The province of the identifying address.
PrimaryAddressState	string	The state of the identifying address.
PrimaryCustomerId	long	The customer party identifier of a primary customer for a given person. There should be a valid relationship between the person and the customer.
PrimaryCustomerName	string	The customer party name of a primary customer for a given person. There should be a valid relationship between the person and the customer.
PrimaryCustomerRelationshipId	long	The unique identifier of the primary customer relationship.
PrimaryEmailAddress	string	The e-mail address of the person.

Name	Type	Description
PrimaryEmailId	long	The primary contact point e-mail ID of the person.
PrimaryFormattedAddress	string	The primary formatted address of the person.
PrimaryFormattedPhoneNumber	string	The primary telephone number formatted in the local format of the person.
PrimaryLanguage	string	The standard name for a language.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneId	long	The primary contact point phone ID of the person.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURL	string	The uniform resource locator.
PrimaryWebId	long	The unique identifier of the primary uniform resource locator.
Pronunciation	string	The person pronunciation.
RentOwnInd	string	Indicates if the person rents or owns his or her residence. Lookup values include rent, own, lease, and so on.
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
SalesAffinityCode	string	The affinity of a person towards the deploying organization.
SalesBuyingRoleCode	string	The role of a person in the buying process.
Salutation	string	The phrase used to address a party in any correspondence.
Status	string	The status of the record.
SuffixOverriddenFlag	boolean	This attribute has Y if the suffix is overridden by user and N if not. Default value is N.
UniqueNameSuffix	string	Identifies system generated or manually overridden suffix.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.

Contact Address

The address of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PersonPartySite

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Phone*
Contains	*Trading Community Address Purpose*
Contains	*Contact Preference*
Contains	*Source System Reference*
Contains	*Trading Community Address Additional Information*
Contained by	*Trading Community Person Details*

Relationship Type	Object or Service
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Addressee	string	The information of the addressee in the contact address.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
GlobalLocationNumber	string	The global location number that uniquely identifies each location in a trading partners enterprise.

Name	Type	Description
IdentifyingAddressFlag	boolean	Indicates whether this is the identifying address for the party. If the value is Y, then this is the identifying address for the party.
Language	string	The language used in the contact's location.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
Mailstop	string	A user-defined code to indicate a mail drop point within their organization.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary address of the associated object. If the value is True, then this is the primary address. The default value is False.
PartyId	long	The unique identifier of the contact party.
PartyNameDba	string	The doing-business_as (DBA) party name for a party site.
PartyNameDivision	string	The division of the party name for a party site.
PartyNameLegal	string	The legal party name for a party site.

Name	Type	Description
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
PartySiteName	string	The address associated with the party site.
PartySiteNumber	string	The alternate identifier of the party site.
PartySiteType	string	The type of the party site.
PartySiteUse	*Trading Community Address Purpose*	Indicates the use of the party site.
PartyUsageCode	string	The usage context of a party's contact point.
PersonPartySiteInformation	*Trading Community Address Additional Information*	The party site information of the person.
Phone	*Phone*	The phone information for the entity.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Contact Interest

The interests of the trading community member, such as baseball, sports car, or painting.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}PersonInterest

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
InterestName	string	A text field that lets you assign a descriptive name to an interest. For example, pets, dogs, baseball, or sports car racing.
InterestTypeCode	string	A code to classify interests for evaluation.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
LevelOfInterest	string	The user-defined level number or name to rate the amount of interest in the activity. For example, high, medium, or low.
LevelOfParticipation	string	The user-defined level number or name to indicate if the person participates and to what extent.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PersonInterestId	long	The unique identifier of interests of the person. • Primary Key
RequestId	long	A system-generated read-only attribute used by the application framework.
Since	{http://xmlns.oracle.com/adf/svc/types/}date-Date	An approximate date from which the person was involved with the activity.
SportIndicator	string	Indicates if the activity is a sport. Y stands for sports and N stands for non-sport activities.
Status	string	The status of the record.
SubInterestTypeCode	string	A code to classify subinterests of the interest type code.
Team	string	Any team the person likes to watch or play for.

Contact Language

The languages known information of a trading community member. For example, Mary Smith can speak both Spanish and English but can only read and write English.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PersonLanguage

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Handled by	*Trading Community Group*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LanguageName	string	The standard name for a language. For example, Spanish, Mandarin, or American English. Foreign key to the FND_LANGUAGES table.
LanguageUseReferenceId	long	The unique identifier of the language use reference.

Name	Type	Description
		• Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
NativeLanguageFlag	boolean	Indicator to specify if the language is the declared native language of a person. Y stands for a declared native language and N stands for all other languages.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PrimaryLanguageIndicator	string	Indicates if this is the primary language used by a person in day-to-day transactions. Y stands for the primary language and N stands for other languages.
ReadsLevel	string	The user-defined level number or name to indicate the ability to read a language.
RequestId	long	A system-generated read-only attribute used by the application framework.
SpeaksLevel	string	The user-defined level number or name to indicate the ability to speak a language.
SpokenComprehensionLevel	string	The code to indicate comprehension of a spoken language.
Status	string	The status of the record.
WritesLevel	string	The user-defined level number or name to indicate the ability to write in a language.

Contact Preference

The contact preference of the trading community member. For example, do not call Joe Smith between 10 a.m. and 12 noon on weekdays.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}ContactPreference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*

Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactLevelTable	string	The table that stores the contact level of the contact preference, and uses the SUBJECT_TABLE lookup. The list of accepted values are HZ_PARTIES, HZ_PARTIES_SITES, or HZ_CONTACT_POINTS.
ContactLevelTableId	long	The foreign key to the table specified in CONTACT_LEVEL_TABLE column. The list of accepted values are PARTY_ID from HZ_PARTIES table, CONTACT_POINT_ID from HZ_CONTACT_POINTS table, or PARTY_SITE_ID from HZ_PARTY_SITES table.
ContactPreferenceId	long	The unique identifier for the contact preference. • Primary Key
ContactType	string	The contact party type that defines whether the contact is a sales account, a prospect, a contact, or any other user-defined party

Name	Type	Description
		type. The default value is CUSTOMER. A list of accepted values is defined in the lookup CONTACT_TYPE.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaximumNoOfInteractUOMCode	string	The period of time during which the maximum number of interactions applies. Uses the MAX_NO_OF_INTERACT_UOM_CODE lookup.
MaximumNoOfInteractions	decimal	The number of times you can use this contact point. The period of time that this number applies is stored in the MAX_NO_OF_INTERACT_UOM_CODE column.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PreferenceCode	string	Indicates whether to use a particular contact method. The list of accepted values are defined in the PREFERENCE_CODE lookup.
PreferenceEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes inactive.
PreferenceEndTimeHR	int	The hour part of time when the contact preference becomes inactive. The time is recorded in the 24 hour format.

Name	Type	Description
PreferenceEndTimeMi	int	The minutes part of the time when the contact preference becomes inactive.
PreferenceStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes active.
PreferenceStartTimeHR	int	The hour part of time when the contact preference becomes active. The time is recorded in the 24 hour format.
PreferenceStartTimeMi	int	The minutes part of the time when the contact preference becomes active.
PreferenceTopicType	string	The appropriate subjects to send the party that the preference is created for. The list of accepted values are defined in the PREFERENCE_TOPIC_TYPE lookup.
PreferenceTopicTypeCode	string	The code of the preference topic type.
PreferenceTopicTypeId	long	The unique identifier of the preference topic type.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
RequestedBy	string	Indicates if the permission or restriction was created internally or requested by the party. The list of accepted values are defined in the REQUESTED_BY lookup.
Status	string	The status of the record.

Credit Rating

The trading community member's credit rating information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}CreditRating

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AverageHighCredit	decimal	The average of all the high credit experiences.
BankruptcyInd	string	Indicates if open bankruptcy exists. Y stands for any open bankruptcy that exists and N stands for no open bankruptcy.
BusinessDiscontinued	string	The business discontinued at the listed location. Prompts reader to contact D and B customer service center if any business is operating.

Name	Type	Description
ClaimsInd	string	Indicates if open claims, legal claims, liens, protested bills, or any equivalent information exists. Y stands for availability of information and N stands for no information.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRatingId	long	The unique identifier of the credit rating. • Primary Key
CreditRiskScoreExplain	string	Explains numeric credit risk score that estimates the risk of delinquent payment over the next 12 months.
CreditScore	string	Indicates the risk of delinquent payments.
CreditScoreAge	decimal	Indicates the age of the credit score expressed in months.
CreditScoreClass	decimal	The date when the credit score was calculated.
CreditScoreCommentary	string	The lookup for explanation codes in the CREDIT_SCORE column.
CreditScoreCommentary10	string	Indicates comments about the credit score.
CreditScoreCommentary2	string	Indicates comments about the credit score.
CreditScoreCommentary3	string	Indicates comments about the credit score.
CreditScoreCommentary4	string	Indicates comments about the credit score.
CreditScoreCommentary5	string	Indicates comments about the credit score.
CreditScoreCommentary6	string	Indicates comments about the credit score.

Name	Type	Description
CreditScoreCommentary7	string	Indicates comments about the credit score.
CreditScoreCommentary8	string	Indicates comments about the credit score.
CreditScoreCommentary9	string	Indicates comments about the credit score.
CreditScoreDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the credit score was calculated.
CreditScoreIncdDefault	decimal	Indicates the probability expressed as a percentage of delinquency for a score range or class.
CreditScoreNatlPercentile	decimal	Indicates the relative credit rating of a business compared to all businesses whose credit ratings are included in the local country database.
CreditScoreOverrideCode	string	Indicates why no score was calculated or why score is equal to zero in the US.
CriminalProceedingInd	string	Indicates if criminal proceedings exist. Y stands for availability of information and N stands for no information.
DebarmentInd	string	Indicates whether the company is debarred from doing business with government agencies. Y stands for company debarred and N stands for not debarred.
DebarmentsCount	decimal	The count of filings by government agencies in the United States that prohibit the party from entering into contracts or transactions with those agencies.
DebarmentsDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date of the most recent filing to prohibit the party from entering into contracts or transactions with a government agency in the United States.
DelqPmtPctgForAllFirms	decimal	Specifies a delinquency percentage for all firms.
DelqPmtRngPrcnt	decimal	Specifies a delinquency percentage for credit score range.
Description	string	The free text description of the record.
DetHistoryInd	string	The code that indicates if detrimental information exists for the party and whether

Name	Type	Description
		complete details exist on management and party. Y stands for availability of information and N stands for no information.
DisasterInd	string	Indicates if information exists about disasters such as fires, hurricanes, and so on. Y stands for availability of information and N stands for no information.
FailureScore	string	For US, the failure risk class, 1 through 5. For Canada , the stability score that indicates risk of business closure, 1 through 10. For Australia, the percentile failure score.
FailureScoreAge	decimal	The failure score age in months.
FailureScoreClass	decimal	1 through 5 to indicate risk of financial stress for a customer account. 1 for a business with greatest risk and 5 for a business with least risk.
FailureScoreCommentary	string	The comments related to failure score.
FailureScoreCommentary10	string	The comments related to failure score.
FailureScoreCommentary2	string	The comments related to failure score.
FailureScoreCommentary3	string	The comments related to failure score.
FailureScoreCommentary4	string	The comments related to failure score.
FailureScoreCommentary5	string	The comments related to failure score.
FailureScoreCommentary6	string	The comments related to failure score.
FailureScoreCommentary7	string	The comments related to failure score.
FailureScoreCommentary8	string	The comments related to failure score.
FailureScoreCommentary9	string	The comments related to failure score.
FailureScoreDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the failure score was calculated.
FailureScoreIncdDefault	decimal	Probability, in percentage, of failure for score range of class.

Name	Type	Description
FailureScoreNatnlPercentile	decimal	The national percentile that reflects the relative ranking of a company among all scored companies in the local country database.
FailureScoreOverrideCode	string	In Europe, code for the reason for variance between the D and B rating and the failure score. In the US, code for the reason why no score was calculated, or why the score is zero.
FinclEmbtInd	string	Indicates if open bankruptcy, receivership liquidation, or any equivalent information exists. Y stands for availability of information and N stands for no information.
FinclLglEventInd	string	Indicates if special events such as financial embarrassment and legal filings exist. Y stands for availability of information and N stands for no information.
GlobalFailureScore	string	The global score for the risk of business default.
HighCredit	decimal	Maximum credit ever extended to the organization.
HighRngDelqScr	decimal	Specifies the high end of the range of the commercial credit score.
JudgementInd	string	Indicates if open judgments exist. Y stands for any open judgment that exists and N stands for no open judgments.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LienInd	string	Indicates if open liens exist. Y stands for any open lien that exists and N stands for no open liens.
LowRngDelqScr	decimal	Specifies the low end of the range of the commercial credit score.
MaximumCreditCurrencyCode	string	The currency used to denominate the MAXIMUM_CREDIT_RECOMMENDATION column.

Name	Type	Description
MaximumCreditRecommendationAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Maximum credit limit recommended for the currency specified in the MAXIMUM_CREDIT_CURRENCY_CODE column.
NegvPmtExpl	string	The conditional comment generated when negative payments are present.
NoTradeInd	string	Indicates that no trade experiences exist. Y stands for any trade experience that exists and N stands for no trade experience.
NumberParentBankruptcyConversions	decimal	The number of bankruptcy conversions by the parent.
NumberParentBankruptcyFiling	decimal	The number of bankruptcies filed by the parent.
NumberSpecialEvent	decimal	The number of occurrences of the special events.
NumberTradeExperiences	decimal	The number of trade experiences.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OprgSpecificationEvntInd	string	Indicates if information exists about operational changes such as name changes, management changes, change of control, moves, and so on. Y stands for availability of information and N stands for no information.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OtherSpecificationEvntInd	string	Indicates if special events exist that are not otherwise specified.
ParentHQBankruptcyInd	string	Indicates if parent (P) or headquarters (H) are entered into bankruptcy.
PartyId	long	The unique identifier of the contact party.
PaydexComment	string	Additional paydex information.

Name	Type	Description
PaydexFirmComment	string	Comment on the paydex score for the organization.
PaydexFirmDays	string	The number of days used in the paydex score.
PaydexIndustryComment	string	Comment on the paydex score for the industry.
PaydexIndustryDays	string	The number of days used in the paydex score for the industry.
PaydexNorm	string	Median or average Paydex score for the industry.
PaydexScore	string	Paydex score for the previous 12 months payment history.
PaydexThreeMonthsAgo	string	Paydex score three months ago.
PrntBkcyChapterConv	string	The change of bankruptcy type.
PrntBkcyConvDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the bankruptcy converted from one type to another.
PrntBkcyFilgChapter	decimal	The chapter number of the bankruptcy filed by the parent under the US uniform commercial code.
PrntBkcyFilgDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The bankruptcy filing date of the parent.
PrntBkcyFilgType	string	The type of bankruptcy filed by the parent.
PubRecExpl	string	The conditional comment generated if suits, liens, and judgments exist.
RatedAsOfDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the rating was acquired.
Rating	string	The rating number or code of the rating company.
RatingOrganization	string	The name of the credit rating organization.
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
SecuredFlngInd	string	Indicates if open secured filings such as UCC filings, secured charges or mortgages pledging, or any equivalent information exists. Y stands for availability of information and N stands for no information.
SlowTradeExpl	string	The conditional comment generated when paydex score indicates that slow trade experiences are present.
SpecialEventComment	string	The comment generated if special event section exists.
SpecialEventText	string	The narrative of the special event.
SpecialEventUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the special event was updated.
Status	string	The status of the record.
SuitInd	string	Indicates if open suits exist. Y stands for any open suit that exists and N stands for no open suits.

Customer Contact Profile

The person who functions as a contact for an organization.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}OrganizationContact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Organization Contact Additional Information*
Contains	*Customer Contact Responsibility*
Contains	*Source System Reference*
Contained by	*Relationship*

Relationship Type	Object or Service
Handled by	*Trading Community Group*

Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
ContactFormattedAddress	string	The formatted version of the contact address.
ContactFormattedMultilineAddress	string	The formatted multiline version of the contact address.
ContactName	string	The name of the contact.
ContactNumber	string	The user-defined identification number for this contact.
ContactPartyId	long	The unique identifier of the contact.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CustomerEmailAddress	string	The e-mail address of the customer this contact person belongs to.
CustomerName	string	The name of the customer.
CustomerPartyId	long	The unique identifier of the customer this contact person belongs to.
CustomerPartyNumber	string	The alternate unique identifier of the customer this contact person belongs to.
CustomerUniqueName	string	The unique name of the customer. For an Organization, the value is a concatenation of unique_name_alias and suffix. For a Person, the value is a concatenation of person_name and suffix.
DecisionMakerFlag	boolean	Indicates if this contact is a decision maker. If the value is True, then the contact is a decision maker.
Department	string	The free form text used to name the department for the contact.
DepartmentCode	string	The department code for the contact. A list of accepted values is defined in the lookup DEPARTMENT_TYPE.
EmailAddress	string	The email address associated with the record.
FormattedAddress	string	The formatted address information.
FormattedPhoneNumber	string	The formatted phone number.

Name	Type	Description
JobTitle	string	The free form text for job title.
JobTitleCode	string	The code given to the job title.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgContactId	long	The unique identifier of the organization contact. • Primary Key
OrgContactInformation	*Trading Community Organization Contact Additional Information*	The information of the organization contact.
OrganizationContactRole	*Customer Contact Responsibility*	The role of the contact in the organization.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyRelationshipId	long	The unique identifier of the relationship of the party.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PartySiteName	string	The address associated with the party site.
PersonAcademicTitle	string	The part of the person's title that denotes the academic qualification, such as Dr. Jane Smith.
PersonCertReasonCode	string	The reason for the organization's current certification level assignment. A list of accepted

Name	Type	Description
		values is defined using the lookup HZ_PARTY_CERT_REASON.
PersonCertificationLevel	string	The certification level of a organization. A list of accepted values is defined in the lookup HZ_PARTY_CERT_LEVEL.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLanguageName	string	The language name associated with the person.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	The prefix for the last name of a person, such as fon, van. For example, if a person's name is Hans Van, the last name of the person is captured using this attribute.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	The place in a family structure. For example, in "Tom Jones III", the "III".
PersonPreNameAdjunct	string	The preferred name adjacency of a resource.
PersonPreviousLastName	string	The previous last name of a person.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PreferredContactFlag	boolean	Indicates if this contact person is primary contact for the customer.

Name	Type	Description
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PrimaryCustomerFlag	boolean	Indicates if this customer is primary customer for the contact.
Rank	string	The rank associated with this customer contact.
ReferenceUseFlag	boolean	Indicates if this contact can be used as a reference. If the value is Y, then the contact can be used as a reference.
RequestId	long	A system-generated read-only attribute used by the application framework.
SalesAffinityCode	string	The affinity of a contact to the deploying organization. A list of accepted values is defined in the lookup HZ_SLS_CNTCT_AFFINITY_CODE.
SalesAffinityComments	string	The comments about the contact's affinity to the deploying organization.
SalesBuyingRoleCode	string	The roles played by a contact in the buying process, for example, decision maker or supporting role. A list of accepted values is defined in the lookup HZ_SLS_CNTCT_BUY_ROLE_CODE.
SalesInfluenceLevelCode	string	The influence of the contact has on the deploying organization. A list of accepted values are defined in the lookup HZ_SLS_CNTCT_INFLUENCE_LVL_CD.
Salutation	string	The size of the household this person is a part of.
WebUrl	string	The web URL of contact point.

Customer Contact Responsibility

The role or responsibility of an organization contact.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}OrganizationContactRole

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Customer Contact Profile*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.

Name	Type	Description
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgContactId	long	The organization contact identifier. Foreign key to the HZ_ORG_CONTACTS table.
OrgContactRoleId	long	The unique contact role identifier. It is primary key and system generated. • Primary Key
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PrimaryContactPerRoleType	string	Indicates if the contact is the primary contact for the role. Y stands for primary contact and N stands for a contact that is not the primary contact for the role type. The default value is N.
PrimaryFlag	boolean	Indicator that specifies if this is the primary role for the contact. Y stands for primary role and N stands for a non-primary role for the contact. The default value is N.
RequestId	long	A system-generated read-only attribute used by the application framework.
RoleLevel	string	The role level of the contact. For example, executive, department head, or middle manager.

Name	Type	Description
RoleType	string	The role performed by a contact.
Status	string	The status of the record.

E-Mail

The e-mail address associated with a trading community member. For example, john.doe@oracle.com.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Email

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*
Contained by	*Household*
Contained by	*Trading Community Organization Details*

Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
EmailAddress	string	The email address associated with the record.
EmailFormat	string	The preferred format for e-mail addressed to this address such as HTML or ASCII. A list of accepted values is defined using the lookup EMAIL_FORMAT.
EmailInformation	*Trading Community Contact Point Additional Information*	The additional information about the e-mail.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary e-mail of the associated object. If the value is True, then this is the primary e-mail. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.

Name	Type	Description
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

E-Mail Domain

The domain of the e-mail address associated with a trading community member. For example, ABC Corporation has CORP and BUSINESS e-mail domains.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}EmailDomain

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*

Relationship Type	Object or Service
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DomainName	string	The actual or non-reversed domain name of the organization for display purpose.
EmailDomainId	long	The sequence generated unique identifier. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.

Name	Type	Description
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
Status	string	The status of the record.
TransposedDomain	string	The reversed domain name for the purposes of searching.

Education

The trading community person's education information. For example, a person may have attended the University of California from 1995 to 1999 and received an undergraduate degree in Computer Science with a GPA of 4.0.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}Education

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CourseMajor	string	The primary area of study.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DegreeReceived	string	The abbreviation for the degree. For example, BA, BSc, MBA, MSc, PhD, and Gd (graduate diploma).
EducationId	long	The unique identifier of the education record. • Primary Key
LastDateAttended	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The year and month when a person last attended the educational institution.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
PartyId	long	The unique identifier of the contact party.
RequestId	long	A system-generated read-only attribute used by the application framework.
SchoolAttendedName	string	The name of the school.
SchoolPartyId	long	The party identifier of the school.
StartDateAttended	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the attendance of a person starts.
Status	string	The status of the record.

Name	Type	Description
TypeOfSchool	string	The classification of the educational organization. For example, high school, college, university, or professional school. Note that the classification of schools varies among different cultures.

Electronic Data Interchange

The electronic data interchange information associated with a trading community member. For example, the details of standard codes and payment methods that are to be used for data interchange.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Edi

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EDIEceTpLocationCode	string	The trading partner location code for EDI Gateway.
EDIIdNumber	string	The EDI trading partner number for the supplier site.
EDIPaymentFormat	string	Indicates type of information being transmitted with the funds if using EDI_PAYMENT_METHOD ACH. The list of accepted values are CCD, CCP, CHZ, CTX, PPD, and PPP.
EDIPaymentMethod	string	Indicates how a payment is to be made through EDI. The list of accepted values are ACH and BOP.
EDIRemittanceInstruction	string	Indicates who will send the remittance advice. The list of accepted values are Banks or Payables systems.
EDIRemittanceMethod	string	Indicates how remittance advice are sent to the supplier.
EDITpHeaderId	long	The unique identifier of the EDI transaction header.

Name	Type	Description
EDITransactionHandling	string	The ANSI standard code for EDI transaction type.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary EDI of the associated object. If the value is True, then this is the primary EDI. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.

Name	Type	Description
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Electronic File Transfer

The electronic funds transfer information of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Eft

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*

Relationship Type	Object or Service
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
EFTPrintingProgramId	long	The printing program identifier.
EFTSWIFTCode	string	The EFT swift code information.
EFTTransmissionProgramId	long	The transmission program identifier.
EFTUserNumber	string	The number that identifies you as a user of electronic funds transfer service for your bank or clearing organization.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.

Name	Type	Description
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Employment History

The employment history information of a trading community member. For example, John Doe was a Vice President at Business World from 2001 to 2007 and President at World of Business from 2007 to 2009.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}EmploymentHistory

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Work Class*
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*

Relationship Type	Object or Service
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BeginDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the employment officially began.
Branch	string	The military branch code.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmployedAsTitle	string	Job position title assigned by an employer.
EmployedAsTitleCode	string	The code for the job title. If title cannot be represented by a code, then the EMPLOYED_AS_TITLE column must be used.
EmployedByDivisionName	string	The common name of a division or an organization at which the person was employed.
EmployedByNameCompany	string	The name of the organization at which the person was employed. Note that the name must not include the division name.

Name	Type	Description
EmployedByPartyId	long	The party identifier of the employer for situations in which the employer is represented as a party.
EmploymentHistoryId	long	The unique employment history identifier. • Primary Key
EmploymentTypeCode	string	Indicates whether the employment is part-time or full-time.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FacultyPositionFlag	boolean	Indicator Y or N to specify whether the position is a faculty position or not.
FractionOfTenure	decimal	The fraction of tenure.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MilitaryRank	string	The rank of the person in the branch.
PartyId	long	The unique identifier of the contact party.
ReasonForLeaving	string	The free format text that describes the reason for leaving.
RequestId	long	A system-generated read-only attribute used by the application framework.
Responsibility	string	Job responsibility of the person.
Served	string	Indicates where the person performed military service.
Station	string	Indicates the station name.

Name	Type	Description
Status	string	The status of the record.
SupervisorName	string	The full name of the manager of the person.
TenureCode	string	The type of tenure for faculty positions.
WeeklyWorkHours	decimal	The usual number of hours worked per week.
WorkClass	*Work Class*	The custom-defined classification information about job title and work experience of a person.

Financial Number

The financial report numbers of a trading community member, such as assets, liabilities, and cash balance.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}FinancialNumber

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Financial Report*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
FinancialNumber	decimal	The value for the financial number. For example, the FINANCIAL_NUMBER_NAME column could have a numerical value of 3,000,000,000 for annual sales.
FinancialNumberCurrency	string	The ISO currency code for the financial number.
FinancialNumberId	long	The unique identifier of the financial number. • Primary Key
FinancialNumberName	string	A text field that lets you assign a descriptive name to a financial report item. For example, gross annual sales, profit, and net annual sales. A user-defined lookup.
FinancialReportId	long	The unique identifier of the financial report.
FinancialUnitsApplied	decimal	The order of magnitude (tens, hundreds, thousands, and so on) used for the FINANCIAL_NUMBER column.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ProjectedActualCode	string	Indicates if the projected amount is projected or actual. The list of accepted values are P and A. The default value is A.
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
Status	string	The status of the record.

Financial Profile

The financial details of a trading community member, such as bank account information that was obtained as part of a credit evaluation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}FinancialProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessAuthorityDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when access to the information in the account was granted.
AccessAuthorityGranted	string	Indicates whether access to information in a financial account was granted. If the value is True, then the access has been granted.
BalanceAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The reported balance on an account. The balance can be a positive number, negative number, or zero.
BalanceVerifiedOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the account balance was verified.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
FinancialAccountNumber	string	The alternate unique identifier of the financial account.
FinancialAccountType	string	The short name that classifies the financial accounts. For example, savings, checking, home loan, personal loan, trading, and so on.
FinancialOrgType	string	The classification of financial organizations. For example, bank, savings and loan, private lender, building society and so on.
FinancialOrganizationName	string	The name of the financial organization that holds the account.
FinancialProfileId	long	The unique identifier of the party's financial profile. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.

Name	Type	Description
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Financial Report

The financial report information of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}FinancialReport

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Financial Number*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Relationship Type	Object or Service
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AuditInd	string	Indicates if the financial reports are audited. If the value is True, then the financial reports have been audited.
ConsolidatedInd	string	Indicates if the financial reports are consolidated. If the value is C, then the reports are consolidated.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DateReportIssued	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the financial report was published.
DocumentReference	string	The unique reference number such as passport number or naturalization reference number associated with DOCUMENT_TYPE.
EstimatedInd	string	Indicates whether the financial reports provide estimated data. If the value is True, then the financial reports provide the data.
FinalInd	string	Indicates whether the financial reports are the final closing statements for a business that has ceased operations. If the value is True, then the reports are final closing statements.

Name	Type	Description
FinancialNumber	*Financial Number*	The number that indicates a financial value like annual sales.
FinancialReportId	long	The unique identifier for a financial report. • Primary Key
FiscalInd	string	Indicates whether the financial reports cover a fiscal twelve-month accounting period. If the value is Y, then the financial report covers a twelve-month fiscal period.
ForecastInd	string	Indicates whether the financial reports display forecasts or future projections. If the value is Y, then the financial report displays forecasts.
IssuedPeriod	string	The period covered by the financial report. For example, fiscal year 1999, 1998, and so on.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OpeningInd	string	Indicates whether the financial reports are the opening statements for a business. If the value is Y, then the financial statements are opening statements.
PartyId	long	The unique identifier of the contact party.
ProformaInd	string	Indicates if the financial reports are pro forma numbers. If the value is Y, then the financial reports are pro forma numbers.
QualifiedInd	string	Indicates whether the financial reports include qualifying remarks from auditors about the fairness and accuracy of the numbers. If the value is Y, then the report is qualified by auditors.
ReportEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The end date of the report, used instead of Issued Period.
ReportStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The start date of the report, used instead of Issued Period.

Name	Type	Description
RequestId	long	A system-generated read-only attribute used by the application framework.
RequiringAuthority	string	The name of the primary organization that requires this financial report. For example, auditors, the Federal Trade Commission, or the Internal Revenue Service.
RestatedInd	string	Indicates whether the financial reports include data that was corrected after the original financial reports. If the value is Y, then the report has been corrected.
SignedByPrincipalsInd	string	Indicates whether the financial reports were signed by the principals of the organization. If the value is Y, then the reports are signed.
Status	string	The status of the record.
TrialBalanceInd	string	Indicates whether the financial reports include trial balance numbers. If the value is Y, then the financial report includes trial balance numbers.
TypeOfFinancialReport	string	A name for the financial report. For example, 10K report, Annual Report, or Shareholder's Special Report.
UnbalancedInd	string	Indicates whether the financial reports include balance sheet accounts that do not balance. If the value is Y, then report includes unbalanced balance sheet accounts.
WhUdpateId	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the record was entered or changed in a data warehouse.

Household

The trading community group information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/groupService/}Group

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Additional Household Name*
Contains	*Classification Assignment*
Contains	*Source System Reference*
Contains	*Relationship*
Contains	*Financial Profile*
Contains	*Web*
Contains	*Contact Preference*
Contains	*Phone*
Contains	*Contact Language*
Contains	*Certification*
Contains	*Usage Assignment*
Contains	*Additional Identifier*
Contains	*E-Mail Domain*
Contains	*Instant Messaging*
Contains	*E-Mail*
Contains	*Address*
Contains	*Preference*
Contained by	*Sales Party*
Contained by	*Sales Party Resource*
Contained by	*My Sales Account*
Contained by	*Sales Account*

Relationship Type	Object or Service
Contained by	*Sales Party Territory*
Handled by	*Trading Community Group*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalGroupName	*Additional Household Name*	Additional name associated with the group.
AdditionalPartyId	*Additional Identifier*	Additional Identifier for the group.
AnnualExpenses	long	Household annual expenses.
AnnualIncome	long	The value for annual income.
AverageAge	long	Household average age.
Certification	*Certification*	Certification information associated with the group.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
CertificationReasonCode	string	Reason for group party's current certification level assignment. HZ_PARTY_CERT_REASON lookup type.
Child0to6Number	long	The number of children between 0 and 6 years.
Child13to18Number	long	The number of children between 13 and 18 years.

Name	Type	Description
Child7to12Number	long	The number of children between 7 and 12 years.
CodeAssignment	*Classification Assignment*	Classification code assigned to the group.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DependentsNumber	long	The number of dependents.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveLatestChange	string	Not Used.
EffectiveSequence	int	Not Used.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
Email	*E-Mail*	The email address associated with the record.
EmailDomain	*E-Mail Domain*	Email domain information for the group.
FinancialProfile	*Financial Profile*	Financial Profile information of the group.

Name	Type	Description
GroupName	string	Name of this group.
GroupSize	long	Size of the group.
GroupType	string	The party type can only be person, organization, group.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MedianAge	long	The age of the median.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyNumber	string	The unique identification number for the party.
PartyPreference	*Preference*	Preference information of the group.
PartySite	*Address*	Address information associated with the group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUsageAssignment	*Usage Assignment*	Party usage assigned to the group.
PersonLanguage	*Contact Language*	Language information associated with a group.
Phone	*Phone*	The phone information for the entity.

Name	Type	Description
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonEmail	string	The E-Mail of the preferred contact person.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredContactPersonName	string	The name of the preferred contact person.
PreferredContactPersonPhone	string	The phone number of the preferred contact person.
PreferredContactPersonURL	string	The URL of the preferred contact person.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryAddressCity	string	The city of the primary address.
PrimaryAddressCountry	string	The country for the primary address.
PrimaryAddressCounty	string	The country of the primary address.
PrimaryAddressLine1	string	Line one of the primary address.
PrimaryAddressLine2	string	Line two of the primary address.
PrimaryAddressLine3	string	Line three of the primary address.
PrimaryAddressLine4	string	Line four of the primary address.

Name	Type	Description
PrimaryAddressLocationId	long	The unique identification number for the primary address location.
PrimaryAddressPartySiteId	long	The unique identifier for the primary address party site.
PrimaryAddressPostalCode	string	The postal code of the primary address.
PrimaryAddressProvince	string	The province of the primary address.
PrimaryAddressState	string	The state of the primary address.
PrimaryEmail	string	Primary E-Mail Address of the Group.
PrimaryEmailId	long	Primary E-Mail ID.
PrimaryFormattedAddress	string	Primary formatted address for the group.
PrimaryFormattedMultilineAddress	string	Primary formatted multiline address for the group.
PrimaryFormattedPhoneNumber	string	Primary formatted phone number for the group.
PrimaryLanguage	string	Standard name for a primary language.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneId	long	The unique identification number for the primary phone.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.

Name	Type	Description
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURL	string	Primary URL.
PrimaryWebId	long	Primary Web ID.
ProfileCreatedBy	string	The user who created the row.
ProfileCreatedByModule	string	The module that created the profile.
ProfileCreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time of the creation of the row.
ProfileLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time of the last update of the row.
ProfileLastUpdateLogin	string	The session login associated to the user who last updated the row.
ProfileLastUpdatedBy	string	The user who last updated the row.
Relationship	*Relationship*	Relationship information for the group.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.
SuffixOverriddenFlag	boolean	This will have Y if the suffix is overridden by user N if not.
UniqueNameSuffix	string	System generated or manually overridden suffix.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
WealthAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Household wealth amount or net worth.
Web	*Web*	The web information related to the record.

Instant Messaging

The instant messaging information of a trading community member, such as the AOL identifier or Yahoo Messenger information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}InstantMessaging

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*

Relationship Type	Object or Service
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
InstantMessagingAddress	string	The instant messaging information address.
InstantMessagingInformation	*Trading Community Contact Point Additional Information*	The instant messaging information related to the record.

Name	Type	Description
InstantMessengerType	string	The type of the instant messenger type.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary instant messaging Id of the associated object. If the value is True, then this is the primary instant messaging Id. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.

Name	Type	Description
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Phone

The phone number associated with a trading community member. For example, the phone number for Oracle Corporation is 650-506-6000.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Phone

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Marketing Response*
Contained by	*Partner*
Contained by	*Household*

Relationship Type	Object or Service
Contained by	*Contact Address*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key

Name	Type	Description
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FormattedPhoneNumber	string	The formatted phone number.
LastContactDtTime	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date and time of last contact placed to this contact point.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.

Name	Type	Description
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PagerTypeCode	string	The PAGER_TYPE_CODE column stores the lookup code for the type of pager. The type of pager determines how the page is received. For example, tone, number, alphanumeric or two-way alphanumeric.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PhoneAreaCode	string	The area code prefix for the phone number.
PhoneCallingCalendar	string	The name or code for a calling calendar used with this telephone number. This attribute is no longer used in Fusion applications.
PhoneCountryCode	string	The country code prefix for the phone number.
PhoneExtension	string	The additional number addressed after initial connection to an internal telephone system.
PhoneInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community phone.
PhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound, or outbound.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.

Name	Type	Description
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RawPhoneNumber	string	The unformatted telephone number.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TimezoneCode	string	The foreign key to FND_TIMEZONES_B.TIMEZONE_CODE.
TransposedPhoneNumber	string	This column stores the concatenation of PHONE_COUNTRY_CODE, PHONE_AREA_CODE, and PHONE_NUMBER in reverse order. For example, if PHONE_COUNTRY_CODE=1, PHONE_AREA_CODE=650 and PHONE_NUMBER=5065747, this column stores 74756050561. This column is used for building an index to search for any combination of the above three columns.

Preference

The preferences of a trading community member. For example, a member may prefer that the transaction currency is the US dollar.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartyPreference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalValue1	string	The additional preference value.
AdditionalValue2	string	The additional preference value.
AdditionalValue3	string	The additional preference value.
AdditionalValue4	string	The additional preference value.
AdditionalValue5	string	The additional preference value.
Category	string	A preference category is used to logically group one or more preference codes in a

Name	Type	Description
		particular user interface. The combination of CATEGORY and PREFERENCE_CODE identifies a preference.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Module	string	The program that creates the preference. For example, TCA MOBILE CUSTOMER DIRECTORY.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PartyPreferenceId	long	The unique identifier of the party preference. • Primary Key
PreferenceCode	string	A preference code determines if a preference is a single value or a multiple value preference. The preference code is validated by the HZ_PREFERENCE lookup. The combination of CATEGORY and PREFERENCE_CODE identifies a preference.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
ValueDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The preference value when the data type is DATE.
ValueName	string	A user-defined alias for a preference value.

Name	Type	Description
ValueNumber	decimal	The preference value when the data type is NUMBER.
ValueVarchar2	string	The preference value when the data type is VARCHAR2.

Relationship

The relationship between two trading community members. For example, John Doe is the spouse of Jane Doe or Michael Smith is a contact of Oracle Corporation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}Relationship

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Phone*
Contains	*Address*
Contains	*Instant Messaging*
Contains	*Web*
Contains	*Usage Assignment*
Contains	*Trading Community Relationship Additional Information*
Contains	*Customer Contact Profile*
Contains	*Source System Reference*
Contains	*Email*
Contained by	*Trading Community Person Details*
Contained by	*Household*

Relationship Type	Object or Service
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalInformation1	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type. For operating unit and legal entity to bank relationships, column stores communication agreement ID, which identifies agreement between payer and bank on type of EDIFACT documents that can be sent for processing payments.
AdditionalInformation10	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation11	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation12	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.

Name	Type	Description
AdditionalInformation13	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation14	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation15	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation16	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation17	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation18	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation19	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation2	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation20	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation21	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation22	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation23	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.

Name	Type	Description
AdditionalInformation24	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation25	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation26	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation27	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation28	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation29	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation3	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation30	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation4	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation5	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation6	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation7	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.

Name	Type	Description
AdditionalInformation8	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation9	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
Comments	string	The comments for the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DirectionCode	string	The code of the relationship direction. The list of accepted values are defined in the lookup DIRECTION_CODE.
Email	*E-Mail*	The email address associated with the record.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.

Name	Type	Description
LastUpdatedBy	string	The user who last updated the record.
ObjectEmailAddress	string	The e-mail address of the object party in the relationship.
ObjectId	long	The unique identifier of the object party in this relationship.
ObjectPartyName	string	The name of the object party in this relationship.
ObjectTableName	string	The source table name of the object party in this relationship.
ObjectType	string	The object type of the relationship.
ObjectUsageCode	string	The usage code of object party in the relationship.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationContact	*Customer Contact Profile*	The organization contact information.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyName	string	The name of the party.
PartySite	*Address*	The party site associated with the relationship.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the relationship.
PercentageOwnership	decimal	The percentage of the child entity owned by the parent entity.
Phone	*Phone*	The phone information for the entity.
PreferredContactFlag	boolean	Indicates if this contact person is primary contact for the customer.
PrimaryCustomerFlag	boolean	Indicates if this customer is primary customer for the contact.

Name	Type	Description
RelationshipCode	string	The code for a forward or a backward relationship. A list of accepted relationship values is defined in the lookup PARTY_ RELATIONS_TYPE.
RelationshipId	long	The relationship identifier for the record.
RelationshipInformation	*Trading Community Relationship Additional Information*	The relationship type information.
RelationshipRecId	long	The unique identifier of the contact's relationship record. • Primary Key
RelationshipType	string	The relationship type name. For example, CUSTOMER_SUPPLIER. A list of valid relationship types is defined in the lookup HZ_ RELATIONSHIP_TYPE.
RequestId	long	A system-generated read-only attribute used by the application framework.
Role	string	The role between the subject and object party in this relationship.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
SubjectEmailAddress	string	The e-mail address of the subject party in relationship.
SubjectId	long	The unique identifier of the subject in this relationship.
SubjectPartyUsageAssignment	*Usage Assignment*	The usage assignment of the subject party in the relationship.
SubjectTableName	string	The source table of the subject.
SubjectType	string	The subject type of the relationship.
SubjectUsageCode	string	The usage code of subject party in the relationship.

Name	Type	Description
Web	*Web*	The web information related to the record.

Sales Party Resource

These are resources associated to the sales party.

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesPartiesService/}SalesPartyResources

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Household*
Contains	*Trading Community Organization Details*
Contains	*Trading Community Person Details*
Handled by	*Sales Party Resource Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevelCode	string	Indicates access level of the resource. Valid values are Full, Edit and View. Owners (primary) always have full access.
CpdrfLastUpd	string	The standard replication column.
CpdrfVerPillar	int	The standard replication column.
CpdrfVerSor	int	The standard replication column.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
Group	*Household*	Indicates to which group the party this resource belongs to.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LockAssignmentFlag	boolean	Indicates the assignment flag.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationParty	*Trading Community Organization Details*	Indicates to which organization the party this resource belongs to.
PartyId	long	The unique identifier of the contact party.
PartyResourceId	long	Sales party team identifier. • Primary Key
PersonParty	*Trading Community Person Details*	Indicates to which person the party this resource belongs to.
PrimaryFlag	boolean	This is used to mark a resource as primary. The primary resource is also known as the owner.
ResourceId	long	The unique identifier of the resource.
ResourceOrgId	long	Indicates resource organization Id.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.

Name	Type	Description
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Source System Reference

The name of external source system where the trading community information is imported from.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}OriginalSystemReference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OldOrigSystemReference	string	The old source system reference that is being replaced.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OrigSystemReferenceId	long	The unique identifier for original system reference. • Primary Key
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
SourceSystemRefInformation	*Trading Community Original System Mapping Identifier Additional Information*	The source system reference information.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Telex

The telex number information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Telex

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*

Handled by	*Partner Program Enrollment Service*

Relationship Type	Object or Service
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.

Name	Type	Description
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary telex of the associated object. If the value is True, then this is the primary telex. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TelexNumber	string	The telex reference number (usually a telephone number) of the organization.

Trading Community Address Additional Information

The address information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/partySite/}PartySiteInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contact Address*
Contained by	*Address*

Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BeginDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date at the start of the date range within which the row is active.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
IntegrationKey	string	The integration key is not used.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PartySiteUseId	long	The unique identifier of the party site used. • Primary Key
PrimaryPerType	string	Indicates if this is the primary use for the site. Y stands for the primary site and N stands for all other sites.
RequestId	long	A system-generated read-only attribute used by the application framework.
SiteUseType	string	The site use type associated with the address.
Status	string	The status of the record.

Trading Community Contact Point Additional Information

The contact point for a trading community member like phone or e-mail. For example 650-506-6000 is the phone number for Oracle Corporation, john.doe@example.com is the e-mail address for John Doe.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/contactPoint/}ContactPointInformation

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalOrganizationName	*Additional Account Name*	The additional name associated with the organization.
AdditionalPartyId	*Additional Identifier*	The additional identifier associated with the organization or person.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AnalysisFy	string	The fiscal year that the financial information is based on.
CategoryCode	string	The code of the category to which the person belongs. A list of accepted values is defined in the lookup type CUSTOMER_CATEGORY.
CeoName	string	The name of the chief executive officer. It is the denormalized value of the CEO_NAME in HZ_ORGANIZATION_PROFILES.

Name	Type	Description
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
Certification	*Certification*	The certification information associated with the organization.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
City	string	The name of the city.
CodeAssignment	*Classification Assignment*	The classification code assigned to the organization.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRating	*Credit Rating*	The credit rating for the organization.
CurrentFiscalYearPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its current fiscal year.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
Edi	*Electronic Data Interchange*	The electronic data interchange information for the organization.
Eft	*Electronic File Transfer*	The electronic file transfer information for the organization.

Name	Type	Description
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EmailDomain	*E-Mail Domain*	The domain name of the email address.
EmployeesTotal	decimal	The total number of employees.
FinancialProfile	*Financial Profile*	The financial profile information of the organization.
FinancialReport	*Financial Report*	The financial report information of the organization.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
GroupType	string	The type of the group.
HQBranchIndicator	string	The status of this site, such as HQ, a branch, or a single location. A list of accepted values are defined in the lookup type HQ_BRANCH_IND.
HomeCountry	string	The home country associated with the party.
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.

Name	Type	Description
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LanguageName	string	The standard name for the language.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MissionStatement	string	The corporate charter of organization in user-defined text format.
NextFyPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its next fiscal year.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationProfile	*Account*	The information about the partner organization.
OrganizationSize	string	The size of the organization based on its revenue, number of employees, and so on.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.

Name	Type	Description
PartyPreference	*Preference*	The preference mentioned in the organization details.
PartySite	*Address*	The party site associated with the organization.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the organization.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
Phone	*Phone*	The phone information for the entity.
PostalCode	string	The postal code element of the address.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryEmailContactPointId	long	The unique identifier of the primary e-mail.

Name	Type	Description
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneContactPointId	long	The unique identifier of the primary phone contact point.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURLContactPointId	long	The unique identifier of the primary URL contact point.
PrincipalName	string	The Name of the highest ranking person in the company.
Province	string	The name of the province.
Relationship	*Relationship*	The relationship information of the organization.
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The Standard Industry Classification (SIC) code.
SICCodeType	string	The version of Standard Industry Classification (SIC) code.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.

Name	Type	Description
SourceSystemUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the source system information was last updated.
State	string	The name of the state.
Status	string	The status of the record.
Telex	*Telex*	The telex information of the organization.
ThirdPartyFlag	boolean	Indicates whether a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. If the value is Y, then the party is a third party relationship. If Oracle Service is installed, the Third Party field in the Customers window is mandatory.
TradingPartnerIdentifier	string	The FSIO related trading partner codes.
URL	string	The destination URL associated with a specific Google AdWords ad.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
Web	*Web*	The web information related to the record.
YearEstablished	int	The year when the organization began doing business.

Trading Community Organization Profile Additional Information

The additional profile information about an organization, such as the organization type.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/organization/}OrganizationInformation

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalPartyId	*Additional Identifier*	The additional identifier associated with the organization or person.
AdditionalPersonName	*Additional Contact Name*	The additional name of the person.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.

Name	Type	Description
CategoryCode	string	The code of the category to which the person belongs. A list of accepted values is defined in the lookup type CUSTOMER_CATEGORY.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
Certification	*Certification*	The certification information for the person.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
Citizenship	*Citizenship*	The citizenship information of a person.
City	string	The name of the city.
CodeAssignment	*Classification Assignment*	The classification code assigned to the person.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRating	*Credit Rating*	The credit rating of the person.
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was born.
Education	*Education*	The education information of the person.
Email	*E-Mail*	The email address associated with the record.

Name	Type	Description
EmailAddress	string	The email address associated with the record.
EmailDomain	*E-Mail Domain*	The domain name of the email address.
EmploymentHistory	*Employment History*	The employment history information of a person.
FinancialProfile	*Financial Profile*	The financial profile information of a person.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
Gender	string	The gender of the person, such as male, female, and unknown. A list of accepted values is defined in the lookup HZ_GENDER.
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LanguageName	string	The standard name for the language.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.

Name	Type	Description
LastUpdatedBy	string	The user who last updated the record.
MaritalStatus	string	The marital status of the person. A list of accepted values is defined in the lookup MARITAL_STATUS.
MissionStatement	string	The corporate charter of organization in user-defined text format.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartyPreference	*Preference*	The preference mentioned in the person details.
PartySite	*Contact Address*	The party site associated with the person.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the person.
PersonAcademicTitle	string	The part of the person's title that denotes the academic qualification, such as Dr. Jane Smith.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonInterest	*Contact Interest*	The interest information associated with a person.

Name	Type	Description
PersonLanguage	*Contact Language*	The language information associated with a person.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	The prefix for the last name of a person, such as fon, van. For example, if a person's name is Hans Van, the last name of the person is captured using this attribute.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	The place in a family structure. For example, in "Tom Jones III", the "III".
PersonPreNameAdjunct	string	The preferred name adjacency of a resource.
PersonPreviousLastName	string	The previous last name of a person.
PersonProfile	*Contact*	The profile information of the person.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
Phone	*Phone*	The phone information for the entity.
PostalCode	string	The postal code element of the address.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.

Name	Type	Description
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryEmailContactPTId	long	The unique identifier of the primary e-mail.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneContactPTId	long	The unique identifier of the primary phone contact point.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURLContactPTId	long	The unique identifier of the primary URL contact point.
Province	string	The name of the province.
Relationship	*Relationship*	The relationship information of the person.

Name	Type	Description
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The Standard Industry Classification (SIC) code.
SICCodeType	string	The version of Standard Industry Classification (SIC) code.
Salutation	string	The size of the household this person is a part of.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
SourceSystemUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the source system information was last updated.
State	string	The name of the state.
Status	string	The status of the record.
ThirdPartyFlag	boolean	Indicates whether a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. If the value is Y, then the party is a third party relationship. If Oracle Service is installed, the Third Party field in the Customers window is mandatory.
URL	string	The destination URL associated with a specific Google AdWords ad.
UserGUID	string	The "light weight" user Global Unique Id. Light Weight users defined in the Extended Security (XS) System.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
Web	*Web*	The web information related to the record.

Trading Community Person Profile Additional Information

The additional information about a trading community person.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/person/}PersonInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contact*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Loyalty Member Service*
Handled by	*Company and User Registration*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OwnerTableId	long	The unique identifier for a record in the owner table.

Name	Type	Description
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
PartyUsageCode	string	The usage context of a party's contact point.
PartyUsgAssignmentId	long	The unique identifier of the party usage assignment. • Primary Key
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.

Web

The Web information associated with a trading community member. For example, Oracle's address on the Web is www.oracle.com.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Web

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*

Relationship Type	Object or Service
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key

Name	Type	Description
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N stands for all others.

Name	Type	Description
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
URL	string	The destination URL associated with a specific Google AdWords ad.
WebInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community Web.
WebType	string	The prefix class to a Web address. Typically, this is either FTP or HTTP.

Work Class

The custom-defined classification of information about a person's job title and work experience.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}WorkClass

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Employment History*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmploymentHistoryId	long	The foreign key to the HZ_EMPLOYMENT_HISTORY table.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LevelOfExperience	string	The user-defined rating for the level of experience in the class of work. For example, journeyman, trainee, or exposure.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.
WorkClassId	long	The unique identifier for the class of work. • Primary Key
WorkClassName	string	The user-determined classification for work. For example, bricklayer, doctor, lawyer, programmer, or minister of health.

Sales Party Territory service

The service to create, update, get, or find sales party territories.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesPartyTerritoryService/}SalesPartyTerritoryService

Service WSDL URL: https://servername/crmService/SalesPartyTerritoryService?WSDL

getSalesPartyTerritory

The get operation for sales party territory details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyTerritoryId	long	The identifier for sales party territory.

Response Payload

Element Name	Type	Description
result	*Sales Party Territory*	The operation that returns sales party territory details that matches the inbound key attributes.

createSalesPartyTerritory

The operation that creates sales party territory details for a party.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesPartyTerritory	*Sales Party Territory*	Sales Party Territory Details to be created

Response Payload

Element Name	Type	Description
result	*Sales Party Territory*	The result of the operation including the successfully created sales party territories and any warnings or informational messages.

updateSalesPartyTerritory

The operation to update sales party territory details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesPartyTerritory	*Sales Party Territory*	Sales Party Territory Details to be updated

Response Payload

Element Name	Type	Description
result	*Sales Party Territory*	The result of the operation includes the successfully updated sales party territory details or a list of warnings or informational messages, or both.

deleteSalesPartyTerritory

The operation that deletes sales party territory details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
salesPartyTerritory	*Sales Party Territory*	Sales Party Territory Details to be deleted

Response Payload

Element Name	Type	Description
result	void	A list of warnings or informational messages encountered when deleting the object.

findSalesPartyTerritory

The find operation for sales party territory details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*Sales Party Territory*	The result of the operation including the list of sales party territory details that satisfy the inbound criteria and any warnings or informational messages encountered during the invocation.

findTerritoriesOfSalesParty

The find operation for sales party details filtered by party identifier. Get a list of territories this sales party belongs to. Get the complete territory data object. This is a composite service.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
BindPartyId	long	The find operation for party identifier.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*Sales Party Territory*	The result of the operation including the list of sales party territory details that satisfy the inbound criteria and any warnings or informational messages encountered during the invocation.

findSalesPartyOfTerritory

The find operation for sales party details filtered by territory identifier. Get a list of territories this sales party belongs to. Get the complete territory data object. This is a composite service.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
BindTerritoryId	long	The find operation for territory identifier.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*Sales Party Territory*	The result of the operation including the list of sales party territory details that satisfy the inbound criteria and any warnings or informational messages encountered during the invocation.

findSalesPartyTerritoriesHierarchy

The find operation for sales party details filtered by territory identifier. Get a list of territories this sales party belongs to. Get the complete territory data object. This is a composite service.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (or where clause), the fetch size, and so on.
BindTerritoryId	long	The find operation for territory identifier.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This operation is currently not in use.

Response Payload

Element Name	Type	Description
result	*Sales Party Territory*	The result of the operation including the list of sales party territory hierarchies that satisfy the inbound criteria and any warnings or informational messages encountered during the invocation.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The locale name is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create,

Element Name	Type	Description
		update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	ZCM_MANAGE_SALES_PARTY_TEAM_PRIV	Manage Sales Party Team	Allows managing the sales party team

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZCM_MANAGE_SALES_PARTY_TEAM_PRIV	ORA_ZCM_SR_SALES_PARTY_MANAGEMENT	Service Sales Party Management	Can create Service Requests and help with resolution of the Service Request. Has basic Service Request management capabilities.
ZCM_MANAGE_SALES_PARTY_TEAM_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
ZCM_MANAGE_SALES_PARTY_TEAM_PRIV	ORA_ZCM_PARTNER_SALES_PARTY_MANAGEMENT_DUTY	Partner Sales Party Management	Manages creation and maintenance of sales organizations and consumers for partners. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts. This role has limited access to customers and contacts.
ZCM_MANAGE_SALES_PARTY_TEAM_PRIV	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			well as appointments, interactions, and customer contacts.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	ORA_OKC_ALL_BUSINESS_UNITS_CONTRACT_INQUIRY_DUTY_CRM	Contract View Access Across All Contracts	Views all contracts across an enterprise.
ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	ORA_ZCM_SALES_PARTY_REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.

Account

An organization account and its profile information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}OrganizationProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Organization Profile Additional Information*
Contained by	*Sales Account*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*

Relationship Type	Object or Service
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Alias	string	The organization alias name.
AnalysisFy	string	The fiscal year that the financial information is based on.
BankCode	string	Identifies the bank in several countries, typically for regulatory purposes.
BankOrBranchNumber	string	Stores bank number for banks and branch number for bank branches. Primarily stores ABA number for US bank branches.
BranchCode	string	Identifies the bank branch in several countries, typically for regulatory purposes.
BranchFlag	boolean	Indicates if this is a branch location. If the value is True, then this is a branch location.
BusinessReport	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	Dun and Bradstreet business information report.
BusinessScope	string	The physical class of business in which a business participates. For example, local, national, or international.

Name	Type	Description
CeoName	string	The name of the chief executive officer. It is the denormalized value of the CEO_NAME in HZ_ORGANIZATION_PROFILES.
CeoTitle	string	The formal title of the chief executive officer.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
Comments	string	The comments for the record.
CongDistCode	string	The U.S. Congressional district code for the account.
ContentSourceNumber	string	The content source number is not used.
ControlYr	decimal	The year when current ownership gained control of the organization.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CorporationClass	string	The taxation classification for corporation entities such as Chapter S in the US.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CurrentFiscalYearPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its current fiscal year.

Name	Type	Description
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DataCloudStatus	string	Specifies the enrichment status of the person.
DbRating	string	The Dun & Bradstreet credit rating.
Disadv8aInd	string	Indicates whether the organization is considered disadvantaged by the US government under Title 8A. If the value is Yes, the organization is considered disadvantaged under Title 8A. The default value is No.
DisplayedDUNSPartyIdentifier	long	Dun and Bradstreet does not maintain data for the branch offices of companies that are located beyond North America. Data is only maintained for the company headquarters. If the data pertains only to company headquarters, the headquarters PARTY_ID is stored. If the data pertains to a branch office, the branch PARTY_ID is stored.
DoNotConfuseWith	string	Indicates existence of similarly named businesses.
DomesticUltimateDUNSNumberC	string	DUNS Number for the Domestic Ultimate, which is the highest family member in the same country as the business entity. A subject can be its own Domestic Ultimate.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveLatestChange	string	The effective latest change is not used.
EffectiveSequence	int	The effective sequence is not used.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
EmployeesAtPrimaryAddress	string	The number of employees at the referenced address.
EmployeesAtPrimaryAddressEstimation	string	Indicates the calculation of employees at the primary address as estimated.

Name	Type	Description
EmployeesAtPrimaryAddressMinimum	string	Indicates the calculation of employees at the primary address as minimum.
EmployeesAtPrimaryAddressText	string	The number of employees at the referenced address that cannot be mapped to a number.
EmployeesTotal	decimal	The total number of employees.
EnquiryDUNS	string	The identifier used to query the Dun and Bradstreet data. If a location is a branch, then in some countries the headquarters DUNS number is used to do the query. Otherwise it is the same as the DUNS number.
ExportInd	string	Indicates whether the organization is an exporter. If the value is Y, then the organization is an exporter. The default value is N.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
GlobalUltimateDUNSNumberC	string	DUNS Number for the Global Ultimate, which is the highest family member in the same country as the business entity as you proceed further on this branch of the tree. A case can be its own ultimate.
GrowthStrategyDescription	string	The description of the growth strategy.
HQBranchIndicator	string	The status of this site, such as HQ, a branch, or a single location. A list of accepted values are defined in the lookup type HQ_BRANCH_IND.
HomeCountry	string	The home country associated with the party.
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.

Name	Type	Description
ImportInd	string	Indicates whether the organization is an importer. If the value is Y, then the organization is an importer. The default value is N.
IncorpYear	int	The year that the business was formally incorporated.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LaborSurplusInd	string	Indicates whether the organization operates in an area with a labor surplus. If the value is Y, then the organization operates in an area with a labor surplus. The default value is N.
LastEnrichmentDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was last enriched in DaaS.
LastSourceUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated by the source system.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdateSourceSystem	string	The source system that last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LegalStatus	string	The legal structure of the organization such as partnership, corporation, and so on.
LineOfBusiness	string	The type of business activities performed at this site.
LocalActivityCode	string	The local activity classification code.
LocalActivityCodeType	string	The local activity classification code type identifier.

Name	Type	Description
LocalBusIdenType	string	The most common business identifiers in a country such as Chamber of Commerce Number in Italy, Government Registration Number in Taiwan. A list of accepted values are defined in the lookup type LOCAL_BUS_IDEN_TYPE.
LocalBusIdentifier	string	The primary identifier assigned to a businesses by a government agency such as Chamber of Commerce, or other authority. It is often used by countries other than USA.
MinorityOwnedInd	string	Indicates whether the organization is primarily owned by ethnic or racial minorities. If the value is Y, then the organization is owned by ethnic or racial minorities. The default value is N.
MinorityOwnedType	string	The type of minority-owned firm.
MissionStatement	string	The corporate charter of organization in user-defined text format.
NextFyPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its next fiscal year.
OobInd	string	Indicates whether the organization is out of business. If the value is Y, then the organization is out of business. The default value is N.
OrgInformation	*Trading Community Organization Profile Additional Information*	The information of the organization.
OrganizationName	string	The name of the party when the party type is Organization.
OrganizationProfileId	long	The unique identifier of the organization profile. • Primary Key
OrganizationSize	string	Size of an organization based on revenue, number of employees, and so on.
OrganizationType	string	Not used in Fusion V1.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.

Name	Type	Description
ParentDUNSNumberC	string	Parent is a corporation that owns more than 50 percent capital stock of another corporation. The parent company can also be a subsidiary of another corporation. If the parent also has branches, then it is headquarters and also parent company. Headquarters is a business establishment that has branches or divisions reporting to it, and is financially responsible for those branches or divisions. If the headquarters has more than 50 percent of capital stock owned by another corporation, then it is also a subsidiary. If it owns more than 50 percent of capital stock of another corporation, then it is also a parent.
ParentSubInd	string	Indicates whether the organization is a parent or subsidiary.
PartyId	long	The unique identifier of the contact party.
PartyNumber	string	The unique identification number for the party.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PreferredContactEmailAddress	string	The e-mail address of the primary contact person of the organization.
PreferredContactFormattedPhoneNumber	string	The formatted phone number of the primary contact person of the organization.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactName	string	The name of the primary contact person of the organization.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.

Name	Type	Description
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryAddressCity	string	The city of the identifying address.
PrimaryAddressCountry	string	The country listed in the TERRITORY_CODE column of the FND_TERRITORY table for the identifying address.
PrimaryAddressCounty	string	The county of the Identifying address.
PrimaryAddressLine1	string	The first line of the identifying address.
PrimaryAddressLine2	string	The second line of the Identifying address.
PrimaryAddressLine3	string	The third line of the Identifying address.
PrimaryAddressLine4	string	The fourth line of the Identifying address.
PrimaryAddressPostalCode	string	The postal code of the identifying address.
PrimaryAddressProvince	string	The province of the identifying address.
PrimaryAddressState	string	The state of the Identifying address.
PrimaryEmailAddress	string	The e-mail address of the organization.
PrimaryEmailId	long	The primary e-mail contact point ID of the organization.
PrimaryFormattedPhoneNumber	string	The primary telephone number formatted in the local format of the organization.
PrimaryLanguage	string	The standard name for a language.
PrimaryPhoneAreaCode	string	The area code within a country code.

Name	Type	Description
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneId	long	The primary contact point phone ID of the organization.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURL	string	The primary uniform resource locator.
PrimaryWebId	long	The unique identifier of the primary uniform resource locator.
PrincipalName	string	The Name of the highest ranking person in the company.
PrincipalTitle	string	The title of the highest ranking person in the organization.
Pronunciation	string	The pronunciation of the organization.
PublicPrivateOwnershipFlag	boolean	Indicator to specify if the organization is privately owned. Y stands for a privately owned organization and N stands for a publicly owned organization.
RegistrationType	string	Indicates the registration type of the organization.
RentOwnInd	string	Indicates if this account owns or rents the place of business. A list of valid values for rent, own, and lease are defined in the lookup OWN_RENT_IND.
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
SICCode	string	The standard industry classification (SIC) code.
SICCodeType	string	The version of the standard industry classification (SIC) code.
SeblUserKeyLoc	string	The location of the account, optional part of the user primary key.
SmallBusInd	string	Indicates whether the organization is considered as a small business. If the value is Y, then the organization is considered as a small business. The default value is N.
Status	string	The status of the record.
StockSymbol	string	The corporate stock symbol such as ORCL.
SuffixOverriddenFlag	boolean	Indicator to specify that the attribute has Y if the suffix is overridden by user and N otherwise. Default value is N.
ThirdPartyFlag	boolean	Indicator that tracks if a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. Y stands for a third party relationship, N stands for a direct relationship. If Oracle Service is installed, the third party field in the Customers window is required.
TotalEmployeesEstimatedIndicator	string	Indicates if the employee total is estimated. The accepted values are defined in the lookup type TOTAL_EMP_EST_IND.
TotalEmployeesInd	string	Indicates if subsidiaries are included in the calculation of total employees. The accepted values are defined in the lookup type TOTAL_EMPLOYEES_INDICATOR.
TotalEmployeesMinimumIndicator	string	Indicates if the number is a minimum, maximum, or average number of total employees. The accepted values are defined in the lookup type TOTAL_EMP_MIN_IND.
TotalEmployeesText	string	The total number of employees in text format.
TotalPaymentAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total number of payment experiences.

Name	Type	Description
TradingPartnerIdentifier	string	One column to store the FSIO related trading partner codes. It stores alpha numeric values and also addresses the Fed vs. Non-Fed attribute requirement.
UniqueNameAlias	string	The name as identified by the users to internally recognize the organization.
UniqueNameSuffix	string	Identifies system generated or manually overridden suffix.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
WomanOwnedInd	string	Indicates whether the organization is primarily owned by women. If the value is Y, then the organization is primarily owned by women. The default value is N.
YearEstablished	int	The year when the organization began doing business.

Additional Account Name

An additional name of an organization, such as a legal name or a DBA name.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}AdditionalOrganizationName

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Relationship Type	Object or Service
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPreferredFlag	boolean	Indicator to specify the preferred additional name for the organization.
PartyId	long	The unique identifier of the contact party.

Name	Type	Description
PartyName	string	The name of the party.
PartyNameId	long	The unique identifier of the party name. It is primary Key and system generated. • Primary Key
PartyNameType	string	The type of the name. It is a value defined by the additional party name and identifier type entity. The party type must be consistent with the party type that the PARTY_NAME_TYPE can be applied to.
PreferredFlag	boolean	Indicator to specify the name as preferred name for this party within the name type. Possible values are Y and N. Default value is N.
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
TransliterationLang	string	Used to identify the language for the name. It is validated against FND_LANGUAGES.LANGUAGE_CODE. Default value is the Session Language.

Additional Contact Name

An additional name of a person, such as the maiden name or alias.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}AdditionalPersonName

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*

Relationship Type	Object or Service
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.

Name	Type	Description
OverallPreferredFlag	boolean	Indicator to specify the preferred additional name of a person.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNameId	long	The unique identifier of the party name ID. It is primary key and system generated. • Primary Key
PartyNameType	string	The type of the name. It is a value defined by the additional party name and identifier type entity. The party type must be consistent with the party type that the PARTY_NAME_TYPE can be applied to.
PersonAcademicTitle	string	Used to specify the academic title for a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field degree in HL7.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	Used to specify the last name prefix such as fon, van, and so on for a person. It is used in the same way the new field PERSON_LAST_NAME_ PREFIX in HZ_PERSON_PROFILES is used. It corresponds to the field Last Name Prefix in HL7.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_ PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	Used to specify the name suffix such as junior, senior, the third, and so on for a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Suffix in HL7.

Name	Type	Description
PersonPreNameAdjunct	string	Used to specify the name prefix such as Mr., Ms, Dr, and so on for a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Prefix in HL7. It is validated against lookup CONTACT_TITLE.
PersonPreviousLastName	string	Used to specify the previous last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It has no mapping in HL7.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PreferredFlag	boolean	Indicator to specify the name as preferred name for the party within the name type. Possible values are Y and N. Default value is N.
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
TransliterationLang	string	Used to specify the language used for the name. It is validated against FND_LANGUAGES.LANGUAGE_CODE. Default value is the Session Language.

Additional Household Name

An additional name associated with a group. For example, the phonetic name of a group.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/groupService/}AdditionalGroupName

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Household*
Handled by	*Trading Community Group*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.

Name	Type	Description
OrigSystemReference	string	The identifier for the record from the original system.
OverallPreferredFlag	boolean	Identify the name as preferred name for this party within this name type. Possible values are 'Y' and 'N'. Default is 'N'.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNameId	long	Unique Identifier of Party Name. • Primary Key
PartyNameType	string	The type of party name.
PreferredFlag	boolean	The flag which Identifies the name as preferred name for this party within this name type. Possible values are 'Y' and 'N'. Default is 'N'.
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
TransliterationLang	string	Used to capture the language used for the name.

Additional Identifier

An additional identifier of a trading community member, such as driver's license number or passport number.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}AdditionalPartyId

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*

Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Country	string	The name of the country.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.

Name	Type	Description
ExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The expiration date for the identifier. It may be NULL, and does not apply to all types of identifiers.
IssueDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date in which the Identifier was issued. It may be NULL and does not apply to all types of identifiers.
IssuingAuthorityName	string	The issuing authority name.
IssuingAuthorityPartyId	long	The unique identifier of the issuing authority.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party.
PartyIdentifierId	long	The unique identifier of the party identifier. • Primary Key
PartyIdentifierType	string	Indicates the type for the current identifier. The list of accepted values are defined in the lookup TYPE_CODE of HZ_NAME_AND_ID_TYPE_B. The party type should be consistent with the party type that the PARTY_IDENTIFIER_TYPE can be applied to.
PartyIdentifierType1	string	Indicates the type for the current identifier. The list of accepted values are defined in the lookup TYPE_CODE of HZ_NAME_AND_ID_TYPE_B. The party type should be consistent with the party type that the PARTY_IDENTIFIER_TYPE can be applied to.
PartyIdentifierValue	string	The value of the party identifier.
PartyName	string	The name of the party.

Name	Type	Description
RequestId	long	A system-generated read-only attribute used by the application framework.
StateProvince	string	The province of the address.
StatusCode	string	The pre-defined code used to indicate the status.

Address

An address of a trading community member, such as Oracle Corporation is located at 500 Oracle Parkway, Redwood Shores, CA.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartySite

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Phone*
Contains	*Trading Community Address Purpose*
Contains	*Instant Messaging*
Contains	*Web*
Contains	*Telex*

Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Address1	string	The first line of the address.

Name	Type	Description
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AddressExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the location is no longer valid.
AddressLinesPhonetic	string	The phonetic or Kana representation of the Kanji address lines that are used in Japan.
AddressStyle	string	Style of the address.
Addressee	string	The information of the addressee.
City	string	The name of the city.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
ContactPreferenceExistFlag	boolean	Indicator to specify if the contact is primary contact for the party.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
Country	string	The name of the country.
Country1	string	The attribute country1 is not used.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DateValidated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address was last validated.
DoNotValidateFlag	boolean	Indicator to specify that a particular location is not eligible for address validation irrespective of the current validation.
Eft	*Electronic File Transfer*	The electronic file transfer information for the party.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
FormattedAddress	string	The formatted read-only address.
FormattedLocaleAddress	string	The formatted read-only local address.
FormattedMultilineAddress	string	The formatted multi line address of the party site.
GlobalLocationNumber	string	The global location number that uniquely identifies each location in a trading partners enterprise.
HouseType	string	Indicates the building type.
IdentifyingAddressFlag	boolean	Indicator to specify the identifying address for the party. Y stands for the indentifying site and N stands for sites that are not the indentifying site.

Name	Type	Description
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
Language	string	The operating language for the party site.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Latitude	decimal	The latitude of the party address.
LocationDirections	string	Directions to the location.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
LocationLanguage	string	The operating language for the locations.
Longitude	decimal	The longitude of the party address.
Mailstop	string	A user-defined code to indicate a mail drop point within the organization.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was last queried.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.

Name	Type	Description
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary address of the contact irrespective of the context. Y stands for primary address and N stands for all others.
PartyId	long	The unique identifier of the contact party.
PartyNameDba	string	Stores the doing-business_as (DBA) party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameDivision	string	Stores the division party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameLegal	string	Stores the legal party name for a party site. This column is used to store FSIO related legal party name attribute.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
PartySiteInformation	*Trading Community Address Additional Information*	The party address information.
PartySiteName	string	The user-defined name for the site.
PartySiteNumber	string	The party site number of the address.
PartySiteType	string	Stores the party site type and is based on the lookup. Currently this is either null or one-time.
PartySiteUse	*Trading Community Address Purpose*	The information of the party address usage.
PartyUsageCode	string	The usage context of a party's contact point.
Phone	*Phone*	The phone information for the entity.
Position	string	The primary direction such as north or east that is used to access the location.
PostalCode	string	The postal code element of the address.
PostalPlus4Code	string	The four digit extension to the United States postal ZIP code.

Name	Type	Description
Province	string	The name of the province.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
State	string	The name of the state.
Status	string	The status of the record.
Telex	*Telex*	The Telex information associated with the party.
UsageCode	string	The usage code is not used.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
ValidationStatusCode	string	The standardized status code describing the results of the validation.
Web	*Web*	The web information related to the record.

Certification

The certification information of a trading community member, such as a full ISO 9001 registered firm.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}Certification

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*

Relationship Type	Object or Service
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CertificationId	long	The unique identifier for certification. • Primary Key
CertificationName	string	The name of the certification such as ISO9000 and GMP001.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrentStatus	string	The name for the status of the certification. For example, applied for, granted, or expired.

Name	Type	Description
ExpiresOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the certification expires.
Grade	string	The level or grade of certification provided by the ISSUED_BY_AUTHORITY. For example, founding member, gold, fully certified, and partially certified.
IssuedByAuthority	string	The name of the certifying authority.
IssuedOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the certification was issued.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
PartyId	long	The unique identifier of the contact party.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Citizenship

The citizenship information about a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}Citizenship

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*

Relationship Type	Object or Service
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BirthOrSelected	string	Indicates if the citizenship was granted by being born in the country or by naturalization.
CitizenshipId	long	The unique citizenship identifier of a person. • Primary Key
CountryCode	string	The ISO code of the country from which a person claims citizenship.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DateDisowned	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when an individual renounced citizenship. This is usually a self-declared date that might not match a legal effective date.
DateRecognized	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the country granted citizenship to the individual. For a native-born person, this date is typically the person's date of birth.
DocumentReference	string	The unique reference number such as passport number or naturalization reference number associated with DOCUMENT_TYPE.

Name	Type	Description
DocumentType	string	The class of document that confirms citizenship. For example, a passport, or naturalization papers.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
PartyId	long	The unique identifier of the contact party.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Classification Assignment

The classification code assigned to a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}CodeAssignment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*
Contained by	*Sales Competitor*

Handled by	*Sales Party Territory service*
Handled by	*Sales Party Resource Service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ClassCategory	string	The name of the classification category.
ClassCode	string	The code of the classification.

Name	Type	Description
CodeAssignmentId	long	The unique identifier of the assignment of an industrial classification code to an object. It is primary key and system generated. • Primary Key
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableKey1	string	The first column of the alphanumeric or multi-part foreign key.
OwnerTableKey2	string	The second column of the alphanumeric or multi-part foreign key.
OwnerTableKey3	string	The third column of the alphanumeric or multi-part foreign key.
OwnerTableKey4	string	The fourth column of the alphanumeric or multi-part foreign key.

Name	Type	Description
OwnerTableKey5	string	The fifth column of the alphanumeric or multi-part foreign key.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PrimaryFlag	boolean	Indicator that specifies if this is the primary class code of a class category for the organization. Y stands for the primary class code and N stands for all others.
Rank	decimal	Ranks classes if multiple classes are assigned to a party.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Contact

The profile information of the trading community person. The profile includes information such as marital status and additional name.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}PersonProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Person Profile Additional Information*
Contained by	*Trading Community Person Details*
Contained by	*Sales Account*

Relationship Type	Object or Service
Contained by	*Loyalty Member*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Loyalty Member Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Alias	string	Person alias name.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
Comments	string	The comments for the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DataCloudStatus	string	The enrichment status of the person.
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was born.
DateOfDeath	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person died.
DeceasedFlag	boolean	Y or N indicates whether the person is deceased or not.
DeclaredEthnicity	string	The declared ethnicity of the person.
Department	string	The free form text used to name the department.
DepartmentCode	string	The list of values for possible department codes.
Distance	decimal	The distance from the input location.
DoNotCallFlag	boolean	Indicator to specify if the user can send mail to the person or not.
DoNotContactFlag	boolean	Indicator to specify if the user can contact the person through phone, e-mail, or mail or not.
DoNotEmailFlag	boolean	Indicator to specify if the user can send e-mail to the person or not.
DoNotMailFlag	boolean	Indicator to specify if the user can send mail to the person or not.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveLatestChange	string	The date effective entity. Y indicates that this row represents the latest change in the day.

Name	Type	Description
EffectiveSequence	int	The date effective entity. Indicates the order of different changes made during a day. The lowest value represents the earliest change in the day.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
FavoriteContactFlag	boolean	Indicator to specify if the person is key contact.
Gender	string	The gender details such as male, female, or unknown of the person.
HeadOfHouseholdFlag	boolean	The head of household indicator is not used.
HouseholdIncomeAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The household income amount is not used.
HouseholdSize	decimal	The household size is not used.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
JobTitle	string	The free form text for the job title.
JobTitleCode	string	The code given to the job title.
LastContactDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the contact was last contacted.
LastEnrichmentDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was last enriched in DaaS.
LastKnownGPS	string	The geophysical location that is, GPS point last reported for the person.
LastSourceUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated by the source application.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdateSourceSystem	string	The source application that last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaritalStatus	string	The marital status of the person.
MaritalStatusEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the marital status of the person changed.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party.
PartyNumber	string	The unique identification number for the party.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PersonAcademicTitle	string	The academic title that is part of the name of a person such as Dr. Jane Smith.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonInformation	*Trading Community Person Profile Additional Information*	The information of the person.
PersonInitials	string	The Initials of the name.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.

Name	Type	Description
PersonLastNamePrefix	string	Used to identify the Last name prefix such as fon, van and so on for a person. It is used in the same way the new field PERSON_LAST_NAME_PREFIX in HZ_PERSON_PROFILES is used. Corresponds to the field, Last Name Prefix in HL7.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonName	string	The combination of title, first, middle, last, and suffix names.
PersonNameSuffix	string	Indicates the place in a family structure. For example, III in Tom Jones III.
PersonPreNameAdjunct	string	Salutary introduction such as Mr., Herr, and so on.
PersonPreviousLastName	string	The previous last or surname of the person.
PersonProfileId	long	The unique identifier of the person profile. • Primary Key
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PersonalIncomeAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated gross annual income of the person.
PlaceOfBirth	string	The place where the person was born, including city and country.
PreferredContactEmail	string	The preferred contact e-mail of the person.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactName	string	The preferred contact name of the person.

Name	Type	Description
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredContactPhone	string	The preferred contact phone of the person.
PreferredContactURL	string	The preferred contact uniform resource locator of the person.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryAddressCity	string	The city of the identifying address.
PrimaryAddressCountry	string	The country listed in the TERRITORY_CODE column of the FND_TERRITORY table for the identifying address.
PrimaryAddressCounty	string	The county of the identifying address.
PrimaryAddressLatitude	decimal	The primary address latitude information for the location for spatial proximity and containment purposes.
PrimaryAddressLine1	string	The first line of the identifying address.
PrimaryAddressLine2	string	The second line of the identifying address.
PrimaryAddressLine3	string	The third line of the identifying address.
PrimaryAddressLine4	string	The fourth line of the identifying address.
PrimaryAddressLocationId	long	The primary address location ID.

Name	Type	Description
PrimaryAddressLongitude	decimal	The primary address longitude information for the location for spatial proximity and containment purposes.
PrimaryAddressPostalCode	string	The postal code of the identifying address.
PrimaryAddressProvince	string	The province of the identifying address.
PrimaryAddressState	string	The state of the identifying address.
PrimaryCustomerId	long	The customer party identifier of a primary customer for a given person. There should be a valid relationship between the person and the customer.
PrimaryCustomerName	string	The customer party name of a primary customer for a given person. There should be a valid relationship between the person and the customer.
PrimaryCustomerRelationshipId	long	The unique identifier of the primary customer relationship.
PrimaryEmailAddress	string	The e-mail address of the person.
PrimaryEmailId	long	The primary contact point e-mail ID of the person.
PrimaryFormattedAddress	string	The primary formatted address of the person.
PrimaryFormattedPhoneNumber	string	The primary telephone number formatted in the local format of the person.
PrimaryLanguage	string	The standard name for a language.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneId	long	The primary contact point phone ID of the person.

Name	Type	Description
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURL	string	The uniform resource locator.
PrimaryWebId	long	The unique identifier of the primary uniform resource locator.
Pronunciation	string	The person pronunciation.
RentOwnInd	string	Indicates if the person rents or owns his or her residence. Lookup values include rent, own, lease, and so on.
RequestId	long	A system-generated read-only attribute used by the application framework.
SalesAffinityCode	string	The affinity of a person towards the deploying organization.
SalesBuyingRoleCode	string	The role of a person in the buying process.
Salutation	string	The phrase used to address a party in any correspondence.
Status	string	The status of the record.
SuffixOverriddenFlag	boolean	This attribute has Y if the suffix is overridden by user and N if not. Default value is N.
UniqueNameSuffix	string	Identifies system generated or manually overridden suffix.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.

Contact Address

The address of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PersonPartySite

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Phone*
Contains	*Trading Community Address Purpose*
Contains	*Contact Preference*
Contains	*Source System Reference*
Contains	*Trading Community Address Additional Information*
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Addressee	string	The information of the addressee in the contact address.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
GlobalLocationNumber	string	The global location number that uniquely identifies each location in a trading partners enterprise.
IdentifyingAddressFlag	boolean	Indicates whether this is the identifying address for the party. If the value is Y, then this is the identifying address for the party.
Language	string	The language used in the contact's location.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
Mailstop	string	A user-defined code to indicate a mail drop point within their organization.

Name	Type	Description
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary address of the associated object. If the value is True, then this is the primary address. The default value is False.
PartyId	long	The unique identifier of the contact party.
PartyNameDba	string	The doing-business_as (DBA) party name for a party site.
PartyNameDivision	string	The division of the party name for a party site.
PartyNameLegal	string	The legal party name for a party site.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
PartySiteName	string	The address associated with the party site.
PartySiteNumber	string	The alternate identifier of the party site.
PartySiteType	string	The type of the party site.
PartySiteUse	*Trading Community Address Purpose*	Indicates the use of the party site.
PartyUsageCode	string	The usage context of a party's contact point.
PersonPartySiteInformation	*Trading Community Address Additional Information*	The party site information of the person.
Phone	*Phone*	The phone information for the entity.
RelationshipId	long	The relationship identifier for the record.

Name	Type	Description
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Contact Interest

The interests of the trading community member, such as baseball, sports car, or painting.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}PersonInterest

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
InterestName	string	A text field that lets you assign a descriptive name to an interest. For example, pets, dogs, baseball, or sports car racing.
InterestTypeCode	string	A code to classify interests for evaluation.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LevelOfInterest	string	The user-defined level number or name to rate the amount of interest in the activity. For example, high, medium, or low.
LevelOfParticipation	string	The user-defined level number or name to indicate if the person participates and to what extent.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PersonInterestId	long	The unique identifier of interests of the person. • Primary Key
RequestId	long	A system-generated read-only attribute used by the application framework.
Since	{http://xmlns.oracle.com/adf/svc/types/}date-Date	An approximate date from which the person was involved with the activity.

Name	Type	Description
SportIndicator	string	Indicates if the activity is a sport. Y stands for sports and N stands for non-sport activities.
Status	string	The status of the record.
SubInterestTypeCode	string	A code to classify subinterests of the interest type code.
Team	string	Any team the person likes to watch or play for.

Contact Language

The languages known information of a trading community member. For example, Mary Smith can speak both Spanish and English but can only read and write English.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PersonLanguage

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Handled by	*Trading Community Group*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LanguageName	string	The standard name for a language. For example, Spanish, Mandarin, or American English. Foreign key to the FND_LANGUAGES table.
LanguageUseReferenceId	long	The unique identifier of the language use reference. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
NativeLanguageFlag	boolean	Indicator to specify if the language is the declared native language of a person. Y stands for a declared native language and N stands for all other languages.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PrimaryLanguageIndicator	string	Indicates if this is the primary language used by a person in day-to-day transactions. Y stands

Name	Type	Description
		for the primary language and N stands for other languages.
ReadsLevel	string	The user-defined level number or name to indicate the ability to read a language.
RequestId	long	A system-generated read-only attribute used by the application framework.
SpeaksLevel	string	The user-defined level number or name to indicate the ability to speak a language.
SpokenComprehensionLevel	string	The code to indicate comprehension of a spoken language.
Status	string	The status of the record.
WritesLevel	string	The user-defined level number or name to indicate the ability to write in a language.

Contact Preference

The contact preference of the trading community member. For example, do not call Joe Smith between 10 a.m. and 12 noon on weekdays.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}ContactPreference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactLevelTable	string	The table that stores the contact level of the contact preference, and uses the SUBJECT_TABLE lookup. The list of accepted values are HZ_PARTIES, HZ_PARTIES_SITES, or HZ_CONTACT_POINTS.
ContactLevelTableId	long	The foreign key to the table specified in CONTACT_LEVEL_TABLE column. The list of accepted values are PARTY_ID from HZ_PARTIES table, CONTACT_POINT_ID from HZ_CONTACT_POINTS table, or PARTY_SITE_ID from HZ_PARTY_SITES table.
ContactPreferenceId	long	The unique identifier for the contact preference. • Primary Key
ContactType	string	The contact party type that defines whether the contact is a sales account, a prospect, a contact, or any other user-defined party type. The default value is CUSTOMER. A list of accepted values is defined in the lookup CONTACT_TYPE.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaximumNoOfInteractUOMCode	string	The period of time during which the maximum number of interactions applies. Uses the MAX_NO_OF_INTERACT_UOM_CODE lookup.
MaximumNoOfInteractions	decimal	The number of times you can use this contact point. The period of time that this

Name	Type	Description
		number applies is stored in the MAX_NO_OF_INTERACT_UOM_CODE column.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PreferenceCode	string	Indicates whether to use a particular contact method. The list of accepted values are defined in the PREFERENCE_CODE lookup.
PreferenceEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes inactive.
PreferenceEndTimeHR	int	The hour part of time when the contact preference becomes inactive. The time is recorded in the 24 hour format.
PreferenceEndTimeMi	int	The minutes part of the time when the contact preference becomes inactive.
PreferenceStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes active.
PreferenceStartTimeHR	int	The hour part of time when the contact preference becomes active. The time is recorded in the 24 hour format.
PreferenceStartTimeMi	int	The minutes part of the time when the contact preference becomes active.
PreferenceTopicType	string	The appropriate subjects to send the party that the preference is created for. The list of accepted values are defined in the PREFERENCE_TOPIC_TYPE lookup.
PreferenceTopicTypeCode	string	The code of the preference topic type.
PreferenceTopicTypeId	long	The unique identifier of the preference topic type.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.

Name	Type	Description
RequestId	long	A system-generated read-only attribute used by the application framework.
RequestedBy	string	Indicates if the permission or restriction was created internally or requested by the party. The list of accepted values are defined in the REQUESTED_BY lookup.
Status	string	The status of the record.

Credit Rating

The trading community member's credit rating information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}CreditRating

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Relationship Type	Object or Service
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AverageHighCredit	decimal	The average of all the high credit experiences.
BankruptcyInd	string	Indicates if open bankruptcy exists. Y stands for any open bankruptcy that exists and N stands for no open bankruptcy.
BusinessDiscontinued	string	The business discontinued at the listed location. Prompts reader to contact D and B customer service center if any business is operating.
ClaimsInd	string	Indicates if open claims, legal claims, liens, protested bills, or any equivalent information exists. Y stands for availability of information and N stands for no information.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRatingId	long	The unique identifier of the credit rating. • Primary Key
CreditRiskScoreExplain	string	Explains numeric credit risk score that estimates the risk of delinquent payment over the next 12 months.
CreditScore	string	Indicates the risk of delinquent payments.
CreditScoreAge	decimal	Indicates the age of the credit score expressed in months.

Name	Type	Description
CreditScoreClass	decimal	The date when the credit score was calculated.
CreditScoreCommentary	string	The lookup for explanation codes in the CREDIT_SCORE column.
CreditScoreCommentary10	string	Indicates comments about the credit score.
CreditScoreCommentary2	string	Indicates comments about the credit score.
CreditScoreCommentary3	string	Indicates comments about the credit score.
CreditScoreCommentary4	string	Indicates comments about the credit score.
CreditScoreCommentary5	string	Indicates comments about the credit score.
CreditScoreCommentary6	string	Indicates comments about the credit score.
CreditScoreCommentary7	string	Indicates comments about the credit score.
CreditScoreCommentary8	string	Indicates comments about the credit score.
CreditScoreCommentary9	string	Indicates comments about the credit score.
CreditScoreDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the credit score was calculated.
CreditScoreIncdDefault	decimal	Indicates the probability expressed as a percentage of delinquency for a score range or class.
CreditScoreNatlPercentile	decimal	Indicates the relative credit rating of a business compared to all businesses whose credit ratings are included in the local country database.
CreditScoreOverrideCode	string	Indicates why no score was calculated or why score is equal to zero in the US.
CriminalProceedingInd	string	Indicates if criminal proceedings exist. Y stands for availability of information and N stands for no information.
DebarmentInd	string	Indicates whether the company is debarred from doing business with government agencies. Y stands for company debarred and N stands for not debarred.

Name	Type	Description
DebarmentsCount	decimal	The count of filings by government agencies in the United States that prohibit the party from entering into contracts or transactions with those agencies.
DebarmentsDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date of the most recent filing to prohibit the party from entering into contracts or transactions with a government agency in the United States.
DelqPmtPctgForAllFirms	decimal	Specifies a delinquency percentage for all firms.
DelqPmtRngPrcnt	decimal	Specifies a delinquency percentage for credit score range.
Description	string	The free text description of the record.
DetHistoryInd	string	The code that indicates if detrimental information exists for the party and whether complete details exist on management and party. Y stands for availability of information and N stands for no information.
DisasterInd	string	Indicates if information exists about disasters such as fires, hurricanes, and so on. Y stands for availability of information and N stands for no information.
FailureScore	string	For US, the failure risk class, 1 through 5. For Canada , the stability score that indicates risk of business closure, 1 through 10. For Australia, the percentile failure score.
FailureScoreAge	decimal	The failure score age in months.
FailureScoreClass	decimal	1 through 5 to indicate risk of financial stress for a customer account. 1 for a business with greatest risk and 5 for a business with least risk.
FailureScoreCommentary	string	The comments related to failure score.
FailureScoreCommentary10	string	The comments related to failure score.
FailureScoreCommentary2	string	The comments related to failure score.
FailureScoreCommentary3	string	The comments related to failure score.
FailureScoreCommentary4	string	The comments related to failure score.

Name	Type	Description
FailureScoreCommentary5	string	The comments related to failure score.
FailureScoreCommentary6	string	The comments related to failure score.
FailureScoreCommentary7	string	The comments related to failure score.
FailureScoreCommentary8	string	The comments related to failure score.
FailureScoreCommentary9	string	The comments related to failure score.
FailureScoreDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the failure score was calculated.
FailureScoreIncdDefault	decimal	Probability, in percentage, of failure for score range of class.
FailureScoreNatnlPercentile	decimal	The national percentile that reflects the relative ranking of a company among all scored companies in the local country database.
FailureScoreOverrideCode	string	In Europe, code for the reason for variance between the D and B rating and the failure score. In the US, code for the reason why no score was calculated, or why the score is zero.
FinclEmbtInd	string	Indicates if open bankruptcy, receivership liquidation, or any equivalent information exists. Y stands for availability of information and N stands for no information.
FinclLglEventInd	string	Indicates if special events such as financial embarrassment and legal filings exist. Y stands for availability of information and N stands for no information.
GlobalFailureScore	string	The global score for the risk of business default.
HighCredit	decimal	Maximum credit ever extended to the organization.
HighRngDelqScr	decimal	Specifies the high end of the range of the commercial credit score.
JudgementInd	string	Indicates if open judgments exist. Y stands for any open judgment that exists and N stands for no open judgments.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LienInd	string	Indicates if open liens exist. Y stands for any open lien that exists and N stands for no open liens.
LowRngDelqScr	decimal	Specifies the low end of the range of the commercial credit score.
MaximumCreditCurrencyCode	string	The currency used to denominate the MAXIMUM_CREDIT_RECOMMENDATION column.
MaximumCreditRecommendationAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Maximum credit limit recommended for the currency specified in the MAXIMUM_CREDIT_CURRENCY_CODE column.
NegvPmtExpl	string	The conditional comment generated when negative payments are present.
NoTradeInd	string	Indicates that no trade experiences exist. Y stands for any trade experience that exists and N stands for no trade experience.
NumberParentBankruptcyConversions	decimal	The number of bankruptcy conversions by the parent.
NumberParentBankruptcyFiling	decimal	The number of bankruptcies filed by the parent.
NumberSpecialEvent	decimal	The number of occurrences of the special events.
NumberTradeExperiences	decimal	The number of trade experiences.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OprgSpecificationEvntInd	string	Indicates if information exists about operational changes such as name changes, management

Name	Type	Description
		changes, change of control, moves, and so on. Y stands for availability of information and N stands for no information.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OtherSpecificationEvntInd	string	Indicates if special events exist that are not otherwise specified.
ParentHQBankruptcyInd	string	Indicates if parent (P) or headquarters (H) are entered into bankruptcy.
PartyId	long	The unique identifier of the contact party.
PaydexComment	string	Additional paydex information.
PaydexFirmComment	string	Comment on the paydex score for the organization.
PaydexFirmDays	string	The number of days used in the paydex score.
PaydexIndustryComment	string	Comment on the paydex score for the industry.
PaydexIndustryDays	string	The number of days used in the paydex score for the industry.
PaydexNorm	string	Median or average Paydex score for the industry.
PaydexScore	string	Paydex score for the previous 12 months payment history.
PaydexThreeMonthsAgo	string	Paydex score three months ago.
PrntBkcyChapterConv	string	The change of bankruptcy type.
PrntBkcyConvDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the bankruptcy converted from one type to another.
PrntBkcyFilgChapter	decimal	The chapter number of the bankruptcy filed by the parent under the US uniform commercial code.
PrntBkcyFilgDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The bankruptcy filing date of the parent.

Name	Type	Description
PrntBkcyFilgType	string	The type of bankruptcy filed by the parent.
PubRecExpl	string	The conditional comment generated if suits, liens, and judgments exist.
RatedAsOfDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the rating was acquired.
Rating	string	The rating number or code of the rating company.
RatingOrganization	string	The name of the credit rating organization.
RequestId	long	A system-generated read-only attribute used by the application framework.
SecuredFlngInd	string	Indicates if open secured filings such as UCC filings, secured charges or mortgages pledging, or any equivalent information exists. Y stands for availability of information and N stands for no information.
SlowTradeExpl	string	The conditional comment generated when paydex score indicates that slow trade experiences are present.
SpecialEventComment	string	The comment generated if special event section exists.
SpecialEventText	string	The narrative of the special event.
SpecialEventUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the special event was updated.
Status	string	The status of the record.
SuitInd	string	Indicates if open suits exist. Y stands for any open suit that exists and N stands for no open suits.

Customer Contact Profile

The person who functions as a contact for an organization.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}OrganizationContact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Organization Contact Additional Information*
Contains	*Customer Contact Responsibility*
Contains	*Source System Reference*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
ContactFormattedAddress	string	The formatted version of the contact address.

Name	Type	Description
ContactFormattedMultilineAddress	string	The formatted multiline version of the contact address.
ContactName	string	The name of the contact.
ContactNumber	string	The user-defined identification number for this contact.
ContactPartyId	long	The unique identifier of the contact.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CustomerEmailAddress	string	The e-mail address of the customer this contact person belongs to.
CustomerName	string	The name of the customer.
CustomerPartyId	long	The unique identifier of the customer this contact person belongs to.
CustomerPartyNumber	string	The alternate unique identifier of the customer this contact person belongs to.
CustomerUniqueName	string	The unique name of the customer. For an Organization, the value is a concatenation of unique_name_alias and suffix. For a Person, the value is a concatenation of person_name and suffix.

Name	Type	Description
DecisionMakerFlag	boolean	Indicates if this contact is a decision maker. If the value is True, then the contact is a decision maker.
Department	string	The free form text used to name the department for the contact.
DepartmentCode	string	The department code for the contact. A list of accepted values is defined in the lookup DEPARTMENT_TYPE.
EmailAddress	string	The email address associated with the record.
FormattedAddress	string	The formatted address information.
FormattedPhoneNumber	string	The formatted phone number.
JobTitle	string	The free form text for job title.
JobTitleCode	string	The code given to the job title.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgContactId	long	The unique identifier of the organization contact. • Primary Key
OrgContactInformation	*Trading Community Organization Contact Additional Information*	The information of the organization contact.
OrganizationContactRole	*Customer Contact Responsibility*	The role of the contact in the organization.
OrigSystemReference	string	The identifier for the record from the original system.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyRelationshipId	long	The unique identifier of the relationship of the party.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PartySiteName	string	The address associated with the party site.
PersonAcademicTitle	string	The part of the person's title that denotes the academic qualification, such as Dr. Jane Smith.
PersonCertReasonCode	string	The reason for the organization's current certification level assignment. A list of accepted values is defined using the lookup HZ_PARTY_CERT_REASON.
PersonCertificationLevel	string	The certification level of a organization. A list of accepted values is defined in the lookup HZ_PARTY_CERT_LEVEL.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLanguageName	string	The language name associated with the person.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	The prefix for the last name of a person, such as fon, van. For example, if a person's name is Hans Van, the last name of the person is captured using this attribute.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	The place in a family structure. For example, in "Tom Jones III", the "III".

Name	Type	Description
PersonPreNameAdjunct	string	The preferred name adjacency of a resource.
PersonPreviousLastName	string	The previous last name of a person.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PreferredContactFlag	boolean	Indicates if this contact person is primary contact for the customer.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PrimaryCustomerFlag	boolean	Indicates if this customer is primary customer for the contact.
Rank	string	The rank associated with this customer contact.
ReferenceUseFlag	boolean	Indicates if this contact can be used as a reference. If the value is Y, then the contact can be used as a reference.
RequestId	long	A system-generated read-only attribute used by the application framework.
SalesAffinityCode	string	The affinity of a contact to the deploying organization. A list of accepted values is defined in the lookup HZ_SLS_CNTCT_AFFINITY_CODE.
SalesAffinityComments	string	The comments about the contact's affinity to the deploying organization.
SalesBuyingRoleCode	string	The roles played by a contact in the buying process, for example, decision maker or supporting role. A list of accepted values is defined in the lookup HZ_SLS_CNTCT_BUY_ROLE_CODE.

Name	Type	Description
SalesInfluenceLevelCode	string	The influence of the contact has on the deploying organization. A list of accepted values are defined in the lookup HZ_SLS_CNTCT_INFLUENCE_LVL_CD.
Salutation	string	The size of the household this person is a part of.
WebUrl	string	The web URL of contact point.

Customer Contact Responsibility

The role or responsibility of an organization contact.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}OrganizationContactRole

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Customer Contact Profile*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*

Relationship Type	Object or Service
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgContactId	long	The organization contact identifier. Foreign key to the HZ_ORG_CONTACTS table.
OrgContactRoleId	long	The unique contact role identifier. It is primary key and system generated. • Primary Key
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.

Name	Type	Description
PrimaryContactPerRoleType	string	Indicates if the contact is the primary contact for the role. Y stands for primary contact and N stands for a contact that is not the primary contact for the role type. The default value is N.
PrimaryFlag	boolean	Indicator that specifies if this is the primary role for the contact. Y stands for primary role and N stands for a non-primary role for the contact. The default value is N.
RequestId	long	A system-generated read-only attribute used by the application framework.
RoleLevel	string	The role level of the contact. For example, executive, department head, or middle manager.
RoleType	string	The role performed by a contact.
Status	string	The status of the record.

E-Mail

The e-mail address associated with a trading community member. For example, john.doe@oracle.com.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Email

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*

Relationship Type	Object or Service
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key

Name	Type	Description
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmailAddress	string	The email address associated with the record.
EmailFormat	string	The preferred format for e-mail addressed to this address such as HTML or ASCII. A list of accepted values is defined using the lookup EMAIL_FORMAT.
EmailInformation	*Trading Community Contact Point Additional Information*	The additional information about the e-mail.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary e-mail of the associated object. If the value is True, then this is the primary e-mail. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

E-Mail Domain

The domain of the e-mail address associated with a trading community member. For example, ABC Corporation has CORP and BUSINESS e-mail domains.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}EmailDomain

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DomainName	string	The actual or non-reversed domain name of the organization for display purpose.
EmailDomainId	long	The sequence generated unique identifier. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
Status	string	The status of the record.
TransposedDomain	string	The reversed domain name for the purposes of searching.

Education

The trading community person's education information. For example, a person may have attended the University of California from 1995 to 1999 and received an undergraduate degree in Computer Science with a GPA of 4.0.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}Education

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CourseMajor	string	The primary area of study.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DegreeReceived	string	The abbreviation for the degree. For example, BA, BSc, MBA, MSc, PhD, and Gd (graduate diploma).
EducationId	long	The unique identifier of the education record. • Primary Key
LastDateAttended	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The year and month when a person last attended the educational institution.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
PartyId	long	The unique identifier of the contact party.
RequestId	long	A system-generated read-only attribute used by the application framework.
SchoolAttendedName	string	The name of the school.
SchoolPartyId	long	The party identifier of the school.
StartDateAttended	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the attendance of a person starts.
Status	string	The status of the record.
TypeOfSchool	string	The classification of the educational organization. For example, high school, college, university, or professional school. Note that the classification of schools varies among different cultures.

Electronic Data Interchange

The electronic data interchange information associated with a trading community member. For example, the details of standard codes and payment methods that are to be used for data interchange.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Edi

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Organization Details*

Relationship Type	Object or Service
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EDIEceTpLocationCode	string	The trading partner location code for EDI Gateway.

Name	Type	Description
EDIIdNumber	string	The EDI trading partner number for the supplier site.
EDIPaymentFormat	string	Indicates type of information being transmitted with the funds if using EDI_PAYMENT_ METHOD ACH. The list of accepted values are CCD, CCP, CHZ, CTX, PPD, and PPP.
EDIPaymentMethod	string	Indicates how a payment is to be made through EDI. The list of accepted values are ACH and BOP.
EDIRemittanceInstruction	string	Indicates who will send the remittance advice. The list of accepted values are Banks or Payables systems.
EDIRemittanceMethod	string	Indicates how remittance advice are sent to the supplier.
EDITpHeaderId	long	The unique identifier of the EDI transaction header.
EDITransactionHandling	string	The ANSI standard code for EDI transaction type.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/ types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary EDI of the associated object. If the value is True, then this is the primary EDI. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Electronic File Transfer

The electronic funds transfer information of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Eft

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EFTPrintingProgramId	long	The printing program identifier.
EFTSWIFTCode	string	The EFT swift code information.
EFTTransmissionProgramId	long	The transmission program identifier.
EFTUserNumber	string	The number that identifies you as a user of electronic funds transfer service for your bank or clearing organization.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Employment History

The employment history information of a trading community member. For example, John Doe was a Vice President at Business World from 2001 to 2007 and President at World of Business from 2007 to 2009.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}EmploymentHistory

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Work Class*
Contained by	*Trading Community Person Details*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BeginDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the employment officially began.
Branch	string	The military branch code.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmployedAsTitle	string	Job position title assigned by an employer.
EmployedAsTitleCode	string	The code for the job title. If title cannot be represented by a code, then the EMPLOYED_AS_TITLE column must be used.
EmployedByDivisionName	string	The common name of a division or an organization at which the person was employed.
EmployedByNameCompany	string	The name of the organization at which the person was employed. Note that the name must not include the division name.
EmployedByPartyId	long	The party identifier of the employer for situations in which the employer is represented as a party.
EmploymentHistoryId	long	The unique employment history identifier. • Primary Key
EmploymentTypeCode	string	Indicates whether the employment is part-time or full-time.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FacultyPositionFlag	boolean	Indicator Y or N to specify whether the position is a faculty position or not.
FractionOfTenure	decimal	The fraction of tenure.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
MilitaryRank	string	The rank of the person in the branch.
PartyId	long	The unique identifier of the contact party.
ReasonForLeaving	string	The free format text that describes the reason for leaving.
RequestId	long	A system-generated read-only attribute used by the application framework.
Responsibility	string	Job responsibility of the person.
Served	string	Indicates where the person performed military service.
Station	string	Indicates the station name.
Status	string	The status of the record.
SupervisorName	string	The full name of the manager of the person.
TenureCode	string	The type of tenure for faculty positions.
WeeklyWorkHours	decimal	The usual number of hours worked per week.
WorkClass	*Work Class*	The custom-defined classification information about job title and work experience of a person.

Financial Number

The financial report numbers of a trading community member, such as assets, liabilities, and cash balance.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}FinancialNumber

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Financial Report*

Relationship Type	Object or Service
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
FinancialNumber	decimal	The value for the financial number. For example, the FINANCIAL_NUMBER_NAME column could have a numerical value of 3,000,000,000 for annual sales.
FinancialNumberCurrency	string	The ISO currency code for the financial number.
FinancialNumberId	long	The unique identifier of the financial number. • Primary Key
FinancialNumberName	string	A text field that lets you assign a descriptive name to a financial report item. For example, gross annual sales, profit, and net annual sales. A user-defined lookup.
FinancialReportId	long	The unique identifier of the financial report.

Name	Type	Description
FinancialUnitsApplied	decimal	The order of magnitude (tens, hundreds, thousands, and so on) used for the FINANCIAL_NUMBER column.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ProjectedActualCode	string	Indicates if the projected amount is projected or actual. The list of accepted values are P and A. The default value is A.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Financial Profile

The financial details of a trading community member, such as bank account information that was obtained as part of a credit evaluation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}FinancialProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*

Relationship Type	Object or Service
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessAuthorityDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when access to the information in the account was granted.
AccessAuthorityGranted	string	Indicates whether access to information in a financial account was granted. If the value is True, then the access has been granted.
BalanceAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The reported balance on an account. The balance can be a positive number, negative number, or zero.
BalanceVerifiedOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the account balance was verified.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
FinancialAccountNumber	string	The alternate unique identifier of the financial account.

Name	Type	Description
FinancialAccountType	string	The short name that classifies the financial accounts. For example, savings, checking, home loan, personal loan, trading, and so on.
FinancialOrgType	string	The classification of financial organizations. For example, bank, savings and loan, private lender, building society and so on.
FinancialOrganizationName	string	The name of the financial organization that holds the account.
FinancialProfileId	long	The unique identifier of the party's financial profile. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Financial Report

The financial report information of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}FinancialReport

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Financial Number*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AuditInd	string	Indicates if the financial reports are audited. If the value is True, then the financial reports have been audited.
ConsolidatedInd	string	Indicates if the financial reports are consolidated. If the value is C, then the reports are consolidated.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DateReportIssued	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the financial report was published.
DocumentReference	string	The unique reference number such as passport number or naturalization reference number associated with DOCUMENT_TYPE.
EstimatedInd	string	Indicates whether the financial reports provide estimated data. If the value is True, then the financial reports provide the data.
FinalInd	string	Indicates whether the financial reports are the final closing statements for a business that has ceased operations. If the value is True, then the reports are final closing statements.
FinancialNumber	*Financial Number*	The number that indicates a financial value like annual sales.
FinancialReportId	long	The unique identifier for a financial report. • Primary Key
FiscalInd	string	Indicates whether the financial reports cover a fiscal twelve-month accounting period. If the value is Y, then the financial report covers a twelve-month fiscal period.
ForecastInd	string	Indicates whether the financial reports display forecasts or future projections. If the value is Y, then the financial report displays forecasts.
IssuedPeriod	string	The period covered by the financial report. For example, fiscal year 1999, 1998, and so on.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OpeningInd	string	Indicates whether the financial reports are the opening statements for a business. If the value is Y, then the financial statements are opening statements.

Name	Type	Description
PartyId	long	The unique identifier of the contact party.
ProformaInd	string	Indicates if the financial reports are pro forma numbers. If the value is Y, then the financial reports are pro forma numbers.
QualifiedInd	string	Indicates whether the financial reports include qualifying remarks from auditors about the fairness and accuracy of the numbers. If the value is Y, then the report is qualified by auditors.
ReportEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The end date of the report, used instead of Issued Period.
ReportStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The start date of the report, used instead of Issued Period.
RequestId	long	A system-generated read-only attribute used by the application framework.
RequiringAuthority	string	The name of the primary organization that requires this financial report. For example, auditors, the Federal Trade Commission, or the Internal Revenue Service.
RestatedInd	string	Indicates whether the financial reports include data that was corrected after the original financial reports. If the value is Y, then the report has been corrected.
SignedByPrincipalsInd	string	Indicates whether the financial reports were signed by the principals of the organization. If the value is Y, then the reports are signed.
Status	string	The status of the record.
TrialBalanceInd	string	Indicates whether the financial reports include trial balance numbers. If the value is Y, then the financial report includes trial balance numbers.
TypeOfFinancialReport	string	A name for the financial report. For example, 10K report, Annual Report, or Shareholder's Special Report.
UnbalancedInd	string	Indicates whether the financial reports include balance sheet accounts that do not balance. If the value is Y, then report includes unbalanced balance sheet accounts.

Name	Type	Description
WhUdpateId	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the record was entered or changed in a data warehouse.

Household

The trading community group information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/groupService/}Group

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Additional Household Name*
Contains	*Classification Assignment*
Contains	*Source System Reference*
Contains	*Relationship*
Contains	*Financial Profile*
Contains	*Web*
Contains	*Contact Preference*
Contains	*Phone*
Contains	*Contact Language*
Contains	*Certification*
Contains	*Usage Assignment*
Contains	*Additional Identifier*

Relationship Type	Object or Service
Contains	*E-Mail Domain*
Contains	*Instant Messaging*
Contains	*E-Mail*
Contains	*Address*
Contains	*Preference*
Contained by	*Sales Party*
Contained by	*Sales Party Resource*
Contained by	*My Sales Account*
Contained by	*Sales Account*
Contained by	*Sales Party Territory*
Handled by	*Trading Community Group*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalGroupName	*Additional Household Name*	Additional name associated with the group.
AdditionalPartyId	*Additional Identifier*	Additional Identifier for the group.
AnnualExpenses	long	Household annual expenses.

Name	Type	Description
AnnualIncome	long	The value for annual income.
AverageAge	long	Household average age.
Certification	*Certification*	Certification information associated with the group.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
CertificationReasonCode	string	Reason for group party's current certification level assignment. HZ_PARTY_CERT_REASON lookup type.
Child0to6Number	long	The number of children between 0 and 6 years.
Child13to18Number	long	The number of children between 13 and 18 years.
Child7to12Number	long	The number of children between 7 and 12 years.
CodeAssignment	*Classification Assignment*	Classification code assigned to the group.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.

Name	Type	Description
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DependentsNumber	long	The number of dependents.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveLatestChange	string	Not Used.
EffectiveSequence	int	Not Used.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
Email	*E-Mail*	The email address associated with the record.
EmailDomain	*E-Mail Domain*	Email domain information for the group.
FinancialProfile	*Financial Profile*	Financial Profile information of the group.
GroupName	string	Name of this group.
GroupSize	long	Size of the group.
GroupType	string	The party type can only be person, organization, group.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MedianAge	long	The age of the median.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.

Name	Type	Description
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyNumber	string	The unique identification number for the party.
PartyPreference	*Preference*	Preference information of the group.
PartySite	*Address*	Address information associated with the group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUsageAssignment	*Usage Assignment*	Party usage assigned to the group.
PersonLanguage	*Contact Language*	Language information associated with a group.
Phone	*Phone*	The phone information for the entity.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonEmail	string	The E-Mail of the preferred contact person.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredContactPersonName	string	The name of the preferred contact person.
PreferredContactPersonPhone	string	The phone number of the preferred contact person.
PreferredContactPersonURL	string	The URL of the preferred contact person.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.

Name	Type	Description
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryAddressCity	string	The city of the primary address.
PrimaryAddressCountry	string	The country for the primary address.
PrimaryAddressCounty	string	The country of the primary address.
PrimaryAddressLine1	string	Line one of the primary address.
PrimaryAddressLine2	string	Line two of the primary address.
PrimaryAddressLine3	string	Line three of the primary address.
PrimaryAddressLine4	string	Line four of the primary address.
PrimaryAddressLocationId	long	The unique identification number for the primary address location.
PrimaryAddressPartySiteId	long	The unique identifier for the primary address party site.
PrimaryAddressPostalCode	string	The postal code of the primary address.
PrimaryAddressProvince	string	The province of the primary address.
PrimaryAddressState	string	The state of the primary address.
PrimaryEmail	string	Primary E-Mail Address of the Group.
PrimaryEmailId	long	Primary E-Mail ID.
PrimaryFormattedAddress	string	Primary formatted address for the group.
PrimaryFormattedMultilineAddress	string	Primary formatted multiline address for the group.
PrimaryFormattedPhoneNumber	string	Primary formatted phone number for the group.

Name	Type	Description
PrimaryLanguage	string	Standard name for a primary language.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneId	long	The unique identification number for the primary phone.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURL	string	Primary URL.
PrimaryWebId	long	Primary Web ID.
ProfileCreatedBy	string	The user who created the row.
ProfileCreatedByModule	string	The module that created the profile.
ProfileCreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time of the creation of the row.
ProfileLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time of the last update of the row.
ProfileLastUpdateLogin	string	The session login associated to the user who last updated the row.
ProfileLastUpdatedBy	string	The user who last updated the row.
Relationship	*Relationship*	Relationship information for the group.

Name	Type	Description
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.
SuffixOverriddenFlag	boolean	This will have Y if the suffix is overridden by user N if not.
UniqueNameSuffix	string	System generated or manually overridden suffix.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
WealthAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Household wealth amount or net worth.
Web	*Web*	The web information related to the record.

Instant Messaging

The instant messaging information of a trading community member, such as the AOL identifier or Yahoo Messenger information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}InstantMessaging

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Household*

Relationship Type	Object or Service
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.

Name	Type	Description
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
InstantMessagingAddress	string	The instant messaging information address.
InstantMessagingInformation	*Trading Community Contact Point Additional Information*	The instant messaging information related to the record.
InstantMessengerType	string	The type of the instant messenger type.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.

Name	Type	Description
OverallPrimaryFlag	boolean	Indicates whether this is the primary instant messaging Id of the associated object. If the value is True, then this is the primary instant messaging Id. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Phone

The phone number associated with a trading community member. For example, the phone number for Oracle Corporation is 650-506-6000.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Phone

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Marketing Response*
Contained by	*Partner*
Contained by	*Household*
Contained by	*Contact Address*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*

Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*

Relationship Type	Object or Service
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FormattedPhoneNumber	string	The formatted phone number.
LastContactDtTime	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date and time of last contact placed to this contact point.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PagerTypeCode	string	The PAGER_TYPE_CODE column stores the lookup code for the type of pager. The type of pager determines how the page is received. For example, tone, number, alphanumeric or two-way alphanumeric.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PhoneAreaCode	string	The area code prefix for the phone number.
PhoneCallingCalendar	string	The name or code for a calling calendar used with this telephone number. This attribute is no longer used in Fusion applications.

Name	Type	Description
PhoneCountryCode	string	The country code prefix for the phone number.
PhoneExtension	string	The additional number addressed after initial connection to an internal telephone system.
PhoneInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community phone.
PhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound, or outbound.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RawPhoneNumber	string	The unformatted telephone number.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TimezoneCode	string	The foreign key to FND_TIMEZONES_B.TIMEZONE_CODE.
TransposedPhoneNumber	string	This column stores the concatenation of PHONE_COUNTRY_CODE, PHONE_AREA_CODE, and PHONE_NUMBER in reverse order. For example, if PHONE_COUNTRY_CODE=1, PHONE_AREA_CODE=650 and PHONE_NUMBER=5065747, this column stores

Name	Type	Description
		74756050561. This column is used for building an index to search for any combination of the above three columns.

Preference

The preferences of a trading community member. For example, a member may prefer that the transaction currency is the US dollar.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartyPreference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalValue1	string	The additional preference value.
AdditionalValue2	string	The additional preference value.
AdditionalValue3	string	The additional preference value.
AdditionalValue4	string	The additional preference value.
AdditionalValue5	string	The additional preference value.
Category	string	A preference category is used to logically group one or more preference codes in a particular user interface. The combination of CATEGORY and PREFERENCE_CODE identifies a preference.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Module	string	The program that creates the preference. For example, TCA MOBILE CUSTOMER DIRECTORY.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PartyPreferenceId	long	The unique identifier of the party preference. • Primary Key

Name	Type	Description
PreferenceCode	string	A preference code determines if a preference is a single value or a multiple value preference. The preference code is validated by the HZ_PREFERENCE lookup. The combination of CATEGORY and PREFERENCE_CODE identifies a preference.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
ValueDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The preference value when the data type is DATE.
ValueName	string	A user-defined alias for a preference value.
ValueNumber	decimal	The preference value when the data type is NUMBER.
ValueVarchar2	string	The preference value when the data type is VARCHAR2.

Relationship

The relationship between two trading community members. For example, John Doe is the spouse of Jane Doe or Michael Smith is a contact of Oracle Corporation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}Relationship

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Phone*
Contains	*Address*
Contains	*Instant Messaging*
Contains	*Web*

Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalInformation1	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type. For operating unit and legal entity to bank relationships, column stores communication agreement ID, which identifies agreement between payer and bank on type of EDIFACT documents that can be sent for processing payments.
AdditionalInformation10	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation11	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation12	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation13	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation14	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation15	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation16	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation17	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation18	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation19	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.

Name	Type	Description
AdditionalInformation2	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation20	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation21	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation22	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation23	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation24	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation25	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation26	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation27	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation28	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation29	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation3	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.

Name	Type	Description
AdditionalInformation30	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation4	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation5	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation6	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation7	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation8	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation9	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
Comments	string	The comments for the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.

Name	Type	Description
DirectionCode	string	The code of the relationship direction. The list of accepted values are defined in the lookup DIRECTION_CODE.
Email	*E-Mail*	The email address associated with the record.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectEmailAddress	string	The e-mail address of the object party in the relationship.
ObjectId	long	The unique identifier of the object party in this relationship.
ObjectPartyName	string	The name of the object party in this relationship.
ObjectTableName	string	The source table name of the object party in this relationship.
ObjectType	string	The object type of the relationship.
ObjectUsageCode	string	The usage code of object party in the relationship.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationContact	*Customer Contact Profile*	The organization contact information.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyName	string	The name of the party.
PartySite	*Address*	The party site associated with the relationship.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the relationship.
PercentageOwnership	decimal	The percentage of the child entity owned by the parent entity.
Phone	*Phone*	The phone information for the entity.
PreferredContactFlag	boolean	Indicates if this contact person is primary contact for the customer.
PrimaryCustomerFlag	boolean	Indicates if this customer is primary customer for the contact.
RelationshipCode	string	The code for a forward or a backward relationship. A list of accepted relationship values is defined in the lookup PARTY_RELATIONS_TYPE.
RelationshipId	long	The relationship identifier for the record.
RelationshipInformation	*Trading Community Relationship Additional Information*	The relationship type information.
RelationshipRecId	long	The unique identifier of the contact's relationship record. • Primary Key
RelationshipType	string	The relationship type name. For example, CUSTOMER_SUPPLIER. A list of valid relationship types is defined in the lookup HZ_RELATIONSHIP_TYPE.
RequestId	long	A system-generated read-only attribute used by the application framework.
Role	string	The role between the subject and object party in this relationship.

Name	Type	Description
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
SubjectEmailAddress	string	The e-mail address of the subject party in relationship.
SubjectId	long	The unique identifier of the subject in this relationship.
SubjectPartyUsageAssignment	*Usage Assignment*	The usage assignment of the subject party in the relationship.
SubjectTableName	string	The source table of the subject.
SubjectType	string	The subject type of the relationship.
SubjectUsageCode	string	The usage code of subject party in the relationship.
Web	*Web*	The web information related to the record.

Sales Party Territory

These are territories associated to the sales party (customer).

QName: {http://xmlns.oracle.com/apps/crmCommon/salesParties/salesPartyTerritoryService}SalesPartyTerritories

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Household*
Contains	*Trading Community Organization Details*
Contains	*Trading Community Person Details*

Relationship Type	Object or Service
Handled by	*Sales Party Territory service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributeCategory	string	Indicates attribute category.
CpdrfLastUpd	string	The standard replication column.
CpdrfVerPillar	int	The standard replication column.
CpdrfVerSor	int	The standard replication column.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
Group	*Household*	Indicates to which group party this territory belongs to.
OrganizationParty	*Trading Community Organization Details*	Indicates to which organization party this territory belongs to.
PartyId	long	The unique identifier of the contact party.
PartyTerritoryId	long	This is the customer territory association identifier. • Primary Key
PersonParty	*Trading Community Person Details*	Indicates to which person party this territory belongs to.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
TerritoryId	long	Indicates territory that is associated with the customer.

Name	Type	Description
TerritoryVersionId	long	Indicates territory version that is associated with the customer.

Source System Reference

The name of external source system where the trading community information is imported from.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}OriginalSystemReference

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OldOrigSystemReference	string	The old source system reference that is being replaced.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OrigSystemReferenceId	long	The unique identifier for original system reference. • Primary Key
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
SourceSystemRefInformation	*Trading Community Original System Mapping Identifier Additional Information*	The source system reference information.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Name	Type	Description

Telex

The telex number information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Telex

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the

Name	Type	Description
		start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary telex of the associated object. If the value is True, then this is the primary telex. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Name	Type	Description
TelexNumber	string	The telex reference number (usually a telephone number) of the organization.

Trading Community Address Additional Information

The address information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/partySite/}PartySiteInformation

Relationships

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BeginDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date at the start of the date range within which the row is active.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
IntegrationKey	string	The integration key is not used.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PartySiteUseId	long	The unique identifier of the party site used. • Primary Key
PrimaryPerType	string	Indicates if this is the primary use for the site. Y stands for the primary site and N stands for all other sites.
RequestId	long	A system-generated read-only attribute used by the application framework.
SiteUseType	string	The site use type associated with the address.
Status	string	The status of the record.

Trading Community Contact Point Additional Information

The contact point for a trading community member like phone or e-mail. For example 650-506-6000 is the phone number for Oracle Corporation, john.doe@example.com is the e-mail address for John Doe.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/contactPoint/}ContactPointInformation

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalOrganizationName	*Additional Account Name*	The additional name associated with the organization.
AdditionalPartyId	*Additional Identifier*	The additional identifier associated with the organization or person.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AnalysisFy	string	The fiscal year that the financial information is based on.
CategoryCode	string	The code of the category to which the person belongs. A list of accepted values is defined in the lookup type CUSTOMER_CATEGORY.

Name	Type	Description
CeoName	string	The name of the chief executive officer. It is the denormalized value of the CEO_NAME in HZ_ORGANIZATION_PROFILES.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
Certification	*Certification*	The certification information associated with the organization.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
City	string	The name of the city.
CodeAssignment	*Classification Assignment*	The classification code assigned to the organization.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRating	*Credit Rating*	The credit rating for the organization.
CurrentFiscalYearPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its current fiscal year.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.

Name	Type	Description
Edi	*Electronic Data Interchange*	The electronic data interchange information for the organization.
Eft	*Electronic File Transfer*	The electronic file transfer information for the organization.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EmailDomain	*E-Mail Domain*	The domain name of the email address.
EmployeesTotal	decimal	The total number of employees.
FinancialProfile	*Financial Profile*	The financial profile information of the organization.
FinancialReport	*Financial Report*	The financial report information of the organization.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
GroupType	string	The type of the group.
HQBranchIndicator	string	The status of this site, such as HQ, a branch, or a single location. A list of accepted values are defined in the lookup type HQ_BRANCH_IND.
HomeCountry	string	The home country associated with the party.
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.

Name	Type	Description
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LanguageName	string	The standard name for the language.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MissionStatement	string	The corporate charter of organization in user-defined text format.
NextFyPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its next fiscal year.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationProfile	*Account*	The information about the partner organization.
OrganizationSize	string	The size of the organization based on its revenue, number of employees, and so on.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party. • Primary Key

Name	Type	Description
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartyPreference	*Preference*	The preference mentioned in the organization details.
PartySite	*Address*	The party site associated with the organization.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the organization.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
Phone	*Phone*	The phone information for the entity.
PostalCode	string	The postal code element of the address.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.

Name	Type	Description
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryEmailContactPointId	long	The unique identifier of the primary e-mail.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneContactPointId	long	The unique identifier of the primary phone contact point.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURLContactPointId	long	The unique identifier of the primary URL contact point.
PrincipalName	string	The Name of the highest ranking person in the company.
Province	string	The name of the province.
Relationship	*Relationship*	The relationship information of the organization.
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The Standard Industry Classification (SIC) code.

Name	Type	Description
SICCodeType	string	The version of Standard Industry Classification (SIC) code.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
SourceSystemUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the source system information was last updated.
State	string	The name of the state.
Status	string	The status of the record.
Telex	*Telex*	The telex information of the organization.
ThirdPartyFlag	boolean	Indicates whether a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. If the value is Y, then the party is a third party relationship. If Oracle Service is installed, the Third Party field in the Customers window is mandatory.
TradingPartnerIdentifier	string	The FSIO related trading partner codes.
URL	string	The destination URL associated with a specific Google AdWords ad.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
Web	*Web*	The web information related to the record.
YearEstablished	int	The year when the organization began doing business.

Trading Community Organization Profile Additional Information

The additional profile information about an organization, such as the organization type.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/organization/}OrganizationInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalPartyId	*Additional Identifier*	The additional identifier associated with the organization or person.
AdditionalPersonName	*Additional Contact Name*	The additional name of the person.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.

Name	Type	Description
CategoryCode	string	The code of the category to which the person belongs. A list of accepted values is defined in the lookup type CUSTOMER_CATEGORY.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
Certification	*Certification*	The certification information for the person.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
Citizenship	*Citizenship*	The citizenship information of a person.
City	string	The name of the city.
CodeAssignment	*Classification Assignment*	The classification code assigned to the person.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRating	*Credit Rating*	The credit rating of the person.
DateOfBirth	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was born.
Education	*Education*	The education information of the person.
Email	*E-Mail*	The email address associated with the record.

Name	Type	Description
EmailAddress	string	The email address associated with the record.
EmailDomain	*E-Mail Domain*	The domain name of the email address.
EmploymentHistory	*Employment History*	The employment history information of a person.
FinancialProfile	*Financial Profile*	The financial profile information of a person.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
Gender	string	The gender of the person, such as male, female, and unknown. A list of accepted values is defined in the lookup HZ_GENDER.
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LanguageName	string	The standard name for the language.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.

Name	Type	Description
LastUpdatedBy	string	The user who last updated the record.
MaritalStatus	string	The marital status of the person. A list of accepted values is defined in the lookup MARITAL_STATUS.
MissionStatement	string	The corporate charter of organization in user-defined text format.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartyPreference	*Preference*	The preference mentioned in the person details.
PartySite	*Contact Address*	The party site associated with the person.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the person.
PersonAcademicTitle	string	The part of the person's title that denotes the academic qualification, such as Dr. Jane Smith.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonInterest	*Contact Interest*	The interest information associated with a person.

Name	Type	Description
PersonLanguage	*Contact Language*	The language information associated with a person.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	The prefix for the last name of a person, such as fon, van. For example, if a person's name is Hans Van, the last name of the person is captured using this attribute.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	The place in a family structure. For example, in "Tom Jones III", the "III".
PersonPreNameAdjunct	string	The preferred name adjacency of a resource.
PersonPreviousLastName	string	The previous last name of a person.
PersonProfile	*Contact*	The profile information of the person.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
Phone	*Phone*	The phone information for the entity.
PostalCode	string	The postal code element of the address.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.

Name	Type	Description
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryEmailContactPTId	long	The unique identifier of the primary e-mail.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneContactPTId	long	The unique identifier of the primary phone contact point.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURLContactPTId	long	The unique identifier of the primary URL contact point.
Province	string	The name of the province.
Relationship	*Relationship*	The relationship information of the person.

Name	Type	Description
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The Standard Industry Classification (SIC) code.
SICCodeType	string	The version of Standard Industry Classification (SIC) code.
Salutation	string	The size of the household this person is a part of.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
SourceSystemUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the source system information was last updated.
State	string	The name of the state.
Status	string	The status of the record.
ThirdPartyFlag	boolean	Indicates whether a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. If the value is Y, then the party is a third party relationship. If Oracle Service is installed, the Third Party field in the Customers window is mandatory.
URL	string	The destination URL associated with a specific Google AdWords ad.
UserGUID	string	The "light weight" user Global Unique Id. Light Weight users defined in the Extended Security (XS) System.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
Web	*Web*	The web information related to the record.

Trading Community Person Profile Additional Information

The additional information about a trading community person.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/person/}PersonInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contact*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Loyalty Member Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
PersonProfileId	long	The unique identifier of the person profile. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Relationship Additional Information

The relationship between two trading community members. For example, John Doe is the spouse of Jane Doe or Michael Smith is a contact of Oracle Corporation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/relationship/}RelationshipInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OwnerTableId	long	The unique identifier for a record in the owner table.

Name	Type	Description
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
PartyUsageCode	string	The usage context of a party's contact point.
PartyUsgAssignmentId	long	The unique identifier of the party usage assignment. • Primary Key
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.

Web

The Web information associated with a trading community member. For example, Oracle's address on the Web is www.oracle.com.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Web

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*

Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key

Name	Type	Description
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N stands for all others.

Name	Type	Description
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
URL	string	The destination URL associated with a specific Google AdWords ad.
WebInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community Web.
WebType	string	The prefix class to a Web address. Typically, this is either FTP or HTTP.

Work Class

The custom-defined classification of information about a person's job title and work experience.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/personService/}WorkClass

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Employment History*

Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmploymentHistoryId	long	The foreign key to the HZ_EMPLOYMENT_HISTORY table.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LevelOfExperience	string	The user-defined rating for the level of experience in the class of work. For example, journeyman, trainee, or exposure.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.
WorkClassId	long	The unique identifier for the class of work. • Primary Key
WorkClassName	string	The user-determined classification for work. For example, bricklayer, doctor, lawyer, programmer, or minister of health.

Sales Person Setup

A setup to configure a person involved in the sale or support of products and services. For example, John Smith, sales representative.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/applicationModule/}SalesPersonService

Service WSDL URL: https://servername/crmService/SalesPersonServiceV2?WSDL

Logical Business Objects

getResourceSalesrep

Get operation for Trading Community Resource Sales Representative Setup

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceSalesrepId	long	Unique Salesrep Identifier

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceSalesrepResult	Trading Community Resource Sales Representative Setup that matches the inbound key attributes.

createResourceSalesrep

Create operation for Trading Community Resource Sales Representative Setup

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceSalesrep	*Resource Sales Representative Setup*	Trading Community Resource Sales Representative Setup to be created

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceSalesrepResult	Result of the operation includes the successfully created Trading Community Resource Sales Representative Setup and/or a list of warnings or informational messages.

updateResourceSalesrep

Update operation for Trading Community Resource Sales Representative Setup

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceSalesrep	*Resource Sales Representative Setup*	Trading Community Resource Sales Representative Setup to be updated

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceSalesrepResult	Result of the operation includes the successfully updated Trading Community Resource Sales Representative Setup and/or a list of warnings or informational messages.

deleteResourceSalesrep

Delete operation for Trading Community Resource Sales Representative Setup

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceSalesrep	*Resource Sales Representative Setup*	Trading Community Resource Sales Representative Setup to be deleted

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warnings or informational messages encountered when deleting the object.

mergeResourceSalesrep

Merge operation for Trading Community Resource Sales Representative Setup. It will perform an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceSalesrep	*Resource Sales Representative Setup*	Trading Community Resource Sales Representative Setup to be merged

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceSalesrepResult	Result of the operation includes the successfully merged Trading Community Resource Sales Representative Setup and/or a list of warnings or informational messages.

findResourceSalesrep

Find operation for Trading Community Resource Sales Representative Setup

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, etc.

Element Name	Type	Description
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Resource Sales Representative Setup*	Result of the operation including a list of Trading Community Resource Sales Representative Setup that satisfy the inbound criteria and any warnings or informational messages encountered during the invocation.

processResourceSalesrep

Bulk load operation for Trading Community Resource Sales Representative Setup

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action shall be performed, such as Create, Update, Merge, or Delete
resourceSalesrep	*Resource Sales Representative Setup*	A list of Trading Community Resource Sales Representative Setup to be processed
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Control your bulk upload behavior, such as whether the valid data will be committed if there are other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Resource Sales Representative Setup*	Result of the operation including a list of Trading Community Resource Sales Representative Setup that are successfully processed and any warnings or informational messages encountered during the invocation.

processCSResourceSalesrep

An operation to apply the changes back to the data source for Trading Community Resource Sales Representative Setup

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object that is used to represent the changes that have been made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Control your bulk upload behavior, such as whether the valid data will be committed if there are other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	Result of the operation including a list of created/updated data objects, and all warning and informational messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
mergeResourceSalesrep	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_SALES_REPRESENTATIVE_INFORMATION_PRIV	Manage Trading Community Resource Sales Representative Information	Allows the management of resource saleperson setup information. If assigning, also assign the ability to view the trading community resource sales representative information.
getResourceSalesrep	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_SALES_REPRESENTATIVE_INFORMATION_PRIV	Manage Trading Community Resource Sales Representative Information	Allows the management of resource saleperson setup information. If assigning, also assign the ability to view the trading community resource sales representative information.
updateResourceSalesrep	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_SALES_REPRESENTATIVE_INFORMATION_PRIV	Manage Trading Community Resource Sales Representative Information	Allows the management of resource saleperson setup information. If assigning, also assign the ability to view the trading community resource sales representative information.
deleteResourceSalesrep	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_SALES_REPRESENTATIVE_INFORMATION_PRIV	Manage Trading Community Resource Sales Representative Information	Allows the management of resource saleperson setup information. If assigning, also assign the ability to view the trading community resource sales representative information.
createResourceSalesrep	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_SALES_REPRESENTATIVE_INFORMATION_PRIV	Manage Trading Community Resource Sales Representative Information	Allows the management of resource saleperson setup information. If assigning, also assign the ability to view the trading community resource sales representative information.
processCSResourceSalesrep	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_SALES_REPRESENTATIVE_INFORMATION_PRIV	Manage Trading Community Resource Sales Representative Information	Allows the management of resource saleperson setup information. If assigning, also assign the ability to view the trading community resource sales representative information.
processResourceSalesrep	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_SALES_REPRESENTATIVE_INFORMATION_PRIV	Manage Trading Community Resource Sales Representative Information	Allows the management of resource saleperson setup information. If assigning, also assign the ability to view the trading community resource sales representative information.
findResourceSalesrep	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_SALES_REPRESENTATIVE_INFORMATION_PRIV	Manage Trading Community Resource Sales Representative Information	Allows the management of resource saleperson setup information. If assigning, also assign the ability to view the trading community resource sales representative information.

Operation Name	Privilege Code	Privilege Name	Privilege Description

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_SALES_REPRESENTATIVE_INFORMATION_PRIV	ORA_HZRESOURCE_ADMINISTRATOR_DUTY	Resource Administration	Administers resource information.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_HZRESOURCE_ADMINISTRATOR_DUTY	ORA_PER_MANAGE_USER_AND_ROLES_DUTY_CRM	Manage Users	Creates and updates users and assigns roles to users.

Resource Sales Representative Setup

The information pertaining to a resource who functions as a sales person. For example, sales credit type information used to calculate sales credit in Financials, sales tax geography code and sales tax inside city limits information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceServiceV2/}ResourceSalesrep

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Sales Person Setup*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Who column: indicates the user who created the row.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the creation of the row.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date this salesrep becomes inactive
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Who column: indicates the date and time of the last update of the row.
LastUpdateLogin	string	Who column: indicates the session login associated to the user who last updated the row.
LastUpdatedBy	string	Who column: indicates the user who last updated the row.
ObjectVersionNumber	int	Used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was queried.
ResourceId	long	Identifier for the resource party. Foreign key to the HZ_PARTIES.PARTY_ID.
ResourceSalesrepId	long	Unique Salesrep Identifier • Primary Key
SalesCreditTypeId	long	Sales Credit Type Identifier (FK to so_sales_credit_types)
SalesTaxGeocode	string	sales tax geocode (used by AR)
SalesTaxInsideCityLimits	string	sales Tax inside city limits (used by AR)
SalesrepNumber	string	Unique number given to salesrep (used for OTHER type of salesreps)
SetCode	string	Reference data set for the sales person..
SetId	long	Identifies a set of reference data shared across business units and other entities. Also known as Reference Data Sets, they are used to filter reference data in transactional UIs.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date this salesrep becomes active

Name	Type	Description
Status	string	Status of salesrep whether he or she is active in AR or not (Used for OTHER type of Salesreps)
WhUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	wh update date (used by AR)

Sales Person Setup

A setup to configure a person involved in the sale or support of products and services. For example, John Smith, sales representative.

Life Cycle Status: Active

getResourceSalesrep

The Get operation for the trading community resource sales representative setup.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceSalesrepId	long	The unique identifier of the sales representative.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceSalesrepResult	The trading community resource sales representative setup that matches the inbound key attributes.

createResourceSalesrep

The Create operation for the trading community resource sales representative setup.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceSalesrep1	*Resource Sales Representative Setup*	The trading community resource sales representative setup to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceSalesrepResult	The result of the operation that includes the successfully created trading community resource sales representative setup and a list of warning or information messages.

Element Name	Type	Description

updateResourceSalesrep

The Update operation for the trading community resource sales representative setup.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceSalesrep1	*Resource Sales Representative Setup*	The trading community resource sales representative setup to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceSalesrepResult	The result of the operation that includes the successfully updated trading community resource sales representative setup and a list of warning or information messages.

deleteResourceSalesrep

The Delete operation for the trading community resource sales representative setup.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceSalesrep1	*Resource Sales Representative Setup*	The trading community resource sales representative setup to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warning or information messages encountered when the object was deleted.

mergeResourceSalesrep

The Merge operation for the trading community resource sales representative setup. It performs an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
resourceSalesrep1	*Resource Sales Representative Setup*	The trading community resource sales representative setup to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceSalesrepResult	The result of the operation that includes the successfully merged trading community resource sales representative setup and a list of warning or information messages.

findResourceSalesrep

The Find operation for the trading community resource sales representative setup.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Resource Sales Representative Setup*	The result of the operation that includes a list of trading community resource sales representative setup that satisfy the inbound criteria and any warning or information messages.

processResourceSalesrep

The Bulk load operation for the trading community resource sales representative setup.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what actions were performed, such as Create, Update, Merge, or Delete.
resourceSalesrep1	*Resource Sales Representative Setup*	A list of the trading community resource sales representative setups to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound operation contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Resource Sales Representative Setup*	The result of the operation that includes a list of trading community resource sales representative setup that are successfully processed and any warning or information messages.

processCSResourceSalesrep

An operation to apply the changes back to the data source for the trading community resource sales representative setup.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object used to represent the changes that were made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and

Element Name	Type	Description
		whether the outbound operation contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The result of the operation that includes a list of created/updated data objects, and all warning and informational messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale used when evaluating the locale-based user interface hints. The localeName is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in the ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and The Delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
mergeResourceSalesrep	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_SALES_REPRESENTATIVE_INFORMATION_PRIV	Manage Trading Community Resource Sales Representative Information	Allows the management of resource saleperson setup information. If assigning, also assign the ability to view the trading community resource sales representative information.
getResourceSalesrep	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_SALES_REPRESENTATIVE_INFORMATION_PRIV	Manage Trading Community Resource Sales Representative Information	Allows the management of resource saleperson setup information. If assigning, also assign the ability to view the trading community resource sales representative information.

Operation Name	Privilege Code	Privilege Name	Privilege Description
updateResourceSalesrep	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_SALES_REPRESENTATIVE_INFORMATION_PRIV	Manage Trading Community Resource Sales Representative Information	Allows the management of resource saleperson setup information. If assigning, also assign the ability to view the trading community resource sales representative information.
deleteResourceSalesrep	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_SALES_REPRESENTATIVE_INFORMATION_PRIV	Manage Trading Community Resource Sales Representative Information	Allows the management of resource saleperson setup information. If assigning, also assign the ability to view the trading community resource sales representative information.
createResourceSalesrep	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_SALES_REPRESENTATIVE_INFORMATION_PRIV	Manage Trading Community Resource Sales Representative Information	Allows the management of resource saleperson setup information. If assigning, also assign the ability to view the trading community resource sales representative information.
processCSResourceSalesrep	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_SALES_REPRESENTATIVE_INFORMATION_PRIV	Manage Trading Community Resource Sales Representative Information	Allows the management of resource saleperson setup information. If assigning, also assign the ability to view the trading community resource sales representative information.
processResourceSalesrep	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_SALES_REPRESENTATIVE_INFORMATION_PRIV	Manage Trading Community Resource Sales Representative Information	Allows the management of resource saleperson setup information. If assigning, also assign the ability to view the trading community resource sales representative information.
findResourceSalesrep	HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_SALES_REPRESENTATIVE_INFORMATION_PRIV	Manage Trading Community Resource Sales Representative Information	Allows the management of resource saleperson setup information. If assigning, also assign the ability to view the trading community resource sales representative information.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_MANAGE_TRADING_COMMUNITY_RESOURCE_SALES_REPRESENTATIVE_INFORMATION_PRIV	ORA_HZRESOURCE_ADMINISTRATOR_DUTY	Resource Administration	Administers resource information.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_HZRESOURCE_ADMINISTRATOR_DUTY	ORA_PER_MANAGE_USER_AND_ROLES_DUTY_CRM	Manage Users	Creates and updates users and assigns roles to users.

Resource Sales Representative Setup

The information pertaining to a resource who functions as a sales person. For example, sales credit type information used to calculate sales credit in Financials, sales tax geography code and sales tax inside city limits information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/resources/resourceService/}ResourceSalesrep

getReference

A web service method of Get operation for Sales Reference Customer SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyId	long	The system generated identifier for this Reference Party.

Response Payload

Element Name	Type	Description
result	*Reference*	The parameter returns the Sales Reference Customer SDO that matches the inbound key attributes.

createReference

A web service method of Create operation for Sales Reference Customer SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
reference	*Reference*	The parameter for the Sales Reference Customer SDO to be created.

Response Payload

Element Name	Type	Description
result	*Reference*	The parameter returns the created Sales Reference Customer SDO.

updateReference

A web service method of Update operation for Sales Reference Customer SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
reference	*Reference*	The parameter for the Sales Reference Customer SDO to be updated.

Response Payload

Element Name	Type	Description
result	*Reference*	The parameter returns the updated Sales Reference Customer SDO.

mergeReference

A web service method of Merge operation for Sales Reference Customer SDO. It performs an update if the object exists or an insert if the object does not already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
reference	*Reference*	The parameter for the Sales Reference Customer SDO to be merged.

Response Payload

Element Name	Type	Description
result	*Reference*	The parameter returns the merged Sales Reference Customer SDO.

findReference

A web service method of Find operation for Sales Reference Customer SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findReference.

Response Payload

Element Name	Type	Description
result	*Reference*	The parameter returns a list of Sales Reference Customer SDO that satisfies the inbound criteria.

processReference

A web service method of Bulk load operation for Sales Reference Customer SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	The parameter indicates what action shall be performed, such as create, update, merge, or delete.
reference	*Reference*	The parameter for a list of Sales Reference Customer SDOs to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The parameter which controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound contains only the key attributes or the full object.

Response Payload

Element Name	Type	Description
result	*Reference*	The parameter returns a list of Sales Reference Customer SDO that is successfully processed.

processCSReference

An operation to apply the changes back to the data source for Sales Reference Customer SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object that is used to represent the changes that have been made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The parameter which controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound contains only the key attributes or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The parameter returns the result of the operation including a list of created/updated data objects, and all warning and informational messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The parameter returns the label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The parameter returns the date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	The parameter returns a list of service data objects defined on this service. For each service

Element Name	Type	Description
		data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getEntityList	ZBS_VIEW_SALES_REFERENCE_CUSTOMER_PRIV	View Sales Reference Customer	Allows viewing of pages displaying information about sales reference customers, such as their names and reference status.
mergeReference	ZBS_MANAGE_SALES_REFERENCE_CUSTOMER_PRIV	Manage Sales Reference Customer	Allows management of sales reference customers in the application.
getReference	ZBS_VIEW_SALES_REFERENCE_CUSTOMER_PRIV	View Sales Reference Customer	Allows viewing of pages displaying information about sales reference customers, such as their names and reference status.
findReference	ZBS_VIEW_SALES_REFERENCE_CUSTOMER_PRIV	View Sales Reference Customer	Allows viewing of pages displaying information about sales reference customers, such as their names and reference status.
createReference	ZBS_MANAGE_SALES_REFERENCE_CUSTOMER_PRIV	Manage Sales Reference Customer	Allows management of sales reference customers in the application.
getDfltObjAttrHints	ZBS_VIEW_SALES_REFERENCE_CUSTOMER_PRIV	View Sales Reference Customer	Allows viewing of pages displaying information about sales reference customers, such as their names and reference status.
processCSReference	ZBS_VIEW_SALES_REFERENCE_CUSTOMER_PRIV	View Sales Reference Customer	Allows viewing of pages displaying information about sales reference customers, such as their names and reference status.
processReference	ZBS_VIEW_SALES_REFERENCE_CUSTOMER_PRIV	View Sales Reference Customer	Allows viewing of pages displaying information about sales reference customers, such as their names and reference status.

Operation Name	Privilege Code	Privilege Name	Privilege Description
getServiceLastUpdateTime	ZBS_VIEW_SALES_REFERENCE_CUSTOMER_PRIV	View Sales Reference Customer	Allows viewing of pages displaying information about sales reference customers, such as their names and reference status.
updateReference	ZBS_MANAGE_SALES_REFERENCE_CUSTOMER_PRIV	Manage Sales Reference Customer	Allows management of sales reference customers in the application.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
ZBS_VIEW_SALES_REFERENCE_CUSTOMER_PRIV	ORA_ZPM_CHANNEL_ACCOUNT_MANAGER_JOB	Channel Account Manager	Sets the objectives and goals for partners. Appointment Transient Assignee

A participant in an appointment and each instance of a recurring appointment. The participant is an internal resource.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activitiesService/}TransientAssignee

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Appointment Transient*
Handled by	*Sales Reference Customer*
Handled by	*Appointment Service*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivityAssigneeId	long	The unique identifier for the appointment resource participant. • Primary Key
ActivityId	long	The unique identifier of the activity.
AppointmentResponseCd	string	The response to an appointment invitation such as Accepted, Rejected, and Tentatively Accepted.
AssigneeId	long	The identifier of the party corresponding to resource participating at the appointment.
AssigneeRsrcOrgId	long	The identifier of the organization to which the resource belongs.
OwnerFlag	boolean	The attribute that indicates that the appointment resource participant is also the appointment owner.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
ShowTimeAsCd	string	The attribute to show a resource time as Busy or Available on a calendar.

Appointment Transient Category

A category that the appointment and its instances belong to, such as a phone call or demonstration.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activitiesService/}TransientCategory

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Appointment Transient*
Handled by	*Sales Reference Customer*
Handled by	*Appointment Service*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivityCategoryId	long	The unique identifier for the Appointment Category table. • Primary Key
ActivityId	long	The unique identifier of the activity.
CategoryCd	string	The attribute for lookup code for category.

Appointment Transient Contact

A contact participant in an appointment and each instance of a recurring appointment.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activitiesService/}TransientContact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Appointment Transient*
Handled by	*Sales Reference Customer*
Handled by	*Appointment Service*

Relationship Type	Object or Service
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivityContactId	long	The identifier of the row in the intersection table between Appointment and Contact. • Primary Key
ActivityId	long	The unique identifier of the activity.
ContactId	long	The Party id of the contact.
ContactRelationshipId	long	The identifier of the contact relationship record in Trading Community Architecture (TCA).
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.

Name	Type	Description
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.

Appointment Transient Note

A note for an appointment and each instance of a recurring appointment.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activitiesService/}TransientNote

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Appointment Transient*
Handled by	*Sales Reference Customer*
Handled by	*Appointment Service*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
NoteId	long	The unique identifier of the note. • Primary Key
NoteTxt	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The description of the note.
NoteTypeCode	string	The lookup code for the type of the note associated to the appointment, such as, General, Reference, or Special.
PartyId	string	The unique identifier of the contact party.

Name	Type	Description
PartyName	string	The name of the party.
SourceObjectCode	string	Indicates that the object associated to the appointment is a Note.
SourceObjectId	long	The Note id associated to the appointment.
VisibilityCode	string	The Lookup code for note visibility, such as private, internal or external.

Appointment Transient

A individual appointment or an instance of a recurring appointment. For example, monthly lunchtime sales meetings or a client visit.

QName: {http://xmlns.oracle.com/apps/crmCommon/activities/activitiesService/}TransientAppointment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Appointment Transient Category SDO*
Contains	*Appointment Transient Note SDO*
Contains	*Appointment Transient Assignee SDO*
Contains	*Appointment Transient Contact*
Contained by	*Opportunity*
Contained by	*Reference*
Handled by	*Sales Reference Customer*
Handled by	*Appointment Service*
Handled by	*Opportunity Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActivityDescription	string	The description of the appointment.
ActivityId	long	The unique identifier of the activity. • Primary Key
ActivityLocationTxt	string	The location of the appointment.
ActivityName	string	The subject of the appointment.
AlarmFlag	boolean	Indicates whether a reminder alarm should start prior to the appointment.
AllDayFlag	boolean	Indicates the appointment is an all-day appointment.
AppointmentAssignee	*Appointment Transient Assignee*	Not used in V1.0 for appointment.
AppointmentContact	*Appointment Transient Contact*	The contact populated on the appointment using its party id.
AppointmentNote	*Appointment Transient Note*	The appointment note.
ApptAlarmTmMinimumNumber	long	Specifies how long the Alarm Notice Time should be in minutes.
AsgnDenormFlag	boolean	Not used in V1.0 for appointment.
AsgnManualFlag	boolean	Not used in V1.0 for appointment.
AsgnSystemFlag	boolean	Not used in V1.0 for appointment.
CategoryCodeTransient	string	The lookup code corresponding to the category set on the appointment.
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CustomerId	long	The identifier of the customer on the appointment.
CustomerName	string	The name of the customer on the appointment.
CustomerPartyType	string	The customer type of the customer assigned to the appointment.
DoNotRouteFlag	boolean	Not used in V1.0 for appointment.
EditMode	string	Not used in V1.0 for appointment.
FuseParticipants	string	Internal Attribute. Do not use.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LockAsgnFlag	boolean	Not used in V1.0 for appointment.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
Owner	string	The name of the appointment owner.
OwnerId	long	The Party Id of the appointment owner.
OwnerRsrcOrgId	long	The identifier corresponding to the organization to which the appointment owner belongs.
PartyId	long	The unique identifier of the contact party.
PartyId1	long	The name of the party.

Name	Type	Description
PartyName	string	The name of the party.
PartyName1	string	The name of the party.
PlannedDurationNumber	decimal	Not used in V1.0 for appointment.
PlannedDurationUOMCd	string	Not used in V1.0 for appointment.
PlannedEndDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The appointment end date and time.
PlannedStartDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The appointment start date and time.
RecurApptId	long	The identifier of the appointment record describing recurrence.
RecurDay	long	The week days the appointment can be recurring on.
RecurEndDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Specifies a specific date when recurrence stops.
RecurExceptionFlag	boolean	Indicates that this is an exception in a recurrence series.
RecurFlag	boolean	Indicates that the appointment is recurring.
RecurFreqNumber	long	Recurrence frequency, such as, Every x Days, Every x Weeks, Every x Months, Every x Years.
RecurFriFlag	boolean	Indicates in weekly recurrence patterns that appointments occur on Friday.
RecurMonFlag	boolean	Indicates in weekly recurrence patterns that appointments occur on Monday.
RecurMonth	string	In yearly recurrence, indicates the month appointments occur in.
RecurOccursNumber	long	The number of recurrence instances.
RecurOrigInstDt	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The first date and time an appointment occurs in a recurring series.

Name	Type	Description
RecurPattern	string	Indicates recurrence patterns such as Third Week of Every Month.
RecurReplaceCd	string	Not used in V1.0 for appointment.
RecurSatFlag	boolean	Indicates in weekly recurrence patterns that appointments occur on Saturday.
RecurSunFlag	boolean	Indicates in weekly recurrence patterns that appointments occur on Sunday.
RecurThuFlag	boolean	Indicates in weekly recurrence patterns that appointments occur on Thursday.
RecurTueFlag	boolean	Indicates in weekly recurrence patterns that appointments occur on Tuesday.
RecurTypeCd	string	Indicates the type of recurrence such as Daily, Weekly, Monthly, Yearly.
RecurWedFlag	boolean	Indicates in weekly recurrence patterns that appointments occur on Wednesday.
RecurWeekDayCd	string	Indicates if the appointment should occur every day including weekends or just on week days, applicable for daily recurring appointments.
ReferenceCustomerId	long	The identifier corresponding to the reference customer set on the appointment.
ReferenceCustomerName	string	The reference customer name set on the appointment.
Response	string	The response of the participant, such as Accepted, Rejected, Tentatively Accepted.
ShowTimeAs	string	Indicates how the time between the appointment start and end date-time shows on a participant's calendar, such as Busy.
SourceObjectCd	string	Indicates the object type the appointment is related to.
SourceObjectCodeMeaningTransient	string	The code indicating the type of business object associated with the appointment, examples: LEAD or OPPORTUNITY.

Name	Type	Description
SourceObjectId	long	The object identifier to which the appointment is related.
TemplateFlag	boolean	Not used in V1.0 for appointment.
TemplateId	long	Not used in V1.0 for appointment.
TransientCategory	*Appointment Transient Category*	The category of an appointment.
VisibilityCd	string	Not used in V1.0 for appointment.

Classification Assignment

The classification code assigned to a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}CodeAssignment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*
Contained by	*Sales Competitor*
Contained by	*Household*
Contained by	*Trading Community Organization Details*

Handled by	*Sales Party Resource Service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ClassCategory	string	The name of the classification category.
ClassCode	string	The code of the classification.
CodeAssignmentId	long	The unique identifier of the assignment of an industrial classification code to an object. It is primary key and system generated. • Primary Key
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableKey1	string	The first column of the alphanumeric or multi-part foreign key.
OwnerTableKey2	string	The second column of the alphanumeric or multi-part foreign key.
OwnerTableKey3	string	The third column of the alphanumeric or multi-part foreign key.
OwnerTableKey4	string	The fourth column of the alphanumeric or multi-part foreign key.
OwnerTableKey5	string	The fifth column of the alphanumeric or multi-part foreign key.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PrimaryFlag	boolean	Indicator that specifies if this is the primary class code of a class category for the

Name	Type	Description
		organization. Y stands for the primary class code and N stands for all others.
Rank	decimal	Ranks classes if multiple classes are assigned to a party.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Note

The object that captures comments, information, or instructions for an Oracle Fusion Applications business object.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/noteService}Note

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Note Descriptive Flexfields*

Handled by	*Sales Cloud Household*
Handled by	*Partner Program Enrollment Service*
Handled by	*Sales Cloud Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactRelationshipId	long	The identifier of the contact relationship record in Trading Community Architecture (TCA).

Name	Type	Description
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreatorPartyId	long	This is the party identifier for the note creator.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DeleteFlag	boolean	Indicates whether the user has access to delete the note.
Dff	*Note Descriptive Flexfields*	The descriptive flex field segment.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record
NoteAttributeCategory	string	The contextual flex field for development usage.
NoteAttributeUid1	string	The flex field for development usage.
NoteAttributeUid2	string	The flex field for development usage.
NoteAttributeUid3	string	The flex field for development usage.
NoteAttributeUid4	string	The flex field for development usage.
NoteAttributeUid5	string	The flex field for development usage.
NoteId	long	The unique identifier of the note.

Name	Type	Description
		• Primary Key
NoteNumber	string	The alternate unique identifier of the note. A user key that is system generated or from an external system.
NoteTitle	string	The title of the note entered by the user.
NoteTxt	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	This is the column that stores the actual note text.
NoteTypeCode	string	This is the note type code for categorization of note.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
SourceObjectCode	string	This is the source_object_code for the source object as defined in OBJECTS Metadata.
SourceObjectId	string	This is the source_object_Uid for the source object such as Activities, Opportunities, and so on defined in OBJECTS metadata.
UpdateFlag	boolean	Indicates whether the user can update the note.
VisibilityCode	string	This is the attribute to specify the visibility level of the note.

Note Descriptive Flexfields

The descriptive flex field that captures additional information for notes, such as a priority or status.

QName: {http://xmlns.oracle.com/apps/crmCommon/notes/flex/noteDff/}NoteDFF

Relationships

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
NoteId	long	The unique identifier of the note. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Referable Product

The product purchased by a reference customer where the customer agreed to endorse it as part of a reference program.

QName: {http://xmlns.oracle.com/apps/sales/baseSales/references/referenceService/}ReferableProduct

Logical Business Objects

- CRM : Sales : Sales Reference Customer

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Reference*
Handled by	*Sales Reference Customer*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.

Name	Type	Description
InventoryItemId	long	The item identifier for the referenceable product.
InventoryOrgId	long	The item organization identifier for the referenceable product.
KeyContactId	long	The key contact party identifier.
KeyContactRelationId	long	The key contact relationship identifier.
LastOrderDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date when a customer most recently ordered the Referenceable Product.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LevelCode	string	The information regarding the reference customer implementation level of the referenceable product (e.g. IMPLEMENTATION, IN_PRODUCTION, NO_LONGER_USING).
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
ProdGroupName	string	The product group name of the referenceable product.
ProductGroupId	long	The product group identifier for the referenceable product.
Quantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	The quantity of referenceable product purchased.
ReferableCode	string	The code that indicates if the reference will be a reference for this referable product.

Name	Type	Description
ReferableProductName	string	The referable product or product group name.
ReferenceProductId	long	The referable product identifier. • Primary Key
Revenue	decimal	The revenue amount for the referenceable product purchase.
RevnCurrencyCode	string	The revenue amount currency code.
RowTypeCode	string	The code that indicates if the referenceable product is a product or product group.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
SubjectId	long	The key contact party identifier.
UOMCode	string	The unit of measure for the specified referenceable product quantity.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Reference

The additional reference attributes such as how many times this customer was used as a reference, the opportunities in which they were involved, and associations to case studies and collateral for that reference.

QName: {http://xmlns.oracle.com/apps/sales/baseSales/references/referenceService/}Reference

Logical Business Objects

- CRM : Sales : Sales Reference Customer

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Reference Supported Activity*
Contains	*Classification Assignment*
Contains	*Note*
Contains	*Appointment Transient SDO*
Contains	*Referable Product*
Handled by	*Sales Reference Customer*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Address1	string	The first line of the address.
Appointment	*Appointment Transient*	Indicates the label for the component showing the list of appointments created for the sales reference customer.
City	string	The name of the city.
ClassCode	string	Indicates the reference primary industry code.
CodeAssignment	*Classification Assignment*	The classification code assigned to a trading community member.
CodeAssignmentId	long	Indicates the identifier for the reference primary industry record in the Code Assignments table.
Comments	string	The comments for the record.
Country	string	The name of the country.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
CurrentFyPotentialRevenue	decimal	The organization's potential revenue for the fiscal year.
CustomerContactPartyId	long	The party ID of the contact that maps to the sales reference customer organization.
CustomerContactRelationId	long	The reference customer contact relationship identifier that is used to identify the customer contact for the reference customer.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
EmployeesTotal	decimal	The total number of employees.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
IncorpYear	int	The year the business was incorporated.
IndustryName	string	Indicates the reference primary industry name.
IntContactPartyId	long	The party ID of the internal contact that maps to the deploying organization.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
NextFyPotentialRevenue	decimal	The organization's potential revenue for next fiscal year.

Name	Type	Description
Note	*Note*	The note data object that captures comments, information, or instructions for an Oracle Fusion Applications business object.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationProfileId	long	The unique identifier for organization profiles which is a system-generated primary key.
OrganizationSize	string	The size of an organization based on revenue and number of employees.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.
PartyName1	string	The reference customer contact name.
PartyName2	string	The reference internal contact name.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PostalCode	string	The postal code element of the address.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PublicPrivateOwnershipFlag	boolean	Indicates the ownership of the organization, where Y signifies private ownership and N signifies public ownership.
ReferableProduct	*Referable Product*	The product purchased by a reference customer where the customer agreed to endorse it as part of a reference program.

Name	Type	Description
ReferenceRankNumber	string	The ranking number for a reference.
ReferenceSuppActivity	*Reference Supported Activity*	The activity type in which the reference customer agreed to engage.
ReferenceTypeCode	string	The level at which a reference is participating in the reference customer program.
RelationshipRecId	long	The sequence-generated unique identifier of the relationship record.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
State	string	The name of the state.
Status	string	The status of the record.
StatusCode	string	The pre-defined code used to indicate the status.
SubjectId	long	The attribute points to reference customer contact party identifier.
URL	string	The destination URL associated with a specific Google AdWords ad.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Reference Supported Activity

The activity that supports reference programs.

QName: {http://xmlns.oracle.com/apps/sales/baseSales/references/referenceService/}ReferenceSuppActivity

Logical Business Objects

Handled by	*Sales Reference Customer*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
SuppActivityCode	string	The supported activity type code.
SuppActivityId	long	The reference supported activity identifier. • Primary Key

Name	Type	Description
ThresholdNumber	long	The maximum number of times the reference customer is willing to participate in the supported activity for a given threshold period.
ThresholdPeriod	string	The frequency of the related threshold number for a supported activity type.
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Source System Reference

The name of external source system where the trading community information is imported from.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}OriginalSystemReference

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OldOrigSystemReference	string	The old source system reference that is being replaced.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OrigSystemReferenceId	long	The unique identifier for original system reference. • Primary Key
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
SourceSystemRefInformation	*Trading Community Original System Mapping Identifier Additional Information*	The source system reference information.

Name	Type	Description
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Trading Community Original System Mapping Identifier Additional Information

The unique identifier for the trading community party, associated with the address, from the external source system reference.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/sourceSystemRef/}SourceSystemRefInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Source System Reference*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
OrigSystemRefId	long	Sequentially generated identifier. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Sales Status Category Mapping

Service to define the set of allowed revenue status categories for a given opportunity status category.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/sales/baseSales/common/salesLookups/salesLookupService/}StatusCategoryMappingService

Service WSDL URL: https://servername/crmService/StatusCategoryMappingService?WSDL

Logical Business Objects

- CRM : Opportunity Management : Opportunity

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Sales Status Category Mapping SDO*

Operations

- *getStatusCategoryMapping*
- *createStatusCategoryMapping*
- *updateStatusCategoryMapping*
- *deleteStatusCategoryMapping*
- *mergeStatusCategoryMapping*
- *findStatusCategoryMapping*
- *processStatusCategoryMapping*
- *processCSStatusCategoryMapping*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

getStatusCategoryMapping

Get operation for Sales Status Category Mapping SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
opptyStatusCategoryOrderId	long	The unique identifier for the Opportunity Status Category Order.

Response Payload

Element Name	Type	Description
result	*Sales Status Category Mapping*	The parameter returns the Sales Status Category Mapping SDO that matches the inbound key attributes.

createStatusCategoryMapping

A web service method of Create operation for Sales Status Category Mapping SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
statusCategoryMapping	*Sales Status Category Mapping*	The parameter for the Sales Status Category Mapping SDO to be created.

Response Payload

Element Name	Type	Description
result	*Sales Status Category Mapping*	The parameter returns the created Sales Status Category Mapping SDO.

updateStatusCategoryMapping

A web service method of Update operation for Sales Status Category Mapping SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
statusCategoryMapping	*Sales Status Category Mapping*	The parameter for the Sales Status Category Mapping SDO to be updated.

Response Payload

Element Name	Type	Description
result	*Sales Status Category Mapping*	The parameter returns the updated Sales Status Category Mapping SDO.

deleteStatusCategoryMapping

A web service method of Delete operation for Sales Status Category Mapping SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
statusCategoryMapping	*Sales Status Category Mapping*	The parameter for the Sales Status Category Mapping SDO to be deleted.

Response Payload

Element Name	Type	Description
result	void	The parameter returns the deleted Sales Status Category Mapping SDO.

mergeStatusCategoryMapping

A web service method of Merge operation for Sales Status Category Mapping SDO. It performs an update if the object exists or an insert if the object does not already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
statusCategoryMapping	*Sales Status Category Mapping*	The parameter for the Sales Status Category Mapping SDO to be merged.

Response Payload

Element Name	Type	Description
result	*Sales Status Category Mapping*	The parameter returns the merged Sales Status Category Mapping SDO.

findStatusCategoryMapping

A web service method of Find operation for Sales Status Category Mapping SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit your query result, such as the filter (where clause), the fetch size, and so on.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The parameter is not used for the method findStatusCategoryMapping.

Response Payload

Element Name	Type	Description
result	*Sales Status Category Mapping*	The parameter returns a list of Sales Status Category Mapping SDO that satisfies the inbound criteria.

processStatusCategoryMapping

A web service method of Bulk Load operation for Sales Status Category Mapping SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	The parameter which indicates what action shall be performed, such as create, update, merge, or delete.
statusCategoryMapping	*Sales Status Category Mapping*	The parameter with a list of Sales Status Category Mapping SDO to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The parameter which controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound contains only the key attributes or the full object.

Response Payload

Element Name	Type	Description
result	*Sales Status Category Mapping*	The parameter returns a list of Sales Status Category Mapping SDO that is successfully processed.

processCSStatusCategoryMapping

An operation to apply the changes back to the data source for Sales Status Category Mapping SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object that is used to represent the changes that have been made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The parameter which controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound contains only the key attributes or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The parameter returns the result of the operation including a list of created/updated data objects, and all warning and informational messages.

getDfltObjAttrHints

Get operation for Status Category that returns control hints defined on a service view and its attributes.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.

Element Name	Type	Description
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The parameter returns the control hints for the method getDfltObjAttrHints.

getServiceLastUpdateTime

Get operation for Status Category that returns the last modified time for the service schema files.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The parameter returns the last modified time for the method getServiceLastUpdateTime.

getEntityList

Get operation for Status Category that returns the list of service view instances.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	The parameter returns the list of service view instances.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
findStatusCategoryMapping	MOO_SET_UP_OPPORTUNITY_PRIV	Set Up Opportunity	Allows setup of opportunity application features, such as sales methods, sales coach, credit allocation templates, profiles, lookups, flexfields, and assignment rules, among others.
findStatusCategoryMapping	MOO_VIEW_OPPORTUNITY_PRIV	View Opportunity	Allows viewing of opportunity pages, including the work area. A work area is the landing page for accessing the frequently used tasks and reports useful for managing relevant opportunities.
processCSStatusCategoryMapping	MOO_SET_UP_OPPORTUNITY_PRIV	Set Up Opportunity	Allows setup of opportunity application features, such as sales methods, sales coach, credit allocation templates, profiles, lookups, flexfields, and assignment rules, among others.
updateStatusCategoryMapping	MOO_SET_UP_OPPORTUNITY_PRIV	Set Up Opportunity	Allows setup of opportunity application features, such as sales methods, sales coach, credit allocation templates, profiles, lookups, flexfields, and assignment rules, among others.
createStatusCategoryMapping	MOO_SET_UP_OPPORTUNITY_PRIV	Set Up Opportunity	Allows setup of opportunity application features, such as sales methods, sales coach, credit allocation templates, profiles, lookups, flexfields, and assignment rules, among others.
getStatusCategoryMapping	MOO_SET_UP_OPPORTUNITY_PRIV	Set Up Opportunity	Allows setup of opportunity application features, such as sales methods, sales coach, credit allocation templates, profiles, lookups, flexfields, and assignment rules, among others.
deleteStatusCategoryMapping	MOO_SET_UP_OPPORTUNITY_PRIV	Set Up Opportunity	Allows setup of opportunity application features, such as sales methods, sales coach, credit allocation templates, profiles,

Operation Name	Privilege Code	Privilege Name	Privilege Description
			lookups, flexfields, and assignment rules, among others.

Sales Status Category Mapping

The definition of the set of allowed revenue status categories for a given opportunity status category.

QName: {http://xmlns.oracle.com/apps/sales/baseSales/common/salesLookups/salesLookupService/}StatusCategoryMapping

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Sales Status Category Mapping*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ConflictId	long	The attribute value is used to guarantee the uniqueness of the row when duplicates are created in different databases.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OpptyStatusCategory	string	The attribute for status category.
OpptyStatusCategoryOrderId	long	The status category mapping identifier. • Primary Key
RevnLost	string	The attribute that indicates whether the revenue line can be in the LOST status category when the opportunity uses this status category.
RevnNosale	string	The attribute that indicates whether the revenue line can be in the NO SALE status category when the opportunity uses this status category.
RevnOpen	string	The attribute that indicates whether the revenue line can be in the OPEN status category when the opportunity uses this status category.
RevnWon	string	The attribute that indicates whether the revenue line can be in the WON status category when the opportunity uses this status category.

Name	Type	Description
UserLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the row was last updated.

Sales Territory Custom Business Object (Deprecated)

Service to operate on custom business objects created in the Oracle Sales Cloud Territory Management application. The supported operations are create, update, delete, and find. A custom business object stores the extended information for an Oracle Fusion business object.

Life Cycle Status: Deprecated. This service is deprecated and replaced by .

QName: {http://xmlns.oracle.com/apps/sales/territoryMgmt/custExtn/territories/territoryService/}SalesTerrMgmtCustomObjectService

Service WSDL URL: https://servername/crmService/SalesTerrMgmtCustomObjectService?WSDL

Logical Business Objects

- CRM : Territory Management : Sales Territory

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Operations

- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*
- *createEntity*
- *getEntity*
- *updateEntity*
- *deleteEntity*
- *findEntity*
- *mergeEntity*

- *processEntity*

getDfltObjAttrHints

Retrieves the user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on the service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name which is the internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Retrieves the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

Retrieves the list of service data objects defined on the service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	The list of service data objects defined on the service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

createEntity

Creates an Oracle Fusion territory management custom object record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	A required input parameter of the createEntity web service method. It includes the attribute values that the records will be created with.
objectName	string	A required input parameter of the createEntity web service method. Use the API name of the custom object you want to create.

Response Payload

Element Name	Type	Description
result	anyType	The full set of attributes and child entities of the record.

getEntity

Retrieves a single record of an Oracle Fusion territory management custom object based on the unique identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
keyValue	string	A required input parameter of the getEntity web service method. Includes the row identifier of the record you want to query for.
objectName	string	A required input parameter of the getEntity web service method. Use the API name of the custom object you want to query for.

Response Payload

Element Name	Type	Description
result	anyType	The full set of attributes and child entities of the record.

updateEntity

Updates a set of records of the Oracle Fusion territory management custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	A required input parameter of the updateEntity method. All records matching the IDs specified in the input object are updated with the corresponding input attribute values that are specified.
objectName	string	A required input parameter of the updateEntity web service method. Use the API name of the custom object you want to update.

Response Payload

Element Name	Type	Description
result	anyType	Returns the updated set of records.

deleteEntity

Deletes a set of records of an Oracle Fusion territory management custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	A required input parameter of the deleteEntity Web service method. All records matching the input attribute values specified in this input object are deleted.
objectName	string	A required input parameter of the deleteEntity Web service method. Use the API name of the custom object you want to delete.

Response Payload

Element Name	Type	Description
result	void	The deleteEntity web service method returns void.

findEntity

Retrieves a set of Oracle Fusion territory management custom object records based on a specified criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	A required input parameter of the findEntity web service method. Includes optional search criteria, sort filter, and attributes to be excluded when returning the set of records. Also includes the option to return any of the custom object's child entities.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	This input parameter is not applicable to the findEntity web service method.
objectName	string	A required input parameter of the findEntity web service method. Use the API name of the custom object you want to query for.

Response Payload

Element Name	Type	Description
result	anyType	The return value of the findEntity web service method. Includes the full set of attributes and child entities of the records.

mergeEntity

Method not available.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	Parameter not available.
objectName	string	Parameter not available.

Response Payload

Element Name	Type	Description
result	anyType	Parameter not available.

processEntity

Method not available.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Parameter not available.
object	anyType	Parameter not available.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Parameter not available.
objectName	string	Parameter not available.

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	anyType	Parameter not available.

Custom Business Object

A service to create, update, delete, or find custom business objects created in the Oracle Fusion CRM application. A custom business object stores extended information for an Oracle Fusion business object.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/custom/extnService/}CustomReferenceService

Service WSDL URL: https://servername/crmService/CustomReferenceService?WSDL

Logical Business Objects

- CRM : CRM Application Composer : CRM Extensible Object

Operations

- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*
- *invokeObjectFunction*
- *createEntity*
- *getEntity*
- *updateEntity*
- *deleteEntity*
- *findEntity*
- *mergeEntity*
- *processEntity*

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create,

Element Name	Type	Description
		update, merge, and delete operations can be performed on the object.

invokeObjectFunction

invoke custom object row function.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
row	anyType	DataObject used to invoke the script
viewName	string	Custom Object type name
scriptName	string	row function name
params	anyType	row function parameters

Response Payload

Element Name	Type	Description
result	anyType	DataObject

createEntity

Create operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject created for the custom object.

getEntity

Get operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
keyValue	string	A list of key values for identifying the custom object.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject identified by the keyValue.

updateEntity

Update operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be updated. The DataObject must include key fields for identifying the updated record, as well as the fields to be updated.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject updated for the custom object.

deleteEntity

Delete operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be deleted. The DataObject must include key fields for identifying the deleted record.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	void	DataObject that is deleted.

findEntity

Find operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	List of DataObjects identified by the findCriteria.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Search control.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObjects found

mergeEntity

merge with existing custom object if exist, create new object if does not exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be merged. The DataObject must include key fields for identifying the record, as well as the fields to be merged.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject result from the merge

processEntity

batch process for custom object operation

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Operation name
object	anyType	DataObjects to be batch processed
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	process control
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject result list

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
processEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea
getEntityList	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
updateEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea
getEntity	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
deleteEntity	ZCX_DELETE_CUSTOM_OBJECT_PRIV	DELETE custom object resources (WorkArea)	PermissionSet to DELETE for custom object WorkArea
findEntity	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
getDfltObjAttrHints	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
createEntity	ZCX_CREATE_CUSTOM_OBJECT_PRIV	CREATE custom object resources (WorkArea)	PermissionSet to CREATE for custom object WorkArea
getServiceLastUpdateTime	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
mergeEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea

Sales Territory Dimension Service

Service to operate on territory dimension and territory dimension member business objects. It can be used by third-party applications to perform standard query operations on territory dimension and territory dimension member business objects.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/sales/territoryMgmt/territories/dimensionPublicService/}TerritoryDimensionPublicService

Service WSDL URL: https://servername/crmService/TerritoryDimensionPublicService?WSDL

Logical Business Objects

- CRM : Territory Management : Sales Territory Dimension

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Sales Territory Dimension Member*
Handles	*Sales Territory Dimension Member Translation*
Handles	*Sales Territory Dimension Translation*
Handles	*Sales Territory Dimension*

Operations

- *getTerritoryDimension*
- *findTerritoryDimension*
- *getTerritoryDimensionMember*
- *findTerritoryDimensionMember*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

getTerritoryDimension

Retrieves territory dimension by the specified territory dimension identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
terrDimensionId	long	The identifier of the territory dimension to be retrieved.

Response Payload

Element Name	Type	Description
result	*Sales Territory Dimension*	The territory dimension record retrieved by the method.

findTerritoryDimension

Retrieves the territory dimensions for a given query criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria values to retrieve the records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The control value that indicates whether to retrieve translations or not.

Response Payload

Element Name	Type	Description
result	*Sales Territory Dimension*	The list of territory dimension objects matching the criteria.

getTerritoryDimensionMember

Retrieves the territory dimension member by a specified territory dimension member identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
terrDimMemberId	long	The identifier of the territory dimension member to be retrieved.

Response Payload

Element Name	Type	Description
result	*Sales Territory Dimension Member*	The sales territory dimension member record.

findTerritoryDimensionMember

Retrieves the territory dimension members for a given query criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria values to retrieve the records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The control value that indicates whether to retrieve the translations or not.

Response Payload

Element Name	Type	Description
result	*Sales Territory Dimension Member*	The list of territory dimension member objects matching the criteria.

getDfltObjAttrHints

Retrieves the user interface hints, such as the service data object label and the object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name which is the internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

Retrieves the list of service data objects defined on the service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on the service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create,

Element Name	Type	Description
		update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MOT_MANAGE_SALES_ TERRITORY_PRIV	Manage Sales Territory	Allows managing of sales territories. A Territory is the jurisdiction of responsibility of a sales representative over a set of sales accounts.
All Operations	MOT_MANAGE_SALES_ TERRITORY_SETUP_PRIV	Manage Sales Territory Setup	Allows defining and managing of sales territory lookups, profile options, flexfields, and dimension data.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MOT_MANAGE_SALES_ TERRITORY_SETUP_PRIV	ORA_MOT_TERRITORY_ MANAGEMENT_SETUP_DUTY	Territory Management Setup	Manages sales territory setup, including lookups, profile options, flexfields, and dimension data. Runs dimension synchronization, and visibility jobs. Additional duties include quota management setup.
MOT_MANAGE_SALES_ TERRITORY_PRIV	ORA_MOT_TERRITORY_ MANAGEMENT_ ADMINISTRATION_DUTY	Territory Management Administration	Manages sales territories and territory proposals. Additional duties include territory management setup and quota management administration.
MOT_MANAGE_SALES_ TERRITORY_PRIV	ORA_MOT_TERRITORY_ MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.
MOT_MANAGE_SALES_ TERRITORY_PRIV	ORA_MOT_TERRITORY_ MANAGEMENT_SETUP_DUTY	Territory Management Setup	Manages sales territory setup, including lookups, profile options, flexfields, and dimension data. Runs dimension synchronization, and visibility jobs. Additional duties include quota management setup.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_MOT_TERRITORY_ MANAGEMENT_SETUP_DUTY	ORA_MOT_QUOTA_EXPORT_ MANAGEMENT_DUTY	Quota Export Management	Manages bulk export of all sales territory quota related objects.
ORA_MOT_TERRITORY_ MANAGEMENT_DUTY	ORA_MOT_QUOTA_ MANAGEMENT_DUTY	Quota Management	Manages sales territory quotas and territory quota formulas. Additional duties include incentive compensation goal management, user and roles management, and party information inquiry.
ORA_MOT_TERRITORY_ MANAGEMENT_ ADMINISTRATION_DUTY	ORA_MOT_QUOTA_ MANAGEMENT_ ADMINISTRATION_DUTY	Quota Management Administration	Manages sales territory quotas, quota setups, territory quota formulas, spread formulas, and seasonality groups, and can view quota plans. Additional duties include incentive compensation goal management, user and roles management, and party information inquiry.
ORA_MOT_TERRITORY_ MANAGEMENT_SETUP_DUTY	ORA_MOT_QUOTA_ MANAGEMENT_SETUP_DUTY	Quota Management Setup	Manages sales territory quota setup, quota plans, prediction and spread formula parameters, and seasonality groups. Runs sales territory quota synchronization and sales quota plan activation and completion processes. Additional duties include party information inquiry.
ORA_MOT_TERRITORY_ MANAGEMENT_ ADMINISTRATION_DUTY	ORA_MOT_TERRITORY_ MANAGEMENT_EXPORT_ IMPORT_DUTY	Territory Management Export Import	Manages sales territory export and import. Provides users with the ability to export territory data, modify it offline and import.
ORA_MOT_TERRITORY_ MANAGEMENT_DUTY	ORA_MOT_TERRITORY_ MANAGEMENT_EXPORT_ IMPORT_DUTY	Territory Management Export Import	Manages sales territory export and import. Provides users with the ability to export territory data, modify it offline and import.
ORA_MOT_TERRITORY_ MANAGEMENT_SETUP_DUTY	ORA_MOT_TERRITORY_ MANAGEMENT_T2P_MIGRATION_ DUTY	Territory Management T2P Migration	Manages sales territory export and import. Provides users with the ability to export territory data from a test environment and import into production.

Sales Territory Dimension

The details of the territory dimension. This information includes key attributes of the territory dimension and the dimension parameters.

QName: {http://xmlns.oracle.com/apps/sales/territoryMgmt/territories/dimensionPublicService/}TerritoryDimension

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Sales Territory Dimension Translation*
Handled by	*Sales Territory Dimension Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveFlag	boolean	Indicates whether the dimension is active or inactive.
Description	string	The free text description of the record.
DimensionCode	string	The type of dimension such as 'GEO', 'PRODUCT' and so on. The value for this column will come from a lookup.
Name	string	The name of the sales territory dimension.
PartitionId	long	The identifier of the dimension partition.
PartitionTypeCode	string	The type of the partition for the sales territory.
TerrDimensionId	long	The identifier of the territory dimension. • Primary Key
TerritoryDimensionTranslationService	*Sales Territory Dimension Translation*	The translated details of the territory dimension name and description.

Sales Territory Dimension Member

The details of the territory dimension member. This information includes key attributes of a territory dimension member.

QName: {http://xmlns.oracle.com/apps/sales/territoryMgmt/territories/dimensionPublicService/}TerritoryDimensionMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Sales Territory Dimension Member Translation*
Handled by	*Sales Territory Dimension Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveFlag	boolean	Indicates if the member is active or not.
Description	string	The free text description of the record.
IntegrationId	string	The common member identifier between Oracle Business Intelligence (OBI), Territory Management, and Cube.
Name	string	The name of the territory dimension member.
ParentDimMemberName	string	The name of the parent territory dimension member.
ParentTerrDimMemberId	long	The identifier of the parent territory dimension member.
PartitionId	long	The identifier of the dimension partition.
PartitionTypeCode	string	The type of the partition for the territory dimension member.

Name	Type	Description
SequenceHigh	long	The high sequence number for the dimension member.
SequenceLow	long	The low sequence number for the dimension member.
SortOrder	long	The sort order number for the dimension members.
TerrDimMemberId	long	The identifier for the territory dimension member. • Primary Key
TerrDimensionCode	string	The type of dimension such as 'GEO', 'PRODUCT', and so on. The value for this attribute will come from a lookup.
TerrDimensionId	long	The identifier of the territory dimension identifier.
TerritoryDimensionMemberTranslationService	*Sales Territory Dimension Member Translation*	The translated details of the territory dimension member name and description.
TypeCode	string	The type of members. The accepted values are 'NORMAL', 'UNSPECIFIED', and 'OTHERS'. All members except for OTHERS and UNSPECIFIED are marked as NORMAL.

Sales Territory Dimension Member Translation

The language translations of the territory dimension members.

QName: {http://xmlns.oracle.com/apps/sales/territoryMgmt/territories/dimensionPublicService/}TerritoryDimensionMemberTranslation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Territory Dimension Member*

Relationship Type	Object or Service
Handled by	*Sales Territory Dimension Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Description	string	The free text description of the record.
Language	string	The code of the language to which the contents of the translatable columns are translated. • Primary Key
Name	string	The name of the territory dimension member.
SourceLang	string	The code of the language in which the contents of the translatable columns were originally created.
TerrDimMemberId	long	The identifier of the territory dimension member. • Primary Key

Sales Territory Dimension Translation

The language translations of the territory dimensions.

QName: {http://xmlns.oracle.com/apps/sales/territoryMgmt/territories/dimensionPublicService/}TerritoryDimensionTranslation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Territory Dimension*
Handled by	*Sales Territory Dimension Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Description	string	The free text description of the record.
Language	string	The language into which the contents of the translatable columns are translated. • Primary Key
Name	string	The name of the sales territory dimension.
SourceLang	string	The language in which the contents of the translatable columns were originally created.
TerrDimensionId	long	The identifier of the territory dimension. • Primary Key

Sales Territory Proposal Service

Service to operate on territory proposal business objects. It can be used by third-party applications to perform standard and custom operations on the territory proposal business objects.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/oracle/apps/sales/territoryMgmt/territories/territoryService/}TerritoryProposalPublicService

Service WSDL URL: https://servername/crmService/TerritoryProposalPublicService?WSDL

Logical Business Objects

- CRM : Territory Management : Sales Territory Proposal

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Sales Territory Coverage Dimension*

Relationship Type	Object or Service
Handles	*Sales Territory Coverage*
Handles	*Sales Territory Proposal*
Handles	*Sales Territory Line of Business*
Handles	*Sales Territory*
Handles	*Sales Territory Resource*
Handles	*Sales Territory Inherited Dimension*
Handles	*Sales Territory Coverage Dimension Value*

Operations

- *reopenProposal*
- *requestProposalActivation*
- *getProposal*
- *createProposal*
- *updateProposal*
- *deleteProposal*
- *findProposals*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

reopenProposal

Reopens a territory proposal and changes the proposal status to 'DRAFT'.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
terrProposalId	long	The identifier of the proposal that needs to be reopened.

Response Payload

Element Name	Type	Description
result	void	The reopenProposal web service method returns void.

requestProposalActivation

Puts the proposal activation in the activation queue by date and changes the proposal status to 'PENDING ACTIVATION'.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
terrProposalId	long	The identifier of the proposal that needs to be activated.

Response Payload

Element Name	Type	Description
result	void	The requestProposalActivation web service method returns void.

getProposal

Retrieves territory proposal by the specified territory proposal ID (only Proposal attributes are returned).

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
terrProposalId	long	Identifier of the proposal to be retrieved.

Response Payload

Element Name	Type	Description
result	*Sales Territory Proposal*	The proposal object retrieved by the getProposal method.

createProposal

Creates a new territory proposal record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
territoryProposalService	*Sales Territory Proposal*	The attributes of the territory proposal.

Response Payload

Element Name	Type	Description
result	*Sales Territory Proposal*	Returns the new territory proposal record.

updateProposal

Updates an existing territory proposal record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
territoryProposalService	*Sales Territory Proposal*	The attributes of the territory proposal.

Response Payload

Element Name	Type	Description
result	*Sales Territory Proposal*	Returns the updated territory proposal record.

deleteProposal

Deletes a territory proposal record. It also deletes territories added to or created in the proposal being deleted. This is a private method and is for internal use only.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
territoryProposalService	*Sales Territory Proposal*	The attributes of the territory proposal.

Response Payload

Element Name	Type	Description
result	void	The deleteProposal web service method returns void.

findProposals

Retrieves only proposals for a given query criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria values to retrieve the records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The control value that indicates whether to retrieve translations or not.

Response Payload

Element Name	Type	Description
result	*Sales Territory Proposal*	The list of proposal objects for a given query criteria.

getDfltObjAttrHints

Retrieves the user interface hints, such as the service data object label and the object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on the service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name which is the internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Retrieves the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

Retrieves the list of service data objects defined on the service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on the service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create,

Element Name	Type	Description
		update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MOT_MANAGE_SALES_TERRITORY_PROPOSAL_PRIV	Manage Sales Territory Proposal	Allows managing of sales territory proposals, for example proposal name, description, and activation date.
findProposals	MOT_VIEW_SALES_TERRITORY_PRIV	View Sales Territory	Allows viewing of sales territories. A Territory is the jurisdiction of responsibility of a sales representative over a set of sales accounts.
getProposal	MOT_VIEW_SALES_TERRITORY_PRIV	View Sales Territory	Allows viewing of sales territories. A Territory is the jurisdiction of responsibility of a sales representative over a set of sales accounts.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MOT_VIEW_SALES_TERRITORY_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_ADMINISTRATION_DUTY	Territory Management Administration	Manages sales territories and territory proposals. Additional duties include territory management setup and quota management administration.
MOT_VIEW_SALES_TERRITORY_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.
MOT_VIEW_SALES_TERRITORY_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	Territory Management Setup	Manages sales territory setup, including lookups, profile options, flexfields, and dimension data. Runs dimension synchronization, and visibility jobs. Additional duties include quota management setup.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MOT_MANAGE_SALES_ TERRITORY_PROPOSAL_PRIV	ORA_MOT_TERRITORY_ MANAGEMENT_ ADMINISTRATION_DUTY	Territory Management Administration	Manages sales territories and territory proposals. Additional duties include territory management setup and quota management administration.
MOT_MANAGE_SALES_ TERRITORY_PROPOSAL_PRIV	ORA_MOT_TERRITORY_ MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.
MOT_MANAGE_SALES_ TERRITORY_PROPOSAL_PRIV	ORA_MOT_TERRITORY_ MANAGEMENT_SETUP_DUTY	Territory Management Setup	Manages sales territory setup, including lookups, profile options, flexfields, and dimension data. Runs dimension synchronization, and visibility jobs. Additional duties include quota management setup.
MOT_MANAGE_SALES_ TERRITORY_PROPOSAL_PRIV	ORA_MOT_TERRITORY_ MANAGEMENT_ENTERPRISE_ ADMINISTRATION_DUTY	Territory Management Enterprise Administration	Manages sales territories and territory proposals. Additional duties include territory management setup and quota management administration.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_MOT_TERRITORY_ MANAGEMENT_SETUP_DUTY	ORA_MOT_QUOTA_EXPORT_ MANAGEMENT_DUTY	Quota Export Management	Manages bulk export of all sales territory quota related objects.
ORA_MOT_TERRITORY_ MANAGEMENT_DUTY	ORA_MOT_QUOTA_ MANAGEMENT_DUTY	Quota Management	Manages sales territory quotas and territory quota formulas. Additional duties include incentive compensation goal management, user and roles management, and party information inquiry.
ORA_MOT_TERRITORY_ MANAGEMENT_ ADMINISTRATION_DUTY	ORA_MOT_QUOTA_ MANAGEMENT_ ADMINISTRATION_DUTY	Quota Management Administration	Manages sales territory quotas, quota setups, territory quota formulas, spread formulas, and seasonality groups, and can view quota plans. Additional duties include incentive compensation goal management, user and roles management, and party information inquiry.
ORA_MOT_TERRITORY_ MANAGEMENT_ENTERPRISE_ ADMINISTRATION_DUTY	ORA_MOT_QUOTA_ MANAGEMENT_ENTERPRISE_ ADMINISTRATION_DUTY	Quota Management Enterprise Administration	Manages sales territory quotas and territory quota formulas. Additional duties include incentive compensation goal management, user and roles management, and quota management setup.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	ORA_MOT_QUOTA_MANAGEMENT_SETUP_DUTY	Quota Management Setup	Manages sales territory quota setup, quota plans, prediction and spread formula parameters, and seasonality groups. Runs sales territory quota synchronization and sales quota plan activation and completion processes. Additional duties include party information inquiry.
ORA_MOT_TERRITORY_MANAGEMENT_ADMINISTRATION_DUTY	ORA_MOT_TERRITORY_MANAGEMENT_EXPORT_IMPORT_DUTY	Territory Management Export Import	Manages sales territory export and import. Provides users with the ability to export territory data, modify it offline and import.
ORA_MOT_TERRITORY_MANAGEMENT_ENTERPRISE_ADMINISTRATION_DUTY	ORA_MOT_TERRITORY_MANAGEMENT_EXPORT_IMPORT_DUTY	Territory Management Export Import	Manages sales territory export and import. Provides users with the ability to export territory data, modify it offline and import.
ORA_MOT_TERRITORY_MANAGEMENT_DUTY	ORA_MOT_TERRITORY_MANAGEMENT_EXPORT_IMPORT_DUTY	Territory Management Export Import	Manages sales territory export and import. Provides users with the ability to export territory data, modify it offline and import.
ORA_MOT_TERRITORY_MANAGEMENT_ENTERPRISE_ADMINISTRATION_DUTY	ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	Territory Management Setup	Manages sales territory setup, including lookups, profile options, flexfields, and dimension data. Runs dimension synchronization, and visibility jobs. Additional duties include quota management setup.
ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	ORA_MOT_TERRITORY_MANAGEMENT_T2P_MIGRATION_DUTY	Territory Management T2P Migration	Manages sales territory export and import. Provides users with the ability to export territory data from a test environment and import into production.

Sales Territory

The various versions of a sales territory where each version record contains most of the key attributes of a territory. Most of the sales territory object components are child entities to a sales territory version, for example, territory rules, territory rule boundaries, territory rule boundary values, and territory resources.

QName: {http://xmlns.oracle.com/apps/sales/territoryMgmt/territories/territoryService/}Territory

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Sales Territory Rule*
Contains	*Sales Territory Line of Business*
Contains	*Sales Territory Resource*
Contains	*Sales Territory Inherited Dimension*
Contained by	*Sales Territory Proposal*
Handled by	*Sales Territory Service*
Handled by	*Sales Territory Proposal Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ApplyOptionalValidationFlag	boolean	This is an obsolete attribute.
CoverageModel	string	Indicates if the dimensions of the territory are based on account attributes or partner attributes.
DeleteFlag	boolean	Indicates whether the user has access to delete the record. If the value is True, then the user has the access. The default value is False.
Description	string	The free text description of the record.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
EligibleForQuotaFlag	boolean	Indicates whether the territory is going to change during a territory realignment. If the value is True, then the territory is unlikely to change during a major realignment and therefore a quota can be entered against the proposed definition.

Name	Type	Description
ForecastParticipationCode	string	The code for the forecast participation.
ForecastedByParentTerritoryFlag	boolean	Indicates if the forecast for the territory is made by its parent territory.
LatestVersionFlag	boolean	Indicates the latest active version of territory.
Name	string	The name of the sales territory.
OrganizationId	long	The unique identifier of the organization.
OrganizationName	string	The name of the party when the party type is Organization.
Owner	string	The owner of the sales territory.
OwnerOrgId	long	The identifier of the owner's organization.
OwnerResourceId	long	The identifier of the resource from CRM Foundation (JTF) resources.
ParentTerritoryId	long	The identifier of the parent sales territory.
PartnerId	long	The unique identifier of the partner.
PartnerName	string	The name of the partner associated with the territory.
PartnerProgramId	long	The specific program that a partner is participating in.
ProgramName	string	The name of the partner program to which the partner is enrolled.
ReviseQuotaFlag	boolean	Indicates whether a submitted quota needs to be revised.
RevisionDescription	string	The description of the reason for revising the quota.
RevisionReason	string	The user-defined reason for revising the quota.
SourceTerrId	long	The identifier of the territory from which the dimensions are inherited.

Name	Type	Description
SourceTerrLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the source territory was last updated. This attribute is related to the inheritance of dimensions by recipient territories from source territories.
SourceTerrName	string	The name of the territory from which the selected dimensions are inherited.
SourceTerrVersionId	long	The unique identifier of the source territory version.
StageCode	string	This is an obsolete attribute.
StatusCode	string	The pre-defined code used to indicate the status.
TerrProposalId	long	The identifier of the territory proposal.
TerritoryFunctionCode	string	Business function associated with the territory
TerritoryId	long	The unique identifier of the sales territory.
TerritoryInheritedDimension	*Sales Territory Inherited Dimension*	The dimension the recipient territory is inheriting from the source territory.
TerritoryLevel	long	The level of the territory in territory hierarchy.
TerritoryLineOfBusiness	*Sales Territory Line of Business*	Identifies the line of business that a territory is associated with. Each territory can be associated with single , multiple (or All) , or no line of business.
TerritoryNumber	string	The unique alternate identification number for the territory.
TerritoryResource	*Sales Territory Resource*	The list of sales territory resource objects.
TerritoryRule	*Sales Territory Rule*	The unique identifier of the territory rule.
TerritoryVersionId	long	The unique identifier of territory version. • Primary Key
TypeCode	string	The code for the type of sales territory.
UniqueTerritoryNumber	string	Unique identification number for this territory

Name	Type	Description
UpdateFlag	boolean	Indicates whether the user has access to update the record. If the value is True, then the user has the access. The default value is False.

Sales Territory Rule

An entity that organizes territory dimensions in the form of rules and enables territory definitions that can be either simple territories defined by a single rule or complex ones with multiple rules. This entity, along with territory rule boundary value, stores the dimensions of the territory in an expression form.

QName: {http://xmlns.oracle.com/apps/sales/territoryMgmt/territories/territoryService/}TerritoryRule

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Sales Territory Rule Boundary*
Contained by	*Sales Territory*
Handled by	*Sales Territory Service*
Handled by	*Sales Territory Proposal Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
RuleNumber	long	A unique number within a territory definition.
RuleOperatorCode	string	The code for identifying whether the coverage adds to or removes from the territory's jurisdiction. The accepted values are: EXCLUSION (for rule type EXCLUSION and PARTNER_EXCLUSION) and INCLUSION (for all other rule types, such as REGULAR, INCLUSION, PARTNER_REGULAR, PARTNER_INCLUSION, and INHERITANCE_OVERRIDE)

Name	Type	Description
RuleTypeCode	string	The code for the territory coverage type. If the territory coverage model is sales account centric, the accepted values are: REGULAR (for coverage based on sales account dimensionality or named accounts), INCLUSION (for manually included account coverage), and EXCLUSION (for manually excluded account coverage). If the territory coverage model is partner centric, the accepted values are: PARTNER_REGULAR (for coverage based on partner dimensionality), PARTNER_INCLUSION (for manually included partner coverage), and PARTNER_EXCLUSION (for manually excluded partner coverage). In case of inheritance, if the coverage is for a recipient territory, then the accepted value is INHERITANCE_OVERRIDE which indicates that the coverage overrides some of the inherited dimensionality.
TerrRuleId	long	The unique identifier of the territory rule. • Primary Key
TerritoryRuleBoundary1	*Sales Territory Rule Boundary*	The list of territory rule boundary objects.
TerritoryVersionId	long	The unique identifier of the territory version.

Sales Territory Rule Boundary

An entity associated with a territory rule boundary value to store the dimensions of the territory in an expression form. Dimension members are evaluated additively and the values within a dimension member are evaluated as choices.

QName: {http://xmlns.oracle.com/apps/sales/territoryMgmt/territories/territoryService/}TerritoryRuleBoundary

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Sales Territory Coverage Dimension Value*
Contained by	*Sales Territory Rule*
Handled by	*Sales Territory Service*

Relationship Type	Object or Service
Handled by	*Sales Territory Proposal Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Dimension	string	The name of the sales territory dimension.
TerrDimensionCode	string	The code for the sales territory dimension.
TerrRuleBoundaryId	long	The unique identifier of the territory rule boundary. • Primary Key
TerrRuleId	long	The identifier of the sales territory rule.
TerritoryRuleBndryValue1	*Sales Territory Rule Boundary Value*	The territory rule boundary value object.

Sales Territory Rule Boundary Value

The actual values of the dimensions for the territory.

QName: {http://xmlns.oracle.com/apps/sales/territoryMgmt/territories/territoryService/}TerritoryRuleBndryValue

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Territory Rule Boundary*
Handled by	*Sales Territory Service*
Handled by	*Sales Territory Proposal Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AddrElementAttribute1	string	Additional address element to support flexible address format.
AddrElementAttribute2	string	Additional address element to support flexible address format.
AddrElementAttribute3	string	Additional address element to support flexible address format.
AddrElementAttribute4	string	Additional address element to support flexible address format.
AddrElementAttribute5	string	Additional address element to support flexible address format.
AddressCity	string	City.
AddressCountry	string	Country.
AddressCounty	string	County.
AddressPostalCode	string	Postal Code.
AddressProvince	string	Province.
AddressState	string	State.
DimensionMember	string	The name of the territory dimension member.
DimensionMemberHigh	string	The name of the territory dimension member with a high sequence number.
IncludeHierarchyFlag	boolean	Indicates whether the dimension member is included along with its hierarchy or not.
TerrDimHighIntgId	string	The common member identifier for Oracle Business Intelligence (OBI), Territory Management, and Cube.
TerrDimIntgId	string	The common member identifier for Oracle Business Intelligence (OBI), Territory

Name	Type	Description
		Management, and Cube having a high sequence number.
TerrDimensionCode	string	The code for the sales territory dimension.
TerrRuleBndryValueId	long	The unique identifier of the territory rule boundary value. • Primary Key
TerrRuleBoundaryId	long	The identifier of the territory rule boundary.

Sales Territory Inherited Dimension

The dimensions that the recipient territory will inherit from its source territory.

QName: {http://xmlns.oracle.com/oracle/apps/sales/territoryMgmt/territories/territoryService/}TerritoryInheritedDimension

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Territory*
Handled by	*Sales Territory Service*
Handled by	*Sales Territory Proposal Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
TerrDimensionCode	string	The code of the dimension that is being inherited.
TerrInheritedDimensionId	long	The identifier of the territory inherited dimension. • Primary Key

Name	Type	Description
TerritoryVersionId	long	The unique identifier of the version of the recipient territory.

Sales Territory Line of Business

The lines of business associated with a territory.

QName: {http://xmlns.oracle.com/oracle/apps/sales/territoryMgmt/territories/territoryService/}TerritoryLineOfBusiness

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Territory*
Handled by	*Sales Territory Service*
Handled by	*Sales Territory Proposal Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
LobCode	string	The code for the territory line of business.
Meaning	string	The meaning of the territory line of business.
TerrLobId	long	The unique identifier of the territory line of business. • Primary Key
TerritoryVersionId	long	The unique identifier of the version of the territory.

Sales Territory Proposal

The details of the request for the proposed territory change. This information includes purpose, initiator of the request, and status. A proposal can impact multiple territories that are owned by the initiator of the territory proposal.

QName: {http://xmlns.oracle.com/apps/sales/territoryMgmt/territories/territoryService/}TerritoryProposal

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Sales Territory*
Handled by	*Sales Territory Proposal Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActFailureReasonCode	string	The failure code for a proposal activation.
ActivationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the proposal is activated.
DeleteFlag	boolean	Access Level Indicator For Delete
Description	string	The free text description of the record.
Name	string	The name of the sales territory proposal.
Owner	string	The display name for the initiator of the proposal.
OwnerId	long	The resource who initiated the proposal, typically the owner of the territory.
PartitionCode	string	The code to identify whether or not the proposal is a error correction proposal for territories that were made invalid by dimension or member changes. Some accepted values are, Stage, Production, and so on.

Name	Type	Description
ProposalNumber	string	The unique identification number of the proposal.
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusCode	string	The pre-defined code used to indicate the status.
TerrProposalId	long	The identifier of the territory proposal. • Primary Key
TerritoryService	*Sales Territory*	The list of sales territory objects.
UpdateFlag	boolean	Access Level Indicator For Update

Sales Territory Resource

The resources allocated to a territory. For example, the sales representative that owns the territory.

QName: {http://xmlns.oracle.com/apps/sales/territoryMgmt/territories/territoryService/}TerritoryResource

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Territory*
Handled by	*Sales Territory Service*
Handled by	*Sales Territory Proposal Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdministratorFlag	boolean	Indicates whether the resource is an administrator of the territory.
FunctionCode	string	The function of the resource in the territory.
ManageForecastFlag	boolean	Indicates whether a territory resource has been given the responsibility to manage the territory forecast on behalf of the owner of the territory.
Manager	string	The name of the manager for the resource.
OrganizationName	string	The name of the party when the party type is Organization.
ReportsTo	string	The name of the resource to which the resource reports to.
ResourceId	long	The unique identifier of the resource.
ResourceName	string	The name of the sales territory resource.
ResourceOrgId	long	The identifier of the organization to which the resource belongs.
RoleName	string	The role name associated with the resource.
TerrResourceId	long	The identifier of the territory resource. • Primary Key
TerritoryVersionId	long	The identifier of the territory version.

Sales Territory Service

Service to operate on territory business objects. It can be used by third-party applications to perform standard and custom operations on territory business objects.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/oracle/apps/sales/territoryMgmt/territories/territoryService/}TerritoryPublicService

Service WSDL URL: https://servername/crmService/TerritoryPublicService?WSDL

Logical Business Objects

- CRM : Territory Management : Sales Territory

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Sales Territory Rule Boundary*
Handles	*Sales Territory Rule*
Handles	*Sales Territory Line of Business*
Handles	*Sales Territory*
Handles	*Sales Territory Resource*
Handles	*Sales Territory Inherited Dimension*
Handles	*Sales Territory Rule Boundary Value*

Operations

- *deleteTerritoryFromProposal*
- *moveTerritoriesInProposal*
- *transformTerritoryUserKeysToIDs*
- *addExistingTerritoryToProposal*
- *addExistingTerritoryToProposalReturnsTerritory*
- *getTerritory*
- *addNewTerritoryToProposal*
- *updateTerritoryInProposal*

- *deleteTerritoryRule*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

deleteTerritoryFromProposal

Deletes an existing territory from a proposal. This is a private method and is for internal use only.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
territoryId	long	The identifier of the territory to be deleted.
territoryProposalId	long	The identifier of the proposal from which the territory is deleted.

Response Payload

Element Name	Type	Description
result	void	The deleteTerritoryFromProposal web service method returns void.

moveTerritoriesInProposal

Moves a territory from one location in the hierarchy to another.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
mvTerritoryIds	long	The list of identifiers for territories being moved.
dstTerritoryId	long	The territory identifier of the new parent territory.
proposalId	long	The identifier of the proposal in which the territories are moved.

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	void	The moveTerritoriesInProposal web service method returns void.

transformTerritoryUserKeysToIDs

Transforms the territory user keys to identifiers.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
territoryService	*Sales Territory*	The attributes of the sales territory object.

Response Payload

Element Name	Type	Description
result	*Sales Territory*	The attributes of the sales territory object.

addExistingTerritoryToProposal

Adds an existing territory to a proposal.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
territoryId	long	The identifier of the territory to be added.
territoryProposalId	long	The identifier of the proposal in which territory is added.

Response Payload

Element Name	Type	Description
result	void	The addExistingTerritoryToProposal web service method returns void.

addExistingTerritoryToProposalReturnsTerritory

Adds an existing territory to a proposal and returns the territory information.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
territoryId	long	The identifier of the territory to be added.
territoryProposalId	long	The identifier of the proposal in which the territory is added.

Response Payload

Element Name	Type	Description
result	*Sales Territory*	The attributes of the sales territory object.

getTerritory

Retrieves the territory by the primary key territory version ID. The Territory object includes all attributes of territory, territory rule, rule boundaries, boundary values, and resources.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
territoryVersionId	long	The identifier of the territory version.

Response Payload

Element Name	Type	Description
result	*Sales Territory*	The attributes of the sales territory object.

addNewTerritoryToProposal

Adds a new sales territory to a proposal.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
territoryService	*Sales Territory*	The attributes of the sales territory object.

Response Payload

Element Name	Type	Description
result	*Sales Territory*	The attributes of the sales territory object.

updateTerritoryInProposal

Updates a territory that was added to a proposal.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
territoryService	*Sales Territory*	The attributes of the sales territory object.

Response Payload

Element Name	Type	Description
result	*Sales Territory*	The attributes of the sales territory object.

mergeTerritoryInProposal

Creates territory if it does not exist. Updates the territory if it exists.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
territoryService	*Sales Territory*	Attributes of the sales territory object.

Response Payload

Element Name	Type	Description
result	*Sales Territory*	Attributes of the sales territory object.

findTerritories

Find territories for a given query criteria. The Territory object includes all attributes of territory, territory rule, rule boundaries, boundary values, and resources.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria values to retrieve the records.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The control value that indicates whether to retrieve translations or not.

Response Payload

Element Name	Type	Description
result	*Sales Territory*	The list of the sales territory objects.

deleteTerritoryInheritedDimension

Deletes a territory inherited dimension record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
territoryInheritedDimension	*Sales Territory Inherited Dimension*	The attributes of the territory inherited dimension object.

Response Payload

Element Name	Type	Description
result	void	The deleteTerritoryInheritedDimension web service method returns void.

deleteTerritoryResource

Deletes a sales territory resource record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
territoryResource	*Sales Territory Resource*	The attributes of the territory resource object.

Response Payload

Element Name	Type	Description
result	void	The deleteTerritoryResource web service method returns void.

createTerritoryRuleBndryValue

Creates a specific member for a specific dimension specified for a territory.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
territoryRuleBndryValue	*Sales Territory Rule Boundary Value*	The attributes of territory rule boundary value object.

Response Payload

Element Name	Type	Description
result	*Sales Territory Rule Boundary Value*	The attributes of territory rule boundary value object.

Element Name	Type	Description

deleteTerritoryRuleBndryValue

Removes a specific member for a specific dimension specified for a territory.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
territoryRuleBndryValue	*Sales Territory Rule Boundary Value*	The attributes of territory rule boundary value object.

Response Payload

Element Name	Type	Description
result	void	The deleteTerritoryRuleBndryValue web service method returns void.

processTerritoryRuleBoundaryValue

Processes a list of territory rule boundary value objects via a CRUD command. This is used to perform bulk processing.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	The type of CRUD operation to be performed.
territoryRuleBndryValue	*Sales Territory Rule Boundary Value*	The list of rule boundary value objects on which the CRUD operation needs to be performed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	The control for the process. For example, do we continue if there is an error during the process or not.

Response Payload

Element Name	Type	Description
result	*Sales Territory Rule Boundary Value*	The list of territory rule boundary value objects.

deleteTerritoryRuleBoundary

Removes all members for a specific dimension specified for a territory. This implies that the territory covers "any" member for that dimension.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
territoryRuleBoundary	*Sales Territory Rule Boundary*	The attributes of the territory rule boundary object.

Response Payload

Element Name	Type	Description
result	void	The deleteTerritoryRuleBoundary web service method returns void.

deleteTerritoryLineOfBusiness

Deletes a territory line of business record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
territoryLineOfBusiness	*Sales Territory Line of Business*	The territory line of business attributes.

Response Payload

Element Name	Type	Description
result	void	The deleteTerritoryLineOfBusiness web service method returns void.

deleteTerritoryRule

Deletes the specified territory rule record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
territoryRule	*Sales Territory Rule*	The attributes of the territory rule object.

Response Payload

Element Name	Type	Description
result	void	The deleteTerritoryRule web service method returns void.

getDfltObjAttrHints

Retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on the service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name which is an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

Retrieves the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

Retrieves the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	The list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MOT_MANAGE_SALES_TERRITORY_PRIV	Manage Sales Territory	Allows managing of sales territories. A Territory is the jurisdiction of responsibility of a sales representative over a set of sales accounts.
findTerritories	MOT_VIEW_SALES_TERRITORY_PRIV	View Sales Territory	Allows viewing of sales territories. A Territory is the jurisdiction

Operation Name	Privilege Code	Privilege Name	Privilege Description
			of responsibility of a sales representative over a set of sales accounts.
getTerritory	MOT_VIEW_SALES_TERRITORY_PRIV	View Sales Territory	Allows viewing of sales territories. A Territory is the jurisdiction of responsibility of a sales representative over a set of sales accounts.
transformTerritoryUserKeysToIDs	MOT_VIEW_SALES_TERRITORY_PRIV	View Sales Territory	Allows viewing of sales territories. A Territory is the jurisdiction of responsibility of a sales representative over a set of sales accounts.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MOT_VIEW_SALES_TERRITORY_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_ADMINISTRATION_DUTY	Territory Management Administration	Manages sales territories and territory proposals. Additional duties include territory management setup and quota management administration.
MOT_VIEW_SALES_TERRITORY_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.
MOT_VIEW_SALES_TERRITORY_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	Territory Management Setup	Manages sales territory setup, including lookups, profile options, flexfields, and dimension data. Runs dimension synchronization, and visibility jobs. Additional duties include quota management setup.
MOT_MANAGE_SALES_TERRITORY_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_ADMINISTRATION_DUTY	Territory Management Administration	Manages sales territories and territory proposals. Additional duties include territory management setup and quota management administration.
MOT_MANAGE_SALES_TERRITORY_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.
MOT_MANAGE_SALES_TERRITORY_PRIV	ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	Territory Management Setup	Manages sales territory setup, including lookups, profile options, flexfields, and dimension data. Runs dimension synchronization, and visibility jobs. Additional duties include quota management setup.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	ORA_MOT_QUOTA_EXPORT_MANAGEMENT_DUTY	Quota Export Management	Manages bulk export of all sales territory quota related objects.
ORA_MOT_TERRITORY_MANAGEMENT_DUTY	ORA_MOT_QUOTA_MANAGEMENT_DUTY	Quota Management	Manages sales territory quotas and territory quota formulas. Additional duties include incentive compensation goal management, user and roles management, and party information inquiry.
ORA_MOT_TERRITORY_MANAGEMENT_ADMINISTRATION_DUTY	ORA_MOT_QUOTA_MANAGEMENT_ADMINISTRATION_DUTY	Quota Management Administration	Manages sales territory quotas, quota setups, territory quota formulas, spread formulas, and seasonality groups, and can view quota plans. Additional duties include incentive compensation goal management, user and roles management, and party information inquiry.
ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	ORA_MOT_QUOTA_MANAGEMENT_SETUP_DUTY	Quota Management Setup	Manages sales territory quota setup, quota plans, prediction and spread formula parameters, and seasonality groups. Runs sales territory quota synchronization and sales quota plan activation and completion processes. Additional duties include party information inquiry.
ORA_MOT_TERRITORY_MANAGEMENT_ADMINISTRATION_DUTY	ORA_MOT_TERRITORY_MANAGEMENT_EXPORT_IMPORT_DUTY	Territory Management Export Import	Manages sales territory export and import. Provides users with the ability to export territory data, modify it offline and import.
ORA_MOT_TERRITORY_MANAGEMENT_DUTY	ORA_MOT_TERRITORY_MANAGEMENT_EXPORT_IMPORT_DUTY	Territory Management Export Import	Manages sales territory export and import. Provides users with the ability to export territory data, modify it offline and import.
ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	ORA_MOT_TERRITORY_MANAGEMENT_T2P_MIGRATION_DUTY	Territory Management T2P Migration	Manages sales territory export and import. Provides users with the ability to export territory data from a test environment and import into production.

Sales Territory

The various versions of a sales territory where each version record contains most of the key attributes of a territory. Most of the sales territory object components are child entities to a sales territory version, for example, territory rules, territory rule boundaries, territory rule boundary values, and territory resources.

QName: {http://xmlns.oracle.com/apps/sales/territoryMgmt/territories/territoryService/}Territory

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Sales Territory Rule*
Contains	*Sales Territory Line of Business*
Contains	*Sales Territory Resource*
Contains	*Sales Territory Inherited Dimension*
Contained by	*Sales Territory Proposal*
Handled by	*Sales Territory Service*
Handled by	*Sales Territory Proposal Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ApplyOptionalValidationFlag	boolean	This is an obsolete attribute.
CoverageModel	string	Indicates if the dimensions of the territory are based on account attributes or partner attributes.
DeleteFlag	boolean	Indicates whether the user has access to delete the record. If the value is True, then the user has the access. The default value is False.
Description	string	The free text description of the record.

Name	Type	Description
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
EligibleForQuotaFlag	boolean	Indicates whether the territory is going to change during a territory realignment. If the value is True, then the territory is unlikely to change during a major realignment and therefore a quota can be entered against the proposed definition.
ForecastParticipationCode	string	The code for the forecast participation.
ForecastedByParentTerritoryFlag	boolean	Indicates if the forecast for the territory is made by its parent territory.
LatestVersionFlag	boolean	Indicates the latest active version of territory.
Name	string	The name of the sales territory.
OrganizationId	long	The unique identifier of the organization.
OrganizationName	string	The name of the party when the party type is Organization.
Owner	string	The owner of the sales territory.
OwnerOrgId	long	The identifier of the owner's organization.
OwnerResourceId	long	The identifier of the resource from CRM Foundation (JTF) resources.
ParentTerritoryId	long	The identifier of the parent sales territory.
PartnerId	long	The unique identifier of the partner.
PartnerName	string	The name of the partner associated with the territory.
PartnerProgramId	long	The specific program that a partner is participating in.

Name	Type	Description
ProgramName	string	The name of the partner program to which the partner is enrolled.
ReviseQuotaFlag	boolean	Indicates whether a submitted quota needs to be revised.
RevisionDescription	string	The description of the reason for revising the quota.
RevisionReason	string	The user-defined reason for revising the quota.
SourceTerrId	long	The identifier of the territory from which the dimensions are inherited.
SourceTerrLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the source territory was last updated. This attribute is related to the inheritance of dimensions by recipient territories from source territories.
SourceTerrName	string	The name of the territory from which the selected dimensions are inherited.
SourceTerrVersionId	long	The unique identifier of the source territory version.
StageCode	string	This is an obsolete attribute.
StatusCode	string	The pre-defined code used to indicate the status.
TerrProposalId	long	The identifier of the territory proposal.
TerritoryFunctionCode	string	Business function associated with the territory
TerritoryId	long	The unique identifier of the sales territory.
TerritoryInheritedDimension	*Sales Territory Inherited Dimension*	The dimension the recipient territory is inheriting from the source territory.
TerritoryLevel	long	The level of the territory in territory hierarchy.
TerritoryLineOfBusiness	*Sales Territory Line of Business*	Identifies the line of business that a territory is associated with. Each territory can be associated with single , multiple (or All) , or no line of business.

Name	Type	Description
TerritoryNumber	string	The unique alternate identification number for the territory.
TerritoryResource	*Sales Territory Resource*	The list of sales territory resource objects.
TerritoryRule	*Sales Territory Rule*	The unique identifier of the territory rule.
TerritoryVersionId	long	The unique identifier of territory version. • Primary Key
TypeCode	string	The code for the type of sales territory.
UniqueTerritoryNumber	string	Unique identification number for this territory
UpdateFlag	boolean	Indicates whether the user has access to update the record. If the value is True, then the user has the access. The default value is False.

Sales Territory Inherited Dimension

The dimensions that the recipient territory will inherit from its source territory.

QName: {http://xmlns.oracle.com/oracle/apps/sales/territoryMgmt/territories/territoryService/}TerritoryInheritedDimension

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Territory*
Handled by	*Sales Territory Service*
Handled by	*Sales Territory Proposal Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
TerrDimensionCode	string	The code of the dimension that is being inherited.
TerrInheritedDimensionId	long	The identifier of the territory inherited dimension. • Primary Key
TerritoryVersionId	long	The unique identifier of the version of the recipient territory.

Sales Territory Line of Business

The lines of business associated with a territory.

QName: {http://xmlns.oracle.com/oracle/apps/sales/territoryMgmt/territories/territoryService/}TerritoryLineOfBusiness

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Territory*
Handled by	*Sales Territory Service*
Handled by	*Sales Territory Proposal Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
LobCode	string	The code for the territory line of business.
Meaning	string	The meaning of the territory line of business.
TerrLobId	long	The unique identifier of the territory line of business.

Name	Type	Description
		• Primary Key
TerritoryVersionId	long	The unique identifier of the version of the territory.

Sales Territory Resource

The resources allocated to a territory. For example, the sales representative that owns the territory.

QName: {http://xmlns.oracle.com/apps/sales/territoryMgmt/territories/territoryService/}TerritoryResource

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Territory*
Handled by	*Sales Territory Service*
Handled by	*Sales Territory Proposal Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdministratorFlag	boolean	Indicates whether the resource is an administrator of the territory.
FunctionCode	string	The function of the resource in the territory.
ManageForecastFlag	boolean	Indicates whether a territory resource has been given the responsibility to manage the territory forecast on behalf of the owner of the territory.
Manager	string	The name of the manager for the resource.
OrganizationName	string	The name of the party when the party type is Organization.

Name	Type	Description
ReportsTo	string	The name of the resource to which the resource reports to.
ResourceId	long	The unique identifier of the resource.
ResourceName	string	The name of the sales territory resource.
ResourceOrgId	long	The identifier of the organization to which the resource belongs.
RoleName	string	The role name associated with the resource.
TerrResourceId	long	The identifier of the territory resource. • Primary Key
TerritoryVersionId	long	The identifier of the territory version.

Sales Territory Rule

An entity that organizes territory dimensions in the form of rules and enables territory definitions that can be either simple territories defined by a single rule or complex ones with multiple rules. This entity, along with territory rule boundary value, stores the dimensions of the territory in an expression form.

QName: {http://xmlns.oracle.com/apps/sales/territoryMgmt/territories/territoryService/}TerritoryRule

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Sales Territory Rule Boundary*
Contained by	*Sales Territory*
Handled by	*Sales Territory Service*
Handled by	*Sales Territory Proposal Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
RuleNumber	long	A unique number within a territory definition.
RuleOperatorCode	string	The code for identifying whether the coverage adds to or removes from the territory's jurisdiction. The accepted values are: EXCLUSION (for rule type EXCLUSION and PARTNER_EXCLUSION) and INCLUSION (for all other rule types, such as REGULAR, INCLUSION, PARTNER_REGULAR, PARTNER_INCLUSION, and INHERITANCE_OVERRIDE)
RuleTypeCode	string	The code for the territory coverage type. If the territory coverage model is sales account centric, the accepted values are: REGULAR (for coverage based on sales account dimensionality or named accounts), INCLUSION (for manually included account coverage), and EXCLUSION (for manually excluded account coverage). If the territory coverage model is partner centric, the accepted values are: PARTNER_REGULAR (for coverage based on partner dimensionality), PARTNER_INCLUSION (for manually included partner coverage), and PARTNER_EXCLUSION (for manually excluded partner coverage). In case of inheritance, if the coverage is for a recipient territory, then the accepted value is INHERITANCE_OVERRIDE which indicates that the coverage overrides some of the inherited dimensionality.
TerrRuleId	long	The unique identifier of the territory rule. • Primary Key
TerritoryRuleBoundary1	*Sales Territory Rule Boundary*	The list of territory rule boundary objects.
TerritoryVersionId	long	The unique identifier of the territory version.

Sales Territory Rule Boundary

An entity associated with a territory rule boundary value to store the dimensions of the territory in an expression form. Dimension members are evaluated additively and the values within a dimension member are evaluated as choices.

QName: {http://xmlns.oracle.com/apps/sales/territoryMgmt/territories/territoryService/}TerritoryRuleBoundary

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Sales Territory Coverage Dimension Value*
Contained by	*Sales Territory Rule*
Handled by	*Sales Territory Service*
Handled by	*Sales Territory Proposal Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Dimension	string	The name of the sales territory dimension.
TerrDimensionCode	string	The code for the sales territory dimension.
TerrRuleBoundaryId	long	The unique identifier of the territory rule boundary. • Primary Key
TerrRuleId	long	The identifier of the sales territory rule.
TerritoryRuleBndryValue1	*Sales Territory Rule Boundary Value*	The territory rule boundary value object.

Sales Territory Rule Boundary Value

The actual values of the dimensions for the territory.

QName: {http://xmlns.oracle.com/apps/sales/territoryMgmt/territories/territoryService/}TerritoryRuleBndryValue

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Sales Territory Rule Boundary*
Handled by	*Sales Territory Service*
Handled by	*Sales Territory Proposal Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AddrElementAttribute1	string	Additional address element to support flexible address format.
AddrElementAttribute2	string	Additional address element to support flexible address format.
AddrElementAttribute3	string	Additional address element to support flexible address format.
AddrElementAttribute4	string	Additional address element to support flexible address format.
AddrElementAttribute5	string	Additional address element to support flexible address format.
AddressCity	string	City.
AddressCountry	string	Country.
AddressCounty	string	County.
AddressPostalCode	string	Postal Code.
AddressProvince	string	Province.
AddressState	string	State.
DimensionMember	string	The name of the territory dimension member.
DimensionMemberHigh	string	The name of the territory dimension member with a high sequence number.

Name	Type	Description
IncludeHierarchyFlag	boolean	Indicates whether the dimension member is included along with its hierarchy or not.
TerrDimHighIntgId	string	The common member identifier for Oracle Business Intelligence (OBI), Territory Management, and Cube.
TerrDimIntgId	string	The common member identifier for Oracle Business Intelligence (OBI), Territory Management, and Cube having a high sequence number.
TerrDimensionCode	string	The code for the sales territory dimension.
TerrRuleBndryValueId	long	The unique identifier of the territory rule boundary value. • Primary Key
TerrRuleBoundaryId	long	The identifier of the territory rule boundary.

Search Marketing Campaign Data Upload

Service to upload marketing campaign data from various search engine vendors into the Oracle Fusion Marketing schema.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/oracle/apps/marketing/searchMarketing/model/}SearchMarketingModelService

Service WSDL URL: https://servername/crmService/SearchMarketingModelService?WSDL

Logical Business Objects

- CRM : Marketing : Search Marketing Campaign

processCampaignSummaryReport

A web service method that uploads Campaign summary data from Google Adwords.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
request	*Search Marketing Campaign Summary*	A required parameter of the processCampaignSummaryReport web service method. The records matching the set of attribute criteria are transferred.

Response Payload

Element Name	Type	Description
result	string	The return value of the processCampaignSummaryReport web service method. It includes a set of Campaign ID's with appropriate status.

processAccountPerformanceReport

A web service method that uploads Account performance data from Google Adwords.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
request	*Search Marketing Account Result*	A required parameter of the processAccountPerformanceReport web service method. The records matching the set of attribute criteria are transferred.

Response Payload

Element Name	Type	Description
result	string	The return value of the processAccountPerformanceReport web service method. It includes a set of Connection ID's with appropriate status.

processCampaignPerformanceReport

A web service method that uploads Campaign performance data from Google Adwords.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
request	*Search Marketing Campaign Result*	A required parameter of the processCampaignPerformanceReport web service method. The records matching the set of attribute criteria are transferred.

Response Payload

Element Name	Type	Description
result	string	The return value of the processCampaignPerformanceReport web service method. It includes a set of Campaign ID's with appropriate status.

processAdGroupsSummaryReport

A web service method that uploads Ad-group summary data from Google Adwords.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
request	*Search Marketing Ad Group Summary*	A required parameter of the processAdGroupsSummaryReport web service method. The records matching the set of attribute criteria are transferred.

Response Payload

Element Name	Type	Description
result	string	The parameter is not applicable for the method processAdGroupsSummaryReport.

processAdGroupPerformanceReport

A web service method that uploads Ad-group performance data from Google Adwords.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
request	*Search Marketing Ad Group Result*	A required parameter of the processAdGroupsPerformanceReport web service method. The records matching the set of attribute criteria are transferred.

Response Payload

Element Name	Type	Description
result	string	The return value of the processAdGroupsPerformanceReport web service method. It includes a set of Ad-group ID's with appropriate status.

processAdsSummaryReport

A web service method that uploads Ads summary data from Google Adwords.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
request	*Search Marketing Ad Summary*	A required parameter of the processAdsSummaryReport web service method. The records matching the set of attribute criteria are transferred.

Response Payload

Element Name	Type	Description
result	string	The return value of the processAdsSummaryReport web service method. It includes a set of Ad ID's with appropriate status.

processAdPerformanceReport

A web service method that uploads Ads performance data from Google Adwords.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
request	*Search Marketing Ad Result*	A required parameter of the processAdPerformanceReport web service method. The records matching the set of attribute criteria are transferred.

Response Payload

Element Name	Type	Description
result	string	The return value of the processAdPerformanceReport web service method. It includes a set of Ad ID's with appropriate status.

processKeywordsSummaryReport

A web service method that uploads keywords summary data from Google Adwords.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
request	*Search Marketing Keyword Summary*	A required parameter of the processKeywordsSummaryReport web service method. The records matching the set of attribute criteria are transferred.

Response Payload

Element Name	Type	Description
result	string	The return value of the processKeywordsSummaryReport web service method. It includes a set of Keyword ID's with appropriate status.

processKeywordPerformanceReport

A web service method that uploads keyword performance data from Google Adwords.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
request	*Search Marketing Keywords Result*	A required parameter of the processKeywordPerformanceReport web service method. The records matching the set of attribute criteria are transferred.

Response Payload

Element Name	Type	Description
result	string	The return value of the processKeywordPerformanceReport web service method. It includes a set of Keyword ID's with appropriate status.

processWebToLead

A web service method that allows creation of Oracle Fusion Lead Object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
firstName	string	A required parameter of the processWebToLead web service method. The first name captures personal information of the generated lead.
lastName	string	An optional parameter of the processWebToLead web service method. The last name is part of the personal details of the generated lead.
emailAddress	string	An optional parameter of the processWebToLead web service method. The email address captures specific contact information of the generated lead.
phoneNumber	string	A required parameter of the processWebToLead web service method. The phone number captures specific contact information of the generated lead.
address1	string	An optional parameter of the processWebToLead web service method. The street address captures specific location information of the generated lead.

Element Name	Type	Description
address2	string	An optional parameter of the processWebToLead web service method. The extended address captures specific location information of the generated lead.
city	string	An optional parameter of the processWebToLead Web Service. The city captures specific location information of the generated lead.
state	string	An optional parameter of the processWebToLead web service method. The state captures specific location information of the generated lead.
zip	string	An optional parameter of the processWebToLead web service method. The zip code captures specific location information of the generated lead.
country	string	An optional parameter of the processWebToLead web service method. The country captures specific location information of the generated lead.
fusionPartyId	string	A required parameter of the processWebToLead web service method. The party ID captures party information of the generated lead.
fusionContactId	string	A required parameter of the processWebToLead web service method. The contact ID captures contact information of the generated lead.
fusionRelationshipId	string	A required parameter of the processWebToLead web service method. The relationship ID captures relationship information of the generated lead.
semCampaignId	string	A required parameter of the processWebToLead web service method. The campaign ID defines the relationship between generated lead & campaign.
semAdgroupId	string	An optional parameter of the processWebToLead web service method. The ad group ID defines the relationship between ad group & generated lead.
semKeywords	string	An optional parameter of the processWebToLead web service method. This captures the keywords associated with the campaign.

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	void	The parameter is not applicable for the method processWebToLead.

getDfltObjAttrHints

A web service method to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

A web service method that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

A web service method to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	MKT_RUN_SEARCH_MARKETING_CAMPAIGN_SCHEDULER_PRIV	Run Search Marketing Campaign Scheduler	Allows scheduling and monitoring the process that schedules marketing search engine campaign execution activities.
All Operations	MKT_CREATE_SEARCH_MARKETING_CAMPAIGN_PRIV	Create Search Marketing Campaign	Allows creating search engine marketing campaigns.
All Operations	MKT_VIEW_SEARCH_MARKETING_CAMPAIGN_PRIV	View Search Marketing Campaign	Allows viewing search engine campaigns and monitoring results.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
MKT_RUN_SEARCH_MARKETING_CAMPAIGN_SCHEDULER_PRIV	ORA_MKT_CORPORATE_MARKETING_MANAGER_JOB	Corporate Marketing Manager	Develops and executes marketing strategies, translating customer needs from varied industries and markets into clear value propositions and actionable marketing programs. Communicates the corporate marketing message, manages the corporate marketing budget for allocation to marketing activities, and follows through the complete marketing life cycle to measure results.
MKT_RUN_SEARCH_MARKETING_CAMPAIGN_SCHEDULER_PRIV	ORA_MKT_MARKETING_MANAGER_JOB	Sales Marketing Manager	Coordinates marketing messaging content, pricing, segmentation, communication channels, and launch activities for marketing campaigns. Contributes to sales lead pipeline process and estimations, product definitions, and return on investment calculations.
MKT_RUN_SEARCH_MARKETING_CAMPAIGN_SCHEDULER_PRIV	ORA_MKT_MARKETING_OPERATIONS_MANAGER_JOB	Marketing Operations Manager	Manages the operations for marketing and leads. Develops tactical campaigns to carry out marketing strategies and communicate offers to customer segments using multiple marketing channels. Monitors campaign interactions, captures campaign responses, and manages sales leads to fill the sales pipeline. Creates and maintains the setup for marketing campaigns, responses, segments, lists, and treatments.
MKT_CREATE_SEARCH_MARKETING_CAMPAIGN_PRIV	ORA_MKT_CORPORATE_MARKETING_MANAGER_JOB	Corporate Marketing Manager	Develops and executes marketing strategies, translating customer needs from varied industries and markets into clear value propositions and actionable marketing programs. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_MKT_MARKETING_OPERATIONS_MANAGER_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.

Search Marketing Account Result

The accounts for which search marketing campaign data is uploaded.

QName: {http://xmlns.oracle.com/oracle/apps/marketing/searchMarketing/model/}MktSemWSAccountResults

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Search Marketing Campaign Data Upload*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountCurrencyCode	string	Currency associated with the Google AdWords Account.
AverageCPC	decimal	Average cost per click recorded for a specific date for a specific Google AdWords Account.
AverageCPM	decimal	Average cost of 1000 impressions recorded for a specific date for a specific Google AdWords Account.
AveragePosition	decimal	Average ad placement position recorded for a specific date for a specific Google AdWords Account.
CTR	decimal	Click through rate recorded for a specific date for a specific Google AdWords Account.
Clicks	decimal	Number of clicks recorded for a specific date for a specific Google AdWords Account.

Name	Type	Description
ClientAccountEmail	string	Email address associated with the Google AdWords Account.
ClientAccountId	long	The identifier of the Google AdWords Account. • Primary Key
Cost	decimal	Cost recorded for a specific date for a specific Google AdWords Account.
Date	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date recorded on the daily report that includes search marketing campaign performance metrics for a specific Google AdWords Account. • Primary Key
Impressions	decimal	Number of impressions recorded for a specific date for a specific Google AdWords Account.

Search Marketing Ad Group Result

The advertisement groups associated with search marketing campaigns.

QName: {http://xmlns.oracle.com/oracle/apps/marketing/searchMarketing/model/}MktSemWSAdgroupsResults

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Search Marketing Campaign Data Upload*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountCurrencyCode	string	Currency associated with the Google AdWords Account used to configure the Google AdWords Ad Group.

Name	Type	Description
AdGroupId	string	Ad Group ID associated with the Ad Group created in Google AdWords for search marketing campaigns.
AdGroupName	string	Ad Group Name associated with the Ad Group created in Google for search marketing campaigns.
AverageCPC	decimal	Average cost per click recorded for a specific date for a specific Ad Group.
AverageCPM	decimal	Average cost of 1000 impressions recorded for a specific date for an Ad Group or a search keyword.
AveragePosition	decimal	Average ad placement position recorded for a specific date for a specific Google AdWords Ad Group.
CTR	decimal	Click through rate recorded for a specific date for a specific Google AdWords Ad Group.
CampaignId	long	The unique identifier for the campaign.
Clicks	decimal	Number of clicks recorded for a specific date for a specific Google AdWords Ad Group.
ClientAccountEmail	string	Email address associated with the Google AdWords Account.
Cost	decimal	Cost recorded for a specific date for a specific Google AdWords Ad Group.
Date	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date recorded on the daily report that includes search marketing campaign performance metrics for a specific Google AdWords Ad Group. • Primary Key
FusionAdgroupId	long	Google AdWords Ad Group identifier generated by Fusion Marketing. • Primary Key
Impressions	decimal	Number of impressions recorded for a specific date for a specific Google AdWords Ad Group.
Status	string	The status of the record.

Search Marketing Ad Group Summary

The summary data for advertisement groups associated with search marketing campaigns.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountCurrencyCode	string	Currency associated with the Google AdWords Account used to configure search marketing campaigns.
Amount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The budget amount associated with the search marketing campaigns created under a specific Google AdWords Account.
AverageCPC	decimal	Average cost per click recorded for a specific date for these search marketing campaigns.

Name	Type	Description
AverageCPM	decimal	Average cost of 1000 impressions recorded for a specific date for these Google AdWords search marketing campaigns.
AveragePosition	decimal	Average ad placement position recorded for a specific date for these Google AdWords search marketing campaigns.
CTR	decimal	Click through rate recorded for a specific date for a specific Google AdWords search marketing campaign.
Clicks	decimal	Number of clicks recorded for a specific date for a specific Google AdWords search marketing campaign.
ClientAccountEmail	string	Email address associated with the Google AdWords Account.
Cost	decimal	Cost recorded for a specific date for a specific Google AdWords search marketing campaign.
FusionCampaignId	long	Google AdWords search marketing campaign identifier generated by Fusion Marketing. • Primary Key
Id	string	Google AdWords search marketing campaign identifier provided by Google.
Impressions	decimal	Number of impressions recorded for a specific date for a specific Google AdWords search marketing campaign.
Name	string	The name of the Google AdWords search marketing campaign.
Status	string	The status of the record.

Search Marketing Keyword Summary

The summary data of keywords associated with marketing campaigns.

QName: {http://xmlns.oracle.com/oracle/apps/marketing/searchMarketing/model/}MktSemWSCampaignKeywordsSummary

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Search Marketing Campaign Data Upload*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountCurrencyCode	string	Currency associated with the Google AdWords Account used to configure these search keywords for search marketing campaigns.
AdGroupId	long	Ad Group ID associated with the search keyword created in Google AdWords for search marketing campaigns.
AverageCPC	decimal	Average cost per click recorded for a specific date for search keywords.
AverageCPM	decimal	Average cost of 1000 impressions recorded for a specific date for these Google AdWords search keywords.
AveragePosition	decimal	Average ad placement position recorded for a specific date for these Google AdWords search keywords.
CTR	decimal	Click through rate recorded for a specific date for a specific Google AdWords search keyword.
CampaignId	long	The unique identifier for the campaign.
Clicks	decimal	Number of clicks recorded for a specific date for a specific Google AdWords search keyword.
ClientAccountEmail	string	Email address associated with the Google AdWords Account.
Cost	decimal	Cost recorded for a specific date for a specific Google AdWords search keyword.

Name	Type	Description
FusionKeywordId	long	Google AdWords search keyword identifier generated by Fusion Marketing. • Primary Key
Id	string	Google AdWords search keyword identifier provided by Google.
Impressions	decimal	Number of impressions recorded for a specific date for a specific Google AdWords search keyword.
KeywordText	string	The Google AdWords search keyword text.
Status	string	The status of the record.
isNegative	string	Indicates whether a given keyword is negative. Adding a negative keyword to an ad group or campaign means that the ads do not show for searches containing that term.

Search Marketing Keywords Result

The keywords associated with marketing campaigns.

QName: {http://xmlns.oracle.com/oracle/apps/marketing/searchMarketing/model/}MktSemWSKeywordResults

- *findEntity*
- *mergeEntity*

- *processEntity*

getDfltObjAttrHints

Get object attribute hint operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	viewName parameter
localeName	string	localeName parameter

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	return parameter

getServiceLastUpdateTime

Get last update time operation for a custom object.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Last updated time of the service as return parameter.

getEntityList

Get list operation for a custom object.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	Entity List as return parameter.

createEntity

Create operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	Data object to be created. The data object must include key fields for identifying the created record, as well as the required fields.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	Data object created for the custom object.

getEntity

Get operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
keyValue	string	A list of key values for identifying the custom object.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	Data object identified by the keyValue.

updateEntity

Update operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	Data object to be updated. The data object must include key fields for identifying the updated record, as well as the fields to be updated.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	

deleteEntity

Delete operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	Data object to be deleted. The data object must include key fields for identifying the deleted record.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	void	

findEntity

Find operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	List of data objects identified by the findCriteria.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Search control.
objectName	string	Search criteria for looking up custom object records.

Response Payload

Element Name	Type	Description
result	anyType	Custom object type name.

mergeEntity

Merge operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	
objectName	string	

Response Payload

Element Name	Type	Description
result	anyType	

processEntity

Process operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	
object	anyType	
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	
objectName	string	

Response Payload

Element Name	Type	Description
result	anyType	

Custom Business Object

A service to create, update, delete, or find custom business objects created in the Oracle Fusion CRM application. A custom business object stores extended information for an Oracle Fusion business object.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/custom/extnService/}CustomReferenceService

Service WSDL URL: https://servername/crmService/CustomReferenceService?WSDL

Logical Business Objects

- CRM : CRM Application Composer : CRM Extensible Object

Operations

- *getDfltObjAttrHints*

- *getServiceLastUpdateTime*
- *getEntityList*
- *invokeObjectFunction*
- *createEntity*
- *getEntity*
- *updateEntity*
- *deleteEntity*
- *findEntity*
- *mergeEntity*
- *processEntity*

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

invokeObjectFunction

invoke custom object row function.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
row	anyType	DataObject used to invoke the script
viewName	string	Custom Object type name
scriptName	string	row function name
params	anyType	row function parameters

Response Payload

Element Name	Type	Description
result	anyType	DataObject

createEntity

Create operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject created for the custom object.

getEntity

Get operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
keyValue	string	A list of key values for identifying the custom object.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject identified by the keyValue.

updateEntity

Update operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be updated. The DataObject must include key fields for identifying the updated record, as well as the fields to be updated.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject updated for the custom object.

deleteEntity

Delete operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be deleted. The DataObject must include key fields for identifying the deleted record.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	void	DataObject that is deleted.

findEntity

Find operation for a custom object.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	List of DataObjects identified by the findCriteria.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Search control.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObjects found

mergeEntity

merge with existing custom object if exist, create new object if does not exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
object	anyType	DataObject to be merged. The DataObject must include key fields for identifying the record, as well as the fields to be merged.
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject result from the merge

processEntity

batch process for custom object operation

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Operation name
object	anyType	DataObjects to be batch processed
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	process control
objectName	string	Custom object type name.

Response Payload

Element Name	Type	Description
result	anyType	DataObject result list

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
processEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea
getEntityList	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
updateEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea

Operation Name	Privilege Code	Privilege Name	Privilege Description
getEntity	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
deleteEntity	ZCX_DELETE_CUSTOM_OBJECT_PRIV	DELETE custom object resources (WorkArea)	PermissionSet to DELETE for custom object WorkArea
findEntity	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
getDfltObjAttrHints	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
createEntity	ZCX_CREATE_CUSTOM_OBJECT_PRIV	CREATE custom object resources (WorkArea)	PermissionSet to CREATE for custom object WorkArea
getServiceLastUpdateTime	ZCX_READ_CUSTOM_OBJECT_PRIV	READ custom object resources (WorkArea)	PermissionSet to READ for custom object WorkArea
mergeEntity	ZCX_UPDATE_CUSTOM_OBJECT_PRIV	UPDATE custom object resources (WorkArea)	PermissionSet to UPDATE for custom object WorkArea

Service Request Service

A service to create, update, get, find, or delete service requests. Access to this SOAP service is restricted only for use by the Oracle Integration Cloud Service.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crm/service/svcMgmt/srMgmt/srMgmtService/}ServiceRequestService

Service WSDL URL: https://servername/crmService/ServiceRequestService?WSDL

Logical Business Objects

handleDeletedSocialPost

Handles the deleted post event.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
postId	long	The primary key of the post being deleted.

Response Payload

Element Name	Type	Description
result	void	

handleNewSocialPost

Handles the new social post event.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
postId	long	The primary key of the social post being created.

Response Payload

Element Name	Type	Description
result	void	

getServiceRequest

Queries a single service request record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
srId	long	The service request ID.

Response Payload

Element Name	Type	Description
result	*Service Request*	A service request that matches the inbound parameters.

createServiceRequest

Creates a single service request record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
serviceRequest	*Service Request*	The service request to be created.

Response Payload

Element Name	Type	Description
result	*Service Request*	The service request created.

updateServiceRequest

Updates a single service request record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
serviceRequest	*Service Request*	The service request to be updated.

Response Payload

Element Name	Type	Description
result	*Service Request*	The updated service request.

deleteServiceRequest

Delete a single service request record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
serviceRequest	*Service Request*	The service request record to be deleted.

Response Payload

Element Name	Type	Description
result	void	nothing.

mergeServiceRequest

Updates a single service request record if one exists; otherwise, creates a new service record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
serviceRequest	*Service Request*	The service request record to be updated.

Response Payload

Element Name	Type	Description
result	*Service Request*	The updated service request record.

findServiceRequest

Queries a list of service requests based on a filter criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to query the list of service requests.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Not currently used.

Response Payload

Element Name	Type	Description
result	*Service Request*	A list of service requests that satisfy the inbound parameters.

findServiceRequestSRListByStripeCdVC

Queries a list of service requests for a specific stripe.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to query the list of service requests.
BindStripeCd	string	The application stripe code.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Not currently used.

Response Payload

Element Name	Type	Description
result	*Service Request*	A list of service requests that satisfy the inbound criteria.

getSrMessage

Queries a single service request message record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
messageId	long	The service request message ID.

Response Payload

Element Name	Type	Description
result	*Message*	The service request message that matches the inbound parameter.

createSrMessage

Creates a single service request message record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
srMessage	*Message*	The service request message to be created.

Response Payload

Element Name	Type	Description
result	*Message*	The service request message created.

updateSrMessage

Updates a single Service request message record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
srMessage	*Message*	The service request message to be updated.

Response Payload

Element Name	Type	Description
result	*Message*	The updated service request message.

deleteSrMessage

Deletes a service request message record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
srMessage	*Message*	The service request message to be deleted.

Response Payload

Element Name	Type	Description
result	void	nothing.

mergeSrMessage

Updates a single sr message record if one exists; otherwise, creates a new sr message record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
srMessage	*Message*	The service request message record to be updated.

Response Payload

Element Name	Type	Description
result	*Message*	The updated service request message record.

getSrContactMember

Queries a single service request contact record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
memberId	long	The ID of the service request contact member.

Response Payload

Element Name	Type	Description
result	*Service Request Contact*	The service request contact member that matches the inbound parameter.

deleteSrContactMember

Deletes a single service request contact record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
srContactMember	*Service Request Contact*	The service request contact member to be deleted.

Response Payload

Element Name	Type	Description
result	void	nothing.

getSrResourceMemberResource

Queries a single service request resource record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
memberId	long	The ID of the service request resource.

Response Payload

Element Name	Type	Description
result	*Service Request Resource*	The service request resource that matches the inbound parameter.

deleteSrResourceMemberResource

Deletes a single service request resource record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
srResourceMemberResource	*Service Request Resource*	The service request resource record to be deleted.

Response Payload

Element Name	Type	Description
result	void	nothing.

getSrReference

Queries a single service request reference record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
referenceId	long	The ID of the service request reference.

Response Payload

Element Name	Type	Description
result	*Service Request Reference*	The service request reference that matches the inbound parameter.

deleteSrReference

Deletes a service request reference record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
srReference	*Service Request Reference*	The service request reference record to be deleted.

Response Payload

Element Name	Type	Description
result	void	nothing.

findSrSocialPost

Queries a list of social posts corresponding to the service requests.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to query the results.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Not currently used.

Response Payload

Element Name	Type	Description
result	*SR Social Post*	A list of social posts corresponding to the service requests.

findSrMessageSocialPost

Queries a list of social posts corresponding to the service request messages.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to query the results.

Element Name	Type	Description
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Not currently used.

Response Payload

Element Name	Type	Description
result	*SR Message Social Post*	A list of social posts corresponding to the service request messages.

getHRHelpDeskRequest

Queries a single service request record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
srId	long	The service request ID.

Response Payload

Element Name	Type	Description
result	*HR Help Desk Request*	A service request that matches the inbound parameters.

createHRHelpDeskRequest

Creates a single service request record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
serviceRequest_HRHD	*HR Help Desk Request*	The service request to be created.

Response Payload

Element Name	Type	Description
result	*HR Help Desk Request*	The service request created.

updateHRHelpDeskRequest

Updates a single service request record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
serviceRequest_HRHD	*HR Help Desk Request*	The service request to be updated.

Response Payload

Element Name	Type	Description
result	*HR Help Desk Request*	The updated service request.

deleteHRHelpDeskRequest

Delete a single service request record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
serviceRequest_HRHD	*HR Help Desk Request*	The service request record to be deleted.

Response Payload

Element Name	Type	Description
result	void	nothing.

mergeHRHelpDeskRequest

Updates a single service request record if one exists; otherwise, creates a new service record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
serviceRequest_HRHD	*HR Help Desk Request*	The service request record to be updated.

Response Payload

Element Name	Type	Description
result	*HR Help Desk Request*	The updated service request record.

findHRHelpDeskRequest

Queries a list of service requests based on a filter criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to query the list of service requests.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Not currently used.

Response Payload

Element Name	Type	Description
result	*HR Help Desk Request*	A list of service requests that satisfy the inbound parameters.

getInternalServiceRequest

Queries a single service request record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
srId	long	The service request ID.

Response Payload

Element Name	Type	Description
result	*Internal Service Request*	A service request that matches the inbound parameters.

createInternalServiceRequest

Creates a single service request record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
serviceRequest_ISR	*Internal Service Request*	The service request to be created.

Response Payload

Element Name	Type	Description
result	*Internal Service Request*	The service request created.

updateInternalServiceRequest

Updates a single service request record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
serviceRequest_ISR	*Internal Service Request*	The service request to be updated.

Response Payload

Element Name	Type	Description
result	*Internal Service Request*	The updated service request.

deleteInternalServiceRequest

Delete a single service request record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
serviceRequest_ISR	*Internal Service Request*	The service request record to be deleted.

Response Payload

Element Name	Type	Description
result	void	nothing.

mergeInternalServiceRequest

Updates a single service request record if one exists; otherwise, creates a new service record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
serviceRequest_ISR	*Internal Service Request*	The service request record to be updated.

Response Payload

Element Name	Type	Description
result	*Internal Service Request*	The updated service request record.

findInternalServiceRequest

Queries a list of service requests based on a filter criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to query the list of service requests.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Not currently used.

Response Payload

Element Name	Type	Description
result	*Internal Service Request*	A list of service requests that satisfy the inbound parameters.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getServiceRequest	SVC_CREATE_SR_PRIV	Create Service Request	Allows creation of a service request
getServiceRequest	SVC_VIEW_SR_USING_REST_PRIV	Use REST Service to View Service Request	Allows viewing of service requests using REST API.
getServiceRequest	SVC_DELETE_SR_PRIV	Delete Service Request	Allows deleting of service request
getServiceRequest	SVC_EDIT_SR_PRIV	Edit Service Request	Allows editing of a service request
getServiceRequest	SVC_VIEW_SR_PRIV	View Service Request	Allows viewing of service request(s).
getServiceRequest	SVC_VIEW_HELPDESK_SR_PRIV	View Help Desk Service Request	Allows viewing of Help Desk service request details.
deleteInternalServiceRequest	SVC_DELETE_ISR_SR_PRIV	Delete Internal Service Request	Allows deleting of an ISR service request.

Operation Name	Privilege Code	Privilege Name	Privilege Description
createInternalServiceRequest	SVC_CREATE_ISR_SR_PRIV	Create Internal Service Request	Allows creation of an ISR service request.
createInternalServiceRequest	SVC_VIEW_AGENT_ISR_HD_PRIV	View Agent Internal Help Desk	Allows viewing of ISR Agent Help Desk.
findInternalServiceRequest	SVC_CREATE_ISR_SR_PRIV	Create Internal Service Request	Allows creation of an ISR service request.
findInternalServiceRequest	SVC_EDIT_ISR_SR_PRIV	Edit Internal Service Request	Allows editing of an ISR service request.
findInternalServiceRequest	SVC_VIEW_ISR_SR_PRIV	View Internal Service Request	Allows viewing of ISR service request(s).
findInternalServiceRequest	SVC_DELETE_ISR_SR_PRIV	Delete Internal Service Request	Allows deleting of an ISR service request.
findInternalServiceRequest	SVC_VIEW_AGENT_ISR_HD_PRIV	View Agent Internal Help Desk	Allows viewing of ISR Agent Help Desk.
mergeHRHelpDeskRequest	SVC_VIEW_AGENT_HR_HD_PRIV	View Agent HR Help Desk	Allows viewing of HR Agent Help Desk.
findSrMessageSocialPost	SVC_MANAGE_SOCIAL_POST_PRIV	Manage Social Post	Allows create, update, delete and view of social posts
createHRHelpDeskRequest	SVC_VIEW_AGENT_HR_HD_PRIV	View Agent HR Help Desk	Allows viewing of HR Agent Help Desk.
createHRHelpDeskRequest	SVC_CREATE_HR_SR_PRIV	Create HR Service Request	Allows creation of an HR service request.
createSrMessage	SVC_EDIT_ISR_SR_PRIV	Edit Internal Service Request	Allows editing of an ISR service request.
createSrMessage	SVC_EDIT_SR_PRIV	Edit Service Request	Allows editing of a service request
createSrMessage	SVC_EDIT_HR_SR_PRIV	Edit HR Service Request	Allows editing of an HR service request.
createSrMessage	SVC_CREATE_SR_USING_REST_PRIV	Use REST Service to Create Service Request	Allows creation of a service request using REST API.
deleteServiceRequest	SVC_DELETE_SR_PRIV	Delete Service Request	Allows deleting of service request

Operation Name	Privilege Code	Privilege Name	Privilege Description
mergeInternalServiceRequest	SVC_VIEW_AGENT_ISR_HD_PRIV	View Agent Internal Help Desk	Allows viewing of ISR Agent Help Desk.
deleteHRHelpDeskRequest	SVC_DELETE_HR_SR_PRIV	Delete HR Service Request	Allows deleting of an HR service request.
deleteSrResourceMemberResource	SVC_DELETE_HR_SR_PRIV	Delete HR Service Request	Allows deleting of an HR service request.
deleteSrResourceMemberResource	SVC_MANAGE_HR_SR_TEAM_MEMBERS_PRIV	Manage HR SR Team Members	Allows adding/removing a team member from an HR service request.
deleteSrResourceMemberResource	SVC_EDIT_ISR_SR_PRIV	Edit Internal Service Request	Allows editing of an ISR service request.
deleteSrResourceMemberResource	SVC_DELETE_SR_PRIV	Delete Service Request	Allows deleting of service request
deleteSrResourceMemberResource	SVC_EDIT_SR_PRIV	Edit Service Request	Allows editing of a service request
deleteSrResourceMemberResource	SVC_EDIT_HR_SR_PRIV	Edit HR Service Request	Allows editing of an HR service request.
deleteSrResourceMemberResource	SVC_DELETE_ISR_SR_PRIV	Delete Internal Service Request	Allows deleting of an ISR service request.
deleteSrResourceMemberResource	SVC_MANAGE_SR_TEAM_MEMBERS_PRIV	Manage SR Team Member	Allows adding/removing a team member to a SR
deleteSrResourceMemberResource	SVC_MANAGE_ISR_SR_TEAM_MEMBERS_PRIV	Manage Internal SR Team Members	Allows adding/removing a team member from an ISR service request.
findServiceRequest	SVC_CREATE_SR_PRIV	Create Service Request	Allows creation of a service request
findServiceRequest	SVC_VIEW_SR_USING_REST_PRIV	Use REST Service to View Service Request	Allows viewing of service requests using REST API.
findServiceRequest	SVC_DELETE_SR_PRIV	Delete Service Request	Allows deleting of service request
findServiceRequest	SVC_EDIT_SR_PRIV	Edit Service Request	Allows editing of a service request
findServiceRequest	SVC_VIEW_SR_PRIV	View Service Request	Allows viewing of service request(s).

Operation Name	Privilege Code	Privilege Name	Privilege Description
findServiceRequest	SVC_VIEW_HELPDESK_SR_PRIV	View Help Desk Service Request	Allows viewing of Help Desk service request details.
getSrReference	SVC_DELETE_HR_SR_PRIV	Delete HR Service Request	Allows deleting of an HR service request.
getSrReference	SVC_CREATE_ISR_SR_PRIV	Create Internal Service Request	Allows creation of an ISR service request.
getSrReference	SVC_DELETE_SR_PRIV	Delete Service Request	Allows deleting of service request
getSrReference	SVC_VIEW_SR_USING_REST_PRIV	Use REST Service to View Service Request	Allows viewing of service requests using REST API.
getSrReference	SVC_EDIT_ISR_SR_PRIV	Edit Internal Service Request	Allows editing of an ISR service request.
getSrReference	SVC_VIEW_ISR_SR_PRIV	View Internal Service Request	Allows viewing of ISR service request(s).
getSrReference	SVC_VIEW_SR_PRIV	View Service Request	Allows viewing of service request(s).
getSrReference	SVC_VIEW_HR_SR_PRIV	View HR Service Request	Allows viewing of HR service request(s).
getSrReference	SVC_CREATE_HR_SR_PRIV	Create HR Service Request	Allows creation of an HR service request.
getSrReference	SVC_CREATE_SR_PRIV	Create Service Request	Allows creation of a service request
getSrReference	SVC_EDIT_SR_PRIV	Edit Service Request	Allows editing of a service request
getSrReference	SVC_DELETE_ISR_SR_PRIV	Delete Internal Service Request	Allows deleting of an ISR service request.
getSrReference	SVC_EDIT_HR_SR_PRIV	Edit HR Service Request	Allows editing of an HR service request.
getSrReference	SVC_VIEW_HELPDESK_SR_PRIV	View Help Desk Service Request	Allows viewing of Help Desk service request details.
getSrReference	SVC_VIEW_KNOWLEDGE_IN_SR_PRIV	View Knowledge within Service Request	Allows viewing of knowledge base components within the service request UI.

Operation Name	Privilege Code	Privilege Name	Privilege Description
deleteSrReference	SVC_DELETE_HR_SR_PRIV	Delete HR Service Request	Allows deleting of an HR service request.
deleteSrReference	SVC_EDIT_ISR_SR_PRIV	Edit Internal Service Request	Allows editing of an ISR service request.
deleteSrReference	SVC_DELETE_SR_PRIV	Delete Service Request	Allows deleting of service request
deleteSrReference	SVC_EDIT_SR_PRIV	Edit Service Request	Allows editing of a service request
deleteSrReference	SVC_EDIT_HR_SR_PRIV	Edit HR Service Request	Allows editing of an HR service request.
deleteSrReference	SVC_DELETE_ISR_SR_PRIV	Delete Internal Service Request	Allows deleting of an ISR service request.
handleNewSocialPost	SVC_MANAGE_SOCIAL_POST_PRIV	Manage Social Post	Allows create, update, delete and view of social posts
getSrResourceMemberResource	SVC_DELETE_HR_SR_PRIV	Delete HR Service Request	Allows deleting of an HR service request.
getSrResourceMemberResource	SVC_CREATE_ISR_SR_PRIV	Create Internal Service Request	Allows creation of an ISR service request.
getSrResourceMemberResource	SVC_DELETE_SR_PRIV	Delete Service Request	Allows deleting of service request
getSrResourceMemberResource	SVC_EDIT_ISR_SR_PRIV	Edit Internal Service Request	Allows editing of an ISR service request.
getSrResourceMemberResource	SVC_VIEW_ISR_SR_PRIV	View Internal Service Request	Allows viewing of ISR service request(s).
getSrResourceMemberResource	SVC_VIEW_SR_PRIV	View Service Request	Allows viewing of service request(s).
getSrResourceMemberResource	SVC_VIEW_HR_SR_PRIV	View HR Service Request	Allows viewing of HR service request(s).
getSrResourceMemberResource	SVC_MANAGE_SR_TEAM_MEMBERS_PRIV	Manage SR Team Member	Allows adding/removing a team member to a SR
getSrResourceMemberResource	SVC_CREATE_HR_SR_PRIV	Create HR Service Request	Allows creation of an HR service request.

Operation Name	Privilege Code	Privilege Name	Privilege Description
getSrResourceMemberResource	SVC_MANAGE_ISR_SR_TEAM_MEMBERS_PRIV	Manage Internal SR Team Members	Allows adding/removing a team member from an ISR service request.
getSrResourceMemberResource	SVC_CREATE_SR_PRIV	Create Service Request	Allows creation of a service request
getSrResourceMemberResource	SVC_MANAGE_HR_SR_TEAM_MEMBERS_PRIV	Manage HR SR Team Members	Allows adding/removing a team member from an HR service request.
getSrResourceMemberResource	SVC_EDIT_SR_PRIV	Edit Service Request	Allows editing of a service request
getSrResourceMemberResource	SVC_DELETE_ISR_SR_PRIV	Delete Internal Service Request	Allows deleting of an ISR service request.
getSrResourceMemberResource	SVC_EDIT_HR_SR_PRIV	Edit HR Service Request	Allows editing of an HR service request.
getSrResourceMemberResource	SVC_VIEW_SR_TEAM_PRIV	View Service Request Team	Allows viewing of service request team tab and its contents.
getSrResourceMemberResource	SVC_VIEW_HELPDESK_SR_PRIV	View Help Desk Service Request	Allows viewing of Help Desk service request details.
updateSrMessage	SVC_EDIT_ISR_SR_PRIV	Edit Internal Service Request	Allows editing of an ISR service request.
updateSrMessage	SVC_EDIT_SR_PRIV	Edit Service Request	Allows editing of a service request
updateSrMessage	SVC_EDIT_SR_USING_REST_PRIV	Use REST Service to Edit Service Request	Allows editing a service request using REST API.
updateSrMessage	SVC_EDIT_HR_SR_PRIV	Edit HR Service Request	Allows editing of an HR service request.
getSrMessage	SVC_DELETE_HR_SR_PRIV	Delete HR Service Request	Allows deleting of an HR service request.
getSrMessage	SVC_DELETE_SR_PRIV	Delete Service Request	Allows deleting of service request
getSrMessage	SVC_VIEW_SR_USING_REST_PRIV	Use REST Service to View Service Request	Allows viewing of service requests using REST API.
getSrMessage	SVC_EDIT_ISR_SR_PRIV	Edit Internal Service Request	Allows editing of an ISR service request.

Operation Name	Privilege Code	Privilege Name	Privilege Description
getSrMessage	SVC_CREATE_ISR_SR_PRIV	Create Internal Service Request	Allows creation of an ISR service request.
getSrMessage	SVC_VIEW_ISR_SR_PRIV	View Internal Service Request	Allows viewing of ISR service request(s).
getSrMessage	SVC_VIEW_SR_PRIV	View Service Request	Allows viewing of service request(s).
getSrMessage	SVC_VIEW_HR_SR_PRIV	View HR Service Request	Allows viewing of HR service request(s).
getSrMessage	SVC_CREATE_HR_SR_PRIV	Create HR Service Request	Allows creation of an HR service request.
getSrMessage	SVC_CREATE_SR_PRIV	Create Service Request	Allows creation of a service request
getSrMessage	SVC_EDIT_SR_PRIV	Edit Service Request	Allows editing of a service request
getSrMessage	SVC_DELETE_ISR_SR_PRIV	Delete Internal Service Request	Allows deleting of an ISR service request.
getSrMessage	SVC_EDIT_HR_SR_PRIV	Edit HR Service Request	Allows editing of an HR service request.
getSrMessage	SVC_VIEW_HELPDESK_SR_PRIV	View Help Desk Service Request	Allows viewing of Help Desk service request details.
getHRHelpDeskRequest	SVC_DELETE_HR_SR_PRIV	Delete HR Service Request	Allows deleting of an HR service request.
getHRHelpDeskRequest	SVC_EDIT_HR_SR_PRIV	Edit HR Service Request	Allows editing of an HR service request.
getHRHelpDeskRequest	SVC_VIEW_HR_SR_PRIV	View HR Service Request	Allows viewing of HR service request(s).
getHRHelpDeskRequest	SVC_VIEW_AGENT_HR_HD_PRIV	View Agent HR Help Desk	Allows viewing of HR Agent Help Desk.
getHRHelpDeskRequest	SVC_CREATE_HR_SR_PRIV	Create HR Service Request	Allows creation of an HR service request.
handleDeletedSocialPost	SVC_MANAGE_SOCIAL_POST_PRIV	Manage Social Post	Allows create, update, delete and view of social posts

Operation Name	Privilege Code	Privilege Name	Privilege Description
deleteSrContactMember	SVC_DELETE_HR_SR_PRIV	Delete HR Service Request	Allows deleting of an HR service request.
deleteSrContactMember	SVC_EDIT_ISR_SR_PRIV	Edit Internal Service Request	Allows editing of an ISR service request.
deleteSrContactMember	SVC_DELETE_SR_PRIV	Delete Service Request	Allows deleting of service request
deleteSrContactMember	SVC_EDIT_SR_PRIV	Edit Service Request	Allows editing of a service request
deleteSrContactMember	SVC_EDIT_HR_SR_PRIV	Edit HR Service Request	Allows editing of an HR service request.
deleteSrContactMember	SVC_DELETE_ISR_SR_PRIV	Delete Internal Service Request	Allows deleting of an ISR service request.
findSrSocialPost	SVC_MANAGE_SOCIAL_POST_PRIV	Manage Social Post	Allows create, update, delete and view of social posts
updateHRHelpDeskRequest	SVC_EDIT_HR_SR_PRIV	Edit HR Service Request	Allows editing of an HR service request.
updateHRHelpDeskRequest	SVC_VIEW_AGENT_HR_HD_PRIV	View Agent HR Help Desk	Allows viewing of HR Agent Help Desk.
createServiceRequest	SVC_CREATE_SR_PRIV	Create Service Request	Allows creation of a service request
createServiceRequest	SVC_CREATE_SR_USING_REST_PRIV	Use REST Service to Create Service Request	Allows creation of a service request using REST API.
mergeSrMessage	SVC_EDIT_ISR_SR_PRIV	Edit Internal Service Request	Allows editing of an ISR service request.
mergeSrMessage	SVC_EDIT_SR_PRIV	Edit Service Request	Allows editing of a service request
mergeSrMessage	SVC_EDIT_SR_USING_REST_PRIV	Use REST Service to Edit Service Request	Allows editing a service request using REST API.
mergeSrMessage	SVC_EDIT_HR_SR_PRIV	Edit HR Service Request	Allows editing of an HR service request.
getSrContactMember	SVC_DELETE_HR_SR_PRIV	Delete HR Service Request	Allows deleting of an HR service request.
getSrContactMember	SVC_DELETE_SR_PRIV	Delete Service Request	Allows deleting of service request

Operation Name	Privilege Code	Privilege Name	Privilege Description
getSrContactMember	SVC_EDIT_ISR_SR_PRIV	Edit Internal Service Request	Allows editing of an ISR service request.
getSrContactMember	SVC_CREATE_ISR_SR_PRIV	Create Internal Service Request	Allows creation of an ISR service request.
getSrContactMember	SVC_VIEW_ISR_SR_PRIV	View Internal Service Request	Allows viewing of ISR service request(s).
getSrContactMember	SVC_VIEW_SR_PRIV	View Service Request	Allows viewing of service request(s).
getSrContactMember	SVC_VIEW_HR_SR_PRIV	View HR Service Request	Allows viewing of HR service request(s).
getSrContactMember	SVC_CREATE_HR_SR_PRIV	Create HR Service Request	Allows creation of an HR service request.
getSrContactMember	SVC_CREATE_SR_PRIV	Create Service Request	Allows creation of a service request
getSrContactMember	SVC_EDIT_SR_PRIV	Edit Service Request	Allows editing of a service request
getSrContactMember	SVC_DELETE_ISR_SR_PRIV	Delete Internal Service Request	Allows deleting of an ISR service request.
getSrContactMember	SVC_EDIT_HR_SR_PRIV	Edit HR Service Request	Allows editing of an HR service request.
getSrContactMember	SVC_VIEW_HELPDESK_SR_PRIV	View Help Desk Service Request	Allows viewing of Help Desk service request details.
mergeServiceRequest	SVC_EDIT_SR_PRIV	Edit Service Request	Allows editing of a service request
mergeServiceRequest	SVC_EDIT_SR_USING_REST_PRIV	Use REST Service to Edit Service Request	Allows editing a service request using REST API.
updateInternalServiceRequest	SVC_EDIT_ISR_SR_PRIV	Edit Internal Service Request	Allows editing of an ISR service request.
updateInternalServiceRequest	SVC_VIEW_AGENT_ISR_HD_PRIV	View Agent Internal Help Desk	Allows viewing of ISR Agent Help Desk.
findServiceRequestSRListByStripeC	SVC_DELETE_HR_SR_PRIV	Delete HR Service Request	Allows deleting of an HR service request.
findServiceRequestSRListByStripeC	SVC_DELETE_SR_PRIV	Delete Service Request	Allows deleting of service request

Operation Name	Privilege Code	Privilege Name	Privilege Description
findServiceRequestSRListByStripeC	SVC_EDIT_ISR_SR_PRIV	Edit Internal Service Request	Allows editing of an ISR service request.
findServiceRequestSRListByStripeC	SVC_CREATE_ISR_SR_PRIV	Create Internal Service Request	Allows creation of an ISR service request.
findServiceRequestSRListByStripeC	SVC_VIEW_ISR_SR_PRIV	View Internal Service Request	Allows viewing of ISR service request(s).
findServiceRequestSRListByStripeC	SVC_VIEW_SR_PRIV	View Service Request	Allows viewing of service request(s).
findServiceRequestSRListByStripeC	SVC_VIEW_HR_SR_PRIV	View HR Service Request	Allows viewing of HR service request(s).
findServiceRequestSRListByStripeC	SVC_CREATE_HR_SR_PRIV	Create HR Service Request	Allows creation of an HR service request.
findServiceRequestSRListByStripeC	SVC_CREATE_SR_PRIV	Create Service Request	Allows creation of a service request
findServiceRequestSRListByStripeC	SVC_EDIT_SR_PRIV	Edit Service Request	Allows editing of a service request
findServiceRequestSRListByStripeC	SVC_DELETE_ISR_SR_PRIV	Delete Internal Service Request	Allows deleting of an ISR service request.
findServiceRequestSRListByStripeC	SVC_EDIT_HR_SR_PRIV	Edit HR Service Request	Allows editing of an HR service request.
findServiceRequestSRListByStripeC	SVC_VIEW_HELPDESK_SR_PRIV	View Help Desk Service Request	Allows viewing of Help Desk service request details.
getInternalServiceRequest	SVC_CREATE_ISR_SR_PRIV	Create Internal Service Request	Allows creation of an ISR service request.
getInternalServiceRequest	SVC_EDIT_ISR_SR_PRIV	Edit Internal Service Request	Allows editing of an ISR service request.
getInternalServiceRequest	SVC_VIEW_ISR_SR_PRIV	View Internal Service Request	Allows viewing of ISR service request(s).
getInternalServiceRequest	SVC_DELETE_ISR_SR_PRIV	Delete Internal Service Request	Allows deleting of an ISR service request.
getInternalServiceRequest	SVC_VIEW_AGENT_ISR_HD_PRIV	View Agent Internal Help Desk	Allows viewing of ISR Agent Help Desk.

Operation Name	Privilege Code	Privilege Name	Privilege Description
updateServiceRequest	SVC_EDIT_SR_PRIV	Edit Service Request	Allows editing of a service request
updateServiceRequest	SVC_EDIT_SR_USING_REST_PRIV	Use REST Service to Edit Service Request	Allows editing a service request using REST API.
findHRHelpDeskRequest	SVC_DELETE_HR_SR_PRIV	Delete HR Service Request	Allows deleting of an HR service request.
findHRHelpDeskRequest	SVC_EDIT_HR_SR_PRIV	Edit HR Service Request	Allows editing of an HR service request.
findHRHelpDeskRequest	SVC_VIEW_HR_SR_PRIV	View HR Service Request	Allows viewing of HR service request(s).
findHRHelpDeskRequest	SVC_VIEW_AGENT_HR_HD_PRIV	View Agent HR Help Desk	Allows viewing of HR Agent Help Desk.
findHRHelpDeskRequest	SVC_CREATE_HR_SR_PRIV	Create HR Service Request	Allows creation of an HR service request.
deleteSrMessage	SVC_DELETE_HR_SR_PRIV	Delete HR Service Request	Allows deleting of an HR service request.
deleteSrMessage	SVC_EDIT_ISR_SR_PRIV	Edit Internal Service Request	Allows editing of an ISR service request.
deleteSrMessage	SVC_DELETE_SR_PRIV	Delete Service Request	Allows deleting of service request
deleteSrMessage	SVC_EDIT_SR_PRIV	Edit Service Request	Allows editing of a service request
deleteSrMessage	SVC_EDIT_HR_SR_PRIV	Edit HR Service Request	Allows editing of an HR service request.
deleteSrMessage	SVC_DELETE_ISR_SR_PRIV	Delete Internal Service Request	Allows deleting of an ISR service request.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
SVC_DELETE_SR_PRIV	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
SVC_DELETE_SR_PRIV	ORA_SVC_HELPDESK_ ADMINISTRATION	HR Help Desk Administration	Manage all aspects of the HCM help desk service requests. In addition can manage queues and administer the HCM help desk service application, including setup.
SVC_CREATE_HR_SR_PRIV	ORA_SVC_HR_SR_CREATION	HR Service Request Creation	Users requesting Next Gen support to resolve their HR related questions and issues.
SVC_CREATE_HR_SR_PRIV	ORA_SVC_HR_SR_ANALYSIS	HR Service Request Analysis	Manages a group of Next Gen HR Help Desk agents. Can view Next Gen HR service requests, activities, and attachments. Monitors metrics and overall resource balancing, critical service requests, service level agreements.

ORA_SVC_INTERNAL_HELPDESK_ ADMINISTRATION	ORA_HZRESOURCE_TEAM_ ADMINISTRATOR_DUTY	Resource Team Administration	Defines resource teams.
ORA_SVC_HELPDESK_ ADMINISTRATION	ORA_HZRESOURCE_TEAM_ ADMINISTRATOR_DUTY	Resource Team Administration	Defines resource teams.
ORA_SVC_HR_SR_ ADMINISTRATION	ORA_HZRESOURCE_TEAM_ ADMINISTRATOR_DUTY	Resource Team Administration	Defines resource teams.
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_GEN_AI_ADMIN	Service Generative AI Administrator	Administer activities related to Service Gen AI APIs such as configuration of prompts across all areas of Oracle Fusion Service, such as Service Center, Knowledge, and Chat.
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_GEN_AI_USER	Service Generative AI User	Can use generative AI features across Oracle Fusion Service including but not limited to Service Center, Knowledge Management and Chat areas. Usage requires access to all generative AI API's essential to input data and fetch results from the LLM model.
ORA_MNT_MAINTENANCE_ TECHNICIAN_JOB	ORA_MNT_VIEW_ENTERPRISE_ ASSETS_DUTY_CRM	View Enterprise Assets	Provides access to the View Asset UI including the view UIs in the history tab within the View Asset UI
ORA_MNT_MAINTENANCE_ TECHNICIAN_JOB	ORA_MNT_VIEW_SUPPLIER_ WARRANTY_DUTY_CRM	View Supplier Warranty	Provides View access to Supplier Warranty feature including the get access to REST resources

HR Help Desk Request

Header level information about a request from a customer for service from the time the customer makes the request until the request is resolved. For example, if a customer has an issue with their laptop battery draining too fast, the details of the customer and the issue they are facing is stored in the service request header.

QName: {http://xmlns.oracle.com/apps/crm/service/svcMgmt/srMgmt/helpDeskService/}HRHelpDeskRequest

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Service Request Contact*
Contains	*Milestone*
Contains	*Message*
Contains	*Service Request Resource Team*
Extends	*Service Request*
Handled by	*Service Request Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
HRHelpDeskRequestContacts	*Service Request Contact*	The list of contacts associated to the serivce request.
HRHelpDeskRequestMessages	*Message*	The list of service request messages.
HRHelpDeskRequestResourceTeamMembers	*Service Request Resource Team*	The list of resource team members associated to the serivce request.
HRHelpDeskRequestSrMilestone	*Milestone*	Indicates the milestone associated with the service request.

Service Request

Header level information about a request from a customer for service from the time the customer makes the request until the request is resolved. For example, if a customer has an issue with their laptop battery draining too fast, the details of the customer and the issue they are facing is stored in the service request header.

QName: {http://xmlns.oracle.com/apps/crm/service/svcMgmt/srMgmt/base/}BaseRequest

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*HR Help Desk Request*
Extended by	*Internal Service Request*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AffectedPartyPersonId	long	Indicates the contact person ID of the party affected in the service request
AffectedPartyPersonName	string	Indicates the display name of the affected party person in the service request
AssigneeEmailAddress	string	The email address of the assignee
AssigneeFormattedAddress	string	Formatted Address of the SR Assignee.
AssigneeFormattedPhoneNumber	string	Indicates the phone number of the resource to whom the service request is assigned.
AssigneePartyId	long	The unique party object ID of the service request assignee.
AssigneePersonName	string	The email address of the assignee.
AssigneeResourceId	long	The ID of the resource (for example, a support engineer) assigned to the service request.
AssigneeTimezone	string	The time zone of the assignee associated with the service request.

Name	Type	Description
AssistedByHumanFlag	boolean	
BUOrgId	long	The unique ID of the business unit name associated to the service request.
BusinessUnitName	string	The name of the business unit associated to the service request
CategoryId	long	The unique ID of the service request category.
CategoryName	string	The name of the category associated to the service request.
ChannelId	long	Indicates the service request channel.
ChannelTypeCd	string	Indicates the channel type.
ChannelTypeCdMeaning	string	Indicates the display value corresponding to the channel type lookup code for the service request.
ClosedDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the service request was closed (if closed).
ComplianceFlag	boolean	Indicates the compliance status of the milestone.
CorpCurrencyCode	string	The corporate currency code.
CreatedBy	string	The user who created the service request.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service request was created.
CriticalFlag	boolean	Indicates whether the service request is critical. If critical, the value is Y, else the value is N.
CurcyConvRateType	string	The corporate currency conversion rate type.
CurrencyCode	string	The currency code.
DeleteFlag	boolean	This flag controls if the user has access to delete the record

Name	Type	Description
DueDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the due date of the milestone.
FirstTransferDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time of the first transfer of the service request.
HandledByAIFlag	boolean	
HeaderFlag	boolean	Indicates if the current milestone should be saved on the service request header.
IBAssetDescription	string	Indicates the Install Base asset description of the service request.
IBAssetId	long	The Unique ID of the associated Install Base asset record.
IBAssetNumber	string	Indicates the Installed Base asset number of the service request.
IBAssetSerialNumber	string	Indicates the Install Base asset serial number of the service request.
InternalPriorityCd	string	Indicates the internal priority of the service request.
InventoryItemId	long	The unique ID of the product associated to the service request.
InventoryOrgId	long	The unique ID of the organization of the product that is associated with the service request.
LanguageCd	string	The customer's preferred language for the service request.
LastReopenDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service request was last reopened.
LastResolvedDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service request was resolved.
LastTransferDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time of the last transfer of the service request.
LastTransferredBy	string	Indicates the user who last transferred the service request.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service request was last updated.
LastUpdateLogin	string	The application login id of the user who last updated the service request.
LastUpdatedBy	string	The user who last updated the service request.
LastUpdatedByDisplayName	string	The display name of the user who last updated the service request.
LastUpdatedByEmailAddress	string	Indicates the e-mail address of the person who last updated the service request.
LastUpdatedByPartyId	long	Indicates the Party ID of the person who last updated the service request.
MilestoneConfigId	long	The unique ID of the milestone configuration associated with the service request.
MilestoneLabel	string	User defined name for the milestone.
MilestoneStatusCd	string	Indicates the status of the milestone.
NetworkTypeCd	string	Indicates the type of social network.
OpenDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the service request was reported by the customer.
OriginalSystemReference	string	The reference to the service request record in the original system from which service request was imported (if imported).
OwnerTypeCd	string	Indicates the type of the service request owner. For example, the owner of the service request may be a customer or a partner.
PrimaryContactDoNotContactFlag	boolean	Indicates that the primary contact of the service request does not want to be contacted.
PrimaryContactEmailAddress	string	Indicates the e-mail of the primary contact associated with the service request.
PrimaryContactFormattedAddress	string	Indicates the formatted address of the primary contact of the service request.

Name	Type	Description
PrimaryContactFormattedPhoneNumber	string	Indicates the service request primary contact's formatted phone number
PrimaryContactPartyId	long	The unique ID of the contact who intially reported the service request. The contact is also the primary contact of the service request.
PrimaryContactPartyName	string	Indicates the name of the service request primary contact.
PrimaryContactPersonId	long	The Person ID of the contact who intially reported the service request. The contact is also the primary contact of the service request.
PrimaryContactPreferredContactMethod	string	Indicates the preferred contact method of the primary contact of the service request.
ProblemCd	string	Indicates the problem code of the service request.
ProblemDescription	string	The service request's problem description/ statement and the steps to reproduce the issue.
ProdGroupId	long	The unique identifire of the product group associated to the service request.
ProdGroupName	string	The name of the product group associated to the service request.
ProductItemDescription	string	The description of the product associated with the service request.
ProductItemNumber	string	The product number/code of the product associated with the service request.
ProductItemOrgId	long	Indicates the product organization.
Queue	*oracle.apps.crm.service.svcMgmt.model.queueSe*	
QueueId	long	The unique ID of the queue to which the service request is assigned.
QueueName	string	The name of the queue associated to the service request.
RecordSet	string	Used by REST API to run saved searches.

Name	Type	Description
ReportedByEmailAddress	string	Indicates the e-mail address of the person who reported the service request.
ReportedByFormattedPhoneNumber	string	Indicates the formatted phone number of the person who reported the service request.
ReportedByPartyId	long	The user who created the service request in the system.
ReportedByPartyName	string	Reported By Party Name
ReportedByPartyUniqueName	string	The unique name of the user who created the service request.
ResolutionCd	string	Indicates the resolution code of the service request.
ResolutionCdMeaning	string	Indicates the display value corresponding to the resolution lookup code for the service request.
ResolveDescription	string	Indicates how the service request has been resolved.
ResolveOutcomeCd	string	Indicates the outcome of a service request resolution.
ResolveOutcomeCdMeaning	string	Indicates the display value corresponding to the resolution outcome lookup code for the service request.
ResolvedBy	string	Indicates the user who resolved the service request.
ResolvedByAIFlag	boolean	
ResolvedByPartyId	long	The unique identifier of the user who resolved this service request.
ScheduleId	long	The unique identifier of the current schedule associated with the service request.
ServiceZoneId	long	The unique identifier of the service zone for the service request.
ServiceZoneName	string	Indicates the service region of the service request.

Name	Type	Description
SeverityCd	string	Indicates the severity of the service request.
SeverityCdMeaning	string	Indicates the display value corresponding to the severity lookup code for the service request.
SeverityColorCd	string	Indicates the color code for the severity of the service requet
SeverityRank	int	Indicates the numeric code of the service request severity.
SourceCd	string	Indicates how the service request was created in the application.
SrCreatedBy	string	The user who created the service request.
SrId	long	The unique ID of the service request record. • Primary Key
SrLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service request was last updated.
SrLastUpdateLogin	string	The application login id of the user who last updated the service request.
SrLastUpdatedBy	string	The user who last updated the service request.
SrLastUpdatedByPartyName	string	
SrMilestoneId	long	The unique ID of the milestone associated to the service request.
SrNumber	string	The unique number that is used to identify a service request. You can customize the service requestNumber to a format that is best suitable to your oragnizational requirements.
StatusCd	string	Indicates the status code of the service request.
StatusCdMeaning	string	Indicates the display value corresponding to the status lookup code for the service request.
StatusTypeCd	string	Indicates the status type of the service request.
StatusTypeCdMeaning	string	Indicates the display value corresponding to the status type lookup code for the service request.

Name	Type	Description
StripeCd	string	Indicates the application context of the service request.
SurveyResponseDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the response to this survey was submitted to the survey vendor.
SurveySentDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when survey was last sent for this service request.
TimeRemaining	string	Indicates the time remaining in the milestone
TimezoneCode	string	The service request time zone used for computing the milestone due date.
Title	string	A brief title of the service request.
TransferCount	long	Count showing how many times a service request has been transferred.
TransferNote	string	This field contains information about transfer note.
TransferReasonCd	string	Lookup code that indicates the transfer reason.
UniqueExternalSystemReference	string	The unique alternative identifier of the service request in the original reference system. Use this column to store the identifier of the service request in the external application you are integrating with.
UpdateFlag	boolean	This flag controls if the user has access to update the record
WarnedFlag	boolean	Indicates that the milestone passed the warning threshold.
contacts	*Service Request Contact*	The list of contacts associated to the serivce request.
messages	*Message*	The list of service request messages.
resourceMembers	*Service Request Resource*	The list of resources associated to the service request.
resourceTeams	*Service Request Resource Team*	The list of resource teams associated to the service request

Name	Type	Description
srInteractionReferences	*Interaction Reference*	Indicates the list of interaction references for a service request.
srMilestone	*Milestone*	Indicates the milestone associated with the service request.
srReferences	*Service Request Reference*	The list of other objects associated to the service request. E.g. Knowledge articles.

Interaction Reference

The reference to the interaction for a service request.

QName: {http://xmlns.oracle.com/apps/crm/service/svcMgmt/srMgmt/srMgmtService/}SrInteractionReference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Service Request*
Handled by	*Service Request Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountPartyId	long	Indicates the ID of the account associated with the interaction.
AccountPartyUniqueName	string	Account name associated with the interaction.
ChannelDisplayName	string	The display name of the channel that is populated in the interaction.
ChannelId	long	Indicates the ID of the interaction channel.

Name	Type	Description
ChannelTypeCd	string	The channel type of the interaction.
ContactPartyId	long	Indicates the ID of the contact person with whom the agent is interacting.
ContactPartyUniqueName	string	Indicates the customer contact for the interaction.
CreatedBy	string	The user who created the interaction.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the interaction was created.
DeleteFlag	boolean	Indicates if the record can be deleted.
Description	string	Indicates description of the interaction.
DirectionCd	string	The direction of the interaction.
EndTime	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the time when the interaction ended.
InteractionId	long	Indicates the ID of the interaction.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the interaction was last updated.
LastUpdateLogin	string	The application login id of the user who last updated the interaction.
LastUpdatedBy	string	The user who last updated the interaction.
OriginalSystemReference	string	Indicates the original system reference for the interaction.
OwnerResourceId	long	Indicates the ID of the agent who owns the interaction.
OwnerResourcePartyUniqueName	string	Indicates the resource, which is an internal interaction owner such as a service agent, associated with the interaction.
ParentInteractionId	long	Indicates the interaction ID for a parent interaction.

Name	Type	Description
Payload	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	Indicates the payload of the interaction.
QueueId	long	Indicates the ID of the interaction queue.
QueueName	string	The name of the queue in the interaction.
ReferenceId	long	Indicates the ID of the reference relationship. • Primary Key
StartTime	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The start time of the interaction.
StatusCd	string	Indicates the interaction status.
StripeCd	string	Indicates the application context of the interaction.
TopLevelFlag	boolean	Indicates whether the interaction is a top level interaction.
UpdateFlag	boolean	Indicates if the record can be updated.

Internal Service Request

Header level information about a request from a customer for service from the time the customer makes the request until the request is resolved. For example, if a customer has an issue with their laptop battery draining too fast, the details of the customer and the issue they are facing is stored in the service request header.

QName: {http://xmlns.oracle.com/apps/crm/service/svcMgmt/srMgmt/helpDeskService/}InternalServiceRequest

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Service Request Contact*
Contains	*Milestone*
Contains	*Message*

Relationship Type	Object or Service
Contains	*Service Request Resource Team*
Extends	*Service Request*
Handled by	*Service Request Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
InternalServiceRequestContacts	*Service Request Contact*	The list of contacts associated to the serivce request.
InternalServiceRequestMessages	*Message*	The list of service request messages.
InternalServiceRequestResourceTeamMembers	*Service Request Resource Team*	The list of resource team members associated to the serivce request.
InternalServiceRequestSrMilestone	*Milestone*	Indicates the milestone associated with the service request.
ReferenceObjectId	long	Indicates the ERP expense item.
ReferenceObjectPuid	string	Indicates the expense report number for ERP.
ReferenceObjectType	string	Indicates the ERP expense type objects.

Service Request

Header level information about a request from a customer for service from the time the customer makes the request until the request is resolved. For example, if a customer has an issue with their laptop battery draining too fast, the details of the customer and the issue they are facing is stored in the service request header.

QName: {http://xmlns.oracle.com/apps/crm/service/svcMgmt/srMgmt/base/}BaseRequest

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Extended by	*HR Help Desk Request*
Extended by	*Internal Service Request*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AffectedPartyPersonId	long	Indicates the contact person ID of the party affected in the service request
AffectedPartyPersonName	string	Indicates the display name of the affected party person in the service request
AssigneeEmailAddress	string	The email address of the assignee
AssigneeFormattedAddress	string	Formatted Address of the SR Assignee.
AssigneeFormattedPhoneNumber	string	Indicates the phone number of the resource to whom the service request is assigned.
AssigneePartyId	long	The unique party object ID of the service request assignee.
AssigneePersonName	string	The email address of the assignee.
AssigneeResourceId	long	The ID of the resource (for example, a support engineer) assigned to the service request.
AssigneeTimezone	string	The time zone of the assignee associated with the service request.
AssistedByHumanFlag	boolean	
BUOrgId	long	The unique ID of the business unit name associated to the service request.
BusinessUnitName	string	The name of the business unit associated to the service request
CategoryId	long	The unique ID of the service request category.

Name	Type	Description
CategoryName	string	The name of the category associated to the service request.
ChannelId	long	Indicates the service request channel.
ChannelTypeCd	string	Indicates the channel type.
ChannelTypeCdMeaning	string	Indicates the display value corresponding to the channel type lookup code for the service request.
ClosedDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the service request was closed (if closed).
ComplianceFlag	boolean	Indicates the compliance status of the milestone.
CorpCurrencyCode	string	The corporate currency code.
CreatedBy	string	The user who created the service request.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service request was created.
CriticalFlag	boolean	Indicates whether the service request is critical. If critical, the value is Y, else the value is N.
CurcyConvRateType	string	The corporate currency conversion rate type.
CurrencyCode	string	The currency code.
DeleteFlag	boolean	This flag controls if the user has access to delete the record
DueDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the due date of the milestone.
FirstTransferDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time of the first transfer of the service request.
HandledByAIFlag	boolean	
HeaderFlag	boolean	Indicates if the current milestone should be saved on the service request header.

Name	Type	Description
IBAssetDescription	string	Indicates the Install Base asset description of the service request.
IBAssetId	long	The Unique ID of the associated Install Base asset record.
IBAssetNumber	string	Indicates the Installed Base asset number of the service request.
IBAssetSerialNumber	string	Indicates the Install Base asset serial number of the service request.
InternalPriorityCd	string	Indicates the internal priority of the service request.
InventoryItemId	long	The unique ID of the product associated to the service request.
InventoryOrgId	long	The unique ID of the organization of the product that is associated with the service request.
LanguageCd	string	The customer's preferred language for the service request.
LastReopenDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service request was last reopened.
LastResolvedDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service request was resolved.
LastTransferDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time of the last transfer of the service request.
LastTransferredBy	string	Indicates the user who last transferred the service request.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service request was last updated.
LastUpdateLogin	string	The application login id of the user who last updated the service request.
LastUpdatedBy	string	The user who last updated the service request.
LastUpdatedByDisplayName	string	The display name of the user who last updated the service request.

Name	Type	Description
LastUpdatedByEmailAddress	string	Indicates the e-mail address of the person who last updated the service request.
LastUpdatedByPartyId	long	Indicates the Party ID of the person who last updated the service request.
MilestoneConfigId	long	The unique ID of the milestone configuration associated with the service request.
MilestoneLabel	string	User defined name for the milestone.
MilestoneStatusCd	string	Indicates the status of the milestone.
NetworkTypeCd	string	Indicates the type of social network.
OpenDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the service request was reported by the customer.
OriginalSystemReference	string	The reference to the service request record in the original system from which service request was imported (if imported).
OwnerTypeCd	string	Indicates the type of the service request owner. For example, the owner of the service request may be a customer or a partner.
PrimaryContactDoNotContactFlag	boolean	Indicates that the primary contact of the service request does not want to be contacted.
PrimaryContactEmailAddress	string	Indicates the e-mail of the primary contact associated with the service request.
PrimaryContactFormattedAddress	string	Indicates the formatted address of the primary contact of the service request.
PrimaryContactFormattedPhoneNumber	string	Indicates the service request primary contact's formatted phone number
PrimaryContactPartyId	long	The unique ID of the contact who intially reported the service request. The contact is also the primary contact of the service request.
PrimaryContactPartyName	string	Indicates the name of the service request primary contact.

Name	Type	Description
PrimaryContactPersonId	long	The Person ID of the contact who intially reported the service request. The contact is also the primary contact of the service request.
PrimaryContactPreferredContactMethod	string	Indicates the preferred contact method of the primary contact of the service request.
ProblemCd	string	Indicates the problem code of the service request.
ProblemDescription	string	The service request's problem description/ statement and the steps to reproduce the issue.
ProdGroupId	long	The unique identifire of the product group associated to the service request.
ProdGroupName	string	The name of the product group associated to the service request.
ProductItemDescription	string	The description of the product associated with the service request.
ProductItemNumber	string	The product number/code of the product associated with the service request.
ProductItemOrgId	long	Indicates the product organization.
Queue	*oracle.apps.crm.service.svcMgmt.model.queueSe*	
QueueId	long	The unique ID of the queue to which the service request is assigned.
QueueName	string	The name of the queue associated to the service request.
RecordSet	string	Used by REST API to run saved searches.
ReportedByEmailAddress	string	Indicates the e-mail address of the person who reported the service request.
ReportedByFormattedPhoneNumber	string	Indicates the formatted phone number of the person who reported the service request.
ReportedByPartyId	long	The user who created the service request in the system.

Name	Type	Description
ReportedByPartyName	string	Reported By Party Name
ReportedByPartyUniqueName	string	The unique name of the user who created the service request.
ResolutionCd	string	Indicates the resolution code of the service request.
ResolutionCdMeaning	string	Indicates the display value corresponding to the resolution lookup code for the service request.
ResolveDescription	string	Indicates how the service request has been resolved.
ResolveOutcomeCd	string	Indicates the outcome of a service request resolution.
ResolveOutcomeCdMeaning	string	Indicates the display value corresponding to the resolution outcome lookup code for the service request.
ResolvedBy	string	Indicates the user who resolved the service request.
ResolvedByAIFlag	boolean	
ResolvedByPartyId	long	The unique identifier of the user who resolved this service request.
ScheduleId	long	The unique identifier of the current schedule associated with the service request.
ServiceZoneId	long	The unique identifier of the service zone for the service request.
ServiceZoneName	string	Indicates the service region of the service request.
SeverityCd	string	Indicates the severity of the service request.
SeverityCdMeaning	string	Indicates the display value corresponding to the severity lookup code for the service request.
SeverityColorCd	string	Indicates the color code for the severity of the service requet

Name	Type	Description
SeverityRank	int	Indicates the numeric code of the service request severity.
SourceCd	string	Indicates how the service request was created in the application.
SrCreatedBy	string	The user who created the service request.
SrId	long	The unique ID of the service request record. • Primary Key
SrLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service request was last updated.
SrLastUpdateLogin	string	The application login id of the user who last updated the service request.
SrLastUpdatedBy	string	The user who last updated the service request.
SrLastUpdatedByPartyName	string	
SrMilestoneId	long	The unique ID of the milestone associated to the service request.
SrNumber	string	The unique number that is used to identify a service request. You can customize the service requestNumber to a format that is best suitable to your oragnizational requirements.
StatusCd	string	Indicates the status code of the service request.
StatusCdMeaning	string	Indicates the display value corresponding to the status lookup code for the service request.
StatusTypeCd	string	Indicates the status type of the service request.
StatusTypeCdMeaning	string	Indicates the display value corresponding to the status type lookup code for the service request.
StripeCd	string	Indicates the application context of the service request.
SurveyResponseDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the response to this survey was submitted to the survey vendor.

Name	Type	Description
SurveySentDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when survey was last sent for this service request.
TimeRemaining	string	Indicates the time remaining in the milestone
TimezoneCode	string	The service request time zone used for computing the milestone due date.
Title	string	A brief title of the service request.
TransferCount	long	Count showing how many times a service request has been transferred.
TransferNote	string	This field contains information about transfer note.
TransferReasonCd	string	Lookup code that indicates the transfer reason.
UniqueExternalSystemReference	string	The unique alternative identifier of the service request in the original reference system. Use this column to store the identifier of the service request in the external application you are integrating with.
UpdateFlag	boolean	This flag controls if the user has access to update the record
WarnedFlag	boolean	Indicates that the milestone passed the warning threshold.
contacts	*Service Request Contact*	The list of contacts associated to the serivce request.
messages	*Message*	The list of service request messages.
resourceMembers	*Service Request Resource*	The list of resources associated to the service request.
resourceTeams	*Service Request Resource Team*	The list of resource teams associated to the service request
srInteractionReferences	*Interaction Reference*	Indicates the list of interaction references for a service request.
srMilestone	*Milestone*	Indicates the milestone associated with the service request.

Name	Type	Description
srReferences	*Service Request Reference*	The list of other objects associated to the service request. E.g. Knowledge articles.

Message

This object stores information about every communication update to the Service request, both from the internal agent and from the customer. An example stored message could be: We have credited your account for the value of the call. You should see a credit in your next monthly bill. We have notified the billing department about the issue. This issue should not recur.

QName: {http://xmlns.oracle.com/apps/crm/service/svcMgmt/srMgmt/srMgmtService/}SrMessage

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Message*
Contained by	*HR Help Desk Request*
Contained by	*Message*
Contained by	*Internal Service Request*
Contained by	*Service Request*
Handled by	*Service Request Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AlLogLevelCd	string	
ChannelId	long	The unique ID of the channel.

Name	Type	Description
ChannelTypeCd	string	Indicates the channel type. For example, email, phone, social, etc.
CreatedBy	string	The user who created the message.
CreatedByEmailAddress	string	Indicates the e-mail ID of the person who created the service request message.
CreatedByPartyId	string	Indicates the party ID of the person who created the service request message.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the message was created.
DeleteFlag	boolean	This flag controls if the user has access to delete the record
FeedFlag	boolean	
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the message was last updated.
LastUpdateLogin	string	The user who last updated the message.
LastUpdatedBy	string	The user who last updated the message.
MessageContent	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	Indicates the content of the service request message.
MessageCreatedBy	string	The user who created the message in the original source system. This is applicable if the service request message was imported from another system.
MessageExpandingState	int	Indicates the message expanding state.
MessageId	long	The unique ID of the service request message. • Primary Key
MessageLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The last updated date of the message in the original source system. This is applicable if the service request message was imported from another system.
MessageLastUpdateLogin	string	The login of the user who last updated the message in the original source system. This is

Name	Type	Description
		applicable if the service request message was imported from another system.
MessageLastUpdatedBy	string	The user who last updated the message in the original source system. This is applicable if the service request message was imported from another system.
MessageNumber	string	Indicates the service request message number.
MessageSubTypeCd	string	The service request message subtype.
MessageTypeCd	string	Indicates the message type. The accepted values are Response, Customer Entry, System Note, System Response, and Internal Note.
NetworkTypeCd	string	Indicates the type of social network.
NotificationProcessingStatusCd	string	Indicates the notification processing status code.
NotificationRetryCount	int	Indicates the notification retry count.
ObjectId	long	Indicates the object ID.
OriginalSystemReference	string	The ID of the message record in the original source system from where the message was imported. This is applicable if the service request message was imported from another system.
OriginationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date the message was created in the original source system. This is applicable if the service request message was imported from another system.
ParentMessageId	long	Indicates the parent service request message ID.
PartyName	string	The party name of the user who posted the message. The user can be an internal resource or a customer contact.
PostedByPartyId	long	The unique ID of the user who the posted the message. The user can be an internal resource or a customer contact.
PrivateInformationFlag	boolean	Indicates whether the message contains private information.

Name	Type	Description
ProcessingId	long	Indicates the processing ID.
ProcessingStatusCd	string	Indicates the processing status of the message. The accepted values are Ready, Processing, Error, and Success.
ReplyToMessageId	long	Indicates the customer message ID to which the agent is replying to.
RichTextFlag	boolean	Indicates whether the message content is in rich text format. If the format is rich text, then the value is Y, else the value is N.
RootMessageId	long	Indicates the identifier of the root message.
RootThreadCount	long	Indicates the number of messages under a root message in a service request.
RootThreadLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the latest updated date for all messages under the root message in a service request.
RootThreadMessageLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date when all messages under the root message in a service request were last updated.
SentDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the message was sent.
SocialPrivateFlag	boolean	Indicates if the service request was created from a private social post.
SourceCd	string	Indicates the source of the message.
SrBUOrgId	long	The identifier of the business unit associated with the service request.
SrId	long	The unique ID of the service request to which the message is associated.
SrInlineAttachmentIds	string	Indicates the list of inline attachments associated with the service request
SrStripeCd	string	The application stripe of the service request.

Name	Type	Description
StatusCd	string	Indicates the status of the message. The accepted values are Draft, Committed, and Corrected.
Subject	string	Indicates the subject of the service request message.
TemplateName	string	Indicates the name of the template that is used for outbound communication of the message.
ThreadCount	long	Indicates the number of threads in a service request message.
ThreadHierarchyLevel	int	Indicates the thread hierarchy level.
ThreadId	long	The unique ID of the service request message thread.
ThreadLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date the thread was last updated.
ThreadMessageLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date when the thread message was last updated.
UpdateFlag	boolean	This flag controls if the user has access to update the record
VisibilityCd	string	Indicates the privacy level of the message. The accepted values are Internal and External. Null value indicates that the message is External.
childMessages	*Message*	The list of child messages for a given service request message.

Milestone

The milestones that are set in the lifecycle of a service request, such as first response time of 24 hours for a customer with Gold coverage, and a resolution time of 3 days for service requests with severity level 2.

QName: {http://xmlns.oracle.com/apps/crm/service/svcMgmt/srMgmt/srMgmtService/}SrMilestone

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Milestone History*
Contains	*Milestone Configuration*
Contained by	*HR Help Desk Request*
Contained by	*Internal Service Request*
Contained by	*Service Request*
Handled by	*Service Request Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ActiveFlag	boolean	Indicates whether the service request milestone is active.
AgentCompletedFlag	boolean	Indicates whether agent marked the milestone as complete.
Comments	string	Indicates customer or agent comments.
CompletionDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the completion date of the milestone.
ComplianceFlag	boolean	Indicates the compliance status of the milestone.
CoverageId	long	The unique identifier for the coverage record.
CoverageSourceCd	string	Indicates the source of the subscription coverage.
CoverageSourceCdMeaning	string	Indicates the display value corresponding to the coverage source lookup code.
CreatedBy	string	Created By
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the record was created.

Name	Type	Description
DelayTime	long	Indicates the time between the due date and the completion date.
DeleteFlag	boolean	This flag controls if the user has access to delete the record
DueDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the due date of the milestone.
EntitlementId	long	The unique ID of the entitlement record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the record was last updated.
LastUpdateLogin	string	Last Update Login
LastUpdatedBy	string	Last Updated By
MilestoneConfig	*Milestone Configuration*	The configuration of the service request milestone.
MilestoneConfigId	long	The unique ID of the milestone configuration record.
MilestoneLabel	string	Name of the milestone.
MilestoneStatusCd	string	Indicates the status of the milestone.
MilestoneStatusCdMeaning	string	Indicates the display value corresponding to the status lookup code for the milestone.
PauseConditionLabel	string	Indicates when the milestone pauses.
SrAssigneePartyId	long	The unique party object ID of the service request assignee.
SrId	long	The unique ID of the service request record.
SrMilestoneHistory	*Milestone History*	The list of changes in the service request milestone status.
SrMilestoneId	long	The unique ID of the service request milestone record. • Primary Key

Name	Type	Description
StartConditionLabel	string	Indicates when the milestone starts.
StopConditionLabel	string	Indicates when the milestone completes.
SubscriptionCoveragePuid	string	Indicates the public unique identifier of the subscription standard coverage.
SubscriptionNumber	string	Indicates the subscription number associated with the standard coverage.
TimeLeftOnceUnpaused	long	Time left, in minutes, to complete the milestone after it is restored from the paused state.
TimeRemaining	string	Indicates the time remaining in the milestone.
UpdateFlag	boolean	This flag controls if the user has access to update the record
WarnedFlag	boolean	Indicates if the milestone passed the warning threshold.
WarningDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the milestone passed the warning threshold.

Milestone Configuration

Configuration details for the milestone, such as name, type, start, pause, and stop conditions.

QName: {http://xmlns.oracle.com/apps/crm/service/svcMgmt/milestoneService/}MilestoneConfig

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Milestone*
Handled by	*Service Request Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AllowAgentCompletionFlag	boolean	Allow Agent to mark milestone as complete
AllowDueDateOverrideFlag	boolean	Allow Agent to override milestone due date
BUOrgId	long	The unique ID of the business unit name associated to the Milestone Config.
BusinessUnitIdFK	long	Business Unit Id Foreign Key
BusinessUnitName	string	The name of the business unit associated to the Milestone Configuration
BusinessUnitNameTransientForLOV	string	Business Unit Name used in LOV
CreatedBy	string	Created By
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Creation Date
DeletedFlag	boolean	Deleted Flag
DisabledFlag	boolean	Disabled Flag
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Last Update Date
LastUpdateLogin	string	Last Update Login
LastUpdatedBy	string	Last Updated By
MilestoneCode	string	Milestone Code
MilestoneConfigId	long	Milestone ConfigId • Primary Key
MilestoneLabel	string	Milestone Label
MilestoneType	string	Milestone type

Name	Type	Description
MilestoneTypeMeaning	string	Indicates the display value corresponding to the milestone type lookup code.
ObjectName	string	The name of the object associated to the Milestone Configuration
ObjectNameMeaning	string	Indicates the display value corresponding to the object name lookup code.
PauseCondition	string	Pause Condition
PauseConditionLabel	string	Pause Condition Label
StartCondition	string	Start Condition
StartConditionLabel	string	start Condition Label
StopCondition	string	Stop Condition
StopConditionLabel	string	Stop Condition Label
ThresholdCode	string	Threshold Code
TzPreferenceCd	string	Indicates the object that will be used to override the time zone from the coverage.
TzPreferenceMeaning	string	Indicates the display value corresponding to the time zone object lookup code.

Milestone History

The history of changes in the milestone status for a service request, such as a list of time entries for when the milestone tracking is started, paused, marked as complete, or restarted.

QName: {http://xmlns.oracle.com/apps/crm/service/svcMgmt/srMgmt/srMgmtService/}SrMilestoneHistory

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Milestone*
Handled by	*Service Request Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccumulatedTimeInStatus	long	Indicates the total time the service request milestone spent in the status.
Comments	string	Indicates agent comments
CreatedBy	string	Created By
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the record was created.
EndTime	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the milestone exited the status.
HistoryId	long	The unique ID of the milestone history record. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the record was last updated.
LastUpdateLogin	string	The session login associated with the user who last updated the record.
LastUpdatedBy	string	Last Updated By
MilestoneStatusCd	string	Indicates the status of the milestone.
OverriddenDueDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates overridden due date
SrMilestoneId	long	The unique ID of the service request milestone record.
StartTime	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time when the milestone status was changed.

Name	Type	Description

SR Message Social Post

The relationship between service request message and the social post.

QName: {http://xmlns.oracle.com/apps/crm/service/svcMgmt/srMgmt/srMgmtService/}SrMessageSocialPost

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Service Request Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
MessageId	long	The unique ID of the service request message. • Primary Key
ObjectId	long	The ID of the service request or service request message associated with the social post.
ObjectTypeCd	string	The type of object associated with the social post
ParentMessageId	long	Parent ID of service request message record.
PostId	long	The unique ID of the social post record.
PostParentPostId	string	The unique ID of the current post's parent post.
PostPostId	string	The unique ID of the current post returned by the social network.
SourcePostIdPrimary	string	The primary source post id of the social post record

Name	Type	Description
SourcePostIdSecondary	string	The secondary source post id of the social post record
SourcePostIdTertiary	string	The tertiary source post id of the social post record
SrId	long	The unique ID of the service request record.
ViaId	long	The unique ID of the channel via record.

SR Social Post

The relationship between service request and the social post.

QName: {http://xmlns.oracle.com/apps/crm/service/svcMgmt/srMgmt/srMgmtService/}SrSocialPost

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Service Request Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ObjectId	long	The ID of the service request associated with the social post.
ObjectTypeCd	string	The type of object associated with the social post record
PostId	long	The unique ID of the social post record.
PostParentPostId	string	The unique ID of the current post's parent post.

Name	Type	Description
PostPostId	string	The unique ID of the current post returned by the social network.
SourcePostIdPrimary	string	The primary source post id of the social post record
SourcePostIdSecondary	string	The secondary source post id of the social post record
SourcePostIdTertiary	string	The tertiary source post id of the social post record
SrId	long	The unique ID of the service request record. • Primary Key
SrNumber	string	The unique reference number of the service request record.
StatusCd	string	The status of the service request associated with the social post
Title	string	Title of the service request record.
ViaId	long	The unique ID of the channel via record.

Service Request

Header level information about a request from a customer for service from the time the customer makes the request until the request is resolved. For example, if a customer has an issue with their laptop battery draining too fast, the details of the customer and the issue they are facing is stored in the service request header.

QName: {http://xmlns.oracle.com/apps/crm/service/svcMgmt/srMgmt/srMgmtService/}ServiceRequest

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Service Request Contact*
Contains	*Milestone*

Relationship Type	Object or Service
Contains	*Service Request Resource*
Contains	*Service Request Reference*
Contains	*Message*
Contains	*Service Request Resource Team*
Contains	*Interaction Reference*
Handled by	*Service Request Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountPartyEmailAddress	string	Indicates the e-mail ID of the account on the service request.
AccountPartyFormattedPhoneNumber	string	Indicates the formatted phone number of the account on the service request.
AccountPartyId	long	The unique party object ID of the account associated to the service request.
AccountPartyName	string	The party name associated with the account.
AccountPartyPreferredContactMethod	string	Indicates the preferred contact method of the account on the service request.
AccountPartyUniqueName	string	The unique party name associated with the account.
AffectedPartyPersonId	long	Indicates the contact person ID of the party affected in the service request
AffectedPartyPersonName	string	Indicates the display name of the affected party person in the service request
AssetId	long	The unique ID of the asset associated to the service request.

Name	Type	Description
AssetNumber	string	The Asset Number of the asset that is associated to the service request
AssetSerialNumber	string	The serial number of the asset that is associated to the service request.
AssigneeEmailAddress	string	The email address of the assignee
AssigneeFormattedAddress	string	Formatted Address of the SR Assignee.
AssigneeFormattedPhoneNumber	string	Indicates the phone number of the resource to whom the service request is assigned.
AssigneePartyId	long	The unique party object ID of the service request assignee.
AssigneePersonName	string	The email address of the assignee.
AssigneeResourceId	long	The ID of the resource (for example, a support engineer) assigned to the service request.
AssigneeTimezone	string	The time zone of the assignee associated with the service request.
AssistedByHumanFlag	boolean	
BUOrgId	long	The unique ID of the business unit name associated to the service request.
BillToCustomerAccountDescription	string	The description of the customer account to be billed for work performed on the service request.
BillToCustomerAccountId	long	The customer account to be billed for work performed on the service request.
BillToCustomerAccountNumber	string	The PUID for the customer account to be billed for work performed on the service request.
BillToCustomerAccountSiteId	long	The customer account site to be billed for work performed on the service request.
BillToCustomerAccountSiteUsageNumber	string	The PUID for the customer account site bill-to usage.

Name	Type	Description
BillToCustomerId	long	The customer to be billed for work performed on the service request.
BillToCustomerName	string	The name of the customer to be billed for work performed on the service request.
BillToCustomerNumber	string	The PUID for the customer to be billed for work performed on the service request.
BillToPartySiteFormattedAddress	string	The formatted address for the customer site to be billed for work performed on the service request.
BillToPartySiteId	long	The address of the customer site to be billed for work performed on the service request.
BillToPartySiteLocationId	long	The location of the customer site to be billed for work performed on the service request.
BillToPartySiteName	string	The name of the customer site to be billed for work performed on the service request.
BillToPartySiteNumber	string	The PUID for the customer site to be billed for work performed on the service request.
BusinessUnitName	string	The name of the business unit associated to the service request
CaseId	long	Indicates the case to which this service request has been associated.
CategoryId	long	The unique ID of the service request category.
CategoryName	string	The name of the category associated to the service request.
ChannelId	long	Indicates the service request channel.
ChannelTypeCd	string	Indicates the channel type.
ChannelTypeCdMeaning	string	Indicates the display value corresponding to the channel type lookup code for the service request.
ClosedDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the service request was closed (if closed).

Name	Type	Description
ComplianceFlag	boolean	Indicates the compliance status of the milestone.
CorpCurrencyCode	string	The corporate currency code.
CreatedBy	string	The user who created the service request.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service request was created.
CriticalFlag	boolean	Indicates whether the service request is critical. If critical, the value is Y, else the value is N.
CurcyConvRateType	string	The corporate currency conversion rate type.
CurrencyCode	string	The currency code.
DeleteFlag	boolean	This flag controls if the user has access to delete the record
DueDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the due date of the milestone.
FirstTransferDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time of the first transfer of the service request.
HandledByAIFlag	boolean	
HeaderFlag	boolean	Indicates if the current milestone should be saved on the service request header.
IBAssetDescription	string	Indicates the Install Base asset description of the service request.
IBAssetId	long	The Unique ID of the associated Install Base asset record.
IBAssetLocation	string	The formatted address of the installed base asset of the service request.
IBAssetLocationType	string	Indicates the type of location of the asset of the service request.
IBAssetNumber	string	Indicates the Installed Base asset number of the service request.

Name	Type	Description
IBAssetSerialNumber	string	Indicates the Install Base asset serial number of the service request.
InternalPriorityCd	string	Indicates the internal priority of the service request.
InventoryItemId	long	The unique ID of the product associated to the service request.
InventoryOrgId	long	The unique ID of the organization of the product that is associated with the service request.
LanguageCd	string	The customer's preferred language for the service request.
LastReopenDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service request was last reopened.
LastResolvedDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service request was resolved.
LastTransferDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Indicates the date and time of the last transfer of the service request.
LastTransferredBy	string	Indicates the user who last transferred the service request.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service request was last updated.
LastUpdateLogin	string	The application login id of the user who last updated the service request.
LastUpdatedBy	string	The user who last updated the service request.
LastUpdatedByDisplayName	string	The display name of the user who last updated the service request.
LastUpdatedByEmailAddress	string	Indicates the e-mail address of the person who last updated the service request.
LastUpdatedByPartyId	long	Indicates the Party ID of the person who last updated the service request.
LoyMemberId	long	The unique ID of the loyalty membership.

Name	Type	Description
LoyMemberName	string	The member name of the loyalty membership.
MilestoneConfigId	long	The unique ID of the milestone configuration associated with the service request.
MilestoneLabel	string	User defined name for the milestone.
MilestoneStatusCd	string	Indicates the status of the milestone.
NetworkTypeCd	string	Indicates the type of social network.
OpenDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the service request was reported by the customer.
OriginalSystemReference	string	The reference to the service request record in the original system from which service request was imported (if imported).
OwnerTypeCd	string	Indicates the type of the service request owner. For example, the owner of the service request may be a customer or a partner.
PartnerAccountPartyId	long	The unique party object ID of the partner account associated with the service request.
PartnerAccountPartyName	string	The party name associated with the partner.
PartnerAccountPartyUniqueName	string	The unique party name associated with the partner.
PrimaryContactDoNotContactFlag	boolean	Indicates that the primary contact of the service request does not want to be contacted.
PrimaryContactEmailAddress	string	Indicates the e-mail of the primary contact associated with the service request.
PrimaryContactFormattedAddress	string	Indicates the formatted address of the primary contact of the service request.
PrimaryContactFormattedPhoneNumber	string	Indicates the service request primary contact's formatted phone number
PrimaryContactPartyId	long	The unique ID of the contact who intially reported the service request. The contact is also the primary contact of the service request.

Name	Type	Description
PrimaryContactPartyName	string	Indicates the name of the service request primary contact.
PrimaryContactPartyUniqueName	string	The unique party name associated with the primary contact.
PrimaryContactPersonId	long	The Person ID of the contact who intially reported the service request. The contact is also the primary contact of the service request.
PrimaryContactPreferredContactMethod	string	Indicates the preferred contact method of the primary contact of the service request.
ProblemCd	string	Indicates the problem code of the service request.
ProblemDescription	string	The service request's problem description/ statement and the steps to reproduce the issue.
ProdGroupId	long	The unique identifire of the product group associated to the service request.
ProdGroupName	string	The name of the product group associated to the service request.
ProductItemDescription	string	The description of the product associated with the service request.
ProductItemNumber	string	The product number/code of the product associated with the service request.
ProductItemOrgId	long	Indicates the product organization.
PurchaseOrder	string	Indicates the purchase order associated with the service request.
QueueId	long	The unique ID of the queue to which the service request is assigned.
QueueName	string	The name of the queue associated to the service request.
RecordSet	string	Used by REST API to run saved searches.
ReportedByEmailAddress	string	Indicates the e-mail address of the person who reported the service request.

Name	Type	Description
ReportedByFormattedPhoneNumber	string	Indicates the formatted phone number of the person who reported the service request.
ReportedByPartyId	long	The user who created the service request in the system.
ReportedByPartyName	string	Reported By Party Name
ReportedByPartyUniqueName	string	The unique name of the user who created the service request.
ResolutionCd	string	Indicates the resolution code of the service request.
ResolutionCdMeaning	string	Indicates the display value corresponding to the resolution lookup code for the service request.
ResolveDescription	string	Indicates how the service request has been resolved.
ResolveOutcomeCd	string	Indicates the outcome of a service request resolution.
ResolveOutcomeCdMeaning	string	Indicates the display value corresponding to the resolution outcome lookup code for the service request.
ResolvedBy	string	Indicates the user who resolved the service request.
ResolvedByAIFlag	boolean	
ResolvedByPartyId	long	The unique identifier of the user who resolved this service request.
ScheduleId	long	The unique identifier of the current schedule associated with the service request.
ServiceProfileId	long	The service profile associated with the service request.
ServiceProfileName	string	The name of the service profile associated with the service request.
ServiceProfileNumber	string	The PUID for the service profile associated with the service request.

Name	Type	Description
ServiceProfilePartySiteId	long	The address of the service profile associated with the service request.
ServiceProfilePartySiteLocationId	long	The location of the service profile associated with the service request.
ServiceProfilePartySiteName	string	The name of the address of the service profile associated with the service request.
ServiceProfilePartySiteNumber	string	The PUID of the address of the service profile associated with the service request.
ServiceProfileSiteFormattedAddress	string	The formatted address of the service profile associated with the service request.
ServiceZoneId	long	The unique identifier of the service zone for the service request.
ServiceZoneName	string	Indicates the service region of the service request.
SeverityCd	string	Indicates the severity of the service request.
SeverityCdMeaning	string	Indicates the display value corresponding to the severity lookup code for the service request.
SeverityColorCd	string	Indicates the color code for the severity of the service requet
SeverityRank	int	Indicates the numeric code of the service request severity.
SocialPrivateFlag	boolean	Indicates if the service request was created from a private social post.
SourceCd	string	Indicates how the service request was created in the application.
SrCreatedBy	string	The user who created the service request.
SrId	long	The unique ID of the service request record. • Primary Key
SrLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service request was last updated.

Name	Type	Description
SrLastUpdateLogin	string	The application login id of the user who last updated the service request.
SrLastUpdatedBy	string	The user who last updated the service request.
SrLastUpdatedByPartyName	string	
SrMilestoneId	long	The unique ID of the milestone associated to the service request.
SrNumber	string	The unique number that is used to identify a service request. You can customize the service requestNumber to a format that is best suitable to your oragnizational requirements.
StatusCd	string	Indicates the status code of the service request.
StatusCdMeaning	string	Indicates the display value corresponding to the status lookup code for the service request.
StatusTypeCd	string	Indicates the status type of the service request.
StatusTypeCdMeaning	string	Indicates the display value corresponding to the status type lookup code for the service request.
StripeCd	string	Indicates the application context of the service request.
SurveyResponseDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the response to this survey was submitted to the survey vendor.
SurveySentDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when survey was last sent for this service request.
TimeRemaining	string	Indicates the time remaining in the milestone
TimezoneCode	string	The service request time zone used for computing the milestone due date.
Title	string	A brief title of the service request.
TransferCount	long	Count showing how many times a service request has been transferred.
TransferNote	string	This field contains information about transfer note.

Name	Type	Description
TransferReasonCd	string	Lookup code that indicates the transfer reason.
UniqueExternalSystemReference	string	The unique alternative identifier of the service request in the original reference system. Use this column to store the identifier of the service request in the external application you are integrating with.
UpdateFlag	boolean	This flag controls if the user has access to update the record
WarnedFlag	boolean	Indicates that the milestone passed the warning threshold.
contacts	*Service Request Contact*	The list of contacts associated to the serivce request.
messages	*Message*	The list of service request messages.
resourceMembers	*Service Request Resource*	The list of resources associated to the service request.
resourceTeams	*Service Request Resource Team*	The list of resource teams associated to the service request
srInteractionReferences	*Interaction Reference*	Indicates the list of interaction references for a service request.
srMilestone	*Milestone*	Indicates the milestone associated with the service request.
srReferences	*Service Request Reference*	The list of other objects associated to the service request. E.g. Knowledge articles.

Service Request Contact

A list of customer contacts associated with a service request. For example, the contact for a corporate customer requesting support for software installation may be the organization's IT manager. Agents communicate service request resolutions or other information with contacts. Communication channels include e-mail, Twitter accounts, and telephone.

QName: {http://xmlns.oracle.com/apps/crm/service/svcMgmt/srMgmt/srMgmtService/}SrContactMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*HR Help Desk Request*
Contained by	*Internal Service Request*
Contained by	*Service Request*
Handled by	*Service Request Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessLevelCd	string	Indicates the service request access granted to the contact.
AccountName	string	Indicates the primary account of the service request contact.
ContactEmailAddress	string	The email address of the party associated with the contact.
ContactFormattedPhoneNumber	string	The formatted phone number of the party associated with the contact.
ContactPartyName	string	Indicates the name of a service request contact.
ContactPreferredContactMethod	string	The preferred contact method of the party associated with the contact.
ContactTypeCd	string	Indicates the contact type of the service request contact.
ContactUniqueName	string	The unique party name associated with the contact.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the record was created.
DeleteFlag	boolean	This flag controls if the user has access to delete the record
DoNotContactFlag	boolean	Indicates that the contact of the service request does not want to be contacted.
FormattedAddress	string	Indicates the formatted address of the service request contact.
JobTitle	string	Indicates the job title of the service request contact.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the record was last updated.
LastUpdateLogin	string	The application login id of the user who last update the contacts object associated with the service request.
LastUpdatedBy	string	The user who last updated the record.
MemberId	long	The unique ID of the contact. • Primary Key
PartyId	long	The unique party ID of the contact.
PersonId	long	The unique person ID of the contact.
PrimaryContactFlag	boolean	Indicates if the contact is the primary contact for the service request. If yes, the value is True, else the value is False.
RelationTypeCd	string	The relationship with the contact in context of the service request. For example, Alternate, Follower, Third_Party, and so on.
SrId	long	The unique ID of the associated service request.
UpdateFlag	boolean	This flag controls if the user has access to update the record

Service Request Reference

The relationship between a service sequest and other objects such as, knowledge base articles and other service requests. Example object attributes include service request identifier, object type, relationship type and object identifier.

QName: {http://xmlns.oracle.com/apps/crm/service/svcMgmt/srMgmt/srMgmtService/}SrReferences

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Service Request*
Handled by	*Service Request Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ArticleId	string	Indicates the ID of the referenced article.
ArticleLocale	string	Indicates the locale of the knowledge management article.
CreatedBy	string	The user who added the reference to the service request.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service request reference was created.
DeleteFlag	boolean	This flag controls if the user has access to delete the record
DocumentId	string	Indicates the document identifier associated with the referenced article.
HelpfulFlag	boolean	Indicates whether the service request reference was helpful.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	the application login associated with the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LinkedFlag	boolean	Indicates whether the reference is linked with the service request.
ObjectId	long	Indicates the ID of the object referenced to the service request.
ObjectTypeCd	string	Indicates the object type of the reference object.
ObjectVersionNumber	int	Indicates the object version number of the service request reference record.
ReferenceId	long	Indicates the ID of the current reference record. • Primary Key
RelationTypeCd	string	Indicates the relationship type between the service request and the referenced object.
ResolutionCd	string	Indicates if the referenced object helps in resolving the service request.
SharedFlag	boolean	Indicates whether the service request reference is shared with the customer.
SrId	long	Indicates the ID of the service request.
Subject	string	Indicates the title of the referenced object.
UpdateFlag	boolean	This flag controls if the user has access to update the record

Service Request Resource

A list of employees or partners, such as service representatives, service managers, or product managers, who are associated with a service request. Multiple service request resources may be involved in resolving a service request.

QName: {http://xmlns.oracle.com/apps/crm/service/svcMgmt/srMgmt/srMgmtService/}SrResourceMemberResource

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Service Request*
Handled by	*Service Request Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who added the resource as a member of the service request.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service request resource member was created.
DeleteFlag	boolean	This flag controls if the user has access to delete the record
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service request resource member record was last updated.
LastUpdateLogin	string	The application login associated with the user who last updated the service request resource member.
LastUpdatedBy	string	The user who last updated the service request resource member record.
MemberId	long	A unique ID of the service request resource member. • Primary Key
ObjectId	long	The unique ID of the individual resource added as service request resource member.
ObjectTypeCd	string	Indicates if the resource is an individual or a team.

Name	Type	Description
OwnerFlag	boolean	Indicates if the service request is assiged to the resource member. If yes, the value is True, else the value is False.
PartyUniqueName	string	The unique name of the individual resource added as service request resource member.
ResourceEmailAddress	string	The email address of the resource member.
ResourceFormattedAddress	string	Formatted Address of the SR Resource Member.
ResourceFormattedPhoneNumber	string	The formatted phone number of the resource member.
ResourceName	string	The name of the individual resource added as service request resource member.
SrId	long	The unique ID of the service request.
UpdateFlag	boolean	This flag controls if the user has access to update the record
UserGUID	string	A globally unique ID of the resouce added as the service request resource member.
UserId	long	The user ID of the resource added as the service request resource member.
Username	string	The user name of the resoource member.

Service Request Resource Team

A list of employee or partner teams associated with a service request. Multiple resource teams may be involved in resolving a service request.

QName: {http://xmlns.oracle.com/apps/crm/service/svcMgmt/srMgmt/srMgmtService/}SrResourceMemberTeam

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*HR Help Desk Request*
Contained by	*Internal Service Request*
Contained by	*Service Request*
Handled by	*Service Request Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the record was last updated.
LastUpdateLogin	string	The session login associated with the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MemberId	long	The ID of the service request team record. • Primary Key
ObjectId	long	The ID of the resource team associated with the service request.
ObjectTypeCd	string	Indicates the type of resource associated with the service request: Resource or Resource Team.
ResourceTeamTeamDescription	string	The description of the resource team.
ResourceTeamTeamId	long	The ID of the resource team associated to the service request.
ResourceTeamTeamName	string	The name of the resource team associated to the service request.

Name	Type	Description
ResourceTeamTeamNumber	string	The resource team number.
SrId	long	The unique ID of the service request record.

Social Post

A service to create, update, get, find, or delete social posts. Access to this SOAP service is restricted only for use by the Oracle Integration Cloud Service.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/crm/service/svcMgmt/model/socialService/}SocialService

Service WSDL URL: https://servername/crmService/SocialService?WSDL

Logical Business Objects

- CRM : Service : Social Post

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Tag*
Handles	*Social Post*
Handles	*Social User*
Handles	*URLs*

Operations

- *getSocialPost*
- *createSocialPost*
- *updateSocialPost*
- *deleteSocialPost*

- *findSocialPost*
- *processSocialPost*
- *getSocialUser*
- *createSocialUser*
- *mergeSocialUser*
- *findSocialUser*
- *processSocialUser*

getSocialPost

Queries a single social post record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
postId	long	The unique ID of the social post.

Response Payload

Element Name	Type	Description
result	*Social Post*	A social post record that matches the inbound parameters.

createSocialPost

Creates a social post record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
socialPost	*Social Post*	The social post to be created.

Response Payload

Element Name	Type	Description
result	*Social Post*	The created social post record.

updateSocialPost

Update a social post.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
socialPost	*Social Post*	The social post to be updated.

Response Payload

Element Name	Type	Description
result	*Social Post*	The updated social post record.

deleteSocialPost

Delete a social post.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
socialPost	*Social Post*	The social post to be deleted.

Response Payload

Element Name	Type	Description
result	void	nothing.

findSocialPost

Queries a list of social posts based on a filter criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to query the list of social posts.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Not currently used.

Response Payload

Element Name	Type	Description
result	*Social Post*	A list of social posts that satisfy the inbound criteria.

processSocialPost

Processes a list of social post records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Type of operation to be performed on the social posts. Example Create.
socialPost	*Social Post*	List of social posts.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Parameters that control the bulk operation.

Response Payload

Element Name	Type	Description
result	*Social Post*	List of updated social posts.

getSocialUser

Queries a single social user record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
userId	long	he unique ID of the social user.

Response Payload

Element Name	Type	Description
result	*Social User*	A social user record that matches the inbound parameters.

createSocialUser

Creates a social user record.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
socialUser	*Social User*	The social user to be created.

Response Payload

Element Name	Type	Description
result	*Social User*	The created social user record.

mergeSocialUser

Merge a social user.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
socialUser	*Social User*	Social User

Response Payload

Element Name	Type	Description
result	*Social User*	A social user record after the merge.

findSocialUser

Queries a list of social users based on a filter criteria.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to query the list of social users.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Not currently used.

Response Payload

Element Name	Type	Description
result	*Social User*	A list of social users that satisfy the inbound criteria.

processSocialUser

Processes a list of social user records.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Type of operation to be performed on the social users. Example Create.
socialUser	*Social User*	List of social users.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Parameters that control the bulk operation.

Response Payload

Element Name	Type	Description
result	*Social User*	List of updated social users.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	SVC_MANAGE_SOCIAL_POST_PRIV	Manage Social Post	Allows create, update, delete and view of social posts

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
SVC_MANAGE_SOCIAL_POST_PRIV	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
SVC_MANAGE_SOCIAL_POST_PRIV	ORA_SVC_SR_POWER_USER	Service Request Power User	Advanced Service Request management capabilities not available to Service Representatives
SVC_MANAGE_SOCIAL_POST_PRIV	ORA_SVC_SR_TROUBLESHOOTER	Service Request Troubleshooter	Manages all aspects of the Service Request object

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_CUST_SERVICE_BILLING_VIEWING	Customer Service Billing Information Viewing	View customer billing information across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_TROUBLESHOOTER	ORA_SVC_CUST_SERVICE_BILLING_VIEWING	Customer Service Billing Information Viewing	View customer billing information across Oracle Fusion Service, including service requests and service work orders.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_SVC_SR_POWER_USER	ORA_SVC_CUST_SERVICE_BILLING_VIEWING	Customer Service Billing Information Viewing	View customer billing information across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_CUST_SERVICE_SCM_ORDERS_MANAGEMENT	Customer Service SCM Orders Management	Allow creation and management of supply chain management orders across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_TROUBLESHOOTER	ORA_SVC_CUST_SERVICE_SCM_ORDERS_MANAGEMENT	Customer Service SCM Orders Management	Allow creation and management of supply chain management orders across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_POWER_USER	ORA_SVC_CUST_SERVICE_SCM_ORDERS_MANAGEMENT	Customer Service SCM Orders Management	Allow creation and management of supply chain management orders across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_CUST_SERVICE_SCM_ORDERS_VIEWING	Customer Service SCM Orders Viewing	View supply chain management orders across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_TROUBLESHOOTER	ORA_SVC_CUST_SERVICE_SCM_ORDERS_VIEWING	Customer Service SCM Orders Viewing	View supply chain management orders across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_POWER_USER	ORA_SVC_CUST_SERVICE_SCM_ORDERS_VIEWING	Customer Service SCM Orders Viewing	View supply chain management orders across Oracle Fusion Service, including service requests and service work orders.
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_GEN_AI_ADMIN	Service Generative AI Administrator	Administer activities related to Service Gen AI APIs such as configuration of prompts across all areas of Oracle Fusion Service, such as Service Center, Knowledge, and Chat.
ORA_SVC_SR_ADMINISTRATOR	ORA_SVC_GEN_AI_USER	Service Generative AI User	Can use generative AI features across Oracle Fusion Service including but not limited to Service Center, Knowledge Management and Chat areas. Usage requires access to all generative AI API's essential to input data and fetch results from the LLM model.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description

Social Post

An object that stores the details of the social post received from the Oracle Social Cloud application to be reviewed and responded to , by the customer service personnel. An example of a social post from Twitter is: oracle_support E-mail responses from our agent are not being received by our customers. Is the e-mail server down?

QName: {http://xmlns.oracle.com/apps/crm/service/svcMgmt/model/socialService/}SocialPost

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Tag*
Contains	*URLs*
Handled by	*Social Post*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CanRespondFlag	boolean	Indicates if a social post can be responded to.
CreatedBy	string	The user who created the social post.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the social post was created.
DeletedFlag	boolean	Indicates if the social post was deleted.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the message was last updated.
LastUpdateLogin	string	The session login associated with the user who last updated the message.

Name	Type	Description
LastUpdatedBy	string	The user who last updated the service request.
ObjectId	long	Indicates the identifier of the business object associated with the social post.
ObjectTypeCd	string	Indicates the business object associated with the social post, such as SVC_SERVICE_REQUESTS or SVC_SR_MESSAGES.
ObjectVersionNumber	int	Indicates the object version number of the social post.
PostChannelCd	string	Indicates the social network on which the post was made.
PostContent	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	The content of the social post made by the customer on the social network.
PostContentString	string	The content of the social post made by the customer on the social network in string data type.
PostDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date the social post was made.
PostId	long	The unique ID of the social post record. • Primary Key
PostMessageTypeCd	string	Indicates if the message is public or private.
PostParentPostId	string	The unique ID of the current post's parent post.
PostPostId	string	The unique ID of the current post returned by the social network.
PostSubChannelName	string	The name of the channel on which the customer made the social post. E.g. the deploying company facebook fan page name or twitter handle.
PostURL	string	Indicates the url of the social post.
PostUser	string	Indicates the user name of the post author on the corresponding social network.
ProcessingMessage	string	Indicates the processed social post message

Name	Type	Description
ProcessingStatusCd	string	Indicates whether the social post has been processed successfully or not.
SocialPostTags	*Tag*	The list of social post tags.
SocialUserId	long	Indicates the user's social ID on the social network.
SourceCd	string	Indicates the source system from which the social post was received. E.g. SRM
SourcePostIdPrimary	string	The primary ID of the post in the source system.
SourcePostIdSecondary	string	The second ID of the post in the source system.
SourcePostIdTertiary	string	The third ID of the post in the source system.
socialPostUrls	*URLs*	The list of URLs associated with a social post.

Social User

An object that stores the details of the social post received from the Oracle Social Cloud application to be reviewed and responded to , by the customer service personnel. An example of a social post from Twitter is: oracle_support E-mail responses from our agent are not being received by our customers. Is the e-mail server down?

QName: {http://xmlns.oracle.com/apps/crm/service/svcMgmt/model/socialService/}SocialUser

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handled by	*Social Post*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	Lists who created the row of data
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Date the row of data was created
FollowerCount	long	Indicates the number of followers that the user has on the social network.
ImageURL	string	Indicates the URL of the profile image of the social user.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The application displays the date that the record was last edited.
LastUpdateLogin	string	System attribute that captures the session login information, such as user or account name, of the user who accesses an application.
LastUpdatedBy	string	The application displays the identity of the user who last edited the record.
ObjectVersionNumber	int	System attribute that captures the incremental version number for an object.
ProfileURL	string	Indicates the profile url of the social user.
SocialNetworkCd	string	Indicates the social network, such as Twitter and Facebook.
SocialNetworkUserId	string	Indicates the user's id on the social network.
SocialNetworkUserName	string	Indicates the user's name as shown on the social network.
UserId	long	Indicates the social user identifier. • Primary Key

Tag

This object stores tags associated to the service objects like social post and service requests. An example for a tag is Customer_Churn or Billing.

QName: {http://xmlns.oracle.com/apps/crm/service/svcMgmt/model/socialService/}SocialPostTag

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Social Post*
Handled by	*Social Post*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Tag	string	Indicates the tag associated with an object.
TagId	long	Indicates the tag identifier.
TagRefId	long	Indicates the tag reference identifier. • Primary Key

URLs

This object stores URLs associated to the service objects like social post and service requests. An example for a URL is a link to a photo sent by a customer along with a social post.

QName: {http://xmlns.oracle.com/apps/crm/service/svcMgmt/model/socialService/}SocialPostUrl

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Social Post*
Handled by	*Social Post*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Url	string	Indicates the URL associated with an object.
UrlId	long	Indicates the URL ID. • Primary Key

Source Information Technology System

A definition of the different information technology systems deployed by a company and a cross reference of trading community information between those systems and Oracle Fusion.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/sourceSystemService/applicationModule/}SourceSystemService

Service WSDL URL: https://servername/crmService/FoundationSourceSystemService?WSDL

Logical Business Objects

- CRM : Trading Community Model : Source Information Technology System Setup

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Trading Community Source System*
Handles	*Trading Community Source System Translation*
Handles	*Trading Community Original System Mapping*

Operations

- *getSourceSystem*

- *createSourceSystem*
- *updateSourceSystem*
- *deleteSourceSystem*
- *mergeSourceSystem*
- *findSourceSystem*
- *getOriginalSystemByCode*
- *processSourceSystem*
- *processCSSourceSystem*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

getSourceSystem

The Get operation for trading community source system.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
origSystemId	long	The unique identifier of the original system.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/sourceSystemService/}OriginalSystemResult	The trading community source system that matches the inbound key attributes.

createSourceSystem

The Create operation for trading community source system.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
originalSystem	*Trading Community Source System*	The trading community source system to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/sourceSystemService/}OriginalSystemResult	The result of the operation that includes the successfully created trading community source system and a list of warning or information messages.

updateSourceSystem

The Update operation for trading community source system.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
originalSystem	*Trading Community Source System*	The trading community source system to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/sourceSystemService/}OriginalSystemResult	The result of the operation that includes the successfully updated trading community source system and a list of warning or information messages.

deleteSourceSystem

The Delete operation for trading community source system.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
originalSystem	*Trading Community Source System*	The trading community source system to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warning or information messages encountered when the object was deleted.

mergeSourceSystem

The Merge operation for trading community source system. It performs an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
originalSystem	*Trading Community Source System*	The trading community source system to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/sourceSystemService/}OriginalSystemResult	The result of the operation that includes the successfully merged trading community source system and a list of warning or information messages.

findSourceSystem

The Find operation for trading community source system.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Trading Community Source System*	The result of the operation that includes a list of trading community source system that satisfy the inbound criteria and any warning or information messages.

getOriginalSystemByCode

The Get operation for trading community source system.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
BindOrigSystem	string	The unique code identifying the original system.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/sourceSystemService/}OriginalSystemResult	The result of the operation that includes a list of trading community source system that satisfy the inbound criteria and any warning or information messages.

processSourceSystem

The Bulk load operation for trading community source system.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action to perform, such as create, update, merge, or delete.

Element Name	Type	Description
originalSystem	*Trading Community Source System*	A list of trading community source systems to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk operation behavior, such as whether valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Trading Community Source System*	The result of the operation that includes a list of trading community source system that were successfully processed and any warning or information messages.

processCSSourceSystem

An operation to apply the changes back to the data source for trading community source system.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object to represent the changes.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk operation behavior, such as whether valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The result of the operation that includes a list of created and updated data objects, and all warning and information messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name; an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale used to evaluate the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in the ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined for this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for the service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
processCSSourceSystem	HZ_MANAGE_TRADING_COMMUNITY_ORIGINAL_SYSTEM_PRIV	Manage Trading Community Original System	Allows the update of original system information.
getSourceSystem	HZ_MANAGE_TRADING_COMMUNITY_ORIGINAL_SYSTEM_PRIV	Manage Trading Community Original System	Allows the update of original system information.
mergeSourceSystem	HZ_MANAGE_TRADING_COMMUNITY_ORIGINAL_SYSTEM_PRIV	Manage Trading Community Original System	Allows the update of original system information.
updateSourceSystem	HZ_MANAGE_TRADING_COMMUNITY_ORIGINAL_SYSTEM_PRIV	Manage Trading Community Original System	Allows the update of original system information.
deleteSourceSystem	HZ_MANAGE_TRADING_COMMUNITY_ORIGINAL_SYSTEM_PRIV	Manage Trading Community Original System	Allows the update of original system information.
getOriginalSystemByCode	HZ_MANAGE_TRADING_COMMUNITY_ORIGINAL_SYSTEM_PRIV	Manage Trading Community Original System	Allows the update of original system information.
findSourceSystem	HZ_MANAGE_TRADING_COMMUNITY_ORIGINAL_SYSTEM_PRIV	Manage Trading Community Original System	Allows the update of original system information.

Operation Name	Privilege Code	Privilege Name	Privilege Description
createSourceSystem	HZ_MANAGE_TRADING_COMMUNITY_ORIGINAL_SYSTEM_PRIV	Manage Trading Community Original System	Allows the update of original system information.
processSourceSystem	HZ_MANAGE_TRADING_COMMUNITY_ORIGINAL_SYSTEM_PRIV	Manage Trading Community Original System	Allows the update of original system information.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_MANAGE_TRADING_COMMUNITY_ORIGINAL_SYSTEM_PRIV	ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Customer Relationship Management Application Administrator	Individual responsible for customer relationship management application administration. Collaborates with customer relationship management application users to maintain consistent financial application setup, rules, and access.
HZ_MANAGE_TRADING_COMMUNITY_ORIGINAL_SYSTEM_PRIV	ORA_AR_CUSTOMER_MAINTENANCE_SEGREGATED_DUTY_CRM	Customer Maintenance Segregated	Maintains customer related data except the creation and management of customers.
HZ_MANAGE_TRADING_COMMUNITY_ORIGINAL_SYSTEM_PRIV	ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Master Data Management Application Administrator	Administers the installation and maintenance of customer data management application and foundation model.
HZ_MANAGE_TRADING_COMMUNITY_ORIGINAL_SYSTEM_PRIV	ORA_DOO_ORCHESTRATION_INFRASTRUCTURE_ADMINISTRATION_DUTY_CRM	Orchestration Infrastructure Administration	Allows access to administrative pages and functions for the orchestration infrastructure elements that can be used by other applications.
HZ_MANAGE_TRADING_COMMUNITY_ORIGINAL_SYSTEM_PRIV	ORA_AR_CUSTOMER_MAINTENANCE_DUTY_CRM	Customer Maintenance	Defines and maintains Receivables attributes of customer accounts and customer account sites.
HZ_MANAGE_TRADING_COMMUNITY_ORIGINAL_SYSTEM_PRIV	ORA_WSH_SHIPPING_ADMINISTRATION_DUTY_CRM	Shipping Administration	Manages all setup tasks necessary to implement and maintain Oracle Fusion Shipping.
HZ_MANAGE_TRADING_COMMUNITY_ORIGINAL_SYSTEM_PRIV	ORA_EGI_PRODUCT_HUB_ADMINISTRATION_DUTY_CRM	Product Hub Administration	Administers tasks required to setup Oracle Fusion Product Hub. Duty role includes all setup duty roles available for this product and inherits setup duty roles from Oracle Fusion Product and Catalog Management.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_MANAGE_TRADING_ COMMUNITY_ORIGINAL_SYSTEM_ PRIV	ORA_RCS_SUPPLY_CHAIN_ APPLICATION_ADMINISTRATOR_ JOB	Supply Chain Application Administrator	Individual responsible for supply chain application administration. Collaborates with supply chain application users to maintain consistent application setup, rules, and access.
HZ_MANAGE_TRADING_ COMMUNITY_ORIGINAL_SYSTEM_ PRIV	ORA_DOO_ORDER_ ORCHESTRATION_ ADMINISTRATION_DUTY_CRM	Order Orchestration Administration	Allows access to order orchestration or order promising setup tasks.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_ MANAGEMENT_APPLICATION_ ADMINISTRATOR_JOB	ORA_ZCA_ACCESS_GROUPS_ ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_ZCA_CUSTOMER_ RELATIONSHIP_MANAGEMENT_ APPLICATION_ADMINISTRATOR_ JOB	ORA_ZCA_ACCESS_GROUPS_ ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_WSH_SHIPPING_ ADMINISTRATION_DUTY_CRM	ORA_WSH_CARRIER_ MANAGEMENT_DUTY_CRM	Carrier Management	Manages setup of carriers including defining carriers, carrier contacts, and shipping methods.
ORA_ZCA_CUSTOMER_ RELATIONSHIP_MANAGEMENT_ APPLICATION_ADMINISTRATOR_ JOB	ORA_ZPM_CHANNEL_MANAGER_ DASHBOARD_DUTY	Channel Manager Dashboard	Provides channel roles a dashboard to manage their daily transactions.
ORA_ZCA_CUSTOMER_ RELATIONSHIP_MANAGEMENT_ APPLICATION_ADMINISTRATOR_ JOB	ORA_OKC_CONTRACT_ AMENDMENT_DUTY_CRM	Contract Amendment	Amends approved contracts. This includes initiating an amendment, reverting the contract to the previous signed version, updating all allowable attributes, and submitting the amendment for approval.
ORA_ZCA_CUSTOMER_ RELATIONSHIP_MANAGEMENT_ APPLICATION_ADMINISTRATOR_ JOB	ORA_OKC_CONTRACT_ AUTHORING_DUTY_CRM	Contract Authoring	Authors contracts, including terms and conditions, interactions, and customer account information.
ORA_ZCA_CUSTOMER_ RELATIONSHIP_MANAGEMENT_	ORA_OKC_CONTRACT_SEARCH_ VIEW_DUTY_CRM	Contract Search and View Access	Searches and views contracts for the assigned business units.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
APPLICATION_ADMINISTRATOR_JOB			
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_SETUP_DUTY_CRM	Contract Setup	Contract Setup
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_CONV_MESSAGE_ADMINISTRATION	Conversation Message Administration	Has complete conversation message management capabilities including create messages, reply to messages, change a reply to ready to send status and delete a message.
ORA_AR_CUSTOMER_MAINTENANCE_SEGREGATED_DUTY_CRM	ORA_FUN_CUSTOMER_ACCOUNT_INQUIRY_DUTY_CRM	Customer Account Inquiry	View customer account details.
ORA_AR_CUSTOMER_MAINTENANCE_DUTY_CRM	ORA_FUN_CUSTOMER_ACCOUNT_INQUIRY_DUTY_CRM	Customer Account Inquiry	View customer account details.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_CDM_ADMIN_DUTY	Customer Data Management Administration	Administers customer data management.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_CDM_ADMIN_DUTY	Customer Data Management Administration	Administers customer data management.
ORA_AR_CUSTOMER_MAINTENANCE_DUTY_CRM	ORA_IBY_CUSTOMER_PAYMENT_INSTRUMENT_MANAGEMENT_DUTY_CRM	Customer Payment Instrument Management	Manages customer bank accounts and credit cards and other payment details.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_CSS_ADMINISTRATION	Customer Self-Service Administration	Manages the provisioning and approval of self service registration requests
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_DATA_INTEGRATION_MANAGEMENT_DUTY	Data Integration Management	This role allows setup and management of data integration maps and instances.
ORA_RCS_SUPPLY_CHAIN_APPLICATION_ADMINISTRATOR_JOB	ORA_FUN_ENTERPRISE_STRUCTURES_ADMINISTRATION_DUTY_CRM	Enterprise Structures Administration	Administer all enterprise structure related setup objects including charts of accounts, calendars, currencies, ledgers, legal entities, legal jurisdictions and business units.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_RCS_SUPPLY_CHAIN_APPLICATION_ADMINISTRATOR_JOB	ORA_RCL_FIELD_SERVICE_ADMINISTRATOR_JOB	Field Service Administrator	Individual responsible for the administration of field service logistics.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_FFS_FIELD_SERVICE_APPLICATION_ADMINISTRATOR_DUTY	Field Service Application Administrator	Individual responsible for the duty of configuring Field Service mobile application
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_GEO_ADMIN_DUTY	Geography Administration	Grants privileges to set up geographies
ORA_WSH_SHIPPING_ADMINISTRATION_DUTY_CRM	ORA_GEO_ADMIN_DUTY	Geography Administration	Grants privileges to set up geographies
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_GEO_ADMIN_DUTY	Geography Administration	Grants privileges to set up geographies

ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_PUBLISHING_DUTY	Interview Definition Publishing	Manage access for publishing and unpublishing Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_VIEWING_DUTY	Interview Definition Viewing	Manage access for viewing Interview definitions.
ORA_RCS_SUPPLY_CHAIN_APPLICATION_ADMINISTRATOR_JOB	ORA_INV_INVENTORY_ADMINISTRATION_DUTY_CRM	Inventory Administration	Configures all setup-related activities for inventory management.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_RCS_SUPPLY_CHAIN_APPLICATION_ADMINISTRATOR_JOB	ORA_EGP_ITEM_MANAGEMENT_DUTY_CRM	Item Management	Creates and manages items including item attributes, item structures, packs, associations, relationships, and catalog assignments.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_EGP_ITEM_MANAGEMENT_DUTY_CRM	Item Management	Creates and manages items including item attributes, item structures, packs, associations, relationships, and catalog assignments.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_CSO_KNOWLEDGE_SETUP_AND_MAINTENANCE_DUTY	Knowledge Setup and Maintenance	Provides the users with the ability to setup and manage knowledge base
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_LEAD_REGISTRATION_MANAGEMENT_DUTY	Lead Registration Management	Manages and analyzes sales lead registrations. Includes the ability to create sales lead registrations, edit both internal and partner lead attributes as needed, and view lead age and status.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_LEAD_REGISTRATION_SUBMISSION_DUTY	Lead Registration Submission	Submits sales lead registrations to the enterprise and manages sales lead attributes. Includes the ability to create, accept, and reject sales lead registrations.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKT_MARKETING_BUDGET_MAINTENANCE_DUTY	MDF Budget Maintenance	Manages MDF budgets including import, export, and viewing budget fund requests and claims that use budgeted funds for marketing activities.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_MANAGE_CX_AI_AGENTS	Manage CX AI Agents	This role allows administrators to manage CX AI Agents in Agent Studio
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKT_MARKETING_MAINTENANCE_DUTY	Marketing Maintenance	Creates and maintains setup for marketing campaigns, responses, segments, lists, and treatments across the enterprise. Additional duties include file import management for the import of marketing campaign responses.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOO_OPPORTUNITY_CHANNEL_ADMINISTRATION_DUTY	Opportunity Channel Administration	Administers all aspects of the application, including some setup. This role is for channel administrators.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_RCS_SUPPLY_CHAIN_APPLICATION_ADMINISTRATOR_JOB	ORA_DOO_ORCHESTRATION_INFRASTRUCTURE_ADMINISTRATION_DUTY_CRM	Orchestration Infrastructure Administration	Allows access to administrative pages and functions for the orchestration infrastructure elements that can be used by other applications.
ORA_RCS_SUPPLY_CHAIN_APPLICATION_ADMINISTRATOR_JOB	ORA_DOO_ORDER_ORCHESTRATION_ADMINISTRATION_DUTY_CRM	Order Orchestration Administration	Allows access to order orchestration or order promising setup tasks.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_PARTNER_ACCOUNT_ADMINISTRATION_DUTY	Partner Account Administration	Maintains a partner account, including managing members and partner profile information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_PARTNER_ACCOUNT_REVIEW_DUTY	Partner Account Review	Views a partner account, including viewing a partner's members, profile, and account team.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_PARTNER_IMPORT_ADMINISTRATION_DUTY	Partner Import Administration	Partner Import Administration Duty role. This duty will allow for administration activities of Partner Import
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_PARTNER_SALES_PARTY_MANAGEMENT_DUTY	Partner Sales Party Management	Manages creation and maintenance of sales organizations and consumers for partners. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts. This role has limited access to customers and contacts.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_VIEW_PARTY_CENTER_DUTY	Party Center Inquiry	Grants privileges to view party center nodes.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_MANAGE_PARTY_CENTER_DUTY	Party Center Management	Grants privileges to manage party center nodes.
ORA_AR_CUSTOMER_MAINTENANCE_DUTY_CRM	ORA_ZX_REGISTRATION_PII_DUTY_CRM	Party Taxpayer Identifier PII	View personally identifiable information for tax registration number of type taxpayer ID.
ORA_DOO_ORCHESTRATION_INFRASTRUCTURE_ADMINISTRATION_DUTY_CRM	ORA_MSP_PLANNING_ADMINISTRATION_DUTY_CRM	Planning Administration	Configures and manages planning set up, data collection and order promising server processes.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_DOO_ORDER_ORCHESTRATION_ADMINISTRATION_DUTY_CRM	ORA_MSP_PLANNING_ADMINISTRATION_DUTY_CRM	Planning Administration	Configures and manages planning set up, data collection and order promising server processes.
ORA_RCS_SUPPLY_CHAIN_APPLICATION_ADMINISTRATOR_JOB	ORA_CZ_PRODUCT_CONFIGURATOR_MANAGER_JOB	Product Configurator Manager	Individual responsible for the creation and maintenance of configuration models.
ORA_RCS_SUPPLY_CHAIN_APPLICATION_ADMINISTRATOR_JOB	ORA_EGI_PRODUCT_HUB_ADMINISTRATION_DUTY_CRM	Product Hub Administration	Administers tasks required to setup Oracle Fusion Product Hub. Duty role includes all setup duty roles available for this product and inherits setup duty roles from Oracle Fusion Product and Catalog Management.
ORA_EGI_PRODUCT_HUB_ADMINISTRATION_DUTY_CRM	ORA_EGP_PRODUCT_MODEL_ADMINISTRATION_DUTY_CRM	Product Model Administration	Administers tasks required to setup Oracle Fusion Product Model. Duty role includes all setup duty roles available for this product.
ORA_RCS_SUPPLY_CHAIN_APPLICATION_ADMINISTRATOR_JOB	ORA_RCV_RECEIVING_ADMINISTRATION_DUTY_CRM	Receiving Administration	Configures receiving parameters to specify default receiving options for an inventory organization.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ADMINISTRATOR_DUTY	Resource Administration	Administers resource information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ADMINISTRATOR_DUTY	Resource Administration	Administers resource information.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ORGANIZATION_ADMINISTRATOR_DUTY	Resource Organization Administration	Administers resource organizations.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ORGANIZATION_ADMINISTRATOR_DUTY	Resource Organization Administration	Administers resource organizations.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_TEAM_ADMINISTRATOR_DUTY	Resource Team Administration	Defines resource teams.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_	ORA_HZRESOURCE_TEAM_ADMINISTRATOR_DUTY	Resource Team Administration	Defines resource teams.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
APPLICATION_ADMINISTRATOR_JOB			
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_REVIEW_CRM_APPROVAL_TRANSACTIONS_ADMINISTRATOR	Review CRM Approval Transactions Administrator	Allows viewing of information for CRM approval transactions by an administrator.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZBS_SALES_CHANGE_HISTORY_INQUIRY_DUTY	Sales Change History Inquiry	Views change history of sales business objects for members within the sales organization.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_SALES_LEAD_FOLLOW_UP_DUTY	Sales Lead Follow Up	Processes sales lead for follow up actions including the qualification and conversion of sales lead to revenue opportunities.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_AVAILABILITY_MANAGEMENT	Service Availability Management	Manage the service availability data including reading and writing the availability of a service.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_PROFILE_ADMINISTRATION	Service Profile Administration	Manages all aspects of the Service Profile object, including deleting a service profile.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_STATUS_COMPUTATION	Service Status Computation	Perform actions required to determine the availability of a service.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_SETUP_CUSTOMER_CENTER_DUTY	Setup Customer Center	Manages customer center set up, sales party creation and their related objects, such as appointments, assessments, interactions, notes and tasks.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_RCS_SUPPLY_CHAIN_APPLICATION_ADMINISTRATOR_JOB	ORA_WSH_SHIPPING_ADMINISTRATION_DUTY_CRM	Shipping Administration	Manages all setup tasks necessary to implement and maintain Oracle Fusion Shipping.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HRS_SOCIAL_CONNECTION_PARTNER_DUTY_CRM	Social Connection Partner	Performs all Oracle Fusion Social Connection partner duties.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SPECIALIST_JOB	Subscription Specialist	Individual responsible for managing subscriptions, establishing recurring and usage billing processes, initiating manual discounts and invoice adjustments, and handling billing discrepancies and disputes.
ORA_RCS_SUPPLY_CHAIN_APPLICATION_ADMINISTRATOR_JOB	ORA_RCS_SCM_COMMON_VIEW_WEB_SERVICE_DUTY_CRM	Supply Chain Common View Web Service	Provides view only web service access to supply chain common to perform activities such as viewing inventory organizations, plant parameters, carriers and units of measure list of values.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	Territory Management Setup	Manages sales territory setup, including lookups, profile options, flexfields, and dimension data. Runs dimension synchronization, and visibility jobs. Additional duties include quota management setup.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_CUSTOMER_ACCOUNT_ADMINISTRATION_DUTY	Trading Community Customer Account Administration	Grants privileges to setup customer account information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_CUSTOMER_ACCOUNT_ADMINISTRATION_DUTY	Trading Community Customer Account Administration	Grants privileges to setup customer account information.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DATA_QUALITY_ADMIN_DUTY	Trading Community Data Quality Administration	Configures, reviews, and edits predefined data quality server configurations and the predefined matching, synchronization, and cleansing configurations.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DATA_QUALITY_ADMIN_DUTY	Trading Community Data Quality Administration	Configures, reviews, and edits predefined data quality server configurations and the predefined matching, synchronization, and cleansing configurations.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCQ_TRADING_COMMUNITY_DQ_MGMT_DUTY	Trading Community Data Quality Management	Performs real-time and batch data quality functions such as matching and cleansing.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DUP_IDEN_MANAGE_DUTY	Trading Community Duplicate Identification Batch Management	Grants privileges to manage duplicate identification batches
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DUP_RES_MANAGE_DUTY	Trading Community Duplicate Resolution Request Management	Grants privileges to manage duplicate resolution requests
ORA_AR_CUSTOMER_MAINTENANCE_SEGREGATED_DUTY_CRM	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_AR_CUSTOMER_MAINTENANCE_DUTY_CRM	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_AR_CUSTOMER_MAINTENANCE_SEGREGATED_DUTY_CRM	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_AR_CUSTOMER_MAINTENANCE_DUTY_CRM	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
APPLICATION_ADMINISTRATOR_JOB			
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_PERSON_ADMINISTRATION_DUTY	Trading Community Person Administration	Grants privileges to setup person information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_PERSON_ADMINISTRATION_DUTY	Trading Community Person Administration	Grants privileges to setup person information.

Trading Community Original System Mapping

The information about the mapping among source systems and objects that are imported from the system.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/sourceSystemService/}OriginalSystemMapping

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Source System*
Handled by	*Source Information Technology System*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MultiOsrFlag	boolean	Y or N indicates whether or not multiple source identifiers from the same source system are allowed to be mapped to one OWNER_TABLE_ID.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name. • Primary Key
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column. • Primary Key
Status	string	The status of the record.

Trading Community Source System

An external system from which data can be imported into the trading community registry.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/sourceSystemService/}OriginalSystem

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Source System Translation*
Contains	*Trading Community Original System Mapping*
Handled by	*Source Information Technology System*

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
EnableForAssetFlag	boolean	Flag indicates whether a source system is enabled for use in assets products; Y indicates enabled for use and N indicates not enabled for use.
EnableForItemsFlag	boolean	Flag to indicate that the source system can be used to import item records.
EnableForPlanningFlag	boolean	Flag to indicate that the source system can be used to import planning records.
EnableForTcaFlag	boolean	Flag to indicate that the source system can be used to import trading community records.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
OrigSystem	string	The source system name.
OrigSystemId	long	The identifier for the source system. • Primary Key
OrigSystemName	string	The source system name.
OrigSystemType	string	The source system type.
OriginalSystemMapping	*Trading Community Original System Mapping*	Mapping of the source system to the trading community entities.
OriginalSystemTranslation	*Trading Community Source System Translation*	Translated source system.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.

Trading Community Source System Translation

The source system information in a local language.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/sourceSystemService/}OriginalSystemTranslation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Source System*
Handled by	*Source Information Technology System*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
Language	string	Indicates the code of the language into which the contents of the translatable columns are translated. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystemId	long	Source system identifier. • Primary Key
OrigSystemName	string	Source system name.
SourceLang	string	Indicates the code of the language in which the contents of the translatable columns were originally created.

Source Information Technology System Reference

A definition of references between source system records and those in the trading community registry. For example, a person with the identifier 1001 is a reference to a contact with identifier 1000 that was imported from the Siebel CRM system.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}OriginalSystemReferenceService

Service WSDL URL: https://servername/crmService/OriginalSystemReferenceService?WSDL

getOriginalSystemReference

The Get operation for the trading community original system reference identifier.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
origSystemReferenceId	long	The get operation for the trading community source system reference.

Response Payload

Element Name	Type	Description
result	*Source System Reference*	The trading community original system reference that matches the inbound key attributes.

createOriginalSystemReference

The Create operation for the trading community original system reference.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
originalSystemReference	*Source System Reference*	The create operation for the trading community source system reference.

Response Payload

Element Name	Type	Description
result	*Source System Reference*	The result of the operation that includes the successfully created trading community source system reference and a list of warning or information messages.

updateOriginalSystemReference

The Update operation for the trading community original system reference.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
originalSystemReference	*Source System Reference*	The trading community original system reference to be updated.

Response Payload

Element Name	Type	Description
result	*Source System Reference*	The result of the operation that includes the successfully updated trading community original system reference and a list of warning or information messages.

deleteOriginalSystemReference

The Delete operation for the trading community original system reference.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
originalSystemReference	*Source System Reference*	The trading community original system reference to be deleted.

Response Payload

Element Name	Type	Description
result	void	A list of warning or information messages encountered when the object was deleted.

mergeOriginalSystemReference

The Merge operation for the trading community original system reference. It performs an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
originalSystemReference	*Source System Reference*	The trading community original system reference to be merged.

Response Payload

Element Name	Type	Description
result	*Source System Reference*	The result of the operation that includes the successfully merged trading community original system reference and a list of warning or information messages.

findOriginalSystemReference

The Find operation for the trading community original system reference.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Source System Reference*	A list of trading community original system reference that satisfy the inbound criteria.

findOwnerTableIdByReference

The Get reference information based on Original System Reference for 3rd party application.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
OrigSystem	string	The unique code of the original system.
OriginalSystemReference	string	The unique identifier of the original system reference.
OwnerTableName	string	The trading community table name for which the reference information is being searched.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Source System Reference*	The trading community original system mapping identifier that matches the inbound key attributes.

processOriginalSystemReference

The Bulk load operation for the trading community original system reference.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action to perform, such as create, update, merge, or delete.
originalSystemReference	*Source System Reference*	A list of the trading community original system references to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk operation behavior, such as whether valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Source System Reference*	The result of the operation that includes a list of trading community original system reference that were successfully processed and any warning or information messages.

processCSOriginalSystemReference

An operation to apply the changes back to the data source for the trading community original system reference.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object to represent the changes.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk operation behavior, such as whether valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The result of the operation that includes a list of created and updated data objects, and all warning and information messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name; an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale used to evaluate the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in the ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined for this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for the service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create,

Element Name	Type	Description
		update, merge, and delete operations can be performed on the object.

Source System Reference

The name of external source system where the trading community information is imported from.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}OriginalSystemReference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Original System Mapping Identifier Additional Information*
Contained by	*Location Details*
Contained by	*Household*
Contained by	*Contact Preference*
Contained by	*Classification Assignment*
Contained by	*Contact Address*
Contained by	*Address*
Contained by	*Trading Community Organization Details*
Contained by	*Instant Messaging*
Contained by	*E-Mail*
Contained by	*Trading Community Customer Billing Account*
Contained by	*Additional Contact Name*
Contained by	*Trading Community Address Purpose*
Contained by	*Telex*

Relationship Type	Object or Service
Contained by	*Phone*
Contained by	*Customer Contact Responsibility*
Contained by	*Additional Identifier*
Contained by	*Additional Account Name*
Contained by	*Trading Community Person Details*
Contained by	*Credit Rating*
Contained by	*Trading Community Customer Account Site*

Contained by	*Relationship*
Contained by	*Electronic Data Interchange*
Contained by	*Trading Community Customer Account or Site Role*
Contained by	*Web*
Contained by	*Customer Contact Profile*
Contained by	*Electronic File Transfer*
Handled by	*Sales Reference Customer*
Handled by	*Trading Community Location*
Handled by	*Trading Community Customer Account*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Competitor Service*
Handled by	*Source Information Technology System Reference*

Relationship Type	Object or Service
Handled by	*Trading Community Person Information*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Marketing Response Service*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.

Name	Type	Description
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OldOrigSystemReference	string	The old source system reference that is being replaced.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OrigSystemReferenceId	long	The unique identifier for original system reference. • Primary Key
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
SourceSystemRefInformation	*Trading Community Original System Mapping Identifier Additional Information*	The source system reference information.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Trading Community Original System Mapping Identifier Additional Information

The unique identifier for the trading community party, associated with the address, from the external source system reference.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/sourceSystemRef/}SourceSystemRefInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Source System Reference*
Handled by	*Sales Reference Customer*
Handled by	*Trading Community Location*
Handled by	*Trading Community Customer Account*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Competitor Service*
Handled by	*Source Information Technology System Reference*
Handled by	*Trading Community Person Information*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Marketing Response Service*

Relationship Type	Object or Service
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
OrigSystemRefId	long	Sequentially generated identifier. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Subscription

Subscription External Service

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/subscriptions/subscriptionManagement/subscriptionIntegrationService/}SubscriptionIntegrationService

Service WSDL URL: https://servername/crmService/SubscriptionIntegrationService?WSDL

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Subscription*
Handles	*Sales Credit*
Handles	*Subscription Product*
Handles	*Subscription Charge Tier*
Handles	*Subscription Bill Lines*
Handles	*Subscription Party*
Handles	*Bill Line*
Handles	*Subscription Charge Adjustment*
Handles	*Subscription Product Descriptive Flexfield*

Handles	*Charge*

Operations

- *getEligibleBillLines*
- *getSubscriptions*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

getEligibleBillLines

Get Eligible BillLine to process Third party Invoice

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
subscriptionNumber	string	Subscription Number

Response Payload

Element Name	Type	Description
result	*Subscription Bill Lines*	BillLine and Sales Credit for a given Subscription Number

getSubscriptions

Get operation for Subscription SDO

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
subscriptionId	long	Subscription Id

Response Payload

Element Name	Type	Description
result	*Subscription*	Result of the operation includes the successfully retrieved Subscription SDO

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the <name> element from the getEntityList operation response payload.

Element Name	Type	Description
localeName	string	The locale to use when evaluating locale-based user interface hints. The localeName is in ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and Boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getSubscriptions	OSS_VIEW_SUBSCRIPTION_PRIV	View Subscription	View a subscription
getEligibleBillLines	OSS_VIEW_SUBSCRIPTION_PRIV	View Subscription	View a subscription

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
OSS_VIEW_SUBSCRIPTION_PRIV	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
OSS_VIEW_SUBSCRIPTION_PRIV	ORA_OSS_SUBSCRIPTION_SEARCH_VIEW_EXTERNAL_DUTY	Subscription Search and View Access External	Searches and views subscriptions for the assigned business units. Duty role for a consuming team. This duty role does not have access to work area.
OSS_VIEW_SUBSCRIPTION_PRIV	ORA_OSS_SUBSCRIPTION_AUTHORING_EXTERNAL_DUTY	Subscription Authoring External	Authors subscriptions. Duty role for a consuming team. This duty role does not have access to work area.
OSS_VIEW_SUBSCRIPTION_PRIV	ORA_OSS_SUBSCRIPTION_AMENDMENT_EXTERNAL_DUTY	Subscription Amendment External	Amends approved subscriptions. This includes initiating an amendment, reverting the subscription to the previous signed version, updating all allowable attributes, and submitting the amendment for approval. Duty role for a consuming team. This duty role does not have access to work area.
OSS_VIEW_SUBSCRIPTION_PRIV	ORA_OSS_SUBSCRIPTION_SEARCH_VIEW_DUTY	Subscription Search and View Access	Searches and views subscriptions for the assigned business units.
OSS_VIEW_SUBSCRIPTION_PRIV	ORA_OSS_SUBSCRIPTION_AUTHORING_DUTY	Subscription Authoring	Authors subscriptions

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
OSS_VIEW_SUBSCRIPTION_PRIV	ORA_OSS_ALL_SUBCRIPTIONS_MGMT_WEBSERV_DUTY	All Subscriptions Management Web Service	Web service duty that manages all subscriptions irrespective of business units.
OSS_VIEW_SUBSCRIPTION_PRIV	ORA_OSS_SUBSCRIPTION_AMENDMENT_DUTY	Subscription Amendment	Amends approved subscriptions. This includes initiating an amendment, reverting the subscription to the previous signed version, updating all allowable attributes, and submitting the amendment for approval.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_OSS_SUBSCRIPTION_SEARCH_VIEW_DUTY	ORA_EGP_ITEM_INQUIRY_DUTY_CRM	Item Inquiry	Queries and views items in the enterprise.
ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY	ORA_EGP_ITEM_INQUIRY_DUTY_CRM	Item Inquiry	Queries and views items in the enterprise.

Bill Line

Bill Lines View Object

QName: {http://xmlns.oracle.com/apps/subscriptions/subscriptionManagement/subscriptionService/}BillLines

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Subscription Bill Adjustment*
Contained by	*Subscription Product*
Handled by	*Subscription*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdhocBillLineFlag	boolean	Adhoc BillLine Flag
Amount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Bill Line Amount
BatchTag	string	Batch Tag
BillInstanceNumber	long	Bill Instance Number
BillLineId	long	Bill Line Id • Primary Key
BillLinePuid	string	Bill Line Puid
BillingPeriod	decimal	Billing Period
ChargeDefinition	string	Charge Definition
ChargeId	long	Charge Id
ChargeName	string	Charge Name
ChargePeriod	decimal	Charge Period
ChargePuid	string	Charge Puid
CorpCurrencyCode	string	Corp Currency Code
CoveredLevelId	long	Covered Level Id
CreatedBy	string	Created By
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Creation Date
CurcyConvRateType	string	Currency Conversion Rate Type
CurrencyCode	string	Currency Code
CustomerTrxTypeSequenceId	long	Customer Transaction Type Sequence Id

Name	Type	Description
DateBilledFrom	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date Billed From
DateBilledTo	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date Billed To
DateToInterface	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Date To Interface
InterfacedFlag	boolean	Interfaced Flag
InvoiceBillLineId	long	Invoice Bill Line Id
InvoiceText	string	Invoice Text
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Last Update Date
LastUpdateLogin	string	Last Update Login
LastUpdatedBy	string	Last Updated By
ListPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	List Price
ManualFlag	boolean	Manual Flag
MilestoneEventId	long	Milestone Event Id
MilestoneEventName	string	Milestone Event Name
MilestoneEventPuid	string	Milestone Event Puid
ObjectVersionNumber	int	Object Version Number
PricingError	string	Pricing Error
RecurringFlag	boolean	Recurring Flag
RevenueAdjustmentFromDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Revenue Adjustment From Date
RevenueAdjustmentToDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Revenue Adjustment To Date

Name	Type	Description
RevenueLineId	long	Revenue Line Id
RevenueOption	string	Revenue Option
RevenuePeriod	string	Revenue Period
RevisionRevenueLineId	long	Revision Revenue Line Id
SentDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Sent Date
SubscriptionId	long	Subscription Id
SubscriptionProductId	long	Subscription Product Id
SummarizedBillLineId	long	Summarized Bill Line ID
TransactionAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Transaction Amount
TransactionClass	string	Transaction Class
TransactionClassMeaning	string	Transaction Class Meaning
TransactionDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Transaction Date
TransactionNumber	string	Transaction Number
TransactionTax	decimal	Transaction Tax
UsageAcquiredFlag	boolean	Usage Acquired Flag
UsageCaptureDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Usage Capture Date
UsageFlag	boolean	Usage Flag
UsagePricedFlag	boolean	Usage Priced Flag
UsageProfileFlag	boolean	Usage Profile Flag

Name	Type	Description
UsageQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	Usage Quantity
UsageRatingProcess	string	Usage Rating Process
VersionType	string	Version Type
billAdjustments	*Subscription Bill Adjustment*	Bill Adjustments

Charge

Subscription Charges View Object

QName: {http://xmlns.oracle.com/apps/subscriptions/subscriptionManagement/subscriptionService/}Charges

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Subscription Charge Adjustment*
Contains	*Subscription Charge Tier*
Contained by	*Subscription Product*
Handled by	*Subscription*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Allowance	decimal	Charge Allowance
BatchTag	string	Batch Tag
BillLineId	long	Bill Line Id

Name	Type	Description
BillingFreq	string	Billing Frequency
BillingFreqName	string	Billing Frequency Name
BlockSize	decimal	Block Size
CanAdjustFlag	boolean	Can Adjust Flag
ChargeAppliesTo	string	Charge Applies To
ChargeCurrency	string	Charge Currency
ChargeDefinition	string	Charge Definition
ChargeDefinitionName	string	Charge Definition Name
ChargeId	long	Charge Id • Primary Key
ChargeName	string	Charge Name
ChargePuid	string	Charge Puid
ChargeSubtype	string	Charge Subtype
ChargeType	string	Charge Type
CorpCurrencyCode	string	Corp Currency Code
CoveredLevelId	long	Covered Level Id
CreatedBy	string	Created By
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Creation Date
CurcyConvRateType	string	Currency Conversion Rate Type
EnableProration	string	Enable Proration
ExternalKey	string	External Key

Name	Type	Description
ExternalParentKey	string	External Parent Key
InvoiceRuleName	string	Invoicing Rule Name
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Last Update Date
LastUpdateLogin	string	Last Update Login
LastUpdatedBy	string	Last Updated By
MilestoneBillingFlag	boolean	Milestone Billing Flag
MilestoneRevenueFlag	boolean	Milestone Revenue Flag
MilestoneTemplateId	long	Milestone Template Id
MilestoneTemplateName	string	Milestone Template Name
ObjectVersionNumber	int	Object Version Number
ParentEntity	string	Parent Entity
ParentEntityId	long	Parent Entity Id
PrePaymentNumber	long	Pre Payment Number
PricePeriodicity	string	Price Periodicity
PricePeriodicityName	string	Price Periodicity Name
PriceType	string	Price Type
PricedQuantity	{http://xmlns.oracle.com/adf/svc/types/}MeasureType	Priced Quantity
PricedQuantityUOM	string	Priced Quantity UOM
PrimaryFlag	boolean	Primary Flag
RollupFlag	boolean	Rollup Flag

Name	Type	Description
SequenceNumber	long	Sequence Number
SubscriptionId	long	Subscription Id
SubscriptionProductId	long	Subscription Product Id
TierType	string	Tier Type
TieredFlag	boolean	Tiered Flag
TieredPricingHeaderId	long	Tiered Pricing Header Id
UnitListPrice	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Unit List Price
UsagePriceLockFlag	boolean	Usage Price Lock Flag
VersionType	string	Version Type
adjustments	*Subscription Charge Adjustment*	Charge Adjustments
chargeTiers	*Subscription Charge Tier*	Charge Tiers

Sales Credit

Sales Credit View Object

QName: {http://xmlns.oracle.com/apps/subscriptions/subscriptionManagement/subscriptionIntegrationService/}EligibleBillLinesSalesCredits

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Subscription Bill Lines*
Contained by	*Subscription Bill Lines*

Relationship Type	Object or Service
Handled by	*Subscription*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BillLineId	long	Bill Lines Id
EligibleBillLinesExt	*Subscription Bill Lines*	Extensible Attributes
OrgId	long	Org Id
ResourceSalesrepId	long	SalesReps Id • Primary Key
SalesCreditPercentSplit	long	Sales Credit percentage Split
SalesCreditTypeId	long	Sales Credit Type

Subscription

Subscriptions View Object

QName: {http://xmlns.oracle.com/apps/subscriptions/subscriptionManagement/subscriptionService/}Subscriptions

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Subscription Descriptive Flexfield*
Contains	*Subscription Product*
Contains	*Subscription Party*
Handled by	*Subscription*

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountingRuleId	long	Accouting Rule Id
AccountingRuleName	string	Accounting Rule Name
ApprovalNote	string	Approval Note
ApprovedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Approved Date
AssigneeId	long	Assignee Id
AssigneeType	string	Assignee Type
AsyncFlag	boolean	Async Flag
BatchTag	string	Batch Tag
BillOnDay	decimal	Bill On Day
BillService	string	Bill Service
BillServiceName	string	Bill Service Name
BillToAccountDescription	string	Bill To Account Description
BillToAccountId	long	Bill To Account Id
BillToAccountNumber	string	Bill To Account Number
BillToAddress	string	Bill To Address
BillToContactId	long	Bill-to Contact
BillToContactName	string	Bill-to Contact

Name	Type	Description
BillToParty	string	Bill To Party
BillToPartyId	long	Bill-to Customer
BillToPartyName	string	Bill-to Customer
BillToSite	string	Bill To Site
BillToSiteUseId	long	Bill To Site Used Id
BillingDateCode	string	Billing Date Code
BillingDateName	string	Billing Date Name
BillingFrequency	string	Billing Frequency
BillingFrequencyName	string	Billing Frequency Name
BillingOffsetDays	int	Billing Offset Days
BillingSystem	string	Billing System
BusinessUnitId	long	Business Unit Id
BusinessUnitName	string	Business Unit Name
CalculatedCreditAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Calculated Credit Amount
CancelReason	string	Cancel Reason
CanceledAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Canceled Amount
CanceledDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Canceled Date
CloseCreditMethod	string	Close Credit Method
ClosedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Closed Amount

Name	Type	Description
ClosedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Closed Date
CommunicationChannel	string	Communication Channel
CorpCurrencyCode	string	Corp Currency Code
CorrelationId	string	Correlation Id
CreatedBy	string	Created By
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Creation Date
CreditedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Credited Amount
CurcyConvRateType	string	Currency Conversion Rate Type
Currency	string	Currency of the subscription
CurrencyConversionRate	string	Cuurency Conversion Rate
CurrencyConversionRateDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Currency Conversion Rate Date
CurrencyConversionRateType	string	Currency Conversion Rate Type
CurrencyName	string	Currency Name
CustomerAcceptance	string	Customer Acceptance
CustomerTrxTypeSequenceId	long	Customer Transaction Type Sequence Id
DaysBeforeExpiry	long	Days Before Expiry
DaysBeforeExpiryUsed	string	Days Before Expiry Used
DefaultLanguage	string	Default Language
DefinitionOrganizationId	long	Definition Organization Id
Description	string	Subscription Description

Name	Type	Description
DocumentFiscalClassification	string	Document Fiscal Classification
Duration	long	Subscription Duration
EnableRenewalRemindersFlag	boolean	Enable Renewal Reminders
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	End Date
EstimatedTax	decimal	Estimated Tax
ExemptCertificateNumber	string	Exempt Certificate Number
ExemptReason	string	Exempt Reason
ExemptReasonMeaning	string	Exempt Reason Meaning
GenerateBillingSchedule	string	Generate Billing Schedule
InstrAssignmentId	long	Instrument Assignment Id
InternalApproval	string	Internal Approval
InvoicedAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Invoiced Amount
InvoicingRuleId	long	Invoicing Rule Id
InvoicingRuleName	string	Invoicing Rule Name
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Last Update Date
LastUpdateLogin	string	Last Update Login
LastUpdatedBy	string	Last Updated By
LayoutTemplate	string	Layout Template
LegalEntityId	long	Legal Entity Id
LegalEntityName	string	Legal Entity Name

Name	Type	Description
LockedFlagReadOnly	string	Locked Flag Read Only
MatrixId	long	Matrix Id
MinimumRenewalDurationUsed	long	Minimum Renewal Duration Used
MinimumRenewalPeriodUsed	string	Minimum Renewal Period Used
NegotiationLanguage	string	Negotiation Language
NotificationTemplateId	long	Notification Template Id
OverrideCreditAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Override Credit Amount
PONumber	string	PO Number
PartialPeriodStart	string	Partial Period Start
PartialPeriodType	string	Partial Period Type
PaymentMethod	string	Payment Method
PaymentMethodName	string	Payment Method Name
PaymentTermsId	long	Payment Terms Id
PaymentTermsName	string	Payment Terms Name
Period	string	Subscription Period
PerpetualFlag	boolean	Perpetual Flag
PriceAdjustmentPercentUsed	decimal	Price Adjustment Percent Used
PriceAdjustmentTypeUsed	string	Renewal Price Adjustment Used
PricedOnDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	Priced On Date
PricingError	string	Pricing Error

Name	Type	Description
PricingSegment	string	Pricing Segment
PricingSegmentExplanation	string	Pricing Segment Explanation
PricingStrategyExplanation	string	Pricing Strategy Explanation
PricingStrategyId	long	Pricing Strategy Id
PricingSystem	string	Pricing System
PrimaryPartyId	long	Primary Party Id
PrimaryPartyName	string	Primary Party Name
PrimarySalesPerson	long	Primary Sales Person
PrimarySalesRepresentative	string	Primary Sales Representative

- *getEntityList*

getClassCategory

The Get operation for the trading community classification category.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
classCategory	string	The class category that belongs to the group. For example, Public classifications such as US SIC, NACE, NAICS or custom classes.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/classificationService/}ClassCategoryResult	The trading community classification category that matches the inbound key attributes.

createClassCategory

The Create operation for the trading community classification category.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
classCategory	*Trading Community Classification Category*	The trading community classification category to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/classificationService/}ClassCategoryResult	The result of the operation that includes the successfully created trading community classification category and a list of warning or information messages.

updateClassCategory

The Update operation for the trading community classification category.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
classCategory	*Trading Community Classification Category*	The trading community classification category to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/classificationService/}ClassCategoryResult	The result of the operation that includes the successfully updated trading community classification category and a list of warning or information messages.

deleteClassCategory

The Delete operation for the trading community classification category.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
classCategory	*Trading Community Classification Category*	The trading community classification category to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warning or information messages encountered when the object was deleted.

mergeClassCategory

The Merge operation for the trading community classification category. It performs an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
classCategory	*Trading Community Classification Category*	The trading community classification category to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/classificationService/}ClassCategoryResult	The result of the operation that includes the successfully merged trading community classification category and a list of warning or information messages.

findClassCategory

The Find operation for the trading community classification category.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Trading Community Classification Category*	The result of the operation that includes a list of trading community classification categories that satisfy the inbound criteria and any warning or information messages.

processClassCategory

The Bulk Load operation for the trading community classification category.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action to perform, such as create, update, merge, or delete.
classCategory	*Trading Community Classification Category*	A list of trading community classification category to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk operation behavior, such as whether valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Trading Community Classification Category*	The result of the operation that includes a list of trading community classification categories that were successfully processed and any warning or information messages.

processCSClassCategory

An operation to apply the changes back to the data source for trading community classification category.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object to represent the changes.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk operation behavior, such as whether valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The result of the operation that includes a list of created and updated data objects, and all warning and information messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList o the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name; an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale used to evaluate the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined for this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for the service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getClassCategory	HZ_MANAGE_TRADING_COMMUNITY_CLASSIFICATION_CATEGORY_PRIV	Manage Trading Community Classification Category	Allows the specification of classification categories used to classify or group organizations and persons in your business community. The classification model lets you record complex, real-life categories in which entities can be grouped, such as industry classification.
processCSClassCategory	HZ_MANAGE_TRADING_COMMUNITY_CLASSIFICATION_CATEGORY_PRIV	Manage Trading Community Classification Category	Allows the specification of classification categories used to classify or group organizations and persons in your business community. The classification model lets you record complex, real-life categories in which entities can be grouped, such as industry classification.

Trading Community Category Use

Rules that stipulate how a classification category can be used to classify any object.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/classificationService/}ClassCategoryUse

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Classification Category*
Handled by	*Trading Community Classification*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalWhereClause	string	Helps restrict the set of instances in the owner table from which the classification will apply.

Name	Type	Description
ClassCategory	string	Public classifications such as US SIC, NACE, NAICS or custom classes. • Primary Key
ColumnName	string	Column from the OWNER_TABLE that applies to classification. For example, HZ_PARTIES.PARTY_ID.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OwnerTable	string	Table that the classification will apply to. For example, the HZ_PARTIES table. • Primary Key

Trading Community Classification Category

The classification category or scheme that can be used to classify trading community members.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/classificationService/}ClassCategory

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Category Use*
Handled by	*Trading Community Classification*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AllowLeafNodeOnlyFlag	boolean	Y or N indicates whether or not the instances of those entities associated with this particular CLASS_CATEGORY can only be assigned to leaf node class codes of that particular CLASS_CATEGORY.
AllowMultiAssignFlag	boolean	Y or N indicates whether codes under this category can be assigned to an object more than once or not.
ClassCategory	string	Class category that belongs to the group. For example, public classifications such as US SIC, NACE, NAICS or custom classes. • Primary Key
ClassCategoryDescription	string	Description of the classification category.
ClassCategoryMeaning	string	Descriptive name for the classification category.
ClassCategoryUse	*Trading Community Category Use*	The purpose for which the classification category will be used.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.

Name	Type	Description
LastUpdatedBy	string	The user who last updated the record.
LkupTypeOwnerId	long	Identifies the owner of the class category.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.

Trading Community Customer Account

A financial arrangement that a person or organization has with deploying company to buy products and services. For example, John buys an account at Amazon and Dell buys an account at Oracle.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/customerAccountService/applicationModule/}CustomerAccountService

Service WSDL URL: https://servername/crmService/CustomerAccountService?WSDL

getCustomerAccount

The Get operation for the trading community customer account SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
customerAccountId	long	The unique identifier of the account created for a party.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/customerAccountService/}CustomerAccountRes	The trading community customer account SDO that matches the inbound key attributes.

createCustomerAccount

The Create operation for the trading community customer account SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
customerAccount	*Trading Community Customer Billing Account*	The Trading Community Customer Account SDO to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/customerAccountService/}CustomerAccountRes	The result of the operation that includes the successfully created trading community customer account SDO and a list of warning or information messages.

updateCustomerAccount

The Update operation for the trading community customer account SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
customerAccount	*Trading Community Customer Billing Account*	The Trading Community Customer Account SDO to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/customerAccountService/}CustomerAccountRes	The result of the operation that includes the successfully updated trading community customer account SDO and a list of warning or information messages.

deleteCustomerAccount

The Delete operation for the trading community customer account SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
customerAccount	*Trading Community Customer Billing Account*	The Trading Community Customer Account SDO to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warning or information messages encountered when the object was deleted.

mergeCustomerAccount

The Merge operation for the trading community customer account SDO. It performs an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
customerAccount	*Trading Community Customer Billing Account*	The Trading Community Customer Account SDO to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/customerAccountService/}CustomerAccountRes	The result of the operation that includes the successfully merged trading community customer account SDO and a list of warning or information messages.

findCustomerAccount

The Find operation for the trading community customer account SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Trading Community Customer Billing Account*	The result of the operation that includes a list of trading community customer account SDO that satisfy the inbound criteria and any warning or information messages.

getCustomerAccountByOriginalSystemReference

The Get operation for trading community customer account filtered by the source system reference.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindOrigSystem	string	The unique code of the original system.
bindOrigSystemReference	string	The unique identifier of the original system reference.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/customerAccountService/}CustomerAccountRes	The result of the operation that includes a list of Trading Community Classification Category for the given the source system reference that are successfully processed and any warning or information messages.

processCustomerAccount

The Bulk load operation for the trading community customer account SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what actions were performed, such as Create, Update, Merge, or Delete.
customerAccount	*Trading Community Customer Billing Account*	A list of trading community customer account SDOs to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound operation contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Trading Community Customer Billing Account*	The result of the operation that includes a list of trading community customer account SDO that are successfully processed and any warning or information messages.

processCSCustomerAccount

An operation to apply the changes back to the data source for the trading community customer account SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object used to represent the changes that were made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound operation contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The result of the operation that includes a list of created/updated data objects, and all warning and informational messages.

getCustomerAccountSiteUseByKey

The Get operation for trading community customer account site use.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
siteUseId	long	The unique identifier of the site.

Response Payload

Element Name	Type	Description
result	*Trading Community Customer Account Site Use*	The trading community customer account site use that matches the inbound key attributes.

findCustomerAccountSiteUse

The Find operation for trading community customer account site use.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Trading Community Customer Account Site Use*	A list of trading community customer account sites that satisfy the inbound criteria.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.

Element Name	Type	Description
localeName	string	The locale used when evaluating the locale-based user interface hints. The localeName is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in the ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and The Delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getCustomerAccountSiteUseByKey	HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	View Customer Account	Allows the viewing of customer account information.
getCustomerAccount	HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	View Customer Account	Allows the viewing of customer account information.
findCustomerAccountSiteUse	HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	View Customer Account	Allows the viewing of customer account information.
findCustomerAccount	HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	View Customer Account	Allows the viewing of customer account information.
createCustomerAccount	HZ_ENTER_CUSTOMER_ACCOUNT_PRIV	Enter Customer Account	Allows the update of customer account information. If assigning, also assign the ability to view the customer account.
processCustomerAccount	HZ_UPDATE_CUSTOMER_ACCOUNT_PRIV	Update Customer Account	Allows the update of customer account information. If assigning, also assign the ability to view the customer account.
processCustomerAccount	HZ_ENTER_CUSTOMER_ACCOUNT_PRIV	Enter Customer Account	Allows the update of customer account information. If assigning, also assign the ability to view the customer account.
getCustomerAccountByOriginalSyst	HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	View Customer Account	Allows the viewing of customer account information.
processCSCustomerAccount	HZ_UPDATE_CUSTOMER_ACCOUNT_PRIV	Update Customer Account	Allows the update of customer account information. If assigning, also assign the ability to view the customer account.
processCSCustomerAccount	HZ_ENTER_CUSTOMER_ACCOUNT_PRIV	Enter Customer Account	Allows the update of customer account information. If assigning, also assign the ability to view the customer account.
deleteCustomerAccount	HZ_REMOVE_CUSTOMER_ACCOUNT_PRIV	Remove Customer Account	Allows the removal of customer accounts. If assigning, also assign

Operation Name	Privilege Code	Privilege Name	Privilege Description
			the ability to view the customer account.
mergeCustomerAccount	HZ_UPDATE_CUSTOMER_ACCOUNT_PRIV	Update Customer Account	Allows the update of customer account information. If assigning, also assign the ability to view the customer account.
mergeCustomerAccount	HZ_ENTER_CUSTOMER_ACCOUNT_PRIV	Enter Customer Account	Allows the update of customer account information. If assigning, also assign the ability to view the customer account.
updateCustomerAccount	HZ_UPDATE_CUSTOMER_ACCOUNT_PRIV	Update Customer Account	Allows the update of customer account information. If assigning, also assign the ability to view the customer account.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_UPDATE_CUSTOMER_ACCOUNT_PRIV	ORA_AR_CUSTOMER_MAINTENANCE_SEGREGATED_DUTY_CRM	Customer Maintenance Segregated	Maintains customer related data except the creation and management of customers.
HZ_UPDATE_CUSTOMER_ACCOUNT_PRIV	ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Master Data Management Application Administrator	Administers the installation and maintenance of customer data management application and foundation model.

HZ_REMOVE_CUSTOMER_ACCOUNT_PRIV	ORA_AR_CUSTOMER_MAINTENANCE_DUTY_CRM	Customer Maintenance	Defines and maintains Receivables attributes of customer accounts and customer account sites.
HZ_REMOVE_CUSTOMER_ACCOUNT_PRIV	ORA_ZCH_DATA_STEWARD_MANAGER_JOB	Data Steward Manager	Manages customer data stewards and has additional privileges including assigning requests.
HZ_REMOVE_CUSTOMER_ACCOUNT_PRIV	ORA_ZCH_TRADING_COMMUNITY_DATA_STEWARD_JOB	Customer Data Steward	Performs customer data management activities including data import, cleansing, duplicate identification, and duplicate resolution.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_PJF_PROJECT_ADMINISTRATOR_JOB	Project Administrator	Assists the project manager with the administrative functions of a project, particularly the functions related to collecting and entering information into the project application.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_OKC_ALL_BUSINESS_UNITS_CONTRACT_INQUIRY_DUTY_FOR_CRM_CRM	Contract View Access Across All Contracts for CRM	Views all contracts across an enterprise.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_DOO_ORCHESTRATION_ORDER_MONITORING_DUTY_CRM	Orchestration Order Monitoring	Allows access to tasks mainly related to monitoring fulfillment processing and taking action on orchestration orders.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_RCV_RECEIVING_ADMINISTRATION_DUTY_CRM	Receiving Administration	Configures receiving parameters to specify default receiving options for an inventory organization.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	Marketing Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal marketing users. Additional duties include viewing of appointments, interactions, and customer contacts.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Master Data Management Application Administrator	Administers the installation and maintenance of customer data management application and foundation model.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_ATC_SELF_SERVICE_SUBSCRIPTION_ACCOUNT_MANAGEMENT	Self-Service Subscription Account Management	Customer management of subscription services quoted, ordered, and provisioned. Manage customer profiles for service delivery and billing.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_OSS_SUBSCRIPTION_SEARCH_VIEW_DUTY	Subscription Search and View Access	Searches and views subscriptions for the assigned business units.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_ATC_SUBSCRIPTION_ACCOUNT_ADMIN_DUTY	Subscription Account Administration	Has full administration ability to manage Subscription and Customer Accounts and Profiles.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_PJF_PROJECT_ACCOUNTANT_JOB	Project Accountant	Manages and analyzes the collection, recording, and allocation of project costs and revenue. Ensures accurate project profit and loss calculations. Analyzes budgets and actual costs. Communicates financial performance to program managers and project executives.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_RCV_SHIPMENT_MANAGEMENT_AS_SUPPLIER_DUTY_CRM	Shipment Management Supplier-Facing	Manages inbound shipments, creates and uploads advance shipment notices and advance shipment billing notices.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_FUN_INTERCO_TRANSACTION_VIEW_DUTY_CRM	Intercompany Transaction Inquiry	Views intercompany transactions and batches.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_MSP_PLANNING_ADMINISTRATION_DUTY_CRM	Planning Administration	Configures and manages planning set up, data collection and order promising server processes.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_ZCH_TRADING_COMMUNITY_DATA_STEWARD_JOB	Customer Data Steward	Performs customer data management activities including data import, cleansing, duplicate identification, and duplicate resolution.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_RCV_RECEIVING_AGENT_JOB	Receiving Agent	Performs receiving activities such as receiving expected shipment lines, inspecting received lines, correcting received lines, and managing returns.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_OKC_ALL_BUSINESS_UNITS_CONTRACT_MANAGEMENT_DUTY_CRM	Contract Management Across All Contracts Web Service	Permits an application using the CRM application ID to manage contracts across all business units.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_DOO_ORCHESTRATION_ORDER_MANAGEMENT_DUTY_CRM	Orchestration Order Management	Allows access to all tasks related to scheduling, holds management, monitoring, workbench interaction, and overall processing of orchestration orders.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_ATC_SELF_SERVICE_SUBSCRIPTION_ACCOUNT_VIEWER	Self-Service Subscription Account Viewer	Customer view of subscription services quoted, ordered, and provisioned. View customer profiles for service delivery and billing.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_OSS_SUBSCRIPTION_SEARCH_VIEW_EXTERNAL_DUTY	Subscription Search and View Access External	Searches and views subscriptions for the assigned business units. Duty role for a consuming team. This duty role does not have access to work area.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_OKC_CONTRACT_SEARCH_VIEW_TEAM_DUTY_CRM	Contract Search and View Access Team	Searches and views contracts for the assigned business units by honoring team access.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_PJF_PROJECT_MANAGEMENT_DUTY_ABSTRACT	Project Management Duty	Manages individual projects and is not assigned the project manager job role. Performs web service operations to create and update projects, tasks, resources, and associated attributes. Manages the integration between Oracle Fusion Project Foundation and Oracle Fusion Project Management.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_FUN_CUSTOMER_ACCOUNT_INQUIRY_DUTY_CRM	Customer Account Inquiry	View customer account details.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_CST_COST_ACCOUNTANT_JOB	Cost Accountant	Performs cost and management accounting functions.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_OKC_GRANT_CONTRACT_SEARCH_VIEW_DUTY_CRM	Grant Contract Search and View Access	Searches and views grant contracts for the assigned business units.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_IEX_COLLECTIONS_AGENT_DUTY_CRM	Collections Management Basic	Allows user to perform activities in Collections.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_FUN_INTERCO_TRANSACTION_ENTRY_DUTY_CRM	Intercompany Transactions Entry	Create, update, approve, reject intercompany transactions and batches.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_DOS_SUPPLY_CHAIN_OPERATIONS_MANAGER_JOB	Supply Chain Operations Manager	Individual responsible for coordinating and monitoring the activities associated with executing and managing supply orders.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_OKC_BUSINESS_PRACTICES_DIRECTOR_JOB	Business Practices Director	Defines and manages sales or procurement contract policies and standards. Ensures all corporate contracts conform to established guidelines and best practices.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_ATC_SUBSCRIPTION_ACCOUNT_VIEWER	Subscription Account Viewer	Has the same scope of visibility as the Subscription Account Management duty, but can only view or read data.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_OKC_CONTRACT_SEARCH_VIEW_DUTY_CRM	Contract Search and View Access	Searches and views contracts for the assigned business units.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_RCV_RECEIVING_MANAGEMENT_DUTY_CRM	Receiving Management	Manages outstanding work in the warehouse and resolves exceptions.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_ATC_SUBSCRIPTION_ACCOUNT_MANAGEMENT	Subscription Account Management	Manages subscription services quoted, ordered, and provisioned to customers. Maintains customer profiles for service delivery and billing.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_RCV_PUT_AWAY_MANAGEMENT_DUTY_CRM	Put Away Management	Performs put away of received lines into inventory or receiving.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_ZCH_DATA_STEWARD_MANAGER_JOB	Data Steward Manager	Manages customer data stewards and has additional privileges including assigning requests.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_FOM_ORDER_ENTRY_SPECIALIST_JOB	Order Entry Specialist	Individual who is responsible for creating new orders, updating existing orders, and creating order returns.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_PJF_GRANTS_DEPARTMENT_ADMINISTRATOR_JOB	Grants Department Administrator	Assists the principal investigator with the administrative functions of an award and its related projects, particularly with data collection and data entry tasks for one or more departments within the enterprise.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_OKC_ALL_BUSINESS_UNITS_CONTRACT_INQUIRY_DUTY_CRM	Contract View Access Across All Contracts	Views all contracts across an enterprise.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_DOS_SUPPLY_REQUESTS_MANAGEMENT_DUTY_CRM	Supply Requests Management	Allows to create, view, manage supply requests and supply exceptions.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_ZCM_SALES_PARTY_REVIEW_DUTY	Sales Party Review	Allows resources read-only access to sales parties information such as manage customer work area and all sales party duties. Additional duties include view access to other customer and sales lead features.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_DOO_ORCHESTRATION_ORDER_SCHEDULING_DUTY_CRM	Orchestration Order Scheduling	Allows access to tasks mainly related to scheduling actions on orchestration orders.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_PJF_PRINCIPAL_INVESTIGATOR_JOB	Principal Investigator	Controls and monitors the technical direction and academic quality of research projects such as laboratory studies or clinical trials. Ensures that projects comply with the terms, conditions, and policies defined by the sponsor and the institution. Owns ultimate responsibility for the management of the sponsored research award, especially in cases where funding is obtained from federal agencies such as the NIH or NSF.
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_PJF_PROJECT_BILLING_SPECIALIST_JOB	Project Billing Specialist	Job role that supports the project billing related requirements in a business
HZ_VIEW_CUSTOMER_ACCOUNT_PRIV	ORA_FOS_SUPPLY_CHAIN_CONTROLLER_JOB	Supply Chain Controller	Individual responsible for providing operational controller leadership and guidance to both Finance and Supply Chain Operations leaders

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			in complex, global supply chain organizations. Responsibilities include implementation of effective global supply chain procedures and controls to ensure compliance with the legal inter-company policies the company has put in place, while ensuring goods are flowing to the customer in the most efficient manner possible.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OldOrigSystemReference	string	The old source system reference that is being replaced.

Name	Type	Description
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OrigSystemReferenceId	long	The unique identifier for original system reference. • Primary Key
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
SourceSystemRefInformation	*Trading Community Original System Mapping Identifier Additional Information*	The source system reference information.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Trading Community Customer Account Relationship

The relationship between two customer accounts. For example, one account could be the Bill To account for another.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/customerAccountService/}CustomerAccountRelationship

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Customer Account Relationship Additional Information*
Contained by	*Trading Community Customer Billing Account*
Handled by	*Trading Community Customer Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BillToFlag	boolean	The Bill-To customer account.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CustAcctRelationshipInformation	*Trading Community Customer Account Relationship Additional Information*	The customer account relationship information.
CustomerAccountId	long	The identifier of the first customer account in a relationship. Foreign key to the HZ_CUST_ACCOUNTS table.
CustomerAccountRelateId	long	The customer account relationship identifier. This attribute is the primary key. • Primary Key
CustomerReciprocalFlag	boolean	Indicates if this relationship is reciprocal or not. If the value is True, then the relationship is reciprocal.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
RelatedCustomerAccountId	long	The identifier of the second customer account in a relationship. Foreign key to the HZ_CUST_ACCOUNTS_ALL table.
RelationshipType	string	The revenue accounting code for the RELATIONSHIP_TYPE column in the AR_LOOKUPS table.
RequestId	long	A system-generated read-only attribute used by the application framework.
SetCode	string	The reference data set for the customer account relationship.
SetId	long	Identifies a set of reference data shared across business units and other entities. Also known as Reference Data Sets, they are used to filter reference data in transactional UIs.
ShipToFlag	boolean	The Ship-To customer account.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Trading Community Customer Account Relationship Additional Information

The relationship between two customer accounts. For example, one account could be the ship-to account for another.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/custAccountRel/}CustAcctRelationshpInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Customer Account Relationship*
Handled by	*Trading Community Customer Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CustAcctRelateId	long	The customer account relationship identifier. This attribute is the primary key. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Customer Account Additional Information

The customer account or customer billing account. For example, account 12345 is a customer account for ABC Corporation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/custAccount/}CustAcctInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Customer Billing Account*
Handled by	*Trading Community Customer Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CustAccountId	long	The unique identifier for the account created for a party. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Customer Account Site

An address associated with a customer account.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/customerAccountService/}CustomerAccountSite

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Trading Community Customer Account Site Use*
Contains	*Trading Community Customer Account Site Additional Information*
Contains	*Trading Community Customer Billing Account Site Global Descriptive Flexfield SDO*
Contains	*Trading Community Customer Account or Site Role*
Contained by	*Trading Community Customer Billing Account*
Handled by	*Trading Community Customer Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BillToIndicator	string	Indicates if this is a Bill-To site. Y for a Bill-To site, P for the primary Bill-To site, and N for a site that is not a Bill-To site.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CustAccountSiteGdf	*Trading Community Customer Billing Account Site Global Descriptive Flexfield SDO*	Customer Account Address Regional Information
CustAcctSiteInformation	*Trading Community Customer Account Site Additional Information*	The customer account address information.
CustomerAccountContact	*Trading Community Customer Account or Site Role*	The customer account contact associated with the account address.
CustomerAccountId	long	The identifier for a customer account. Foreign key to the HZ_CUST_ACCOUNTS table.
CustomerAccountSiteId	long	The customer site identifier. • Primary Key
CustomerAccountSiteUse	*Trading Community Customer Account Site Use*	The customer account address use associated with the account address.
CustomerCategoryCode	string	The user-definable category. The lookup type is ADDRESS_CATEGORY.
EceTpLocationCode	string	Stores the EDI location code. It should be unique for a customer. The column accepts free-form text.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
KeyAccountFlag	boolean	The key account for sales representatives.
Language	string	The operating language for account sites.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MarketIndicator	string	Indicates if this is a marketing site. Y for a Marketing site, P for the primary Marketing site, and N for a site that is not a Marketing site.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
RequestId	long	A system-generated read-only attribute used by the application framework.
SetCode	string	The unique code to identify the reference data set for the account address.
SetId	long	Identifies a set of reference data shared across business units and other entities. Also known as Reference Data Sets, they are used to filter reference data in transactional UIs.
ShipToIndicator	string	Indicates if this is a Ship-To site. Y for a Ship-To site, P for the primary Ship-To site, and N for a site that is not a Ship-To site.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TpHeaderId	long	The trading partner header identifier.
TranslatedCustomerName	string	The customer name in the language used at the account site.

Trading Community Customer Account Site Additional Information

An address associated with a customer account.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/custAccountSite/}CustAcctSiteInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Customer Account Site*
Handled by	*Trading Community Customer Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CustAcctSiteId	long	The customer site identifier. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Customer Account Site Use

The purpose or use of a customer account site.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/customerAccountService/}CustomerAccountSiteUse

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Customer Account Site Use Additional Information*
Contains	*Source System Reference*
Contained by	*Trading Community Customer Account Site*
Handled by	*Trading Community Customer Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BillToSiteUseId	long	The Bill-To site use identifier.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CustAcctSiteUseInformation	*Trading Community Customer Account Site Use Additional Information*	The customer account address use information.
CustomerAccountSiteId	long	The identifier for the customer account site. Foreign key to the HZ_CUST_ACCT_SITES_ALL table.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FinchrgReceivablesTrxId	long	Identifies receivables activity that are used for finance charges.
GSAIndicator	string	Indicates if this is a US federal agency supported by the General Services

Name	Type	Description
		Administration (GSA). If the value is True, then this is an organization served by the GSA.
LastAccrueChargeDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The last date that accrued finance charges were computed for this site.
LastUnaccrueChargeDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The last date that unaccrued finance charges were computed for this site.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Location	string	The site use identifier.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PaymentTermId	long	The payment term identifier.
PrimaryFlag	boolean	Indicates if this site is the primary site for this customer account. If the value is True, then this site is the primary customer contact site.
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The Standard Industry Classification (SIC) code.
SecondLastAccrueChargeDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The next-to-last date that accrued finance charges were computed for this site.
SecondLastUnaccrueChrgDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The next-to-last date that unaccrued finance charges were computed for this site.
SetId	long	Identifies a set of reference data shared across business units and other entities. Also known as reference data sets, they are used to filter reference data in transactional UIs.

Name	Type	Description
SiteUseCode	string	The business purpose assigned to customer site account, such as Bill-To, Market, and Statements.
SiteUseId	long	The site use identifier. • Primary Key
SortPriority	int	The sort priority information.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TaxClassification	string	Classifies Bill-To site to tax group codes. Foreign key to the AR_LOOKUPS table (AR_TAX_CLASSIFICATION) used in AR_VAT_TAX (TAX_CLASSIFICATION) indexes.
TaxCode	string	The tax code associated with this site.
TaxHeaderLevelFlag	boolean	Used by Oracle Sales Compensation.
TaxReference	string	The taxpayer identification number.
TaxRoundingRule	string	The tax rounding rule information.
TerritoryId	long	The territory identifier.

Trading Community Customer Account Site Use Additional Information

The purpose or use associated with a customer account site.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/custAccountSiteUse/}CustAcctSiteUseInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Customer Account Site Use*
Handled by	*Trading Community Customer Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
SiteUseId	long	The site use identifier. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Customer Account or Site Role

The contact person for a customer account.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/customerAccountService/}CustomerAccountContact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Customer Account or Site Role Additional Information*
Contains	*Source System Reference*
Contains	*Trading Community Customer Account or Site Role Responsibility*
Contained by	*Trading Community Customer Account Site*
Contained by	*Trading Community Customer Billing Account*

Relationship Type	Object or Service
Handled by	*Trading Community Customer Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPersonId	long	Contains denormalized value based on PartyId and Relationship_Id.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CustAcctContactInformation	*Trading Community Customer Account or Site Role Additional Information*	The customer account contact information.
CustomerAccountContactRole	*Trading Community Customer Account or Site Role Responsibility*	The role or responsibility of the customer account contact.
CustomerAccountId	long	The customer account identifier. Foreign key to the HZ_CUST_ACCOUNTS table.
CustomerAccountRoleId	long	The unique identifier for the role played by the party in the customer account. • Primary Key
CustomerAccountSiteId	long	The customer account site identifier. Foreign key to the HZ_CUST_ACCT_SITES_ALL table.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OrigSystemReference	string	The identifier for the record from the original system.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PrimaryFlag	boolean	Indicates if this party occupies the primary role for this account. Y for a party in the primary role for this account, N for all other parties.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
RoleType	string	The lookup for type of role a party performs.
SourceCode	string	The promotion that was used to make the party a customer.
Status	string	The status of the record.

Trading Community Customer Account or Site Role Additional Information

The contact person associated with a customer account.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/custAccountContact/}CustAcctContactInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Customer Account or Site Role*
Handled by	*Trading Community Customer Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CustAccountRoleId	long	The unique identifier for the role played by the party in the customer account. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Customer Account or Site Role Responsibility

The customer account contact person's role or responsibility information. For example a contact person could be the shipping contact for an account.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/customerAccountService/}CustomerAccountContactRole

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Customer Account or Site Role Responsibility Additional Information*
Contained by	*Trading Community Customer Account or Site Role*
Handled by	*Trading Community Customer Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CustAcctContactRoleInformation	*Trading Community Customer Account or Site Role Responsibility Additional Information*	The customer account contact role information.
CustomerAccountRoleId	long	Foreign key to the HZ_CUST_ACCOUNT_ROLES table.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OrigSystemReference	string	The identifier for the record from the original system.
PrimaryFlag	boolean	Indicates if this is the primary role responsibility of a party in an account. Y for a primary role, N for a role that is not a primary responsibility.
RequestId	long	A system-generated read-only attribute used by the application framework.
ResponsibilityId	long	The identifier of the responsibility for the party related to the role that the party plays in the account. • Primary Key
ResponsibilityType	string	The lookup for responsibility type.
StatusCode	string	The pre-defined code used to indicate the status.

Trading Community Customer Account or Site Role Responsibility Additional Information

The customer account contact person's role or responsibility information. For example a contact person could be the shipping contact for an account.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/custAccountContactRole/}CustAcctContactRoleInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Customer Account or Site Role Responsibility*
Handled by	*Trading Community Customer Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ResponsibilityId	long	The identifier of the responsibility for the party related to the role that the party plays in the account. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Customer Billing Account

The customer account or billing account associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/customerAccountService/}CustomerAccount

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Customer Account Site*

Relationship Type	Object or Service
Contains	*Trading Community Customer Account Relationship*
Contains	*Trading Community Customer Billing Account Global Descriptive Flexfield Object*
Contains	*Source System Reference*
Contains	*Trading Community Customer Account Additional Information*
Contains	*Trading Community Customer Account or Site Role*
Handled by	*Trading Community Customer Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccountEstablishedDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the customer account was originally established through either an Oracle Application or a legacy system.
AccountName	string	The description chosen by external party (but can be entered internally on behalf on the customer).
AccountNumber	string	The account number.
AccountTerminationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the customer account was originally terminated through either an Oracle Application or a legacy system.
ArrivalsetsIncludeLinesFlag	boolean	Indicates if lines include arrival sets. Y for lines included on arrival sets, N for lines not automatically included in arrival sets.
AutopayFlag	boolean	Indicates Autopay.
Comments	string	The comments for the record.
CoterminateDayMonth	string	Identifies the date when services ordered by the customer will end. Values for this column will take the form DD-MON.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CustAccountGdf	*Trading Community Customer Billing Account Global Descriptive Flexfield Object*	Customer Account Regional Information
CustAcctInformation	*Trading Community Customer Account Additional Information*	The customer account information.
CustomerAccountContact	*Trading Community Customer Account or Site Role*	The customer account contact information.
CustomerAccountId	long	The unique identifier for the account created for a party. Primary Key for the table. • Primary Key
CustomerAccountRelationship	*Trading Community Customer Account Relationship*	The customer account relationship information.
CustomerAccountSite	*Trading Community Customer Account Site*	The customer account address information.
CustomerClassCode	string	The customer class identifier. For example, an account created for a reseller or educational customers would have a customer_class_code as reseller or education.
CustomerType	string	The receivables lookup code for the CUSTOMER_TYPE attribute. I for internal customers, R for revenue generating external customers.
DateTypePreference	string	The preference for ship or arrival dates.
DepositRefundMethod	string	The refund method.
HeldBillExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The held bill expiration date.
HoldBillFlag	boolean	Indicates if the bill receivable should be held or not. If the value is True, then the bill receivables should be held.
LastBatchId	long	The last active batch.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
NpaNumber	string	Identifies an account with a Number Plan Area (NPA) used in telecommunications.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party.
RequestId	long	A system-generated read-only attribute used by the application framework.
SellingPartyId	long	The identifier of the party entering a business relationship as a seller. A selling party can be an individual or an organization. The Selling Party represents the external facing organization with which the customer is doing business, and is not necessarily a legal entity or an operating unit. Its usage within the ebusiness suite will be phased: Phase 1:Products can join to HZ_PARTIES using the SELLING_PARTY_ID to retrieve the PARTY_NAME for use in a UI. e.g. a call center application may run on behalf of several internal organizations - displaying the selling party will allow the user to see context for the customer Phase 2:Products can use SELLING_PARTY_ID as a filtering mechanism. e.g. a profile controls the selling_party_id that a user has access to. The UI would then show accounts matching this party.
SourceCode	string	The promotion that was used to make the party a customer.
Status	string	The status of the record.

Name	Type	Description
StatusUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The last status update date.
TaxCode	string	The tax code for the customer.
TaxHeaderLevelFlag	boolean	Indicates if item is tax header or a line item. Y for records that are headers for tax purposes, N for records that are lines.
TaxRoundingRule	string	The tax amount rounding rule.

Trading Community Customer Billing Account Global Descriptive Flexfield Object

A customer account or billing account global descriptive flexfield object.

QName: {http://xmlns.oracle.com/apps/flex/cdm/foundation/parties/custAccountGdf/}CustAccountGdf

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Customer Billing Account*
Handled by	*Trading Community Customer Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CustAccountId	long	Unique identifier for the account created for a Party. Primary Key for the table • Primary Key
_FLEX_NumOfSegments	int	Number of segments for customer account global descriptive flexfield object

Name	Type	Description
__FLEX_Context	string	Context for customer account global descriptive flexfield object
__FLEX_Context_DisplayValue	string	Context display value for customer account global descriptive flexfield object.

Trading Community Customer Billing Account Site Global Descriptive Flexfield SDO

A customer account or billing account site global descriptive flexfield object.

QName: {http://xmlns.oracle.com/apps/flex/cdm/foundation/parties/custAccountSiteGdf/}CustAccountSiteGdf

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Customer Account Site*
Handled by	*Trading Community Customer Account*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CustAcctSiteId	long	Customer site identifier. • Primary Key
_FLEX_NumOfSegments	int	Number of segments for customer account site global descriptive flexfield object
__FLEX_Context	string	Context for customer account site global descriptive flexfield object
__FLEX_Context_DisplayValue	string	Context display value for customer account site global descriptive flexfield object.

Trading Community Original System Mapping Identifier Additional Information

The unique identifier for the trading community party, associated with the address, from the external source system reference.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/sourceSystemRef/}SourceSystemRefInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Source System Reference*
Handled by	*Sales Reference Customer*
Handled by	*Trading Community Location*
Handled by	*Trading Community Customer Account*
Handled by	*Sales Party*
Handled by	*Company and User Registration*

getGroup

The Get operation for the trading community group details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyId	long	The unique identifier of the party.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/groupService/}GroupResult	The trading community group details that matches the inbound key attributes.

createGroup

The Create operation for the trading community group details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
groupParty	*Household*	The trading community group details to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/groupService/}GroupResult	The result of the operation that includes the successfully created trading community groups details and a list of warning or information messages.

updateGroup

The Update operation for the trading community group details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
groupParty	*Household*	The trading community group details to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/groupService/}GroupResult	The result of the operation that includes the successfully updated trading community group details and a list of warning or information messages.

deleteGroup

The Delete operation for the trading community group details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
groupParty	*Household*	The trading community group details to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warning or information messages encountered when the object was deleted.

mergeGroup

The Merge operation for the trading community group details. It performs an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
groupParty	*Household*	The trading community group details to be merged.

Element Name	Type	Description

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/groupService/}GroupResult	The result of the operation that includes the successfully merged trading community group details and a list of warning or information messages.

findGroup

The Find operation for the trading community group details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Household*	The result of the operation that includes a list of trading community group details that satisfy the inbound criteria and any warning or information messages.

getGroupsFilteredByPartyUsageCode

The Get operation for trading community group filtered by the party usage.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindPartyUsageCode	string	The code identifying the party usage used to filter a group.
bindEffectivedate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The effective date to filter a group.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/groupService/}GroupResult	The trading community group details that matches the inbound party usage code.

getGroupByOriginalSystemReference

The Get operation for trading community Group filtered by the source system reference.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindOrigSystem	string	The unique code identifying the original system.
bindOrigSystemReference	string	The unique identifier of the original system reference.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/groupService/}GroupResult	The trading community group details that are filtered by the source system reference provided.

getGroupsFilteredByPartyUsageFilterRuleCode

The Get operation for trading community group filtered by the party usage filter rule.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindPartyUsageFrCode	string	The party usage filter rule used to filter a group.
bindEffectivedate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The effective date to filter a group.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/groupService/}GroupResult	The trading community group details that were filtered by the party usage filter rule provided.

processGroup

The Bulk load operation for the trading community group details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action to perform, such as create, update, merge, or delete.
groupParty	*Household*	The trading community group details to be processed.

Element Name	Type	Description
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk operation behavior, such as whether valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Household*	The result of the operation that includes a list of trading community group details that were successfully processed and any warning or information messages.

processCSGroup

An operation to apply the changes back to the data source for the trading community group details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object to represent the changes.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk operation behavior, such as whether valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The result of the operation that includes a list of created and updated data objects, and all warning and information messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name; an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale used to evaluate the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in the ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for the service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
All Operations	HZ_MANAGE_TRADING_COMMUNITY_GROUP_DETAILS_PRIV	Manage Trading Community Group Details	

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_MANAGE_TRADING_COMMUNITY_GROUP_DETAILS_PRIV	ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Master Data Management Application Administrator	Administers the installation and maintenance of customer data management application and foundation model.
HZ_MANAGE_TRADING_COMMUNITY_GROUP_DETAILS_PRIV	ORA_HZ_RESOURCE_ABSTRACT	Resource	Identifies the person as front office personnel.
HZ_MANAGE_TRADING_COMMUNITY_GROUP_DETAILS_PRIV	ORA_ZCH_DATA_STEWARD_MANAGER_JOB	Data Steward Manager	Manages customer data stewards and has additional privileges including assigning requests.
HZ_MANAGE_TRADING_COMMUNITY_GROUP_DETAILS_PRIV	ORA_ZBS_SALES_ADMINISTRATOR_JOB	Sales Administrator	Manages sales department and personnel. Performs ongoing administrative tasks, corrects erroneous data, and configures the application according to business needs.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_MANAGE_TRADING_COMMUNITY_GROUP_DETAILS_PRIV	ORA_ZCH_TRADING_COMMUNITY_DATA_STEWARD_JOB	Customer Data Steward	Performs customer data management activities including data import, cleansing, duplicate identification, and duplicate resolution.
HZ_MANAGE_TRADING_COMMUNITY_GROUP_DETAILS_PRIV	ORA_ZBS_SALES_VP_JOB	Sales VP	Manages sales managers within the organization. Responsible for account planning, territory and quota management, and managing sales forecasts for the territory.
HZ_MANAGE_TRADING_COMMUNITY_GROUP_DETAILS_PRIV	ORA_ZBS_SALES_REPRESENTATIVE_JOB	Sales Representative	Represents the business to sell its products. Maintains relationships with customers and contacts, builds pipeline, manages leads and opportunities and performs sales forecasting.
HZ_MANAGE_TRADING_COMMUNITY_GROUP_DETAILS_PRIV	ORA_ZBS_SALES_MANAGER_JOB	Sales Manager	Manages salespersons within the organization. Generates revenue within a territory, builds pipeline, manages territory forecasts, and assists salespersons in closing deals.
HZ_MANAGE_TRADING_COMMUNITY_GROUP_DETAILS_PRIV	ORA_ZCM_PARTNER_SALES_PARTY_MANAGEMENT_DUTY	Partner Sales Party Management	Manages creation and maintenance of sales organizations and consumers for partners. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts. This role has limited access to customers and contacts.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_DATA_STEWARD_MANAGER_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_ZBS_SALES_VP_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_ZBS_SALES_MANAGER_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_HZ_RESOURCE_ABSTRACT	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_ZCH_TRADING_COMMUNITY_DATA_STEWARD_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_MKL_CHANNEL_DEAL_REG_MANAGEMENT_DUTY	Channel Deal Registration Management	Reviews, accepts, and rejects deal registrations. Includes the ability to view deal registration details and update certain attributes.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_ZCA_CONSUME_SIGNALS_EVENTS_DUTY	Consume Signals Events	Duty role to consume business events for integration when a new object is created, updated, or deleted.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_AMENDMENT_DUTY_CRM	Contract Amendment	Amends approved contracts. This includes initiating an amendment, reverting the contract to the previous signed version, updating all allowable attributes, and submitting the amendment for approval.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_AUTHORING_DUTY_CRM	Contract Authoring	Authors contracts, including terms and conditions, interactions, and customer account information.
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_OKC_CONTRACT_REQUEST_AUTHORING_DUTY_CRM	Contract Request Authoring	Authors contract request, uploads relevant documents and provides sufficient information to assignee to create contract.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_SEARCH_VIEW_DUTY_CRM	Contract Search and View Access	Searches and views contracts for the assigned business units.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_SETUP_DUTY_CRM	Contract Setup	Contract Setup

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_SVC_CONV_MESSAGE_ADMINISTRATION	Conversation Message Administration	Has complete conversation message management capabilities including create messages, reply to messages, change a reply to ready to send status and delete a message.
ORA_ZBS_SALES_MANAGER_JOB	ORA_SVC_CONV_MESSAGE_MANAGEMENT	Conversation Message Management	Has basic conversation message management capabilities such as create messages and reply to messages. Would not be able to change a reply to ready to send status or delete a message.
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_SVC_CONV_MESSAGE_MANAGEMENT	Conversation Message Management	Has basic conversation message management capabilities such as create messages and reply to messages. Would not be able to change a reply to ready to send status or delete a message.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_CDM_ADMIN_DUTY	Customer Data Management Administration	Administers customer data management.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_SVC_CSS_ADMINISTRATION	Customer Self-Service Administration	Manages the provisioning and approval of self service registration requests

Additional Household Name

An additional name associated with a group. For example, the phonetic name of a group.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/groupService/}AdditionalGroupName

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Household*
Handled by	*Trading Community Group*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OverallPreferredFlag	boolean	Identify the name as preferred name for this party within this name type. Possible values are 'Y' and 'N'. Default is 'N'.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNameId	long	Unique Identifier of Party Name. • Primary Key
PartyNameType	string	The type of party name.
PreferredFlag	boolean	The flag which Identifies the name as preferred name for this party within this name type. Possible values are 'Y' and 'N'. Default is 'N'.

Name	Type	Description
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
TransliterationLang	string	Used to capture the language used for the name.

Additional Identifier

An additional identifier of a trading community member, such as driver's license number or passport number.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}AdditionalPartyId

Relationships

Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Country	string	The name of the country.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
ExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The expiration date for the identifier. It may be NULL, and does not apply to all types of identifiers.
IssueDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date in which the Identifier was issued. It may be NULL and does not apply to all types of identifiers.
IssuingAuthorityName	string	The issuing authority name.
IssuingAuthorityPartyId	long	The unique identifier of the issuing authority.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party.
PartyIdentifierId	long	The unique identifier of the party identifier. • Primary Key
PartyIdentifierType	string	Indicates the type for the current identifier. The list of accepted values are defined in the lookup TYPE_CODE of HZ_NAME_AND_ID_TYPE_B. The party type should be consistent with the party type that the PARTY_IDENTIFIER_TYPE can be applied to.
PartyIdentifierType1	string	Indicates the type for the current identifier. The list of accepted values are defined in the lookup TYPE_CODE of HZ_NAME_AND_ID_TYPE_B. The party type should be consistent with the party type that the PARTY_IDENTIFIER_TYPE can be applied to.
PartyIdentifierValue	string	The value of the party identifier.
PartyName	string	The name of the party.
RequestId	long	A system-generated read-only attribute used by the application framework.
StateProvince	string	The province of the address.
StatusCode	string	The pre-defined code used to indicate the status.

Address

An address of a trading community member, such as Oracle Corporation is located at 500 Oracle Parkway, Redwood Shores, CA.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartySite

The following table describes attributes in the service data object.

Name	Type	Description
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AddressExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the location is no longer valid.
AddressLinesPhonetic	string	The phonetic or Kana representation of the Kanji address lines that are used in Japan.
AddressStyle	string	Style of the address.
Addressee	string	The information of the addressee.
City	string	The name of the city.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.

Name	Type	Description
ContactPreferenceExistFlag	boolean	Indicator to specify if the contact is primary contact for the party.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
Country	string	The name of the country.
Country1	string	The attribute country1 is not used.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DateValidated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address was last validated.
DoNotValidateFlag	boolean	Indicator to specify that a particular location is not eligible for address validation irrespective of the current validation.
Eft	*Electronic File Transfer*	The electronic file transfer information for the party.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.

Name	Type	Description
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
FormattedAddress	string	The formatted read-only address.
FormattedLocaleAddress	string	The formatted read-only local address.
FormattedMultilineAddress	string	The formatted multi line address of the party site.
GlobalLocationNumber	string	The global location number that uniquely identifies each location in a trading partners enterprise.
HouseType	string	Indicates the building type.
IdentifyingAddressFlag	boolean	Indicator to specify the identifying address for the party. Y stands for the indentifying site and N stands for sites that are not the indentifying site.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
Language	string	The operating language for the party site.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Latitude	decimal	The latitude of the party address.
LocationDirections	string	Directions to the location.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
LocationLanguage	string	The operating language for the locations.

Name	Type	Description
Longitude	decimal	The longitude of the party address.
Mailstop	string	A user-defined code to indicate a mail drop point within the organization.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was last queried.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary address of the contact irrespective of the context. Y stands for primary address and N stands for all others.
PartyId	long	The unique identifier of the contact party.
PartyNameDba	string	Stores the doing-business_as (DBA) party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameDivision	string	Stores the division party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameLegal	string	Stores the legal party name for a party site. This column is used to store FSIO related legal party name attribute.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
PartySiteInformation	*Trading Community Address Additional Information*	The party address information.
PartySiteName	string	The user-defined name for the site.

Name	Type	Description
PartySiteNumber	string	The party site number of the address.
PartySiteType	string	Stores the party site type and is based on the lookup. Currently this is either null or one-time.
PartySiteUse	*Trading Community Address Purpose*	The information of the party address usage.
PartyUsageCode	string	The usage context of a party's contact point.
Phone	*Phone*	The phone information for the entity.
Position	string	The primary direction such as north or east that is used to access the location.
PostalCode	string	The postal code element of the address.
PostalPlus4Code	string	The four digit extension to the United States postal ZIP code.
Province	string	The name of the province.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
State	string	The name of the state.
Status	string	The status of the record.
Telex	*Telex*	The Telex information associated with the party.
UsageCode	string	The usage code is not used.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
ValidationStatusCode	string	The standardized status code describing the results of the validation.

Name	Type	Description
Web	*Web*	The web information related to the record.

Certification

The certification information of a trading community member, such as a full ISO 9001 registered firm.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}Certification

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CertificationId	long	The unique identifier for certification. • Primary Key
CertificationName	string	The name of the certification such as ISO9000 and GMP001.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrentStatus	string	The name for the status of the certification. For example, applied for, granted, or expired.
ExpiresOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the certification expires.
Grade	string	The level or grade of certification provided by the ISSUED_BY_AUTHORITY. For example, founding member, gold, fully certified, and partially certified.
IssuedByAuthority	string	The name of the certifying authority.
IssuedOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the certification was issued.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
PartyId	long	The unique identifier of the contact party.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Name	Type	Description

Classification Assignment

The classification code assigned to a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}CodeAssignment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*
Contained by	*Sales Competitor*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Reference*
Handled by	*Sales Reference Customer*
Handled by	*Company and User Registration*
Handled by	*Sales Party*
Handled by	*Sales Competitor Service*
Handled by	*Trading Community Person Information*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*

Relationship Type	Object or Service
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party Territory service*
Handled by	*Sales Party Resource Service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ClassCategory	string	The name of the classification category.
ClassCode	string	The code of the classification.
CodeAssignmentId	long	The unique identifier of the assignment of an industrial classification code to an object. It is primary key and system generated. • Primary Key
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.

Name	Type	Description
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableKey1	string	The first column of the alphanumeric or multi-part foreign key.
OwnerTableKey2	string	The second column of the alphanumeric or multi-part foreign key.
OwnerTableKey3	string	The third column of the alphanumeric or multi-part foreign key.
OwnerTableKey4	string	The fourth column of the alphanumeric or multi-part foreign key.
OwnerTableKey5	string	The fifth column of the alphanumeric or multi-part foreign key.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PrimaryFlag	boolean	Indicator that specifies if this is the primary class code of a class category for the organization. Y stands for the primary class code and N stands for all others.
Rank	decimal	Ranks classes if multiple classes are assigned to a party.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.

Name	Type	Description
Status	string	The status of the record.

Contact Language

The languages known information of a trading community member. For example, Mary Smith can speak both Spanish and English but can only read and write English.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PersonLanguage

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Handled by	*Trading Community Group*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.

Name	Type	Description
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LanguageName	string	The standard name for a language. For example, Spanish, Mandarin, or American English. Foreign key to the FND_LANGUAGES table.
LanguageUseReferenceId	long	The unique identifier of the language use reference. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
NativeLanguageFlag	boolean	Indicator to specify if the language is the declared native language of a person. Y stands for a declared native language and N stands for all other languages.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PrimaryLanguageIndicator	string	Indicates if this is the primary language used by a person in day-to-day transactions. Y stands for the primary language and N stands for other languages.
ReadsLevel	string	The user-defined level number or name to indicate the ability to read a language.
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
SpeaksLevel	string	The user-defined level number or name to indicate the ability to speak a language.
SpokenComprehensionLevel	string	The code to indicate comprehension of a spoken language.
Status	string	The status of the record.
WritesLevel	string	The user-defined level number or name to indicate the ability to write in a language.

Contact Preference

The contact preference of the trading community member. For example, do not call Joe Smith between 10 a.m. and 12 noon on weekdays.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}ContactPreference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*
Contained by	*Electronic Data Interchange*
Contained by	*E-Mail*
Contained by	*Instant Messaging*
Contained by	*Household*
Contained by	*Phone*
Contained by	*Telex*
Contained by	*Web*

Relationship Type	Object or Service
Contained by	*Contact Address*
Contained by	*Electronic File Transfer*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Handled by	*Trading Community Group*

Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactLevelTable	string	The table that stores the contact level of the contact preference, and uses the SUBJECT_ TABLE lookup. The list of accepted values

Name	Type	Description
		are HZ_PARTIES, HZ_PARTIES_SITES, or HZ_CONTACT_POINTS.
ContactLevelTableId	long	The foreign key to the table specified in CONTACT_LEVEL_TABLE column. The list of accepted values are PARTY_ID from HZ_PARTIES table, CONTACT_POINT_ID from HZ_CONTACT_POINTS table, or PARTY_SITE_ID from HZ_PARTY_SITES table.
ContactPreferenceId	long	The unique identifier for the contact preference. • Primary Key
ContactType	string	The contact party type that defines whether the contact is a sales account, a prospect, a contact, or any other user-defined party type. The default value is CUSTOMER. A list of accepted values is defined in the lookup CONTACT_TYPE.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaximumNoOfInteractUOMCode	string	The period of time during which the maximum number of interactions applies. Uses the MAX_NO_OF_INTERACT_UOM_CODE lookup.
MaximumNoOfInteractions	decimal	The number of times you can use this contact point. The period of time that this number applies is stored in the MAX_NO_OF_INTERACT_UOM_CODE column.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PreferenceCode	string	Indicates whether to use a particular contact method. The list of accepted values are defined in the PREFERENCE_CODE lookup.
PreferenceEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes inactive.
PreferenceEndTimeHR	int	The hour part of time when the contact preference becomes inactive. The time is recorded in the 24 hour format.
PreferenceEndTimeMi	int	The minutes part of the time when the contact preference becomes inactive.
PreferenceStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes active.
PreferenceStartTimeHR	int	The hour part of time when the contact preference becomes active. The time is recorded in the 24 hour format.
PreferenceStartTimeMi	int	The minutes part of the time when the contact preference becomes active.
PreferenceTopicType	string	The appropriate subjects to send the party that the preference is created for. The list of accepted values are defined in the PREFERENCE_TOPIC_TYPE lookup.
PreferenceTopicTypeCode	string	The code of the preference topic type.
PreferenceTopicTypeId	long	The unique identifier of the preference topic type.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
RequestedBy	string	Indicates if the permission or restriction was created internally or requested by the party. The list of accepted values are defined in the REQUESTED_BY lookup.

Name	Type	Description
Status	string	The status of the record.

Customer Contact Profile

The person who functions as a contact for an organization.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}OrganizationContact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Organization Contact Additional Information*
Contains	*Customer Contact Responsibility*
Contains	*Source System Reference*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
ContactFormattedAddress	string	The formatted version of the contact address.
ContactFormattedMultilineAddress	string	The formatted multiline version of the contact address.
ContactName	string	The name of the contact.
ContactNumber	string	The user-defined identification number for this contact.
ContactPartyId	long	The unique identifier of the contact.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CustomerEmailAddress	string	The e-mail address of the customer this contact person belongs to.
CustomerName	string	The name of the customer.
CustomerPartyId	long	The unique identifier of the customer this contact person belongs to.

Name	Type	Description
CustomerPartyNumber	string	The alternate unique identifier of the customer this contact person belongs to.
CustomerUniqueName	string	The unique name of the customer. For an Organization, the value is a concatenation of unique_name_alias and suffix. For a Person, the value is a concatenation of person_name and suffix.
DecisionMakerFlag	boolean	Indicates if this contact is a decision maker. If the value is True, then the contact is a decision maker.
Department	string	The free form text used to name the department for the contact.
DepartmentCode	string	The department code for the contact. A list of accepted values is defined in the lookup DEPARTMENT_TYPE.
EmailAddress	string	The email address associated with the record.
FormattedAddress	string	The formatted address information.
FormattedPhoneNumber	string	The formatted phone number.
JobTitle	string	The free form text for job title.
JobTitleCode	string	The code given to the job title.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgContactId	long	The unique identifier of the organization contact. • Primary Key

Name	Type	Description
OrgContactInformation	*Trading Community Organization Contact Additional Information*	The information of the organization contact.
OrganizationContactRole	*Customer Contact Responsibility*	The role of the contact in the organization.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyRelationshipId	long	The unique identifier of the relationship of the party.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PartySiteName	string	The address associated with the party site.
PersonAcademicTitle	string	The part of the person's title that denotes the academic qualification, such as Dr. Jane Smith.
PersonCertReasonCode	string	The reason for the organization's current certification level assignment. A list of accepted values is defined using the lookup HZ_PARTY_CERT_REASON.
PersonCertificationLevel	string	The certification level of a organization. A list of accepted values is defined in the lookup HZ_PARTY_CERT_LEVEL.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLanguageName	string	The language name associated with the person.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	The prefix for the last name of a person, such as fon, van. For example, if a person's name is Hans Van, the last name of the person is captured using this attribute.

Name	Type	Description
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	The place in a family structure. For example, in "Tom Jones III", the "III".
PersonPreNameAdjunct	string	The preferred name adjacency of a resource.
PersonPreviousLastName	string	The previous last name of a person.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PreferredContactFlag	boolean	Indicates if this contact person is primary contact for the customer.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PrimaryCustomerFlag	boolean	Indicates if this customer is primary customer for the contact.
Rank	string	The rank associated with this customer contact.
ReferenceUseFlag	boolean	Indicates if this contact can be used as a reference. If the value is Y, then the contact can be used as a reference.
RequestId	long	A system-generated read-only attribute used by the application framework.
SalesAffinityCode	string	The affinity of a contact to the deploying organization. A list of accepted values is defined in the lookup HZ_SLS_CNTCT_AFFINITY_CODE.

Name	Type	Description
SalesAffinityComments	string	The comments about the contact's affinity to the deploying organization.
SalesBuyingRoleCode	string	The roles played by a contact in the buying process, for example, decision maker or supporting role. A list of accepted values is defined in the lookup HZ_SLS_CNTCT_BUY_ROLE_CODE.
SalesInfluenceLevelCode	string	The influence of the contact has on the deploying organization. A list of accepted values are defined in the lookup HZ_SLS_CNTCT_INFLUENCE_LVL_CD.
Salutation	string	The size of the household this person is a part of.
WebUrl	string	The web URL of contact point.

Customer Contact Responsibility

The role or responsibility of an organization contact.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}OrganizationContactRole

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Customer Contact Profile*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*

Relationship Type	Object or Service
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgContactId	long	The organization contact identifier. Foreign key to the HZ_ORG_CONTACTS table.
OrgContactRoleId	long	The unique contact role identifier. It is primary key and system generated. • Primary Key

Name	Type	Description
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PrimaryContactPerRoleType	string	Indicates if the contact is the primary contact for the role. Y stands for primary contact and N stands for a contact that is not the primary contact for the role type. The default value is N.
PrimaryFlag	boolean	Indicator that specifies if this is the primary role for the contact. Y stands for primary role and N stands for a non-primary role for the contact. The default value is N.
RequestId	long	A system-generated read-only attribute used by the application framework.
RoleLevel	string	The role level of the contact. For example, executive, department head, or middle manager.
RoleType	string	The role performed by a contact.
Status	string	The status of the record.

Electronic File Transfer

The electronic funds transfer information of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Eft

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Organization Details*

Relationship Type	Object or Service
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.

Name	Type	Description
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EFTPrintingProgramId	long	The printing program identifier.
EFTSWIFTCode	string	The EFT swift code information.
EFTTransmissionProgramId	long	The transmission program identifier.
EFTUserNumber	string	The number that identifies you as a user of electronic funds transfer service for your bank or clearing organization.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.

Name	Type	Description
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

E-Mail

The e-mail address associated with a trading community member. For example, john.doe@oracle.com.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Email

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EmailAddress	string	The email address associated with the record.
EmailFormat	string	The preferred format for e-mail addressed to this address such as HTML or ASCII. A list of accepted values is defined using the lookup EMAIL_FORMAT.
EmailInformation	*Trading Community Contact Point Additional Information*	The additional information about the e-mail.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row

Name	Type	Description
		is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary e-mail of the associated object. If the value is True, then this is the primary e-mail. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.

Name	Type	Description
Status	string	The status of the record.

E-Mail Domain

The domain of the e-mail address associated with a trading community member. For example, ABC Corporation has CORP and BUSINESS e-mail domains.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}EmailDomain

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DomainName	string	The actual or non-reversed domain name of the organization for display purpose.
EmailDomainId	long	The sequence generated unique identifier. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
Status	string	The status of the record.
TransposedDomain	string	The reversed domain name for the purposes of searching.

Financial Profile

The financial details of a trading community member, such as bank account information that was obtained as part of a credit evaluation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}FinancialProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessAuthorityDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when access to the information in the account was granted.
AccessAuthorityGranted	string	Indicates whether access to information in a financial account was granted. If the value is True, then the access has been granted.

Name	Type	Description
BalanceAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The reported balance on an account. The balance can be a positive number, negative number, or zero.
BalanceVerifiedOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the account balance was verified.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
FinancialAccountNumber	string	The alternate unique identifier of the financial account.
FinancialAccountType	string	The short name that classifies the financial accounts. For example, savings, checking, home loan, personal loan, trading, and so on.
FinancialOrgType	string	The classification of financial organizations. For example, bank, savings and loan, private lender, building society and so on.
FinancialOrganizationName	string	The name of the financial organization that holds the account.
FinancialProfileId	long	The unique identifier of the party's financial profile. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value

Name	Type	Description
		of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Household

The trading community group information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/groupService/}Group

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Additional Household Name*
Contains	*Classification Assignment*
Contains	*Source System Reference*
Contains	*Relationship*
Contains	*Financial Profile*
Contains	*Web*
Contains	*Contact Preference*
Contains	*Phone*
Contains	*Contact Language*
Contains	*Certification*

Relationship Type	Object or Service
Contains	*Usage Assignment*
Contains	*Additional Identifier*
Contains	*E-Mail Domain*
Contains	*Instant Messaging*
Contains	*E-Mail*
Contains	*Address*
Contains	*Preference*
Contained by	*Sales Party*
Contained by	*Sales Party Resource*
Contained by	*My Sales Account*
Contained by	*Sales Account*
Contained by	*Sales Party Territory*
Handled by	*Trading Community Group*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalGroupName	*Additional Household Name*	Additional name associated with the group.

Name	Type	Description
AdditionalPartyId	*Additional Identifier*	Additional Identifier for the group.
AnnualExpenses	long	Household annual expenses.
AnnualIncome	long	The value for annual income.
AverageAge	long	Household average age.
Certification	*Certification*	Certification information associated with the group.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
CertificationReasonCode	string	Reason for group party's current certification level assignment. HZ_PARTY_CERT_REASON lookup type.
Child0to6Number	long	The number of children between 0 and 6 years.
Child13to18Number	long	The number of children between 13 and 18 years.
Child7to12Number	long	The number of children between 7 and 12 years.
CodeAssignment	*Classification Assignment*	Classification code assigned to the group.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DependentsNumber	long	The number of dependents.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveLatestChange	string	Not Used.
EffectiveSequence	int	Not Used.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
Email	*E-Mail*	The email address associated with the record.
EmailDomain	*E-Mail Domain*	Email domain information for the group.
FinancialProfile	*Financial Profile*	Financial Profile information of the group.
GroupName	string	Name of this group.
GroupSize	long	Size of the group.
GroupType	string	The party type can only be person, organization, group.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MedianAge	long	The age of the median.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyNumber	string	The unique identification number for the party.
PartyPreference	*Preference*	Preference information of the group.
PartySite	*Address*	Address information associated with the group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUsageAssignment	*Usage Assignment*	Party usage assigned to the group.
PersonLanguage	*Contact Language*	Language information associated with a group.
Phone	*Phone*	The phone information for the entity.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonEmail	string	The E-Mail of the preferred contact person.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredContactPersonName	string	The name of the preferred contact person.
PreferredContactPersonPhone	string	The phone number of the preferred contact person.
PreferredContactPersonURL	string	The URL of the preferred contact person.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.

Name	Type	Description
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryAddressCity	string	The city of the primary address.
PrimaryAddressCountry	string	The country for the primary address.
PrimaryAddressCounty	string	The country of the primary address.
PrimaryAddressLine1	string	Line one of the primary address.
PrimaryAddressLine2	string	Line two of the primary address.
PrimaryAddressLine3	string	Line three of the primary address.
PrimaryAddressLine4	string	Line four of the primary address.
PrimaryAddressLocationId	long	The unique identification number for the primary address location.
PrimaryAddressPartySiteId	long	The unique identifier for the primary address party site.
PrimaryAddressPostalCode	string	The postal code of the primary address.
PrimaryAddressProvince	string	The province of the primary address.
PrimaryAddressState	string	The state of the primary address.
PrimaryEmail	string	Primary E-Mail Address of the Group.
PrimaryEmailId	long	Primary E-Mail ID.
PrimaryFormattedAddress	string	Primary formatted address for the group.
PrimaryFormattedMultilineAddress	string	Primary formatted multiline address for the group.

Name	Type	Description
PrimaryFormattedPhoneNumber	string	Primary formatted phone number for the group.
PrimaryLanguage	string	Standard name for a primary language.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneId	long	The unique identification number for the primary phone.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURL	string	Primary URL.
PrimaryWebId	long	Primary Web ID.
ProfileCreatedBy	string	The user who created the row.
ProfileCreatedByModule	string	The module that created the profile.
ProfileCreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time of the creation of the row.
ProfileLastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time of the last update of the row.
ProfileLastUpdateLogin	string	The session login associated to the user who last updated the row.
ProfileLastUpdatedBy	string	The user who last updated the row.

Name	Type	Description
Relationship	*Relationship*	Relationship information for the group.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.
SuffixOverriddenFlag	boolean	This will have Y if the suffix is overridden by user N if not.
UniqueNameSuffix	string	System generated or manually overridden suffix.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
WealthAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Household wealth amount or net worth.
Web	*Web*	The web information related to the record.

Instant Messaging

The instant messaging information of a trading community member, such as the AOL identifier or Yahoo Messenger information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}InstantMessaging

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*

Relationship Type	Object or Service
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key

Name	Type	Description
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
InstantMessagingAddress	string	The instant messaging information address.
InstantMessagingInformation	*Trading Community Contact Point Additional Information*	The instant messaging information related to the record.
InstantMessengerType	string	The type of the instant messenger type.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.

Name	Type	Description
OverallPrimaryFlag	boolean	Indicates whether this is the primary instant messaging Id of the associated object. If the value is True, then this is the primary instant messaging Id. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Phone

The phone number associated with a trading community member. For example, the phone number for Oracle Corporation is 650-506-6000.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Phone

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Marketing Response*
Contained by	*Partner*
Contained by	*Household*

Relationship Type	Object or Service
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FormattedPhoneNumber	string	The formatted phone number.
LastContactDtTime	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date and time of last contact placed to this contact point.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PagerTypeCode	string	The PAGER_TYPE_CODE column stores the lookup code for the type of pager. The type of pager determines how the page is received. For example, tone, number, alphanumeric or two-way alphanumeric.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PhoneAreaCode	string	The area code prefix for the phone number.
PhoneCallingCalendar	string	The name or code for a calling calendar used with this telephone number. This attribute is no longer used in Fusion applications.

Name	Type	Description
PhoneCountryCode	string	The country code prefix for the phone number.
PhoneExtension	string	The additional number addressed after initial connection to an internal telephone system.
PhoneInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community phone.
PhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound, or outbound.
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RawPhoneNumber	string	The unformatted telephone number.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TimezoneCode	string	The foreign key to FND_TIMEZONES_B.TIMEZONE_CODE.
TransposedPhoneNumber	string	This column stores the concatenation of PHONE_COUNTRY_CODE, PHONE_AREA_CODE, and PHONE_NUMBER in reverse order. For example, if PHONE_COUNTRY_CODE=1, PHONE_AREA_CODE=650 and PHONE_NUMBER=5065747, this column stores

Name	Type	Description
		74756050561. This column is used for building an index to search for any combination of the above three columns.

Preference

The preferences of a trading community member. For example, a member may prefer that the transaction currency is the US dollar.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartyPreference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalValue1	string	The additional preference value.
AdditionalValue2	string	The additional preference value.
AdditionalValue3	string	The additional preference value.
AdditionalValue4	string	The additional preference value.
AdditionalValue5	string	The additional preference value.
Category	string	A preference category is used to logically group one or more preference codes in a particular user interface. The combination of CATEGORY and PREFERENCE_CODE identifies a preference.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Module	string	The program that creates the preference. For example, TCA MOBILE CUSTOMER DIRECTORY.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PartyPreferenceId	long	The unique identifier of the party preference. • Primary Key

Name	Type	Description
PreferenceCode	string	A preference code determines if a preference is a single value or a multiple value preference. The preference code is validated by the HZ_PREFERENCE lookup. The combination of CATEGORY and PREFERENCE_CODE identifies a preference.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
ValueDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The preference value when the data type is DATE.
ValueName	string	A user-defined alias for a preference value.
ValueNumber	decimal	The preference value when the data type is NUMBER.
ValueVarchar2	string	The preference value when the data type is VARCHAR2.

Relationship

The relationship between two trading community members. For example, John Doe is the spouse of Jane Doe or Michael Smith is a contact of Oracle Corporation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}Relationship

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Phone*
Contains	*Address*
Contains	*Instant Messaging*
Contains	*Web*

Relationship Type	Object or Service
Contains	*Usage Assignment*
Contains	*Trading Community Relationship Additional Information*
Contains	*Customer Contact Profile*
Contains	*Source System Reference*
Contains	*Email*
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalInformation1	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type. For operating unit and legal entity to bank relationships, column stores communication agreement ID, which identifies agreement between payer and bank on type of EDIFACT documents that can be sent for processing payments.
AdditionalInformation10	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation11	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation12	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation13	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation14	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation15	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation16	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation17	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation18	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation19	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.

Name	Type	Description
AdditionalInformation2	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation20	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation21	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation22	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation23	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation24	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation25	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation26	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation27	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation28	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation29	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation3	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.

Name	Type	Description
AdditionalInformation30	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation4	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation5	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation6	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation7	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation8	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation9	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
Comments	string	The comments for the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.

Name	Type	Description
DirectionCode	string	The code of the relationship direction. The list of accepted values are defined in the lookup DIRECTION_CODE.
Email	*E-Mail*	The email address associated with the record.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectEmailAddress	string	The e-mail address of the object party in the relationship.
ObjectId	long	The unique identifier of the object party in this relationship.
ObjectPartyName	string	The name of the object party in this relationship.
ObjectTableName	string	The source table name of the object party in this relationship.
ObjectType	string	The object type of the relationship.
ObjectUsageCode	string	The usage code of object party in the relationship.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationContact	*Customer Contact Profile*	The organization contact information.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyName	string	The name of the party.
PartySite	*Address*	The party site associated with the relationship.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the relationship.
PercentageOwnership	decimal	The percentage of the child entity owned by the parent entity.
Phone	*Phone*	The phone information for the entity.
PreferredContactFlag	boolean	Indicates if this contact person is primary contact for the customer.
PrimaryCustomerFlag	boolean	Indicates if this customer is primary customer for the contact.
RelationshipCode	string	The code for a forward or a backward relationship. A list of accepted relationship values is defined in the lookup PARTY_RELATIONS_TYPE.
RelationshipId	long	The relationship identifier for the record.
RelationshipInformation	*Trading Community Relationship Additional Information*	The relationship type information.
RelationshipRecId	long	The unique identifier of the contact's relationship record. • Primary Key
RelationshipType	string	The relationship type name. For example, CUSTOMER_SUPPLIER. A list of valid relationship types is defined in the lookup HZ_RELATIONSHIP_TYPE.
RequestId	long	A system-generated read-only attribute used by the application framework.
Role	string	The role between the subject and object party in this relationship.

Name	Type	Description
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
SubjectEmailAddress	string	The e-mail address of the subject party in relationship.
SubjectId	long	The unique identifier of the subject in this relationship.
SubjectPartyUsageAssignment	*Usage Assignment*	The usage assignment of the subject party in the relationship.
SubjectTableName	string	The source table of the subject.
SubjectType	string	The subject type of the relationship.
SubjectUsageCode	string	The usage code of subject party in the relationship.
Web	*Web*	The web information related to the record.

Source System Reference

The name of external source system where the trading community information is imported from.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}OriginalSystemReference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OldOrigSystemReference	string	The old source system reference that is being replaced.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OrigSystemReferenceId	long	The unique identifier for original system reference. • Primary Key
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.

Name	Type	Description
PartyId	long	The unique identifier of the contact party.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
SourceSystemRefInformation	*Trading Community Original System Mapping Identifier Additional Information*	The source system reference information.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Telex

The telex number information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Telex

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*

Relationship Type	Object or Service
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary telex of the associated object. If the value is True, then this is the primary telex. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.

Name	Type	Description
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TelexNumber	string	The telex reference number (usually a telephone number) of the organization.

Trading Community Address Additional Information

The address information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/partySite/}PartySiteInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Contact Address*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*

Relationship Type	Object or Service
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Address Purpose

The purpose of an address, such as Business, Home, or Ship To.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartySiteUse

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Contact Address*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BeginDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date at the start of the date range within which the row is active.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
IntegrationKey	string	The integration key is not used.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PartySiteUseId	long	The unique identifier of the party site used. • Primary Key
PrimaryPerType	string	Indicates if this is the primary use for the site. Y stands for the primary site and N stands for all other sites.
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
SiteUseType	string	The site use type associated with the address.
Status	string	The status of the record.

Trading Community Contact Point Additional Information

The contact point for a trading community member like phone or e-mail. For example 650-506-6000 is the phone number for Oracle Corporation, john.doe@example.com is the e-mail address for John Doe.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/contactPoint/}ContactPointInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*E-Mail*
Contained by	*Instant Messaging*
Contained by	*Phone*
Contained by	*Web*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*

Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*

Relationship Type	Object or Service
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointType	string	The type of the contact point.
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Organization Contact Additional Information

The additional information about the organization contact.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/orgContact/}OrganizationContactInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Customer Contact Profile*

Relationship Type	Object or Service
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
OrgContactId	long	The unique identifier of the organization contact. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Original System Mapping Identifier Additional Information

The unique identifier for the trading community party, associated with the address, from the external source system reference.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/sourceSystemRef/}SourceSystemRefInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Source System Reference*
Handled by	*Sales Reference Customer*
Handled by	*Trading Community Location*
Handled by	*Trading Community Customer Account*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Competitor Service*
Handled by	*Source Information Technology System Reference*
Handled by	*Trading Community Person Information*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Marketing Response Service*

Relationship Type	Object or Service
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
OrigSystemRefId	long	Sequentially generated identifier. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Relationship Additional Information

The relationship between two trading community members. For example, John Doe is the spouse of Jane Doe or Michael Smith is a contact of Oracle Corporation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/relationship/}RelationshipInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Relationship*
Handled by	*Trading Community Group*

Relationship Type	Object or Service
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
RelationshipRecId	long	The unique identifier of the contact's relationship record. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Usage Assignment

The party usage assigned to a trading community member. For example, John Doe is a contact of ABC Corporation and XYZ Corporation is a supplier.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartyUsageAssignment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Trading Community Party Usage Assignment Service*
Handled by	*Trading Community Party Information*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
PartyUsageCode	string	The usage context of a party's contact point.
PartyUsgAssignmentId	long	The unique identifier of the party usage assignment. • Primary Key
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.

Web

The Web information associated with a trading community member. For example, Oracle's address on the Web is www.oracle.com.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Web

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N stands for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.

Name	Type	Description
PrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
URL	string	The destination URL associated with a specific Google AdWords ad.
WebInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community Web.
WebType	string	The prefix class to a Web address. Typically, this is either FTP or HTTP.

Trading Community Information Format for Name and Address

A format for name and address used to store and display trading community information. For example, John Doe can be formatted as Doe, John.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/styleFormatService/}StyleFormatService

Service WSDL URL: https://servername/crmService/StyleFormatService?WSDL

Logical Business Objects

- CRM : Trading Community Model : Trading Community Information Format

Relationships

getStyle

The Get operation for trading community style.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
styleCode	string	The get operation for the trading community style for the given style code.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/styleFormatService/}StyleResult	The trading community style that matches the inbound key attributes.

createStyle

The Create operation for trading community style.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
style	*Trading Community Style*	The trading community style to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/styleFormatService/}StyleResult	The result of the operation that includes the successfully created trading community style and a list of warning or information messages.

updateStyle

The Update operation for trading community style.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
style	*Trading Community Style*	The trading community style to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/styleFormatService/}StyleResult	The result of the operation that includes the successfully created trading community style and a list of warning or information messages.

deleteStyle

The Delete operation for trading community style.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
style	*Trading Community Style*	The trading community style to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warning or information messages encountered when the object was deleted.

mergeStyle

The Merge operation for trading community style. It performs an update if the object exists, or an insert if the object doesn't exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
style	*Trading Community Style*	The trading community style to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/styleFormatService/}StyleResult	The result of the operation that includes the successfully merged trading community style and a list of warning or information messages.

findStyle

The Find operation for trading community style.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Trading Community Style*	The result of the operation that includes a list of trading community style that satisfy the inbound criteria and any warning or information messages.

processStyle

The Bulk load operation for trading community style.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action to perform, such as create, update, merge, or delete.
style	*Trading Community Style*	The list trading community style to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk operation behavior, such as whether valid data is committed if there

Element Name	Type	Description
		are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Trading Community Style*	The result of the operation that includes a list of trading community style that were successfully processed and any warning or information messages.

processCSStyle

An operation to apply the changes back to the data source for trading community style.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object to represent the changes.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk operation behavior, such as whether valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The result of the operation that includes a list of created or updated data objects, and all warning and information messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name; an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale used to evaluate the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in the ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined for this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for the service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
processStyle	HZ_MANAGE_TRADING_COMMUNITY_NAME_FORMAT_PRIV	Manage Trading Community Name Format	Allows the specification of how customer names appear in the application, such as the sequence of first name and last name.
deleteStyle	HZ_MANAGE_TRADING_COMMUNITY_NAME_FORMAT_PRIV	Manage Trading Community Name Format	Allows the specification of how customer names appear in the application, such as the sequence of first name and last name.
updateStyle	HZ_MANAGE_TRADING_COMMUNITY_NAME_FORMAT_PRIV	Manage Trading Community Name Format	Allows the specification of how customer names appear in the application, such as the sequence of first name and last name.
findStyle	HZ_MANAGE_TRADING_COMMUNITY_NAME_FORMAT_PRIV	Manage Trading Community Name Format	Allows the specification of how customer names appear in the application, such as the sequence of first name and last name.
mergeStyle	HZ_MANAGE_TRADING_COMMUNITY_NAME_FORMAT_PRIV	Manage Trading Community Name Format	Allows the specification of how customer names appear in the application, such as the sequence of first name and last name.
createStyle	HZ_MANAGE_TRADING_COMMUNITY_NAME_FORMAT_PRIV	Manage Trading Community Name Format	Allows the specification of how customer names appear in the application, such as the sequence of first name and last name.
getStyle	HZ_MANAGE_TRADING_COMMUNITY_NAME_FORMAT_PRIV	Manage Trading Community Name Format	Allows the specification of how customer names appear in the application, such as the sequence of first name and last name.

Operation Name	Privilege Code	Privilege Name	Privilege Description
processCSStyle	HZ_MANAGE_TRADING_COMMUNITY_NAME_FORMAT_PRIV	Manage Trading Community Name Format	Allows the specification of how customer names appear in the application, such as the sequence of first name and last name.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_MANAGE_TRADING_COMMUNITY_NAME_FORMAT_PRIV	ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Customer Relationship Management Application Administrator	Individual responsible for customer relationship management application administration. Collaborates with customer relationship management application users to maintain consistent financial application setup, rules, and access.
HZ_MANAGE_TRADING_COMMUNITY_NAME_FORMAT_PRIV	ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Master Data Management Application Administrator	Administers the installation and maintenance of customer data management application and foundation model.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_CHANNEL_MANAGER_DASHBOARD_DUTY	Channel Manager Dashboard	Provides channel roles a dashboard to manage their daily transactions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_AMENDMENT_DUTY_CRM	Contract Amendment	Amends approved contracts. This includes initiating an amendment, reverting the contract to the previous signed version, updating all allowable attributes, and submitting the amendment for approval.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_AUTHORING_DUTY_CRM	Contract Authoring	Authors contracts, including terms and conditions, interactions, and customer account information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_SEARCH_VIEW_DUTY_CRM	Contract Search and View Access	Searches and views contracts for the assigned business units.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_SETUP_DUTY_CRM	Contract Setup	Contract Setup
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_CONV_MESSAGE_ADMINISTRATION	Conversation Message Administration	Has complete conversation message management capabilities including create messages, reply to messages, change a reply to ready to send status and delete a message.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_CDM_ADMIN_DUTY	Customer Data Management Administration	Administers customer data management.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_CDM_ADMIN_DUTY	Customer Data Management Administration	Administers customer data management.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_CSS_ADMINISTRATION	Customer Self-Service Administration	Manages the provisioning and approval of self service registration requests
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_DATA_INTEGRATION_MANAGEMENT_DUTY	Data Integration Management	This role allows setup and management of data integration maps and instances.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_FFS_FIELD_SERVICE_APPLICATION_ADMINISTRATOR_DUTY	Field Service Application Administrator	Individual responsible for the duty of configuring Field Service mobile application
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_GEO_ADMIN_DUTY	Geography Administration	Grants privileges to set up geographies

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_GEO_ADMIN_DUTY	Geography Administration	Grants privileges to set up geographies
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_CN_INCENTIVES_ADMINISTRATION_DUTY_CRM	Incentive Compensation Administration	Configure and maintain incentive compensation enterprise and business unit setup.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_AUTHORING_DUTY	Interview Definition Authoring	Manage access for authoring Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_MANAGING_DUTY	Interview Definition Managing	Manage access for deleting and forcing checkout of Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_PUBLISHING_DUTY	Interview Definition Publishing	Manage access for publishing and unpublishing Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_VIEWING_DUTY	Interview Definition Viewing	Manage access for viewing Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_EGP_ITEM_MANAGEMENT_DUTY_CRM	Item Management	Creates and manages items including item attributes, item structures, packs, associations, relationships, and catalog assignments.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_CSO_KNOWLEDGE_SETUP_AND_MAINTENANCE_DUTY	Knowledge Setup and Maintenance	Provides the users with the ability to setup and manage knowledge base
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_LEAD_REGISTRATION_MANAGEMENT_DUTY	Lead Registration Management	Manages and analyzes sales lead registrations. Includes the ability to create sales lead registrations, edit both internal and partner lead attributes as needed, and view lead age and status.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_LEAD_REGISTRATION_SUBMISSION_DUTY	Lead Registration Submission	Submits sales lead registrations to the enterprise and manages sales lead attributes. Includes the ability

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
			to create, accept, and reject sales lead registrations.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKT_MARKETING_BUDGET_MAINTENANCE_DUTY	MDF Budget Maintenance	Manages MDF budgets including import, export, and viewing budget fund requests and claims that use budgeted funds for marketing activities.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_MANAGE_CX_AI_AGENTS	Manage CX AI Agents	This role allows administrators to manage CX AI Agents in Agent Studio
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKT_MARKETING_MAINTENANCE_DUTY	Marketing Maintenance	Creates and maintains setup for marketing campaigns, responses, segments, lists, and treatments across the enterprise. Additional duties include file import management for the import of marketing campaign responses.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOO_OPPORTUNITY_CHANNEL_ADMINISTRATION_DUTY	Opportunity Channel Administration	Administers all aspects of the application, including some setup. This role is for channel administrators.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_PARTNER_ACCOUNT_ADMINISTRATION_DUTY	Partner Account Administration	Maintains a partner account, including managing members and partner profile information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_PARTNER_ACCOUNT_REVIEW_DUTY	Partner Account Review	Views a partner account, including viewing a partner's members, profile, and account team.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_PARTNER_IMPORT_ADMINISTRATION_DUTY	Partner Import Administration	Partner Import Administration Duty role. This duty will allow for administration activities of Partner Import
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_PARTNER_SALES_PARTY_MANAGEMENT_DUTY	Partner Sales Party Management	Manages creation and maintenance of sales organizations and consumers for partners. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts. This role has limited access to customers and contacts.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_VIEW_PARTY_CENTER_DUTY	Party Center Inquiry	Grants privileges to view party center nodes.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_MANAGE_PARTY_CENTER_DUTY	Party Center Management	Grants privileges to manage party center nodes.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ADMINISTRATOR_DUTY	Resource Administration	Administers resource information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ADMINISTRATOR_DUTY	Resource Administration	Administers resource information.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ORGANIZATION_ADMINISTRATOR_DUTY	Resource Organization Administration	Administers resource organizations.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ORGANIZATION_ADMINISTRATOR_DUTY	Resource Organization Administration	Administers resource organizations.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_TEAM_ADMINISTRATOR_DUTY	Resource Team Administration	Defines resource teams.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_TEAM_ADMINISTRATOR_DUTY	Resource Team Administration	Defines resource teams.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_REVIEW_CRM_APPROVAL_TRANSACTIONS_ADMINISTRATOR	Review CRM Approval Transactions Administrator	Allows viewing of information for CRM approval transactions by an administrator.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZBS_SALES_CHANGE_HISTORY_INQUIRY_DUTY	Sales Change History Inquiry	Views change history of sales business objects for members within the sales organization.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_SALES_LEAD_FOLLOW_UP_DUTY	Sales Lead Follow Up	Processes sales lead for follow up actions including the qualification and conversion of sales lead to revenue opportunities.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_AVAILABILITY_MANAGEMENT	Service Availability Management	Manage the service availability data including reading and writing the availability of a service.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_PROFILE_ADMINISTRATION	Service Profile Administration	Manages all aspects of the Service Profile object, including deleting a service profile.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_STATUS_COMPUTATION	Service Status Computation	Perform actions required to determine the availability of a service.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_SETUP_CUSTOMER_CENTER_DUTY	Setup Customer Center	Manages customer center set up, sales party creation and their related objects, such as appointments, assessments, interactions, notes and tasks.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HRS_SOCIAL_CONNECTION_PARTNER_DUTY_CRM	Social Connection Partner	Performs all Oracle Fusion Social Connection partner duties.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SPECIALIST_JOB	Subscription Specialist	Individual responsible for managing subscriptions, establishing recurring and usage billing processes, initiating manual discounts and invoice adjustments, and handling billing discrepancies and disputes.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	Territory Management Setup	Manages sales territory setup, including lookups, profile options, flexfields, and dimension data. Runs dimension synchronization, and visibility jobs. Additional duties include quota management setup.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_CUSTOMER_ACCOUNT_ADMINISTRATION_DUTY	Trading Community Customer Account Administration	Grants privileges to setup customer account information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_CUSTOMER_ACCOUNT_ADMINISTRATION_DUTY	Trading Community Customer Account Administration	Grants privileges to setup customer account information.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DATA_QUALITY_ADMIN_DUTY	Trading Community Data Quality Administration	Configures, reviews, and edits predefined data quality server configurations and the predefined matching, synchronization, and cleansing configurations.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DATA_QUALITY_ADMIN_DUTY	Trading Community Data Quality Administration	Configures, reviews, and edits predefined data quality server configurations and the predefined matching, synchronization, and cleansing configurations.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCQ_TRADING_COMMUNITY_DQ_MGMT_DUTY	Trading Community Data Quality Management	Performs real-time and batch data quality functions such as matching and cleansing.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DUP_IDEN_MANAGE_DUTY	Trading Community Duplicate Identification Batch Management	Grants privileges to manage duplicate identification batches
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DUP_RES_MANAGE_DUTY	Trading Community Duplicate Resolution Request Management	Grants privileges to manage duplicate resolution requests
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_PERSON_ADMINISTRATION_DUTY	Trading Community Person Administration	Grants privileges to setup person information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_PERSON_ADMINISTRATION_DUTY	Trading Community Person Administration	Grants privileges to setup person information.

Trading Community Style

The style that uniquely identifies a particular manner or situation for which an entity (address, person name) is to be formatted such as list name, postal address, or bill of lading address.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/styleFormatService/}Style

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Style Format*
Contains	*Trading Community Style Translation*
Handled by	*Trading Community Information Format for Name and Address*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DatabaseObjectName	string	The object for which the style is being defined for.
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
StyleCode	string	Code to uniquely identify a style that uniquely identifies a particular manner or situation for which an entity is to be formatted. • Primary Key
StyleCodeTransient	string	Transient style code value.
StyleFormat	*Trading Community Style Format*	Format information in which a name or an address is displayed or rendered for data entry.
StyleName	string	Name of a style that uniquely identifies a particular manner or situation for which an entity is to be formatted.
StyleTranslation	*Trading Community Style Translation*	Language specific style information.

Trading Community Style Format

The format in which a name or an address is displayed or rendered for data entry such as United States postal address format or Canadian postal address format.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/styleFormatService/}StyleFormat

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Contained by	*Trading Community Style Format Locale*
Handled by	*Trading Community Information Format for Name and Address*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AttributeCode	string	The component or attribute being laid out.
BlankLinesAfter	int	The number of blank lines to display after the last attribute on a line.
BlankLinesBefore	int	The number of blank lines to display before the first attribute on a line.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DelimiterAfter	string	One or more characters to be placed after the attribute if the attribute is not null.
DelimiterBefore	string	One or more characters to be placed before attribute if attribute is not null.
DisplaySize	int	The maximum display size of the attribute.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LineNumber	int	Line that attribute should be formatted on.
MandatoryFlag	boolean	Flag to indicate if an attribute is mandatory for layout or not.
Position	int	The position on the line that attribute should be placed.
Prompt	string	Label used when displaying the address components.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
StyleFmtLayoutId	long	Unique identifier for style format layout. • Primary Key
StyleFormatCode	string	The style format for variation.
StyleFormatLayoutTranslation	*Trading Community Style Format Layout Translation*	Language specific style format layout information.
TransformFunction	string	Identifies PL/SQL function with optional parameters that must be called to transform attribute.

Name	Type	Description
UppercaseFlag	boolean	A flag to indicate whether attribute should be translated to uppercase.
UseInitialFlag	boolean	A flag to indicate whether only initial character of attribute should be used.
VariationNumber	int	A sequential number within style format to identify variation.

Trading Community Style Format Layout Translation

The language specific or translatable attributes for style format layout such as prompts.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/styleFormatService/}StyleFormatLayoutTranslation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Style Format Layout*
Handled by	*Trading Community Information Format for Name and Address*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Language	string	Indicates the code of the language into which the contents of the translatable columns are translated. • Primary Key

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
Prompt	string	Attribute prompt specific to location, for example Zip Code for US and Postcode for UK.
SourceLang	string	Indicates the code of the language in which the contents of the translatable columns were originally created.
StyleFmtLayoutId	long	Sequence generated unique identifier for style format layout row. • Primary Key

Trading Community Style Format Locale

The country and language for which the style format is applicable such as Canada and French.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/styleFormatService/}StyleFormatLocale

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Style Format Layout*
Contained by	*Trading Community Style Format*
Handled by	*Trading Community Information Format for Name and Address*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LanguageCode	string	Identifies language for location.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
StyleCode	string	Identifies style that format belongs to.
StyleFmtLocaleId	long	The unique identifier for style format location. • Primary Key
StyleFormatCode	string	Identifies style format for location.
StyleFormatLayout	*Trading Community Style Format Layout*	Name of the style format layout.
TerritoryCode	string	Identifies territory for location.

Name	Type	Description
TerritoryCode1	string	Identifies territory for location.
TerritoryShortName	string	Identifies the territory for a location.

Trading Community Style Format Translation

The language specific or translatable attributes for style format such as the format name.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/styleFormatService/}StyleFormatTranslation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Style Format*
Handled by	*Trading Community Information Format for Name and Address*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
Language	string	Indicates the code of the language into which the contents of the translatable columns are translated. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
SourceLang	string	Indicates the code of the language in which the contents of the translatable columns were originally created.
StyleFormatCode	string	Unique code for style format. • Primary Key
StyleFormatName	string	Description or comments for style format.

Trading Community Style Format Variation

The variations of a style format for a given locale such as a French mailing address when mailing to countries within Europe and French mailing address when mailing to countries outside of Europe.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/styleFormatService/}StyleFormatVariation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Style Format Layout*
Contained by	*Trading Community Style Format*
Handled by	*Trading Community Information Format for Name and Address*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
SelectionCondition	string	SQL condition to evaluate whether variation should be used or not.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
StyleFormatCode	string	Identifies style format that variation applies to. • Primary Key
StyleFormatLayout	*Trading Community Style Format Layout*	Name of the style format layout.
VariationNumber	int	Sequential number within style format to identify variation. • Primary Key
VariationRank	int	Rank or sequence that variations should be checked in to determine the one that applies.

Trading Community Style Translation

The language specific or translatable attributes of a style such as the style name.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/styleFormatService/}StyleTranslation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Style*
Handled by	*Trading Community Information Format for Name and Address*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
Language	string	Indicates the code of the language into which the contents of the translatable columns are translated. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row

Name	Type	Description
		is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
SourceLang	string	Indicates the code of the language in which the contents of the translatable columns were originally created.
StyleCode	string	Unique code for style. • Primary Key
StyleName	string	Descriptive style name.

Trading Community Information Format for Phone

A format for phones used to store and display trading community phone information. For example, Oracle's phone number could be formatted as 1 (650) 506 7000.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/phoneFormatService/}PhoneFormatService

Service WSDL URL: https://servername/crmService/PhoneFormatService?WSDL

Logical Business Objects

- CRM : Trading Community Model : Trading Community Information Format

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Trading Community Mobile Phone Prefix*
Handles	*Trading Community Phone Format*
Handles	*Phone Area Code*
Handles	*Phone Country Code*

Operations

- *getPhoneCountryCode*
- *createPhoneCountryCode*
- *updatePhoneCountryCode*
- *deletePhoneCountryCode*
- *mergePhoneCountryCode*
- *findPhoneCountryCode*
- *processPhoneCountryCode*
- *processCSPhoneCountryCode*
- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

getPhoneCountryCode

The Get operation for country codes of phone numbers.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
phoneCountryCodeId	long	The unique identifier of the area codes of phone numbers.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/phoneFormatService/}PhoneCountryCodeResul	The country code of phone numbers that matches the inbound key attributes.

createPhoneCountryCode

The Create operation for country codes of phone numbers.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
phoneCountryCode	*Phone Country Code*	The country code of phone numbers to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/phoneFormatService/}PhoneCountryCodeResult	The result of the operation that includes the successfully created phone country code and a list of warning or information messages.

updatePhoneCountryCode

The Update operation for country codes of phone numbers.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
phoneCountryCode	*Phone Country Code*	The country code of phone numbers to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/phoneFormatService/}PhoneCountryCodeResult	The result of the operation that includes the successfully updated phone country code and a list of warning or information messages.

deletePhoneCountryCode

The Delete operation for country codes of phone numbers.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
phoneCountryCode	*Phone Country Code*	The country code of phone numbers to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warning or information messages encountered when the object was deleted.

mergePhoneCountryCode

The Merge operation for country codes of phone numbers. It performs an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
phoneCountryCode	*Phone Country Code*	The country code of phone numbers to be merged..

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/phoneFormatService/}PhoneCountryCodeResul	The result of the operation that includes the successfully merged phone country codes and a list of warning or information messages.

findPhoneCountryCode

The Find operation for country codes of phone numbers.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Phone Country Code*	The Result of the operation that includes a list of phone country codes that satisfy the inbound criteria and any warning or information messages.

processPhoneCountryCode

The Bulk Load operation for country codes of phone numbers.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action to perform, such as create, update, merge, or delete.
phoneCountryCode	*Phone Country Code*	A list of phone number country codes to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk operation behavior, such as whether valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Phone Country Code*	The result of the operation that includes a list of phone country codes that were successfully processed and any warning or information messages.

processCSPhoneCountryCode

An operation to apply the changes back to the data source for Phone Country Code.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object to represent the changes.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk operation behavior, such as whether valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The result of the operation that includes a list of created and updated data objects, and all warning and information messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name; an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale used to evaluate the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in the ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined for this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for the service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
processPhoneCountryCode	HZ_MANAGE_TRADING_COMMUNITY_CONTACT_POINT_PRIV	Manage Trading Community Telephone Numbering Plan	Allows the specification of country specific phone numbering plans, which define parameters such as the country codes, the area codes and the length of phone numbers.

Operation Name	Privilege Code	Privilege Name	Privilege Description
findPhoneCountryCode	HZ_MANAGE_TRADING_COMMUNITY_CONTACT_POINT_PRIV	Manage Trading Community Telephone Numbering Plan	Allows the specification of country specific phone numbering plans, which define parameters such as the country codes, the area codes and the length of phone numbers.
mergePhoneCountryCode	HZ_MANAGE_TRADING_COMMUNITY_CONTACT_POINT_PRIV	Manage Trading Community Telephone Numbering Plan	Allows the specification of country specific phone numbering plans, which define parameters such as the country codes, the area codes and the length of phone numbers.
processCSPhoneCountryCode	HZ_MANAGE_TRADING_COMMUNITY_CONTACT_POINT_PRIV	Manage Trading Community Telephone Numbering Plan	Allows the specification of country specific phone numbering plans, which define parameters such as the country codes, the area codes and the length of phone numbers.
updatePhoneCountryCode	HZ_MANAGE_TRADING_COMMUNITY_CONTACT_POINT_PRIV	Manage Trading Community Telephone Numbering Plan	Allows the specification of country specific phone numbering plans, which define parameters such as the country codes, the area codes and the length of phone numbers.
createPhoneCountryCode	HZ_MANAGE_TRADING_COMMUNITY_CONTACT_POINT_PRIV	Manage Trading Community Telephone Numbering Plan	Allows the specification of country specific phone numbering plans, which define parameters such as the country codes, the area codes and the length of phone numbers.
getPhoneCountryCode	HZ_MANAGE_TRADING_COMMUNITY_CONTACT_POINT_PRIV	Manage Trading Community Telephone Numbering Plan	Allows the specification of country specific phone numbering plans, which define parameters such as the country codes, the area codes and the length of phone numbers.
deletePhoneCountryCode	HZ_MANAGE_TRADING_COMMUNITY_CONTACT_POINT_PRIV	Manage Trading Community Telephone Numbering Plan	Allows the specification of country specific phone numbering plans, which define parameters such as the country codes, the area codes and the length of phone numbers.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_MANAGE_TRADING_COMMUNITY_CONTACT_POINT_PRIV	ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Customer Relationship Management Application Administrator	Individual responsible for customer relationship management application administration. Collaborates with customer relationship management application users to maintain

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			consistent financial application setup, rules, and access.
HZ_MANAGE_TRADING_ COMMUNITY_CONTACT_POINT_ PRIV	ORA_ZCH_MASTER_DATA_ MANAGEMENT_APPLICATION_ ADMINISTRATOR_JOB	Master Data Management Application Administrator	Administers the installation and maintenance of customer data management application and foundation model.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_ MANAGEMENT_APPLICATION_ ADMINISTRATOR_JOB	ORA_ZCA_ACCESS_GROUPS_ ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.

ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_GEO_ADMIN_DUTY	Geography Administration	Grants privileges to set up geographies
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_CN_INCENTIVES_ADMINISTRATION_DUTY_CRM	Incentive Compensation Administration	Configure and maintain incentive compensation enterprise and business unit setup.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_AUTHORING_DUTY	Interview Definition Authoring	Manage access for authoring Interview definitions.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_MANAGING_DUTY	Interview Definition Managing	Manage access for deleting and forcing checkout of Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_PUBLISHING_DUTY	Interview Definition Publishing	Manage access for publishing and unpublishing Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_VIEWING_DUTY	Interview Definition Viewing	Manage access for viewing Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_EGP_ITEM_MANAGEMENT_DUTY_CRM	Item Management	Creates and manages items including item attributes, item structures, packs, associations, relationships, and catalog assignments.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_CSO_KNOWLEDGE_SETUP_AND_MAINTENANCE_DUTY	Knowledge Setup and Maintenance	Provides the users with the ability to setup and manage knowledge base
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_LEAD_REGISTRATION_MANAGEMENT_DUTY	Lead Registration Management	Manages and analyzes sales lead registrations. Includes the ability to create sales lead registrations, edit both internal and partner lead attributes as needed, and view lead age and status.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_LEAD_REGISTRATION_SUBMISSION_DUTY	Lead Registration Submission	Submits sales lead registrations to the enterprise and manages sales lead attributes. Includes the ability to create, accept, and reject sales lead registrations.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKT_MARKETING_BUDGET_MAINTENANCE_DUTY	MDF Budget Maintenance	Manages MDF budgets including import, export, and viewing budget fund requests and claims that use budgeted funds for marketing activities.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_MANAGE_CX_AI_AGENTS	Manage CX AI Agents	This role allows administrators to manage CX AI Agents in Agent Studio
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_	ORA_MKT_MARKETING_MAINTENANCE_DUTY	Marketing Maintenance	Creates and maintains setup for marketing campaigns,

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
APPLICATION_ADMINISTRATOR_JOB			responses, segments, lists, and treatments across the enterprise. Additional duties include file import management for the import of marketing campaign responses.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOO_OPPORTUNITY_CHANNEL_ADMINISTRATION_DUTY	Opportunity Channel Administration	Administers all aspects of the application, including some setup. This role is for channel administrators.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_PARTNER_ACCOUNT_ADMINISTRATION_DUTY	Partner Account Administration	Maintains a partner account, including managing members and partner profile information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_PARTNER_ACCOUNT_REVIEW_DUTY	Partner Account Review	Views a partner account, including viewing a partner's members, profile, and account team.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_PARTNER_IMPORT_ADMINISTRATION_DUTY	Partner Import Administration	Partner Import Administration Duty role. This duty will allow for administration activities of Partner Import
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_PARTNER_SALES_PARTY_MANAGEMENT_DUTY	Partner Sales Party Management	Manages creation and maintenance of sales organizations and consumers for partners. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts. This role has limited access to customers and contacts.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_VIEW_PARTY_CENTER_DUTY	Party Center Inquiry	Grants privileges to view party center nodes.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_MANAGE_PARTY_CENTER_DUTY	Party Center Management	Grants privileges to manage party center nodes.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ADMINISTRATOR_DUTY	Resource Administration	Administers resource information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ADMINISTRATOR_DUTY	Resource Administration	Administers resource information.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ORGANIZATION_ADMINISTRATOR_DUTY	Resource Organization Administration	Administers resource organizations.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ORGANIZATION_ADMINISTRATOR_DUTY	Resource Organization Administration	Administers resource organizations.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_TEAM_ADMINISTRATOR_DUTY	Resource Team Administration	Defines resource teams.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_TEAM_ADMINISTRATOR_DUTY	Resource Team Administration	Defines resource teams.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_REVIEW_CRM_APPROVAL_TRANSACTIONS_ADMINISTRATOR	Review CRM Approval Transactions Administrator	Allows viewing of information for CRM approval transactions by an administrator.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZBS_SALES_CHANGE_HISTORY_INQUIRY_DUTY	Sales Change History Inquiry	Views change history of sales business objects for members within the sales organization.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_SALES_LEAD_FOLLOW_UP_DUTY	Sales Lead Follow Up	Processes sales lead for follow up actions including the qualification and conversion of sales lead to revenue opportunities.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_AVAILABILITY_MANAGEMENT	Service Availability Management	Manage the service availability data including reading and writing the availability of a service.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_	ORA_SVC_SERVICE_PROFILE_ADMINISTRATION	Service Profile Administration	Manages all aspects of the Service Profile object, including deleting a service profile.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
APPLICATION_ADMINISTRATOR_JOB			
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_STATUS_COMPUTATION	Service Status Computation	Perform actions required to determine the availability of a service.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_SETUP_CUSTOMER_CENTER_DUTY	Setup Customer Center	Manages customer center set up, sales party creation and their related objects, such as appointments, assessments, interactions, notes and tasks.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HRS_SOCIAL_CONNECTION_PARTNER_DUTY_CRM	Social Connection Partner	Performs all Oracle Fusion Social Connection partner duties.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SPECIALIST_JOB	Subscription Specialist	Individual responsible for managing subscriptions, establishing recurring and usage billing processes, initiating manual discounts and invoice adjustments, and handling billing discrepancies and disputes.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	Territory Management Setup	Manages sales territory setup, including lookups, profile options, flexfields, and dimension data. Runs dimension synchronization, and visibility jobs. Additional duties include quota management setup.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_CUSTOMER_ACCOUNT_ADMINISTRATION_DUTY	Trading Community Customer Account Administration	Grants privileges to setup customer account information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_CUSTOMER_ACCOUNT_ADMINISTRATION_DUTY	Trading Community Customer Account Administration	Grants privileges to setup customer account information.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DATA_QUALITY_ADMIN_DUTY	Trading Community Data Quality Administration	Configures, reviews, and edits predefined data quality server configurations and the predefined matching, synchronization, and cleansing configurations.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DATA_QUALITY_ADMIN_DUTY	Trading Community Data Quality Administration	Configures, reviews, and edits predefined data quality server configurations and the predefined matching, synchronization, and cleansing configurations.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCQ_TRADING_COMMUNITY_DQ_MGMT_DUTY	Trading Community Data Quality Management	Performs real-time and batch data quality functions such as matching and cleansing.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DUP_IDEN_MANAGE_DUTY	Trading Community Duplicate Identification Batch Management	Grants privileges to manage duplicate identification batches
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DUP_RES_MANAGE_DUTY	Trading Community Duplicate Resolution Request Management	Grants privileges to manage duplicate resolution requests
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_PERSON_ADMINISTRATION_DUTY	Trading Community Person Administration	Grants privileges to setup person information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_PERSON_ADMINISTRATION_DUTY	Trading Community Person Administration	Grants privileges to setup person information.

Phone Area Code

An area code detail that can be associated with a trading community member's phone number. For example area code for Oracle Corporation is 650.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/phoneFormatService/}PhoneAreaCode

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Phone Country Code*
Handled by	*Trading Community Information Format for Phone*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AreaCode	string	Telephone area code.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.

Name	Type	Description
PhoneAreaCodeId	long	Unique identifier for the Phone area codes. • Primary Key
PhoneCountryCode	string	The country code prefix for the phone number.
TerritoryCode	string	Territory or country of the area code.
TimezoneCode	string	Foreign key to FND_TIMEZONES_B.TIMEZONE_CODE.

Phone Country Code

The country code detail that can be associated with a trading community member's phone number. For example country code for Oracle Corporation is 1.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/phoneFormatService/}PhoneCountryCode

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Mobile Phone Prefix*
Contains	*Trading Community Phone Format*
Contains	*Phone Area Code*
Handled by	*Trading Community Information Format for Phone*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AreaCodeLength	decimal	Number of fixed area code digits.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
IntlPrefix	string	International telephone number prefix.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MobilePrefix	*Trading Community Mobile Phone Prefix*	Prefixes for mobile phone numbers.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PhoneAreaCode	*Phone Area Code*	The area code prefix for the phone number.
PhoneCountryCode	string	The country code prefix for the phone number.
PhoneCountryCodeId	long	Unique identifier for the Phone area codes. • Primary Key
PhoneFormat	*Trading Community Phone Format*	Format associated with phone numbers.
PhoneLength	decimal	Number of fixed telephone number digits.
TerritoryCode	string	Foreign key to the FND_TERRITORIES.TERRITORY_CODE.
TimezoneCode	string	Foreign key to FND_TIMEZONES_B.TIMEZONE_CODE.
TrunkPrefix	string	Long distance telephone number prefix.
ValidationProc	string	PL/SQL validation procedure for telephone numbers of this country.

Trading Community Mobile Phone Prefix

The mobile phone number's prefix and carrier information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/phoneFormatService/}MobilePrefix

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Phone Country Code*
Handled by	*Trading Community Information Format for Phone*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Carrier	string	Indicates the carrier information or network information for a mobile prefix.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MobilePrefix	string	Mobile telephone number prefix. • Primary Key

Name	Type	Description
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PhoneCountryCode	string	The country code prefix for the phone number.
TerritoryCode	string	Territory or country of the mobile prefix. • Primary Key

Trading Community Phone Format

The display format for a phone number. For example, specifying 999-999-9999 as the default format for a US phone number.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/phoneFormatService/}PhoneFormat

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Phone Country Code*
Handled by	*Trading Community Information Format for Phone*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AreaCodeSize	long	Size of the area code. Specify the size as 0 if the area code is not included in the phone number.
CountryCodeDisplayFlag	boolean	Indicates if the country code must be displayed with the phone number. Y for displaying the country code, N for not displaying the country code. The default value is N.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
FormatName	string	Descriptive name of the telephone number format style.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PhoneFormatId	long	Unique identifier for the Phone formats. • Primary Key
PhoneFormatStyle	string	Format style for the phone number.
TerritoryCode	string	Foreign key from the HZ_TERRITORIES.TERRITORY_CODE.

Trading Community Location

A postal address, for example, 500 Oracle Parkway, Redwood Shores, CA 94065, USA or Oracle Parkway, Thames Valley Park (TVP), Reading, Berkshire, and RG6 1RA.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/locationService/applicationModule/}LocationService

Service WSDL URL: https://servername/crmService/FoundationPartiesLocationService?WSDL

Logical Business Objects

- CRM : Trading Community Model : Trading Community Location

getNearByLocations

The Find operation for the trading community classification category.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
latitude	decimal	The latitude of the location.
longitude	decimal	The longitude of the location.
distance	decimal	The distance from the input location.
unitOfMeasure	string	The unit of measure of the distance.

Response Payload

Element Name	Type	Description
result	*Location Details*	The collection of the trading community location SDO that matches the inbound key attributes.

getLocation

The Get operation of the trading community location SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
locationId	long	The unique identifier of the location.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/locationService/}LocationResult	The trading community location SDO that matches the inbound key attributes.

createLocation

The Create operation of the trading community location SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
location	*Location Details*	The trading community location SDO to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/locationService/}LocationResult	The result of the operation that includes the successfully created trading community location SDO and a list of warning or information messages.

updateLocation

The Update operation of the trading community location SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
location	*Location Details*	The trading community location SDO to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/locationService/}LocationResult	The result of the operation that includes the successfully updated trading community location SDO and a list of warning or information messages.

deleteLocation

The Delete operation of the trading community location SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
location	*Location Details*	The trading community location SDO to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warning or information messages encountered when the object was deleted.

mergeLocation

The Merge operation of the trading community location SDO. It performs an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
location	*Location Details*	The trading community location SDO to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/locationService/}LocationResult	The result of the operation that includes the successfully merged trading community location SDO and a list of warning or information messages.

findLocation

The Find operation of the trading community location SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The Find control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Location Details*	The result of the operation that includes a list of the trading community location SDO that satisfy the inbound criteria and any warning or information messages.

getLocationByOriginalSystemReference

The Get operation for trading community location filtered by the source system reference.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindOrigSystem	string	The unique code of the original system.
bindOrigSystemReference	string	The unique identifier of the original system reference.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The Find control. Not currently used.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/locationService/}LocationResult	The Get operation for trading community location filtered by the source system reference.

processLocation

The Bulk load operation of the trading community location SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what actions were performed, such as Create, Update, Merge, or Delete.
location	*Location Details*	A list of the trading community location SDO to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Control your bulk upload behavior, such as whether the valid data will be committed if there are other invalid data in the same batch, and whether the outbound will contain the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Location Details*	The result of the operation that includes a list of the trading community location SDO that were successfully processed and any warning or information messages.

processCSLocation

An operation to apply the changes back to the data source of the trading community location SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object used to represent the changes that were made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound operation contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The result of the operation that includes a list of created and updated data objects, and all warning and informational messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale to use when evaluating the locale-based user interface hints. The localeName is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in the ISO 8601 format.

getEntityList

An operation to get a list of service data objects defined for the service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for this service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and The Delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getLocationByOriginalSystemRefere	HZ_VIEW_TRADING_COMMUNITY_LOCATION_PRIV	View Trading Community Location	Allows the invocation of location web services.
processLocation	HZ_UPDATE_TRADING_COMMUNITY_LOCATION_PRIV	Update Trading Community Location	Allows the update of the organization location information. If assigning, also assign the ability to view the trading community location.
processLocation	HZ_ENTER_TRADING_COMMUNITY_LOCATION_PRIV	Enter Trading Community Location	Allows the invocation of location web services. If assigning, also assign the ability to view the trading community location.
deleteLocation	HZ_REMOVE_TRADING_COMMUNITY_LOCATION_PRIV	Remove Trading Community Location	Allows the removal of locations. If assigning, also assign the ability to view the trading community location.

Operation Name	Privilege Code	Privilege Name	Privilege Description
getNearByLocations	HZ_VIEW_TRADING_ COMMUNITY_LOCATION_PRIV	View Trading Community Location	Allows the invocation of location web services.
findLocation	HZ_VIEW_TRADING_ COMMUNITY_LOCATION_PRIV	View Trading Community Location	Allows the invocation of location web services.
getLocation	HZ_VIEW_TRADING_ COMMUNITY_LOCATION_PRIV	View Trading Community Location	Allows the invocation of location web services.
processCSLocation	HZ_UPDATE_TRADING_ COMMUNITY_LOCATION_PRIV	Update Trading Community Location	Allows the update of the organization location information. If assigning, also assign the ability to view the trading community location.
processCSLocation	HZ_ENTER_TRADING_ COMMUNITY_LOCATION_PRIV	Enter Trading Community Location	Allows the invocation of location web services. If assigning, also assign the ability to view the trading community location.
mergeLocation	HZ_UPDATE_TRADING_ COMMUNITY_LOCATION_PRIV	Update Trading Community Location	Allows the update of the organization location information. If assigning, also assign the ability to view the trading community location.
mergeLocation	HZ_ENTER_TRADING_ COMMUNITY_LOCATION_PRIV	Enter Trading Community Location	Allows the invocation of location web services. If assigning, also assign the ability to view the trading community location.
updateLocation	HZ_UPDATE_TRADING_ COMMUNITY_LOCATION_PRIV	Update Trading Community Location	Allows the update of the organization location information. If assigning, also assign the ability to view the trading community location.
createLocation	HZ_ENTER_TRADING_ COMMUNITY_LOCATION_PRIV	Enter Trading Community Location	Allows the invocation of location web services. If assigning, also assign the ability to view the trading community location.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_VIEW_TRADING_ COMMUNITY_LOCATION_PRIV	ORA_HEQ_APPLICANT_JOB	Applicant	Individual applying for admissions to a higher education institution, such as a college or university.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
			The role would be assigned to a user prior to being accepted After acceptance they would become a student.

ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_STATUS_COMPUTATION	Service Status Computation	Perform actions required to determine the availability of a service.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_ZCM_SETUP_CUSTOMER_CENTER_DUTY	Setup Customer Center	Manages customer center set up, sales party creation and their related objects, such as appointments, assessments, interactions, notes and tasks.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_AMENDMENT_DUTY	Subscription Amendment	Amends approved subscriptions. This includes initiating an amendment, reverting the subscription to the previous signed version, updating all allowable attributes, and submitting the amendment for approval.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_AUTHORING_DUTY	Subscription Authoring	Authors subscriptions
ORA_ZBS_SALES_MANAGER_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
ORA_ZBS_SALES_REPRESENTATIVE_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
ORA_ZBS_SALES_VP_JOB	ORA_OSS_SUBSCRIPTION_SALES_VIEW_DUTY	Subscription Sales View	Searches and views subscriptions for the assigned business units. This duty role is specifically applicable for sales job roles.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SEARCH_VIEW_DUTY	Subscription Search and View Access	Searches and views subscriptions for the assigned business units.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SETUP_DUTY	Subscription Setup	Handles the setup required for subscriptions.
ORA_ZBS_SALES_MANAGER_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZBS_SALES_VP_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_ENTERPRISE_ADMINISTRATION_DUTY	Territory Management Enterprise Administration	Manages sales territories and territory proposals. Additional duties include territory management setup and quota management administration.
ORA_ZBS_SALES_RESTRICTED_USER_JOB	ORA_MOT_TERRITORY_MANAGEMENT_READ_ONLY_DUTY	Territory Management Read Only	Read Only role for Territory Management Duty.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_CUSTOMER_ACCOUNT_ADMINISTRATION_DUTY	Trading Community Customer Account Administration	Grants privileges to setup customer account information.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DATA_QUALITY_ADMIN_DUTY	Trading Community Data Quality Administration	Configures, reviews, and edits predefined data quality server configurations and the predefined matching, synchronization, and cleansing configurations.
ORA_ZCH_DATA_STEWARD_MANAGER_JOB	ORA_ZCQ_TRADING_COMMUNITY_DQ_MGMT_DUTY	Trading Community Data Quality Management	Performs real-time and batch data quality functions such as matching and cleansing.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCQ_TRADING_COMMUNITY_DQ_MGMT_DUTY	Trading Community Data Quality Management	Performs real-time and batch data quality functions such as matching and cleansing.
ORA_ZCH_TRADING_COMMUNITY_DATA_STEWARD_JOB	ORA_ZCQ_TRADING_COMMUNITY_DQ_MGMT_DUTY	Trading Community Data Quality Management	Performs real-time and batch data quality functions such as matching and cleansing.
ORA_ZCH_DATA_STEWARD_MANAGER_JOB	ORA_DUP_IDEN_MANAGE_DUTY	Trading Community Duplicate Identification Batch Management	Grants privileges to manage duplicate identification batches
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DUP_IDEN_MANAGE_DUTY	Trading Community Duplicate Identification Batch Management	Grants privileges to manage duplicate identification batches
ORA_ZCH_TRADING_COMMUNITY_DATA_STEWARD_JOB	ORA_DUP_IDEN_MANAGE_DUTY	Trading Community Duplicate Identification Batch Management	Grants privileges to manage duplicate identification batches
ORA_ZCH_DATA_STEWARD_MANAGER_JOB	ORA_DUP_RES_MANAGE_DUTY	Trading Community Duplicate Resolution Request Management	Grants privileges to manage duplicate resolution requests

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DUP_RES_MANAGE_DUTY	Trading Community Duplicate Resolution Request Management	Grants privileges to manage duplicate resolution requests
ORA_ZCH_TRADING_COMMUNITY_DATA_STEWARD_JOB	ORA_DUP_RES_MANAGE_DUTY	Trading Community Duplicate Resolution Request Management	Grants privileges to manage duplicate resolution requests
ORA_ZCH_DATA_STEWARD_MANAGER_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZBS_SALES_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCH_TRADING_COMMUNITY_DATA_STEWARD_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCM_MKTG_SALES_PARTY_MANAGEMENT_DUTY	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCH_DATA_STEWARD_MANAGER_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCH_TRADING_COMMUNITY_DATA_STEWARD_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_PERSON_ADMINISTRATION_DUTY	Trading Community Person Administration	Grants privileges to setup person information.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZBS_SALES_MANAGER_JOB	ORA_ZCA_VIEW_CX_AI_AGENTS	View CX AI Agents	This role allows at run-time UI to access agent meta data
ORA_ZBS_SALES_ REPRESENTATIVE_JOB	ORA_ZCA_VIEW_CX_AI_AGENTS	View CX AI Agents	This role allows at run-time UI to access agent meta data
ORA_ZBS_SALES_VP_JOB	ORA_ZCA_VIEW_CX_AI_AGENTS	View CX AI Agents	This role allows at run-time UI to access agent meta data

Location Details

The details about a geographical or physical location. For example, 500 Oracle Parkway, Redwood Shores, CA 94065.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/locationService/}Location

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Location Profile Additional Information*
Contains	*Location Locale*
Contains	*Source System Reference*
Contains	*Location Profile*
Handled by	*Trading Community Location*
Handled by	*Company and User Registration*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AddrElementAttribute1	string	The additional address element to support flexible address format.
AddrElementAttribute2	string	The additional address element to support flexible address format.
AddrElementAttribute3	string	The additional address element to support flexible address format.
AddrElementAttribute4	string	The additional address element to support flexible address format.
AddrElementAttribute5	string	The additional address element to support flexible address format.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AddressEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address becomes effective.
AddressExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address is no longer active.
AddressLinesPhonetic	string	The phonetic or kana representation of the Kanji address lines (used in Japan).
AddressStyle	string	The context value for Flexible Address Format descriptive flex field. Do not use this column, join to the FND_TERRITORIES table via COUNTRY = TERRITORY_CODE to retrieve the address style for the country.
Building	string	The specific building name or number at a given address.
City	string	The name of the city.
CliiCode	string	Common Language Location Identifier (CLLI) code.

Name	Type	Description
Comments	string	The comments for the record.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DateValidated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address was last validated.
Description	string	The free text description of the record.
Distance	decimal	The distance from the input location.
DoNotValidateFlag	boolean	Indicates that a particular location should not validated, regardless of the current validation status code. If the value is Yes, then the location is not validated. The default is No.
EffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the location becomes valid.
FaLocationId	long	Foreign key to the FA_LOCATIONS table.
FloorNumber	string	The floor number of the address.
GeometryStatusCode	string	The spatial data integration status for given location.
HouseType	string	Indicates the building type for the building in the address. A list of valid values are defined in the lookup HZ_HOUSE_TYPE.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
Language	string	The language used in the location.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Latitude	decimal	The latitude information for the address. The latitude information for the location is used for spatial proximity and containment purposes.
LocationDirections	string	The directions to the address location.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table. • Primary Key
LocationInformation	*Trading Community Location Profile Additional Information*	The detailed information about the location.
LocationLocale	*Location Locale*	The location or address information in the local language.
LocationProfile	*Location Profile*	The profile information of the location.
Longitude	decimal	The longitude information for the address. The longitude information for the location is used for spatial proximity and containment purposes.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
Position	string	The primary direction such as North or East that is used to access the location.

Name	Type	Description
PostalCode	string	The postal code element of the address.
PostalPlus4Code	string	The four-digit extension to the United States Postal ZIP code for the address.
Province	string	The name of the province.
RequestId	long	A system-generated read-only attribute used by the application framework.
SalesTaxGeocode	string	The US Sales Tax Jurisdiction code. This provides a Jurisdiction Code (also called as Geocode) defined by either Vertex or Taxware. This value is passed as a ship-to location jurisdiction code to the tax partner API.
SalesTaxInsideCityLimits	string	Indicates if the location is inside the boundary of a city. Used to calculate state and local taxes in the United States. If the value is 1, then the location is within city limits.
ShortDescription	string	The short description of the location.
State	string	The name of the state.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
TimezoneCode	string	The code of the time zone for the location.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
ValidationStatusCode	string	A standardized status code describing the results of the validation. The value is internally set by system during address cleansing.

Location Locale

The details about a location or address in the local language.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/locationService/}LocationLocale

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Location Details*
Handled by	*Trading Community Location*
Handled by	*Company and User Registration*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AddrElementAttribute1	string	The additional address element to support flexible address format.
AddrElementAttribute2	string	The additional address element to support flexible address format.
AddrElementAttribute3	string	The additional address element to support flexible address format.
AddrElementAttribute4	string	The additional address element to support flexible address format.
AddrElementAttribute5	string	The additional address element to support flexible address format.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
Building	string	The specific building name or number at a given address in the local language.

Name	Type	Description
City	string	The name of the city.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
FloorNumber	string	The floor number of the address in the local language.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PostalCode	string	The postal code element of the address.
PostalPlus4Code	string	The four-digit extension to the United States Postal ZIP code for the address.
Province	string	The name of the province.
State	string	The name of the state.
TransliterationLang	string	The language used to define the address elements of the location. The list of accepted values are defined in the FND_LANGUAGES.LANGUAGE_COD lookup.

Location Profile

The profile information of a location.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/locationService/}LocationProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Location Details*
Handled by	*Trading Community Location*
Handled by	*Company and User Registration*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AddrElementAttribute1	string	The additional address element to support flexible address format.
AddrElementAttribute2	string	The additional address element to support flexible address format.
AddrElementAttribute3	string	The additional address element to support flexible address format.
AddrElementAttribute4	string	The additional address element to support flexible address format.
AddrElementAttribute5	string	The additional address element to support flexible address format.
Address1	string	The first line of the address.
Address2	string	The second line of the address.

Name	Type	Description
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
Building	string	The specific building name or number at a given address.
City	string	The name of the city.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DateValidated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address was last validated.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveLatestChange	string	Indicates whether the row has the latest change in the day. If the value is True, then this row has the latest change in the day.
EffectiveSequence	int	The order of the different changes made during the day. The lowest value represents the earliest change in the day.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
FloorNumber	string	The floor number of the address.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
LocationProfileId	long	The unique Identifier for a location profile. • Primary Key
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PostalCode	string	The postal code element of the address.
Province	string	The name of the province.
RequestId	long	A system-generated read-only attribute used by the application framework.
State	string	The name of the state.
ValidationSstFlag	boolean	Indicates if the location information has been validated. If the value is Y, then the location has been validated.
ValidationStatusCode	string	A standardized status code describing the results of the validation. The value is internally set by system during address cleansing.

Source System Reference

The name of external source system where the trading community information is imported from.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}OriginalSystemReference

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OldOrigSystemReference	string	The old source system reference that is being replaced.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OrigSystemReferenceId	long	The unique identifier for original system reference. • Primary Key

Name	Type	Description
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
SourceSystemRefInformation	*Trading Community Original System Mapping Identifier Additional Information*	The source system reference information.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Trading Community Location Profile Additional Information

The physical location information of a trading community member. For example 300 Oracle Parkway, Redwood Shore, CA.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/location/}LocationInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Location Details*
Handled by	*Trading Community Location*
Handled by	*Company and User Registration*

Relationship Type	Object or Service
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Original System Mapping Identifier Additional Information

The unique identifier for the trading community party, associated with the address, from the external source system reference.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/sourceSystemRef/}SourceSystemRefInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Source System Reference*
Handled by	*Sales Reference Customer*
Handled by	*Trading Community Location*
Handled by	*Trading Community Customer Account*

Relationship Type	Object or Service
Handled by	*Sales Party*

Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
OrigSystemRefId	long	Sequentially generated identifier. • Primary Key
_FLEX_NumOfSegments	int	Do not use as it is a internal descriptive flex field attribute.

Name	Type	Description
__FLEX_Context	string	Do not use as it is a internal descriptive flex field attribute.

Trading Community Member Name and Identifier

A configuration of name and identifier types that is associated with trading community members. For example, legal name, DBA name, passport number, and driver's license number.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/nameAndIdTypeService/applicationModule/}NameAndIdTypeService

Service WSDL URL: https://servername/crmService/NameAndIdTypeService?WSDL

Logical Business Objects

- CRM : Trading Community Model : Trading Community Member Name and Identifier Setup

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Handles	*Trading Community Additional Name and Identifier Type*
Handles	*Trading Community Additional Name and Identifier Type Translation*

Operations

- *getNameAndIdType*
- *createNameAndIdType*
- *updateNameAndIdType*
- *deleteNameAndIdType*
- *mergeNameAndIdType*
- *findNameAndIdType*
- *processNameAndIdType*
- *processCSNameAndIdType*

- *getDfltObjAttrHints*
- *getServiceLastUpdateTime*
- *getEntityList*

getNameAndIdType

The Get operation for trading community additional name and identifier type.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
typeCode	string	The Get operation for the trading community additional name and the identifier type for the type code provided as input.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/nameAndIdTypeService/}NameAndIdTypeResult	The trading community additional name and the identifier type that matches the inbound key attributes.

createNameAndIdType

The Create operation for trading community additional name and identifier type.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
nameAndIdType	*Trading Community Additional Name and Identifier Type*	The trading community additional name and identifier type to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/nameAndIdTypeService/}NameAndIdTypeResult	The result of the operation that includes the successfully created trading community additional name and identifier type and a list of warning or information messages.

updateNameAndIdType

The Update operation for trading community additional name and identifier type.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
nameAndIdType	*Trading Community Additional Name and Identifier Type*	The trading community additional name and identifier type to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/nameAndIdTypeService/}NameAndIdTypeResult	The result of the operation that includes the successfully updated trading community additional name and identifier type and a list of warning or information messages.

deleteNameAndIdType

The Delete operation for trading community additional name and identifier type.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
nameAndIdType	*Trading Community Additional Name and Identifier Type*	The trading community additional name and identifier type to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warning or information messages encountered when the object was deleted.

mergeNameAndIdType

The Merge operation for the trading community additional name and the identifier type. It performs an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
nameAndIdType	*Trading Community Additional Name and Identifier Type*	The trading community additional name and identifier type to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/nameAndIdTypeService/}NameAndIdTypeResult	The result of the operation that includes the successfully merged trading community additional name and identifier type and a list of warning or information messages.

findNameAndIdType

The Find operation for trading community additional name and identifier type.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Trading Community Additional Name and Identifier Type*	The result of the operation that includes a list of trading community additional name and identifier type that satisfy the inbound criteria and any warning or information messages.

processNameAndIdType

The Bulk Load operation for trading community additional name and identifier type.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action to perform, such as create, update, merge, or delete.
nameAndIdType	*Trading Community Additional Name and Identifier Type*	A list of trading community additional name and identifier type to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk operation behavior, such as whether valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Trading Community Additional Name and Identifier Type*	The result of the operation that includes a list of trading community additional name and identifier type that were successfully processed and any warning or information messages.

processCSNameAndIdType

An operation to apply the changes back to the data source for the trading community additional name and the identifier type.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object to represent the changes.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk operation behavior, such as whether valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The result of the operation that includes a list of created and updated data objects, and all warning and information messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name; an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale used to evaluate the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

Element Name	Type	Description

getEntityList

An operation to get the list of service data objects defined for this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for the service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
deleteNameAndIdType	HZ_MANAGE_TRADING_COMMUNITY_MEMBER_NAME_AND_IDENTIFIER_SETUP_FOR_IDENTIFIER_PRIV	Manage Trading Community Member Name and Identifier Setup for Identifier	Allows the specification of additional identifier types for organizations and persons in your business community, such as passport number and social security number.

HZ_MANAGE_TRADING_COMMUNITY_MEMBER_NAME_AND_IDENTIFIER_SETUP_FOR_IDENTIFIER_PRIV	ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Master Data Management Application Administrator	Administers the installation and maintenance of customer data management application and foundation model.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_CHANNEL_MANAGER_DASHBOARD_DUTY	Channel Manager Dashboard	Provides channel roles a dashboard to manage their daily transactions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_AMENDMENT_DUTY_CRM	Contract Amendment	Amends approved contracts. This includes initiating an amendment, reverting the contract to the previous signed version, updating all allowable attributes, and submitting the amendment for approval.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_AUTHORING_DUTY_CRM	Contract Authoring	Authors contracts, including terms and conditions, interactions, and customer account information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_SEARCH_VIEW_DUTY_CRM	Contract Search and View Access	Searches and views contracts for the assigned business units.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_SETUP_DUTY_CRM	Contract Setup	Contract Setup
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_CONV_MESSAGE_ADMINISTRATION	Conversation Message Administration	Has complete conversation message management capabilities including create messages, reply to messages, change a reply to ready to send status and delete a message.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_CDM_ADMIN_DUTY	Customer Data Management Administration	Administers customer data management.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_CDM_ADMIN_DUTY	Customer Data Management Administration	Administers customer data management.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_CSS_ADMINISTRATION	Customer Self-Service Administration	Manages the provisioning and approval of self service registration requests
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_DATA_INTEGRATION_MANAGEMENT_DUTY	Data Integration Management	This role allows setup and management of data integration maps and instances.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_FFS_FIELD_SERVICE_APPLICATION_ADMINISTRATOR_DUTY	Field Service Application Administrator	Individual responsible for the duty of configuring Field Service mobile application
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_GEO_ADMIN_DUTY	Geography Administration	Grants privileges to set up geographies
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_GEO_ADMIN_DUTY	Geography Administration	Grants privileges to set up geographies
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_CN_INCENTIVES_ADMINISTRATION_DUTY_CRM	Incentive Compensation Administration	Configure and maintain incentive compensation enterprise and business unit setup.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_AUTHORING_DUTY	Interview Definition Authoring	Manage access for authoring Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_MANAGING_DUTY	Interview Definition Managing	Manage access for deleting and forcing checkout of Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_PUBLISHING_DUTY	Interview Definition Publishing	Manage access for publishing and unpublishing Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_VIEWING_DUTY	Interview Definition Viewing	Manage access for viewing Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_EGP_ITEM_MANAGEMENT_DUTY_CRM	Item Management	Creates and manages items including item attributes, item structures, packs, associations, relationships, and catalog assignments.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_CSO_KNOWLEDGE_SETUP_AND_MAINTENANCE_DUTY	Knowledge Setup and Maintenance	Provides the users with the ability to setup and manage knowledge base
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_LEAD_REGISTRATION_MANAGEMENT_DUTY	Lead Registration Management	Manages and analyzes sales lead registrations. Includes the ability to create sales lead registrations, edit both internal and partner lead attributes as needed, and view lead age and status.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_LEAD_REGISTRATION_SUBMISSION_DUTY	Lead Registration Submission	Submits sales lead registrations to the enterprise and manages sales lead attributes. Includes the ability to create, accept, and reject sales lead registrations.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKT_MARKETING_BUDGET_MAINTENANCE_DUTY	MDF Budget Maintenance	Manages MDF budgets including import, export, and viewing budget fund requests and claims that use budgeted funds for marketing activities.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_MANAGE_CX_AI_AGENTS	Manage CX AI Agents	This role allows administrators to manage CX AI Agents in Agent Studio
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKT_MARKETING_MAINTENANCE_DUTY	Marketing Maintenance	Creates and maintains setup for marketing campaigns, responses, segments, lists, and treatments across the enterprise. Additional duties include file import management for the import of marketing campaign responses.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOO_OPPORTUNITY_CHANNEL_ADMINISTRATION_DUTY	Opportunity Channel Administration	Administers all aspects of the application, including some setup. This role is for channel administrators.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_PARTNER_ACCOUNT_ADMINISTRATION_DUTY	Partner Account Administration	Maintains a partner account, including managing members and partner profile information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_PARTNER_ACCOUNT_REVIEW_DUTY	Partner Account Review	Views a partner account, including viewing a partner's members, profile, and account team.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_PARTNER_IMPORT_ADMINISTRATION_DUTY	Partner Import Administration	Partner Import Administration Duty role. This duty will allow for administration activities of Partner Import
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_PARTNER_SALES_PARTY_MANAGEMENT_DUTY	Partner Sales Party Management	Manages creation and maintenance of sales organizations and consumers for partners. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts. This role has limited access to customers and contacts.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_VIEW_PARTY_CENTER_DUTY	Party Center Inquiry	Grants privileges to view party center nodes.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_MANAGE_PARTY_CENTER_DUTY	Party Center Management	Grants privileges to manage party center nodes.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ADMINISTRATOR_DUTY	Resource Administration	Administers resource information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ADMINISTRATOR_DUTY	Resource Administration	Administers resource information.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ORGANIZATION_ADMINISTRATOR_DUTY	Resource Organization Administration	Administers resource organizations.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ORGANIZATION_ADMINISTRATOR_DUTY	Resource Organization Administration	Administers resource organizations.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_TEAM_ADMINISTRATOR_DUTY	Resource Team Administration	Defines resource teams.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_TEAM_ADMINISTRATOR_DUTY	Resource Team Administration	Defines resource teams.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_REVIEW_CRM_APPROVAL_TRANSACTIONS_ADMINISTRATOR	Review CRM Approval Transactions Administrator	Allows viewing of information for CRM approval transactions by an administrator.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZBS_SALES_CHANGE_HISTORY_INQUIRY_DUTY	Sales Change History Inquiry	Views change history of sales business objects for members within the sales organization.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_SALES_LEAD_FOLLOW_UP_DUTY	Sales Lead Follow Up	Processes sales lead for follow up actions including the qualification and conversion of sales lead to revenue opportunities.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_AVAILABILITY_MANAGEMENT	Service Availability Management	Manage the service availability data including reading and writing the availability of a service.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_PROFILE_ADMINISTRATION	Service Profile Administration	Manages all aspects of the Service Profile object, including deleting a service profile.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_STATUS_COMPUTATION	Service Status Computation	Perform actions required to determine the availability of a service.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_SETUP_CUSTOMER_CENTER_DUTY	Setup Customer Center	Manages customer center set up, sales party creation and their related objects, such as appointments, assessments, interactions, notes and tasks.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HRS_SOCIAL_CONNECTION_PARTNER_DUTY_CRM	Social Connection Partner	Performs all Oracle Fusion Social Connection partner duties.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SPECIALIST_JOB	Subscription Specialist	Individual responsible for managing subscriptions, establishing recurring and usage billing processes, initiating manual discounts and invoice adjustments, and handling billing discrepancies and disputes.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	Territory Management Setup	Manages sales territory setup, including lookups, profile options, flexfields, and dimension data. Runs dimension synchronization, and visibility jobs. Additional duties include quota management setup.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_CUSTOMER_ACCOUNT_ADMINISTRATION_DUTY	Trading Community Customer Account Administration	Grants privileges to setup customer account information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_CUSTOMER_ACCOUNT_ADMINISTRATION_DUTY	Trading Community Customer Account Administration	Grants privileges to setup customer account information.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DATA_QUALITY_ADMIN_DUTY	Trading Community Data Quality Administration	Configures, reviews, and edits predefined data quality server configurations and the predefined matching, synchronization, and cleansing configurations.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DATA_QUALITY_ADMIN_DUTY	Trading Community Data Quality Administration	Configures, reviews, and edits predefined data quality server configurations and the predefined matching, synchronization, and cleansing configurations.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCQ_TRADING_COMMUNITY_DQ_MGMT_DUTY	Trading Community Data Quality Management	Performs real-time and batch data quality functions such as matching and cleansing.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DUP_IDEN_MANAGE_DUTY	Trading Community Duplicate Identification Batch Management	Grants privileges to manage duplicate identification batches
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DUP_RES_MANAGE_DUTY	Trading Community Duplicate Resolution Request Management	Grants privileges to manage duplicate resolution requests
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_PERSON_ADMINISTRATION_DUTY	Trading Community Person Administration	Grants privileges to setup person information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_PERSON_ADMINISTRATION_DUTY	Trading Community Person Administration	Grants privileges to setup person information.

Trading Community Additional Name and Identifier Type

An additional name and identifier type that can be associated with a trading community member. For example, a passport number for a person or a D-U-N-S number for an organization.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/nameAndIdTypeService/}NameAndIdType

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Additional Name and Identifier Type Translation*
Handled by	*Trading Community Member Name and Identifier*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
NameAndIdTypeTranslation	*Trading Community Additional Name and Identifier Type Translation*	Language specific name or identifier type.
NameTypeIndicator	string	Qualifier to indicate name or identifier.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
TypeCode	string	Unique identifier for the party identifier and name type. • Primary Key
TypeName	string	Unique name for the name or identifier type.
TypeOfParty	string	The party type that the name or identifier is associated with.
UniqueWithinTypeFlag	boolean	Flag to indicate if this is unique within this type.

Trading Community Additional Name and Identifier Type Translation

An additional name or identifier type in a local language. For example, configure local language name in French or an alias in Japanese.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/nameAndIdTypeService/}NameAndIdTypeTranslation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Additional Name and Identifier Type*
Handled by	*Trading Community Member Name and Identifier*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
Language	string	Indicates the code of the language into which the contents of the translatable columns are translated. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
SourceLang	string	Indicates the code of the language in which the contents of the translatable columns were originally created.

Name	Type	Description
TypeCode	string	Foreign key to _B table. • Primary Key
TypeName	string	Used for display. Needs to be unique.

Trading Community Member Usage

A configuration of information regarding how each trading community member is used in the deploying company's business processes. For example, usages could be customer and supplier.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyUsageService/applicationModule/}PartyUsageService

getPartyUsage

The Get operation for trading community party usage.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyUsageCode	string	The get operation of the trading community party usage for the given party usage code.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/partyUsageService/}PartyUsageResult	The trading community party usage that matches the inbound key attributes.

createPartyUsage

The Create operation for trading community party usage.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyUsage	*Trading Community Party Usage*	The trading community party usage to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/partyUsageService/}PartyUsageResult	The result of the operation that includes the successfully created trading community party usage and a list of warning or information messages.

updatePartyUsage

The Update operation for trading community party usage.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyUsage	*Trading Community Party Usage*	The trading community party usage to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/partyUsageService/}PartyUsageResult	The result of the operation that includes the successfully updated trading community party usage and a list of warning or information messages.

deletePartyUsage

The Delete operation for trading community party usage.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyUsage	*Trading Community Party Usage*	The trading community party usage to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warning or information messages encountered when the object was deleted.

mergePartyUsage

The Merge operation for the trading community party usage. It performs an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyUsage	*Trading Community Party Usage*	The trading community party usage to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/partyUsageService/}PartyUsageResult	The result of the operation that includes a list of trading community additional name and identifier type that were successfully merged and any warning or information messages.

findPartyUsage

The Find operation for trading community party usage.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Trading Community Party Usage*	The result of the operation that includes a list of trading community party usage that satisfy the inbound criteria and any warning or information messages.

processPartyUsage

The Bulk Load operation for trading community party usage.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action to perform, such as create, update, merge, or delete.
partyUsage	*Trading Community Party Usage*	A list of trading community party usage to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk operation behavior, such as whether valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Trading Community Party Usage*	The result of the operation that includes a list of trading community additional name and identifier type that were successfully processed and any warning or information messages.

processCSPartyUsage

An operation to apply the changes back to the data source for trading community party usage.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object to represent the changes.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk operation behavior, such as whether valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The result of the operation that includes a list of created and updated data objects, and all warning and information messages.

getPartyUsageFilterRule

The Get operation for trading community party usage filter rule.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyUsageFrId	long	The get operation of the trading community party usage filter rule for the given party usage filter rule identifier.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/partyUsageService/}PartyUsageFilterRuleResult	The trading community party usage filter rule that matches the inbound key attributes.

createPartyUsageFilterRule

The Create operation for trading community party usage filter rule.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyUsageFilterRule	*Trading Community Party Usage Filter Rule*	The trading community party usage filter rule to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/partyUsageService/}PartyUsageFilterRuleResult	The result of the operation that includes the successfully created trading community party usage filter rule and a list of warning or information messages.

updatePartyUsageFilterRule

The Update operation for trading community party usage filter rule.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyUsageFilterRule	*Trading Community Party Usage Filter Rule*	The trading community party usage filter rule to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/partyUsageService/}PartyUsageFilterRuleResult	The result of the operation that includes the successfully updated trading community party usage filter rule and a list of warning or information messages.

deletePartyUsageFilterRule

The Delete operation for trading community party usage filter rule.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyUsageFilterRule	*Trading Community Party Usage Filter Rule*	The trading community party usage filter rule to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warning or information messages encountered when deleting the object.

mergePartyUsageFilterRule

The Merge operation for trading community party usage filter rule. It performs an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyUsageFilterRule	*Trading Community Party Usage Filter Rule*	The trading community party usage filter rule to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/partyUsageService/}PartyUsageFilterRuleResult	The result of the operation that includes the successfully merged trading community party usage filter rule and a list of warning or information messages.

findPartyUsageFilterRule

The Find operation for trading community party usage filter rule.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Trading Community Party Usage Filter Rule*	The result of the operation that includes a list of trading community party usage filter rule that satisfy the inbound criteria and any warning or information messages.

processPartyUsageFilterRule

The Bulk Load operation for trading community party usage filter rule.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what action to perform, such as create, update, merge, or delete.
partyUsageFilterRule	*Trading Community Party Usage Filter Rule*	A list of the trading community party usage filter rules to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk operation behavior, such as whether valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Trading Community Party Usage Filter Rule*	The result of the operation that includes a list of trading community party usage filter rule that were successfully processed and any warning or information messages.

processCSPartyUsageFilterRule

An operation to apply the changes back to the data source for trading community party usage filter rule.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object to represent the changes.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk operation behavior, such as whether valid data is committed if there are other invalid data in the same batch, and whether the outbound contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The result of the operation that includes a list of created and updated data objects, and all warning and information messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name; an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale used to evaluate the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in the ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined for this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for the service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getPartyUsageFilterRule	HZ_MANAGE_TRADING_COMMUNITY_PARTY_USAGE_FILTER_RULE_INFORMATION_PRIV	Manage Trading Community Party Usage Filter Rule Information	Allows the specification of filter rules to include or exclude usages for searching parties.

mergePartyUsageFilterRule	HZ_MANAGE_TRADING_ COMMUNITY_PARTY_USAGE_ FILTER_RULE_INFORMATION_PRIV	Manage Trading Community Party Usage Filter Rule Information	Allows the specification of filter rules to include or exclude usages for searching parties.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_MANAGE_TRADING_ COMMUNITY_PARTY_USAGE_PRIV	ORA_ZCA_CUSTOMER_ RELATIONSHIP_MANAGEMENT_ APPLICATION_ADMINISTRATOR_ JOB	Customer Relationship Management Application Administrator	Individual responsible for customer relationship management application administration. Collaborates with customer relationship management application users to maintain consistent financial application setup, rules, and access.
HZ_MANAGE_TRADING_ COMMUNITY_PARTY_USAGE_PRIV	ORA_ZCH_MASTER_DATA_ MANAGEMENT_APPLICATION_ ADMINISTRATOR_JOB	Master Data Management Application Administrator	Administers the installation and maintenance of customer data management application and foundation model.

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_MANAGE_TRADING_COMMUNITY_PARTY_USAGE_FILTER_RULE_INFORMATION_PRIV	ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Customer Relationship Management Application Administrator	Individual responsible for customer relationship management application administration. Collaborates with customer relationship management application users to maintain consistent financial application setup, rules, and access.
HZ_MANAGE_TRADING_COMMUNITY_PARTY_USAGE_FILTER_RULE_INFORMATION_PRIV	ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	Master Data Management Application Administrator	Administers the installation and maintenance of customer data management application and foundation model.

Duty Roles to Duty or Job Roles Mapping

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_ACCESS_GROUPS_ENABLEMENT_DUTY	Access Groups Enablement	Enables the Access Groups functionality.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_CHANNEL_MANAGER_DASHBOARD_DUTY	Channel Manager Dashboard	Provides channel roles a dashboard to manage their daily transactions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_AMENDMENT_DUTY_CRM	Contract Amendment	Amends approved contracts. This includes initiating an amendment, reverting the contract to the previous signed version, updating all allowable attributes, and submitting the amendment for approval.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_AUTHORING_DUTY_CRM	Contract Authoring	Authors contracts, including terms and conditions, interactions, and customer account information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_SEARCH_VIEW_DUTY_CRM	Contract Search and View Access	Searches and views contracts for the assigned business units.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OKC_CONTRACT_SETUP_DUTY_CRM	Contract Setup	Contract Setup
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_CONV_MESSAGE_ADMINISTRATION	Conversation Message Administration	Has complete conversation message management capabilities including create messages, reply to messages, change a reply to ready to send status and delete a message.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_CDM_ADMIN_DUTY	Customer Data Management Administration	Administers customer data management.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_CDM_ADMIN_DUTY	Customer Data Management Administration	Administers customer data management.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_CSS_ADMINISTRATION	Customer Self-Service Administration	Manages the provisioning and approval of self service registration requests
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_DATA_INTEGRATION_MANAGEMENT_DUTY	Data Integration Management	This role allows setup and management of data integration maps and instances.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_FFS_FIELD_SERVICE_APPLICATION_ADMINISTRATOR_DUTY	Field Service Application Administrator	Individual responsible for the duty of configuring Field Service mobile application
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_GEO_ADMIN_DUTY	Geography Administration	Grants privileges to set up geographies
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_GEO_ADMIN_DUTY	Geography Administration	Grants privileges to set up geographies
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_CN_INCENTIVES_ADMINISTRATION_DUTY_CRM	Incentive Compensation Administration	Configure and maintain incentive compensation enterprise and business unit setup.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_AUTHORING_DUTY	Interview Definition Authoring	Manage access for authoring Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_MANAGING_DUTY	Interview Definition Managing	Manage access for deleting and forcing checkout of Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_PUBLISHING_DUTY	Interview Definition Publishing	Manage access for publishing and unpublishing Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OIA_INTERVIEW_VIEWING_DUTY	Interview Definition Viewing	Manage access for viewing Interview definitions.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_EGP_ITEM_MANAGEMENT_DUTY_CRM	Item Management	Creates and manages items including item attributes, item structures, packs, associations, relationships, and catalog assignments.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_CSO_KNOWLEDGE_SETUP_AND_MAINTENANCE_DUTY	Knowledge Setup and Maintenance	Provides the users with the ability to setup and manage knowledge base
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_LEAD_REGISTRATION_MANAGEMENT_DUTY	Lead Registration Management	Manages and analyzes sales lead registrations. Includes the ability to create sales lead registrations, edit both internal and partner lead attributes as needed, and view lead age and status.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_LEAD_REGISTRATION_SUBMISSION_DUTY	Lead Registration Submission	Submits sales lead registrations to the enterprise and manages sales lead attributes. Includes the ability to create, accept, and reject sales lead registrations.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKT_MARKETING_BUDGET_MAINTENANCE_DUTY	MDF Budget Maintenance	Manages MDF budgets including import, export, and viewing budget fund requests and claims that use budgeted funds for marketing activities.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_MANAGE_CX_AI_AGENTS	Manage CX AI Agents	This role allows administrators to manage CX AI Agents in Agent Studio
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKT_MARKETING_MAINTENANCE_DUTY	Marketing Maintenance	Creates and maintains setup for marketing campaigns, responses, segments, lists, and treatments across the enterprise. Additional duties include file import management for the import of marketing campaign responses.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOO_OPPORTUNITY_CHANNEL_ADMINISTRATION_DUTY	Opportunity Channel Administration	Administers all aspects of the application, including some setup. This role is for channel administrators.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_PARTNER_ACCOUNT_ADMINISTRATION_DUTY	Partner Account Administration	Maintains a partner account, including managing members and partner profile information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_PARTNER_ACCOUNT_REVIEW_DUTY	Partner Account Review	Views a partner account, including viewing a partner's members, profile, and account team.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZPM_PARTNER_IMPORT_ADMINISTRATION_DUTY	Partner Import Administration	Partner Import Administration Duty role. This duty will allow for administration activities of Partner Import
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_PARTNER_SALES_PARTY_MANAGEMENT_DUTY	Partner Sales Party Management	Manages creation and maintenance of sales organizations and consumers for partners. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts. This role has limited access to customers and contacts.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_VIEW_PARTY_CENTER_DUTY	Party Center Inquiry	Grants privileges to view party center nodes.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCH_MANAGE_PARTY_CENTER_DUTY	Party Center Management	Grants privileges to manage party center nodes.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ADMINISTRATOR_DUTY	Resource Administration	Administers resource information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ADMINISTRATOR_DUTY	Resource Administration	Administers resource information.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ORGANIZATION_ADMINISTRATOR_DUTY	Resource Organization Administration	Administers resource organizations.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_ORGANIZATION_ADMINISTRATOR_DUTY	Resource Organization Administration	Administers resource organizations.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_TEAM_ADMINISTRATOR_DUTY	Resource Team Administration	Defines resource teams.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZRESOURCE_TEAM_ADMINISTRATOR_DUTY	Resource Team Administration	Defines resource teams.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCA_REVIEW_CRM_APPROVAL_TRANSACTIONS_ADMINISTRATOR	Review CRM Approval Transactions Administrator	Allows viewing of information for CRM approval transactions by an administrator.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZBS_SALES_CHANGE_HISTORY_INQUIRY_DUTY	Sales Change History Inquiry	Views change history of sales business objects for members within the sales organization.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MKL_SALES_LEAD_FOLLOW_UP_DUTY	Sales Lead Follow Up	Processes sales lead for follow up actions including the qualification and conversion of sales lead to revenue opportunities.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_SALES_PARTY_MANAGEMENT_DUTY	Sales Party Management	Manages creation and maintenance of the sales organizations and consumers for internal sales users. Additional duties include viewing of opportunities and opportunity revenue, reviewing sales leads as well as appointments, interactions, and customer contacts.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_AVAILABILITY_MANAGEMENT	Service Availability Management	Manage the service availability data including reading and writing the availability of a service.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_PROFILE_ADMINISTRATION	Service Profile Administration	Manages all aspects of the Service Profile object, including deleting a service profile.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SR_ADMINISTRATOR	Service Request Administrator	Administers all aspects of the Service application, including Setup.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_SVC_SERVICE_STATUS_COMPUTATION	Service Status Computation	Perform actions required to determine the availability of a service.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCM_SETUP_CUSTOMER_CENTER_DUTY	Setup Customer Center	Manages customer center set up, sales party creation and their related objects, such as appointments, assessments, interactions, notes and tasks.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HRS_SOCIAL_CONNECTION_PARTNER_DUTY_CRM	Social Connection Partner	Performs all Oracle Fusion Social Connection partner duties.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_OSS_SUBSCRIPTION_SPECIALIST_JOB	Subscription Specialist	Individual responsible for managing subscriptions, establishing recurring and usage billing processes, initiating manual discounts and invoice adjustments, and handling billing discrepancies and disputes.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_DUTY	Territory Management	Manages sales territories, territory proposals, and quotas.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MOT_TERRITORY_MANAGEMENT_SETUP_DUTY	Territory Management Setup	Manages sales territory setup, including lookups, profile options, flexfields, and dimension data. Runs dimension synchronization, and visibility jobs. Additional duties include quota management setup.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_CUSTOMER_ACCOUNT_ADMINISTRATION_DUTY	Trading Community Customer Account Administration	Grants privileges to setup customer account information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_CUSTOMER_ACCOUNT_ADMINISTRATION_DUTY	Trading Community Customer Account Administration	Grants privileges to setup customer account information.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DATA_QUALITY_ADMIN_DUTY	Trading Community Data Quality Administration	Configures, reviews, and edits predefined data quality server configurations and the predefined matching, synchronization, and cleansing configurations.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DATA_QUALITY_ADMIN_DUTY	Trading Community Data Quality Administration	Configures, reviews, and edits predefined data quality server configurations and the predefined matching, synchronization, and cleansing configurations.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_ZCQ_TRADING_COMMUNITY_DQ_MGMT_DUTY	Trading Community Data Quality Management	Performs real-time and batch data quality functions such as matching and cleansing.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DUP_IDEN_MANAGE_DUTY	Trading Community Duplicate Identification Batch Management	Grants privileges to manage duplicate identification batches
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_DUP_RES_MANAGE_DUTY	Trading Community Duplicate Resolution Request Management	Grants privileges to manage duplicate resolution requests
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_PERSON_ADMINISTRATION_DUTY	Trading Community Person Administration	Grants privileges to setup person information.
ORA_ZCA_CUSTOMER_RELATIONSHIP_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_PERSON_ADMINISTRATION_DUTY	Trading Community Person Administration	Grants privileges to setup person information.

Trading Community Party Usage

The usage associated with a trading community member. For example, a customer or a contact usage.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyUsageService/}PartyUsage

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Party Usage Rule*
Contains	*Trading Community Party Usage Translation*
Handled by	*Trading Community Member Usage*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.

Name	Type	Description
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyUsageAssignmentDescription	string	The description of the business event that drives the party usage assignment.
PartyUsageAssignmentRule	*Trading Community Party Usage Rule*	Rule for assignment for a party usage.
PartyUsageCode	string	The usage context of a party's contact point. • Primary Key
PartyUsageName	string	Name of the party usage.
PartyUsageTranslation	*Trading Community Party Usage Translation*	Language specific party usage.
PartyUsageType	string	Party type that the usage pertains to.
PartyUsageUnassignmentDescription	string	The description of the business event that drives the party usage unassignment.
RelationshipCausesAssignmentFlag	boolean	Flag to indicate if usage can be assigned to a party by a create relationship event.
RestrictManualAssignFlag	boolean	Indicates if usage can be assigned only implicitly through identified business events and not directly through other features.
RestrictManualUpdateFlag	boolean	Indicates if usage can be updated only implicitly through identified business events and not directly through other features.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
UncondAssignFlag	boolean	Flag to indicate whether the assignment can be done from UI/Bulk Import by directly exposing the usages.

Name	Type	Description

Trading Community Party Usage Filter Rule

The filter rule that is a collection of related party usages. For example, a filter rule called All Organization Contacts includes sales contact, supplier contact, and so on.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyUsageService/}PartyUsageFilterRule

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Party Usage Filter Rule Translation*
Contains	*Trading Community Party Usage Filter Rule Member*
Handled by	*Trading Community Member Usage*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CompiledStatus	string	Indicator of whether or not the compiled sql is up to date.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.

Name	Type	Description
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyUsageFRTranslation	*Trading Community Party Usage Filter Rule Translation*	The language specific party usage filter rule translation.
PartyUsageFilterRuleMember	*Trading Community Party Usage Filter Rule Member*	The member of the party usage filter rule.
PartyUsageFrCode	string	The code for the party usage filter rule.
PartyUsageFrId	long	The identifier for the party usage filter rule. • Primary Key
PartyUsageFrName	string	Name of the party usage filter rule.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.

Trading Community Party Usage Filter Rule Member

The party usage that is a member in a filter rule by being included in the filter rule definition. For example, a rule could include customers and suppliers, but exclude partners.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyUsageService/}PartyUsageFilterRuleMember

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Party Usage Filter Rule Soft Exclusion*
Contained by	*Trading Community Party Usage Filter Rule*

Relationship Type	Object or Service
Handled by	*Trading Community Member Usage*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyUsageAsgSelCrteria	string	The selection criteria for the party usage assignment. Indicates if the selection includes active, not active, or both types of party usage assignments.
PartyUsageCode	string	The usage context of a party's contact point.
PartyUsageFilterRuleSoftExclusion	*Trading Community Party Usage Filter Rule Soft Exclusion*	A soft excluded party usage in a filter rule.
PartyUsageFrId	long	The identifier for the party usage filter rule.
PartyUsageFrMemId	long	The member identifier for the party usage filter rule. • Primary Key
PartyUsageFrMemType	string	The member types for the party usage filter rule.

Trading Community Party Usage Filter Rule Soft Exclusion

The rule that stipulates soft exclusions from a party usage filter rule. For example a partner contact can be excluded from a filter rule meant for customer contacts.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyUsageService/}PartyUsageFilterRuleSoftExclusion

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Party Usage Filter Rule Member*
Handled by	*Trading Community Member Usage*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyUsageCode	string	The usage context of a party's contact point.

Name	Type	Description
PartyUsageFrId	long	Unique identifier for the party usage filter rule.
PartyUsageFrMemId	long	The member Identifier for the party usage filter rule.
SoftExclusionId	long	The identifier for the party usage filter rule soft exclusion. • Primary Key

Trading Community Party Usage Filter Rule Translation

The filter rule information in a local language.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyUsageService/}PartyUsageFRTranslation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Party Usage Filter Rule*
Handled by	*Trading Community Member Usage*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
Language	string	Indicates the code of the language into which the contents of the translatable columns are translated.

Name	Type	Description
		• Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyUsageFrId	long	The identifier for the party usage filter rule. • Primary Key
PartyUsageFrName	string	Name of the party usage filter rule.
SourceLang	string	Indicates the code of the language in which the contents of the translatable columns were originally created.

Trading Community Party Usage Rule

The rule that stipulates how party usages should be assigned to a trading community member. For example, the organization contact usage should be assigned on creation of a relationship between a person and any organization.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyUsageService/}PartyUsageAssignmentRule

Relationships

getOrganizationProfile

The Get operation for trading community organization profile. You can query the organization profile with the party ID using this operation.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
PartyId	long	The unique identifier of the party.

Response Payload

Element Name	Type	Description
result	*Account*	The trading community organization profile that matches the inbound key attributes.

getOrganization

The Get operation for the trading community organization details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyId	long	The unique identifier of the party.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}OrganizationPartyResult	The trading community organization details that matches the inbound key attributes.

createOrganization

The Create operation for the trading community organization details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
organizationParty	*Trading Community Organization Details*	The trading community organization details to be created.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}OrganizationPartyResult	The result of the operation that includes the successfully created trading community organization details and a list of warning or information messages.

updateOrganization

The Update operation for the trading community organization details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
organizationParty	*Trading Community Organization Details*	The trading community organization details to be updated.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}OrganizationPartyResult	The result of the operation that includes the successfully updated trading community organization details and a list of warning or information messages.

deleteOrganization

The Delete operation for the trading community organization details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
organizationParty	*Trading Community Organization Details*	The trading community organization details to be deleted.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}MethodResult	A list of warning or information messages encountered when the object was deleted.

mergeOrganization

The Merge operation for trading community organization details. It performs an update if the object exists, or an insert if the object doesn't already exist.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
organizationParty	*Trading Community Organization Details*	The trading community organization details to be merged.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}OrganizationPartyResult	The result of the operation that includes the successfully merged trading community organization details and a list of warning or information messages.

findOrganization

The Find operation for trading community organization details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Trading Community Organization Details*	The result of the operation that includes a list of trading community organization details that satisfy the inbound criteria and any warning or information messages encountered during the invocation.

getOrganizationsFilteredByPartyUsageFilterRuleCode

The Get operation for trading community organization filtered by party usage filter rule.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindPartyUsageFrCode	string	The party usage filter rule used to filter an organization.
bindEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The effective date to filter the party usages associated with the organization.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}OrganizationPartyResult	The trading community organization details that are filtered by the party usage filter rule provided.

getOrganizationsFilteredByPartyUsageCode

The Get operation for trading community organization filtered by party usage.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindPartyUsageCode	string	The party usage code used to filter organizations.
bindEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}dateDate	The effective date to filter the party usages associated with the organization.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}OrganizationPartyResult	The trading community organization details that matches the inbound party usage code.

getOrganizationByOriginalSystemReference

The Get operation for trading community organization filtered by the source system reference.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindOrigSystem	string	The unique code of the original system.
bindOrigSystemReference	string	The unique identifier of the original system reference.

Element Name	Type	Description
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}OrganizationPartyResult	The trading community organization details that are filtered by The source system reference provided.

processOrganization

The Bulk load operation for trading community organization details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
changeOperation	string	Indicates what actions were performed, such as Create, Update, Merge, or Delete.
organizationParty	*Trading Community Organization Details*	A list of the trading community organization details to be processed.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound operation contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	*Trading Community Organization Details*	The result of the operation that includes a list of trading community organization details that are successfully processed and any warning or information messages encountered during the invocation.

processCSOrganization

An operation to apply the changes back to the data source for trading community organization details.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
processData	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The object used to represent the changes that were made.
processControl	{http://xmlns.oracle.com/adf/svc/types/}ProcessControl	Controls the bulk upload behavior, such as whether the valid data is committed if there are other invalid data in the same batch, and whether the outbound operation contains the key attributes only or the full object.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ProcessData	The result of the operation that includes a list of created and updated data objects, and all warning and informational messages.

updateOrganizationProfile

The Update operation for trading community organization profile. You can update the organization profile with party ID using this operation.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
organizationDVO	*Account*	The trading community organization profile to be updated.

Response Payload

Element Name	Type	Description
result	*Account*	The result of the operation that includes the successfully updated trading community organization profile and a list of warning or information messages.

mergeOrganizationProfile

The Merge operation for trading community organization profile. You can update the organization profile with party ID using this operation.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
organizationDVO	*Account*	The trading community organization profile to be merged.

Response Payload

Element Name	Type	Description
result	*Account*	The result of the operation that includes the successfully merged trading community organization profiles and a list of warning or information messages.

findOrganizationProfile

The Find operation for trading community organization profile.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	The Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Account*	The result of the operation that includes a list of trading community organization profiles that satisfy the inbound criteria and any warning or information messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name, an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale used when evaluating the locale-based user interface hints. The localeName is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined on this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined on this service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and the Delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
getOrganizationsFilteredByPartyUsa	HZ_VIEW_TRADING_COMMUNITY_ORGANIZATION_PRIV	View Trading Community Organization	Allows exporting, searching, and viewing of organization details such as addresses, classifications, identifiers, and names.
createOrganization	HZ_ENTER_TRADING_COMMUNITY_ORGANIZATION_INFORMATION_PRIV	Enter Trading Community Organization Information	Allows the specification of organization information.
All Operations	HZ_ENTER_TRADING_COMMUNITY_ORGANIZATION_INFORMATION_PRIV	Enter Trading Community Organization Information	Allows the specification of organization information.
getOrganization	HZ_VIEW_TRADING_COMMUNITY_ORGANIZATION_PRIV	View Trading Community Organization	Allows exporting, searching, and viewing of organization details such as addresses, classifications, identifiers, and names.
updateOrganization	HZ_UPDATE_TRADING_COMMUNITY_ORGANIZATION_PRIV	Update Trading Community Organization	Allows the update of the organization relationship information. If assigning, also assign the ability to view the trading community organization relationship.
deleteOrganization	HZ_REMOVE_TRADING_COMMUNITY_ORGANIZATION_PRIV	Remove Trading Community Organization	Allows the removal of organizations. If assigning, also assign the ability to view the trading community organization.

Operation Name	Privilege Code	Privilege Name	Privilege Description
findOrganization	HZ_VIEW_TRADING_ COMMUNITY_ORGANIZATION_ PRIV	View Trading Community Organization	Allows exporting, searching, and viewing of organization details such as addresses, classifications, identifiers, and names.
processCSOrganization	HZ_UPDATE_TRADING_ COMMUNITY_ORGANIZATION_ PRIV	Update Trading Community Organization	Allows the update of the organization relationship information. If assigning, also assign the ability to view the trading community organization relationship.
processCSOrganization	HZ_ENTER_TRADING_ COMMUNITY_ORGANIZATION_ INFORMATION_PRIV	Enter Trading Community Organization Information	Allows the specification of organization information.
getOrganizationByOriginalSystemR	HZ_VIEW_TRADING_ COMMUNITY_ORGANIZATION_ PRIV	View Trading Community Organization	Allows exporting, searching, and viewing of organization details such as addresses, classifications, identifiers, and names.
mergeOrganization	HZ_UPDATE_TRADING_ COMMUNITY_ORGANIZATION_ PRIV	Update Trading Community Organization	Allows the update of the organization relationship information. If assigning, also assign the ability to view the trading community organization relationship.
mergeOrganization	HZ_ENTER_TRADING_ COMMUNITY_ORGANIZATION_ INFORMATION_PRIV	Enter Trading Community Organization Information	Allows the specification of organization information.
getOrganizationsFilteredByPartyUsa	HZ_VIEW_TRADING_ COMMUNITY_ORGANIZATION_ PRIV	View Trading Community Organization	Allows exporting, searching, and viewing of organization details such as addresses, classifications, identifiers, and names.
processOrganization	HZ_UPDATE_TRADING_ COMMUNITY_ORGANIZATION_ PRIV	Update Trading Community Organization	Allows the update of the organization relationship information. If assigning, also assign the ability to view the trading community organization relationship.
processOrganization	HZ_ENTER_TRADING_ COMMUNITY_ORGANIZATION_ INFORMATION_PRIV	Enter Trading Community Organization Information	Allows the specification of organization information.

Privileges to Duty Roles Mapping

Privilege Code	Granted to Duty Role Code	Granted to Duty Role Name	Granted To Duty Role Description
HZ_UPDATE_TRADING_COMMUNITY_ORGANIZATION_PRIV	ORA_CE_CASH_POSITION_AND_FORECAST_MANAGEMENT_DUTY_CRM	Cash Positioning and Forecasting Management	Manages cash positioning and forecasting, including performing deep-dive analyses of cash flows from various sources.

ORA_AR_CUSTOMER_MAINTENANCE_SEGREGATED_DUTY_CRM	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCH_DATA_STEWARD_MANAGER_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_ZCH_TRADING_COMMUNITY_DATA_STEWARD_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_AR_CUSTOMER_MAINTENANCE_DUTY_CRM	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_BATCH_DUTY	Trading Community Import Batch Management	Manages trading community data import batches.
ORA_AR_CUSTOMER_MAINTENANCE_SEGREGATED_DUTY_CRM	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCH_DATA_STEWARD_MANAGER_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_ZCH_TRADING_COMMUNITY_DATA_STEWARD_JOB	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.
ORA_AR_CUSTOMER_MAINTENANCE_DUTY_CRM	ORA_MANAGE_TRADING_COMMUNITY_IMPORT_PROCESS_DUTY	Trading Community Import Process Management	Manages trading community data import batch processes.

Duty Role Code	Granted to Duty or Job Role Code	Granted to Duty or Job Role Name	Granted To Duty or Job Role Description
ORA_ZCH_MASTER_DATA_MANAGEMENT_APPLICATION_ADMINISTRATOR_JOB	ORA_HZ_TRADING_COMMUNITY_PERSON_ADMINISTRATION_DUTY	Trading Community Person Administration	Grants privileges to setup person information.

Account

An organization account and its profile information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}OrganizationProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Organization Profile Additional Information*
Contained by	*Sales Account*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Alias	string	The organization alias name.
AnalysisFy	string	The fiscal year that the financial information is based on.
BankCode	string	Identifies the bank in several countries, typically for regulatory purposes.
BankOrBranchNumber	string	Stores bank number for banks and branch number for bank branches. Primarily stores ABA number for US bank branches.
BranchCode	string	Identifies the bank branch in several countries, typically for regulatory purposes.
BranchFlag	boolean	Indicates if this is a branch location. If the value is True, then this is a branch location.
BusinessReport	{http://xmlns.oracle.com/adf/svc/types/}base64Binary-DataHandler	Dun and Bradstreet business information report.
BusinessScope	string	The physical class of business in which a business participates. For example, local, national, or international.
CeoName	string	The name of the chief executive officer. It is the denormalized value of the CEO_NAME in HZ_ORGANIZATION_PROFILES.
CeoTitle	string	The formal title of the chief executive officer.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
Comments	string	The comments for the record.
CongDistCode	string	The U.S. Congressional district code for the account.
ContentSourceNumber	string	The content source number is not used.

Name	Type	Description
ControlYr	decimal	The year when current ownership gained control of the organization.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CorporationClass	string	The taxation classification for corporation entities such as Chapter S in the US.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CurrentFiscalYearPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its current fiscal year.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DataCloudStatus	string	Specifies the enrichment status of the person.
DbRating	string	The Dun & Bradstreet credit rating.
Disadv8aInd	string	Indicates whether the organization is considered disadvantaged by the US government under Title 8A. If the value is Yes, the organization is considered disadvantaged under Title 8A. The default value is No.
DisplayedDUNSPartyIdentifier	long	Dun and Bradstreet does not maintain data for the branch offices of companies that are located beyond North America. Data is only maintained for the company headquarters. If the data pertains only to company headquarters, the headquarters PARTY_ID is stored. If the data pertains to a branch office, the branch PARTY_ID is stored.

Name	Type	Description
DoNotConfuseWith	string	Indicates existence of similarly named businesses.
DomesticUltimateDUNSNumberC	string	DUNS Number for the Domestic Ultimate, which is the highest family member in the same country as the business entity. A subject can be its own Domestic Ultimate.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveLatestChange	string	The effective latest change is not used.
EffectiveSequence	int	The effective sequence is not used.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
EmployeesAtPrimaryAddress	string	The number of employees at the referenced address.
EmployeesAtPrimaryAddressEstimation	string	Indicates the calculation of employees at the primary address as estimated.
EmployeesAtPrimaryAddressMinimum	string	Indicates the calculation of employees at the primary address as minimum.
EmployeesAtPrimaryAddressText	string	The number of employees at the referenced address that cannot be mapped to a number.
EmployeesTotal	decimal	The total number of employees.
EnquiryDUNS	string	The identifier used to query the Dun and Bradstreet data. If a location is a branch, then in some countries the headquarters DUNS number is used to do the query. Otherwise it is the same as the DUNS number.
ExportInd	string	Indicates whether the organization is an exporter. If the value is Y, then the organization is an exporter. The default value is N.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services

Name	Type	Description
		Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
GlobalUltimateDUNSNumberC	string	DUNS Number for the Global Ultimate, which is the highest family member in the same country as the business entity as you proceed further on this branch of the tree. A case can be its own ultimate.
GrowthStrategyDescription	string	The description of the growth strategy.
HQBranchIndicator	string	The status of this site, such as HQ, a branch, or a single location. A list of accepted values are defined in the lookup type HQ_BRANCH_IND.
HomeCountry	string	The home country associated with the party.
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
ImportInd	string	Indicates whether the organization is an importer. If the value is Y, then the organization is an importer. The default value is N.
IncorpYear	int	The year that the business was formally incorporated.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LaborSurplusInd	string	Indicates whether the organization operates in an area with a labor surplus. If the value is Y, then the organization operates in an area with a labor surplus. The default value is N.
LastEnrichmentDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the person was last enriched in DaaS.

Name	Type	Description
LastSourceUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated by the source system.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdateSourceSystem	string	The source system that last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LegalStatus	string	The legal structure of the organization such as partnership, corporation, and so on.
LineOfBusiness	string	The type of business activities performed at this site.
LocalActivityCode	string	The local activity classification code.
LocalActivityCodeType	string	The local activity classification code type identifier.
LocalBusIdenType	string	The most common business identifiers in a country such as Chamber of Commerce Number in Italy, Government Registration Number in Taiwan. A list of accepted values are defined in the lookup type LOCAL_BUS_IDEN_TYPE.
LocalBusIdentifier	string	The primary identifier assigned to a businesses by a government agency such as Chamber of Commerce, or other authority. It is often used by countries other than USA.
MinorityOwnedInd	string	Indicates whether the organization is primarily owned by ethnic or racial minorities. If the value is Y, then the organization is owned by ethnic or racial minorities. The default value is N.
MinorityOwnedType	string	The type of minority-owned firm.
MissionStatement	string	The corporate charter of organization in user-defined text format.
NextFyPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its next fiscal year.

Name	Type	Description
OobInd	string	Indicates whether the organization is out of business. If the value is Y, then the organization is out of business. The default value is N.
OrgInformation	*Trading Community Organization Profile Additional Information*	The information of the organization.
OrganizationName	string	The name of the party when the party type is Organization.
OrganizationProfileId	long	The unique identifier of the organization profile. • Primary Key
OrganizationSize	string	Size of an organization based on revenue, number of employees, and so on.
OrganizationType	string	Not used in Fusion V1.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
ParentDUNSNumberC	string	Parent is a corporation that owns more than 50 percent capital stock of another corporation. The parent company can also be a subsidiary of another corporation. If the parent also has branches, then it is headquarters and also parent company. Headquarters is a business establishment that has branches or divisions reporting to it, and is financially responsible for those branches or divisions. If the headquarters has more than 50 percent of capital stock owned by another corporation, then it is also a subsidiary. If it owns more than 50 percent of capital stock of another corporation, then it is also a parent.
ParentSubInd	string	Indicates whether the organization is a parent or subsidiary.
PartyId	long	The unique identifier of the contact party.
PartyNumber	string	The unique identification number for the party.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix.

Name	Type	Description
		For Person, it is concatenation of person_name and suffix.
PreferredContactEmailAddress	string	The e-mail address of the primary contact person of the organization.
PreferredContactFormattedPhoneNumber	string	The formatted phone number of the primary contact person of the organization.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactName	string	The name of the primary contact person of the organization.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryAddressCity	string	The city of the identifying address.
PrimaryAddressCountry	string	The country listed in the TERRITORY_CODE column of the FND_TERRITORY table for the identifying address.
PrimaryAddressCounty	string	The county of the Identifying address.
PrimaryAddressLine1	string	The first line of the identifying address.
PrimaryAddressLine2	string	The second line of the Identifying address.
PrimaryAddressLine3	string	The third line of the Identifying address.

Name	Type	Description
PrimaryAddressLine4	string	The fourth line of the Identifying address.
PrimaryAddressPostalCode	string	The postal code of the identifying address.
PrimaryAddressProvince	string	The province of the identifying address.
PrimaryAddressState	string	The state of the Identifying address.
PrimaryEmailAddress	string	The e-mail address of the organization.
PrimaryEmailId	long	The primary e-mail contact point ID of the organization.
PrimaryFormattedPhoneNumber	string	The primary telephone number formatted in the local format of the organization.
PrimaryLanguage	string	The standard name for a language.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneId	long	The primary contact point phone ID of the organization.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURL	string	The primary uniform resource locator.
PrimaryWebId	long	The unique identifier of the primary uniform resource locator.

Name	Type	Description
PrincipalName	string	The Name of the highest ranking person in the company.
PrincipalTitle	string	The title of the highest ranking person in the organization.
Pronunciation	string	The pronunciation of the organization.
PublicPrivateOwnershipFlag	boolean	Indicator to specify if the organization is privately owned. Y stands for a privately owned organization and N stands for a publicly owned organization.
RegistrationType	string	Indicates the registration type of the organization.
RentOwnInd	string	Indicates if this account owns or rents the place of business. A list of valid values for rent, own, and lease are defined in the lookup OWN_RENT_IND.
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The standard industry classification (SIC) code.
SICCodeType	string	The version of the standard industry classification (SIC) code.
SeblUserKeyLoc	string	The location of the account, optional part of the user primary key.
SmallBusInd	string	Indicates whether the organization is considered as a small business. If the value is Y, then the organization is considered as a small business. The default value is N.
Status	string	The status of the record.
StockSymbol	string	The corporate stock symbol such as ORCL.
SuffixOverriddenFlag	boolean	Indicator to specify that the attribute has Y if the suffix is overridden by user and N otherwise. Default value is N.
ThirdPartyFlag	boolean	Indicator that tracks if a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. Y

Name	Type	Description
		stands for a third party relationship, N stands for a direct relationship. If Oracle Service is installed, the third party field in the Customers window is required.
TotalEmployeesEstimatedIndicator	string	Indicates if the employee total is estimated. The accepted values are defined in the lookup type TOTAL_EMP_EST_IND.
TotalEmployeesInd	string	Indicates if subsidiaries are included in the calculation of total employees. The accepted values are defined in the lookup type TOTAL_EMPLOYEES_INDICATOR.
TotalEmployeesMinimumIndicator	string	Indicates if the number is a minimum, maximum, or average number of total employees. The accepted values are defined in the lookup type TOTAL_EMP_MIN_IND.
TotalEmployeesText	string	The total number of employees in text format.
TotalPaymentAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The total number of payment experiences.
TradingPartnerIdentifier	string	One column to store the FSIO related trading partner codes. It stores alpha numeric values and also addresses the Fed vs. Non-Fed attribute requirement.
UniqueNameAlias	string	The name as identified by the users to internally recognize the organization.
UniqueNameSuffix	string	Identifies system generated or manually overridden suffix.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
WomanOwnedInd	string	Indicates whether the organization is primarily owned by women. If the value is Y, then the organization is primarily owned by women. The default value is N.
YearEstablished	int	The year when the organization began doing business.

Additional Account Name

An additional name of an organization, such as a legal name or a DBA name.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}AdditionalOrganizationName

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
Description	string	The free text description of the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPreferredFlag	boolean	Indicator to specify the preferred additional name for the organization.
PartyId	long	The unique identifier of the contact party.
PartyName	string	The name of the party.
PartyNameId	long	The unique identifier of the party name. It is primary Key and system generated. • Primary Key
PartyNameType	string	The type of the name. It is a value defined by the additional party name and identifier type entity. The party type must be consistent with the party type that the PARTY_NAME_TYPE can be applied to.
PreferredFlag	boolean	Indicator to specify the name as preferred name for this party within the name type. Possible values are Y and N. Default value is N.
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.

Name	Type	Description
TransliterationLang	string	Used to identify the language for the name. It is validated against FND_LANGUAGES.LANGUAGE_CODE. Default value is the Session Language.

Additional Identifier

An additional identifier of a trading community member, such as driver's license number or passport number.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}AdditionalPartyId

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*

Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Relationship Type	Object or Service
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Country	string	The name of the country.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
Description	string	The free text description of the record.
ExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The expiration date for the identifier. It may be NULL, and does not apply to all types of identifiers.
IssueDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date in which the Identifier was issued. It may be NULL and does not apply to all types of identifiers.
IssuingAuthorityName	string	The issuing authority name.
IssuingAuthorityPartyId	long	The unique identifier of the issuing authority.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party.

Name	Type	Description
PartyIdentifierId	long	The unique identifier of the party identifier. • Primary Key
PartyIdentifierType	string	Indicates the type for the current identifier. The list of accepted values are defined in the lookup TYPE_CODE of HZ_NAME_AND_ID_TYPE_B. The party type should be consistent with the party type that the PARTY_IDENTIFIER_TYPE can be applied to.
PartyIdentifierType1	string	Indicates the type for the current identifier. The list of accepted values are defined in the lookup TYPE_CODE of HZ_NAME_AND_ID_TYPE_B. The party type should be consistent with the party type that the PARTY_IDENTIFIER_TYPE can be applied to.
PartyIdentifierValue	string	The value of the party identifier.
PartyName	string	The name of the party.
RequestId	long	A system-generated read-only attribute used by the application framework.
StateProvince	string	The province of the address.
StatusCode	string	The pre-defined code used to indicate the status.

Address

An address of a trading community member, such as Oracle Corporation is located at 500 Oracle Parkway, Redwood Shores, CA.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartySite

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.
Address4	string	The fourth line of the address.
AddressExpirationDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the location is no longer valid.
AddressLinesPhonetic	string	The phonetic or Kana representation of the Kanji address lines that are used in Japan.
AddressStyle	string	Style of the address.
Addressee	string	The information of the addressee.
City	string	The name of the city.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
ContactPreferenceExistFlag	boolean	Indicator to specify if the contact is primary contact for the party.

Name	Type	Description
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
Country	string	The name of the country.
Country1	string	The attribute country1 is not used.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
DateValidated	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the address was last validated.
DoNotValidateFlag	boolean	Indicator to specify that a particular location is not eligible for address validation irrespective of the current validation.
Eft	*Electronic File Transfer*	The electronic file transfer information for the party.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.

Name	Type	Description
FormattedAddress	string	The formatted read-only address.
FormattedLocaleAddress	string	The formatted read-only local address.
FormattedMultilineAddress	string	The formatted multi line address of the party site.
GlobalLocationNumber	string	The global location number that uniquely identifies each location in a trading partners enterprise.
HouseType	string	Indicates the building type.
IdentifyingAddressFlag	boolean	Indicator to specify the identifying address for the party. Y stands for the indentifying site and N stands for sites that are not the indentifying site.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
Language	string	The operating language for the party site.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Latitude	decimal	The latitude of the party address.
LocationDirections	string	Directions to the location.
LocationId	long	The identifier of the location. It is the foreign key to the HZ_LOCATIONS table.
LocationLanguage	string	The operating language for the locations.
Longitude	decimal	The longitude of the party address.

Name	Type	Description
Mailstop	string	A user-defined code to indicate a mail drop point within the organization.
ObjectVersionNumber1	int	The attribute is used to implement optimistic locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to detect whether another session has updated the row since it was last queried.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary address of the contact irrespective of the context. Y stands for primary address and N stands for all others.
PartyId	long	The unique identifier of the contact party.
PartyNameDba	string	Stores the doing-business_as (DBA) party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameDivision	string	Stores the division party name for a party site. This column is used to store FSIO related legal party name attribute.
PartyNameLegal	string	Stores the legal party name for a party site. This column is used to store FSIO related legal party name attribute.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table. • Primary Key
PartySiteInformation	*Trading Community Address Additional Information*	The party address information.
PartySiteName	string	The user-defined name for the site.
PartySiteNumber	string	The party site number of the address.

Name	Type	Description
PartySiteType	string	Stores the party site type and is based on the lookup. Currently this is either null or one-time.
PartySiteUse	*Trading Community Address Purpose*	The information of the party address usage.
PartyUsageCode	string	The usage context of a party's contact point.
Phone	*Phone*	The phone information for the entity.
Position	string	The primary direction such as north or east that is used to access the location.
PostalCode	string	The postal code element of the address.
PostalPlus4Code	string	The four digit extension to the United States postal ZIP code.
Province	string	The name of the province.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
State	string	The name of the state.
Status	string	The status of the record.
Telex	*Telex*	The Telex information associated with the party.
UsageCode	string	The usage code is not used.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
ValidationStatusCode	string	The standardized status code describing the results of the validation.
Web	*Web*	The web information related to the record.

Certification

The certification information of a trading community member, such as a full ISO 9001 registered firm.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}Certification

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CertificationId	long	The unique identifier for certification. • Primary Key
CertificationName	string	The name of the certification such as ISO9000 and GMP001.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurrentStatus	string	The name for the status of the certification. For example, applied for, granted, or expired.
ExpiresOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the certification expires.
Grade	string	The level or grade of certification provided by the ISSUED_BY_AUTHORITY. For example, founding member, gold, fully certified, and partially certified.
IssuedByAuthority	string	The name of the certifying authority.
IssuedOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the certification was issued.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
PartyId	long	The unique identifier of the contact party.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Classification Assignment

The classification code assigned to a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}CodeAssignment

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*
Contained by	*Sales Competitor*
Contained by	*Household*
Contained by	*Trading Community Organization Details*

Relationship Type	Object or Service
Handled by	*Sales Account Service*
Handled by	*Sales Party Territory service*
Handled by	*Sales Party Resource Service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ClassCategory	string	The name of the classification category.
ClassCode	string	The code of the classification.
CodeAssignmentId	long	The unique identifier of the assignment of an industrial classification code to an object. It is primary key and system generated. • Primary Key
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableKey1	string	The first column of the alphanumeric or multi-part foreign key.
OwnerTableKey2	string	The second column of the alphanumeric or multi-part foreign key.
OwnerTableKey3	string	The third column of the alphanumeric or multi-part foreign key.
OwnerTableKey4	string	The fourth column of the alphanumeric or multi-part foreign key.
OwnerTableKey5	string	The fifth column of the alphanumeric or multi-part foreign key.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PrimaryFlag	boolean	Indicator that specifies if this is the primary class code of a class category for the organization. Y stands for the primary class code and N stands for all others.
Rank	decimal	Ranks classes if multiple classes are assigned to a party.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Contact Preference

The contact preference of the trading community member. For example, do not call Joe Smith between 10 a.m. and 12 noon on weekdays.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}ContactPreference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*
Contained by	*Electronic Data Interchange*
Contained by	*E-Mail*

Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactLevelTable	string	The table that stores the contact level of the contact preference, and uses the SUBJECT_TABLE lookup. The list of accepted values are HZ_PARTIES, HZ_PARTIES_SITES, or HZ_CONTACT_POINTS.
ContactLevelTableId	long	The foreign key to the table specified in CONTACT_LEVEL_TABLE column. The list of accepted values are PARTY_ID from HZ_PARTIES table, CONTACT_POINT_ID from HZ_CONTACT_POINTS table, or PARTY_SITE_ID from HZ_PARTY_SITES table.
ContactPreferenceId	long	The unique identifier for the contact preference. • Primary Key
ContactType	string	The contact party type that defines whether the contact is a sales account, a prospect, a contact, or any other user-defined party

Name	Type	Description
		type. The default value is CUSTOMER. A list of accepted values is defined in the lookup CONTACT_TYPE.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MaximumNoOfInteractUOMCode	string	The period of time during which the maximum number of interactions applies. Uses the MAX_NO_OF_INTERACT_UOM_CODE lookup.
MaximumNoOfInteractions	decimal	The number of times you can use this contact point. The period of time that this number applies is stored in the MAX_NO_OF_INTERACT_UOM_CODE column.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PreferenceCode	string	Indicates whether to use a particular contact method. The list of accepted values are defined in the PREFERENCE_CODE lookup.
PreferenceEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes inactive.
PreferenceEndTimeHR	int	The hour part of time when the contact preference becomes inactive. The time is recorded in the 24 hour format.

Name	Type	Description
PreferenceEndTimeMi	int	The minutes part of the time when the contact preference becomes inactive.
PreferenceStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the contact preference becomes active.
PreferenceStartTimeHR	int	The hour part of time when the contact preference becomes active. The time is recorded in the 24 hour format.
PreferenceStartTimeMi	int	The minutes part of the time when the contact preference becomes active.
PreferenceTopicType	string	The appropriate subjects to send the party that the preference is created for. The list of accepted values are defined in the PREFERENCE_TOPIC_TYPE lookup.
PreferenceTopicTypeCode	string	The code of the preference topic type.
PreferenceTopicTypeId	long	The unique identifier of the preference topic type.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.
RequestId	long	A system-generated read-only attribute used by the application framework.
RequestedBy	string	Indicates if the permission or restriction was created internally or requested by the party. The list of accepted values are defined in the REQUESTED_BY lookup.
Status	string	The status of the record.

Credit Rating

The trading community member's credit rating information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}CreditRating

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Trading Community Person Details*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AverageHighCredit	decimal	The average of all the high credit experiences.
BankruptcyInd	string	Indicates if open bankruptcy exists. Y stands for any open bankruptcy that exists and N stands for no open bankruptcy.
BusinessDiscontinued	string	The business discontinued at the listed location. Prompts reader to contact D and B customer service center if any business is operating.

Name	Type	Description
ClaimsInd	string	Indicates if open claims, legal claims, liens, protested bills, or any equivalent information exists. Y stands for availability of information and N stands for no information.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRatingId	long	The unique identifier of the credit rating. • Primary Key
CreditRiskScoreExplain	string	Explains numeric credit risk score that estimates the risk of delinquent payment over the next 12 months.
CreditScore	string	Indicates the risk of delinquent payments.
CreditScoreAge	decimal	Indicates the age of the credit score expressed in months.
CreditScoreClass	decimal	The date when the credit score was calculated.
CreditScoreCommentary	string	The lookup for explanation codes in the CREDIT_SCORE column.
CreditScoreCommentary10	string	Indicates comments about the credit score.
CreditScoreCommentary2	string	Indicates comments about the credit score.
CreditScoreCommentary3	string	Indicates comments about the credit score.
CreditScoreCommentary4	string	Indicates comments about the credit score.
CreditScoreCommentary5	string	Indicates comments about the credit score.
CreditScoreCommentary6	string	Indicates comments about the credit score.

Name	Type	Description
CreditScoreCommentary7	string	Indicates comments about the credit score.
CreditScoreCommentary8	string	Indicates comments about the credit score.
CreditScoreCommentary9	string	Indicates comments about the credit score.
CreditScoreDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the credit score was calculated.
CreditScoreIncdDefault	decimal	Indicates the probability expressed as a percentage of delinquency for a score range or class.
CreditScoreNatlPercentile	decimal	Indicates the relative credit rating of a business compared to all businesses whose credit ratings are included in the local country database.
CreditScoreOverrideCode	string	Indicates why no score was calculated or why score is equal to zero in the US.
CriminalProceedingInd	string	Indicates if criminal proceedings exist. Y stands for availability of information and N stands for no information.
DebarmentInd	string	Indicates whether the company is debarred from doing business with government agencies. Y stands for company debarred and N stands for not debarred.
DebarmentsCount	decimal	The count of filings by government agencies in the United States that prohibit the party from entering into contracts or transactions with those agencies.
DebarmentsDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date of the most recent filing to prohibit the party from entering into contracts or transactions with a government agency in the United States.
DelqPmtPctgForAllFirms	decimal	Specifies a delinquency percentage for all firms.
DelqPmtRngPrcnt	decimal	Specifies a delinquency percentage for credit score range.
Description	string	The free text description of the record.
DetHistoryInd	string	The code that indicates if detrimental information exists for the party and whether

Name	Type	Description
		complete details exist on management and party. Y stands for availability of information and N stands for no information.
DisasterInd	string	Indicates if information exists about disasters such as fires, hurricanes, and so on. Y stands for availability of information and N stands for no information.
FailureScore	string	For US, the failure risk class, 1 through 5. For Canada , the stability score that indicates risk of business closure, 1 through 10. For Australia, the percentile failure score.
FailureScoreAge	decimal	The failure score age in months.
FailureScoreClass	decimal	1 through 5 to indicate risk of financial stress for a customer account. 1 for a business with greatest risk and 5 for a business with least risk.
FailureScoreCommentary	string	The comments related to failure score.
FailureScoreCommentary10	string	The comments related to failure score.
FailureScoreCommentary2	string	The comments related to failure score.
FailureScoreCommentary3	string	The comments related to failure score.
FailureScoreCommentary4	string	The comments related to failure score.
FailureScoreCommentary5	string	The comments related to failure score.
FailureScoreCommentary6	string	The comments related to failure score.
FailureScoreCommentary7	string	The comments related to failure score.
FailureScoreCommentary8	string	The comments related to failure score.
FailureScoreCommentary9	string	The comments related to failure score.
FailureScoreDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the failure score was calculated.
FailureScoreIncdDefault	decimal	Probability, in percentage, of failure for score range of class.

Name	Type	Description
FailureScoreNatnlPercentile	decimal	The national percentile that reflects the relative ranking of a company among all scored companies in the local country database.
FailureScoreOverrideCode	string	In Europe, code for the reason for variance between the D and B rating and the failure score. In the US, code for the reason why no score was calculated, or why the score is zero.
FinclEmbtInd	string	Indicates if open bankruptcy, receivership liquidation, or any equivalent information exists. Y stands for availability of information and N stands for no information.
FinclLglEventInd	string	Indicates if special events such as financial embarrassment and legal filings exist. Y stands for availability of information and N stands for no information.
GlobalFailureScore	string	The global score for the risk of business default.
HighCredit	decimal	Maximum credit ever extended to the organization.
HighRngDelqScr	decimal	Specifies the high end of the range of the commercial credit score.
JudgementInd	string	Indicates if open judgments exist. Y stands for any open judgment that exists and N stands for no open judgments.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
LienInd	string	Indicates if open liens exist. Y stands for any open lien that exists and N stands for no open liens.
LowRngDelqScr	decimal	Specifies the low end of the range of the commercial credit score.
MaximumCreditCurrencyCode	string	The currency used to denominate the MAXIMUM_CREDIT_RECOMMENDATION column.

Name	Type	Description
MaximumCreditRecommendationAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	Maximum credit limit recommended for the currency specified in the MAXIMUM_CREDIT_CURRENCY_CODE column.
NegvPmtExpl	string	The conditional comment generated when negative payments are present.
NoTradeInd	string	Indicates that no trade experiences exist. Y stands for any trade experience that exists and N stands for no trade experience.
NumberParentBankruptcyConversions	decimal	The number of bankruptcy conversions by the parent.
NumberParentBankruptcyFiling	decimal	The number of bankruptcies filed by the parent.
NumberSpecialEvent	decimal	The number of occurrences of the special events.
NumberTradeExperiences	decimal	The number of trade experiences.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OprgSpecificationEvntInd	string	Indicates if information exists about operational changes such as name changes, management changes, change of control, moves, and so on. Y stands for availability of information and N stands for no information.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OtherSpecificationEvntInd	string	Indicates if special events exist that are not otherwise specified.
ParentHQBankruptcyInd	string	Indicates if parent (P) or headquarters (H) are entered into bankruptcy.
PartyId	long	The unique identifier of the contact party.
PaydexComment	string	Additional paydex information.

Name	Type	Description
PaydexFirmComment	string	Comment on the paydex score for the organization.
PaydexFirmDays	string	The number of days used in the paydex score.
PaydexIndustryComment	string	Comment on the paydex score for the industry.
PaydexIndustryDays	string	The number of days used in the paydex score for the industry.
PaydexNorm	string	Median or average Paydex score for the industry.
PaydexScore	string	Paydex score for the previous 12 months payment history.
PaydexThreeMonthsAgo	string	Paydex score three months ago.
PrntBkcyChapterConv	string	The change of bankruptcy type.
PrntBkcyConvDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the bankruptcy converted from one type to another.
PrntBkcyFilgChapter	decimal	The chapter number of the bankruptcy filed by the parent under the US uniform commercial code.
PrntBkcyFilgDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The bankruptcy filing date of the parent.
PrntBkcyFilgType	string	The type of bankruptcy filed by the parent.
PubRecExpl	string	The conditional comment generated if suits, liens, and judgments exist.
RatedAsOfDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the rating was acquired.
Rating	string	The rating number or code of the rating company.
RatingOrganization	string	The name of the credit rating organization.
RequestId	long	A system-generated read-only attribute used by the application framework.

Name	Type	Description
SecuredFlngInd	string	Indicates if open secured filings such as UCC filings, secured charges or mortgages pledging, or any equivalent information exists. Y stands for availability of information and N stands for no information.
SlowTradeExpl	string	The conditional comment generated when paydex score indicates that slow trade experiences are present.
SpecialEventComment	string	The comment generated if special event section exists.
SpecialEventText	string	The narrative of the special event.
SpecialEventUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the special event was updated.
Status	string	The status of the record.
SuitInd	string	Indicates if open suits exist. Y stands for any open suit that exists and N stands for no open suits.

Customer Contact Profile

The person who functions as a contact for an organization.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}OrganizationContact

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Organization Contact Additional Information*
Contains	*Customer Contact Responsibility*
Contains	*Source System Reference*
Contained by	*Relationship*

Relationship Type	Object or Service
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
ContactFormattedAddress	string	The formatted version of the contact address.
ContactFormattedMultilineAddress	string	The formatted multiline version of the contact address.
ContactName	string	The name of the contact.
ContactNumber	string	The user-defined identification number for this contact.
ContactPartyId	long	The unique identifier of the contact.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
CustomerEmailAddress	string	The e-mail address of the customer this contact person belongs to.
CustomerName	string	The name of the customer.
CustomerPartyId	long	The unique identifier of the customer this contact person belongs to.
CustomerPartyNumber	string	The alternate unique identifier of the customer this contact person belongs to.
CustomerUniqueName	string	The unique name of the customer. For an Organization, the value is a concatenation of unique_name_alias and suffix. For a Person, the value is a concatenation of person_name and suffix.
DecisionMakerFlag	boolean	Indicates if this contact is a decision maker. If the value is True, then the contact is a decision maker.
Department	string	The free form text used to name the department for the contact.
DepartmentCode	string	The department code for the contact. A list of accepted values is defined in the lookup DEPARTMENT_TYPE.
EmailAddress	string	The email address associated with the record.
FormattedAddress	string	The formatted address information.
FormattedPhoneNumber	string	The formatted phone number.

Name	Type	Description
JobTitle	string	The free form text for job title.
JobTitleCode	string	The code given to the job title.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgContactId	long	The unique identifier of the organization contact. • Primary Key
OrgContactInformation	*Trading Community Organization Contact Additional Information*	The information of the organization contact.
OrganizationContactRole	*Customer Contact Responsibility*	The role of the contact in the organization.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyRelationshipId	long	The unique identifier of the relationship of the party.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PartySiteName	string	The address associated with the party site.
PersonAcademicTitle	string	The part of the person's title that denotes the academic qualification, such as Dr. Jane Smith.
PersonCertReasonCode	string	The reason for the organization's current certification level assignment. A list of accepted

Name	Type	Description
		values is defined using the lookup HZ_PARTY_CERT_REASON.
PersonCertificationLevel	string	The certification level of a organization. A list of accepted values is defined in the lookup HZ_PARTY_CERT_LEVEL.
PersonFirstName	string	The first name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Given Name in HL7.
PersonLanguageName	string	The language name associated with the person.
PersonLastName	string	The last name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Family Name in HL7.
PersonLastNamePrefix	string	The prefix for the last name of a person, such as fon, van. For example, if a person's name is Hans Van, the last name of the person is captured using this attribute.
PersonMiddleName	string	The middle name of a person. It is used in the same way the homonymous field in HZ_PERSON_PROFILES is used. It corresponds to the field Middle Initial or Name in HL7.
PersonNameSuffix	string	The place in a family structure. For example, in "Tom Jones III", the "III".
PersonPreNameAdjunct	string	The preferred name adjacency of a resource.
PersonPreviousLastName	string	The previous last name of a person.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
PersonTitle	string	The professional or family title. For example, Don or The Right Honorable.
PreferredContactFlag	boolean	Indicates if this contact person is primary contact for the customer.

Name	Type	Description
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PrimaryCustomerFlag	boolean	Indicates if this customer is primary customer for the contact.
Rank	string	The rank associated with this customer contact.
ReferenceUseFlag	boolean	Indicates if this contact can be used as a reference. If the value is Y, then the contact can be used as a reference.
RequestId	long	A system-generated read-only attribute used by the application framework.
SalesAffinityCode	string	The affinity of a contact to the deploying organization. A list of accepted values is defined in the lookup HZ_SLS_CNTCT_AFFINITY_CODE.
SalesAffinityComments	string	The comments about the contact's affinity to the deploying organization.
SalesBuyingRoleCode	string	The roles played by a contact in the buying process, for example, decision maker or supporting role. A list of accepted values is defined in the lookup HZ_SLS_CNTCT_BUY_ROLE_CODE.
SalesInfluenceLevelCode	string	The influence of the contact has on the deploying organization. A list of accepted values are defined in the lookup HZ_SLS_CNTCT_INFLUENCE_LVL_CD.
Salutation	string	The size of the household this person is a part of.
WebUrl	string	The web URL of contact point.

Customer Contact Responsibility

The role or responsibility of an organization contact.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}OrganizationContactRole

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contained by	*Customer Contact Profile*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.

Name	Type	Description
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrgContactId	long	The organization contact identifier. Foreign key to the HZ_ORG_CONTACTS table.
OrgContactRoleId	long	The unique contact role identifier. It is primary key and system generated. • Primary Key
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PrimaryContactPerRoleType	string	Indicates if the contact is the primary contact for the role. Y stands for primary contact and N stands for a contact that is not the primary contact for the role type. The default value is N.
PrimaryFlag	boolean	Indicator that specifies if this is the primary role for the contact. Y stands for primary role and N stands for a non-primary role for the contact. The default value is N.
RequestId	long	A system-generated read-only attribute used by the application framework.
RoleLevel	string	The role level of the contact. For example, executive, department head, or middle manager.

Name	Type	Description
RoleType	string	The role performed by a contact.
Status	string	The status of the record.

E-Mail

The e-mail address associated with a trading community member. For example, john.doe@oracle.com.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Email

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Partner*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*

Relationship Type	Object or Service
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.

Name	Type	Description
EmailAddress	string	The email address associated with the record.
EmailFormat	string	The preferred format for e-mail addressed to this address such as HTML or ASCII. A list of accepted values is defined using the lookup EMAIL_FORMAT.
EmailInformation	*Trading Community Contact Point Additional Information*	The additional information about the e-mail.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary e-mail of the associated object. If the value is True, then this is the primary e-mail. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.

Name	Type	Description
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

E-Mail Domain

The domain of the e-mail address associated with a trading community member. For example, ABC Corporation has CORP and BUSINESS e-mail domains.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}EmailDomain

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*

Relationship Type	Object or Service
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DomainName	string	The actual or non-reversed domain name of the organization for display purpose.
EmailDomainId	long	The sequence generated unique identifier. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.

Name	Type	Description
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
Status	string	The status of the record.
TransposedDomain	string	The reversed domain name for the purposes of searching.

Electronic Data Interchange

The electronic data interchange information associated with a trading community member. For example, the details of standard codes and payment methods that are to be used for data interchange.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Edi

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*

Relationship Type	Object or Service
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EDIEceTpLocationCode	string	The trading partner location code for EDI Gateway.
EDIIdNumber	string	The EDI trading partner number for the supplier site.
EDIPaymentFormat	string	Indicates type of information being transmitted with the funds if using EDI_PAYMENT_METHOD ACH. The list of accepted values are CCD, CCP, CHZ, CTX, PPD, and PPP.
EDIPaymentMethod	string	Indicates how a payment is to be made through EDI. The list of accepted values are ACH and BOP.

Name	Type	Description
EDIRemittanceInstruction	string	Indicates who will send the remittance advice. The list of accepted values are Banks or Payables systems.
EDIRemittanceMethod	string	Indicates how remittance advice are sent to the supplier.
EDITpHeaderId	long	The unique identifier of the EDI transaction header.
EDITransactionHandling	string	The ANSI standard code for EDI transaction type.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary EDI of the associated object. If the value is True, then this is the primary EDI. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.

Name	Type	Description
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Electronic File Transfer

The electronic funds transfer information of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Eft

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*

Relationship Type	Object or Service
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.

Name	Type	Description
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EFTPrintingProgramId	long	The printing program identifier.
EFTSWIFTCode	string	The EFT swift code information.
EFTTransmissionProgramId	long	The transmission program identifier.
EFTUserNumber	string	The number that identifies you as a user of electronic funds transfer service for your bank or clearing organization.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.

Name	Type	Description
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Financial Number

The financial report numbers of a trading community member, such as assets, liabilities, and cash balance.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}FinancialNumber

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Financial Report*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
FinancialNumber	decimal	The value for the financial number. For example, the FINANCIAL_NUMBER_NAME column could have a numerical value of 3,000,000,000 for annual sales.
FinancialNumberCurrency	string	The ISO currency code for the financial number.
FinancialNumberId	long	The unique identifier of the financial number. • Primary Key
FinancialNumberName	string	A text field that lets you assign a descriptive name to a financial report item. For example, gross annual sales, profit, and net annual sales. A user-defined lookup.

Name	Type	Description
FinancialReportId	long	The unique identifier of the financial report.
FinancialUnitsApplied	decimal	The order of magnitude (tens, hundreds, thousands, and so on) used for the FINANCIAL_ NUMBER column.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ProjectedActualCode	string	Indicates if the projected amount is projected or actual. The list of accepted values are P and A. The default value is A.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Financial Profile

The financial details of a trading community member, such as bank account information that was obtained as part of a credit evaluation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}FinancialProfile

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*

Relationship Type	Object or Service
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AccessAuthorityDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when access to the information in the account was granted.
AccessAuthorityGranted	string	Indicates whether access to information in a financial account was granted. If the value is True, then the access has been granted.
BalanceAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The reported balance on an account. The balance can be a positive number, negative number, or zero.
BalanceVerifiedOnDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the account balance was verified.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
FinancialAccountNumber	string	The alternate unique identifier of the financial account.

Name	Type	Description
FinancialAccountType	string	The short name that classifies the financial accounts. For example, savings, checking, home loan, personal loan, trading, and so on.
FinancialOrgType	string	The classification of financial organizations. For example, bank, savings and loan, private lender, building society and so on.
FinancialOrganizationName	string	The name of the financial organization that holds the account.
FinancialProfileId	long	The unique identifier of the party's financial profile. • Primary Key
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
RequestId	long	A system-generated read-only attribute used by the application framework.
Status	string	The status of the record.

Financial Report

The financial report information of a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/organizationService/}FinancialReport

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Financial Number*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AuditInd	string	Indicates if the financial reports are audited. If the value is True, then the financial reports have been audited.
ConsolidatedInd	string	Indicates if the financial reports are consolidated. If the value is C, then the reports are consolidated.

Name	Type	Description
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
DateReportIssued	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the financial report was published.
DocumentReference	string	The unique reference number such as passport number or naturalization reference number associated with DOCUMENT_TYPE.
EstimatedInd	string	Indicates whether the financial reports provide estimated data. If the value is True, then the financial reports provide the data.
FinalInd	string	Indicates whether the financial reports are the final closing statements for a business that has ceased operations. If the value is True, then the reports are final closing statements.
FinancialNumber	*Financial Number*	The number that indicates a financial value like annual sales.
FinancialReportId	long	The unique identifier for a financial report. • Primary Key
FiscalInd	string	Indicates whether the financial reports cover a fiscal twelve-month accounting period. If the value is Y, then the financial report covers a twelve-month fiscal period.
ForecastInd	string	Indicates whether the financial reports display forecasts or future projections. If the value is Y, then the financial report displays forecasts.
IssuedPeriod	string	The period covered by the financial report. For example, fiscal year 1999, 1998, and so on.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.

Name	Type	Description
OpeningInd	string	Indicates whether the financial reports are the opening statements for a business. If the value is Y, then the financial statements are opening statements.
PartyId	long	The unique identifier of the contact party.
ProformaInd	string	Indicates if the financial reports are pro forma numbers. If the value is Y, then the financial reports are pro forma numbers.
QualifiedInd	string	Indicates whether the financial reports include qualifying remarks from auditors about the fairness and accuracy of the numbers. If the value is Y, then the report is qualified by auditors.
ReportEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The end date of the report, used instead of Issued Period.
ReportStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The start date of the report, used instead of Issued Period.
RequestId	long	A system-generated read-only attribute used by the application framework.
RequiringAuthority	string	The name of the primary organization that requires this financial report. For example, auditors, the Federal Trade Commission, or the Internal Revenue Service.
RestatedInd	string	Indicates whether the financial reports include data that was corrected after the original financial reports. If the value is Y, then the report has been corrected.
SignedByPrincipalsInd	string	Indicates whether the financial reports were signed by the principals of the organization. If the value is Y, then the reports are signed.
Status	string	The status of the record.
TrialBalanceInd	string	Indicates whether the financial reports include trial balance numbers. If the value is Y, then the financial report includes trial balance numbers.
TypeOfFinancialReport	string	A name for the financial report. For example, 10K report, Annual Report, or Shareholder's Special Report.

Name	Type	Description
UnbalancedInd	string	Indicates whether the financial reports include balance sheet accounts that do not balance. If the value is Y, then report includes unbalanced balance sheet accounts.
WhUdpateId	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the record was entered or changed in a data warehouse.

Instant Messaging

The instant messaging information of a trading community member, such as the AOL identifier or Yahoo Messenger information.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}InstantMessaging

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*

Relationship Type	Object or Service
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.

Name	Type	Description
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
InstantMessagingAddress	string	The instant messaging information address.
InstantMessagingInformation	*Trading Community Contact Point Additional Information*	The instant messaging information related to the record.
InstantMessengerType	string	The type of the instant messenger type.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary instant messaging Id of the associated object. If the value is True, then this is the primary instant messaging Id. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.

Name	Type	Description
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.

Phone

The phone number associated with a trading community member. For example, the phone number for Oracle Corporation is 650-506-6000.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Phone

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Trading Community Contact Point Additional Information*
Contains	*Source System Reference*

Relationship Type	Object or Service
Contains	*Contact Preference*
Contained by	*Trading Community Person Details*
Contained by	*Marketing Response*
Contained by	*Partner*
Contained by	*Household*
Contained by	*Contact Address*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Contained by	*Relationship*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Marketing Response Service*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
FormattedPhoneNumber	string	The formatted phone number.
LastContactDtTime	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date and time of last contact placed to this contact point.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.

Name	Type	Description
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PagerTypeCode	string	The PAGER_TYPE_CODE column stores the lookup code for the type of pager. The type of pager determines how the page is received. For example, tone, number, alphanumeric or two-way alphanumeric.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.
PhoneAreaCode	string	The area code prefix for the phone number.
PhoneCallingCalendar	string	The name or code for a calling calendar used with this telephone number. This attribute is no longer used in Fusion applications.
PhoneCountryCode	string	The country code prefix for the phone number.
PhoneExtension	string	The additional number addressed after initial connection to an internal telephone system.
PhoneInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community phone.
PhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound, or outbound.

Name	Type	Description
PhoneNumber	string	The telephone number in the local format. The number should not include area code, country code, or extension.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator to specify if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RawPhoneNumber	string	The unformatted telephone number.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TimezoneCode	string	The foreign key to FND_TIMEZONES_B.TIMEZONE_CODE.
TransposedPhoneNumber	string	This column stores the concatenation of PHONE_COUNTRY_CODE, PHONE_AREA_CODE, and PHONE_NUMBER in reverse order. For example, if PHONE_COUNTRY_CODE=1, PHONE_AREA_CODE=650 and PHONE_NUMBER=5065747, this column stores 74756050561. This column is used for building an index to search for any combination of the above three columns.

Preference

The preferences of a trading community member. For example, a member may prefer that the transaction currency is the US dollar.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}PartyPreference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalValue1	string	The additional preference value.
AdditionalValue2	string	The additional preference value.
AdditionalValue3	string	The additional preference value.

Name	Type	Description
AdditionalValue4	string	The additional preference value.
AdditionalValue5	string	The additional preference value.
Category	string	A preference category is used to logically group one or more preference codes in a particular user interface. The combination of CATEGORY and PREFERENCE_CODE identifies a preference.
CreatedBy	string	The user who created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
Module	string	The program that creates the preference. For example, TCA MOBILE CUSTOMER DIRECTORY.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
PartyId	long	The unique identifier of the contact party.
PartyPreferenceId	long	The unique identifier of the party preference. • Primary Key
PreferenceCode	string	A preference code determines if a preference is a single value or a multiple value preference. The preference code is validated by the HZ_PREFERENCE lookup. The combination of CATEGORY and PREFERENCE_CODE identifies a preference.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active),

Name	Type	Description
		'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.
ValueDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The preference value when the data type is DATE.
ValueName	string	A user-defined alias for a preference value.
ValueNumber	decimal	The preference value when the data type is NUMBER.
ValueVarchar2	string	The preference value when the data type is VARCHAR2.

Relationship

The relationship between two trading community members. For example, John Doe is the spouse of Jane Doe or Michael Smith is a contact of Oracle Corporation.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/relationshipService/}Relationship

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Phone*
Contains	*Address*
Contains	*Instant Messaging*
Contains	*Web*
Contains	*Usage Assignment*
Contains	*Trading Community Relationship Additional Information*
Contains	*Customer Contact Profile*
Contains	*Source System Reference*

Relationship Type	Object or Service
Contains	*Email*
Contained by	*Trading Community Person Details*
Contained by	*Household*
Contained by	*Trading Community Organization Details*
Handled by	*Trading Community Group*
Handled by	*Trading Community Organization*
Handled by	*Sales Account Service*
Handled by	*Sales Party*
Handled by	*Company and User Registration*
Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalInformation1	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type. For operating unit and legal entity to bank relationships, column stores communication agreement ID, which identifies agreement between payer and bank on type of EDIFACT documents that can be sent for processing payments.

Name	Type	Description
AdditionalInformation10	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation11	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation12	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation13	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation14	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation15	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation16	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation17	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation18	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation19	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation2	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation20	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.

Name	Type	Description
AdditionalInformation21	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation22	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation23	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation24	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation25	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation26	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation27	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation28	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation29	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation3	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation30	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation4	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.

Name	Type	Description
AdditionalInformation5	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation6	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation7	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation8	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
AdditionalInformation9	string	The extensible attribute used for application-specific functionality. The column values depend on relationship type.
Comments	string	The comments for the record.
CorpCurrencyCode	string	The corporate currency code associated with the record. This attribute is used by CRM Extensibility framework.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CurcyConvRateType	string	The currency conversion rate associated with the record. This attribute is used by CRM Extensibility framework.
CurrencyCode	string	The currency code. This attribute is used by CRM Extensibility framework.
DirectionCode	string	The code of the relationship direction. The list of accepted values are defined in the lookup DIRECTION_CODE.
Email	*E-Mail*	The email address associated with the record.

Name	Type	Description
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectEmailAddress	string	The e-mail address of the object party in the relationship.
ObjectId	long	The unique identifier of the object party in this relationship.
ObjectPartyName	string	The name of the object party in this relationship.
ObjectTableName	string	The source table name of the object party in this relationship.
ObjectType	string	The object type of the relationship.
ObjectUsageCode	string	The usage code of object party in the relationship.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationContact	*Customer Contact Profile*	The organization contact information.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyName	string	The name of the party.
PartySite	*Address*	The party site associated with the relationship.

Name	Type	Description
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the relationship.
PercentageOwnership	decimal	The percentage of the child entity owned by the parent entity.
Phone	*Phone*	The phone information for the entity.
PreferredContactFlag	boolean	Indicates if this contact person is primary contact for the customer.
PrimaryCustomerFlag	boolean	Indicates if this customer is primary customer for the contact.
RelationshipCode	string	The code for a forward or a backward relationship. A list of accepted relationship values is defined in the lookup PARTY_RELATIONS_TYPE.
RelationshipId	long	The relationship identifier for the record.
RelationshipInformation	*Trading Community Relationship Additional Information*	The relationship type information.
RelationshipRecId	long	The unique identifier of the contact's relationship record. • Primary Key
RelationshipType	string	The relationship type name. For example, CUSTOMER_SUPPLIER. A list of valid relationship types is defined in the lookup HZ_RELATIONSHIP_TYPE.
RequestId	long	A system-generated read-only attribute used by the application framework.
Role	string	The role between the subject and object party in this relationship.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
SubjectEmailAddress	string	The e-mail address of the subject party in relationship.

Name	Type	Description
SubjectId	long	The unique identifier of the subject in this relationship.
SubjectPartyUsageAssignment	*Usage Assignment*	The usage assignment of the subject party in the relationship.
SubjectTableName	string	The source table of the subject.
SubjectType	string	The subject type of the relationship.
SubjectUsageCode	string	The usage code of subject party in the relationship.
Web	*Web*	The web information related to the record.

Source System Reference

The name of external source system where the trading community information is imported from.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/}OriginalSystemReference

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Handled by	*Partner Program Enrollment Service*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
CreatedBy	string	The user who created the record.

Name	Type	Description
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date after which the record becomes inactive.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OldOrigSystemReference	string	The old source system reference that is being replaced.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OrigSystemReferenceId	long	The unique identifier for original system reference. • Primary Key
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
ReasonCode	string	The reason that this type of contact should or should not be made. The list of accepted values are defined in the REASON_CODE lookup.

Name	Type	Description
RequestId	long	A system-generated read-only attribute used by the application framework.
SourceSystemRefInformation	*Trading Community Original System Mapping Identifier Additional Information*	The source system reference information.
StartDateActive	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date on which the record becomes active.
Status	string	The status of the record.

Telex

The telex number information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Telex

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service
Contains	*Source System Reference*
Contains	*Contact Preference*
Contained by	*Trading Community Organization Details*
Contained by	*Address*
Handled by	*Trading Community Group*
Handled by	*Deal Registration Service*

Handled by	*Sales Party Resource Service*
Handled by	*Sales Party Territory service*
Handled by	*Partner Service*
Handled by	*Partner Program Enrollment Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.

Name	Type	Description
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicates whether this is the primary telex of the associated object. If the value is True, then this is the primary telex. The default value is False.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyUsageCode	string	The usage context of a party's contact point.
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicates whether this is the primary contact point of the associated object. If the value is True, then this is the primary contact point. The default value is False.
RelationshipId	long	The relationship identifier for the record.

Name	Type	Description
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
TelexNumber	string	The telex reference number (usually a telephone number) of the organization.

Trading Community Address Additional Information

The address information associated with a trading community member.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/partySite/}PartySiteInformation

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
BeginDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date at the start of the date range within which the row is active.
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
IntegrationKey	string	The integration key is not used.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartySiteId	long	The identifier for the party site. It is the foreign key to the HZ_PARTY_SITES table.
PartySiteUseId	long	The unique identifier of the party site used. • Primary Key
PrimaryPerType	string	Indicates if this is the primary use for the site. Y stands for the primary site and N stands for all other sites.
RequestId	long	A system-generated read-only attribute used by the application framework.
SiteUseType	string	The site use type associated with the address.
Status	string	The status of the record.

Trading Community Contact Point Additional Information

The contact point for a trading community member like phone or e-mail. For example 650-506-6000 is the phone number for Oracle Corporation, john.doe@example.com is the e-mail address for John Doe.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/contactPoint/}ContactPointInformation

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
AdditionalOrganizationName	*Additional Account Name*	The additional name associated with the organization.
AdditionalPartyId	*Additional Identifier*	The additional identifier associated with the organization or person.
Address1	string	The first line of the address.
Address2	string	The second line of the address.
Address3	string	The third line of the address.

Name	Type	Description
Address4	string	The fourth line of the address.
AnalysisFy	string	The fiscal year that the financial information is based on.
CategoryCode	string	The code of the category to which the person belongs. A list of accepted values is defined in the lookup type CUSTOMER_CATEGORY.
CeoName	string	The name of the chief executive officer. It is the denormalized value of the CEO_NAME in HZ_ORGANIZATION_PROFILES.
CertReasonCode	string	The reason for the organization party's current certification level assignment as indicated by the HZ_PARTY_CERT_REASON lookup type.
Certification	*Certification*	The certification information associated with the organization.
CertificationLevel	string	The certification level the organization party as indicated in the HZ_PARTY_CERT_LEVEL lookup type.
City	string	The name of the city.
CodeAssignment	*Classification Assignment*	The classification code assigned to the organization.
Comments	string	The comments for the record.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
Country	string	The name of the country.
County	string	The name of the county.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
CreditRating	*Credit Rating*	The credit rating for the organization.

Name	Type	Description
CurrentFiscalYearPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its current fiscal year.
DUNSNumberC	string	The nine-digit identification number that is assigned to business entities by Dun and Bradstreet.
Edi	*Electronic Data Interchange*	The electronic data interchange information for the organization.
Eft	*Electronic File Transfer*	The electronic file transfer information for the organization.
Email	*E-Mail*	The email address associated with the record.
EmailAddress	string	The email address associated with the record.
EmailDomain	*E-Mail Domain*	The domain name of the email address.
EmployeesTotal	decimal	The total number of employees.
FinancialProfile	*Financial Profile*	The financial profile information of the organization.
FinancialReport	*Financial Report*	The financial report information of the organization.
FiscalYearendMonth	string	The month when the fiscal year ends for the organization.
GSAIndicatorFlag	boolean	Indicates whether organization is a US federal agency supported by the General Services Administration (GSA). If the value is Y, then the organization is supported by GSA. The default value is N. If this attribute is not explicitly mentioned in the payload while creating an account, then the value of this attribute is set to null.
GroupType	string	The type of the group.
HQBranchIndicator	string	The status of this site, such as HQ, a branch, or a single location. A list of accepted values are defined in the lookup type HQ_BRANCH_IND.
HomeCountry	string	The home country associated with the party.

Name	Type	Description
IdenAddrLocationId	long	The unique identifier of the location of the identifying address.
IdenAddrPartySiteId	long	The unique identifier of the party site of the identifying address.
InstantMessaging	*Instant Messaging*	The instant messaging information related to the record.
InternalFlag	boolean	The denormalized value of the INTERNAL_FLAG in HZ_PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
JgzzFiscalCode	string	The taxpayer identification number. It can be the unique identifier of the person or organization. It can also be the SSN or income taxpayer ID in US, fiscal code or NIF in Europe.
LanguageName	string	The standard name for the language.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
MissionStatement	string	The corporate charter of organization in user-defined text format.
NextFyPotentialRevenueAmount	{http://xmlns.oracle.com/adf/svc/types/}AmountType	The estimated revenues that can be earned by the organization during its next fiscal year.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrganizationProfile	*Account*	The information about the partner organization.
OrganizationSize	string	The size of the organization based on its revenue, number of employees, and so on.
OrigSystemReference	string	The identifier for the record from the original system.

Name	Type	Description
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
PartyId	long	The unique identifier of the contact party. • Primary Key
PartyName	string	The name of the party.
PartyNumber	string	The unique identification number for the party.
PartyPreference	*Preference*	The preference mentioned in the organization details.
PartySite	*Address*	The party site associated with the organization.
PartyType	string	The party type of the contact. The party type can only be Person, Organization, or Group.
PartyUniqueName	string	This is a derived column. For Organization, it is concatenation of unique_name_alias and suffix. For Person, it is concatenation of person_name and suffix.
PartyUsageAssignment	*Usage Assignment*	The party usage assigned to the organization.
PersonSecondLastName	string	The second last name for a person. In some cultures it is not uncommon to have double last names. It is used in the same way the field PERSON_SECOND_LAST_NAME in HZ_PERSON_PROFILES is used.
Phone	*Phone*	The phone information for the entity.
PostalCode	string	The postal code element of the address.
PreferredContactMethod	string	The preferred contact method for a person or organization. It is validated against lookup HZ_PREFERRED_CONTACT_METHOD.
PreferredContactPersonId	long	The PARTY_ID of a preferred contact for a given party. There should be a valid relationship.
PreferredFunctionalCurrency	string	The preferred functional currency for the person or organization. The denormalized value of the PREF_FUNCTIONAL_CURRENCY in HZ_

Name	Type	Description
		PERSON_PROFILES/HZ_ORGANIZATION_PROFILES.
PreferredName	string	The denormalized value of the PARTY_NAME field in HZ_ADDTNL_PARTY_NAMES identified by PREFERRED_NAME_ID.
PreferredNameId	long	The foreign key to PARTY_NAME_ID in HZ_ADDTNL_PARTY_NAMES. It contains the ID of the referred name for the party. If it is NULL the Profile Name will be used as preferred name. By default the value is NULL.
PrimaryEmailContactPointId	long	The unique identifier of the primary e-mail.
PrimaryPhoneAreaCode	string	The area code within a country code.
PrimaryPhoneContactPointId	long	The unique identifier of the primary phone contact point.
PrimaryPhoneCountryCode	string	The international country code for a telephone number. For example, it is 33 for France.
PrimaryPhoneExtension	string	The additional number required after initial connection to an internal telephone system.
PrimaryPhoneLineType	string	The lookup code for the type of phone line. For example, general, fax, inbound or outbound, and so on.
PrimaryPhoneNumber	string	The telephone number in local format. The number should not include country code, area code, or extension.
PrimaryPhonePurpose	string	The contact point type, such as business or personal.
PrimaryURLContactPointId	long	The unique identifier of the primary URL contact point.
PrincipalName	string	The Name of the highest ranking person in the company.
Province	string	The name of the province.
Relationship	*Relationship*	The relationship information of the organization.

Name	Type	Description
RequestId	long	A system-generated read-only attribute used by the application framework.
SICCode	string	The Standard Industry Classification (SIC) code.
SICCodeType	string	The version of Standard Industry Classification (SIC) code.
SourceSystem	string	The source system name where the record originated.
SourceSystemReferenceValue	string	The identifier for the record from an external source system.
SourceSystemUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the source system information was last updated.
State	string	The name of the state.
Status	string	The status of the record.
Telex	*Telex*	The telex information of the organization.
ThirdPartyFlag	boolean	Indicates whether a party has a direct relationship with the organization using Oracle Receivables or through a third party vendor. If the value is Y, then the party is a third party relationship. If Oracle Service is installed, the Third Party field in the Customers window is mandatory.
TradingPartnerIdentifier	string	The FSIO related trading partner codes.
URL	string	The destination URL associated with a specific Google AdWords ad.
ValidatedFlag	boolean	Indicates whether the entity was validated. If the value is Y then the entity was validated.
Web	*Web*	The web information related to the record.
YearEstablished	int	The year when the organization began doing business.

Trading Community Organization Profile Additional Information

The additional profile information about an organization, such as the organization type.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/flex/organization/}OrganizationInformation

Handled by	*Partner Service*
Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
PartyUsageCode	string	The usage context of a party's contact point.
PartyUsgAssignmentId	long	The unique identifier of the party usage assignment.

Name	Type	Description
		• Primary Key
RequestId	long	A system-generated read-only attribute used by the application framework.
StatusFlag	boolean	The record status flag used to soft delete the record. The accepted values are: 'A' (active), 'I' (inactive), 'D' (logically deleted), and 'M' (merged). The default is 'A'.

Web

The Web information associated with a trading community member. For example, Oracle's address on the Web is www.oracle.com.

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/contactPointService/}Web

Relationships

The following table describes how this service data object is related to other service data objects or business object services.

Relationship Type	Object or Service

Handled by	*Trading Community Person Information*

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
ContactPointId	long	The unique primary key identifier for the contact point. • Primary Key
ContactPointPurpose	string	The purpose of the contact point.
ContactPointType	string	The type of the contact point.
ContactPreference	*Contact Preference*	The contact preference associated with the record.
CreatedBy	string	The user who created the record.

Name	Type	Description
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date till which the entity is active. This date is inclusive and the status of the entity is dependent on this.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OrigSystem	string	The source system name.
OrigSystemReference	string	The identifier for the record from the original system.
OriginalSystemReference	*Source System Reference*	The identifier for the record from the original system.
OverallPrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact irrespective of the context. Y stands for primary contact and N stands for all others.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyName	string	The name of the party.
PartyUsageCode	string	The usage context of a party's contact point.

Name	Type	Description
PrimaryByPurpose	string	Indicates whether this is the primary contact point of the contact point purpose for the party or site. The value Y indicates that the contact point is the primary contact point. A party or site can have only one contact point with value Y.
PrimaryFlag	boolean	Indicator that specifies if this is the primary contact point of the contact point type for referenced party, site, or location. Y stands for primary contact and N for all others.
RelationshipId	long	The relationship identifier for the record.
RequestId	long	A system-generated read-only attribute used by the application framework.
StartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	Indicates the date from which this entity is active. This date is inclusive and the status of an entity is dependent on this.
Status	string	The status of the record.
URL	string	The destination URL associated with a specific Google AdWords ad.
WebInformation	*Trading Community Contact Point Additional Information*	The additional information for the trading community Web.
WebType	string	The prefix class to a Web address. Typically, this is either FTP or HTTP.

Trading Community Party Information

A framework to assign party usages to trading community members. For example, John Doe is assigned a usage to indicate he is a sales account contact and ABC Corporation is assigned a usage to indicate that it is a supplier.

Life Cycle Status: Active

QName: {http://xmlns.oracle.com/apps/cdm/foundation/parties/partyService/applicationModule/}PartyInformationService

assignPartyUsage

The Create operation for the trading community party usage assignment SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyUsageAssignment	*Usage Assignment*	The trading community party usage assignment SDO to be created.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The trading community party usage assignment SDO to be updated.

endPartyUsageAssignment

The Update operation for the trading community party usage assignment SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyUsageAssignment	*Usage Assignment*	The trading community party usage assignment SDO to be updated.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The result of the operation that includes the successfully updated trading community party usage Assignment SDO and a list of warning or information messages.

findPartyUsageAssignment

The Find operation for the trading community party usage assignment SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The result of the operation that includes a list of trading community party usage Assignment SDO that satisfy the inbound criteria and any warning or information messages.

findPartyUsageAssignmentgetUsageAssignmentByPartyIdCodeDate

The Find operation for the Party Usage assigned to a trading community Organization or trading community Person.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindPartyId	long	The unique identifier of the trading community organization or the trading community person that needs to be verified along with the party usage code for a given date.
bindPartyUsageCode	string	The code to filter the party usages associated with the trading community organization or the trading community person.
bindEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The effective date used to filter the party usages associated with the trading community organization or the trading community person.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The result of the operation that includes the successfully created trading community party usage Assignment SDO and a list of warning or information messages.

findPartyUsageAssignmentPartyUsageAssgnOneWaySyncVOCriteria

Verifies if the party is an external contact.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindPartyId	long	The unique identifier of the party that needs to be verified.
bindEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}dateDate	The effective date used to filter the party usages associated with the party.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The result of the operation that includes a list of trading community party usage Assignment SDO that satisfy the inbound criteria and any warning or information messages.

findPartyUsageAssignmentPartyUsageAssignRoleProvVOCriteria

Verifies if the party is an employee or contingent worker for a given date.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindPartyId	long	The unique identifier of the party that needs to be verified.
bindStartDate	{http://xmlns.oracle.com/adf/svc/types/}dateDate	The date when the employee or contingent worker record starts.
bindEndDate	{http://xmlns.oracle.com/adf/svc/types/}dateDate	The date when employee or contingent worker record ends.

Element Name	Type	Description
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The result of the operation that includes the successfully created trading community party usage Assignment SDO and a list of warning or information messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name; an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale used to evaluate the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in the ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined for this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for the service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create, update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
endPartyUsageAssignment	HZ_MANAGE_TRADING_COMMUNITY_ORGANIZATION_USAGE_ASSIGNMENT_PRIV	Manage Trading Community Organization Usage Assignment	Allows the assignment of usages to an organization. If assigning, also assign the ability to view the trading community organization usage assignment.

assignPartyUsage

The Create operation for the trading community party usage assignment SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyUsageAssignment	*Usage Assignment*	The trading community party usage assignment SDO to be created.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The result of the operation that includes the successfully created trading community party usage Assignment SDO and a list of warning or information messages.

endPartyUsageAssignment

The Update operation for the trading community party usage assignment SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
partyUsageAssignment	*Usage Assignment*	The trading community party usage assignment SDO to be updated.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The result of the operation that includes the successfully updated trading community party usage Assignment SDO and a list of warning or information messages.

findPartyUsageAssignment

The Find operation for the trading community party usage assignment SDO.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The result of the operation that includes a list of trading community party usage Assignment SDO that satisfy the inbound criteria and any warning or information messages.

findPartyUsageAssignmentgetUsageAssignmentByPartyIdCodeDate

The Find operation for the party usage assigned to a trading community organization or trading community person.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindPartyId	long	The unique identifier of the trading community organization or the trading community person

Element Name	Type	Description
		that needs to be verified along with the party usage code for a given date.
bindPartyUsageCode	string	The code to filter the party usages associated with the trading community organization or the trading community person.
bindEffectiveDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The effective date used to filter the party usages associated with the trading community organization or the trading community person.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The result of the operation that includes the successfully created trading community party usage Assignment SDO and a list of warning or information messages.

findPartyUsageAssignmentPartyUsageAssgnOneWaySyncVOCriteria

Verifies if the party is an external contact.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindPartyId	long	The unique identifier of the party that needs to be verified.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The result of the operation that includes a list of trading community party usage Assignment

Element Name	Type	Description
		SDO that satisfy the inbound criteria and any warning or information messages.

findPartyUsageAssignmentPartyUsageAssignRoleProvVOCriteria

Verifies if the party is an employee or contingent worker for a given date.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
findCriteria	{http://xmlns.oracle.com/adf/svc/types/}FindCriteria	The criteria used to limit the query result, such as the filter (where clause) and the fetch size.
bindPartyId	long	The unique identifier of the party that needs to be verified.
bindStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when the employee or contingent worker record starts.
bindEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date when employee or contingent worker record ends.
findControl	{http://xmlns.oracle.com/adf/svc/types/}FindControl	Find Control. Not currently used.

Response Payload

Element Name	Type	Description
result	*Usage Assignment*	The result of the operation that includes the successfully created trading community party usage Assignment SDO and a list of warning or information messages.

getDfltObjAttrHints

An operation to retrieve user interface hints, such as the service data object label and object attribute labels, for the specified service data object and locale. As a prerequisite, invoke the getEntityList operation defined on this service to get the list of possible values for the viewName request payload element.

Life Cycle Status: Active

Request Payload

Element Name	Type	Description
viewName	string	The service view usage name; an internal name for the service data object. Specify the value of the name element from the getEntityList operation response payload.
localeName	string	The locale used to evaluate the locale-based user interface hints. The locale name is in the ISO 639-1 format.

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ObjAttrHints	The label and user interface hints for the specified service data object and its attributes in a name-value pair format.

getServiceLastUpdateTime

An operation that returns the date and time when the schema files referenced in the service definition last changed.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date and time when the service definition last changed in the ISO 8601 format.

getEntityList

An operation to get the list of service data objects defined for this service.

Life Cycle Status: Active

Request Payload

Response Payload

Element Name	Type	Description
result	{http://xmlns.oracle.com/adf/svc/types/}ServiceViewInfo	A list of service data objects defined for the service. For each service data object, the result includes the QName, internal name, and boolean values indicating whether create,

Element Name	Type	Description
		update, merge, and delete operations can be performed on the object.

Security

The following tables list the privileges required to perform the service operations, and the duty roles that each privilege is granted to.

Service Operations to Privileges Mapping

Operation Name	Privilege Code	Privilege Name	Privilege Description
endPartyUsageAssignment	HZ_MANAGE_TRADING_COMMUNITY_ORGANIZATION_USAGE_ASSIGNMENT_PRIV	Manage Trading Community Organization Usage Assignment	Allows the assignment of usages to an organization. If assigning, also assign the ability to view the trading community organization usage assignment.

Attributes

The following table describes attributes in the service data object.

Name	Type	Description
Comments	string	The comments for the record.
CreatedBy	string	The user who created the record.
CreatedByModule	string	The module that created the record.
CreationDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was created.
EffectiveEndDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the end of the date range within which the row is effective.
EffectiveStartDate	{http://xmlns.oracle.com/adf/svc/types/}date-Date	The date at the beginning of the date range within which the row is effective.
LastUpdateDate	{http://xmlns.oracle.com/adf/svc/types/}dateTime-Timestamp	The date when the record was last updated.
LastUpdateLogin	string	The login of the user who last updated the record.
LastUpdatedBy	string	The user who last updated the record.
ObjectVersionNumber	int	The number used to implement locking. This number is incremented every time that the row is updated. The number is compared at the start and end of a transaction to determine whether another session has updated the row.
OwnerTableId	long	The unique identifier for a record in the owner table.
OwnerTableName	string	The Trading Community Architecture (TCA) tables that have source system reference column.
PartyId	long	The unique identifier of the contact party.
PartyUsageCode	string	The usage context of a party's contact point.
PartyUsgAssignmentId	long	The unique identifier of the party usage assignment. • Primary Key
RequestId	long	A system-generated read-only attribute used by the application framework.
